<p>April 28, 2015 Greetings, As one of the primary authors of the comments submitted by the Wasatch Backcountry Alliance (WBA), I support and endorse the WBA comments. In order to not be redundant, I submit only the following brief comments: NEPA The Mountain Accord is being conducted as a precursor to the NEPA process. Therefore it is not unreasonable to view the intent of the Mountain Accord as essentially NEPA Scoping. Funding for the Mountain Accord includes money with a likely source that includes funds provided by the State of Utah that are essentially being passed through the State from Federal sources. Based on the funding factor alone, there is likely a Federal Nexus and therefore, the Mountain Accord process in its entirety must be part of legal record as per NEPA requirements. Therefore all comments must be reviewed, addressed and responded to as per NEPA regulations. Public Involvement The Mountain Accord has failed in terms of getting the public informed and involved. Considering the large amount of funding provided, it is a surprise that more money was not allocated for an aggressive Public Relations campaign. Moving forward, the Mountain Accord must do a better job at public involvement. Ski Area Expansion I personally do not support ski area expansion in any manner. Dispersed users have been losing terrain for the last 40 years. Backcountry skier numbers and densities have been growing rapidly. There is no justification to increase the footprint of for-profit ski areas at the expense of other public lands users. In addition, ski area expansion has the potential for significant impacts to wildlife, natural habitats and the watershed health of the Central Wasatch. The impacts of ski area expansion such as increased use of sidecountry must be analyzed very rigorously. One example is Solitude's proposed expansion into Silver Fork. While encompassing only 70 acres, it provides easy "no-effort, glide-return" access, along with associated impacts to an additional 250 acres of new sidecountry in Silver Fork alone for a total impact of 320 acres.. I have attached a map detailing the area of these impacts to this letter. This is similar to the 9,990 lift at the Canyons Resort which has been shown to have verifiable impacts to dispersed public lands users on the Park City Ridgeline and Big Cottonwood Canyon. Entrenched Consultants I support and suggest that a new set of consultants be used for portions of the NEPA analysis. This will allow the project to be evaluated with a fresh set of eyes and may provide additional out-of-the-box thinking. Based on my experience with the Transportation subgroup, I feel that some of the consultants may be too close to and biased by the agencies that they have had longterm relationships with. In closing, I would like to thank the Mountain accord for allowing me to be part of the process.</p>	Salt Lake City, UT	4/28/2015
<p>I sincerely feel that the pristine state of our canyons needs to be preserved. Albion Basin and Mt. Superior are treasures for their beauty. Salt Lake cannot be shortsighted and allow development to ruin our watershed. The peace and beauty of undeveloped land is essential in my opinion for one's spiritual development and health of mind. With the creation of the Canyons, Utah now has the largest ski resort in the United States. Alta does not need to expand and keep up. <u>I hope you will stand up to the developers. Please keep Alta as pristine as it now is.</u></p>	Salt Lake City, UT	4/28/2015
<p>There have been many discussions about transportation up Big and Little Cottonwood Canyons and this is the topic I would like to address. Although trains have been a successful mode of transportation to ski areas in Europe they are outdated and too restrictive. With the advent of clean fuel vehicles and new streamlined buses the way to move forward to ease the transportation issues in Big and Little Cottonwood Canyons is to consider closing the road to private non-authorized vehicles and using a rotating bus system. If buses are run continuously with a mix of express - straight to the ski areas and tour, stopping at trail heads, this would meet everyone's needs. One issue that is constantly addressed when public transportation issues arise is parking. I suggest that transportation hubs are developed away from the mouth of the canyons. Instead they would be situated in business districts such as the Gateway, Sugarhouse, Southtowne The District, Day Break. This will not only clear congestion on the access roads to the canyons but also bring people to the businesses where the hubs are located. This would take careful planning and support from local businesses. Thank you for your time</p>	Salt Lake City, UT	4/28/2015
<p>I'll keep my comments short and sweet, as I'm sure there are many you're sorting through right now. Everyone has a claim to the backcountry... we live in a majestic place. But think about the future as you divvy up the very limited resources that we have, and balance that with what we want to hand off to generations to come. As a result, I come down on the side of protection - leave open space just that - open space. Keep pollution to a minimum - protect our watershed, protect our sound shed, and protect our land and habitats. Therefore... NO to expansion of ski resorts. Keep them all within their current boundaries. NO to a linking of ski resorts by ways of lifts or trams Economics come to the area by way of beautiful places - not by way of blight. Trams, lifts, excessive people, development = blight. But most importantly.... Our watershed protection is paramount. We live in a unique area where so much of one of our most valuable resources comes to us cheaply and easily. Don't squander that for a quick buck. The developers, resorts and "political experts" will spin it as good for the community because it brings people to our communities. But when less than 13% of the Salt Lake Valley residents ski, but 100% of them need water, let's look to the greatest good for the greatest number of people. Once the watershed protection is gone, it's gone for good. Thank you.</p>	Salt Lake City, UT	4/28/2015
<p>I am very much opposed to the idea of a tunnel between LCC and BCC. Alta has nurtured such a unique feel with its idyllic setting and down home ambiance set at the end of a box canyon. Having a train station that brings people over from PC on a daily basis would drastically change that ideal. Once it's gone—it's gone forever. Alta will never be the same, and what makes it so unique will only been seen in the black and white photos that hang at the Alta Lodge. At some point, we must recognize that the reason we all love Little Cottonwood Canyon is because it ISN'T like Vail, or places in Europe. It does not need a train through a mountain! And doesn't it seem ethically wrong to spend all this money and enormous carbon footprint in an effort to serve the top 1-2 percent of the population? That's poor stewardship if I've ever seen it. Thank you.</p>	Salt Lake City, UT	4/28/2015

<p>Hello Council members,  Thank you all, again, for your time, energy, critical analyses, and dedication to our beautiful backyards.  I attended the information meeting on the Mountain Accord on Tues., then re-read the Blueprint and other information on the Mountain Accord website. I also read the article in today's Park Record summarizing your discussion. Overall, I feel the Blueprint is too vague to support or oppose at this point. I have submitted comments on the Mountain Accord website about the plan, and I have the following comments/questions regarding its impact on Summit County specifically:  Like some of you, I feel the plans proposed in the Blueprint do not benefit Summit County in any significant way, and question whether it's worth the money and time to participate. The Blueprint addresses some transportation suggestions for getting people to/from Summit County &amp; Park City. But these ideas are already being discussed locally. The County and Park City have already paid for and conducted recent Transportation Studies. We know what our issues are, and have begun to study options to deal with them. Once people are here, the Blueprint does not address the ancillary processes of getting them to their individual destinations. Transportation is the cog that will drive the County's economy, environment, and recreation in the foreseeable future. The economic, environmental, and recreational components of the Blueprint seem geared for the Cottonwood Canyons &amp; the ski areas specifically.  I adamantly oppose a cross-mountain connection of any type other than trails between the Cottonwood Canyons and Park City/Summit County. NO TUNNELS. NO TRAMS. NO SKI LIFTS. The damage to the environment, &amp; the costs of building and maintaining these connections far exceed any economic benefit to any entity other than ski resorts. The reality of skiing from one side to the other will ultimately involve a motor vehicle for transporting luggage, gear, or other family members; or for returning to the original location at the end of the day (or night). I am very happy to hear that the Council (&amp; Park City Council) is opposed to such connections, too.  At this point, I feel the benefits to continuing to participate, at least for the short-term, are: 1. Opposition to the cross-mountain connection can be heard often, and emphatically so that it won't be ignored in future discussions 2. We might learn something about the realities of implementing some of the proposals 3. It keeps us abreast of what's being considered 4. It maintains our commitment for regional planning 5. It leaves options for bowing out in the future, 6. It allows us to develop relationships with many players that could be mutually beneficial in the future when we are faced with other issues.  My questions are: 1. Does our participation improve the ability of the County to avail itself of Federal or State funds to pay for implementation of the plan? 2. What legal authority will the plan have relative to our General Plan and Building Code? 3. What, specifically, is our "seat at the table" money being used for (up to this point &amp; for the next 3 yrs)? 4. Is it possible to commit to participate for less than 3 years, at a reduced cost to the County? 5. How are local resorts involved in the Mountain Accord discussions and solutions (other than via the blanket of SkiUtah)?  Thank you for considering my comments; and, in advance, for answering my questions.</p>	Salt Lake City, UT	4/28/2015
<p>The Wasatch Mountains are a critical resource for Utahns and visitors from all parts of the world. Protecting the Wasatch Mountains' environment should drive the Mountain Accord Blueprint, and be a pre-condition to any development strategies seriously considered.  Public transport up the canyon must be frequent, comparable in travel time to driving and affordable, or people will continue to drive. A railway would be visually intrusive, noisy and diminish the wilderness character of the canyon. Construction and operation would likely have damaging impacts to water quality and wildlife. Instead, a dedicated bus lane should be considered, constructed by widening the road to three lanes where practical, with an alternate flow lane to accommodate bus traffic during morning and afternoon peak times in the winter.  Avalanche protection might be added in Little Cottonwood to improve reliability of access, if built with a visually acceptable design.  Tunnels among Little Cottonwood, Big Cottonwood, and Park City would mainly support ski resort marketing and would do little to address regular transit needs for residents. Tunnels may pose significant environmental concerns during and after construction such as water pollution, air pollution, noise, and permanent visual disturbances in our scenic canyons. Tunnels would incur significant construction and maintenance costs, and would disproportionately benefit out-of-state ski-area customers rather than Utahns.  Land exchanges that preserve pristine backcountry in the Wasatch while allowing limited additional development in already impacted areas are potentially a good idea. These exchanges also offer the potential for reducing conflicts over wilderness designation and other protections on public lands. Permanent protection for public lands, such as those proposed in the Wasatch Wilderness and Protection Act in 2010, is important for watershed, wildlife and back country solitude.  One of the most important outcomes from the Mountain Accord process would be to create permanent, limited boundaries beyond which ski resorts will not be able to expand.  Have potential impacts from the following factors been fully evaluated?  *The Utah State Climatologist projects declining snow packs with spring snow disappearing by 2100. How will Climate Change impact demand for skiing?  *Today's youth spend half as much time outdoors as their parents. How will this affect future ski area attendance?  Doing the least harm to our unique environment is the prudent course for Mountain Accord in the face of uncertainties over what the actual demand will be for ski resort access in the future.</p>	Salt Lake City, UT	4/28/2015

How will Climate Change impact demand for skiing?</p> <p>*Today's youth spend half as much time outdoors as their parents. How will this affect future ski area attendance?</p> <p>Doing the least harm to our unique environment is the prudent course for Mountain Accord in the face of uncertainties over what the actual demand will be for ski resort access in the future.</p>	Salt Lake City, UT	4/28/2015
<p>The Wasatch Mountains are a critical resource for Utahns and visitors from all parts of the world. Protecting the Wasatch Mountains' environment should drive the Mountain Accord Blueprint, and be a pre-condition to any development strategies seriously considered.</p> <p>Public transport up the canyon must be frequent, comparable in travel time to driving and affordable, or people will continue to drive. A railway would be visually intrusive, noisy and diminish the wilderness character of the canyon. Construction and operation would likely have damaging impacts to water quality and wildlife. Instead, a dedicated bus lane should be considered, constructed by widening the road to three lanes where practical, with an alternate flow lane to accommodate bus traffic during morning and afternoon peak times in the winter.</p> <p>Avalanche protection might be added in Little Cottonwood to improve reliability of access, if built with a visually acceptable design.</p> <p>Tunnels among Little Cottonwood, Big Cottonwood, and Park City would mainly support ski resort marketing and would do little to address regular transit needs for residents. Tunnels may pose significant environmental concerns during and after construction such as water pollution, air pollution, noise, and permanent visual disturbances in our scenic canyons. Tunnels would incur significant construction and maintenance costs, and would disproportionately benefit out-of-state ski-area customers rather than Utahns.</p> <p>Land exchanges that preserve pristine backcountry in the Wasatch while allowing limited additional development in already impacted areas are potentially a good idea. These exchanges also offer the potential for reducing conflicts over wilderness designation and other protections on public lands. Permanent protection for public lands, such as those proposed in the Wasatch Wilderness and Protection Act in 2010, is important for watershed, wildlife and back country solitude.</p> <p>One of the most important outcomes from the Mountain Accord process would be to create permanent, limited boundaries beyond which ski resorts will not be able to expand.</p> <p>Have potential impacts from the following factors been fully evaluated?</p> <p>*The Utah State Climatologist projects declining snow packs with spring snow disappearing by 2100. How will Climate Change impact demand for skiing?</p> <p>*Today's youth spend half as much time outdoors as their parents. How will this affect future ski area attendance?</p> <p>Doing the least harm to our unique environment is the prudent course for Mountain Accord in the face of uncertainties over what the actual demand will be for ski resort access in the future.</p>	Salt Lake City, UT	4/28/2015

<p>Dear Fellow Constituent,</p> <p>In politics, the squeaky wheel will prevail but in most other terms, logic should prevail. We can safely state: Water will prevail, in land planning, but no one connects the dots how the environmental stress is best managed. Unlikely the way UDOT manages and upgrades the canyon highways, unlikely by long highway shoulder parking.... Environmental quality management calls for research and maybe this will be weaved into Impact Statements; however, the simplification of making canyon visitor numbers proportional to i.e. water quality impact is a rather unsophisticated answer.</p> <p>It would appear that we could look at alternatively managed watersheds in Europe for example, where exactly the same set of questions have been encountered and were "permanent land use" has been legislated well ahead of a Mountain Accord.</p> <p>It appears that for example in the Jungfrau Region, they learnt to deal with a much higher occupation of a much more limited recreation footprint without damaging the water quality, the environment and the enjoyment. It seemed to be a shining example of those that have visited the area.</p> <p>Unfortunately, one thing that is in common, the climate is out of control on the entire Globe.</p> <p>Okay, since the climate is not willing to obey man's permanent formulas of land use, we can do two things:</p> <ol style="list-style-type: none"> <li>1) Nothing.</li> <li>2) Reduce carbon footprint most effectively on the steeper highways.</li> </ol> <p>So then, keeping water quality high and carbon footprint low, suggest the use of modern transportation technology.</p> <p>The most proven such technology for an avalanche riddled canyon like the Little Cottonwood Canyon is a mountain railway. This had been said 50 years ago, repeated 30 years ago, forgotten 20 years ago (due to tunnel visions) and accepted by 75 % of respondents to good questions posed by Envision Utah 5 years ago. Will we get it right this time?</p> <p>I start seriously wondering what research could do to support decision making. There certainly is not one unified formula for transportation in our Wasatch Canyons. It would be unforgiven to ignore avalanches for example. Since snow slides are one of these items that will prevail in land use planning. Some of the decision parameters are very forceful and it is not really logical to design a unified transit system with guided buses that will do it all. Fortunately rail mass transit has been established in the valley below with much accessible parking sitting empty during peak recreation demand. If there is one advantage of mass transit it is to have common destination points, like our resorts, therefore these destinations are the most obvious to link with our quite extensive urban mass transit effort. One would think this is good for everyone, after all the Forest Service does have a mandate to manage the area in question for everyone and are (anxiously) awaiting a guideline.</p> <p>Thank you for your interest in the long term vision.</p>	Salt Lake City, UT	4/29/2015
<p>Good day,</p> <p>I'm writing to express my support on ONE Wasatch and the over-the-snow connectivity. As our population grows and tourism increases we need improved transportation options to our ski resorts.</p> <p><u>I rarely go to the resorts up Big or Little Cottonwood Canyons on a weekend in part due to the traffic issues.</u></p>	Salt Lake City, UT	4/29/2015
<p>To whom it may concern:</p> <p>I am herewith submitting comments on the Mountain Accord. Generally, I endorse the positions taken on the Accord by Friends of Alta, the Wasatch Backcountry Alliance, and Save Our Canyons. However, my stance may advance an even stronger prioritization of environmental protection in this process than even these organizations do.</p> <p>Briefly, I oppose any actions that will further commercial development or environmental deterioration of the Central Wasatch, including but not exclusively: ski resort expansions/lift extensions (such as those proposed in the Cottonwood Canyons Task Force); resort interlinking schemes of any sort (aerial tramways, lifts, tunnels, et al.); trains or other major new costly transportation infrastructure construction, including new road lanes. I also resolutely oppose any and all unnecessary natural resource exploitation – both present and proposed – such as, e.g., snowmaking by the resorts using scarce freshwater. I consider unacceptable any public financing of any projects whose primary beneficiaries would be for-profit private enterprises.</p> <p>I support any actions that will strictly protect existing open space and public lands, and increase the extent in area and strength of protection, and integrity of, such lands. As such, in the Blueprint I support the proposed permanent protection of the Emma-Superior ridgeline, and the 250 acres near Guardsman Pass. However, I believe the Accord falls far short of, and needs to go much further in, advancing such protections. Regarding transportation options, I strongly endorse, instead of a train or other schemes requiring major construction and public expense (including new lanes), an enhanced bus service, perhaps including a Bus Rapid Transit (BRT) system up the canyons that is designed in a way to both incentivize use and dis-incentivize private automobile use, and is comprised of an alternatively-powered bus fleet (e.g., hybrid-electric).</p> <p>I believe protection of wildlife habitat and watershed/ecosystem integrity should be the paramount principles guiding the future of the Central Wasatch. Accordingly, I argue that the four focal areas identified in the Blueprint should not be considered equally important or given equal weight, but should be ranked, with environment being the highest-ranking, and the others being subordinate to that, and indeed having to satisfy the criterion of non-harm/non-violation of the environment before being considered. As such, the stated goals under the 'Economy' section to "Generate sustainable economic growth" and "Ensure the tourism market is competitive now and into the future", are, in my view, misguided. The former strikes me as a self-contradictory goal, an "impossibility theorem" in the words of ecological economist Herman Daly. Sustainability per se, or environmental protection/integrity, should be the goals, which may require even reduction of economic growth in the Central Wasatch, or at least no further growth, but certainly not more growth. The latter, as well, seems impossible to reconcile with the environmental protection imperative. I would formulate the goal differently: Tourism (or the 'tourism market'), and the quantity and quality of tourism, can occur in the Wasatch only insofar as it is compatible with no further environmental deterioration or stress. If it violates that first principle, it should not be permitted.</p> <p>Thank you for the opportunity to comment.</p>	Salt Lake City, UT	4/29/2015

<p>I support One Wasatch</p>	Salt Lake City, UT	4/29/2015

<p>28 April 29, 2015  Subj: Transportation  Committee Members,  Please believe that the following proposal, though it may seem extreme, may not be without merit considering the future of travel along the east bench.  As a resident and user of the canyons, I have lived at my current resident at 74th south and 36th east for 40 years this January. I am 75 years old and retired last June, having spent 9 years as Vice President of Operations and Chief Quality Officer of a Salt Lake medical firm. In the 47 years that I have worked in the Salt Lake valley, I have travelled the east bench corridor, first for 15 years to the University of Utah, the remainder in the central valley, and have watched the addition of I-215 and increase of traffic along Wasatch and Foothill Boulevards. My wife and I have been season ticket holders at Brighton Ski Resort annually, and visit all of the other resorts at least once a year. We have seen the gridlock at the mouths of the canyons for avalanche control during rush hour. We are aware of the development surrounding Big Cottonwood's entrance, the possible addition of a shopping center and theater in the empty gravel pit, and what a nightmare of traffic there will be.  Though there are many critics of the UTA and their operations, in retrospect, you have to admit that quite awhile back, some people had a very futuristic idea of what the valley was ultimately going to need as the population spreads to fill the valley floor and every 16 year old each year gets a car.  The first rail line down the middle of the valley must have been on a "build-it-and-they-will-come" premise. You knew that the "Christmas tree" pattern that has emerged to access the rest of the valley population was only a matter of time and necessity.  OK, getting to the practical details... I believe that an east bench transportation system should be created and that it should be a monorail. Now, hear me out first. I am aware of the costs, the ADA accessible issues. But, people, think of the future. Build monorail lines up Big and Little Cottonwood canyons first. They will not need on-grade excavations, quite possibly in and of itself ruining the canyon floors. Decisions as to which side, to blast away granite, across the creek bed, avalanche sheds and tunnels?? If stanchions can be built to carry high-speed quads for skiers, they certainly can be placed up the canyon for an elevated rail system, and if necessary, cross to sides opposite avalanche areas of concern.  This is the beginning. I also believe that one day a line needs to go to Park City. Up the middle of I-80?? Never!  So please consider the model of this program: a monorail line that begins with a connection at the University of Utah TRAX line; goes up behind the university ( I believe that the BLM line is about halfway up the foothills in elevation); behind the Fort Douglas cemetery, across Emigration and behind homes south of the canyon; follows the foothills across Millcreek to I-80, connects to a monorail line set in the canyon walls to Park City; thence continues south along the foothills to Big Cottonwood and Little Cottonwood connections up each canyon; turns west to follow 98th to 94th and down to the Sandy Station, an East Bench loop.  I mean think about this. Camouflage the cars, no noise, little impact on the population, complete connection to all other transportation in the valley. The best part? You will have people traveling the world around to come and ride this! Imagine the view coming down from Park City, along the foothills to the university, the views coming down the canyons! They would be magnificent! Sure, I am daft, but I have vision for a time when I will be gone, population will be crazy, and there won't be a possibility for a do-over. It will get paid for. The ADA regs say there can be exceptions for inaccessibility. Not every stop has to be ADA accessible. Ladies and gentlemen, this is the future. Do not consider this to be a mass transit line. This is a destination rapid transit – airport to the monorail, to the ski resorts, Sandy and soccer.  Forgive the length of this letter. I just wanted you all to know that I am invested in this, that I do care, and that if we don't do this right the first time, there will never be funding later to fuss over it for corrections and piecemeal additions. Will there be objections? Pffff! I am probably objectionable. But, you wanted suggestions. There are many who can tell you what is wrong with what you want to do and never tell you how they would do it. I have spent most of my working life solving problems and organizing labor. I have learned that any obstacle you can come up with can be overcome, and the results here would be world class, if not Disney class.  Sincere 2-cents worth, ☺</p>	Salt Lake City, UT	4/29/2015
<p>Hello:  Here are a few comments re. principles used to determine the Wasatch Front area development during the coming decades:  * Certain types of recreational expansion such as the development of tunnels, single rail trains and surface lift facilities, in addition to conforming to watershed, wildlife habitat and human transportation needs should have realistic cost assessments that will be borne by private development as well as public tax dollars, and still result in affordable public access and transportation facilities. One way to contain overambitious private resort expansion in the Wasatch would be to keep the Summit County resorts linked together and the Cottonwood Canyons resorts the same way without the extraordinary cost to environment and transportation that a total connection would involve.  * It is important to emphasize that one of the biggest challenges to long term transportation planning (beyond the immediate decade or so) is avoiding current solutions that will likely become obsolete or impractical due to new innovations, technologies and fuel systems that will continue to evolve and change the possibilities for growth and practicality in the years to come. It is vital therefore that the limitations of our current technological options not create options that might not only be very costly to build and maintain now but may also become obsolete in the foreseeable future before they are even fully realized.  * Another important aspect that should be more fully explored in connection with the Wasatch Front development future is better distribution of the commercial and recreational flow into the Summit County area by an enhanced use of the I-84 corridor from Ogden to Heber, thereby creating a north/east circular flow into those areas from Salt Lake City rather than just a north/south corridor from Provo and the City via Parley's Canyon and the I-80.</p>	Salt Lake City, UT	4/29/2015
<p>I support One Wasatch</p>	Salt Lake City, UT	4/29/2015
<p>Protect the water quality at all costs.</p>	Salt Lake City, UT	4/29/2015
<p>No expansion of the ski resorts.  No additional private enterprise/housing in the canyons.  Public transportation only in the canyons - no private vehicles.  No creation of trails or any other efforts to "facilitate access." Those who want access should have to earn it/be physically up to it.</p>		
<p><del>In short, make it more wild. The Wasatch isn't developed so it there to provide anyone a money making opportunity.</del></p>		
<p>The Wasatch Mountain Range is a rare and precious resource. There is no other major urban center in the United States that has such an expanse of backcountry recreation opportunities so close to the homes of over 1 million people. To preserve this precious resource now is a critical time to permanently stop further development into areas that are currently wild. Building transportation schemes that will divide currently preserved tracts of wilderness will permanently ruin wild spaces for all future generations.</p>	Salt Lake City, UT	4/29/2015
<p>What a wonderful dream to have light rail to Park city in its own track so I would not fearful drive on a road full of double tankers barreling down the interstate. Fast, warm, internet perfect for commuting and expensive but worth it. Take a lane out of the interstate and hooray I would pay.</p>	Salt Lake City, UT	4/29/2015
<p>I would not want a link for skiers, hikers, anyone over the backcountry.  No sprawl around the resorts. Solitude most of the year is a ghost town and so is the canyons. WE need more trails, well maintained. The camgrounds are full , people use the canyons and there is no parking. We almost need a frequent bus system like Zion NP.  The backcountry skiers need more space as it becomes more popular. There are very few places for nordic skiing and we need more. Biking summer and winter if important now and any mass transit system has to accommodate bikes as well as ski and boarders.  The accord must keep our water safe and our wildlife habitat healthy.  Ski lift and resort development should not spill over into American Fork Canyon. It is a treasure and should remain that way.  Keep Guardsman closed in winter and do not allow summer homes or golf courses up there. Buy up private property if there is some up there.  Charging a small fee or a reasonable year pass for access to cottonwood canyons would be ok. Look how much better Millcreek is with the \$2 fee.  I appreciate the hours of work people have put and I hope development is very cautiously approached because once gone the beauty, peace, animals, trees, stillness cannot be replaced.</p>		
<p>My parents came to Salt Lake City in the 40's partly due to the splendors of the Wasatch Mountains and the pristine, unparalleled natural surroundings. Please, please let Mt. Accord continue to preserve these natural sanctuaries!</p>	Salt Lake City, UT	4/29/2015

