

Draft #1 – Artificial Intelligence standard to be incorporated into any CTE course where AI is used to highlight the responsible use of AI.

1. **Responsible use of AI**, which includes recognizing when to use AI, **determining accuracy of information**, how AI has contributed to a product, and communicating that clearly.
2. **How AI influences all work**, including the evolving boundaries and tightening restrictions around intellectual property and copyright.
3. **The importance of transparency and documentation**, both in their own use of AI tools and in verifying the authenticity of others' work.
