

# Eagle presentation

---

By Drake Jackson

# What my eagle project is

My eagle project is to rebuild and improve the orienteering course that is at barker park because lots of the markers on the course need to be raised and repaired there are also some that need to be redon entirely.

# Marker pictures

# Why am I doing this

This is not just to get my eagle rank but I am also doing this for scouts like me so they can get their rank advancements and merit badges this is also not just for scouts for everyone in the community to learn orienteering.

# What needs to be done

I will be replacing the 100 foot pace line and the three point course. To make them easier to find and on the main course there are 2 that need to be re made and put back in.

7 need to be raised and 2 that need to be repaired, I am also planning on moving the marker in the baseball field to a place where it is not in the way when there is a game. I will also be updating the map to show the new changes.

There is also the map board which will need to have to replace the old map with the new updated one

I am hoping to get this done on November 15th but if I cannot I will move it to early March 7th

Depending on how cold it is going to be.

# Map changes pictures

# What I have and need

To get this done I will need shovels, cement mixer, saw, gloves, safety glasses, sana tube, and brass pins. I have some shovels along with gloves and safety glasses but if we do need more I would make sure that the city can provide them.

I also am asking the city if they will provide the cement mixer along with the saw for cutting the sana tube to the right length. I also request that the city has a person come and help us by driving the cement mixer to each marker that needs it so we can ensure that we do not damage anything in the park and keep it looking good and safe.

I would also like to know if I must find the place that rents cement mixers and a place that sell the sana tube or if the city will do that for me.

# The cost

The estimated total cost of the cement mixer, sana tube, and the brass pins is 400 dollars but I think it is worth it so we can get this course built so scouts and the community can learn this great skill.

# Conclusion

- Thank you for considering this project. Not only is this for scouts like me to help them get their rank advancements and merit badges, this is also for everyone in the community to learn about orienteering.