<p>The Wasatch Mountains are a critical resource for Utahns and visitors from all parts of the world. Protecting the Wasatch Mountains' environment should drive the Mountain Accord Blueprint, and be a pre-condition to any development strategies seriously considered.</p> <p>Public transport up the canyon must be frequent, comparable in travel time to driving and affordable, or people will continue to drive. A railway would be visually intrusive, noisy and diminish the wilderness character of the canyon. Construction and operation would likely have damaging impacts to water quality and wildlife. Instead, a dedicated bus lane should be considered, constructed by widening the road to three lanes where practical, with an alternate flow lane to accommodate bus traffic during morning and afternoon peak times in the winter.</p> <p>Avalanche protection might be added in Little Cottonwood to improve reliability of access, if built with a visually acceptable design.</p> <p>Tunnels among Little Cottonwood, Big Cottonwood, and Park City would mainly support ski resort marketing and would do little to address regular transit needs for residents. Tunnels may pose significant environmental concerns during and after construction such as water pollution, air pollution, noise, and permanent visual disturbances in our scenic canyons. Tunnels would incur significant construction and maintenance costs, and would disproportionately benefit out-of-state ski-area customers rather than Utahns.</p> <p>Land exchanges that preserve pristine backcountry in the Wasatch while allowing limited additional development in already impacted areas are potentially a good idea. These exchanges also offer the potential for reducing conflicts over wilderness designation and other protections on public lands. Permanent protection for public lands, such as those proposed in the Wasatch Wilderness and Protection Act in 2010, is important for watershed, wildlife and back country solitude.</p> <p>One of the most important outcomes from the Mountain Accord process would be to create permanent, limited boundaries beyond which ski resorts will not be able to expand.</p> <p>Have potential impacts from the following factors been fully evaluated?</p> <p>*The Utah State Climatologist projects declining snow packs with spring snow disappearing by 2100. How will Climate Change impact demand for skiing?</p> <p>*Today's youth spend half as much time outdoors as their parents. How will this affect future ski area attendance?</p> <p>Doing the least harm to our unique environment is the prudent course for Mountain Accord in the face of uncertainties over what the actual demand will be for ski resort access in the future.</p>	Salt Lake City, UT	4/29/2015

<p>I do not support an interconnection between Big Cottonwood Canyon, Little Cottonwood Canyon and Park City, or any combination thereof, including tunnels. I support development of a purpose and need statement and balances the "Systems" Mountain Accord is addressing, without giving undue bias to any one element or proposal.</p>	Salt Lake City, UT	4/30/2015
<p>I appreciate the 4 aspect approach to this blueprint, and I agree with most of the actions proposed. The balance between environmental protection and economic development appears viable, and a broader, more connected trail network would be beneficial. However, I am strongly against the proposal for a rail development in Little Cottonwood Canyon connecting the mouth of the canyon with the Wasatch Back. Much like ski-link, I think this proposal will be touted as a transportation initiative, but it's real intent is to increase tourism and development in the region. I still have not seen compelling data suggesting there is a transportation demand in this area. I believe developers want to create a demand that is not currently there through this development. In addition, extensive construction on a railway in the canyon, as well as a tunnel underneath the mountain, is likely to impact the ecosystem in ways that are inconsistent with the environmental goals of this initiative. As an alternative, I propose increased bus service in the canyon along with disincentives for vehicle use, while focusing on Parley's Canyon as the primary mode connecting the Salt Lake Valley with the Wasatch Back. I am also not entirely opposed to additional lift connections between Little Cottonwood and other canyons/resorts, but I think it is clandestine and misleading to tout them as transportation initiatives in order to garner more public support.</p>	Salt Lake City, UT	4/30/2015
<p>As background: I came to Utah to work at Snowbird for the 1973-74 season and continued to work there for three more seasons. After a few years living in the Jackson Hole area I returned to Salt Lake for graduate school and have been here ever since. I have been, and continue to be, an avid user of the backcountry in both winter and summer and do use the ski resorts on a lesser basis (they are, you know, getting absurdly expensive).</p> <p>As an initial comment I am opposed to taxpayer subsidized steps that only benefit private businesses (primarily the ski resorts). The point of this accord is to protect the public and the canyons, not to subsidize a small group of businesses with a declining usage.</p> <p>Transportation:</p> <p>I am generally opposed to the idea of a fixed rail train up either of the canyons. I am in favor of optimizing the bus system, with added stops, express busses to each of the resorts and the provision of a substantial amount of additional parking at the mouths of the canyons. Snow sheds are also a viable and relatively inexpensive option. I support a fee-per-car for all vehicles using the canyons with very low or free bus fares.</p> <p>I am opposed to the idea of tunnels between LCC and BCC and between BCC and PC. These are just a silly idea. They will degrade a great deal of backcountry and their primary purpose is not the "sustainability" excuse but a taxpayer subsidized benefit for ski resorts and developers. They are not a solution to anything.</p> <p>I do support a light rail system between Park City and the Salt Lake valley.</p> <p>I think there should be a year-round bus system up BCC and LCC.</p> <p>Stops should be provided at trailheads along each of the canyons and parking should be improved at these trailheads but the number of spaces should not be substantially increased (emphasis needs to be on canyon-mouth parking).</p> <p>Ski resort benefits:</p> <p>I do support enabling the ski resorts to use more water for snow making, intelligent zoning changes for additional development within the existing boundaries (and judicious land swaps to add to these boundaries). I also am in favor of improving the avalanche mitigation techniques.</p> <p>I think that the idea of doing whatever it takes to get more people up the canyon is fundamentally misguided. The pressure of people on the watershed and back country is the primary degrading factor. Quality not quantity should be the guiding rule.</p> <p>I am opposed to a lift in Grizzly Gulch, in fact Grizzly Gulch should be afforded permanent protection.</p> <p>I have no problem with the general idea of chairlifts and development in American Fork Canyon.</p> <p>The re-alignment of the Honeycomb lift might be OK if there are no added effects on backcountry access to Silver Fork.</p> <p>I support Brighton's adoption of Hidden Canyon and increased connectivity between Brighton and Solitude in the SolBright area.</p> <p>General:</p> <p>I am in favor of protecting the Emma Ridge to Superior ridgeline from development and with the reforestation of this ridge.</p> <p>I am in favor of a trails network with a mix of mountain bike and hiking trails and a management system as well as improved road biking facilities such as wider shoulders and bike lanes.</p> <p>It is time to end helicopter skiing in the Wasatch.</p> <p>Wilderness boundaries should be modified to optimize the Bonneville Shoreline Trail.</p>	Salt Lake City, UT	4/30/2015

<p>If reducing the pressure of automobile traffic and preserving the watershed are worthy goals, it is impossible to imagine how these goals can be accomplished by digging tunnels through the mountains to connect resorts in different canyons. More roads = more cars = more pollution. A much more effective solution would be to get serious about providing convenient, frequent bus shuttles.</p> <p>If we model the future of the Wasatch on the interconnected mega-resorts of Europe, we'll get exactly what we have accomplished: the destruction anything truly natural or wild in the service of making everything convenient to access and monetizable for the already-wealthy few. <u>Utahns want and deserve better than that</u></p> <p>To Whom It May Concern,</p> <p>I simply want to state that I agree with the comments of the Wasatch Backcountry Alliance. I feel it is an integral part of our community that there is still protected wilderness available to the public and that restrictions to motorized recreation in this area protects valuable resources and provides opportunities for non-motorized recreation.</p> <p>To the Mountain Accord decisionmakers:</p> <p>I want to add my voice to the community of Wasatch Front citizens who have spoken for preserving our backyard wilderness in the Central Wasatch. Every bit of extra development incrementally whittles at the most important resource we have: irreplaceable mountain environments. I want the Mountain Accord to recommend less development and more conservation.</p> <p>Ecologists give us good reasons to block up wild habitats as much as possible, to keep them connected so predators and game herds can move freely between protected lands. With our burgeoning population, we'll need as much backcountry as possible for recreation and refuge.</p> <p>Skiing is not a growth industry. Sure, if you create extravagant mountain resorts, affluent people will come. But I believe the Wasatch offers far more as a "commons"—as a place for not-so-rich folks to camp and fish and hike and climb and ski. In the Tribune this morning, Vail Resorts reports that sales were up in this bad snow year because "marketing efforts provided a comprehensive world-class destination experience by attracting high-income guests from all over the world."</p> <p>Vail's vision of the Wasatch is a far cry from the down-home traditions of Brighton or Alta. We must stand firm for the Wasatch as a community resource, not turn it into playground for the wealthy international elite.</p> <p>Resort skiing is not a growth industry; backcountry skiing, on the other hand, is increasingly appealing to millennials.</p> <p>So, don't transform the Wasatch into a commodity for quick profits. Fight the long view. Preserve wilderness. Fight for backcountry experiences. Don't build unnecessary tunnels and trains, but do create a bus and shuttle transit system that minimizes traffic in the Cottonwood canyons.</p> <p>Climate change makes these conservative actions even more imperative. Unless we back off drastically from our burning of fossil fuels, Park City will soon have the same climate as Salt Lake City and Salt Lake will have the climate of St. George. By 2100, if we don't drop our emissions significantly, Salt Lake City will have the same number of freezing nights as Cedar Hill, Texas, and the same summer temperatures now endured in the Catalina Foothills above Tucson (according to www.climatecentral.org). Those models do not suggest mega-development to accommodate the demand for resort skiing in future years</p> <p>I believe most Utah citizens agree with me. They haven't chimed in on the Mountain Accord because they are busy, because they are not in the habit of writing letters to officials, and because the website is daunting. But they are out there—the silent majority who love the Wasatch and who want you to think of their grandchildren before turning the Wasatch into a commercialized for-profit tragedy.</p> <p><u>Thanks for your good and dedicated work on behalf of the future.</u></p>	Salt Lake City, UT	4/30/2015
<p>Dear Mountain Accord Executive Board,</p> <p>Please accept my appreciation for the hard work you folks have put in trying to bring a cohesive plan to the future interests of the Wasatch. I know it is not an easy task for there are many voices, many agendas, and many dollars to be gained or lost for some. We of the greater Salt Lake area acknowledge the value of having the mountains so close by, which permits a fantastic work-life balance. However, the wilderness areas which offer the most contrast and reprieve from city life are finite. I hope that whatever the committee decides it takes into mind that wilderness is extremely difficult to bring back. Once there is an alpine slide, restaurant, etc. it is unlikely things will return to what they were. When our vision is short-sighted we slight those who will come after us. I beg you to keep present open space open and to prevent further expansion of our already corpulent ski areas. If you want a warning, just look over the Park City ridge line into the warren of expensive and often unoccupied vacation houses... Central to all this, the conduit between canyons is Grizzly Gulch. No sustainable plan involves development of Grizzly Gulch. It is the lovely, quiet path between Canyons, a vital conduit for winter self-powered travel.</p> <p>Thank you for your time,</p>	Salt Lake City, UT	4/30/2015
<p>I cast my vote for Wilderness preservation.</p> <p>In particular restricted real estate speculation.</p> <p><u>I favor valley parking and shuttle service year-round in the canyons.</u></p> <p>There needs to be more time for public comment. I was asked for my feedback by Ski Utah yesterday. Until then I didn't have a clue what Mountain Accord was. What efforts have been made to engage the public? I'm shocked that only 1,500 people have given input (number according to Carl Fischer's article). If those numbers are accurate there has obviously been a failure to get public involvement. I am curious what efforts have been made and how they were measured for success. I am a life-long resident of Salt Lake City. I grew up here, I work here, I own property here, and I recreate in our mountains regularly. My family owns a cabin up Millcreek Canyon. In many ways these plans effect me. I'm very surprised that with as much effect as a plan like this will have on all of us, that I am just barely being asked for my comment. Please extend the public comment period. And I am happy to help provide feedback on how to get more responses from the public.</p>	Salt Lake City, UT	4/30/2015
<p><u>I would like the Wasatch Mountains preserved for my children and grandchildren.</u></p> <p>I am a resident of Salt Lake City and a frequent visitor to Little Cottonwood Canyon. I'm not originally from Utah, but moved here for the world class skiing and stayed for the community. I own a house here, and plan to raise my future children here. I take public transportation everyday to/from work. My husband and I are a one-car family. I share all of this information because I want to demonstrate that I am invested in Utah, and the Mountain Accord strategy will greatly influence my life and my community. And I am so grateful.</p> <p>I fully support the development of public transportation in our canyons. Either a gondola or a train would not only reduce carbon emissions but it would be safer and a much more pleasant experience. I understand the fear of further development and its affect on the land and the backcountry. But looking at the proposed plans, I see the planned due diligence for minimizing the environmental impact. Clearly, the team is taking this very seriously. Additionally, the environmental and health impact of more cars on the road will most likely greatly outweigh the impact of development. Our smog is making international news and will soon scare away tourists, future residents, and current residents - like me - who don't want to take years off my life by breathing pollution each winter.</p> <p>The culture of single passenger driving must end. Change will happen with superior, new infrastructures that enhance the user experience and have an immediate positive effect on the climate. I believe there is no choice but to move forward with this plan, if we want to continue enjoying access to the Wasatch.</p> <p>Thank you for your time and your hard work on this project.</p> <p>P.S. Speaking as an east coaster, I say you impose a toll for those who choose to drive up the canyons. It will help fund the project and other environmental clean-up initiatives. Toll roads are the norm on each coast, and people will get used to it. For those that will be deterred, let 'em move to Colorado and sit on I-70 for six hours just to get in a few turns!</p>	Salt Lake City, UT	4/30/2015
<p>As a resident of the benches of the Wasatch for 35 years, please consider the following in your blueprint:</p> <p>I am all for sustainable transit options for our canyons to reduce traffic and emissions, but please make an effort to minimize any development beyond transportation needs. Also, please consider NOT making a transit corridor that connects the Cottonwood canyons with Park City. The reason the cottonwood canyons have worldwide appeal, in addition to being our greatest gem, is because it has avoided contact with the development goals and greed associated with the Park City area. These separate areas function better, and maintain their <u>individual identity and culture better kept as individual areas with separate access points</u>.</p> <p>I have grave reservations regarding the developments proposed in connection with the Mountain Accord, and urge planners to maintain our beautiful Wasatch Mountains and our water supply as pristine and safe as possible, without undermining the ski resorts in the Cottonwood Canyons. A better system of clean fueled public transportation to our Cottonwood ski resorts that would reduce pollution and other canyon impacts and improve access for skiers would substantially improve existing conditions, without imposing unnecessary infrastructure, which may well become obsolete with climate change and evolving recreational patterns. Similarly, improved clean-fueled public transportation from Salt Lake City to the Park City ski resorts and concomitant facilities, would reduce environmental impacts and allow our extraordinary resorts to maintain their unique features. I strongly oppose the interconnect proposal, which I believe would radically change the character of our resorts and negatively impact the experience for our recreational visitors.</p>	Salt Lake City, UT	4/30/2015
<p>would like to see the "private shuttle" concept explained. This canyon is the only major one open to dogs, so many dog owners exercise themselves and their pets there. It's hard to imagine people bringing their pets into Millcreek canyon on a "private shuttle."</p>	Salt Lake City, UT	4/30/2015
<p>Thank you for the well thought out proposal and the attempts to include all of the view points and desires for use of the canyons. The most important element of the proposal for many in the Wasatch is to limit the growth of ski resorts. We have a precious system, and do not want to overwhelm our resources by increasing the resort size. I am a resort pass holder, however feel that the backcountry territory needs to be preserved. The idea of linking our canyons and resorts is silly, our resorts are already big enough that visitors can ski new terrain all day long. I would hate to see the Wasatch turn into a Euro mimic by putting gondolas or lifts through backcountry territory. Its gimmicky, silly, and would mar the experience for those who want to get out away from the crowds and development.</p> <p>In consideration of public transportation, we need more. I ride the bus to the resorts often, but feel very limited by the schedules and often have to hitch a ride down canyon at days end. I would also love to see bus service in the summer to allow for loop bike rides. An important caveat: buses need to stop at popular locations for hikes/climbing/biking. Just stopping at resorts is not sufficient if the goal is actually to reduce traffic and parking whoas.</p> <p>Thank you again for all of the hard work that has gone into this proposal. The Wasatch is a gem and I hope it can be protected and recognized as such.</p>	Salt Lake City, UT	4/30/2015

<p>Please accept my comments, below, on the proposed blueprint for the Central Wasatch Mountains.  I DO NOT think that there is appropriate balance between development and preservation in the current draft. I believe there should be a greater emphasis on preserving and protecting the remaining unspoiled wilderness in the Central Wasatch for future generations.  I am STRONGLY OPPOSED to any development of Grizzly Gulch, including Alta's proposal for a lift up Tuscarora.  I SUPPORT all proposals for expanding the protection of the existing wilderness character of areas that have been identified in the blueprint, such as Superior to Emma Ridge and Guardsman Pass, and for others as well.  I am STRONGLY OPPOSED to the One Wasatch concept, such as any aerial tramway between Park City and Big Cottonwood.  I DO NOT support the train up LCC or the connecting tunnels, because of the anticipated taxpayer costs.  I SUPPORT the concept of a designated bus lane up LCC, with optional stops provided for backcountry users.  I SUPPORT the concept of enhanced, year-round bus transit up BCC, with optional stops provided for backcountry users.  I SUPPORT the expansion of the trails network.  I SUPPORT the continued protection of the watershed.  Regarding the economic impact of these decisions, I feel that the best economic course for Utah is to continue to attract and expand its existing highly-paid workforce in growth industries such as health care and technology. The best workers/earners in these fields are well known to place a high value on outdoor recreation and wilderness/open space access. The preservation of the natural character of the Central Wasatch will have a much greater positive economic impact by attracting these residents to Utah than any possible increase in ski resort visitation, which is not trending well in any case. Utah's best economic growth lies with its future RESIDENTS rather than with its future VISITORS, and the unspoiled Central Wasatch is its quality-of-life crown jewel.</p>	Salt Lake City, UT	4/30/2015
<p>Limiting land development by entities that want to profit from the Wasatch is the right way to go. The best way to ensure environmental health for residents of Utah is to keep the lands as public lands –permanently protected, but for all to enjoy and none to profit from. We must all be responsible to protect this resource and Salt Lake's main watershed. Don't take away our open spaces!  <u>A concerned Salt Lake resident</u></p>	Salt Lake City, UT	4/30/2015
<p>Keep in mind the importance of biodiversity in the Wasatch ecosystem. Clean water is a big part of it, but the forest and wildlife will also be impacted if, for example, extensive trail systems are added and recreation becomes like a world series party. I'd be more than happy to live with a restricted access program that allows daily entry limits, lottery permits for visits, or even/odd day eligibility. We do it with dogs, bikes, and lawn watering. To preserve the essence of the Wasatch I'd be willing to submit to such a program even though I currently <u>experience the area 5 or more times per week</u></p>	Salt Lake City, UT	4/30/2015
<p>I'm just adding my voice to those of the thousands who I know share my views.  I'm now in my mid-60s, and I'm sure that the countless hours I've spent, over the many years I've been skiing and hiking in the backcountry of Millcreek Canyon and the Cottonwood Canyons, have made me considerably healthier than I otherwise would be, not to mention the pure joy those experiences have brought me.  Also, I never hunt, and none of the guys with whom I ski and hike hunt, but I'm always happy to encounter bow-hunters on the trails. Those encounters always make me realize, anew, how cool it is that people with diverse outdoor interests can share this rare and wondrous thing.  <u>Not the Park City side of the Range but whatever the rich guy and tourist want it to be, but closer to the Tri Canyon area than you are.</u></p>	Salt Lake City, UT	4/30/2015
<p>I am a resident of Salt Lake City and an avid lover of one its most precious resources - the Wasatch Front mountain range. I am writing to express my thoughts on the current proposed Mountain Accord. These thoughts are provided below:  Generally speaking, I am interested about the proposed train transit up BCC and LCC, and would like to see a similar train transit option up Parleys. This would be an exceptionally unique ski experience in the America's and would seem to accommodate a variety of recreational opportunities if implemented properly. That said, I do have some serious reservations. First, tunneling to achieve canyon interconnection is critical so as not to disturb more natural areas with overground transport. Second, such an approach needs to address multiple uses, distributed users, and a wide range of operating times (e.g., to accommodate summer and winter climbing and hiking activities, distributed back-country skiing trail heads, and accommodate the beloved Wasatch "dawn patrol" winter tours, early morning climbs, etc.)  Any ski resort expansion should be limited to the base areas, and expansion and/or significant development outside these base areas should not be considered (i.e., no large restaurants on the ridge and mountaintops). In a relatively recent, over 90% of residents in the Salt Lake Valley indicated they were against any further ski area expansion in the Wasatch Front. See Envision Utah's 2010 Wasatch Canyon's Tomorrow Study accessible at <a href="http://saveourcanyons.org/files/resources/WCT_FINAL_23Sep2010.pdf">http://saveourcanyons.org/files/resources/WCT_FINAL_23Sep2010.pdf</a>. I am comfortable with limited ski resort expansion as proposed in the blueprint with a few considerations. First, private land transfers and preservation actions MUST include Grizzly Gulch. Land swaps should be pursued immediately, as a condition precedent for future development. Alignment of any new lift in Honeycomb Canyon must not drop below the elevation of the current lift and should not terminate in the Silver Fork drainage (e.g., it will remain in Honeycomb).  Being located in a desert, wise watershed management is critical to support our future needs. Failing to effectively manage sensitive watersheds can lead to significant problems down the road, severely straining population growth and economic expansion. Our neighbors in Nevada and California are particularly aware of this issue, as significant population growth in Southern Nevada has taxed their limited watersheds to near emergency levels. Accordingly, watershed preservation should be of primary importance.  Thank you for consideration the above and your time in connection with the Mountain Accord process.</p>	Salt Lake City, UT	4/30/2015
<p>I would like to comment on the future master plan for the Wasatch Mountain area.  The Wasatch Mountains are a word class feature of Utah that we are fortunate to have. The accessibility and availability of wilderness areas that are available for exploration and recreation is unparalleled. The established ski areas that we have offer a comprehensive variety of terrain and accommodation for the local, national and international skiers; and in my opinion our community should embrace the individuality of the ski areas that we have, and strictly limit any future expansion, development or connectivity between the resorts.  I do support increased transit options between salt lake city and resorts in the cottonwood canyons but, I am strongly opposed to increasing connectivity between the cottonwood canyons and park city, or between the two cottonwood canyons. In my opinion, bringing patrons from park city would be a direct way to spoil the cottonwood canyons.</p>	Salt Lake City, UT	4/30/2015
<p>I have lived in Salt Lake County for 19 years. I moved here from Pennsylvania to live in a place with world-class recreation activities and a vibrant economy. The Cottonwood Canyons are my favorite place to ski, although I have skied all of the Park City based resorts as well.  We clearly need a better transit system up the canyons. While a railroad has been proposed, I see many problems with that proposal. New construction like that will have a huge, negative, impact on water, land, and animals. I just can't imagine how it could be "avalanche proofed" either. I highly support increasing the bus capacity for the canyons—increase the size of the park and ride lots, have the buses run more often, make a dedicated bus lane so people could actually get up the canyon faster, build in family-friendly amenities so that people with young children can use the bus. Most of all—make it very inexpensive so people WANT to take the bus.  Tunnels between canyons is of no use to Utah residents. We know which canyon we want and we get there. We don't need to use tunnels—the existing roadways are sufficient. The tunnels ONLY help tourists who are staying in Park City or up at the top of the canyons. And those are not the people contributing to traffic jams in the canyons. I have absolutely no desire to have my tax dollars going towards tunnels that only help the elite. If we have extra money—it needs to go to education, road maintenance, and conservation. There are approximately 2.5 million people on the Wasatch Front—why not cater to that market and the out of state tourists? There is also the fact that tunnels are a huge visual disturbance for those of us who use the canyons year round—they will look hideous in the summer and will be rarely used.  I don't mind if we exchange lands for development—I would rather concentrate development while protecting the backcountry for hiking and skiing. Again—I moved here for these amenities. If we ruin our landscape, many current residents will leave and we will have a hard time recruiting others to come here. Tourism is important but we have to diversify our economy. Snow sports user days at resorts are declining—we need to think for the long term. Simply adding more bells and whistles to compete for a decreasing market is not long-term thinking.  I want changes to have the least impact on our already highly impacted mountains. We need to protect our open space from visual and noise pollution. We desperately need mass transit solutions—why not build on what we already have instead of paying huge amounts of money to build something from scratch?  When I moved here 19 years ago I was overjoyed at the outdoor recreation opportunities available to me. I want to keep those opportunities available to my children. I hope the Mountain Accord will allow all of us to do preserve these world-class places for the next generations.</p>	Salt Lake City, UT	4/30/2015
<p>I applaud your effort to develop a sensible transportation plan based on the high recreational use of the Cottonwood Canyons and Park City area. I am supportive of a rapid or express bus system for both Big and Little Cottonwood Canyons, and the restriction of personal vehicles up these canyons. I do not support tunnels linking the Cottonwood Canyons with Park City and Deer Valley because it is a waste of taxpayer money without an equal benefit. These areas are already very close in proximity and tunnels would only promote and increase <u>in use by personal vehicles between these areas.</u></p>	Salt Lake City, UT	4/30/2015

