

**Audit Filter 1 (no longer monitored due to data availability)**

Trauma patients with more than one (in-state) inter-hospital transfer prior to definitive care.

**Audit Filter 2**

Trauma patients with 1) an ISS greater than 15 or 2) penetrating trauma with EMS scene times greater than 10 minutes.

**Audit Filter 3**

Transferred (out) trauma patients with an ISS greater than 15 and ED time greater than 90 minutes.

**Audit Filter 4**

- a) Trauma patients who die with a probability of survival (TRISS)  $\geq 75\%$
- b) Trauma patients who live with a probability of survival (TRISS)  $\leq 25\%$  (TRISS score for trauma patients using physiologic measures collected at the presenting hospital)

**Audit Filter 5**

Trauma patients with an ISS greater than 15 who are discharged from non-designated trauma centers.

**Audit Filter 6**

Trauma patients <15 years old who either had 1) an ED GCS  $\leq 13$ , 2) were intubated, or 3) ISS > 15 and were not transferred to a regional pediatric trauma center

**Audit Filter 7 (No longer monitored due to data availability)**

Trauma patients who meet the criteria of Steps 1 and 2 of the CDC Trauma Field Triage Guidelines and are not transported to the highest level trauma center within (or nearby) the (Trauma) region. (NEMESIS v3.4 data element eInjury.03 seldom filled in)

**Audit Filter 8**

Trauma patients who die greater than one hour after ED arrival (Calculated as the time from ED arrival to ED-discharge (include patients transferred from different facilities)
