

**NOTICE OF MEETING AND AGENDA
PLANNING COMMISSION
JANUARY 27, 2026 AT 7:00 P.M.**
City Council Chambers
110 South Main Street
Springville, Utah 84663

The agenda will be as follows:

Call to Order

- Approval of the Agenda
- Approval of Minutes: January 13, 2026

Administrative Session - No Items

Legislative Session – Public Hearing

- 1) Perry Sharma Capital requests an amendment to the Official Zone Map from NC Neighborhood Commercial to HC Highway Commercial for the property located at northwest corner of Wallace Drive and 1600 South Parcel 26:047:0195.
- 2) Springville Public Works requests a recommendation on the approval of the Transportation Impact Fee Facility Plan, and Impact Fee Analysis.
- 3) The Springville Planning Commission will hold a public hearing to review the Springville Station Area Plan and make a recommendation to the City Council. The plan sets a vision and policies for development and transportation around the FrontRunner station area.

Adjournment

THIS AGENDA SUBJECT TO CHANGE WITH A MINIMUM OF 24-HOURS NOTICE

This meeting was noticed in compliance with Utah Code 52-4-202 on January 23, 2026. Agendas and minutes are accessible through the Springville City website at www.springville.org/agendas-minutes. Planning Commission meeting agendas are available through the Utah Public Meeting Notice website at www.utah.gov/pmn/index.html. Email subscriptions to Utah Public Meeting Notices are available through their website.

In compliance with the Americans with Disabilities Act, the City will make reasonable accommodations to ensure accessibility to this meeting. If you need special assistance to participate in this meeting, please contact the Community Development department at (801) 491-7861 at least three business days prior to the meeting.

IN ATTENDANCE

Commissioners Present: Genevieve Baker, Ann Anderson, Ralph Calder,
Brett Nelson, and Peter Pratt

Commissioners Excused: Hunter Huffman and Tyler Patching

City Staff: Josh Yost, Community Development Director
Heather Goins, Executive Assistant

City Council: Jake Smith

CALL TO ORDER

Vice Chair Nelson called the meeting to order at 7:00 p.m.

APPROVAL OF THE AGENDA

Commissioner Anderson moved to approve the agenda as written. Commissioner Calder seconded the motion. The vote to approve the agenda was unanimous.

APPROVAL OF THE MINUTES

December 9, 2025

Commissioner Calder moved to approve the December 9, 2025 meeting minutes. Commissioner Pratt seconded the motion. The vote to approve the meeting minutes was unanimous.

ADMINISTRATIVE SESSION

No Items

LEGISLATIVE SESSION:

1) Lakeside Landing Partners and Unified Business Alliance request an amendment to the Development Agreement for Lakeside Landing Property dated April 2022.

Josh Yost, Community Development Director, presented the proposed First Amendment to the Lakeside Landing Development Agreement, originally adopted in December 2021 and recorded in April 2022. He explained that the original agreement established vesting periods and park completion timelines, with park completion required by April 2025. Due to changes in development timing, the development parties are currently in default.

The proposed amendment addresses the park completion timing to replace the fixed completion date with a performance-based standard. No building permits will be issued beyond 40% of the total units in either the north or south development areas until the respective neighborhood park is completed. The vesting period reset leaves the regulatory/density rights (15-year vesting period beginning April 2022) unchanged. The design-related vesting rights (architectural, landscape, lot standards, etc.) are reset for an additional six-year period.

The Commissioners asked questions regarding development partners and ownership structure, park responsibilities and funding, infrastructure progress (utilities, sewer, pressurized irrigation) and development phasing and coordination among multiple developers. The development groups are LGI Homes, Lakeside Landing, and UBA.

Commissioner Anderson asked about the progress of the project. Director Yost explained that on the ground improvements are mostly done. LGI Homes intends to start home construction this summer.

Commissioner Calder asked about developer parks. Director Yost noted there are two public neighborhood parks covered by the agreement and that other open spaces are privately maintained.

Chair Baker arrived at 7:10 p.m. Director Yost gave a quick recap to Chair Baker.

Chair Baker opened the public hearing at 7:12 p.m. Seeing no speakers, Commissioner Calder moved to close the public hearing. Commissioner Anderson seconded. The public hearing was closed at 7:12 p.m.

Commissioner Anderson moved to recommend approval of the First Amendment to the Development Agreement for Lakeside Landing Property between the City of Springville, Lakeside Land Partners, and Davies Design Build. Commissioner Nelson seconded the motion. The vote to approve the Legislative Session item was unanimous.

2) Springville Public Works requests a recommendation on the approval of the Drinking Water Master Plan, Impact Fee Facility Plan and Impact Fee Analysis.

3) Springville Public Works requests a recommendation on the adoption of the Pressurized Irrigation Master Plan, Impact Fee Facility Plan, and Impact Fee Analysis.

Jeff Anderson, Assistant Public Works Director, presented. The master plans aim to plan for upcoming growth, establish levels of service, and project and estimate growth.

He gave detailed statistics on the existing system, including miles of pipe, wells, tanks, and pressure zones. Sufficient water rights are verified and worst-case scenarios are analyzed.

The plan includes estimates for future growth and the need for capital improvement projects. Growth is picking up. There are several subdivisions ready to go. Growth pays for itself through impact fees.

He showed existing drinking water wells, existing storage tanks, and 220 miles of pipelines. Hydraulic models see some fire flow deficiencies.

Assistant Director Anderson spoke to aging pipes and replacement. Plat A has 100-year-old pipes in the ground. It is expensive to replace. Just because it is old, doesn't mean it is at it's

Pressurized Irrigation

The City models and designs for peak times. There are 262 irrigated acres to expand to 615 in 10 years. Supplementing with culinary water needs to stop.

The system assets are Hobble Creek, Strawberry Reservoir and Bartholomew Pond. We have a lot of water. We are at a surplus for water rights. But as growth comes, that will change. Potential irrigation water rights have 2,976 acre feet available.

Chair Baker asked about water rights in Plat A. Assistant Director Anderson said it isn't in the master plan to put PI in Plat A. He explained installation and costs with flood irrigation. Commissioner Nelson expressed concern about how this is being communicated. Director Stapley said PI is not in the plan for Plat A at this time.

Staff recommends keeping the drinking water impact fee at \$1,266. Secondary water is proposed at \$2,305. The total is \$3,571. It is \$20 less than the current impact fee. We are well below the county average. These fees meet our needs.

The Commissioners discussed aging infrastructure replacement strategy and bonding considerations, long-term fiscal sustainability, historical replacement practices, PI system expansion and implications for Plat A, equity and ratepayer impacts and redundancy and emergency interconnections with neighboring systems.

