

# Overcurrent Protection According to the 2011 NEC (Online)

<b>Credit Hours</b>	4 hours
<b>Course Timetable</b>	Attached
<b>Course Description</b>	This course will cover overcurrent protection according to the 2011 NEC. The key sections of Article 240 will be discussed. Overcurrent protection for panelboards, appliances, motors, motor compressors, transformers, and fire pumps will also be included. The requirements for ground-fault protection for personnel and arc-fault circuit-interrupter protection are presented.
<b>Course Objectives</b>	After completing this course the participant will have a better understanding of the requirements in the 2011 NEC for overcurrent protection and will be able to apply that knowledge to common electrical installations.
<b>Method of Presentation</b>	Each code section includes commentary, a graphic illustration or photograph, and a multiple choice question. A passing score of 75% is required on the multiple choice questions. After all the questions have been answered, the user must affirm they are the one who completed the course and verify that their registration information is correct.
<b>Method of Evaluation</b>	The licensee must complete all 50 multiple choice questions with a score of at least 75% in order to get credit for the course. Credit will not be awarded unless the licensee has completely answered all questions and the passing grade has been met.
<b>Qualification of Instructor</b>	Resume of course instructor David Burt is attached.
