Hi - We're the owners on #106 77 Juniper Lane and wanted to voice a concern with the current construction happening there as well as the proposal. It seems debris and additional water runoff from the site is draining into our common area drainage grate and it can't handle the increased debris/volume - it caused flooding last month that entered the unit. We would like to know what the drainage plans are for the current construction and the proposed 11 space lot. We feel the additional construction will make matters worse leading to more flooding. Any info and discussion is welcome and appreciated! Thank you for the public forum.