Assistant Director Anderson clarified replacement costs are not impact-fee eligible, development pays for new infrastructure; ratepayers fund maintenance and replacement and replacement planning will be phased and may involve bonding.

Chair Baker opened the PI public hearing at 8:11 p.m.

Charles (last name inaudible) spoke. He mentioned the audio clarity on YouTube. Unless people speak directly into the microphone, they cannot be heard. His interest is in PI expansion in Plat A during future pipe replacement projects. Director Stapley noted PI expansion in Plat A is a potential future consideration but not currently included in the master plan.

Commissioner Anderson moved to close the PI public hearing. Commissioner Nelson seconded. The public hearing was closed at 8:17 p.m.

Chair Baker opened the drinking water public hearing at 8:18 p.m. Seeing no speakers, Commissioner Nelson moved to close the public hearing. The public hearing was closed at 8:18 p.m.

Commissioner Anderson moved to recommend approval of the Drinking Water Master Plan, Impact Fee Facility Plan and Impact Fee Analysis. Commissioner Calder seconded the motion. The vote to approve the Legislative Session item was unanimous.

Commissioner Pratt moved to recommend the adoption of the Pressurized Irrigation Master Plan, Impact Fee Facility Plan and Impact Fee Analysis. Commissioner Nelson seconded the motion. The vote to approve the Legislative Session item was unanimous.

With nothing further to discuss, Commissioner Nelson moved to adjourn the meeting. Commissioner Anderson seconded the motion. Chair Baker adjourned the meeting at 8:21 p.m.

To: Planning Commission

From: Carla Wiese, Planner/Econ Dev

Date: January 23, 2026

Re: Transportation Impact Fee Facility Plan, and Impact Fee Analysis

Planning Commission Members,

In the following months, the Planning Commission will make recommendations on the master plans submitted by various departments. State Code, in the Land Use Development and Management Act, requires land use decisions to go before the municipality's planning commission, and recently the state legislature expanded the items that would be considered land use decisions to include "... specification, fee, or rule that governs the use or development of land...". Our City Attorney, John Penrod, has advised that the required impact fee facilities plans and analysis fall into this category and, therefore, should be submitted to the planning commission for recommendation to the City Council.

State Code also governs the requirements for cities to impose an impact fee on development. Title 11-36a is the Impact Fee Act, and it defines an impact fee as "... a payment of money imposed upon new development activity as a condition of development approval to mitigate the impact of the new development on public infrastructure." Before a city can impose an impact fee, it must "...prepare an impact fee facilities plan to determine the public facilities required to serve development resulting from new development activity" and "prepare a written analysis of each impact fee".

Each city department that imposes an impact fee will update its Impact Fee Facility Master Plan and Impact Fee Analysis, and will bring these documents to the Planning Commission for recommendations to the City Council. The Mayor and City Council have directed the various departments to review these master plans annually to ensure that the fees are sufficient to fund the infrastructure required by new growth.

I. INTRODUCTION

A. Background

This document is an update to the 2024 Springville City Impact Fee Facilities Plan (IFFP) completed by Horrocks and does not represent an entirely new project planning and impact fee process. This IFFP update is based on the 2024 Springville City Transportation Master Plan (TMP) completed by Horrocks. The following changes have been in coordination with Springville City staff as part of this update:

- Inflating project costs (5% per year) from 2024 TMP to represent 2026 costs
- Growing roadway volumes (2% per year) from the 2024 TMP to represent 2026 daily traffic volumes
- Minor updates in methodology to represent best practices
- Updates to inconsistencies in the 2024 IFFP
- Completed projects have been moved to the buy-in component
- Project funding sources have been updated to reflect the latest understanding of city versus outside funding splits

The 2024 TMP was not updated with the IFFP. Thus, the following was not changed:

- Project list (and specifically the need for these projects)
- Roadway capacities/cross-sections
- Original project cost estimates¹
- Original existing and future traffic volumes estimates

The 2024 TMP provides traffic volumes for 2024 and 2040 scenarios, not 2033. However, 2033 traffic volumes are provided in the previous IFFP. Thus, the traffic volumes used in this update are taken from the previous IFFP. When the TMP is updated, this IFFP should also be updated to reflect the most current analysis and traffic volumes.

B. Overview

The purpose of the Springville City Transportation Impact Fee Facilities Plan (IFFP) update is to identify public roadway improvements that are needed to accommodate anticipated development and to evaluate the amount that is impact fee eligible. Utah law requires cities to prepare an IFFP prior to preparing an impact fee analysis (IFA) and establishing an impact fee. According to Utah State Code Title 11, Chapter 36a, Section 302, the IFFP is required to accomplish the following:

- Identify the existing level of service (LOS)
- Establish a proposed LOS
- Identify any excess capacity to accommodate future growth at the proposed LOS
- Identify demands placed upon existing public facilities by new development activity at the proposed LOS
- Identify the means by which the political entity will meet those growth demands
- Include a general consideration of all potential revenue sources to finance system improvements

This analysis incorporates information from the Springville TMP (2024), which was completed by Horrocks. The TMP includes information regarding the existing and future demands on the transportation infrastructure and the proposed improvements to provide acceptable levels of service. The TMP also provides additional detail regarding the methodology used to determine future travel demand.

This document focuses on the improvements that will be needed over the next 6-10 years. Utah law requires that any impact fees collected for these improvements be spent within six years of being collected. This creates a rolling 6-10 year window depending on when fees are collected. Only capital improvements are included in this plan; all other maintenance and operation costs are assumed to be covered through the City's General Fund as tax revenues increase due to additional development. The city council may choose to adopt a fee lower than the maximum impact fee identified, but not higher.

¹ Cost estimates were updated for a few bridge/culvert projects where the previous cost estimates appeared to be unrealistically low

C. Service Area

The service area for the transportation impact fee analysis is the city of Springville, shown below in **Figure 1**.

FIGURE 1: Service Area – Springville City

II. ANALYSIS METHODOLOGY

A. Purpose

The purpose of this chapter is to discuss the Level of Service (LOS) methodology and the proposed LOS threshold for Springville City roadways. According to Utah State Code Title 11, Chapter 36a, Section 102, LOS is defined as “the defined performance standard or unit of demand for each capital component of a public facility within a service area.” The LOS of a roadway segment or intersection is used to determine if capacity improvements are necessary. LOS is measured on a roadway segment using its daily traffic volume and at an intersection based on a high-level analysis of the intersection.

B. Proposed LOS

Level of Service (LOS) is a term that describes the operating performance of an intersection or roadway. LOS is measured quantitatively and reported on a scale from A to F, with A representing the least traffic congestion and F the most traffic congestion.