<p>After reviewing the Wasatch Mountain Accord Blue Print I have the following comments.  The trend in the Wasatch is toward more wilderness backcountry use. Here are a couple of indicators.  Backcountry equipment manufactures and distributors have grown significantly faster then the valley population while the alpine ski equipment has merely kept-up with the valley population growth.  There were 12 to 15 backcountry style races in the Wasatch this year. One race is almost world class. Just 10 years ago there might have been 1 backcountry ski race.  Many others  Our priority shall be to preserve the backcountry wilderness and curb ski area expansions. The "recreational projects" of the future are backcountry type activities; ie. hiking, climbing, skiing, bird watching etc.  The ski area's proposals threaten the Forest Service, with exponential population growth. The plan for our limited resource shall not include exponential population growth. The forest is now at it's people limit. The ski area's are given a concession to operate on National Forest. BCC and LCC Ski area concessions shall be rewritten as follows.  Preserve the National Forest  Ski schools  Ski races  Family recreation,  Introducing people to the backcountry.  Light Summer activities...hiking, biking, Frisbee, and ski area maintenance.  Social events, Weddings, Reunions, etc  Ski area companies should not be profiting on our National Forest. All profits shall be used to fund ski schools, ski races, avalanche safety, interpretive programs etc.  The ski area clientele are looking for more amenities; ie., bigger lodges, more restaurants; more nightlife; more child care etc. The Wasatch will not be able to meet this demand. Focus shall be on maintaining what we have and preserving the rest. What is the next "20 year plan" going to look like?  More backcountry/mountain guiding concessions shall be issued. Backcountry guides can safely bring resort skiers into the backcountry and at the same time promote good land stewardship. Resorts don't need to be pressured by skiers always wanting to ski more; always wanting more expansion. Backcountry guides can help take the pressure off of the ski area's.  The LCC road bed shall be used as follows.  One fast train track with stops at Snowbird and Alta.  One 24 hr slow train track which stops upon request.  There shall be no more road, up or down, LCC.  A service tunnel shall be bored from Alta, under twin lakes pass, under twin lakes reservoir to Brighton.</p>	Salt Lake City, UT	4/30/2015
<p>I submit the following comments on the Mountain Accord's proposed blueprint. Thank you for your efforts to comprehensively address many of the challenges that face the Central Wasatch.  First, and foremost, I feel that the Mountain Accord's proposed blueprint must emphasize watershed protection more than it does now. The guiding light here should be whether an action would improve or harm water quality. For example, it seems highly unlikely that the construction of a rail line in a new corridor in Little Cottonwood Canyon will be a positive development for water quality. This value should trump all others in charting a path forward.  Resort Expansion. The Mountain Accord should not permit any resort expansion within Salt Lake County. Grizzly Gulch and Silver Fork are two drainages that are important for watershed and of immense value for habitat and quiet, human-powered recreation. Expansion at Alta and Solitude, respectively, would have significant adverse affects on these areas.  New Development of Base Facilities. The Mountain Accord should tie any new permitted development at the base of ski resorts to three things. (1) At least 75 percent of any new development should be in existing parking space (this will force greater dependancy on public transit, reduce the footprint of new facilities, and help reduce runoff from parking lots). (2) Resorts must exchange (for lands located at the base of resorts) and donate private lands located in environmentally sensitive areas (Flagstaff, Superior, Emma Ridge, Grizzly Gulch, Cardiff Fork, White Pine, Guardsman Pass) in order to receive building permits and approvals to move forward with base facilities. And (3) No new lifts or resort expansion allowed outside of existing resort footprints.  Additional Land Exchange Issue. It is unclear how much the public benefits from land acquisition inside of ski resort boundaries at Alta and Brighton. This seems like a way for resorts to possibly reduce property tax liabilities while benefit from the leasing of public lands. These parcels should be the lowest priority for exchange and acquisition, if at all.  Transportation. A new rail line in Little Cottonwood Canyon could have significant impacts on water quality. The Mountain Accord should consider an option for Little Cottonwood that would significantly increase bus service in the canyon (and from various valley locations) while diminishing vehicle traffic. This could be accomplished by instituting a toll at the canyon for high traffic times that would implement congestion pricing and convince most drivers to leave their vehicles in the valley. Connecting Alta, Brighton, and Park City via above ground or below ground transportation seems unnecessary and expensive. These would not realistically be mass transit solutions for the general public but rather high-priced gimmicks aimed at a very select crowd. Such transportation options should not be funded by the general Utah public or by the federal government. Zion National Park's shuttle system is an excellent example of an effectively-instituted mass transit system using existing infrastructure done in very short order. A bus system in Little Cottonwood Canyon should be patterned after this.  One Wasatch. No lifts or transportation options should be constructed that would link resorts in Park City with those in Big Cottonwood or those in Big Cottonwood with those in Little Cottonwood. Such expansions would threaten water quality, open space, habitat, and quiet recreation options in the Wasatch.  Snowmobiles, helicopters, and OHVs. The Mountain Accord's proposed blueprint should consider banning snowmobiles in Big Cottonwood's Guardsman Pass area. It should also end heliskiing in the Wasatch of Salt Lake County. Finally, off-highway vehicles (OHVs) should be prohibited in Mineral Fork. These machines create an excessive footprint for such a crowded area and can threaten water quality.  Grazing. In as much as grazing may be permitted on Forest Service lands in American Fork Canyon, the Mountain Accord should forever end that possibility and practice.  Land Protections. I strongly favor the expansion of existing wilderness areas and the creation of new wilderness areas. In addition, the Mountain Accord should designate watershed protection areas for the portions of the Wasatch that may not qualify for wilderness designation.  Thank you for considering these comments.</p>	Salt Lake City, UT	4/30/2015
<p>I am emailing to voice my support for the Wasatch Backcountry Alliance position regarding the mountain accord. I hold the same position. The position statement can be found here - <a href="http://wasatchbackcountryalliance.org/2015/04/22/wasatch-backcountry-alliance-submits-blueprint-comments-to-mountain-accord/">http://wasatchbackcountryalliance.org/2015/04/22/wasatch-backcountry-alliance-submits-blueprint-comments-to-mountain-accord/</a></p>	Salt Lake City, UT	4/30/2015
<p>I am a Utah Native of 46 years. I have been dismayed over the years at the seemingly thoughtless ways development has happened in Utah especially concerning the Wasatch range. I am glad for the Mtn Accord and the collaborative approach to address issues affecting the future of the Wasatch.  The Mountain Accord includes a proposal to permanently protect 2,150 acres of prime backcountry terrain  Improved transit i.e. better bus systems  Maintaining the balance between user groups  The Wasatch Range is Utah's Gem preserving it in its raw and natural state has immeasurable value not only economically but aesthetically. Businesses, tourists and relocating families are drawn to this place because of its unique beauty and it's accessibility. If we make decisions that alter the current balance between user groups ie resort expansion past their current boundaries, that shifts out the user groups who like to enjoy the Wasatch in a human powered fashion. If we make drastic alterations to the canyon in order to accommodate a possible increase in traffic without maximizing existing less invasive transit options first we risk making irreparable damage to the pristine beauty of the Wasatch.  Please carefully consider the permanent impact of each decision made in the mtn accord process. Expand and improve bus service before you spend millions of taxpayers dollars digging a tunnel or building a train line. Seek to market skiing in the Wasatch to locals instead of building Wasatch One as a misguided marketing ploy to attract tourists.  The Wasatch is perfect as is let's maintain the balance and the beauty by using minimally invasive solutions to the issues being addressed in the mtn accord process.</p>	Salt Lake City, UT	4/30/2015

<p>The Wasatch Mountains are a critical resource for Utahns and visitors from all parts of the world. Protecting the Wasatch Mountains' environment should drive the Mountain Accord Blueprint, and be a pre-condition to any development strategies seriously considered.</p> <p>Public transport up the canyon must be frequent, comparable in travel time to driving and affordable, or people will continue to drive. A railway would be visually intrusive, noisy and diminish the wilderness character of the canyon. Construction and operation would likely have damaging impacts to water quality and wildlife. Instead, a dedicated bus lane should be considered, constructed by widening the road to three lanes where practical, with an alternate flow lane to accommodate bus traffic during morning and afternoon peak times in the winter.</p> <p>Avalanche protection might be added in Little Cottonwood to improve reliability of access, if built with a visually acceptable design.</p> <p>Tunnels among Little Cottonwood, Big Cottonwood, and Park City would mainly support ski resort marketing and would do little to address regular transit needs for residents. Tunnels may pose significant environmental concerns during and after construction such as water pollution, air pollution, noise, and permanent visual disturbances in our scenic canyons. Tunnels would incur significant construction and maintenance costs, and would disproportionately benefit out-of-state ski-area customers rather than Utahns.</p> <p>Land exchanges that preserve pristine backcountry in the Wasatch while allowing limited additional development in already impacted areas are potentially a good idea. These exchanges also offer the potential for reducing conflicts over wilderness designation and other protections on public lands. Permanent protection for public lands, such as those proposed in the Wasatch Wilderness and Protection Act in 2010, is important for watershed, wildlife and back country solitude.</p> <p>One of the most important outcomes from the Mountain Accord process would be to create permanent, limited boundaries beyond which ski resorts will not be able to expand.</p> <p>Have potential impacts from the following factors been fully evaluated?</p> <p>*The Utah State Climatologist projects declining snow packs with spring snow disappearing by 2100. How will Climate Change impact demand for skiing?</p> <p>*Today's youth spend half as much time outdoors as their parents. How will this affect future ski area attendance?</p> <p>Doing the least harm to our unique environment is the prudent course for Mountain Accord in the face of uncertainties over what the actual demand will be for ski resort access in the future.</p>	Salt Lake City, UT	4/30/2015

<p>I am apposed to any plan to increase traffic in Big Cottonwood Canyon</p> <p>I am apposed to closing the road ever for bike or running events</p> <p>I am apposed to any increase in commercial business in the canyon</p> <p>I am apposed to the combination of Big, and Little Cottonwood etc.</p> <p><del>Leave the canyon just as it is, and don't do anything to it.</del></p>	Salt Lake City, UT	4/30/2015
<p>I have enjoyed Big Cottonwood Canyon for a long time. I have an old cabin in the canyon. I am apposed to any plan that will increase the use in the canyon. I am apposed to increased travel up the canyon</p> <p>I mostly wish to express that, not surprisingly, the proposal reads like a pro-ski industry development plan that UTA got a hold of before the draft was complete. As a 24 year resident of Salt Lake City, I think the canyons are developed enough for skiing. The idea of rail lines up the canyons might sound sexy, but the cost far outweighs the benefit. We do not need tunnels and gondolas. Buses can get it done.</p> <p>Specific comments:</p> <ol style="list-style-type: none"> <li>1. No light rail up either Big or Little Cotton wood Canyon. Hugely expensive, dubious benefit. Buses can handle the ski traffic. In my opinion, we should adopt a "if you're a local going to the resort, mandatory bus ride" policy.</li> <li>2. Light rail up Parleys might make sense in the long term, but it will only be successful if there are disincentives to drive to Park City for the average person. Simply offering a light rail alternative is not going to make everyone jump aboard; people still prefer their own vehicles. So you've got to somehow make it attractive or required to ride it.</li> <li>3. Give it up on the ski resort connection ideas. First, the expense of skiing is already beyond the reach of a lot of people. Combined resort passes are only going to be more expensive, and only a handful of ski tourists are going to bother with trying to ski multiple resorts in a day.</li> <li>4. NO gondolas over to Park City.</li> <li>5. NO tunnels.</li> </ol> <p>The Wasatch is a very compact mountain range. When I read the transit and interconnect proposals, as well as the ski resort expansion plans in the Mountain Accord, I get the feeling that people think its the French Alps or something. It is too small for all of the things you are proposing.</p> <p>Ski area expansion is not a necessity or inevitability, no matter how much the ski industry makes it out to be. However, I will say that if they are going to expand, I do think the Accord concept of trading new resort space for new public open space on the other side of the road/canyon is a good one.</p> <p>I am all for expanded trails, watershed protection, BUS transit, reduced vehicular traffic, and general preservation of open space in the canyons. I do not subscribe to the notion that the canyons should be used as a tool for economic development. Ski resort expansion is neither a necessity nor an inevitability. It is a choice. In our very compact mountain range, we should choose not to expand them. And we certainly should not choose to string them together with tunnels and gondolas.</p> <p>Thanks for listening.</p>	Salt Lake City, UT	4/30/2015
<p>Hi,</p> <p>I've submitted a comment prior, but I want to reinforce my stance that while I'm strongly in favor of resort connectivity, I'm strongly against the idea of a tunnel through the mountain.</p> <p>I am a resident of 84106 and work on 84060.</p> <p>Thank you</p>	Salt Lake City, UT	4/30/2015

<p>Balance of Ski Resort and Backcountry: I'd like to see our current balance maintained, including keeping the Grizzly Gulch access point. I use both the backcountry and ski resorts, and love both. The backcountry seems to steadily increase in popularity, while the resorts seem a lot less busy than they were in previous decades.</p> <p>Ski Resort Expansion: I'm opposed to the ski areas expanding outside their current boundaries.</p> <p>Ski Resort Development: I'm in favor of the ski resorts improving amenities, within their existing boundaries: lodges, parking garages, hotels, etc...</p> <p>Economic Enhancement: I'm in favor of the resorts, Ski Utah, and the state to increase the tourist attraction of Utah, by expanding within existing ski resort boundaries, improving Salt Lake City après ski attractions, and/or changing Utah liquor laws.</p> <p>Transportation: I'm in favor of any environmentally and financially responsible options to improve air quality and traffic congestion in the canyons. I'd recommend charging motorists to use the canyon, like in American Fork canyon.</p> <p>Taxpayer Money: I'm opposed to increasing the use of taxpayers' money to increase the profits of private businesses...businesses that have small numbers of employees, in the big picture of our local economy. If our ski resorts can't sell the greatest snow on earth, they have no hope of survival.</p> <p>Thanks</p>	Salt Lake City, UT	4/30/2015
<p>Greetings -</p> <p>I appreciate the opportunity to submit these brief comments regarding the Mountain Accord. First off, I have lived in Utah for more than twenty years and plan on remaining in this great State for the rest of my life. The Wasatch Mountains and the outstanding opportunities they provide for solitude and primitive recreation (e.g., backcountry skiing, hiking, climbing) are one of the main reasons I live here and intend on remaining for rest of my life.</p> <p>I do not want to see additional development in the Wasatch Mountains and in particular, in Big and Little Cottonwood Canyons. There should be more, not less, opportunities to have a true "Wilderness" experience in this remarkable place. Additional construction and fragmentation of the backcountry is unacceptable to me. I frequently use (30-40 times a year) Grizzly Gulch, Emma Ridge, Silver Fork Basin (east and west bowls), and Twin Lakes Pass, to name a few of the great locations in the Wasatch, for backcountry skiing. Trams/ chair lifts/or the like in these beautiful areas will ruin my experience and enjoyment of these areas. No train/trax should be built in Little Cottonwood Canyon.</p> <p>The Wasatch Mountains provide a critical source of drinking water to millions. This fact cannot be overstated. And despite what the promoters of One Wasatch argue; the recent expansion (over the past twenty years) has already adversely impacted water quality and additional development will only make this worse. The State is well aware of countless studies to support this fact. Faced with the real threat of climate which has already adversely impacted and will continue to impact our health, environment and economy, it makes no sense to take actions that will only set us up for more problems.</p> <p>Finally, fragmentation of habitat for wildlife should be avoided as much as possible. I personally hike in the Wasatch Mountains at least 30-40 times during the Spring-Fall and in many instances, do so with the specific purpose of viewing wildlife. I love to see coyote, elk, deer, moose, and other animals on these hikes; an enjoyment that is directly threatened by the proposed fragmentation of these areas.</p> <p>Thank you for considering my comments.</p>	Salt Lake City, UT	4/30/2015
<p>Here are my comments:</p> <ol style="list-style-type: none"> <li>1. NO TRAINS up the cottonwood canyons.</li> <li>2. NO EUROPE like intermountain connections.</li> <li>3. NO TRAMS connecting resorts.</li> <li>4. No ski development in Grizzly Gulch.</li> <li>5. No ski development on NORTH side of LCC.</li> <li>6. No ski development in White Pine.</li> <li>7. No ski development in Silver fork canyon BCC.</li> <li>8. PLEASE charge a fee for driving up canyons just like Millcreek. (fee to make bus services FREE) 9. PLEASE create Bus Only lanes in the cottonwoods and EXPAND bus services.</li> <li>10. PLEASE create more parking and an intermodal transfer station at the mouth of the canyons. (replace quarry?) 11. PLEASE PRESERVE THE WILDS OF THE WASATCH FOR FUTURE GENERATIONS.</li> <li>12. Don't sell out our public lands for the pockets of the ski industry.</li> </ol> <p>Growth isn't always good!!!</p> <ol style="list-style-type: none"> <li>13. PLEASE create lasting preservation of lands so the arm wrestling for more development doesn't start again in 10-20 years...</li> </ol> <p>THANK YOU!</p>	Salt Lake City, UT	4/30/2015
<p>The enormous Mountain Accord study seems very thorough and impressive. Because the whole project is so enormous in scope, it is wise to now break it down into smaller, do-able parts. Our interest today is Little Cottonwood Canyon.</p> <p>We drove up to Snowbird on April 16. It was appalling to see the number of cars in the canyon, mostly trucks and huge SUVs with one occupant....the driver! What devastation to watch these gas guzzling, oil dripping, space consuming vehicles...with only ONE person.... taking up so much precious parking space! Snowbird parking employees were magnificent trying to accommodate one more truck here and one more over there. The canyon road was packed with parked cars on BOTH sides of the road, and the Bypass road was full up beyond Ben Hame. What those engines do to our watershed, and those idling engines and exhaust fumes due to our air quite sickened us. But it also made us grateful that the Mountain Accord process is underway.</p> <p>Some solution is needed immediately for Little Cottonwood Canyon. People at Snowbird all day were complaining about: why isn't there a Mountain Rail serving these resorts? They are correct.</p> <p>So many "environmentalists" are against a train, surely mistakenly visualizing an Amtrak train going up/down the canyon!! Yesterday, we took the train serving Sugarhouse. It is electric, quiet, non invasive, and efficient. Its single track reminds me of the Swiss/French/Austrian/Italian/Japanese alpine trains which so efficiently serve high alpine villages. Efficiently spaced out are second tracks used just for up/down passing. These are quiet mass transit carriers efficiently bringing skiers and hikers and guests up into the mountains. If they are successfully used in places like Hong Kong and Rio De Janiero, why not Salt Lake City?</p> <p>Anyone who has not witnessed one of these amazing forms of travel needs to go to the Alps to witness their efficiency before speaking out against their usage.</p> <p>Carbon footprint issues absolutely demand rail for mass transit. Using buses on the steep canyon roads cannot be favored over rail when frequent avalanche closures occur. Most buses leave a carbon footprint and have a relatively short life when compared to railways so they are not the long range solution; however, until the train system is installed, buses can be used, and there should be a moratorium or a set limit on the number of single occupant vehicles in the canyon. Once we understand the need to carpool or bus up Little Cottonwood Canyon, the public will rejoice over the quiet one-track rail system so popular throughout the world.</p> <p>Holding up the Mountain Accord Process is the connection with Big Cottonwood and Park City. Let's install the Little Cottonwood train first to prove how efficient and popular it will be before we must commit to a huge regional plan, particularly building extensive tunnels. To seriously address Carbon Footprint, let's instead do an aerial lift system to easily bring people from Heber/Midway to Alta.</p>	Salt Lake City, UT	4/30/2015
<p>Mountain Accord People: thank you for undertaking this important task and thank you for asking for comments from the lay public. I hope wisdom prevails in the decisions that will be made on this project...wisdom that protects our priceless natural wonders well into the future...and beyond.</p> <p>My stance on the issue is simple: We must preserve the beauty, water sheds and related natural amenities of the Central Wasatch Mountains. They are the icon, the backdrop of Salt Lake Valley, the awe-inspiring setting for all the beauty shots you've all seen in photos, videos and promotional materials. They are the very reason Salt Lake Valley exists and thrives today. For the Wasatch Back, the reason mountains' offerings are the lifeblood, the reason several places (Park City) thrive. To do ANYTHING to jeopardize these natural wonders would be economic, environmental, aesthetic and recreational suicide -- not to mention short-sighted.</p> <p>Not every beautiful natural site -- winter or summer -- has to be easily accessible to everybody. Not everyone can float Cataract Canyon or climb Mt. Timpanogos. Many/most things/places must be left NATURAL or as natural as possible so that people can look on in wonder, dream, fantasize and marvel at the NATURAL beauty before them. Think Yellowstone Park. That won't be possible with gondola cable cars, towers, mid-mountain restaurants, switch-back trails gouged in a once-pristine mountain slope, or adjacent to a soothing canyon creek that runs unimpeded now.</p> <p>Yes, we are "loving our canyons to death", but wise stewardship will balance that love of the beauty with the growing crowds that want to visit, ski, picnic, hike, photograph, and wonder about. That will not be the case with light rail running up and down Little Cottonwood Canyon... And if it were, where would all the crowds ski? The layout of the canyon directs its limitations. Listen to nature. The ski experiences of Alta and Snowbird would be ruined by overcrowding, thus we'd be "killing the goose (natural wonder, remoteness, open space, natural beauty) that is laying the golden egg." Ditto for Big Cottonwood Canyon.</p> <p>Go slow with developing your plans, with whatever development is absolutely necessary (I can't imagine what that would be), go wisely, and do not allow the all mighty dollar be your guide, but that deep-down feeling in your heart. ☺</p>	Salt Lake City, UT	5/1/2015

