

TOWN OF BRIGHTON
ORDINANCE #2025 – O – 6 – 1

AN ORDINANCE ADOPTING ENGINEERING STANDARDS

WHEREAS, Staff recognizes that many of the engineering standards should be incorporated in a separate engineering manual;

WHEREAS, many communities have moved their engineering and technical standards to an separate manual for ease of use for developers and the public;

WHEREAS, certain updates to application and submittal requirements will help with the application and review process;

WHEREAS, a public hearing was duly held before the Planning Commission on May 21, 2025 and before the Town Council on June 10, 2025;

WHEREAS, the Standard Specifications and Drawing Manual is a Land Use Regulation pursuant to UCA 10-9a-502.

NOW, THEREFORE, BE IT ORDAINED BY THE TOWN COUNCIL OF BRIGHTON, UTAH, THAT:

SECTION I: The Town of Brighton Engineering Standard Drawing and Specifications, attached hereto as Exhibit A is hereby adopted.

SECTION III: Effective Date. This Ordinance shall take effect upon publication.

PASSED AND ADOPTED by the Town Council of Brighton, Utah, this 10th day of June in the year 2025.

TOWN OF BRIGHTON

Dan Knopp, Mayor

ATTEST:

Kara John, Town Clerk

GENERAL PROVISIONS

Town of Brighton automatically adopts the latest revision of AASHTO “A Policy on Geometric Design of Highways and Streets” (Green Book), the Utah Manual on Uniform Traffic Control Devices (MUTCD), and APWA Manual of Standard Plans and Manual of Standard Specifications, with exceptions noted in this document.

The city engineer may approve exceptions to engineering standards and drawings where appropriate.

Consistent with Brighton Master Planning & Visioning Statements, the standards do not include curb and gutter, streetlights or sidewalks.

EXCEPTIONS TO APWA STANDARDS

APWA Plan No./ Specification Section	Exception
215, 216, 221.1, 221.2, 225, 229.1 & 229.2	APWA Plan No's. 221.1 and 221.2 are acceptable for use. APWA Plan No's. 215, 216, 225, 229.1, and 229.2 are not acceptable for use unless otherwise authorized by the MSD Engineer.
221.1, 221.2	When adverse slopes, right-of-way limitations, or existing obstructions occur, MSD Engineering may authorize deviations from the APWA apron/slope geometry.
251	Bituminous Concrete (asphalt) T-Patch thickness is 6" minimum for both residential and non-residential streets.
255	<p>Bituminous Concrete (asphalt) T-Patch thickness is 6" minimum for both residential and non-residential streets.</p> <p>Mill and overlay not required whenever there is an upcoming city project that will mill and overlay or reconstruct the road within two (2) years.</p> <p>Full-width mill and overlay on roads newer than three (3) years.</p> <p>APWA Mill and overlay required if street cut is longer than 300 feet long and pavement is 3-7 years old.</p> <p>Mill and overlay not required if pavement is greater than 7 years old.</p>
292	Steel tube is to be 12' x 2" x 2". Standard Plan 140 in this book applies in locations where sign is installed in concrete.
315.1, 315.2 & 316	Where APWA inlet plans refer to frame and grate per APWA Plan No. 308, contractor shall use Standard Plan 201 in this book, unless otherwise authorized by the MSD Engineer.
332	<p>The use of pre-cast "knock-out" boxes in storm drain facilities may be authorized by the MSD Engineer, upon written request and provided the following conditions are met:</p> <p>a) All other requirements of APWA Plan 332 - Precast Box, are still met.</p> <p>b) Boxes shall have engineered design for AASHTO's HL-93 live load and shall be designed for lateral soil loads appropriate for the burial depth and conditions.</p> <p>c) The thickness of concrete collars where the pipe enters box at the knockout face shall extend 6" to 9" from the exterior face of the box and shall cover the entire side of the structure with no less than 12" concrete all the way around the pipe. Collars shall have a minimum of four (4) #4 dowels tying the collar to the precast box and include a #4 rebar ring or square tie around the pipe.</p> <p>d) Inspection and certification required on all precast boxes.</p>
381	(Note 2A) - Use granular backfill borrow for common fill.
382	<p>(Note 2B) - Use granular backfill borrow for common fill.</p> <p>(Note 3A) - Minimum trench width is to be Pipe O.D. + 24" or (Pipe O.D. x 1.25)+12", whichever is greater.</p>
33 05 02	Public storm drain pipes and culverts shall be 15" dia.or greater RCP unless otherwise authorized by the MSD Engineer. Installation must follow manufacturer's direction. Provide a minimum amount of 1' cover over top of concrete pipes and 2' cover over the top of pipes of other materials unless approved otherwise by manufacturer and MSD Engineer. Corrugated metal pipe and vitrified clay pipe are not allowed.

NOTES:

Materials, construction, and workmanship shall be in accordance with the current edition of "APWA Manual of Standard Specifications" addendums, and modifications thereto; and as directed by the MSD Public Works Engineer. Reference to specific sections of APWA does not limit requirements to that section.

SUBGRADE: See APWA Section 32 05 10 (Backfilling Roadways) for preparation and proof rolling of roadway, curb and gutter, and sidewalk.