LOS methodology from the previous TMP (and thus also the IFFP) are utilized in this update. Information on their methodology is provided on Page 9 of the Springville TMP (2024). These daily capacity thresholds are based on providing LOS D or better during peak hours, and are provided below in **Table 1** and **Table 2**.

TABLE 1: SUBURBAN ARTERIAL LOS CAPACITY CRITERIA IN VEHICLES PER DAY (2024 IFFP TABLE 5)

Lanes	LOS C	LOS D	LOS E
3	12,400	15,100	17,700
5	28,500	32,800	40,300
7	43,000	50,500	63,400

Source: Utah/Wasatch Front Specific Daily Capacity Estimates; MAG & WFRC

TABLE 2: SUBURBAN COLLECTOR LOS CAPACITY CRITERIA IN VEHICLES PER DAY (2024 IFFP TABLE 6)

Lanes	LOS C	LOS D	LOS E
2	9,700	12,100	14,500
3	10,800	13,400	16,100
5	23,100	26,900	33,900

Source: Utah/Wasatch Front Specific Daily Capacity Estimates; MAG & WFRC

The proposed LOS provides a standard of evaluation for roadway conditions. This standard will determine whether or not a roadway will need improvements. According to Utah State Code Title 11, Chapter 36a, Section 302:

“(b) A proposed level of service may diminish or equal the existing level of service.

(c) A proposed level of service may:

(i) exceed the existing level of service if, independent of the use of impact fees, the political subdivision or private entity provides, implements, and maintains the means to increase the existing level of service for existing demand within six years of the date on which new growth is charged for the proposed level of service; or

(ii) establish a new public facility if, independent of the use of impact fees, the political subdivision or private entity provides, implements, and maintains the means to increase the existing level of service for existing demand within six years of the date on which new growth is charged for the proposed level of service.”

As noted in the Springville TMP (2024):

LOS D was adopted by the Springville City Council with the general plan for system streets (collectors and arterials) as acceptable for future planning and was used in this TMP.

Therefore, improvements are recommended and eligible for impact fees for roadways that are projected to operate at LOS E or F in the future.

C. Excess Capacity

An important element of the IFFP is the determination of excess capacity on the roadway network. Excess capacity is defined as the amount of available capacity on any given street in the roadway network under existing conditions. This capacity is available for new development in the City before additional infrastructure will be needed. This represents a buy-in component from the City if the existing residents and businesses have already paid for these improvements.

New roads do not have any existing excess capacity, and roads that are not under city jurisdiction have their capacity information removed from the calculations. The excess capacity for roadways that are identified as needing improvements in the IFFP was calculated and accounted for in the impact fee calculations.

D. Trips

The unit of demand for transportation impact is the PM peak hour vehicle trip. A vehicle trip is defined by the Institute of Transportation Engineers (ITE) as a “single or

one-direction vehicle movement with either the origin or the destination (exiting or entering) inside a study site”. The total traffic impact of a new development can be determined by the sum of the total number of vehicle trips generated by a development during the PM peak hour of a typical weekday. This trip generation number or impact can be estimated for an individual development using the ITE Trip Generation Manual, 12th ed. (2025). ITE’s trip data is based on data collection at numerous sites over several decades.

According to the 2024 IFFP ITE trip generation rates were divided by one-half. This same approach was taken in this updated IFFP.

There is a minor discrepancy in the way ITE calculates trips and the way trips or roadway volumes are calculated in the travel demand model used in the Springville TMP. This discrepancy is explained by the model roadway volumes and capacities being calculated using daily traffic volumes rather than trips on the roadway. Essentially, this means that a travel demand model “trip” or unit of volume is counted once as a vehicle leaves home, travels on the road network, and then arrives at work. These vehicles will only be counted as they travel on the roadway network. The ITE Trip Generation method uses driveway counts as its measure of a trip. Therefore, a vehicle making the same journey will be counted once as it leaves home and once again as it arrives at work for a total of two trips. This can be rectified simply by adjusting the ITE Trip Generation rates by one-half, this calculation will be evident in the IFA.

An additional consideration is that certain developments generate pass-by trips. Pass-by trips are stops taken on the way from one development to another. An example of this is someone stopping at a gas station on the way home from work. The pass-by trip is still counted at the gas station access. However, the pass-by trip was completed by a vehicle already on the road due to other developments.

Pass-by trips do not add additional traffic to the roadway and, therefore, do not create additional impact. Many land-use types in the ITE Trip Generation Manual have a suggested reduction for pass-by trips where applicable. In each case, the trip reduction rate will be applied to the trip generation rate used in the IFA.

E. Cut-through Trips

Trips that do not have an origin or destination within Springville City are referred to as “cut-through trips” or in the 2024 IFFP “pass-through trips”. These trips need to be removed from the impact fee calculation. For example, if the driver of a vehicle starts a trip in Mapleton, travels through Springville City, and ends that trip in Provo, this trip adds traffic to a Springville roadway. However, the cost of the incremental congestion it adds to Springville City roadways cannot be recovered through impact fees. The details behind these calculations are described in Chapter 4 of this document. The details behind the cut-through trips were described on page 16 of the 2024 IFFP.

This percentage is determined using the MAG Travel Demand Model. The Travel Demand Model determines pass-through traffic by keeping track of the origin, destination, and path for each vehicle trip generated. When the vehicle trip uses a roadway in Springville and the origin and destination of that trip is located outside of Springville, that trip is considered a pass-through trip.

F. Existing Overcapacity

If a project is identified for a roadway that is already operating with volumes in excess of the acceptable capacity, the volume of existing traffic that is above capacity is accounted for in calculating the percent of project cost that is eligible for inclusion in the impact fee. The volume of existing traffic that exceeds existing capacity is subtracted from the volume of future traffic that exceeds existing capacity when determining the amount of new development-related traffic projected to use the newly created roadway capacity.

No roadways in Springville with projects planned currently exceed their existing capacity, thus this category was not included in the final impact fee calculation table.

G. Intersection Projects

If trips resulting from new growth require an intersection to be upgraded, the full cost of the intersection is impact fee eligible. If it weren't for new development, the existing intersection configuration would be adequate. Thus, excess capacity is not accounted for with intersection projects.

H. System and Project Improvement

There are nine primary classifications of roads defined in the Springville TMP:

- Principal Arterial
- Major Arterial with Trail
- Major Arterial
- Minor Collector with 10' Trail
- Minor Collector (3-Lanes)
- Minor Collector (2-Lanes)
- Commercial Local
- Residential Local
- Country Lane

For the purpose of capacity in the IFFP, the capacities for arterials and collectors identified in the Existing Traffic Volumes and Level of Service section of the TMP were used.