<p>Dear Accord,</p> <p>I don't know how the exceptional labors, insights, and publications of Mountain Accord have escaped me. Indeed it is my error to have not contributed to the dialogue much earlier. However...and for what it is worth...here is my meagre contribution after having enjoyed many hours, days, months and years of "learning," patiently listening to, traveling with, and camaraderie with Leon Hansen the Father of the Multi-Purpose, Multi-Use, Super Tunnel concept. If one knew Leon and his white hot focus on the tunnel, the word "patiently" is easily understood.</p> <p>"Light rail transit(LRT)in exclusive guideway up Little Cottonwood Canyon to the Park City area, including tunnel connections between Alta, Big Cottonwood Canyon and Park City."</p> <p>The foregoing is an encouraging quote from the study. The most "exclusive guideway" would be a master tunnel with Draper as the portal into the "front" with respective branches to access all ski areas and Park City proper. There is Global precedent for such tunneling. Such precedent has been expressed repeatedly in its very early conceptualization by Master Geologist Leon Hansen ... deceased.</p> <p>There are many of us who believe that a "Multi-Purpose, Multi-Use, Super Tunnel" would remediate if not eliminate most environmental concerns and create a cornucopia of economic activity and opportunity. The father of the Utah Tunnel concept is Leon Hansen. Leon was a Masters degree level geologist who had a lifelong working relationship with the Greater Park City Mining District of Utah. Leon has held senior positions with several large, international, mining enterprises.</p> <p>There exists a repository of proprietary data that confirms the existence of precious metals resources that equal or exceed what have already been recovered from the mining district prior to its closure. Mining was halted decades ago because the metals resources were impacted and impounded by water in the mines. Leon believed that the water in the mines is a resource even more precious than the remaining gold and silver reserves. If the waters are recovered, the metals can also again be recovered.</p> <p>Synopsis:</p> <p>The Utah Tunnel will be a tunnel like many other long, long tunnels...New York-85; Sweden-51; Japan-33; Moscow-25; Madrid-25; Finland-74; LOETSCHBERG-21; Chunnel-31; Utah Tunnel-21</p> <p>The Utah Tunnel would also be 21 miles long and most like the LOETSCHBERG tunnel.</p> <p>Loetschberg is the longest land tunnel (21Miles) in the world.The Loetschberg tunnel took eight years to build and cost \$3.5 billion. The Loetschberg tunnel transports skiers to Swiss resorts more quickly.</p> <p>The Utah Tunnel would be a multipurpose/multi use resource. It will Convey...Water...Strategic minerals...Tourist transit to world class ski and recreational resorts...and other economic benefits to all of the citizens of Utah. The Utah Tunnel...it can be done...during economically difficult times. The famous symbols of recovery in the West during the Depression included: Hoover Dam, Grand Coulee Dam, The San Francisco Bay Bridge and the Golden Gate Bridge." The Utah Tunnel will develop the following resources:</p> <p>Water...Multi-Millions of gallons from aquifers under and around the Uinta and Wasatch mountains recovered. Strategic minerals...\$0,000,000,000 (at thousands of dollars an ounce) of water locked, precious metals (gold, silver etc.) resources freed!!! Travel to ski and recreational areas... rapid, uncongested, and safe transit from the airport and other points to resort areas developed. Hydro and Geothermal power...other economic benefits...</p> <p>The tunnel from Draper to Park City will pass under three of Utah's most famous ski resorts. The plan is to connect those resorts with the tunnel thereby ensuring safe and rapid transportation from the Salt Lake International Airport to the resorts. It is our understanding that there is an existing railroad right of way from Draper to the Airport.</p> <p>Submitted respectfully ☺</p>	Salt Lake City, UT	5/1/2015
<p>Dear Committee,</p> <p>To begin, thank you for your consideration of our input and comments. I hope that the comments you've received about your work have been mature and articulate, and, if so, I trust that you will take them very seriously as the words of a democratic citizenry vitally invested in this place.</p> <p>As an individual citizen so connected to the Wasatch landscape, ecosystem, and economy, I have two main topics of concern: water use and protection, and public funds vs. wilderness fiber.</p> <p>Especially in the wake of the dramatic 2014-2015 winter snow shortage in Utah and across the West, it is not at all out of the realm of possibility that Utah may need adopt a water rationing model like the one California put in place this year. In light of such a possibility, it is hugely unfair for private-profit ski resorts to plan to increase their use of water for increased snowmaking operations on expanded terrain while Utah residents are asked to consider ways to conserve water in their homes, on public green spaces, and on agricultural lands. For the ski industry in Utah to plan an increased use of water in the Wasatch Mountains is short-sighted and ecologically irresponsible, and ski resorts should not be allowed to expand without more seriously addressing the issue. In that same vein, I have major misgivings about how plans put forth by the Mountain Accord will affect the key watershed environment of the Wasatch Mountains. The reports about how tunnels, trains, and other proposed transportation changes in LCC and BCC will affect runoff paths and watershed preservation are not sufficiently researched or considered. This seems an immense oversight and grossly neglects the life-sustaining importance of water in the increasingly dry climatological reality of the West. While transportation does need to change in the Cottonwood Canyons, any large-scale project needs to perform much more comprehensive study of effects on the watershed before being seriously considered.</p> <p>I'm concerned about the proposed use of taxpayer monies to support private industry. I'm irked by the elevation of interests of corporate ski areas in contrast to those of independent citizens who reside in this place. And while I understand the economic motivation to grow Utah's tourism sector, I do not value it more than the need to preserve the ecosystem and landscape Utahns call home. Proposed underground ski resort connect systems, while perhaps enticing to potential visitors, critically alter a natural landscape in our backyard with huge taxpayer cost and ill-researched ecological effects. Ease of transportation between ski areas in the Cottonwood Canyons and the Park City area using ski lifts or tunnels, while perhaps attractive to out-of-state-owned corporate interests like Vail, sacrifices wilderness experience for those who seek it (for local and visiting recreators). The mountain environment and wilderness fiber of the Wasatch has drawn and continues to attract new Utah residents in growing numbers. The plans set forth for responsibly planning development of the mountain industries needs to promote, also, the protection of public lands. Failure to do so could quite simply destroy the core nature of the Wasatch Mountains as a place to enjoy democratic and free access to open alpine lands. Small parcels have been delegated for protection, but I'd appreciate more language and proof that this value is being seriously considered.</p> <p>Thank you very much for your time and attention paid to this important project defining the future health and balance of my home environment. I wish the committee the best of luck moving forward.</p>	Salt Lake City, UT	5/1/2015
<p>Thank you for accepting comments on the concept of Mountain Accord, as well as the different ideas and concepts as laid out in the materials available at the Mountain Accord Website. It's clear that there has been a lot of great work and critical thought put into the process. I want to focus my comments on 3 areas of the Accord: need for change, transportation in and around the Tri-Canyon area, and development in the tri-canyon area proper (Millcreek, Big Cottonwood and Little Cottonwood Canyons).</p> <p>First, there is an obvious need to address the environmental, transportation, recreation, and to a lesser extent the economic systems in the Tri-Canyon areas. The ever increasing numbers of cars, users, and impacts are having a negative effect on all of the systems the Accord describes. Good job for pulling all of the systems together into one conversation. I agree with the need to evaluate how each of these systems are affected.</p> <p>I do think that the Accord should rank the systems in an order so that weight can be given to the different systemic factors that proposals and ideas directly affect. For instance, the systems are all treated equally now, but which system is most irreversibly altered if one or more systems are favored? Specifically, if the economic system is favored at the expense of the environmental system, there is no reversing the detrimental effects on the environment, though the economic system may succeed wildly. So, the environmental system should be given primary consideration when evaluating the ideas and scenarios moving forward. After the Environmental system, I suggest ranking Recreation, then Transportation, and finally the Economic. Without healthy systems in either of the first 2 systems, then the economic system declines and we are left with dead tourism market. The Transportation system needs to comply with and support the goals of the first-ranked systems.</p> <p>As for transportation systems: At this point, I think a system that uses Rapid Bus Transit in Parley's Millcreek and Big and Little Cottonwood Canyons is crucial. We need to couple a vastly improved bus service with disincentivised personal auto use in at least the Tri-Canyons. Far too many single occupant trips are made in these canyons, leading to congestion on the roads, trailheads, parking areas. Notice there is little congestion one users get on the mountain. If users had dependable, functional (users could transport skis, luggage, bikes, climbing gear, hiking gear, etc), frequent, and affordable bus service up the canyons, why would we drive alone in our cars? If convenience is removed as the impetus for single occupant vehicle trips and is replaced with a comfortable, dependable bus with more stops in each of the Canyons for recreationists to embark/disembark, then the incentive to drive alone is gone. Couple increased, rapid bus service with a fee system for driving alone up the canyon, and the incentive to carpool or ride rapid transit is even greater. This idea should be the primary proposal considered. It is MUCH less expensive than building light rail up LCC, and likely able to move just as many people, assuming the transfer hubs were designed correctly to support the primary mode of transit. Also, we have an opportunity NOW to see how that solution will play out for the future. We can pilot such a program in the near future, not wait 10 years. UTA needs to be on board, as does UDOT, the Ski Resorts, and most importantly the individual recreationist/guest who visits the mountains.</p> <p>When construction of light rail is analyzed in the LCC to BCC to Park City line, the total costs of that system, how it will be funded, how it will operate, and how it will be paid for all need to be disclosed in clear, concise detail. Any transit solution that seeks to connect the Tri-Canyon area with the Wasatch Back is going to have unintended consequences that need to be creatively considered and disclosed in environmental analyses.</p> <p>Finally, development in the Tri-Canyon area is a critical piece of the Environment and Economy picture. Development in the canyons ranges from expanding resort boundaries, building more single-family homes in the canyons, to building more lodging in the canyons. I would like to weigh in against some ideas and in favor of some ideas. Many of those ideas I am in favor of are not popular among many of the preservationists in the region, but they appear to me to be political realities when asking for conservation measures to prevent other kinds of development.</p> <p>First, no ski resort boundaries should be expanded, above the base areas. There is not a need to accommodate more skier traffic on the hill at our resorts. The skier/snowboarder numbers around the world are not increasing, they are flat or decreasing. The sport has simply become too expensive for more and more people to participate in, let alone travel to Utah from other locations. We (the resorts in Utah) are competing with other established resorts in CO, Europe and the Eastern US. True, prime weekends lead to some life lines at Utah resorts, but it's still far less crowded here than in other ski areas around the country, and world. In exchange for no resort boundary expansion, I actually do favor allowing resorts to purchase at fair market value some small areas of public lands at the resort bases so that resorts can build additional lodging, employee housing, transit exchanges.</p> <p>I also think the USFS should allow resorts to add lifts, and on-mountain development within ski areas currently within the boundaries leased by resorts from the US Forest Service. I think that also means resorts should be allowed to build facilities, features, activities that are able to be used during the summer (such as lift-served mountain biking, outdoor concert venues, zip lines; even Mountain Coasters, and yes, I pinched my nose when I typed that).</p> <p>These are primary thoughts at the beginning of what will be a long conversation about the issues at hand in the Accord. It is difficult for a working stiff to write all the thoughts I have about the proposals. I would like to thank you for considering my comments.</p>	Salt Lake City, UT	5/1/2015

<p>To whom it may concern:</p> <p>I'm writing to express my general support for the Wasatch Backcountry Alliance's position with regard to the mountain accord process and proposal. My main concerns as both a resort pass holder and backcountry user are the impacts that proposed resort expansion, private development, and new transportation infrastructure will have on the remaining public lands and natural resources in and around The cottonwood canyons. I would like to see grizzly gulch remain a place for public human powered recreation. I am concerned about the impacts that a train tunnel may have on LCC from the increased use it will bring. Buses seem to be a more palatable option if increased parking lots can be developed. <del>I'm opposed to any connection that crosses the crest.</del></p>	Salt Lake City, UT	5/1/2015
<p>First, I would like to commend the Mountain Accord for its inclusive and forwarding looking process. As one of the few cities in the United States with easy access to some of the greatest mountain terrain, it is critical that this invaluable resource be managed so that it retains its viability into the future for the public good.</p> <p>That said, I do not think the Mountain Accord factors in how climate change will affect the public's future use of the Wasatch Mountains. One critical need will be water resources because water will be (and already is) an essential component in Salt Lake City's sustainability, future development and livability. Any future plans must, therefore, first and foremost preserve and protect the watershed.</p> <p>The transportation component of Mountain Accord seems to focus on the need of the ski industry. I question whether there will be growth in the ski industry much beyond what it is today. The price of lift tickets and the cost of ski equipment already make ski sports unaffordable to many Utahns and visitors alike. The diminution of snowfall (e.g., no Spring snow projected by 2100) and the need for man-made snow will not attract even the most affluent and avid skiers. Moreover, man-made snow will put excess demands on scarce water resources.</p> <p>Second, I oppose tunnels and a train up the canyon. Even at the preliminary stage, these plans are grandiose and extraordinarily expensive and seem to be based on the perceived needs of the ski industry. The costs would undoubtedly be put on the Utah taxpayer. Such a specialized project benefiting a few may not even attract federal funds. A better use could be made with such a huge expenditure by improving transportation for the Salt Lake City metro area to the mountains.</p> <p>There are more efficient and affordable ways to enhance transportation up the canyons. For example, a third bi-directional lane could be added so that there would be two lanes for traffic to travel during peak periods. A more efficient and dedicated bus system makes more sense and would not create the visual scar or environmental damage as would a train or tunnels.</p> <p>Third, I support the concept of land swaps, which is a much more efficient system for all than protracted litigation. But I only support the concept if land deeded to the public is given the highest environmental and non-developmental protection available. Clustering development around the base of existing ski resorts and limiting the footprint of future development so that contiguous wilderness area can be created and preserved should be an overarching goal.</p> <p>Thank you for giving the public the opportunity to comment on this early stage of the process.</p>	Salt Lake City, UT	5/1/2015
<p>Mountain Accord Comments</p> <p>What I am okay with...</p> <p>I am okay with elements that seek to protect and limit development in the Wasatch high country and even with the privatization of some of the public land to support the commercialization of ski resorts. I don't have enough information (or have not been able to review) to understand the calculus of this exchange but conceptually it's okay for me.</p> <p>What I am not okay with...</p> <p>I am concerned and frankly appalled by the proposal to augment the transportation system – with light rail, tunnels and gondolas. This is an absolutely a disastrous plan.</p> <p>We are facing profound changes and considerable uncertainty on many levels. Climate change, draughts, inversions...all of which have profound implications on growth scenarios. I just don't support the notion that we are a 6 million person state in few years. There are limits to our growth. I am suspect of growth projections that assume current trends when there is so much about the current circumstances that could depress growth.</p> <p>I recognize that the proposed infrastructure requires careful planning and massive amounts of capital – and therefore has a long gestation. But it seems to me that the sort of development suggested in the plan would be absolutely immutable. Light rail up canyons, tunnels through mountains, sky links (or whatever the euphemism now) connecting canyons all seem like reasonable alternatives to more cars, more congestion, more pollution – but for the fact that they profoundly change the unique characteristics of these canyons. In fact, the congestion and gridlock experienced today serves to retard use.</p> <p>So here is an example of why building infrastructure to move more people, more efficiently and with less noise and pollution is a pyrrhic achievement. Fifteen of twenty years ago, Zion National Park created a sensible, thoughtful and collaborative plan with the gateway community of Springdale to restrict automobiles and to require access via shuttle. The benefits are huge – cars out of the canyon, less noise, less pollution, awards and plaudits for forward thinking. But alas, the previous system had a built in pressure release, limited parking. If visitors did not have parking options they would not visit that particular trail. The shuttle system circumvents the parking barrier and as a result, the trails are hammered and to some extent the visitor experience of “nature” is lost.</p> <p>My fear is that by eliminating the natural barrier to entry, we have the potential to absolutely destroy the naturalness, beauty and resilience of these remarkable canyons. I fear that the Wasatch will become a sterile – almost artificial urban park.</p> <p>I am also concerned about the plan to make more water available for snowmaking. I fear that this will become increasingly the rule. As we build up the expectations for our ski industry by connecting all resorts in three canyons – it will require even more water for more snowmaking to support the economic imperative of these massive resorts. That we will have more concerns about water for municipal uses is quite apparent. Why would we want to build in an expectation based upon an economic imperative that is created by this accord (more grand skiing opportunities in Utah) that limits our municipal water needs.</p> <p>In my opinion, this plan, this accord is half baked and its assumptions seem to be structured to drive towards solutions that will only exacerbate the problem. Some land exchanges that offer privatization of small forest service lands – great – establish a more viable resort option at the base for the existing ski areas, as I fear that their summer seasons will be longer in the future. Let's work to actually protect the naturalness of our canyons – maybe recognize that they have a carrying capacity and find ways to actually find solutions that protect this most precious resource.</p>	Salt Lake City, UT	5/1/2015
<p>Introduction</p> <p>The concepts within the Mountain Accord are sufficiently vague causing an overall concern that any support for the concepts is premature. Understanding the complexity of planning that will be necessary for implementing the varied aspects considered by Mountain Accord, the very premise of the Mountain Accord its process is concerning as well. Taking a broad swath of land and jurisdictions and allowing a select group (partially made up of for profit companies whose bottom line will be benefitted by the outcome) to come to consensus on how these areas should be planned, circumvents the public process. It applies undue pressure and influence to any project by project analysis and public hearing that subsequently occurs.</p> <p>Most visioning processes, though useful in understanding broad concerns and needs, often fail to implement with integrity the environmental or community benefits envisioned by these processes. Too many visioning efforts result in the economic development and transportation elements getting funded and moving forward while meaningful preservation is sidelined, partially accomplished, left to chance or worse development occurs instead.</p> <p>Land preservation and Watershed protection needs to be the highest priority for all those at the table. It is fundamental to long term economic vitality and should not be undermined by short term economic concerns as the recreational opportunity, clean water and environmental health once compromised cannot be replaced. Transportation solutions should not be driving the process. It is disheartening to see the scoping document appear on the register indicating that Transportation solutions will drive the process and further questions the validity and viability of the process.</p> <p>Land Swaps—Having protected land from development for the past 25 years, anytime there is discussion regarding taking protected land and making it developable there are concerns. The bar needs to be sufficiently high, so that this idea does not become routine. This land swap has the potential to set a dangerous precedent. Consideration should be given not just to the amount of acreage being swapped but also the relative development potential, the planning and zoning currently existing and the eventual development considerations given to the property. Additionally a concept which has been part of other federal regulatory process is that it shouldn't be a one to one match but rather a ratio where there is a several fold increase of protected land.</p> <p>Additional protections for already protected land—Additional layers of protection for already protected land is fundamentally a good thing. Utah Open Lands has long held that conservation easements are critical as a layer of defense and protection when land is purchased or zoned as open space. With this said no one would pay a full market value for a piece of land that had already had the development rights stripped away. Whatever the additional layer of protection turns out to be whether it be Wilderness designation or something similar the trade off should be commensurate with the recognition that it is protected already and therefore trade offs should not be considered as if the land protected was somehow in danger of being developed.</p> <p>Economic Centers or Transit Oriented Development—this concept in theory is dynamic and should aid in reducing air pollution, traffic congestion and create walkable communities. In practice there are several concerns. Blindly supporting this concept without proper regard for the consequence of how these areas actually get rezoned and the potential lawsuits that it might open up is foolhardy. The concept of economic centers is troubling as most of these communities lack requisite and appropriate ordinances to ensure that these centers, which will necessarily benefit the landowners within these centers, will actually provide a benefit to the community reversing decades of positive planning in which clustered developments or upzoned properties had to provide multiple community benefits. There are several examples in the Salt Lake Valley where transit oriented developments resulted in a windfall to developers with no community benefits, so a very poor precedent, by one of the leading agencies in this process, as already been set. By way of example one project was originally zoned 1 unit per acre and once a transit oriented development was planned it was rezoned with unlimited height and unlimited density.</p> <p>Train or transportation solution—A recent New York Times article explored the train versus bus transportation solution in many cities. The conclusion, buses are not as sexy but they are more efficient, are not fixed and therefore can actually accommodate a ridership that gets people where they need to go and are more cost effective. We are not Europe we are a car centered community which suggests that buses accommodate the need better. A train that aims to solve a transportation problem that exists perhaps 20 days out of any given year in the cottonwood canyons, doesn't make sense. A train in the canyons will not pay for itself in ridership and therefore will potentially increase undesirable development as a means to finance shortfalls. Current fares are too costly to truly capture the family of four wanting to recreate in the mountains. \$5 per trip – \$40 for the day will not be cost effective for any family. Additionally, as climate change alters current recreational pursuits in ways we may not be able to envision a bus line will be far more adaptive to those changes than a fixed solution.</p>	Salt Lake City, UT	5/1/2015

<p>Public Comment on Mountain Accord</p> <p>Our Wasatch Canyons: Protecting What Cannot be Replaced May 1, 2015</p> <p>I spent my childhood summers hiking the trails around Brighton, including numerous treks to Lake Solitude. After not walking those trails for many years, I took my grandsons on a hike to the lake. We saw a moose on the hillside, took in the scent of the pines, and passed a few families also enjoying the walk. As we reached our destination, however, instead of the pristine lake I remembered, what caught my eye was a deeply-rutted, muddy service road—a scar running up the mountain from Solitude Resort. A rusted snowcat was parked in front of us. The unexpected collision of development and nature was jarring, I didn't even notice the lake.</p> <p>I'm not against ski resorts—skiing the Wasatch has enhanced the lives of all of us who have been lucky enough to participate. But the experience at Lake Solitude made it clear that, although development can provide ways to enjoy the canyon, it can also destroy the very things we value most about being there. We need to be aware of what we're creating, pay attention to the consequences, and work together to find sensible balance between development, and preserving the natural state of the spectacular canyons that are our backyard. Once an area is developed, it is forever changed. It will never go back to a natural state.</p> <p>And this brings me to the Mountain Accord.</p> <p>I attended the public meeting at Cottonwood High School in Salt Lake City. I was surprised and impressed to observe how the panelists responded to questions from those attending and comments from each other. I expected more rancor, but it was obvious that the process that has been used over these many months has resulted in a group of people with diverse priorities for the Wasatch to be able to have a civil dialogue. Very surprising—and refreshing. Hopeful.</p> <p>My priority in our Wasatch canyons is to preserve and protect our watershed and not take on any development projects that could put it at risk. There are suggestions in the Mountain Accord plan to tunnel through some of the mountains to connect the various resorts, along with building interconnected ski lifts, and restricting cars in the Cottonwood canyons to provide a transportation solution for the unsustainable amount of traffic there. I have also heard that in order to forever protect and preserve additional wild land, other land would be given up to development. But the bottom line is that we all have a responsibility to be stewards of these canyons—to protect them from development that would threaten what we love most about them.</p> <p>Local leaders want to develop policies to solve our canyon transportation challenges and guide future decision making about development on public lands in the Wasatch Canyons. They need our support. But our government needs to keep protection of our watershed the highest priority. And we all need to value how incredibly rare it is to live in a metropolitan area where 20 minutes later, we can be hiking a pristine trail in the Wasatch Mountains.</p> <p>Utah nature writer Stephen Trimble, in a recent article in "High Country News" asks, "What should we do with our blink of time?" To paraphrase his response: "We must think hard about consequences. We can act with hubris...or we can deal with the extraordinary opportunity of our few decades on Earth with restraint...acutely aware that we must act with care if our natural world is to flourish."</p> <p>I agree.</p>	Salt Lake City, UT	5/1/2015
<p>I support ONE Wasatch and over-the-snow connectivity</p> <p>To whom it may concern,</p> <p>The results of the Mountain Accord process should emphasize maintaining and preserving the biological integrity of the Wasatch Mountains. The Wasatch Mountains are more than a source for recreation and economic growth, they are a place of quiet and solace located just outside of our bustling city. They are the headwaters for our watershed and the primary reason we choose to call this valley our home.</p> <p>For many of us who are not members of the dominant religion, these mountains are also our place of worship - they are where we go to interact with wildlife, to look into ourselves, to preserve the sanity that seems always under attack by the noises, grime, and soot of our populated city and suburbs. A premium should be placed on conservation of these fragile ecosystems and no scenario should be considered which in any way weakens or negatively effects protection of these unique and precious areas.</p> <p>In every circumstance expansion of the ski resorts should not be allowed and further urbanization and development of the canyons - including greater access through rail expansion, tunnels, and ariel transportation - should be restricted.</p> <p>Under no scenario should the interests of ski resorts be prioritized. They have proven themselves poor caretakers of our mountains - just witness Hidden Peak. While I enjoy skiing with my family at the resorts, our experiences as skiers and the fleeting joy that comes with taking a quick run should by no means be prioritized, seen as being of greater benefit, or held to be of greater value than the more important aim of preserving the long term health of the watershed and preserving the biological integrity of these unique mountains.</p> <p>Thank you for your time. ☺</p>	Salt Lake City, UT Salt Lake City, UT	5/1/2015 5/1/2015
<p>To whom it may concern,</p> <p>We own property on Church Road adjoining Solitude Ski Area in Big Cottonwood Canyon. The property owners on Church Road will be negatively impacted by the expansion of the ski area unless several issues are resolved.</p> <p>1) The realignment of the Honeycomb Return chairlift will allow many more skiers access into Honeycomb Canyon. Currently, many skiers now leave Solitude Ski Area boundaries and ski down Church Road to return to the resort. Back country skiers currently access the Meadow Chutes area via Church Road as well. Church Road is a single lane road, much of which is privately owned and is now currently privately maintained. Back county and resort skier traffic create a safety hazard for the skiers as well as drivers and the dangers will increase unless the road is improved to allow both vehicle and skier traffic. This improvement must be included in any resort expansion.</p> <p>2) Backcountry skiers leave both garbage and human waste in both Honeycomb and Silver Fork Canyons. Garbage disposal and restroom facilities is needed currently and must be addressed in any expansion plans.</p> <p>Generally, we support the plans, but considerations to local residents and property owners must be considered.</p>	Salt Lake City, UT	5/1/2015
<p>Hi,</p> <p>The Mountain Accord web site is tough for me to navigate, so I'm just going to send a basic plea on behalf of wilderness. I am in support of better trails through the Wasatch, but fewer roads and fewer ski connections and structures. Please prioritize keeping it quiet in the mountains.</p> <p>Thanks</p>	Salt Lake City, UT	5/1/2015
<p>Ski area connectivity would definitely help Utah's economy. Therefore, I support ONE Wasatch.</p>	Salt Lake City, UT	5/1/2015
<p>I sent a few thoughts in yesterday and would like to add just one other thing:</p>	Salt Lake City, UT	5/1/2015
<p>Whatever else happens, please don't let them put a lift up Grizzly Gulch!</p>		
<p>Thanks for your consideration</p>		
<p>I believe the economies and sustainable development of the Wasatch Front and the Wasatch Back are directly linked to environmental protection, environmental health, and land preservation. Businesses move to Salt Lake City and Park City because of our high quality of life, access to diverse mountain recreation, and access to undeveloped backcountry experiences. Business and tourists avoid Salt Lake City and Park City because of poor air quality along the Wasatch Front. Professionals and entrepreneurs are beginning to leave the Wasatch Front due to serious public health concerns with air quality.</p> <p>I am concerned that the "Economy System" is not reflective of the true Wasatch Front and Wasatch Back economy. The economy system focuses on tourism and prioritizes growing tourism. The economy of Salt Lake City is much more diverse and should be reflected in the goals and vision of Mountain Accord. I am concerned that the Mountain Accord has become a "transportation" plan to benefit moving tourists between ski resorts.</p> <p>I strongly oppose an interconnect between the environmentally sensitive Cottonwood Canyons and Park City including tunnels, rail, enhanced roads, and aerial lifts. Tourists do not come to Salt Lake City and Park City to ride unnecessary and gimmicky aerial lifts or rail interconnects. The environmental cost of such interconnect is significant. The loss of dispersed backcountry experiences is significant with such an interconnect. The economic benefits of such an interconnect are over stated and benefit a select few.</p> <p>I support an enhanced bus-based transportation for the Cottonwood Canyons and oppose any rail options for the Cottonwood Canyons. The Cottonwood Canyons are extremely sensitive environments, and I am concerned about the impact of rail on Little Cottonwood Canyon. I support actions and fees that would encourage bus use and discourage auto use in the Cottonwood Canyons. I support user fees that would benefit preservation including private land transfer.</p> <p>I support private land transfers to further preservation actions in Grizzly Gulch.</p> <p>I oppose further boundary expansion of ski areas in the Cottonwood Canyons. A balance between resort, backcountry, and land preservation has been reached in the Cottonwood Canyons.</p> <p>I support further consideration of rail and enhanced bus options serving the Airport to Park City area via I-80 corridor. It is practically impossible to take public transportation from Salt Lake City to Park City.</p> <p>I support further consideration of bus rapid transit and light rail along the Summit County connectors.</p>	Salt Lake City, UT	5/1/2015
<p>After careful review of multiple stages of the Blueprint, I feel that I must make my voice heard on this issue. I have lived in the SL Valley for nearly a decade, and have spent much of my time enjoying the Wasatch. I have also watched privatization of our natural resources happen with regard to our rivers and streams, and I fear that by compromising the values of preservation within such a treasured and highly frequented resource as the Wasatch, we will be setting ourselves down a path that is regrettable in 30, 50, or 100 years from now. That is not to say that I disagree with the blueprint in its entirety, as there are still many aspects of it that I find favorable, particularly the use of a Mountain Rail. However, I must say that the sentiments expressed by the Wasatch Backcountry Alliance are congruent with my own views, and at this current juncture I cannot support the Mountain Accord Blueprint.</p> <p>Please consider the WBA letter as though it were my own:  <a href="http://wasatchbackcountryalliance.org/2015/02/12/wasatch-backcountry-alliance-official-response-mountain-accords-cottonwood-task-force-blueprint/">http://wasatchbackcountryalliance.org/2015/02/12/wasatch-backcountry-alliance-official-response-mountain-accords-cottonwood-task-force-blueprint/</a></p>	Salt Lake City, UT	5/1/2015

