

Citizens Unloading Review

04/24/2024

Current Operations

Approximately 140,000 transactions (T1 Waste Code – Hand unload including trailers) in 2023

30 Spaces for trash unloading (T1)

Approximately 3 acres (also includes metal recycling bins, tire collection, and other)

Average unload time 30 minutes per vehicle

Saturday (March – October) averages approximately 900 T1 transactions

Due to wait times on Saturday, at least 50% or more utilize the tipping face rather than citizen's unload

Maintain larger tipping face on Saturdays than rest of the week to accommodate T1's

Generally, no issues Monday through Friday

Future Considerations

Current location will need to be developed into a landfill cell in approximately 25 - 30 years

Long term citizens unload capabilities required through the life of the landfill

Citizens unload capabilities (and other transfer) after landfill closes

Options

Expand at current location

Build new location on east 80 acres to accommodate life of landfill (approximately 60 years)

Build new location on east 80 considering waste for transfer after landfill closes