Improvements made to collectors and arterials are considered system improvements as defined in the Utah Impact Fee Law, as these streets serve users from multiple developments. All intersection improvements on existing and future collectors and arterials are also considered system improvements. System improvements may include anything within the roadway, such as curb and gutter, asphalt, road base, sidewalks/trails, lighting, and signing for collectors and arterials. These projects are eligible to be funded with impact fees and are included in this IFFP.

According to the 2024 IFFP, the City responsibility cost for each new road is determined as the percentage of the total project cost beyond a local street classification. For example, a Minor Collector Street is 17% more costly than a local street. Thus, the City responsible (impact fee eligible) portion of a new Minor Collector is 17%.

III. TRANSPORTATION DEMANDS

A. Purpose

The purpose of this chapter is to identify the existing and future transportation demands on Springville roadway facilities. Future transportation demands are based on new development in the City. Once defined, the transportation demands help identify roadways that have excess capacity and those that require additional capacity due to high transportation demands.

B. Existing Roadway Conditions

The existing LOS of major roadways in Springville City is shown in the TMP. As shown, all major City roadways are currently operating at an acceptable LOS (D or better). Two intersections are operating at LOS E or worse:

- Main Street (US-89) & 400 South (SR-77)
- 400 East & 400 South (SR-77)

C. Future Roadway Conditions

2033 traffic volumes were obtained from the 2024 IFFP (Table 5 on page 17). These volumes were then grown 2% per year to present 2036.

Based on the analysis in the 2024 Springville TMP, the anticipated growth from new development in Springville City will result in **27,255** PM trips in 2033. This is a 41 percent increase in PM peak hour trips from 2024 (19,738 PM peak hour trips). It was not necessary to grow these trips to reflect a 2036 condition as growing both the base-year and the future-year will cancel each other out (assuming the same linear growth for both years).

IV. MITIGATION PROJECTS

A. Purpose

The purpose of this chapter is to discuss the recommended improvements and new roadways that will mitigate capacity deficiencies on City roadways, as well as the cost of those improvements. The cost of the recommended improvements is critical in the calculation of the impact fees.

B. Future Projects

Poor levels of service on roadways are generally mitigated by building new roads or adding travel lanes. In some cases, additional lanes can be gained by re-striping the existing pavement width. This can be accomplished by eliminating on-street parking, creating narrower travel lanes, or adding two-way left-turn lanes where they don't currently exist. Improvements can also be made at intersections to improve LOS by adding turn lanes or by changing the intersection type or the intersection control. At signalized intersections, methods to improve intersection LOS include additional left- and right-turn lanes and signal-timing improvements.

For the purposes of this IFFP, only projects that are planned to be completed by 2036 will be considered. These projects represent a list of needed projects developed in the 2024 TMP and IFFP and do not reflect a full update of evaluating new project needs. **Table 3** and **Table 4** shows all City projects expected to be constructed by 2036, and thus to be included in the IFFP analysis. Project numbering is consistent with the 2024 TMP and IFFP. UDOT projects will be funded entirely with state funds and are therefore not eligible for impact fee expenditure and are not included in this analysis. The roadway and intersection projects planned to be completed by 2036 are shown in **Figure 2** and **Figure 3**, respectively.

The costs shown herein represent current 2026 costs. The impact fee analysis should be updated regularly to account for changes in cost estimates over time.

TABLE 3: SPRINGVILLE CITY 2036 ROADWAY PROJECT LIST

#	Project	Type	Functional Class	Responsibility	2026 Inflated Cost
7B	1200 West: 400 South to 550 North	New Construction	Major Arterial with Trail (5-Lanes)	Springville / MAG	\$6,472,000
7C	1200 West: 550 North to SR-75	New Construction	Major Arterial with Trail (5-Lanes)	Springville / MAG	\$7,998,000
7D	1200 West: 1600 South to Canyon Creek Parkway	New Construction	Major Arterial with Trail (5-Lanes)	Springville / MAG	\$2,616,000
8	1600 South: I-15 to State Street	Widening	Major Arterial (5-Lanes)	UDOT	\$51,408,000
11A	2600 West: 400 South to 500 North	New Construction	Major Arterial with Trail (5-Lanes)	Springville / MAG	\$5,698,000
15	900 South: Spring Canyon Way to SR-51	New Construction	Minor Collector (2-Lanes)	Springville / Developer	\$7,323,000
17	Connection of Wood Springs Drive and 1000 North	New Construction	Minor Collector (2-Lanes)	Springville / Developer	\$1,294,000
19	Center Street: Spring Oaks Drive to 2080 East	New Construction	Minor Collector (2-Lanes)	Springville	\$593,000
45	1500 West: 400 South to 900 South	New Construction	Minor Collector (2-Lanes)	Springville / Developer	\$7,173,000
46	New Road: Mapleton to Spanish Fork	New Construction	Minor Collector (2-Lanes)	Springville	\$8,557,000
47	1000 North: Spring Creek Road to 1000 North	New Construction	Commercial Local (2-Lanes)	Springville	\$3,367,000
49	550 West: 550 West to 450 West	New Construction	Minor Collector (2-Lanes)	Springville / Developer	\$4,732,000
51	700 South: 1500 West to 1250 West	New Construction	Minor Collector with Trail (3-Lanes)	Springville / Developer	\$2,125,000
52A	Frontage Road: 1000 North to Center Street (excluding culvert)	New Construction	Minor Collector (2-Lanes)	Springville / Developer	\$8,136,000
53	2600 West: 550 North to SR-75	New Construction	Major Arterial with Trail (5-Lanes)	Springville / MAG	\$11,153,700
60	900 South: 1750 West to 1500 West	New Construction	Minor Collector (2-Lanes)	Springville / Developer	\$2,314,000
64	950 West: Realignment 700 North to 850 North	Realignment	Minor Collector (2-Lanes)	Springville	\$1,046,000
66	1500 West: Center St to 400 S	New Construction	Minor Collector (2-Lanes)	Springville / Developer	\$5,142,000
67	900 South: 1500 West to 1200 West	New Construction	Minor Collector (2-Lanes)	Springville / Developer	\$2,690,000
70	450 West: 700 South to 1600 South	New Construction	Minor Collector (2-Lanes)	Springville / Developer	\$9,265,000
71	1600 South to Project 46	New Construction	Minor Collector (2-Lanes)	Springville	\$7,786,000
77a	1200 East: Canyon Road to 900 South (with signal)	New Construction	Minor Collector (2-Lanes)	Springville / School District	\$4,614,000
77b	620 South: Canyon Road to 900 South	Realignment	Minor Collector (2-Lanes)	Springville	\$4,449,000