<p>Although they are coming in at the last moment, please accept my personal comments on your process and evaluation of alternatives as you make what will be a most important decision on the future of the Wasatch we all enjoy and utilize. I'm writing free-hand and without notes and "suggested bullet points" from any interest group involved in the process, so this is all from the heart and based on my personal experiences in the Wasatch over the years.</p> <p>I'm 51 years old and grew up in Cottonwood Heights between the Cottonwood Canyons. Since I was a kid, I've hiked throughout the canyons for the sheer pleasure of getting away, at first from adults, and nowadays from my busy work life. I use the canyons for escape and to find a place I can enjoy away from my urban existence. I use them to get in touch with my drinking water source, to observe and somehow bond with wildlife, to recreate in the form of snowshoeing in the winter and hiking in the summer, to breathe clean air, and most of all to get into the wilderness our predecessors so wisely set aside.</p> <p>I believe the most important thing you should consider in your evaluation and decision making is the expansion and addition of more wilderness areas. Wilderness is the reason we have a clean drinking water supply for our growing citizenry. Without designating what wilderness we have back in the 1980s, we could very well be facing a lot more development in the canyons today which would be placing an increased risk to our quality of water due to sedimentation that comes with development as well as water quantity from those extra canyon users. Without designating those wilderness areas back then, we would have no places where the ski resorts didn't punch their lifts into quiet winter back bowls in our canyons. Without wilderness we lose the opportunity to challenge ourselves against nature right outside our own backyard. Without wilderness we become less human. Just knowing that it's there is good enough for me -- I don't have to go there and make use of it -- it's valuable simply as idea, or as Wallace Stegner wrote in 1961, "It's part of the Geography of Hope."</p> <p>I'm a preservationist and I think your decision should place preservation and conservation above all other factors. We only have one group of mountains outside our urban area -- losing more portions to development is a permanent decision that can't be reversed. The forces of development will always have an interest in growth, but through this process, you can hold that growth to the 2015 level, which is already enough. To the forces and interests who wish to make our mountains an even larger industrial playground so they can use the mountains as they see fit, complete with trains, gondolas, tunnels, One Wasatch, etc. I say enough is enough. We've already endured years of ski industry dominance of our canyons. They are responsible for the increased traffic and problems associated with even more industrialized growth in the canyons -- your decision on Mountain Accord shouldn't make the matter worse. Yes, I favor limitations on development and growth of the ski resorts and whatever plans they have to continue "building out" their infrastructure that caters to the wealthy. They have enough already. We don't need to "compete" with European resorts as a destination. Let Europe be Europe, and let Colorado and Vail, etc. be themselves. We don't have to cow-tow to moneyed interests just to be big like those other places. Utah resorts should be unique, small and cater to that audience. You don't have to agree to their wishes and demands and I urge you to err on the side of caution and conservation. It's a decision your grandchildren would appreciate.</p>	Salt Lake City, UT	5/1/2015
<p>I am a 20 year resident of Salt Lake City and have spent hundreds of days recreating in the central Wasatch. My favorite activities include backcountry skiing, backcountry snowboarding, snowshoeing, mountaineering, climbing, hiking, and backpacking. I also do enjoy the amenities of the local Wasatch resorts and usually spend a couple of days riding the lifts each season as well. However, my main interest is in self-powered activities that allow me to experience the wildness of the Wasatch. I am very concerned about the continual, encroaching development in the Wasatch. I have read the Mountain Accord documents and kept abreast of the process and would like to provide my comments.</p> <p>I strongly disapprove of any plan to provide an interconnection between Big and Little Cottonwood Canyons and Park City. I strongly disapprove of the construction or expansion of any new roadways or tunnels to provide an interconnection in the Wasatch. My concern is that there will be significant impacts to the environment and the remaining wild character of the central Wasatch. There would be significant impact to dispersed user group. So much of the central Wasatch is already developed and subject to motorized vehicle use. I strongly support keeping the central Wasatch free from further development of any interconnect, as this will have significant immediate impact, and the cumulative long-term impact is unknown.</p> <p>Thank you for considering my input into this process.</p>	Salt Lake City, UT	5/1/2015
<p>I have provided comments before at gatherings and I was told to repeat those comments to ensure that they are recorded.</p> <p>These are my comments regarding the Mountain Accord Plan proposal:</p> <p>In general, the Plan appears to be overly costly and assumes the availability of funding. There is a limited amount of government public projects money available that should have created a more realistic project plan. If one billion is somehow acquired to build the tunnel and cog railway, then other mass transit services in the Salt Lake Valley will be hurt. That has happened in the past. In addition, these projects should compete with other projects with respect to cost effectiveness (cost per passenger) of transit. Note that some cog railways in the U.S. charge \$30+ per passenger and that is on top of the project cost. That cost is unreasonable and an inefficient use of funding.</p> <p>Also a cog railway will probably be electric due to the residents' concern about noise in the canyon. That will require power lines and rail power lines that will destroy the views of canyon visitors.</p> <p>Widening the roadway would provide a better and more cost effective way to get people up and down the canyons. Widening the shoulders for bicyclists would also help safety and be more cost effective than making the bike lanes able to handle big vehicles. Shoulders don't need to have a thick construction and can have deeper ridges to warn drivers if they are going onto the shoulder/bikeway. Bus service needs to be available year round and not be special for skiers. The canyons get visitors all year round. Buses should allow/encourage more bicyclists.</p> <p>Instead of big projects, simple and cheap proposals are a better and more realistic way to plan this area's future.</p>	Salt Lake City, UT	5/1/2015
<p>I grew up in Salt Lake City and have spent a lot of time in and around the Wasatch canyons, and particularly Little Cottonwood. As a resident of downtown Salt Lake City, I value the Wasatch for its watershed, recreation opportunities, and open space. I believe that Mountain Accord can have a very positive impact on the Wasatch and surrounding communities. While I largely agree with the overarching goals and actions within the Blueprint, there are three areas that I am particularly concerned with:</p> <p>1) Proposed connection over/through Grizzly Gulch</p> <p>Part of what makes Little Cottonwood Canyon, and particularly the town of Alta unique, is its relative isolation. I'm concerned that a tunnel through the top of the canyon into Park City will turn Alta into an extension of Park City. I believe this would be a detriment to the unique heritage, culture, and character of each community. Furthermore, from an environmental and watershed protection standpoint, I'm concerned that a tunnel would increase access to an area that is already highly visited. There is a benefit from both an environmental protection as well as user experience to limited access.</p> <p>Regarding a proposed lift over Grizzly Gulch, I am also not in favor. Lifts could be a considered a means of transportation (to the elite few who can afford lift tickets) maybe 5 months out of the year. I am concerned about the limits of this as a viable transportation alternative, but more so for its impact on the environment and viewshed. For the remaining six months out of the year, we are left with an unsightly lift line that will be visible even far beyond the Grizzly Gulch area. I think we would be giving up too much in the way of open space, and the outdoor experience, by allowing a new lift in that area.</p> <p>2) Mode of public transportation up LCC</p> <p>I support a bus rapid transit system over a train. As a Salt Lake resident I would love to have a reliable and quick public transit option up the canyon. I'm concerned, however, about the cost of a train as well as the inflexibility of a train. A train requires a significant investment in infrastructure, in time, money, and space. Studies show that bus transit systems are a fraction of the cost of a train and may be quicker to implement. I would prefer to see an investment in a bus system, with money spent on marketing the bus system to override apparent bus stereotypes.</p> <p>3) Proposed land swap between Forest Service and Alta Lifts Co.</p> <p>I am in favor of a consolidation of lands, particularly if it includes more wilderness or other land protections for the Wasatch as a whole. However, I have many concerns about the swap between the Forest Service and Alta Lifts Co. entirely benefitting the lift company. I believe that if a town center is truly to be created, a portion of that land MUST be dedicated, within the swap agreement, for public purposes that benefit the community and its year round visitors. Lands must be dedicated for public use as a covenant running with the land. In particular, if we are trying to encourage use of public transportation up and down canyon, then there needs to be some sort of PUBLIC infrastructure to support that. I'm concerned about visitors and residents being priced out of access to the Alta area if the new infrastructure is designed to attract high spending out of state dollars. It is the Town of Alta, where Alta Lifts Co. is just one of other businesses, not the other way around.</p> <p>And finally, keep Alta unique by not trying to compare ourselves to the Alps. We are a unique experience in and of itself.</p> <p>Thank you for all your time and effort with Mountain Accord.</p>	Salt Lake City, UT	5/1/2015

<p>The Wasatch Mountains are a critical resource for Utahns and visitors from all parts of the world. Protecting the Wasatch Mountains' environment should drive the Mountain Accord Blueprint, and be a pre-condition to any development strategies seriously considered.</p> <p>Public transport up the canyon must be frequent, comparable in travel time to driving and affordable, or people will continue to drive. A railway would be visually intrusive, noisy and diminish the wilderness character of the canyon. Construction and operation would likely have damaging impacts to water quality and wildlife. Instead, a dedicated bus lane should be considered, constructed by widening the road to three lanes where practical, with an alternate flow lane to accommodate bus traffic during morning and afternoon peak times in the winter.</p> <p>Avalanche protection might be added in Little Cottonwood to improve reliability of access, if built with a visually acceptable design.</p> <p>Tunnels among Little Cottonwood, Big Cottonwood, and Park City would mainly support ski resort marketing and would do little to address regular transit needs for residents. Tunnels may pose significant environmental concerns during and after construction such as water pollution, air pollution, noise, and permanent visual disturbances in our scenic canyons. Tunnels would incur significant construction and maintenance costs, and would disproportionately benefit out-of-state ski-area customers rather than Utahns.</p> <p>Land exchanges that preserve pristine backcountry in the Wasatch while allowing limited additional development in already impacted areas are potentially a good idea. These exchanges also offer the potential for reducing conflicts over wilderness designation and other protections on public lands. Permanent protection for public lands, such as those proposed in the Wasatch Wilderness and Protection Act in 2010, is important for watershed, wildlife and back country solitude.</p> <p>One of the most important outcomes from the Mountain Accord process would be to create permanent, limited boundaries beyond which ski resorts will not be able to expand.</p> <p>Have potential impacts from the following factors been fully evaluated?</p> <p>*The Utah State Climatologist projects declining snow packs with spring snow disappearing by 2100. How will Climate Change impact demand for skiing?</p> <p>*Today's youth spend half as much time outdoors as their parents. How will this affect future ski area attendance?</p> <p>Doing the least harm to our unique environment is the prudent course for Mountain Accord in the face of uncertainties over what the actual demand will be for ski resort access in the future.</p>	Salt Lake City, UT	5/1/2015
<p>Thank you for the opportunity to comment. I have skied the backcountry in upper Big Cottonwood canyon and the Brighton resort sidecountry since the late 1970's/early 80's, and have hiked and occasionally camped in the central Wasatch during that same timeframe. In those years, much backcountry of near-wilderness quality has become lift-served, developed terrain for the expanding ski resorts. It is my opinion that the resorts should not be allowed to expand beyond their current boundaries. So much backcountry has been lost already, and the trend today is for more - not less - dispersed, backcountry use.</p> <p>In particular, I oppose ski resort incursion into Grizzly Gulch, the Mt. Wolverine/Tuscarora/Catherine's Pass area. The often proposed interconnection of all ski resorts into one European-style conglomerate of resorts has value only as a marketing gimmick - an unnecessary one at that. The small central Wasatch (50 x 10 miles) is not the expansive Alps or the sprawling ranges in Colorado and California, and is more sensitive to development pressures and negative impacts. We have a unique and outstanding skiing experience here, and visitors can enjoy our several distinctive and world-class resorts best individually and separately while protecting the environment and watershed from the destructive impacts of a One Wasatch-type development.</p> <p>Transportation to, from and within the canyons is a critical component to the Blueprint. I support improved bus transit in the Cottonwoods, perhaps a bus rapid transit system in Little Cottonwood, and improved transit options between Salt Lake City and Park City. I oppose rail and tunnel connections between (among) the canyons and the Wasatch Front and Back. I would also urge the planning process to look more closely at what can be done to get people to the mouths of the canyons via convenient transit. As a resident of the Avenues, it is particularly frustrating that I must travel by bus downtown, then TRAX to 7200 or 9000 South (and blocks west of US 89) before boarding the bus up the Cottonwoods (which takes a total travel time of about 1 hour and 45 minutes one way). This compels me to drive to the canyons. Surely there can be a better system to move people along the eastern edge of the valley!</p> <p>There is much to commend in the Mt. Accord process to date, particularly some of the proposed land exchanges, the commitment to maintaining the watershed and water quality, additional federal protections for some areas, additional trails, and more. I look forward to continuing to engage in this process as it goes forward.</p>	Salt Lake City, UT	5/1/2015
<p>To whom it may concern,</p> <p>Much of the congestion in our Canyons is caused by single drivers bringing their vehicles up with no passengers. I would like to propose a system that would encourage two people or more per vehicle in the highest use periods.</p> <p>Current travel in our state encourages drivers to have a passenger to gain access to our express lanes. We also impose chain restrictions and even close the Canyons due to weather and avalanche danger. Could we start the discussion of restrictions...or better, incentives to encourage drivers to have a passenger. Coupons for a free hot chocolates or coffee given out by parking attendants is a simple idea.</p> <p>We are imposing 4 wheel drive and chain restrictions. It seems like a station at the base of the Cottonwood Canyons is a reasonable option to control safety and congestion. A "travel station" that oversees safe travel up the canyons and possibly imposes a small single driver charge per vehicle could be installed.</p> <p>Thanks for your consideration and the opportunity to present some constructive input.</p>	Salt Lake City, UT	5/1/2015
<p>Hello Folks,</p> <p>I'm a 23 yr resident of SLC with local family dating back 80+ yrs, the changes we've seen are unsettling and profound. I've three comments:</p> <p>I find it literally insane to consider connecting Big, Little, and PC with roads and tunnels. Why? Doing so will only increase cars in the canyon. These are destinations in and of themselves. There is no compelling need to create an auto "circus" loop. We need to reduce the number of cars heading up the canyons each day. How? It is really simple folks. 1) Put toll booths at the head of Little and Big, charge \$20 per car. 2) Increase bus service in the canyons using the toll funds to subsidize the fares. 3) Provide businesses in the canyons with toll vouchers to cover some but not all the cost. There is strong precedent that this will work. For example, the toll booth at the head of Millcreek has done wonders for the canyon. It turned it from a trashed teen hangout to a recreational paradise. Why isn't this one of the proposals for the Mountain Accord? Look at the bus services in the NPs, e.g. Zion or Yosemite. Fantastic! Time to get serious folks and stop this nonsense about trains, tunnels, and trams. Less is more.</p> <p>As far further backcountry encroachment/ ski resort expansion, one word, NO! There's already too much. The resorts need to shrink, not expand.</p> <p>Lastly, money corrupts; in business, politics, and in projects such as this. Accepting funds from the big businesses you're aiming to regulate is a direct conflict of interest. Your intentions may be good but I have no trust that you will be able to do the right thing. Stop accepting funds from stakeholders! ☹</p>	Salt Lake City, UT	5/1/2015
<p>Dear Forward-thinking Planners for the Great Natural Bounties surrounding Salt Lake City:</p> <p>It is GREAT to know that some Thoughtful folks are looking ahead to plan for the disposition of our GOD-Given Natural Resources: Mountains, Rivers, Watersheds, Forests, Wildlife...and ski-slopes. May we have the wisdom to know and respect their eternal values, especially in a world of changing climate. May we understand that burgeoning HUMAN populations can overwhelm the capacities of our lands.</p> <p>There must exist good data on the existing capacity for ski visitation: transit to the ski slopes, lodging and feeding of visitors, slope occupancy that maintains maximum enjoyment. The ski industry seems to be pushing for ski-expansion: dollar signs glitter in the sunlight. Considering the widely acknowledged forecast for diminishing snowfall, perhaps it would be wise to delay ski expansion until the changing snow forecasts settle into a clearer pattern.</p> <p>The same constraint leads me to feel that dramatic changes in transportation are inappropriate and likely to destroy the quiet and natural outlook of our scenic canyons. Possible bad impacts on the watershed as well. It would be a big improvement for everyone if a fleet of mid-size electric or gas-powered busses would serve the canyons on a schedule adapted to times of most demand.</p> <p>In the interest of preserving, as much as possible, the natural values of our mountains/lakes/streams/trails, I would opt for as little development as possible. There are large swaths of foothill/ canyon-entry lands that have been developed with housing and business opportunities. Also substantial ski-related development. Let us fully value the unspoiled back-country of our mountains and mountain-tops. It cannot be restored, once it is de-natured.</p>	Salt Lake City, UT	5/1/2015
<p>To Laynee Jones, Project Manager, Mountain Accord. May 2, 2015. Laynee, I'm the guy who, impressed with your executive committee panel at the SLC Public Safety Buildign a few weeks ago, said I might call. I ntalking with others and exploring your web pages, I am even more impress with the importance and challenges of your project. I am also concerned that taking your time might not be the best use of that time. So I am not calling, yet will try to helpful: e.g. I found several legislators thinking the Mountain Accord to be a reincarnation of Ski Link, a misunderstanding I hope to have corrected. My warning about Robert Moses, described in Robert Caro's biography, was incomplete. Our brief discussion emphasized the importance of his timing in building the recreation and transportation infrastructure for the NYC metro area. He was superb in starting projects in ways that communicated their potential and thus built support for furthering his project. I mentioned that his success in gaining support and power would not (well, should not) fit today, but I did not explain the inadequate disclosures he made of full costs, before committing to them, nor his other less-than-transparent financial schemes. So while the book reveals the importance of timing, it is a warning about abusive public leadership. In my feedback to the Proposed Blueprint, I picked up on our discussion of building, not reducing, future options in planning long-term programs. Cost/benefit analysis should include total costs (operating and construction); it should also reflect uncertainties about the future (in a way, consistent with the typical upward-sloping yield curve of investment analysis). But selecting the discount rates becomes increasingly arbitrary as it becomes increasingly critical. Sensitivity analysis can help reflect upon uncertainties of the future as well aww uncertainties of financial calculatons, but not enough to make benefit/cost analysis a substitute for thoughtful judgment; B/C is best used to inform, not replace, judgement. This seems especially true in comparing options when uncertainties and flexibilities are important. Careful judgement also is more likely to consider how infrastructure generates its own (not necessarily desirable) demand - a lesson well understood and used by Bob Moses). With High Hopes for your work,</p>	Salt Lake City, UT	5/2/2015

<p>Clearly a lot of time and effort has gone into this effort. It is not the first. In the 80's I attended public meetings regarding development within the Canyons to facilitate an Olympic bid. I was one of a few attendees who did not have an economic interest. Proposals were eerily like the Mountain Accord and included interconnecting tunnels, elaborate traffic patterns, snow sheds, etc., all in the name of the Olympics. Mainly as I recall because of water issues these plans were scrapped and the Olympics were staged without impacting the Canyons. This proposal suffers from the same weaknesses. While lip service is given to recreational opportunities and the environment, it clearly is drawn to fit the ambitions of the resort skiing industry. This is a seasonal industry whose season - Winter - is being shortened by climate change. There is a credible body of science that support the notion that this may not be a short term phenomenon. It is also an industry that caters to a small portion of the populace both nationally and local. This is simply a question of cost as the \$100 lift tickets is becoming common. I have been a frequent visitor to the Wasatch Mountains since the 70's. While I was first attracted to the skiing, I have learned to appreciate the year around attributes of this unique resource. In some respects the Summer and Fall season are just as enjoyable as the Ski season. For me it is what make Salt Lake City unique. Notions promoted by the Ski industry such as One Wasatch fail to recognize this uniqueness and its ability to provide for a broad section of the populace be it water, physical beauty, or just a place to escape from urban development along the Wasatch front. To compromise these attributes to satisfy the wants and economic goals of a few is simply misguided and should not be allowed. Admittedly the roads into the canyons are sometimes quite congested, it is most often the result of attractions such as "Powder Days." To try and meet this demand which often is gone by noon does not make fiscal or physical sense. It should also be noted that dogs are prohibited - rightly so - in certain canyons to protect the water quality. Yet this proposal envisions the canyons being a construction zone for many years which will certainly have a negative impact on water quality for generations to come. While there is no doubt that something should be done to deal with the impact of urban growth this proposal is inadequate for the reasons cited. Plans should be developed that retain the unique aspects so it can continue to be enjoyed by a cross section of the population and not just those who view it as a place to alpine ski. am a bit skeptical of request for comments on what seems to be a done deal. Hopefully this skepticism is not warranted in this case.</p>	Salt Lake City, UT	
<p><b>MOUNTAIN ACCORD—A TALL TALE</b>  A Utah politician decided to take a week-long fact-finding trip with one of her constituents, a fat Wasatch wasp, up into the mountains just beyond the city. Each day the wasp flew out and miraculously returned every evening to where the politician waited in the shade of the aspens. They shared telepathically:  --Only sun, cloud shadow, fragrant breeze, flower, trickling water, flower, bird, flower, moose, my own buzz...  --I wait for you all day, the aspens rustle in the breeze, and I'm not impatient. Nothing happens. No ground is cleared, no materials are trucked in, nothing is built, no deals are made, no money changes hands...  After a time, the politician realized that she found herself in a sort of wireless hot-spot, and was now logged on to the primordial frequency. As she continued to download, she breathed in deeply and smiled...the bandwidth was huge.  When they got home, the politician had finalized her mountain accord position. The wasp voted for her...but a final tally is not yet in.</p>	Salt Lake City, UT	
<p><b>To Whom it May Concern</b>  I live near the mouth of Millcreek Canyon in SLC; have been a resident of Salt Lake Valley for the past 30 years. I am a practicing attorney, a long time canyon activist and one that has hiked, climbed, skied, and for the past 20 years, backcountry skied in the Central Wasatch. During that process I have been involved (at times) with each of the principals of the 4 resorts in the Tri-Canyons. I've been involved with appeals of US Forest Service Decisions relating to those resorts and connected with countless interest groups over the years that are "involved" in the canyons. (City, County, Land owners, business owners, UDOT, ski resort and a host of USFS staff. Helicopter operation, resort skiers, backcountry skiers, mountain bikers).  <b>ADMIRE</b> - There are many things to compliment in the Mountain Accord and, as often recounted, there is (might be) a unique opportunity to strike a deal that could impact the public and the land and canyons for decades. I have been to two sessions, spoken with folk that were in Park City meetings, and spoken with some that were in meetings with Resort directors. In all cases though, I felt there was a major pause in having organizers actually get a direct pulse of many in attendance at gatherings. At Skyline for example, after chatting with over 100 people, I heard NOT ONE comment that endorsed a RAIL Line up Little Cottonwood Canyon (to Alta or into Park City). Not only was there NO endorsement, but there was one passionate call (from all) in opposition to the idea, and opposition to funding any plan that looked into the idea. At work, a partner said, "The rail would work in Little Cottonwood Canyon, but only if it displaced the current road system that goes to Alta; otherwise it would pretty much wreck the narrow corridors of the canyon." This general theme of "overwhelming opposition" to the rail line was felt, but it never translated back to the media, to UDOT, the City or the Executive Board. Many said to me - and I feel the same - that it would be "reckless" to first study the idea, and then secondly ram the idea down the public's throat because there was support (here and there). Millions wasted when alternative bus transit systems and parking, vans for resort workers and changes in vehicle ridership (3 in a vehicle) required in the winter. The other annoying albatross that showed up (in the background) is that Wasatch Powderbird gets free reign all over the Wasatch - with no changes - and that the resorts, particularly Alta and to some degree Snowbird, are holding the public hostage - "put the rail line in or else, we won't give anything else up." This is in the background and behind the curtain that the Executive Committee, for example, doesn't want the public to know about. Why? I have NO idea.  <b>INTERESTS and CONFLICTS.</b> Winter Carrying Capacity (in the Tri Canyon area) as it relates to ski resorts, has been the lynchpin of most USFS planning documents I have seen for the past 3 decades. Decades ago planners said carrying capacity had maxed and that no more "resort expansion" or development should issue." But in the face of this analysis, more expansion took hold each decade, more building and more promotion. And each time "carrying capacity" was brought up, a new analysis always gave it stretch and said, oh, the Canyons can take more. And then on the Park City side, mostly void of USFS land, the resorts leaped up to ridgelines (the Canyons) and the Forest Service did nothing and canyon carrying capacity never got a whisper. And then more background, the winter resorts slowly, incrementally (except for youth at Brighton) priced middle America (Utahan's out of the ski/board market. Ski Utah doesn't mention it, the resorts don't mention it and the Mountain Accord Blueprint says nothing about it. And then the Mountain Accord, with great adulation pats itself on its back with it's "unprecedented collaboration" and yet forgets to tell the public that the resorts are (figuratively) holding a gun to the preservation activists heads; and where was the collaboration when Wasatch Powderbird Guides was simply given a "pass" in the process. Amazing really, all the hoopla and hype and the leaders of the band, afraid to disclose and display the \$ behind the UDOT rail line, and the money and leverage behind the resorts, ski Utah and Vail.  <b>Land and Open Space Protection.</b> I would love to see wilderness area expansions, public purchases of private land and wilderness expanded to include the (currently excluded) donut hole in Millcreek Canyon.  <b>Short of Wilderness,</b> I have little/no hope that other designations would hold firm for a decade or more. Politicians would squeeze the USFS who would cave to the resorts and lift lines and towers would spread. One Wasatch would zip up both Big and Little Cottonwood Canyons right on over to all the industrial zones on the Park City ridgelines. People, politicians not really connected to these places (canyons) could care less. I do, the canyons are many home, and it makes me sick when decade after decade, greedy humans, screw them up.  <b>Recreation Trail network.</b> Good job here, but be careful and distinguish new mountain bike routes vs. strictly foot path routes on any new ground outline in the canyons. The two human interest groups need to be separated at times.  <b>Economic and Recreation Centers.</b> I don't think the Blue Print needs to outline what is basically already obvious to most of the public. It's fine to display and outline them on maps, but it's not the responsibility of the USFS, the County, the City and the Mountain Accord to "play doctor or accountant" to the business interests. that rise and fall depending on market conditions. And if resorts continue with escalating rates, and snowpack annually diminishes, then why should a support line be thrown to group that never wished to be a player in compromise.</p>	Salt Lake City, UT	3/17/2015
<p><b>Transit Connections</b>  1. More winter busses up Parleys in the Winter. I have no objection. Demand, supply, needs and interests of traveling public and business in Park City?  2. Shuttle up Millcreek Canyon. A big yes, I would support that.  3. More, better, smaller winter busses up Big Cottonwood Canyon - yes, fine  4. Rail Line up to Alta, to Park City; A resounding NO, NO, NO!  * Winter traffic in Little Cottonwood Canyon is a mess. For decades, NOBODY wanted to take control. Resorts have done nothing or little to alleviate problems, traffic planners have put I parking areas at the bottom, (yes), but so many of the public wish to drive vehicles. More down canyon parking spots, more frequent busses, smaller busses at times, some year round busses. The rail line study and plan should b scrapped.  <b>Compliments.</b> When I've been at programs I've felt there has been much to compliment. Many/most of the organizers and presenters are concise, well versed and seemingly familiar with some/much of the nuance of the canyons. And there seems to be a heady roll of energy to accomplish something. If the Wasatch were Colorado, this would be a different game. The Wasatch though, such a thin line of ridges and canyons, with urban forests getting squeezed. To me it's an easy game, call a time out to much of the planned development and preserve for generations, as much land as possible. In the current resort boundaries, there will be a mix and match of various changes over the years - I guess this is palatable. Lift lines though to Flagstaff Peak, to the pass between Alta and Brighton, One Wasatch, Rail Lines, more development and resort expansion. These are dark dreams and messages of folk that are not of my band or tribe and they care not one whit for the integrity of the quiet, still and majesty of so many corridors in the canyons. Sail on organizers, sail on. Push the rail line, and many/most of us are going to jump of the boat and start pushing back. And if resorts, and even Powderbirds, won't move, then why not slap large swaths of Wilderness all around them, and then tell them to keep still. Nature has it's ights too, to be "untrammeled and unfettered."</p>		

