			The login and role assignment was developed within a	
			short timeline and a short term expectation of use. Initially,	
			the plan for logging in would ultimately use the same application being developed through USIMS. Principals	
			and LEAs would use the same login application in USIMS	
			and the associated applications would ultimately need to	
			tie into that application. USIMS would not be ready in time so a short-term solution was completed. Later the	
			decision was made the School LAND Trust would be a	
			legacy site, including the login feature. The short-term fix	
			has continued to be problematic. To get a user the correct access, it sometimes requiresmaking adjustments	
Managing Logins and Roles Links			manually in three or four applications instead of one.	
	Role Manager identifies the username,			
	email, phone number and login role of each			
	user. Usernames and emails may not be changed. Phone numbers and login roles			
	are editable by SCT Admin.			
	User Reasignment is a function that allows			
	SCT Admin to search by email to identify the			
	current school or LEA login access and change access within an LEA			
	Assignments is another location where

Declaration of Habitatastics Decision to Drive the Mehate Inhause			
Background - Utah Interactive - Decision to Bring the Website Inhouse			
Utah Interactive bid on an won the RFP not reviewing the requirements - Thought it was for the public site.			
A lengthy unassociated contract for Utah Interactive services in Teacher Licensing was attached to the School LAND Trust Website ontact			
Challenges emerged within a few month related to items 1 and 2. USBE reqested additional funds from the Legislature			
. Legal issues emerged due to the unassocaited and attached Teacher Licensing contract.			
. Utah Interactive exercised their option to end the contract. Utah Interactive business model was based on payment for services oming from a service with a cost.			
. At the time teacher license and relicense had a fee attached. School LAND Trust didn't match the business model			
. SCT was on a short timeline to have an operational website for principal entry in the fall.			
. Staff reached out to State IT for options and assistance. USBE is not part of State IT. and couldn't help.			
. Staff consulted with SITLA about providing services - either maintenance until another provider was secured or full development			
SITLA researched and met with Utah Interactive. SITLA recommended the website be rebuilt from the start.			
The website was built on a platform and in language not supported by USBE. USBE couldn't provide maintenance until another rovider could be secured.			
<ol><li>Through consultation and negotiation Utah Interactive agreed to provide maintenance only support for 18 months until USBE could uplicate/rebuild with supported platforms and language.</li></ol>			
3. ROI was created. USBE provided start up funding with Mineral Lease funds until a legislative appropriation could be secured			
Nov. Applications Comparting Ctalchelder Made			
New Applications Supporting Stakeholder Work			
. Business Administrators enter School LAND Trust expenditures through UPEFS eliminating the need to enter the same data twice.			
. CACTUS interface - New School Data Entered in School LAND Trust - Eliminates manual creation of new schools.			
. Expenditure Categories Principals Recognize/Understand when planning expenditures			
Challenges Developing SCT Website Inhouse			
. The estimate to implement the ROI - cost and manhours - considerably underestimated			
IT personnel was transitory initially. Within the first 18 months no one who started the work remained including the staff that wrote the OI. Turnover has continued to be an issue until the last two years.			
No institutional memory ( or notes in the programming providing guidance or context to development)			
. Some applications were not transferable. Work arounds or patches were put in place to get a critical application available for use.			
. Work arounds and patches have proved to be costly and time consuming in the long run. Applications or tickets within the pplications have been redone multiple times.			
Some applications not included in the ROI or requested by SCT have been developed taking time from priorities.			
Some work was rushed without consideration of how it needed to apply to other applications. It has been costly to undo and redo.			
Utah Code and Board Rule changes have added requirements that were not part of the ROI			
Applications frequently take more sprints than budgeted for.			
D. Testing has been time consuming. 90% of development has issues in SCT testing (secondary testing) also causing delays.			
1. Applications and data that are not reliable. Staff maintains spreadsheets on data that should be reliable in the database.