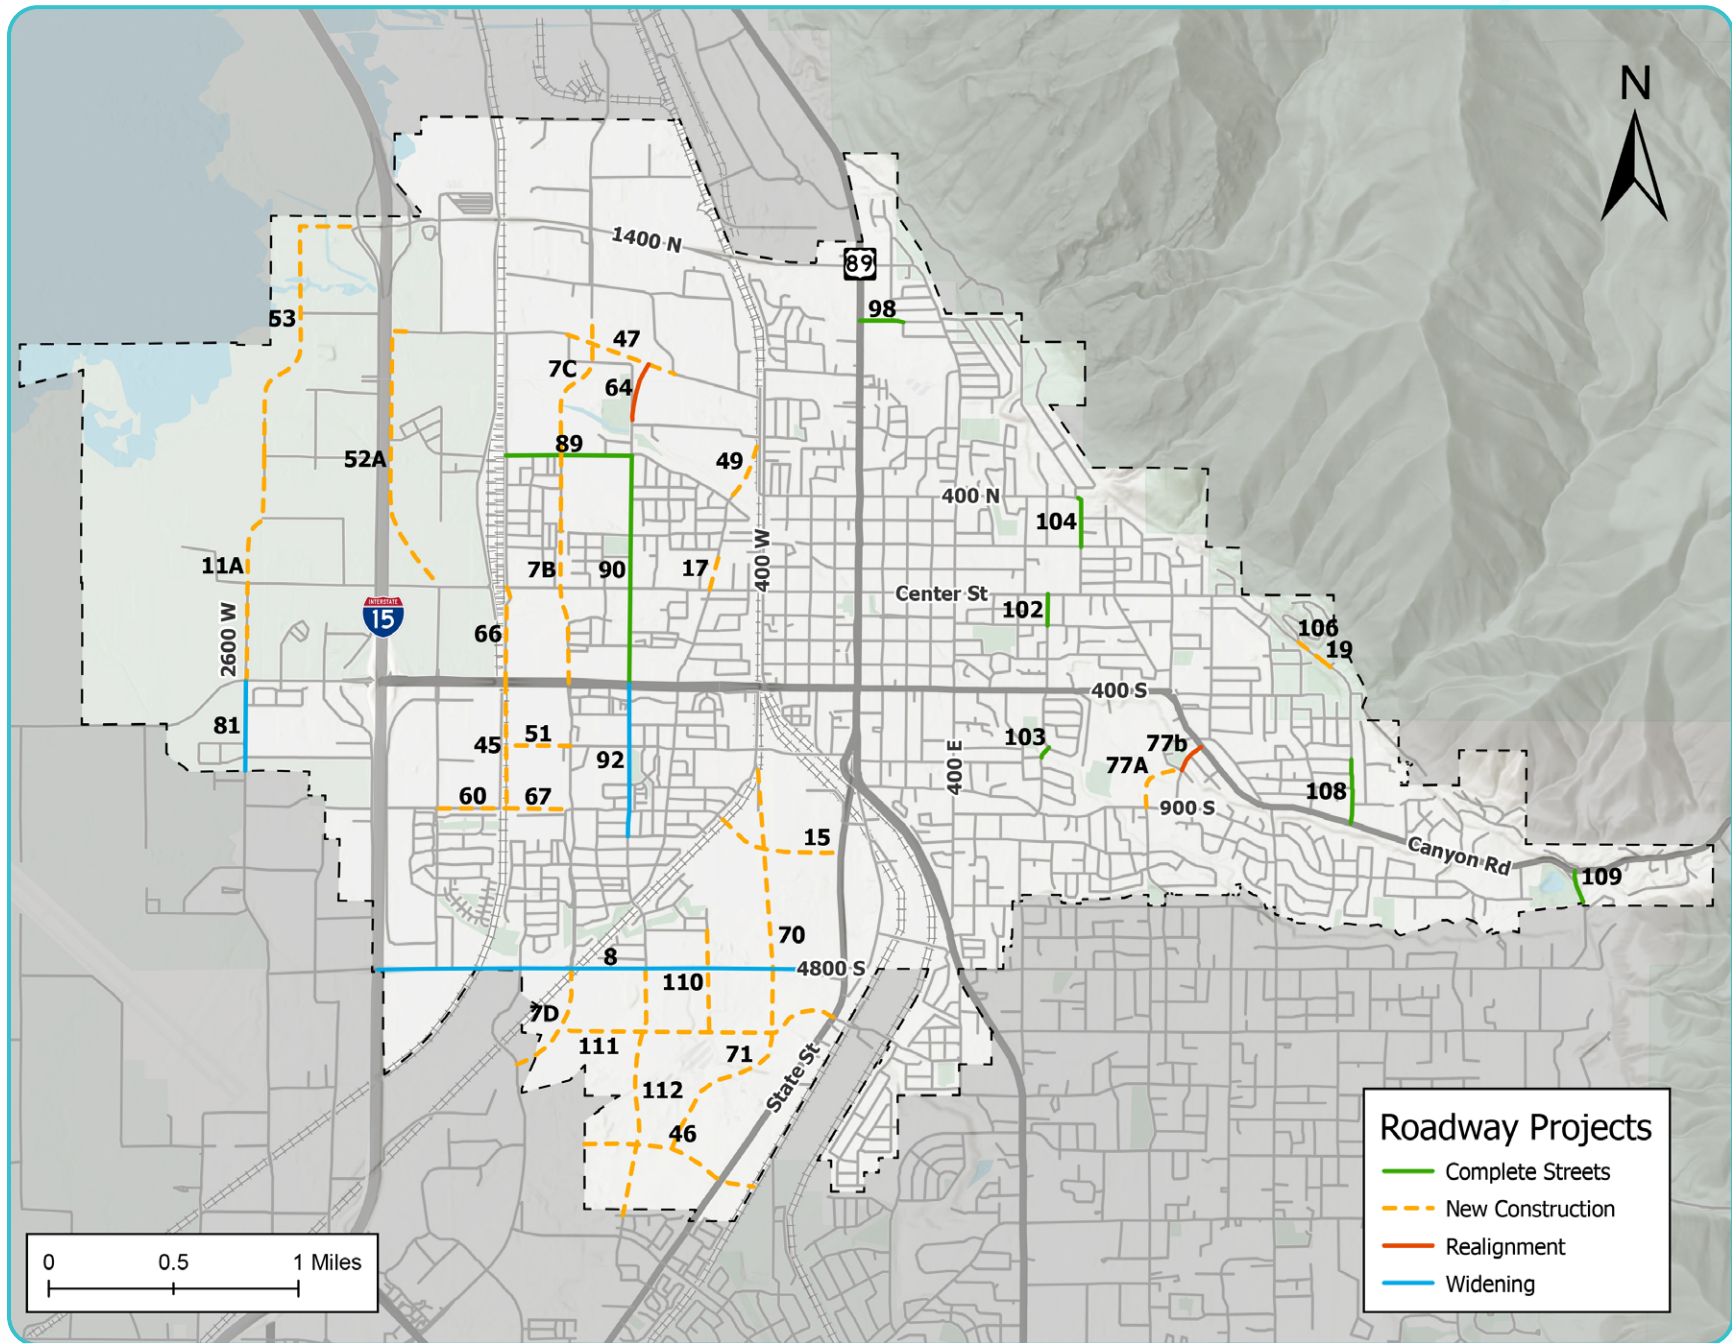

FIGURE 2: Phase 1 Roadway Projects

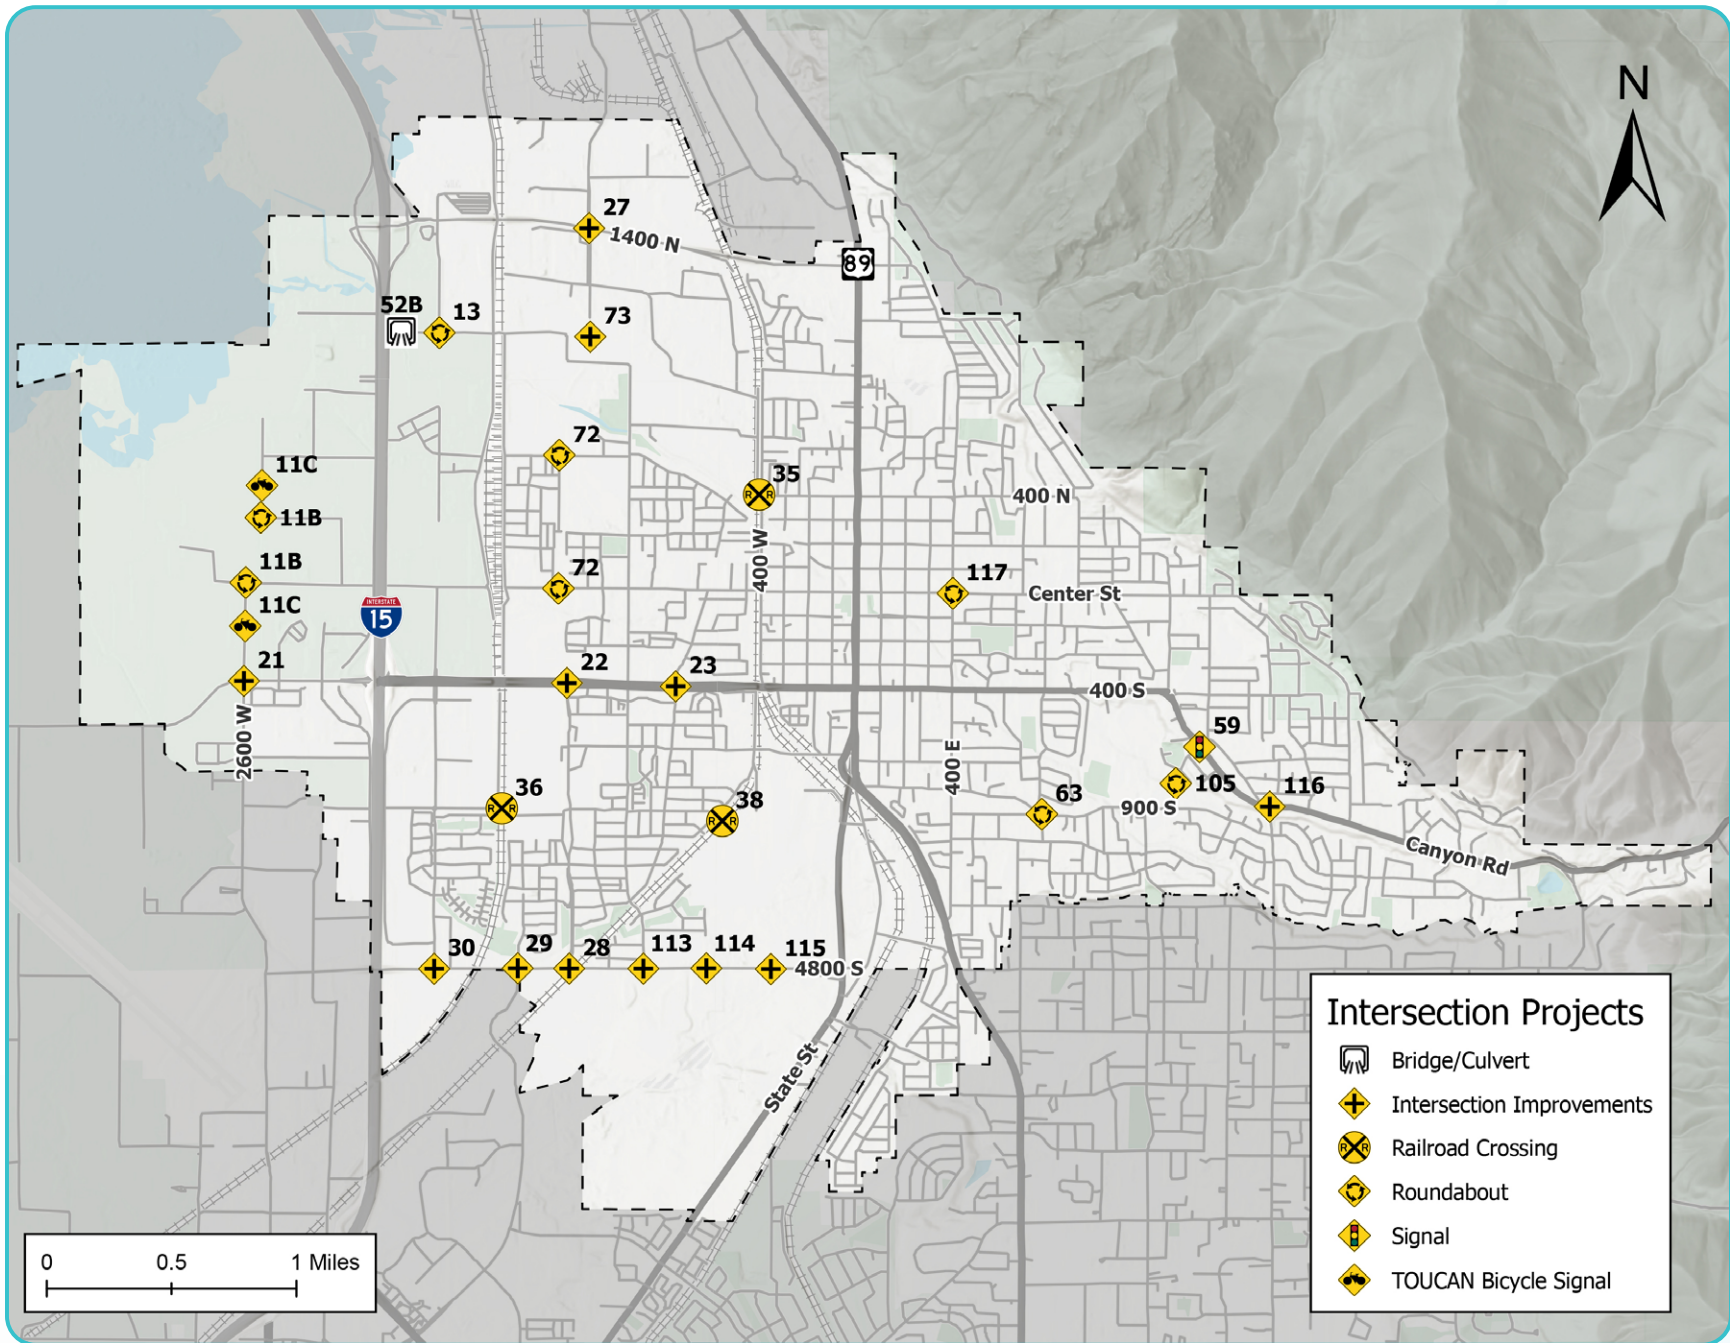

FIGURE 3: Phase 1 Intersection Projects

C. Project Costs Attributable to Future Growth

Table 3 and **Table 4** represent all projects expected to be constructed by 2036 based on the analysis in the TMP. The total cost for all projects is estimated to be **\$234,760,700**. Only a portion of the total cost is impact fee eligible. Some projects are expected to be partially or fully funded by developers. Funding for regional projects can also come through other sources, such as the local metropolitan planning organization, UDOT, or the County. The City will need to find funding to cover the portion of the projects that are not impact fee eligible, and are not fully funded by developers or outside sources. The cost due to future growth can be shared by new development through the assessment of transportation impact fees.

The amount of each project to be funded by impact fees varies depending on the cut-through traffic, projected traffic volumes, and capacity of each roadway. A vehicle trip is considered cut-through when the origin and the destination for a specific trip occurs outside the city limits. Specific cut-through values were assigned to each project roadway based on **Table 5**. Cut-through values which were not provided in this table were estimated based on engineering judgment and previous travel modeling work done for adjacent cities.

TABLE 5: CUT-THROUGH PERCENTAGES (2024 IFFP TABLE 4)

Project	Location	Added Capacity	Pass-Through Volume	Impact Fee Reduction%
7B	1200 West: 400 South to 550 North (New Road)	32,800	817	2%
7C	1200 West: 550 North to SR-75 (New Road)	32,800	817	2%
7D	1200 West: 1600 South to Canyon Creek Pkwy (New Road)	32,800	817	2%
14	900 South: 1200 West to RR Crossing (Project 38)	5,000	279	6%
16	Connection of Mattea Lane & 750 West (New Road)	12,100	242	2%
