

10-21-5: LANDSCAPING:

~~A. The design of developments and placement of buildings shall preserve the natural terrain, drainage, existing topsoil, tree groupings, large individual trees and large rocks.~~

~~—B. Natural, informal landscape design should be used in the city, rather than formal, geometric designs. Different types of adjacent uses, both within and between developments, should be buffered (separated) or screened by extensive tree planting. (Ord. 2012.04, 1-18-2012; amd. 2014 Code)~~

A. Definitions: The following definitions shall apply to this ordinance:

- a. Active Recreation Area: dedicated active play areas where irrigated lawn is used as the playing surface, such as a sports field designed for public use. Active recreation areas shall be:
 - i. A minimum of 1,500 contiguous square feet of lawn area;
 - ii. Not less than 30 feet in any dimension;
 - iii. Not less than 10 feet from areas dedicated to vehicular use, such as a street or parking lot;
 - iv. Designed and located to be accessible to large populations, such as at a school, daycare, recreation center, senior center, public park, private park, water park, or religious institution;
 - v. Co-located with amenities, including but not limited to trash bins, benches, tables, walking paths, drinking water, playground equipment, and/or other recreational amenities.
- b. Irrigation Plan: a plan that shows the components of an irrigation system, including water meter size, backflow prevention, precipitation rates, flow rate, operating pressure for each irrigation circuit, and identification of all irrigation equipment.
- c. Landscape Plan: a plan that clearly and accurately identifies the location and species of new and existing trees, shrubs, ground covers, and other plants on a site, and any other landscape elements, and includes an irrigation plan.
- d. Lawn: irrigated nonagricultural land planted in closely mowed, managed grasses.
- e. Mulch: material (such as, but not limited to, rock, bark, wood chips) uniformly applied upon the surface of the soil to reduce evaporation and weed growth. Mulches must allow penetration of water and air. For the purposes of this chapter, ungrouted pavers, stepping stones, and artificial

turf manufactured to be permeable to air and water may be considered mulch.

- f. Planting Bed: areas of the landscape that consist of plants, such as trees, ornamental grasses, shrubs, perennials, and other regionally appropriate plants.

B. Applicability: All new single and multi-family residential, commercial, institutional, and industrial development, construction activity, or landscape installation shall comply with the standards found in this chapter as well as with the current Water Efficiency Standards as adopted by the City.

C. Landscape Requirements:

- a. Where lawns are allowed, spray irrigation may be used. All other plant material must be irrigated from a drip irrigation system equipped with a pressure regulator filter, flush-end assembly and emitters rated for 20 gallons per hour (gph) or less.
- b. Drip irrigation and sprinkler irrigation may not be served from the same irrigation valve.
- c. Automated irrigation systems must use a US EPA WaterSense labeled smart controller or a similar weather-based controller if an appropriate WaterSense model is not available for the specific application.
- d. All Planting Beds must have mulch upon the soil surface with exceptions for areas being restored to appear as native desert.
- e. Plant Selection: Plants shall be well-suited to the microclimate and soil conditions at the project site. Both native and locally adapted plants are acceptable. Plants with similar water needs shall be grouped together as much as possible.
- f. At least 40% of the project's proposed (and installed) landscaped area shall contain vegetative cover consisting of water-efficient plants adequate in number and configuration to visually enhance the project, prevent heat islands, and prevent soil erosion.
- g. Lawn Allowances:
 - i. Lawns must be accessible for active use and may not be in streetscape frontages, parking lots, roundabouts, medians, driveways, and other areas not conducive to access and safe use. Lawns may not be within 10 feet of a roadway.
 - ii. Single-family residential – 8% of any residential lot, or 2,500 square feet, whichever is less. Lots less than 7,500 square feet are allowed up to 600 square feet of lawn.

- iii. Limited common area development – single-family homes with limited common areas designated for the exclusive use of the adjacent dwelling shall have the same allowances as a single-family home.
- iv. Attached multi-family residential – up to 100 square feet per dwelling unit used in functional applications. Properties with less than 6 dwelling units are allowed up to 600 square feet of lawn.
- v. Commercial, institutional, and industrial – lawn areas are prohibited except where an Active Recreation Area is appropriate, such as at a childcare center or athletic complex.
- vi. No lawn shall be less than 8 feet in any dimension, or upon a slope with a grade exceeding 25% (1 foot of rise per 4 feet of run). To the extent possible, spray irrigation should be free from obstructions (trees, signs, posts, enclosures, etc.).
- h. Certain special purpose landscape areas (e.g., stormwater management areas, cemeteries, etc.) may receive exceptions from the slope or lawn allowances and other elements of the Landscaping Requirements. Exceptions shall be considered by the City on a case-by-case basis.
- i. Golf Courses:
 - i. All courses using water supplied by the City or the Washington County Water Conservancy District shall have a separate meter for irrigation.
 - ii. All golf courses, without regard to the date of construction, shall be required to submit and follow a water budget and identify water conservation measures for regular city and water provider review.
- j. Manmade Ornamental Water Features:
 - i. Manmade ornamental water features are limited to 25 square feet per parcel and are limited to the parcel.

D. Application Requirements:

- a. Landscape Plan: A copy of a Landscape Plan shall be submitted to and approved by the City prior to the issuance of any permit. The plan shall consist of the following items:
 - i. Planting Plan: A detailed plan shall be drawn to scale. This plan shall be in an electronic format and clearly identify the following:
 - 1. Project name, address, and the applicants contact information;
 - 2. Location and size of all Planting Beds, plant materials, and mulch materials;

3. A legend with botanical and common names of all plant materials;
 4. Property lines and street names;
 5. Scale: graphic and written;
 6. Existing and proposed buildings, walls, fences, utilities, paved areas, and other site improvements;
 7. Existing trees and plant materials to be removed or retained;
 8. Location and size of any lawn or turf areas; and
 9. Location of proposed planting and mulch areas.
- ii. Irrigation Plan: A detailed irrigation plan shall be drawn at the same scale in the same format as the planting plan and shall contain the following information:
1. Layout of the irrigation system;
 2. Location of valves, filters, and backflow prevention devices;
 3. A table with the precipitation rate for proposed sprinkler irrigation devices and drip irrigation devices;
 4. Designation of areas to be sprinkler irrigated and areas to be irrigated using a drip irrigation system as well as each valve that operates those areas; and
 5. Location, make, and model of a US EPA WaterSense labeled smart controller.
