

## Equipment Management:

Introduces Safety Share Equipment Management Solutions – Built to help you better manage your assets and lower your operating costs. Monitor location, fuel burn and utilization, as well as health and maintenance issues like hours, fluid contamination, scheduled oil samples and more. Product Link and VisionLink – Sends valuable health and utilization information from your equipment as you'd see using an Electronic Technician. In addition to comprehensive machine health data, Product Link will also display machine GPS location and geo-fences, meter hours, help you track planned maintenance, and even tell you exactly which parts are needed for each planned maintenance interval. Safety and Inspection walk around to show what to look for to ensure the machine is safe and ready to run efficiently. CAT Software – CAT Connect Solutions combines technology and services to boost your job site efficiency by use of technology equipped machines. Fluid Analysis – keep minor repairs from becoming major ones and help you to avoid complete failures. Helps you predict wear related problems, allowing greater flexibility in repair scheduling and downtime control. Lube Service – Planned Maintenance, Written Machine Inspection Reports, Proper disposal of waste oil and coolants, SOS Services – For maximum protection, you need fluid analysis – oil, fuel and coolant analysis for all major oil lubricated systems: engine, transmission, hydraulic system and final drives.