45	1500 West: Center Street to 900 South	5,000	17	1%
67	900 South: 1500 West to 1200 West	12,100	484	4%
69	700 South New Road: 950 West to 450 West (New Road)	5,000	15	1%
70	450 West New Road: 700 South to 1600 South	5,000	195	4%
81	Spanish Fork Main Street: 400 South to South Border	6,500	1,173	19%

The impact fee eligibility of each project was calculated by dividing the total new development-related component of the future (2036) traffic volume that exceeds existing capacity by roadway capacity added with construction of the proposed project. This eligibility percentage was then multiplied by the project cost to calculate the impact fee eligible cost for each project. The following formulas outline how the impact fee eligible cost was calculated.

$$2036 \text{ ADT in Excess of } 2026 \text{ Capacity} = 2036 \text{ ADT} - 2026 \text{ Capacity}$$

$$2026 \text{ ADT in Excess of } 2026 \text{ Capacity} = 2026 \text{ ADT} - 2026 \text{ Capacity}$$

¹ If 2036 ADT is greater than 2036 capacity, then use 2036 capacity

$$\% \text{ Impact Fee Eligible} = \frac{2036 \text{ ADT in Excess of } 2026 \text{ Capacity} - 2026 \text{ ADT in Excess of } 2026 \text{ Capacity}}{\text{New Capacity}} \times (1 - \% \text{ cut through})$$

$$\text{Impact Fee Eligible Cost} = \% \text{ Impact Fee Eligible} \times \text{Total Project Cost}$$

A summary of the costs and impact fee eligibility of each project is shown in **Table 6** and **Table 7**. As shown, the total impact fee eligible cost for planned Springville City projects expected to be completed by 2036 is **\$27,145,000**.

V. FUNDING SOURCES

A. Purpose

The purpose of this chapter is to identify the funding sources that are available for roadway improvement projects. All possible revenue sources have been considered as a means of financing transportation capital improvements needed as a result of new growth. Funding sources for transportation are essential to enable the recommended improvements in Springville City to be built. This chapter discusses the potential revenue sources that could be used to fund transportation needs.