UNTREATED BASE COURSE: Shall be Grade 1 as per APWA Section 32 11 23 (Aggregate Base Course). Place fill in no greater than 6 inch lifts after compaction as per APWA Section 32 05 10 (Backfilling Roadways). Compact to no less than 95% relative density based on the Modified Proctor Density as per APWA Section 31 23 26 (Compaction).

PRIME COAT: Prime coat, as directed by the engineer, on untreated base course before placing asphalt. See APWA Section 32 12 13.19 (Prime Coat).

TACK COAT: Grade SS-1, CSS-1, or CSS-1h emulsified asphalt shall be applied to existing asphalt concrete or portland cement concrete surfaces prior to placing asphalt concrete pavement as per APWA Section 32 12 13.13 (Tack Coat).

ASPHALT CONCRETE: Unless otherwise approved in writing by the MSD Public Works Engineer or their designated representative, all roads shall be considered Road Class III and the bituminous concrete mix designator used shall correspond to the table on Sheet 2. Minimum allowed roadway section – 3 inches asphalt concrete on 8 inches untreated base course. Thicker sections required for collectors, minor arterials, and roadways with heavy truck traffic. Construct road mix bituminous surface course only when air temperature in the shade and road bed temperature are greater than 50 degrees.

NOTES:

Materials, construction, and workmanship shall be in accordance with the current edition of "APWA Manual of Standard Specifications" addendums, and modifications thereto; and as directed by the MSD Engineer.

Cast Iron to conform to ASTM A-48, Class 35B H-20 wheel loading.

Use D&L Supply Co. I-3517 or approved equivalent.

All connecting hardware to be stainless steel.

NOTES:

Materials, construction, and workmanship shall be in accordance with the current edition of "APWA Manual of Standard Specifications" addendums, and modifications thereto; and as directed by the MSD Engineer.

Ladder Rungs: Provide rungs in boxes over 4 feet deep, spaced 12" O.C. When measured from the floor of the box, place bottom rung 16" maximum above box floor. Place top rung within 3 feet of finish grade.

Follow all current OSHA requirements.

Align rungs with lid opening.

Rungs not required in boxes with concentric access.

Ladder rungs shall be copolymer polypropylene plastic coating over a $\frac{1}{2}$ inch steel bar.

Steel bar shall conform to ASTM 615 Grade 60.

Use M.A. Industries PS1-PF 10" Manhole Single Face Step or approved product with similar materials and ratings with MSD Engineer approval.

NOTES:

GENERAL DETENTION BASIN REQUIREMENTS:

- ① Side slopes shall be a maximum of 3:1.
- ② Sides and bottom of basin shall be rock lined. In special circumstances such as when the basin contains a park or playing field, the basin may be lined with grass, with approval of the MSD Engineer. For rock lining, use 2" rock with a minimum depth of 5" over separation fabric. If grass lined, the area must be adequately irrigated with a permanent pressurized irrigation system.
- ③ 1 foot of freeboard above the 10-year 24-hour storm event level or capacity for the 100-year 24-hour storm.
- ④ Concrete low flow pipe or channel preferred.

SECTION A. INLET AND OUTLET STRUCTURE REQUIREMENTS:

- ⑤ Outflow must be restricted per the code requirements.
- ⑥ Must include a concrete flared end section and locking grate, unless underground low-flow conveyance is utilized.
- ⑦ Pre-treatment required prior to outflow to approved facility, outlet structure must conform to Standard Detail 301 in this document or approved outlet structure.

SECTION B. REQUIREMENTS FOR ACCESSES TO ALL INLET/OUTLET STRUCTURES:

- ⑧ Must fall within the area of the arc (shown in the Accessible Road/Pad Detail), which is representative of the maintenance vehicles' reach.
- ⑨ No increase in elevation greater than 5' from surface of accessible road or pad.
- ⑩ No decrease in elevation greater than 35' from surface of accessible road or pad.
- ⑪ Must be a minimum of 45 feet in length from traveled way of connecting roadway if a detention pond specific access road or pad is utilized.

SECTION C. ACCESSIBLE ROAD/PAD REQUIREMENTS:

- ⑫ Must be easily accessible by maintenance vehicles.
- ⑬ Must not exceed a maximum longitudinal slope of 12%.
- ⑭ Must be at least 10' in width.
- ⑮ No cross-slope in excess of 2%.
- ⑯ Must be a minimum of 6" thick concrete.
- ⑰ Must have measures in place restricting public access (ex. bollards). If bollards are used, must be of stainless steel material.
- ⑱ Must comply with all other local, county, state, and federal requirements.

NOTES:

Materials, construction, and workmanship shall be in accordance with the current edition of "APWA Manual of Standard Specifications" addendums, and modifications thereto; and as directed by the MSD Engineer. Reference to specific sections of APWA does not limit requirements to that section.

1. Developer shall install lock and chain on handwheel. Lock to be supplied by SLCO Operations Department.
2. Provide gate with stop nut on stem to hold gate at 10" above invert of orifice or higher.
3. Golden Harvest slide gate with non-rising stem and handwheel, or approved equal. Cut grate as required for extension of frame.
4. The drawing on Sheet 2 is intended to be general in nature, but shows the overall conceptual requirements for the outlet structure, including box with weir wall, orifice, gate, hood, and grated top. The specific size of the components shall be designed for the specific application.
