

Majestic Fields Elementary
675 East Majestic Drive
Washington, UT 84780
Principal: Melissa Lane

"The Future Belongs to the Curious."

Dear School Board Members,

TSSA Goals

Goal #1: All 3rd–5th grade students will achieve a median growth percentile (MGP) of 60% on RISE Literacy, RISE Science, and RISE Math assessments.

Goal #2: 88% of students will achieve typical, above-typical, or well-above-typical growth on Acadience EOY Literacy assessments.

Goal #3: 88% of students will achieve typical, above-typical, or well-above-typical growth on Acadience EOY Math assessments.

Requested Amendment

The school is requesting to amend the current TSSA Plan to provide flexibility in using funds to directly support the implementation of the three academic growth goals identified above. Funds may be used in the following areas:

1. Substitute Costs

TSSA funds may be used for substitute costs that allow teachers to participate in professional development, professional learning communities, collaborative planning, data analysis, student intervention planning, and other activities directly connected to improving student achievement in literacy, mathematics, and science.

2. Food for Professional Development Days

Funds may be used for food and refreshments associated with school-sponsored professional development days. These expenditures support staff participation in extended professional learning focused on instructional strategies, assessment data, intervention, and practices designed to increase student growth in literacy, mathematics, and science.

3. Technology and Technology Software

Funds may be used to purchase technology, technology-related equipment, educational software, digital instructional resources, and software subscriptions that support literacy, mathematics, science, assessment, intervention, progress monitoring, and differentiated instruction. These resources will be selected based on their ability to support the school's academic growth goals and improve student learning outcomes.

4. Summer Work Hour Stipends

Funds may be used to provide stipends for approved summer work that directly supports the implementation of the TSSA Plan. Summer work may include analyzing student achievement data, developing instructional plans and resources, preparing interventions, curriculum planning, and other activities designed to strengthen instruction and support student growth in literacy, mathematics, and science.

Rationale for Amendment

These amendments will provide the school with greater flexibility to direct TSSA funds toward activities and resources that directly support student academic growth. The requested expenditures will provide teachers with opportunities for professional learning, collaboration, data analysis, instructional preparation, and access to technology and resources that support effective instruction and intervention.

Together, these expenditures will support the school's efforts to achieve the identified targets for RISE and Acadience growth and ensure that TSSA funds are used strategically to improve student outcomes.

Thank you for your consideration!