<p>To whom it may concern:</p> <p>Below are my comments regarding the mountain accord blueprint:</p> <p>Transportation</p> <ul style="list-style-type: none"> <li>• The bus system should first be made usable. This means that busses should be available more often, more parking should be available at the mouths of the canyon, and parking at the ski areas should cost money.</li> <li>• Providing copious parking near the mouths of the canyon would be a critical component of this.</li> <li>• No lanes should be added. This will only increase pollution, traffic, and overall impact.</li> <li>• Charging a per-vehicle fee - either via a daily fee or an annual pass – would help subsidize the optimized bus/parking system and provide an incentive to ride the transit system</li> <li>• Incentivize ridership by making the bus fee free or only a nominal price.</li> <li>• The bus system would need to have both a Snowbird-servicing bus and multiple Alta express buses that also drop off and pick up passengers in the backcountry.</li> <li>• Current and future UDOT plans to add passing lanes on hwy 210 for private vehicles should be eliminated.</li> <li>• Snowsheds and/or bridges over slide paths can/should be added for increased avalanche mitigation for the highway.</li> <li>• I fully support optimizing year-round Bus Rapid Transit for Big Cottonwood Canyon. Again, with copious parking at the mouth of the canyon.</li> <li>• At the moment parking is the limiting factor for pressurized use in the Cottonwood Canyons; enabling as many people as possible to use the canyon will result in more user pressure. Optimizing Bus Rapid Transit will be an intermediate step to moving possibly-somewhat more people up the canyon to put only moderate additional use pressure on the canyons.</li> <li>• I am in full support of a year-round bus shuttle system for Mill Creek Canyon.</li> <li>• I am in full support of a train/light rail system linking the Salt Lake Valley with Park City and heading up BCC and LCC.</li> <li>• The rationale provided for abandoning the Parley's rail transit - that was favored in the Trans system group - is that it would not be competitive with the freeway; however, this rationale was not applied to the successful SLC airport Trax line.</li> </ul> <p>Recreation</p> <ul style="list-style-type: none"> <li>• I am in full support of creating a trails network in the upper reaches of the two canyons</li> <li>• The trails should be a mix of hiking exclusive, mountain biking exclusive, and shared (and/or with management techniques conducive to habits; ie Snowbird's new trail being uphill until the tram runs and then it becomes downhill).</li> <li>• Any new road/transit construction must have improved road cycling facilities (wider shoulders, exclusive bike lanes, disconnected paved bike paths)</li> <li>• LCC/BCC parking areas need to be enlarged and enhanced for the major dispersed user trailheads, with optional stops for the Bus Rapid Transit at White Pine, Argenta, Butler Fork, Mineral Fork, etc.</li> <li>• I support the permanent protection of the Emma Ridges to Superior ridgeline from development.</li> <li>• I do NOT support a chairlift in Grizzly Gulch. I recognize that it is private property, but I also appreciate that much of Alta's operations are on public land and that they stand to benefit greatly from enhanced base development on a lot of lucrative land, additional water use, increased snowmaking, and improved LCC transit. Grizzly Gulch and the surrounding area should be put into some sort of permanent protection.</li> <li>• I could be supportive of chairlifts and development into the American Fork Canyon depending on alignment and scope.</li> <li>• I could be supportive of a re-aligned chairlift in Honeycomb Canyon, depending on the alignment, provided there are no effects on Silver Fork backcountry</li> <li>• I am supportive of Brighton's formal adoption of Hidden Canyon, provided any chairlift reaches back towards the Great Western chairlift.</li> <li>• I am not supportive of increased connectivity between Brighton and Solitude in the SolBright area.</li> <li>• I am supportive of enhanced facilities at identified high-use nodes to both concentrate use in appropriate close-in areas and disperse use in more-remote areas</li> </ul> <p>Economics</p> <ul style="list-style-type: none"> <li>• I support enabling the ski resorts to utilize more water for snowmaking</li> <li>• I support enabling the ski resorts to expand their summertime activities within their existing footprints.</li> <li>• I support enhanced modern avalanche mitigation techniques (ie Gas-X) above Alta. I do NOT support a chairlift on Flagstaff peak</li> </ul> <p>Environment</p> <ul style="list-style-type: none"> <li>• the Blueprint is not specific enough for me to comment on the survey question: "does the Blueprint achieve environmental stewardship of the natural resources?"</li> <li>• I know that the EPA has determined that ski resort development has a more profound effect on watershed integrity than ANY other development. But I am cautiously optimistic that SLC Water and various other governing bodies will ensure water quality despite the threats associated with increased use, transit, and development.</li> <li>• I am in favor of a re-forestation effort on (particularly) the Emma ridgeline area</li> <li>• I am becoming increasingly convinced that simple people-pressure on the canyons is having a degrading effect on the watershed, and dramatically increasing opportunities to transport people up the canyons will have a commensurate effect on the watershed quality.</li> </ul>	Salt Lake City, UT	3/20/2015
<p>My Mountain Accord Comments:</p> <p>Overall Perspective On Canyons Use: With a million plus people living in or near the Salt Lake Valley, the Canyons should be looked at as an escape from the urbanization and development in the valley, not as a source of economic development. The future actions concerning the Canyons should be based on what is best for the Valley or Canyon residents, not what is best for out of the state visitors or the resort owners and developers. The central Wasatch Mountains actually encompass a very small area and when more land is lost to development it severely impacts the majority of Canyon users.</p> <p>Transportation: The proposal of a light rail or cog railway system in the Canyons should not even be considered. The main traffic problem in the Canyons is limited to a very short time in the winter months. The cost of the system would be many millions of dollars, would require a massive taxpayer subsidy, and would possibly only benefit a small number of people. The money required for this would be better spent to develop a better transportation system in the valley which would be of year-around use and would benefit a far greater number of people. A right-of-way for this is also not feasible because of the narrow canyon and the creeks in the canyon bottom. If the system was built it would be a major blight on the scenic beauty of the Canyons. There is no extra room along the existing roadway. The road shoulder for bicycles need to be expanded, and there can be no loss of the existing recreational parking areas, hiking trails, and access points along the highway.</p> <p>There is no need for and no taxpayer money should be spent to subsidize a link between The Canyons or to Park City by way of tunnels or a year-around access road. Local residents do not need this and it would only possibly benefit the resort owners. Helicopters can provide emergency medical rescue in case of access blockage in one Canyon. Tram lines or a chair lift system is also not necessary and would be of a possible benefit only to the resort owners and this would be mostly from a marketing perspective. Grizzly Gulch, Catherine's Pass, as well as land on the Brighton side, is very heavily used year around for hiking, skiing, and snowshoeing. Any road or other chair or tram system would greatly distract from the beauty and solitude of this area, and would severely restrict or limit the way the area is presently used. A road connection between the Canyons would also tend to increase Canyon traffic, not decrease Canyon traffic.</p> <p>There is also no need for a link between the ski areas by way of chair lifts, or a tram type system. The ski areas can operate as they are now and be economical viable without this link. It should also be noted that these ski areas were purchase or developed based on their existing or approved plans. They did not purchase or develop their resorts based on a promise of a future connection to other ski areas. This would also be blight on the scenic beauty of the canyon and would mostly likely be a ski area expansion because over time there would be a way for the resort skiers to exit along the way to traditionally backcountry ski areas.</p> <p>The bus system is the best solution to any transportation problems in the Canyons. To encourage more people to use the bus, there needs to be more parking near the mounts of the Canyons. The existing parking lots are all full on the weekends or when there is new snow for skiing, or on Holiday weeks. The only large area of undeveloped land for a parking lot is the gravel pits along Wasatch Boulevard. Negotiations should be begin IMMEDIATELY to secure this area for a future parking lot that would hold 1000+ cars. If this area is lost, it would severely limit the options for more bus use in the Canyons. There may be other land areas in the county that should also be considered for additional Canyon parking. Another way to encourage more bus use would be to subsidize the cost of bus fares. This would be only a small fraction of the subsidy required to build a light rail system. There should be some consideration given to the expansion of bus service to serve the Canyons year-around or in the summer months. With the number of full time residents in the Canyon there would seem to be a need for service all of the year. During the summer season, the parking lots are often full, especially on the weekends and holidays, and bus service would help to reduce cars and provide more people an opportunity to get access to the trailheads and recreation areas. Mill Creek Canyon also needs summer bus service on weekends and holidays. The parking lots here are often full and the traffic in this narrow canyon is excessive. People cannot use the Canyons if there is no parking available or bus service to the trailheads or recreation areas.</p> <p>With the growing number of bicyclist on the Canyon roads, there needs to wide shoulders on both sides of the road to help provide safety for the bicyclist and to prevent accidents.</p> <p>Economy: We do not need more development in the Canyons to have good economy for the residents of the Valley and the Canyons. The resorts were purchased or developed based on the existing operations or approved plans, not on the promise of future expansion out side of existing boundaries. They are economical viable as they are or there would not be people willing to make recent purchases and make offers to buy the properties. The expansion of the economy should come from development in the Valley and not in the Canyons.</p>	Salt Lake City, UT	4/29/2015

<p>Resort Expansion and Development: My comments on this are partially covered in Transportation and Economy. With resort lift tickets in the \$75-\$100 range, the vast majority of families and individuals living in the valley cannot afford to visit the resorts for winter recreation. The resorts are serving only a small percent of the local residents. The recreational growth in the Wasatch is from non resort based recreation. The developed ski area skiing has been flat or in a decline and other forms of winter and summer recreation have greatly increased. It should also be noted that based on sales figures, downhill ski gear has decreased while backcountry ski gear and snowshoe sales have been up sharply. This would indicate that more of our land base should be used for non resort based recreation opportunities. Over the past several years there had been a loss of many traditional backcountry ski and snowshoe areas. There has also been a de facto expansion of the ski areas by allowing resort skiers to exit the lifts into traditional backcountry ski areas. Hikers and other users of the Wasatch should be able to enjoy the natural beauty of the Canyons without having to hike under or view lifts or tramways. There should be no further expansion of ski areas outside of their boundaries.</p> <p>There is no need or justification for more resort lodging or other base area development. We have a more than adequate supply of good lodging and dining establishments in the Valley within a reasonable distance from the Canyon resorts.</p> <p>Recreation: This has also been partially covered in the other sections. The trail system in the Canyons need some expansion in to some more areas to accommodate the increased number of hikers and to increase the opportunity for loop hikes. The opportunity for people to use our Canyons is also being impaired because of the lack of parking and public transportation at many of the recreations areas and trailheads. It should also be noted that there needs to be a lot better maintenance of the existing trails. A number of the trails in the Wasatch are eroded and treacherous and are unpleasant or difficult for a lot of people to walk on. Along the Wasatch front, there needs to be more access to our public lands. Many of the private land owners and developments have closed traditional access to the public land. Before any development is even considered, the public access to public lands should be maintained. There also needs to be more trail development in the public lands along the Wasatch Front. The Utah Congressional Delegation needs to secure more funds for the Forest Service to fund this and to maintain all our trails and recreational facilities. The funding cannot be flat or decrease when the demand on the resource is increasing. Local or County funds or some type of user fees may be necessary to assist in this.</p> <p>thank you for the opportunity to comment,</p>		
<p>I have lived my entire life in Salt Lake City and the vast majority of it has been centered around exploring, recreating, and working in the nearby mountains. As a professional skier, as well as active runner, hiker, mountainbiker, climber, and camper, I have had a chance to explore many areas throughout the range and see them from a number of perspectives, as well as watch the explosive growth of usage and traffic for all these activities and many more over the years. It is quite obvious that we have reached a point at which we have to actively plan and manage the recreational, business, economic, environmental interests and access within the canyons, or risk losing everything that makes the Wasatch so special for so many people. These are some comments on the "blueprint" put forth in the Mountain Accord process</p> <p>Transportation</p> <ul style="list-style-type: none"> <li>• I recognize that the traffic situation in Little Cottonwood Canyon is both headache inducing and unsustainable on some winter days, and while I understand the impetus to promote a train to reduce the congestion and help with the transportation problem, I feel that the bus system is far from optimized. With proper implementation, the buses could service both the ski resorts and dispersed users on a year-round basis far more effectively than a train and would be a far cheaper, more practical option. This should be implemented and tested long before such a high cost, high impact construction project like a train should be considered.</li> <li>• Providing copious parking near the mouths of the canyon would be a critical component of this.</li> <li>• Without trying an optimized bus system using the existing infrastructure first, I feel it is impossible to justify major infrastructure changes, such as adding lanes or installing a train.</li> <li>• Charging a per-vehicle fee - either via a daily fee or an annual pass - could help subsidize the optimized bus/parking system and provide an incentive to ride the transit system</li> <li>• Incentivize ridership by making the bus fee free or only a nominal price.</li> <li>• The bus system would need to have both a Snowbird-servicing bus and multiple Alta express buses.</li> <li>• Current and future UDOT plans to add passing lanes on hwy 210 for private vehicles should be focused on improving bus transit systems.</li> <li>• Snowsheds and/or bridges over slide paths can/should be added for increased avalanche mitigation for the highway.</li> <li>• I fully support optimizing year-round Bus Rapid Transit for Big Cottonwood Canyon. Again, with copious parking at the mouth of the canyon.</li> <li>• A tunnel linking LCC and BCC is not needed. Improved and optimized public transit would alleviate the traffic issues associated with LCC, and the "safety" issues that have been ascribed to a tunnel have been overblown; there have not been any documented injuries/fatalities associated with overuse of LCC that would not be overcome with improved transit. A tunnel is again, to much a high cost, high impact option, that places too much risk to a delicate ecosystem and watershed to consider without first attempting to optimize existing infrastructure for transit.</li> <li>• Tunnel connections would create more defacto resort side-country terrain, effectively increasing the resorts' footprints. It would also permanently alter the look, feel and accessibility of areas in the upper canyons.</li> <li>• The tunnel would basically be a taxpayer-funded connection that would exist to benefit four businesses (ski resorts) with no/very little validation that such a connection would actually be economically beneficial to those businesses. There are no significant "problems" that an LCC/BCC tunnel would solve, despite a considerable cost to taxpayers.</li> <li>• The same argument is applied to a fixed guideway system connecting BCC to Park City. It would not necessarily save time for PC-BCC travelers, is not supported by Park City officials, and would again be a taxpayer-subsidized benefit to a handful of businesses (ski resorts) who have not proven that such a connection would even be beneficial today, much less in the future considering global warming and the flat/declining trends of the resort skiing industry (according to their own study).</li> <li>• Realistically, ski resorts would essentially be shooting themselves in the foot by installing lift connections by cutting off access to backcountry terrain, as backcountry skiing is one of the few areas of the ski industry that is actually growing, and fairly rapidly. Given that resort skiing and backcountry skiing are not mutually exclusive, and in fact, resorts skiers are increasingly looking to explore more "adventurous" sidecountry and backcountry options, the ski areas would be far better to capitalize on this market by promoting the easy access to out of resort terrain and even offering guide services. For all intents and purposes, the "One Wasatch" that all the ski areas want to create already exists and the resorts would be far better off to promote interconnect tours than to build more lifts and choke off backcountry routes and access points.</li> <li>• The question on the survey asking if the transit "solutions" are "environmentally-sustainable" is fundamentally flawed, since NO ONE - including transit engineers who have looked into this project - knows if they'll actually be environmentally-sustainable (eg degrading the watershed) that point is misguided at best and badly misleading and irrelevant at worst. This would require significant research and studies to answer these questions, and until such research is conducted this question is merely speculation and conjecture. The question</li> </ul>	Salt Lake City, UT	4/30/2015
<ul style="list-style-type: none"> <li>• At the moment parking is the limiting factor for pressurized use in the Cottonwood Canyons; enabling as many people as possible to use the canyon will result in more user pressure. Optimizing Bus Rapid Transit will be an intermediate step to moving possibly-somewhat more people up the canyon to put only moderate additional use pressure on the canyons.</li> <li>• I am in full support of a year-round bus shuttle system for Mill Creek Canyon.</li> <li>• I am in full support of a train/light rail system or bus system linking the Salt Lake Valley with Park City. This is a system that I feel would be used far more extensively by commuters and lower-income resort workers around the clock on a more-regular schedule than a LCC canyon train that would be associated almost exclusively for time-intensive recreation</li> </ul> <p>Recreation</p> <ul style="list-style-type: none"> <li>• I am in full support of creating a trails network in the upper reaches of the two canyons</li> <li>• The trails should be a mix of hiking exclusive, mountain biking exclusive (some designated downhill only), and shared (and/or with management techniques conducive to habits; ie snowbird's new trail being uphill til the tram runs and then it becomes downhill, as well as designated downhill only trails link with uphill or two-way access trails.</li> <li>• Any new road/transit construction must have improved road cycling facilities (wider shoulders, exclusive bike lanes, disconnected paved bike paths)</li> <li>• LCC/BCC parking areas need to be enlarged and enhanced for the major dispersed user trailheads, with optional stops for the Bus Rapid Transit at White Pine, Argenta, Butler Fork, Mineral Fork, etc.</li> <li>• I support the permanent protection of the Emma Ridges to Superior ridgeline from development.</li> <li>• I do NOT support a chairlift in Grizzly Gulch. I recognize that it is private property, but I also appreciate that much of Alta's operations are on public land and that they stand to benefit greatly from enhanced base development on a lot of lucrative land, additional water use, increased snowmaking, and improved LCC transit. Grizzly Gulch and the surrounding area should be put into some sort of permanent protection. This is a major access point to some of the most high value backcountry terrain in the canyons, and resorts would be much better off to capitalize on the growing backcountry market/growing desire of resort skiers for a backcountry experience by leaving this terrain open, and marketing the existing pathways through the area to other resorts while offering guide services to less experienced users who want to take advantage as well.</li> <li>• I could be supportive of chairlifts and development into the American Fork Canyon depending on alignment and scope.</li> <li>• I could be supportive of a re-aligned chairlift in Honeycomb Canyon, depending on the alignment, provided there are no effects on Silver Fork backcountry</li> <li>• I could be supportive of Brighton's formal adoption of Hidden Canyon, provided any chairlift reaches back towards the Great Western chairlift.</li> <li>• I am supportive of increased connectivity between Brighton and Solitude in the SolBright area.</li> <li>• I am supportive of enhanced facilities at identified high-use nodes to both concentrate use in appropriate close-in areas and disperse use in more-remote areas</li> </ul> <p>I am in support of modifying wilderness boundaries to accommodate new and existing sections of the Bonneville Shoreline Trail.</p> <ul style="list-style-type: none"> <li>• I fail to understand how the Mountain Accord can consider all forms of recreation in the Central Wasatch except for one of the most significant and controversial forms: Wasatch Powderbirds. To me this "oversight" of neglecting helicopter skiing in our tiny range -that was based on a Forest Service administrative timeline that was arbitrarily changed from 5 year renewals to 10 years - is an egregious omission.</li> </ul> <p>Economics</p> <ul style="list-style-type: none"> <li>• I support enabling the ski resorts to utilize more water for snowmaking</li> <li>• I support adding potential land and altering zoning for additional development at the various resorts' bases.</li> </ul>		