Transportation routes often span multiple jurisdictions and provide regional significance to the transportation network. As a result, other government jurisdictions or agencies often help pay for such regional benefits. Those jurisdictions and agencies could include the Federal Government, the State (UDOT), the County, and the local MPO (MAG). The City will need to continue to partner and work with these other jurisdictions to ensure adequate funds are available for the specific improvements necessary to maintain an acceptable LOS. The City will also need to partner with adjacent communities to ensure corridor continuity across jurisdictional boundaries (i.e., arterials connect with arterials, collectors connect with collectors, etc.).

B. Federal Funding

Federal money is available to cities and counties through the federal-aid program. In Utah, UDOT administers these funds. To be eligible, a project must be listed on the five-year Statewide Transportation Improvement Program (STIP).

The Surface Transportation Program (STP) funds projects for any roadway with a functional classification of a collector street or higher as established on the Statewide Functional Classification Map. STP funds can be used for both rehabilitation and new construction. The Joint Highway Committee programs a portion of the STP funds for projects around the state in urban areas. Another portion of the STP funds can be used for projects in any area of the state at the discretion of the State Transportation Commission. Transportation Enhancement funds are allocated based on a competitive application process. The Transportation Enhancement Committee reviews all applications and then a portion of the applications are passed to the State Transportation Commission.

