

MAGNA MOSQUITO ABATEMENT DISTRICT

MANAGERS FIELD REPORT

JULY 1, 2026

Happy 4th of July! This is always the longest week of the summer but I think things are going well. To date we have treated 440 acres with the drone and over 500 acres total. This does not include the acreage treated with our ULV treatments.

Janae is doing most of our mosquito testing and to this point we have no positive samples for any disease. We have tested 143 samples from all of our traps, which is over 11,000 mosquitoes. The state has already seen 17 positive West Nile Virus samples which is surprising this early in the season. Salt Lake has 7 positive samples, Davis County has 7, Utah County has 2 and Moab has 1. To clarify, we have seen West Nile this early before, just not in these numbers. Unfortunately it is only a matter of time until we start seeing positives in our District.

We are operating as if we do have positive West Nile because we more than likely do somewhere. This week we are doing ULV treatments every night in preparation for all the outdoor events people will participate in.

I have also been compiling information on a new drone and the information on them is attached to this report. One last thing, one of our seasonals got a new job with Enbridge and his last day was Monday. I was able to quickly get the word out, we had a couple interviews and we have since replaced him.

The one thing that stays consistent in mosquito control is that every mosquito season is different from any other. Thank you,

<u>Company</u>	<u>Ready to Fly Bundle</u>	<u>Cost</u>
NuWay Ag	Talos T60X	\$30,995.00
NuWay Ag	Agras T50	\$20,335.00
Volitant Tech	Talos T60X	\$29,520.44
Volitant Tech	Agras T50	\$27,599.00
Talos Drones	Talos T60X	\$28,694.00
Talos Drones	Agras T50	\$21,534.00