<p>I do not support extraordinarily-expensive, taxpayer-funded “solutions” to “problems” that enable profit maximization for ski resorts whose lift tickets are pricing their customers out of an already-flat-to-declining market.</p> <p>Environment</p> <ul style="list-style-type: none"> <li>I am not an environmental specialist, so I cannot comment on the survey question: “does the Blueprint achieve environmental stewardship of the natural resources?”</li> <li>I know that the EPA has determined that ski resort development has a more profound effect on watershed integrity than ANY other development. But I am cautiously optimistic that SLC Water and various other governing bodies will ensure water quality despite the threats associated with increased use, transit, and development.</li> <li>I am in favor of a re-forestation effort, particularly on the Emma ridgeline area.</li> <li>I am becoming increasingly convinced that simple people-pressure on the canyons is having a degrading effect on the watershed, and dramatically increasing opportunities to transport people up the canyons will have a commensurate effect on the watershed quality.</li> <li>I am concerned that the ski resorts are getting many of their desired “gets”, and their “gives” are more along the lines of “we are not taking as much as we could take”, at the expense of potential environmental and backcountry terrain preservation.</li> </ul> <p>Therefore I do not support the “blueprint” (it should have been called a “proposal”) in its current form, but I am a strong believer in the Mountain Accord ideals and timing, and am very hopeful that a more equitable balance of gives and takes can be achieved to accommodate many constituents’/stakeholders’ desires, if they are all willing to concede on some of their desires. This is an important process, that is well timed, and if executed properly could have a strong positive impact and help to maintain the beauty and value of our precious central Wasatch.</p> <p>Thank you, and I look forward to seeing the results of the next stage in the process.</p>		
<p>Dear Reader -</p> <p>When the Mountain Accord process was initially proposed I was optimistic. I fell in love with the Cottonwood Canyons in the early 1990’s and my passion remains strong. Yet over the last 25 years I have seen the impact of a dramatic increase in users despite the efforts of the Forest Service, Town of Alta, Friends of Alta and many others to mitigate said impact. Clearly something needs to be done. My comments address the following:</p> <p>Overview - the unique nature of the three primary core Wasatch areas of Park City, Big Cottonwood Canyon, Little Cottonwood Canyon Transportation in the Canyons Transfer of Private Lands to Public Entities Transfer of Public Lands to Private Entities Water Issues Cost</p> <p>Overview - The three main areas (PC, BCC, LCC) of the core Wasatch each have unique characteristics that offer both locals and visitors distinct and special experiences. We are not Europe nor should we try to be. We are Utah; let’s celebrate and preserve the special characteristics of each of the three areas. The mountain accord as proposed would destroy the individual character of each of the three areas; the combination of ready access via rail line and increased developable space in the base areas would create a much more homogenous experience across the zones. It seems to me the transportation plan was initially well-intentioned, but has been hijacked by development interests as a real estate development plan. I am in favor of a sensible transportation plan. I am opposed to a plan that opens the door for significant additional development in the Cottonwood Canyons and has the additional unfortunate consequence of diluting the unique experience offered by each zone.</p> <p>Transportation in the Canyon - We seriously need a transportation alternative to the thousands of cars that travel the canyons of the central Wasatch, but a rail interconnect is a bad idea. As described above it will result in a much more homogenous experience across the three areas. It also would take a long time to come to fruition and would be extremely expensive. Fortunately there are better solutions. Note again that a rail interconnect is extremely expensive. The cost is measured in billions of dollars and it will likely take decades to plan, approve and build. The problem exists now and needs to be resolved. Adding a dedicated bus lane in LCC would cost millions not billions and could be completed in years, not decades. Furthermore, our fiscally conservative congressional delegation should be - by nature - opposed to this extraordinarily high price tag at taxpayer expense.</p> <p>Transfer of Private Lands to Public Entities - The idea of preserving lands from future development is appealing. It would be a relief to be assured that the Grizzly Gulch Area and the Emma through Flagstaff Ridge in LCC would be safe from development pressures in perpetuity. Unfortunately transferring private lands to public entities would not create this assurance. Large parts of the existing ski terrain in the Cottonwood Canyons is on permitted public land. The political pressure to develop these areas would not cease as a result of the mountain accord and future Utah congressional delegations will likely find themselves pressured by the existing resorts and other developers to open up these public lands to additional development. The only way to assure these lands remain safe from development pressures is to have title in the properties pass to a not for profit entity like the Utah Land Trust. Otherwise the transfer will be a development delaying tactic and nothing more. I find this transfer to be a not-so-thinly veiled land grab that does nothing to protect public lands in the future.</p> <p>Transfer of Public Lands to Private Entities - Alta has retained its unique character over the past several decades through the dedicated efforts of the Alta town office, Friends of Alta, and the broad community of people who have come to love Alta for its relatively wild and undeveloped nature. Yet much is changing. We have seen Vail resorts take control of the Canyons ski area and take ownership of Park City Ski Area. We have seen Deer Valley acquire Solitude. Vail, along with other ski area operators, has figured out the formula to dramatically enhance shareholder returns by creating comprehensive base areas with a full range of services including lodging, dining, shopping and entertainment. The land swap as envisioned which would pass title of much of the land in the Alta base area to the Alta Ski Lift company would be an economic bonanza for the shareholders of the Alta Ski Lift company. It would also make the Alta lift company far more valuable to an acquirer like Vail Resorts who need developable land in the base area to build it out according to their model. This would come at the expense of the broad public who owns the area, through governmental entities, right now. However I do not think it is appropriate to provide an economic bonanza to a private entity at taxpayers expense. Additionally such a transfer would allow development space at the Alta base for development and acceleration of the homogenization of the three core Wasatch areas which I oppose. People from the world over travel to ski Alta for its legendary powder, and a great part of that appeal is the lack of sprawl that now envelops so many other ski areas.</p> <p>Water Issues - I am not sure what the political process was that resulted in Salt Lake City water district allowing the Alta lift company, as part of the plan, to acquire water for over 100 additional overnight accommodation units. What pressure was put on Salt Lake City water district to bring them to the table with this accommodation? The trend over the last 25 years has been less snow each year - thus less water available - and increased demand in the Salt Lake Valley as population has increased. We need to make intelligent choices with how we allocate this valuable resource, and in my view the Mountain Accord does nothing to address this serious issue.</p> <p>Cost - At present the cost estimate to build a rail system is in the range of \$5 billion. It is extremely likely that the eventual cost will be substantially greater than this amount given the scope of the project, the lack of detail on how the cost estimate was determined, and the reality that actual construction would be many years if not decades in the future. This is a lot of money. A dedicated bus lane would be far less expensive (millions, not billions) and could be built in a much shorter time frame. This would also provide an immediate address to air quality concerns as well as decreasing our carbon footprint in the short term. Additionally, the cost to taxpayers of the land swap would also be substantial. We all know that developable land is much more valuable than undevelopable mountainside. While I respect the Alta lift company and the individuals who manage it it is not appropriate to transfer such a valuable asset from public ownership to private ownership without appropriate compensation.</p> <p>Thank you for considering my comments. In principal I am in favor of the Mountain Accord process and will do my best to bring the process back into the light of day so that all stakeholders, which includes the general public, can influence the direction we take with this precious resource.</p> <p>Sincerely,</p>	Salt Lake City, UT	5/1/2015

<p>Dear Mountain Accord,</p> <p>I own a home within a mile of the mouth of Little Cottonwood Canyon in Granite, UT. In addition, I recreate in Little Cottonwood Canyon throughout the year rock climbing, mountain biking, hiking, back country skiing, and skiing at Alta Ski Resort. As a resident of the local area of the mouth of the canyon and a regular visitor to the canyon, I'm faced with the transpiration issues of the canyons on a daily basis.</p> <p><b>INCREASED BUS SERVICE AND SHUTTLE SERVICE</b></p> <p>I'm in opposition to the rail alternative presented as part of the Mountain Accord Blue Print. I do not believe the rail alternative is the best option available. Within the "Mountain Accord Transportation Corridor Purposes and Alternatives", Alternative F for Increased bus service is dismissed. It is described as:</p> <p>F. Increase bus service in mixed traffic up Little Cottonwood Canyon. This alternative would meet the purpose of reducing avalanche-related risk and delay (assuming that it would include construction of avalanche sheds in Little Cottonwood Canyon) but would fail to meet the other 13 purposes.</p> <p>I would like to present my own analysis of the transportation "Corridor Purposes" comparing increase bus service and shuttles verse a rail. I would like to start by adding one Corridor Purpose which must be considered as part of the purposes: A. Is the Alternative Economically Feasible for the citizens of Utah.</p> <p>1. Protect watershed health, water supply, and water quality. I do not see that a train offers any better protection than other alternatives and with the construction of a rail alignment additional sediments and metals would be release from these disturbed areas. Assuming a width of two pairs of rails for uphill and downhill travel of 30 ft wide and 60,000 ft long is a new impact area of 1.8 million sq ft or approximately 40 acres of undisturbed native forest lands. Release of sediments from 40 acres of additionally disturbed area would degrade water quality. Result: Bus</p> <p>2. Provide competitive transit service in the corridor. I do not believe a train would provide year round competitive transit service in the area. Canyon Transport offers transportation from the airport to Snowbird every 20-30 minutes with door to door service for \$72 and an approximate transit time of 45-60 minutes. Current, TRAX trains will transport you from the airport to 9400 South in Sandy leave every 20 minutes and takes 60 minutes. In addition, a third train ride up the canyon would be required and since this would likely be a cog railway it could take another 30-60 minutes for the proposed train up the canyon. This would be 90-120 minute of transit requiring two train transfers with luggage. With the exception of the days the canyon road would be closed, I do not believe the average guest of the resorts would chose to save a few dollars to double their transit time, transfer their bags and ski gear. I find the rail option an inferior option for transportation from the airport. Result: Shuttle</p> <p>3. Reduce avalanche-related risks and delay in Little Cottonwood Canyon. Depending on the alignment and avalanche protection constructed a rail might offer. However, some avalanche protection could be added to the existing road and make the difference less. Result: Train</p> <p>4. Provide new evacuation options from both Cottonwood Canyons. A rail up Little Cottonwood does not address this nor does increase buses or shuttles. Result: None</p> <p>5. Reduce auto use and congestion in Little Cottonwood Canyon. It has not been demonstrated that a rail system would decrease auto traffic more than buses and shuttles. Result: Both</p> <p>6. Reduce vehicle emissions in the Cottonwood Canyons to improve air quality.</p>	Salt Lake City, UT	5/1/2015
<p>7. Reduce parking impacts on environment, safety, and economy. A bus service addresses reduced parking better than a rail service due to flexibility of pickup and drop off. Result: Bus</p> <p>8. Support land use goals for reduced sprawl and concentrated development. Increase bus service addresses this issue better than a rail service as it does not require an additional 40 acres of sprawl for its' construction. Result: Bus</p> <p>9. Create unique, attractive "traveler experience" to increase tourist and resident visitation. A trip up a train inside of an enclosure does not great a unique travel experience and I contend a bus with increased visibility creates a more attractive traveler experience. Result: Bus</p> <p>10. Improve access and connections for pedestrians and bicyclists. Buses are easier to access for both pedestrians and bicyclists as the one on one connection with the driver exists verse a train. In addition, buses greater ability to drop off or pickup at more numerous locations vastly increases access over a train. Result: Bus</p> <p>11. Improve travel reliability in inclement weather. A covered train will achieve this want better. Result: Train</p> <p>12. Provide competitive transit service to a range of recreation destinations and economic nodes. Buses greater ability to drop off or pickup at more numerous locations provides a better range of service to multiple destinations. Result: Bus</p> <p>13. Protect or enhance the natural and scenic resources of the Cottonwood Canyons. Since an additional 40 acres of disturbed area is not required for bus operations increase bus service far achieves better protection of the existing scenic resources. Result: Bus</p> <p>14. Protect and enhance community character. Increased bus service will not alter the existing character at the bottom or top of the canyon and thus better protects the community character. Result: Bus</p> <p>A. Economically Feasible for the citizens of Utah Existing infrastructure for buses is in place and carries no additional cost to the citizens of Utah outside of increased service. A train carries an approximate 1 billion dollar price tag. The citizens of Utah cannot afford to pay for a new train which I've demonstrated brings little value to the community over buses. Result: Bus</p> <p>I believe this simple analysis shows that the rail alternative is inferior to increased bus and shuttle service in every way except for increase avalanche protection. I believe the blueprint needs to be revised to better examine the alternative of increased bus and shuttle service. Further, Page 38 of "Existing Conditions &amp; Future Trendlines of the Transportation System" states: "Capacity issues may provide an explanation in the decrease in ridership. During peak times in the winter, ski buses operate at capacity. As shown in Figure 40, ridership is highest during the morning and afternoon. While bus service is increased during these times, there are</p>		

<p>This further supports the need for increase bus service.</p> <p>In addition, as the alternatives are reexamined actual transportation data needs to be analyzed of traffic patterns throughout the year and throughout the day. If this data is not available then it needs to be collected over the next few years while implementing increased bus service.</p> <p><b>RAIL ALIGNMENT</b></p> <p>If after analyzing the annual and daily traffic data it is found a rail is needed and warranted then I believe the only option is replacement of the road with the rail. I do not believe a system of cars and trains in the canyon would achieve the objectives of the Corridor Purposes.</p> <p><b>CANYON CLOSURE TO CARS AT PEAKS TIMES OR DAYS</b></p> <p>If the canyon cannot handle the load of cars coming in and/or out at certain times of the day then the option of closure of the canyon to private vehicles for certain hours should be considered. This would force many visitors on to mass transit and alleviate the bulk of the congestion and parking problems currently being experienced.</p> <p><b>INTERCONNECTION OF CANYONS</b></p> <p>I have examined the information available on the canyon interconnection project and this fails to meet the standard of being a transportation project. The diagrams provide visual estimations of the needs of Utah residents to travel between the Cottonwood Canyons and Park City. From inspection this is a minuscule number of commuters. Based on this fact interconnect is a blunder as a transportation project. At best it is a resort promotion project however, from my numerous discussions over the past month I've found the residents of Sandy and Cottonwood Heights do not desire an interconnect nor do the residents of Park City. With neither of the residents of these communities desiring the project I question why it is even being considered. The Mountain Accord needs to better demonstrate the need for Canyon Interconnect and why the taxpayers of Utah should pay for it.</p> <p><b>CONCLUSION</b></p> <p>In conclusion I find the support documents lack sufficient transportation data and transportation data analysis to support the proposed blueprint. If transportation data is not available the data needs to be gathered over the next few years some an informed decision can be made. <u>Thus at this time the proposed blueprint should be scrapped and revisited after data gathering and analysis is complete.</u></p>		
<p>I appreciate the opportunity to provide feedback on the proposed Mountain Accord blueprint. Many of the proposals seem laudable and I support added protections for Utah's canyons.</p> <p>However, I am very opposed to the addition of a light rail system up either Big Cottonwood or Little Cottonwood Canyons. I am a frequent user of these canyons, particularly in the summer time. I believe that a rail system would be highly detrimental to our canyons. The construction would undoubtedly damage the environment. The trains would bring unnecessary noise up the canyons. In addition, the cost would be astronomical and the benefits would go to the wealthiest among us--the ski resorts and those who can afford to ski (either local residents or tourists). If we have billions to spend to improve public transit in Utah, there are many more effective ways to do so than to create a boondoggle to the ski resorts. If skiers need more public transportation, let's create a more efficient bus system. But let's not damage the delicate environment of either Big or Little Cottonwood Canyon by adding light rail.</p> <p>Thank you for this opportunity to comment.</p> <p>Sandy, Utah</p>	Sandy, UT	3/19/2015
<p>To Whom It Concerns,</p> <p>I am writing to add my voice to those who wish to make long-term environmental protection and low-impact recreation the two highest priorities as we consider plans for the Cottonwood Canyons.</p> <p>Although I am only a beginning skier, I have many friends who visit here not only for our unique snow but also for the unique experience we offer. We are not like Colorado and Europe, and that is what they treasure about their time in the Wasatch Mountains.</p> <p>In addition, for almost two decades, our family hiked, picnicked, and organized day camps in these two canyons with Girl Scouts of Utah. A large part of the joy and education they experience is related to the limited commercialization in both canyons. Where else can you carpool out of a bustling city at 5 p.m. and confront a moose on a lush trail just 45 minutes later?</p> <p>There are many, many ways for corporations to make money and government agencies to support commerce in our region. There are only these few canyons, and they are our legacy. Please protect them.</p> <p>Thank you for considering my point of view,</p>	Sandy, UT	3/28/2015
<p>Hello!</p> <p>As I have read and studied the Mountain Accord, I have come to these conclusions about it.</p> <p>The first thing these plans--all 4 sections--need to do is to 1. protect the beauty of the Wasatch, 2. preserve our municipal water source, 3. establish year round environmentally protective recreation, and 4. protect and improve our air quality.</p> <p>These are all possible!</p> <p>Protecting the beauty of the Wasatch is possible by protecting our wilderness areas by deeming them unavailable for any development!</p> <p>We must preserve our municipal water resources! The Forest Service needs to exchange privately owned property in Albion Basin in Little Cottonwood Canyon--head waters of the water sources for Sandy and Salt Lake City--to the Forest Service as opposed to the current plan of transferring land at the base of Alta ski lift area--transfer tow area from Collins lift area to Sunnyside lift area. Allowing a hotel or other development in this area would stop the flow of Little Cottonwood Creek to the cities below! Horrid thought!</p> <p>Skiing and hiking in our Wasatch Mountains is one of the reasons we live here! Please make it possible for the residents of the valley to be able to enjoy these mountains daily. We do not need to create an environment so that visitors who come here once or twice yearly or once in a lifetime see a huge connected and easy for them to get to recreation area that reminds them of home be it the Alps or Colorado! We need to maintain these areas for US!</p> <p>Protecting our air quality is paramount! This can and must happen with environmentally sound transit plans. Transportation in the Cottonwood Canyons and from Salt Lake City to Wasatch Back MUST accomplish this goal! Bus Rapid Transit up Little Cottonwood and Big Cottonwood Canyon is the ONLY alternative. A designated lane for the busses is possible without destroying the views of the mountains while traveling those gorgeous areas. They must be frequent in their schedules and run year round. Parking lots or structures at the mouths of the canyons or stops in the valley are a necessity! Trains should not even be considered further! The electricity lines, snow sheds and destruction of the canyon walls to accommodate rail lines is just unthinkable! PLEASE DELETE THIS ITEM FROM CONSIDERATION!</p> <p>Another option to consider for the Cottonwood canyons is to have shuttle busses operate in the canyons ONLY! No cars would be allowed as is the program at Zion Canyon and Bryce Canyon! Also, an option could be to charge a user fee to drive the canyons as is the case in Millcreek Canyon.</p> <p>Transportation issues to connect Alta, Snowbird, Brighton, Solitude, Canyons, Park City and Deer Valley via tunnels and/or ski lifts would again destroy water resources and destroy our wilderness areas. Once a wilderness area is violated, it is destroyed FOREVER! Please PROTECT THEM.</p> <p>Salt Lake is not Europe and we should not try to mimic it. We have something unique in all the world here and it MUST BE PRESERVED. Business should not be allowed to destroy it!</p>	Sandy, UT	4/1/2015
<p>The enormous task you've taken on is heroic and, absolutely essential. Thank you for the hard work you've done so far. We know it will continue to be challenging, but we also know it is necessary, really imperative, to establish an over-arching vision and a plan to manage the thing that makes the Central Wasatch what it is- a rare, even unique, wild and natural habit adjacent to the thriving populations centers of Utah. There is no other place in the country that is so wild and so close to civilization. It is the heart of Northern and Central Utah, and without your work it will be ruined. That can't be allowed to happen.</p> <p>My message is simple and heart felt. I love these mountains. I want you to protect and preserve them. I am willing to sacrifice my personal experiences to ensure an enduring natural environment.</p> <p>When I visited here for the first time (1991) at the peak of the wildflower season, I was moved by the pristine glorious sweeps of Albion Basin, and it was then that I decided to try to live close to that wild beauty. I do now and I worry greatly for this glorious natural place. I worry about our projected population growth and how it will tax the resources of the Wasatch. I worry about the water that feeds us, the wild life that inspires us, the trails that lead us into the forests and high terrain- I even worry about the resorts, and how they can adjust to drought and a warmer climate.</p> <p>Wendell Barry once said that "serving one good at the expense of another is no solution" and that if you do that enough "all together those non-solutions will result in a net loss to nature and the human common-wealth." In my opinion, that is what is occurring today with the endless uncoordinated nibbling at the resource of the Wasatch, with no over all view of the whole. It is that that you can arrest and replace with a truly well-thoughtout Mountain Accord. We need this to conserve the asset that makes Salt Lake Valley and surrounds the attractive and ideal place we all love, and need.</p> <p>There are features of the Mountain Accord Blueprint that give me great hope.</p> <p>At the top of that list is the land exchange that will permanently protect Mount Superior and Flagstaff Mountain, plus in-holding in White Pine and Days Fork. I would hope you will find a way to add Grizzly Gulch to that list.</p> <p>I am thrilled that you are proposing to add Federal protections to the public domains of the Wasatch; and equally thrilled that you intend to implement an environmental monitoring and reporting program to support a sustainable watershed and healthy habitat and natural environment. We need a well-funded trails stewardship and maintenance program that assures the health of the environment and the quality of the experience.</p> <p>To address the surges in traffic in Little Cottonwood, I know you must add public transportation and I can see that will require experience, skill, collaboration and creativity. I urge you to work together and with the community of stakeholders who are counting on your wisdom and judgment to spend our tax payer monies wisely for the benefit of the entire community. I am a skier but I do not wish to degrade LCC's environment to make my trips easier or faster. I do not need a train or a gondola. I want a healthy canyon. I see both the train and the gondola as part of a development scheme that may benefit some, at the expense of the greater Wasatch.</p> <p>I trust that as you engage in the hard work ahead you are serving the future generations of Utahns who will be forever grateful that you have conserved and preserved the natural resource of the Central Wasatch.</p>	Sandy, UT	4/21/2015

<p>To All</p> <p>First and foremost thank you for working hard and long to resolve the host of critical issues surrounding our pristine and treasured Central Wasatch Mountains. Because of their singular uniqueness, competing forces wanting access to them and use of them is inevitable. Hopefully your work through Mountain Accord will result in securing essential Federal protections of the most fragile corridors, while preserving avenues for those interested in respectful development while carefully following guidelines, boundaries and regulations so central to long term viability. What none of us can afford is outright violation of our pristine environmental corridors so essential to the needed ecological balance throughout the Range.</p> <p>Having grown up in this area and lived away for two and half decades, I appreciate how relatively "untouched" our mountains have remained. We live at the mouth of Little Cottonwood Canyon and love to hike the trails and ski the areas available to us. Even though some development is inevitable, I would hope that any, is done with heightened awareness, that we can't improve on the environment only hurt or destroy it. It's why "marketing" the area as if it were just another "theme park" is so out of keeping with the grandeur and relative fragility of the place.</p> <p>It's my understanding that Mountain Accord is an arena within which multiple voices can be heard and understood for what each can contribute, what each stands for, what each wants. It would be tragic if any voice, regardless of money, status or political clout were to dominate. It is our mountains that we're talking about. An area to be appreciated and respected, not a toy with which to play until it's broken or damaged, perhaps beyond repair.</p> <p>One last comment. Having seen what has happened in far away Nepal, as thousands upon thousands flock to the Mount Everest "Base Camp" creating never-ending lines of people and leaving the entire area strewn with litter, I find it deeply unfortunate that stakeholders in Mountain Accord have also announced their "ultimate base camp" development plans. The notion itself, tragically flies in the face of the actual nature of our mountains, what they represent, their uniqueness and how they must be protected, essentially as is, for generations to come. What we don't need is any hint that our mountains are simply passageways for curious tourists through which to ride, or otherwise traverse indiscriminately. It's simple not the nature or our place.</p> <p>Thank you for your diligent work. Please continue to do whatever is possible to protect the pristine nature of the Central Wasatch, allowing smart and respectful development while cordoning off the vast most fragile areas through Federally mandated actions.</p> <p>Thank you</p>	Sandy, UT	4/21/2015
<p>Hi</p> <p>These are some of my thoughts.</p> <p>No train No tunnel No fees to enter canyon No interconnect system</p>	Sandy, UT	4/28/2015
<p>Thank you for asking for public feedback. In a nutshell, here is my response to the development/protection blueprint proposed by the Mountain Accord: protect the watershed at all costs, no trains, no tunnels and manage the resort expansion.</p> <p>If Salt Lake City's population does grow at the projected rate, protecting the watershed will be of utmost importance. People cannot live in the desert – even the high desert – without water. Putting aside the fact that Salt Lake Valley residents must start conserving water (especially in view of reduced snowfall in the face of our changing climate), keeping the Wasatch Mountains' snowpack clear and clean is crucial. The best way to protect the watershed is not to develop the Cottonwood Canyons any further. I realize that is not possible but limiting the new resort development to the smallest possible footprint is important. The Salt Lake Valley's residents need all the snowpack they can get.</p> <p>Putting light rail up Little Cottonwood Canyon is a terrible idea. The expense alone would be preposterous: from an archived Salt Lake Tribune article from December 2012, the TRAX extension from Sandy to Draper was a \$194 million project – and that was for only 3.8 miles in a straight, flat line. A train up Little Cottonwood Canyon would at most be used five months out of the year during ski season, which is hardly worth the expense and the destruction to habitat and watershed. A better, cheaper and much less intrusive solution? Double the number of ski buses so that people don't have to wait for rides up and down the canyons (and have those ski buses run on natural gas to keep the air pollution down). Then, in the summertime when the tourists go away and ridership drops off, the buses can be redirected elsewhere. The major reason I don't tend to use the ski buses? I don't want to have to wait. Many more buses, marketed well to both tourists and locals so that people can understand the ease and flexibility of use, would change my habits for sure.</p> <p>Tunnels between the Cottonwood canyons and through to Park City are another terrible idea. Tunnels through the Wasatch Mountains would be destructive and disruptive. There is so little backcountry and wild habitat left in the canyons, what little is left should be protected. Moose, deer, pikas, mountain goats, marmots, rabbits, mountain lions, coyotes and a host of other critters call the Wasatch their home. We need to protect their habitat - they cannot protect themselves. And with lift prices ever creeping up and shutting out the majority of middle-class Utahns, the Cottonwoods backcountry is the only place locals can go without breaking the bank.</p> <p>When I moved to SLC from Maine years ago, people asked me if I missed the ocean. I didn't (and don't) because of the Wasatch Mountains right here in my backyard. Coming from the East Coast where there is scarcely any public land left, where almost everything is privately owned and inaccessible to the general public, it continually amazes me that so many native Utahns do not understand what a gift it is to have so much public land available in the state, especially the wild beauty of the Wasatch so close to the city. In Maine, you can't get to the ocean unless you go to a state park beach because the coastline has been snatched up by private landowners. In Utah, Forest Service and BLM land is available to everyone. There is so little wilderness left in this county, what there is should be protected. As Utah residents, as stewards of the incredible Wasatch Mountains, it is our duty to protect this endangered natural resource as much as possible, to protect the land, the water and the animals, and to keep it available for future generations to enjoy, as unspoiled as possible.</p> <p>Please do the right thing. Protect the Wasatch. Thank you.</p>	Sandy, UT	4/28/2015
<p>The Wasatch Mountains are a critical resource for Utahns and visitors from all parts of the world. Protecting the Wasatch Mountains' environment should drive the Mountain Accord Blueprint, and be a pre-condition to any development strategies seriously considered.</p> <p>Public transport up the canyon must be frequent, comparable in travel time to driving and affordable, or people will continue to drive. A railway would be visually intrusive, noisy and diminish the wilderness character of the canyon. Construction and operation would likely have damaging impacts to water quality and wildlife. Instead, a dedicated bus lane should be considered, constructed by widening the road to three lanes where practical, with an alternate flow lane to accommodate bus traffic during morning and afternoon peak times in the winter.</p> <p>Avalanche protection might be added in Little Cottonwood to improve reliability of access, if built with a visually acceptable design.</p> <p>Tunnels among Little Cottonwood, Big Cottonwood, and Park City would mainly support ski resort marketing and would do little to address regular transit needs for residents. Tunnels may pose significant environmental concerns during and after construction such as water pollution, air pollution, noise, and permanent visual disturbances in our scenic canyons. Tunnels would incur significant construction and maintenance costs, and would disproportionately benefit out-of-state ski-area customers rather than Utahns.</p> <p>Land exchanges that preserve pristine backcountry in the Wasatch while allowing limited additional development in already impacted areas are potentially a good idea. These exchanges also offer the potential for reducing conflicts over wilderness designation and other protections on public lands. Permanent protection for public lands, such as those proposed in the Wasatch Wilderness and Protection Act in 2010, is important for watershed, wildlife and back country solitude.</p> <p>One of the most important outcomes from the Mountain Accord process would be to create permanent, limited boundaries beyond which ski resorts will not be able to expand.</p> <p>Have potential impacts from the following factors been fully evaluated?</p> <p>*The Utah State Climatologist projects declining snow packs with spring snow disappearing by 2100. How will Climate Change impact demand for skiing?</p> <p>*Today's youth spend half as much time outdoors as their parents. How will this affect future ski area attendance?</p> <p>Doing the least harm to our unique environment is the prudent course for Mountain Accord in the face of uncertainties over what the actual demand will be for ski resort access in the future.</p>	Sandy, UT	4/28/2015

