BACKGROUND

The Monticello Wastewater Treatment Facility (Facility) was designed to store the effluent during the non-irrigation months and use the water for irrigation during the cultivating season. The Facility is a 38.5-acre, 5 cell, non-aerated, lagoon system, with the first 4 cells having a water depth from 3 to 6 feet and the final cell (winter storage pond) having a maximum water depth of 12 feet. The average design flow is 0.32 million gallons a day (MGD), and the design population equivalent is 3,000. Monticello City's population is estimated to be about 1,900 people. Designed as total containment lagoons, the Facility has only had to discharge to waters of the State in years where the precipitation is higher than average and the irrigation demand was less than expected. See Permit and Fact sheet for more information.

PUBLIC COMMENTS

Pursuant to Utah Admin. Code R317-8-6(6.6), any interested person may submit written comments on the draft permit documents and may request a public hearing if no hearing has already been scheduled. A request for a public hearing shall be in writing and shall state the nature of the issues proposed to be raised in the hearing. All comments will be considered in making the final decision and shall be answered as provided in Utah Admin. Code R317-8-6(6.12).

Commenters have an affirmative obligation to raise all reasonably ascertainable issues and submit all reasonably available arguments and factual grounds supporting their position, including all supporting
