

1. Artificial Intelligence Student Taskforce

- a. Overview: Students, along with their teachers, are affected by AI every day in and outside of the classroom. Student voice can provide powerful insights into how these tools are being used, potential policy around them, and how we can best support our Utah students. Creating a Artificial Intelligence Student Taskforce, as a offshoot of the Student Advisory Committee, can help the board better understand AI's place in student learning and policy.
