Streetlights in TRSSD

# Base Services

**Draper City is responsible for the maintenance of:**

- Below ground electrical to the street lights
- Electrical external to the pole assembly
- Ensuring power is supplied to the poles
- Providing underground repairs and fuse replacements.

# TRSSD Financed Services

## **The TRSSD will pay Draper City for:**

- Maintenance of street lights, including the poles, foundations, and electrical components within the poles
- Proactive approach to determining replacement needs
- To build a place to store the TRSSD street light parts – poles, lights, etc.

# Proposed Approach

- Draper City Public Works will take over all street light maintenance in the TRSSD as if they were City street lights
- A GL will be created for the TRSSD to annually deposit an amount, up front, for Public Works to perform the work that will be financed by the TRSSD
- The amount will be determined annually; with the initial years being larger amounts to cover proactive approach and infrastructure(storage) needs.
- Public Works will track all work through the asset management/work order system in place so that the TRSSD can review expenses upon request
