

Dear Members of the Snyderville Basin Cemetery District Board,

The Bear Hollow Community Affairs Committee is writing to formally present the results of our comprehensive neighborhood survey conducted throughout August and September 2026. As the committee tasked with analyzing community impacts and representing the collective interests of our residents, we must inform you that our neighborhood has delivered an overwhelming mandate: **82% of responding households demand that the County find a more appropriate cemetery site, and 74% are explicitly non-supportive of a cemetery at this proposed location.**

As a board tasked with creating a dignified, peaceful final resting place, forcing a project onto a corner that faces near-total community rejection is fundamentally counterproductive. The data compiled by the Community Affairs Committee highlights insurmountable planning conflicts:

- **Irreconcilable Use Incompatibility:** Placing a reflective municipal burial ground directly adjacent to the high-energy, high-noise western boundary of the Run-A-Muk off-leash dog park is a severe planning flaw. The noise from hundreds of barking dogs and active trail users directly undermines the serene environment required for a cemetery.
- **Traffic and Safety Infrastructure:** **71% of our residents** expressed critical concern over traffic on SR-224 and Bear Cub Drive. The Community Affairs Committee will actively oppose any design that attempts to use Bear Cub Drive as an operational staging ground or entry point for heavy services and funeral processions.

With a mere **3% community support** for these projects, the Community Affairs Committee strongly urges the Cemetery District to respect the community data, avoid an adversarial development process, and pivot your search to more isolated, appropriate parcels within the Snyderville Basin.

Sincerely,

Craig Ungaro

Member of The Bear Hollow Community Affairs Committee
