Fire safety training at work is everyone's business. Each year in the United States, there are between 70,000 and 80,000 workplace fires. Of these, over 5,000 result in injury and 200 end in death. Fortunately, most workplace fires can be prevented — only 15 percent of them are a result of circumstances outside of human control. The key is training, knowledge, and preventative measures. It’s important that businesses establish and implement fire safety programs and that all employees are involved. Fire safety training kits should cover all vital elements such as hazard recognition, prevention, and response. Use these fire safety basics to get you started. (Safety Services Company)

Fireworks start an average of 18,500 fires per year, including 1,300 structure fires, 300 vehicle fires, and 16,900 outside and other fires. These fires caused an average of three deaths, 40 civilian injuries, and an average of $43 million in direct property damage.