Transportation enhancements include twelve categories ranging from historic preservation, bicycle and pedestrian facilities, and water runoff mitigation.

MAG accepts applications for federal funds from local and regional government jurisdictions. The MAG Technical Advisory and Regional Planning Committees select projects for funding every two years. The selected projects form the Transportation Improvement Program (TIP). In order to receive funding, projects should include one or more of the following aspects:

- **Congestion relief** – spot improvement and corridor improvement projects intended to improve levels of service and/or reduce average delay along those corridors identified in the Regional Transportation Plan as high-congestion areas
- **Mode choice** – projects improving the diversity and/or usefulness of travel modes other than single-occupant vehicles
- **Air quality improvements** – projects showing demonstrable air quality benefits
- **Safety** – improvements to vehicular, pedestrian, and bicyclist safety

C. State/County Funding

The distribution of State Class B and C program funds is established by State Legislation and is administered by UDOT. Revenues for the program are derived from State fuel taxes, registration fees, driver license fees, inspection fees, and transportation permits. Seventy-five percent of these funds are kept by UDOT for their construction and maintenance programs. The rest is made available to counties and cities. As some of the roads in Springville fall under UDOT jurisdiction, it is in the interest of the City that staff are aware of the procedures used by UDOT to allocate those funds and to be active in requesting the funds be made available for UDOT-owned roadways in the City.

Class B and C funds are allocated to each city and county based on the following formula: 50 percent based on the percentage that the population of the county or municipality bears to the total population of the state, and 50 percent based on the percentage that the B and C road weighted mileage of the county or municipality bears to the total Class B and Class C road total weighted mileage. Class B and C funds can be used for maintenance and construction projects.

D. City Funding

Some cities utilize general fund revenues for their transportation programs. Another option for transportation funding is to create special improvement districts. These districts are organized for the purpose of funding a single specific project that benefits an identifiable group of properties. Another source of funding used by cities is revenue bonding for projects intended to benefit the entire community.

Private interests often provide resources for transportation improvements. Developers construct the local streets within subdivisions and often dedicate right-of-way and participate in the construction of collector/arterial streets adjacent to their developments. Developers can also be considered a possible source of funds for projects through the use of impact fees. These fees are assessed as a result of the impacts a particular development will have on the surrounding roadway system, such as the need for traffic signals or street widening.

General fund revenues are typically reserved for operation and maintenance purposes as they relate to transportation. However, general funds can be used, if available, to fund the expansion or introduction of specific services. Providing a line item in the City budgeted general funds to address roadway improvements that are not impact fee eligible is a recommended practice to fund transportation projects, should other funding options fall short of the needed amount.

General obligation bonds are debt paid for or backed by the City's taxing power. In general, facilities paid for through this revenue stream are in high demand amongst the community. Typically, general obligation bonds are not used to fund facilities that are needed as a result of new growth because existing residents would be paying for the impacts of new growth. As a result, general obligation bonds are not considered a fair means of financing future facilities needed as a result of new growth. They may be considered as a reasonable method to address existing deficiencies.

Certain areas might have different needs or require different methods of funding than traditional revenue sources. A Special Assessment Area (SAA) can be created for infrastructure needs that benefit or encompass specific areas of the City. The municipality can create an SAA through a resolution declaring that public health, convenience, and necessity require the creation of an SAA. The boundaries and services provided by the district must be specified and a public hearing must be held before the SAA is created. Once the SAA is created, funding can be obtained from tax levies, bonds, and fees when approved by the majority of the qualified electors of the SAA. These funding mechanisms allow the costs to be spread out over time. Through the SAA, tax levies and bonding can apply to specific areas in the City needing to benefit from the improvements.

E. Interfund Loans

Since infrastructure generally must be built ahead of growth, it is sometimes funded before expected impact fees are collected. Bonds are the solution to this problem in some cases. In other cases, funds from existing user rate revenue will be loaned to the impact fee fund to complete initial construction of the project. As impact fees are received, they will be reimbursed. Consideration of these loans will be included in the impact fee analysis and should be considered in subsequent accounting of impact fee expenditures.

F. Developer Dedications and Exactions

Developer dedications and exactions can both be credited against the developer's impact fee analysis. If the value of the developer's dedications and/or extractions are less than the developer's impact fee liability, the developer will owe the balance of the liability to the City. If the dedications and/or extractions of the developer are greater than the impact fee liability, the City may reimburse the developer the difference.

G. Developer Impact Fees

Impact fees are a way for a community to obtain funds to assist in the construction of infrastructure improvements resulting from and needed to serve new growth. The premise behind impact fees is that if no new development occurred, the existing infrastructure would be adequate. Therefore, new development should pay for the portion of required improvements that result from new growth. Impact fees are assessed for many types of infrastructure and facilities that are provided by a community, such as roadways. According to state law, impact fees can only be used to fund growth-related system improvements.

According to State statute, impact fees must only be used to fund projects that will serve needs caused by future development. They are not to be used to address present deficiencies. Only project costs that address future needs are included in this IFFP. This ensures a fair fee since developers will not be expected to address present deficiencies.

Legislation requires that impact fees should be spent or encumbered within six years after each impact fee is paid. Impact fees collected in the next six years should be spent on those projects outlined in the IFFP as growth related costs to maintain the City established LOS. Impact fees collected as buy-in to existing facilities can be allocated to the General Fund to repay the City for historic investment.

VI. IMPACT FEE CERTIFICATION

A. Overview

This report has been prepared in accordance with Utah Code Title 11, Chapter 36a, "Impact Fees Act." This report (including its results and projections) relies upon the planning, engineering, land use, and other source data provided in the Springville City TMP (2024) completed by Horrocks.

In accordance with Utah Code Annotate, 11-36a-306(1), METHODS Consulting certifies that this impact fee facilities plan:

1. Includes only the cost of public facilities that are:
 - a. allowed under the Impact Fees Act; and
 - b. actually incurred; or
 - c. are projected to be incurred or encumbered within six years of the day on which each impact fee is paid;
2. Does not include:
 - a. costs of operation and maintenance of public facilities; or
 - b. costs for qualifying public facilities that will raise the level of service for the facilities, through impact fees, above the LOS supported by existing residents; and
3. Complies in each and every relevant respect with the Impact Fees Act.

This certification is made with the following limitations:

- All of the recommendations for implementing this IFFP and IFA are followed in their entirety by the City.
- If any portion of the IFFP is modified or amended in any way, this certification is no longer valid.

All information presented and used in the creation of this IFFP is assumed to be complete and correct, including any information received from the City or other outside sources.