<p>Dear Mountain Accord Planners,</p> <p>I appreciate your asking for input from Utah citizens and you plan for the future.</p> <p>I think preservation of the unique landscape of the Wasatch Front should be the first consideration in planning. We are unique in having a wilderness area so close to our population centers and well as these mountains and canyons with ecosystems that are so different from our valleys. Also, 60% of our culinary water comes from our mountain snow pack, and preserving this is essential.</p> <p>I think climate change must be a central consideration in planning. It is hard to predict, as we don't know if the work will follow hi-emission scenarios or drastically reduce greenhouse gas emissions. Based on what is happening today, there is no good evidence that nations of the world will make the necessary changes or that the United States Congress will take a leadership role in the process. I think any planning should include careful consideration of the scenarios in the 2014 document, Assessment of Climate Change in the Southwest United States, A Report Prepared for the National Climate Assessment. Even with the best case scenarios, where world temperature increase is limited to 2 degrees Centigrade, there will be significantly less snow, a shorter ski season, and fewer employees in the ski industry (absent any countering trends).</p> <p>I don't see benefit to the environment with trains or tunnels. While I don't like to pay to go up in the canyons, I think the toll in Millcreek Canyon has produced significant benefits. It should be considered in the other canyons. Those using a bus could be exempted from the tolls. With more bus users, more frequent busses could be employed.</p>	Sandy, UT	4/30/2015
<p>I fully support the One Wasatch concept.</p> <p>It has the potential to yield significant environmental benefits by reducing automobile traffic up Little and Big Cottonwood Canyons. This is due to the fact that it would allow vacationing tourists to stay in the Park City area where there is a large bed base and nightlife, and ride quiet, electrically powered lifts to access Alta, Snowbird, Brighton and Solitude as part of their vacation experience without having to drive up the canyons. The result is less exhaust, tire residue and less traffic in the Cottonwood canyons.</p> <p>While not as large as some of the interconnected European resorts, the combined lift-accessible area will become the most significant ski area complex in North America, which will be good for the Utah economy.</p> <p>The environmental impacts are all net positive. A few additional lifts are not going to hurt the beauty of the mountains, nor bother the wildlife.</p>	Sandy, UT	4/30/2015

<p>We are writing to comment on the proposed Mountain Accord blueprint. Through our company, Hydro Holdings, LLC, we own a one hundred year old hydroelectric power plant, together with associated structures, buildings, power lines and pipelines, in Little Cottonwood Canyon. We also are the beneficiaries of several easements in the canyon, which we use regularly and depend upon to run our operation.</p> <p>We are writing because we oppose any portion of the Mountain Accord project, including, but not limited to a rail system or a road, that would negatively affect our use and enjoyment of our hydroelectric infrastructure or established easements.</p>	Sandy, UT	4/30/2015
<p>We find the Mountain Accord "The Proposed Central Wasatch Blueprint" (Blueprint) to be flawed in both it's conclusions and it's process.</p> <p>To hit our top-level concerns:</p> <ol style="list-style-type: none"> <li>1. No justification for the projection of a nearly 100% increase in Little Cottonwood Canyon (LCC) traffic by 2040 is provided. MA's "Existing Conditions &amp; Future Trendlines of the Transportation System" shows that traffic in LCC has been statistically flat for the past decade with a slight down-tick in growth during the Financial recession and a corresponding slight up-tick to previous levels, post recession. The MA report provides no justification whatsoever to support a projection of 100% growth in LCC traffic and in fact the data provided indicates 'no growth' is the expected trend. Without solid projections of traffic growth accompanied by well referenced sources and well vetted models with stated assumptions, no recommended change in transportation can be evaluated or meaningfully compared to alternatives. Without justifying a deviation in growth from the past 10 years, the need for any change whatsoever in the transportation system can not be accessed. This is a fundamental flaw in the study and it's conclusions.</li> <li>2. Regardless of any increases of traffic up the current LCC corridor as it stands, building a transportation corridor through LCC that links Big Cottonwood Canyon and Park City will most certainly vastly increase the traffic through LCC regardless of the transportation system used. Regardless of the transportation system used, this will have a significant negative impact on every aspect of the Canyon's environment, violating two of the MA's own "Key Actions" — "Preserve Land, protect watersheds and water resources" and "Protect and restore the environment." At the same time, increasing traffic via LCC to Park City and the ski resorts in BCC would almost certainly reduce (relatively or absolutely, depending on projections) peak traffic in BCC and the I-80 corridor. Trading lower traffic on the I/80 corridor with increased traffic in LCC would clearly be inconsistent with MA's stated Environmental goals for LCC.</li> <li>3. Water is becoming the most precious resource in the West. Virtually every climatic model predicts a trend of increasing water scarcity and increasing water value throughout this century. The MA proposes to trade some (unquantified) water rights to Alta in exchange for some property rights necessary to effect the MA Blueprint. Lower LCC creek is now dry for most of the year, degrading a rare riparian environment to a desert one for the benefit of the residents of one municipality. If water resources in upper LCC are not essential to the existing users, it would be far more beneficial to the LCC environment to use those water rights to allow water to flow once again through the lower Canyon, reversing the damage already done by past improperly allocated water rights. This use of the water rights would appear to be far more in keeping with the MA's stated goals of protecting water resources and restoring the environment than making more snow for a privately held resort. At any rate, shifting water rights from large metro areas that serve hundreds of thousands of people to financially benefit a handful of property and resort owners would appear to make little sense except to those few who will gain financially at the cost of the many. While MA does not address quantities of water rights transferred, any discussion of the transfer of water rights from a municipal or county entity to a selected few commercial, for-profit entities should be part of a comprehensive water development plan for the SLC Valley and not driven in isolation by the exigencies of a transportation plan.</li> <li>4. Governance and Process: All decision authority for selecting the recommendations in the Blueprint rested with the MA's executive board (EB). It is not clear what constituencies or interests the individual members of the EC represent or if they have specific financial stakes in particular alternatives. Because a closed board of unelected officials exclusively control the MA decision making process that could financially and environmentally affect much of the Salt Lake Valley, the current MA process is inherently flawed. Rather than vesting decision authority in an all-powerful executive board, which is not clearly answerable directly to the voters of the SLC Valley, the voters/residents should have a clear line of representation on the board and key decision points should be submitted to citizens' referendums or votes by elected representatives of the citizens potentially affected by the EC's decisions.</li> </ol>	Sandy, UT	4/30/2015
<p>First of all, thank you for all the hard work that has been done so far in looking for ways to preserve the unique treasure that is the Wasatch Range. And thanks for allowing comments.</p> <p>In general, I absolutely support the idea of working together to come up with solutions that will keep preserve the Wasatch experience, now and for years to come. To that end, I think there are several recommendations in the Blueprint that make a lot of sense - such as land swaps and increased protection of sensitive backcountry spaces.</p> <p>I do, however, have serious concerns about proposals to link the LCC, BCC and Park City areas - particularly with aerial trams, tunnels, etc. To me, that would compromise the backcountry terrain in those areas (where I spend a LOT of time in both the winter and summer) with little positive benefit to the area. So while I do support transportation alternatives in the canyons, I'm strongly in favor of those that would be less intrusive to these sensitive areas (primarily, improved bus service).</p> <p>As both a resident of the immediate area (I live at the mouth of LCC)and frequent backcountry traveller, I support the recommendations to improve the Blueprint that have been put forward by the joint Wasatch Backcountry Alliance/Winter Wildlands Alliance proposal. It seems that the current Blueprint, while attempting to balance interests, has come down a little too much on the side of development - which I do not believe represents the overwhelming opinion of those of us who live, work and recreate in and around the Wasatch. Certainly tourism and some development need to be part of this plan, but not at the expense of the wild areas and the activities like hiking, snowshoeing and backcountry skiing that are growing in popularity.</p> <p>Again, thank you for providing an opportunity to comment. I'm sure that as we work together we can arrive at solutions that will preserve this special area for future generations.</p>	Sandy, UT	4/30/2015
<p>We are writing to follow up on our first comment regarding our hydroelectric plant in Little Cottonwood Canyon (Hydro Holdings, LLC). We also oppose any portion of the Mountain Accord project that would impact our water rights or the water flow of Little Cottonwood Creek.</p>	Sandy, UT	5/1/2015
<p>I knew very little about Mountain Accord until my son did a college paper on something local that they had an interest in. Being a lifelong skier, he attended several meetings and presented it at SLCC. I learned so much about this project and would love to see it proceed for many reasons. My husband is a ski instructor and tourists would love this type of access to other ski areas without having to rent cars. If you would like a copy of his report, let me know and I will send you a copy. It is quite impressive. He also did a video.</p>	Sandy, UT	5/1/2015
<p>The current document does not address the fact that transportation alternatives currently available are not adequately being utilized. Current trax, bus &amp; front runner systems are not helpful since they are not properly managed. Having a frontrunner system which does not run on Sunday is criminal. Huge amounts of money were spent to build rail systems, both frontrunner &amp; trax, padding UTA officials pockets and they refuse to run the system when needed. Having an airport trax is useless when it doesn't run at all hours the airport runs. Currently airport employees can not use trax because it's hours of operation are pathetic. How can we comment on funding transportation systems which are run by a greedy private corporation whose interests are clearly not in serving the public. Having more eco friendly free bus service to the ski resorts would greatly reduce pollution, but this is not given as an alternative, the bus service currently available is so limited it forces people to drive cars! UTA is the problem, don't give them more funding through mountain accord. Preserve the beauty of the canyons, don't destroy the canyons by building railways that will never be utilized or even run. There is currently no summer bus service to either big or little cottonwood canyon. If you don't offer an alternative, pollution is inevitable. Mountain accord plan doesn't address the major issues, so as it stands is a feeble proposal.</p>	Sandy, UT	5/2/2015

<p>Thanks for managing this Mountain Accord process to ensure everyone is heard. I have been an active user of the Wasatch for 27 years visiting ski area, backcountry skiing from most of the major summits and ridgelines, hiking in the summer and ice climbing. The Wasatch is unique in the world as offering superb outdoor lands so close to a major city. In my prior job as Executive Director of Outward Bound International I visited over 40 countries and never found anywhere to equal Salt Lake City.</p> <p>I applaud the Mountain Accord process and the efforts to preserve the quality of experience in key backcountry terrain, provide enduring protection against ski resort and residential expansion and resolve transportation issues involved in accessing the mountains.</p> <p>I oppose or question some aspects of the February 2015 Mountain Accord Blueprint and believe other areas deserve further study before informed comments can be made.</p> <p><b>Oppose Train service up Little Cottonwood Canyon</b></p> <p>A railway would be visually intrusive, very noisy and diminish the wilderness character of the canyon. Construction and operation would likely have damaging impacts to water quality and wildlife.</p> <p>Understandably the ski resorts would like better guest access during times of heavy demand. We believe better access might be achieved with improved bus service. A dedicated bus lane might be considered, constructed by widening the road to three lanes where practical, with an alternate flow lane to accommodate bus traffic during morning and afternoon peak times in the winter. Avalanche protection might be added in Little Cottonwood to improve reliability of access, if built with a visually acceptable design.</p> <p>Public transport up the canyon must be frequent, comparable in travel time to driving and affordable or people will continue to drive. Aside from previously stated objections to a train (presumably a cog railway), bus service would be preferable because:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Trains would carry more passengers per trip than a bus, so frequency of train service would probably not be as good as a bus option.</li> <li><input type="checkbox"/> In low demand times during the year and during each day, operating a train may not be economical, or result in expensive fares and infrequent service.</li> <li><input type="checkbox"/> Bus service could be scaled to match demand more flexibly than a train, by using vans and various size buses, while maintaining a frequent schedule.</li> <li><input type="checkbox"/> A special maintenance facility for the railway may be needed near the mouth of Little Cottonwood in a prime residential area or in the scenic upper part of the canyon.</li> </ul> <p><b>More Attention to Environmental Focus and Impact of Climate Change</b></p> <p>The discussion of environmental concerns in the Blueprint is good but needs to be more central to planning. Protecting the Wasatch environment should drive other parts of the Blueprint, and be a pre-condition to any development strategies seriously considered. The impact of climate change as forecast by numerous Utah climate scientists; Rob Gillies, State Climatologist, Rob Davies, Utah Climate Center and Jim Steenburgh, University of Utah.</p> <p><b>Tunnels and other transit issues deserve further study</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> I believe the Blueprint should address the greatest transit needs for residents and guests of the Wasatch Front and Back distinct from ski resort marketing and profitability. I would favor improved transit between Salt Lake City and Park City, such as improved bus service or train. I'm highly skeptical of tunnels among Little Cottonwood, Big Cottonwood, and Park City they would mainly serve as ski resort marketing devices that would do little to address regular transit needs for residents and guests, and</li> <li><input type="checkbox"/> tunnels may pose significant environmental concerns during and/or after construction such as water pollution, air pollution, noise, and permanent visual disturbances in our scenic canyons, and</li> <li><input type="checkbox"/> tunnels would incur significant construction and maintenance costs, and if these are paid by Utah taxpayers they generally would not benefit from them.</li> </ul> <p><b>Land swaps</b></p> <p>The Blueprint proposes a number of land parcel exchanges. This sound like a fine resolution to long standing disputes to preserving pristine backcountry in the Wasatch while allowing limited additional development in less sensitive locations. However, it was difficult to see at the scale provided exactly where the various land parcels are located, what visual and other environmental impacts might result, and what the process would be for each change in ownership. Therefore, though I support the general concept of land swap but reserve final judgment until we see the details.</p> <p><b>How accurate are growth forecasts for recreational skiing/snowboarding given the following factors?</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Climate Change. The Utah State Climatologist projects spring snow disappearing by 2100. This might result in demand for skiing being much below the projections of Ski Utah, a massive increase in water supply desired for snowmaking, or use of artificial ski surfaces at lower elevations.</li> <li><input type="checkbox"/> Declining Interest of Youth in being Outdoors. Today's youth spend half as much time outdoors as their parents (America's Great Outdoors 2011). How will this affect future ski area attendance?</li> <li><input type="checkbox"/> Cost of Lift Tickets. The economic impact of Mountain Accord has yet to be determined. However it is reasonable to assume that skiers/snowboarders will bear the costs of improved access and expanded facilities through more expensive lift tickets. How will these increased costs impact demand for skiing in the Wasatch? How much usage would shift to other areas such as Sundance, Snowbasin, Powder Mountain, etc. as ticket prices increase? Skiing is already unaffordable for most middle income Utah families; only 7% of Utah residents currently ski in resorts. How much will lift ticket price increases further reduce access for Utahns?</li> </ul> <p><b>What would be the economic impact on access to the canyons?</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Part of the plan for reducing vehicle access to the Cottonwood canyons is an "economic disincentive" or fee per vehicle. This could make access to the canyons more challenging or impossible for youth and economically disadvantaged people.</li> <li><input type="checkbox"/> Having toll booths at the mouth of the canyons, either when entering or exiting would be unfavorably received by canyon users.</li> <li><input type="checkbox"/> Is increasing the cost of using the canyons worth the tradeoff to improve resort skier access for a few winter months? Would every canyon user be subsidizing a ski industry that caters to wealthy non-residents?</li> </ul> <p><b>Conclusion</b></p> <p>The inclusive Mountain Accord process is a magnificent effort. Any Mountain Accord agreement that increases transportation capacity should ensure protection of the environment; ensure that transit improvements meet the needs of residents at a reasonable cost and are not inflated to improve ski resort marketing.</p> <p>I have yet to see persuasive evidence that the ski industry marketing concept of "One Wasatch" benefits the region. Such a major change to existing ski management should be evaluated on a need and cost basis as well as an environmental impact basis. At this stage, the need is not a given and the cost and environmental impacts are not known. Ski Utah should make public their studies of the impact of One Wasatch.</p> <p>Finally, doing the least harm to our unique environment is the prudent course for Mountain Accord in the face of uncertainties over what the actual demand will be for ski resort access in the future. The future demand discussed in the in the Blueprint is an uncertain projection due to economic, societal and climate change impacts. Further independent study is recommended regarding future visitation patterns and potential impacts of development.</p>	Sandy, UT	3/18/2015
--	-----------	-----------

<p>The January 2014 Mountain Accord Early Scoping Package states:  “The overarching goal of Mountain Accord is to preserve and improve the natural environment of the Wasatch Mountains and adjoining areas to ensure the prosperity, character, livability, and well-being of the region. Key components of this goal include establishing a modern, environmentally sustainable transportation system; environmental stewardship; water resource and watershed protection; air quality improvements; a vibrant economy; and quality recreation opportunities.”  Let’s not lose sight of the preservation goal in this effort. In your effort to “plan for growth” do not get caught up in the belief that you must continually provide accommodation for more users. If you do, you will ultimately fail to meet your “overarching goal.”  My perspective is primarily as a dispersed recreationalist, though I annually maintain a Solitude ski card and visit all the Central Wasatch resorts on occasion. I am a backcountry skier, cyclist, hiker, ice climber and rock climber, so I travel throughout the resource area on a regular basis throughout the year. I’ve either skied, biked or hiked every significant drainage in the area, and in most cases done all three. I think it critical to understand that the Central Wasatch is a very small resource area. It is possible to traverse the range in a day any number of ways, so opportunities for solitude are really fairly limited and they are jeopardized by this proposal.  I want to make the following points:  1) I am highly opposed to any form of transportation connections from the Cottonwood Canyons to Park City or its resorts. This includes the proposed tunnels as well as lifts previously proposed elsewhere. The end result of either is an increased user base which would be contrary to your stated overarching goal of reducing user impacts. The Park City ridgeline should remain a barrier between the communities. It is a benefit in its present state in that it serves to keep this little mountain range as big as possible. An additional effect of these access means would be increased residential and commercial development on the Park City and Heber sides of the range and increased property values to the detriment of existing residents. One can envision a future with high-rises at the Park City terminal being marketed to wealthy New Yorkers so they can quickly access Alta and Snowbird powder skiing. Lovely I’m sure from Ski Utah’s perspective but an abomination to anyone currently on the ground. While I think Park City is a nice enough place, my perspective is that those who choose to ski there should accept what they get.  2) The transportation analysis used to establish viable alternatives is flawed and hints that the analysis may not have been performed in a pre-decisional manner as required by NEPA. As an example, your Transportation Corridor Purposes and Alternatives document provides a Corridor Purposes Table with 14 itemized purposes. Note that under Alternatives Proposed to Drop from Further Consideration you state that Alternative F (increased bus service) meets purpose 3 (re avalanches) but fails to meet the other 13. I will challenge that analysis by stating that increased bus service as a sole remedy would in fact likely meet purposes 1, 5, 6, 7, 8, 9, 13, and 14 and would not preclude meeting the other stated purposes. Look for example at the UTA Transit and Air Quality fact sheet, February 2014, where the goals and accomplishments of the agency’s clean bus fleet are shown. Are these reduced emissions considered in your work? How can you possibly conclude that increased use of low-emission buses does not reduce auto use, vehicle emissions, or parking impacts? This analysis is troubling. Please describe how these conclusions were reached. Also note that purposes 2 and 12 are duplicative in stating a need to provide “competitive transit service.” I ask you to define “competitive” in this context and to justify this as a need.  3) I am generally opposed to any resort expansion, including new lifts. I am completely opposed to expansion in Little Cottonwood but open to the limited expansion in Big Cottonwood under certain conditions. It is a given that the Cottonwood resorts would expand their operations to consume any and all available terrain if left unhindered, even to their own detriment. I think it time this be put to a stop. It is one of the sublime vistas of the developed Wasatch to be able to look from the comfort of the Goldminer’s Daughter or Mid Gad day lodge at the Little Cottonwood Ridge, Mt. Superior and Emma Ridge in its undeveloped glory. This should remain forever so, a boundary to never be crossed. More problematic is the Grizzly Gulch drainage. Access to Mt. Wolverine via Catherine’s Pass is already at the whim of Alta. Should they develop Grizzly Gulch it could be cut off completely from Little Cottonwood. Much of Silver Fork is also at peril. Currently, resort skiers from Solitude exit the resort from the Summit chair and traverse to Twin Lakes Pass and ski upper Grizzly Gulch, many with no avalanche equipment and presumably no training. Be careful what concessions are given to Solitude’s proposed addition or resort skiers will treat the entirety of Silver Fork as their own side country, with a significant adverse effect on touring skiers and greatly increased avalanche hazard to all users of the drainage. This drainage has several known slide paths including one in its mid-section that must be crossed to exit the canyon. Do not enable Solitude to extend the Honeycomb return chair such that it enables and encourages resort skiers to enter the top of Silver Fork.</p> <p>4) I believe that the public’s responsibility to provide for increased profitability or increased user numbers at the Cottonwood resorts is limited. That they already exercise sole operational control over extensive sections of public land, and for profit-making purposes, is somewhat troubling in itself. It is my understanding that the only current limits on numbers of resort users are either self-imposed ones or due to restrictions on parking development. That they exhibit this great desire for public transit is an open statement that their vision of the canyon is more users. The experience is in my opinion already a compromised one at both Alta and Snowbird during the winter with the existing number of users. It is not the drive so much that I dislike, but what I encounter at its end. I am also aware that these resorts have made comparison of their user number densities to resorts in Colorado specifically in order to justify an increased user base. I would argue that the terrain differences and relative amounts of grooming would make that comparison a strained one and the “Wasatch powder experience” at these resorts is already in trouble. There is no more of a good thing to be had here.</p> <p>5) You cannot gauge the real public support for a rail system until you provide at least a partial design solution that details the alignment, system type, its cross-section and impact on existing resources, where it would be accessed, what its true travel times are, and what the burdens for skiers to use it would actually be. I participated in the initial Mountain Accord online scoping survey and I’ve seen the products and conclusions derived from it. It is one thing to ask people if they enjoy riding trains and if they’d enjoy riding one to Alta. Indeed I would answer yes. It is another to implement a design in a palatable fashion, so the former should not be construed to inform the latter. I would like to be able to support a limited rail system but I think you’re hard pressed to find a design/alignment combination that does not do significant irreparable harm to the canyon.</p> <p>6) The Mountain Accord Blueprint notes that 145 acres within the resource area are devoted to parking, but does not indicate how much of this parking acreage would be removed with installation of a rail or BRT system. Are there any assurances in place that any of this acreage would then be recovered? The Blueprint also claims that the project area built environment will increase over 40% by 2040 and that transit-oriented development will preserve existing community character. How do these statements apply to a rail system in the Cottonwood Canyons?</p> <p>7) The Transportation Draft White Paper analyzes travel times under various scenarios. It is quite curious to me how a rail system going up the 8% Little Cottonwood grade is anticipated to require only 36 minutes to travel from Sandy to Alta while a bus is anticipated to require 56 minutes for the same trip. Under what conditions are these scenarios analyzed? This analysis does not seem to account for waiting and loading times. What would be the anticipated frequency of train service and how should that be factored into waiting time?</p> <p>8) The least impact in a new evacuation option for Little Cottonwood Canyon may in fact be a tunnel from Alta to Brighton for auto use. Have you considered this as an alternative to meet that stated need alone should you not construct a rail system?</p> <p>I applaud the effort and much of the vision that has gone into this process and hope there is success in efforts to exchange lands in order to provide long-term protections. I am wary of further canyon and resort growth, whether it be on the hill or at the base, and of transportation systems whose primary purpose seems to be to serve resort expansion. I encourage you to seek creative solutions that minimize additional infrastructure. Thank you for the opportunity to comment.</p>	Sandy, UT	4/30/2015
<p>Growth within the SLC basin and corresponding increased use of the Wasatch range is inevitable. Planning for and accommodating for that growth must happen or the area will be overrun and the user experience greatly degraded. Providing transportation in methods other than private auto is essential to minimizing long term impacts. There is no question that there will be increased cost and impact associated with construction and operation. That is not the questions! What path offers the least impact while allowing the most enjoyment is the question that must be focused on. Its not a choice between black and white. No action might seem attractive with this metric but at what cost of enforcement?  My words of advice are to bite the bullet and have the strength to make the hard choices. As the process develops there will be lots of proposals brought forth for consideration. Proposals that will make some people a lot of money and they will be supported by expensive presentations surrounded by people in suits. Who will stand up and advocate for the mountains? There is no money to made doing that! Development can occur in a manner that promotes stewardship of the natural environment but that path will almost certainly cost more money upfront and reduce monetary returns over the long run. If Vail is the ideal you pursue the path forward is easy. If something special is what you have in mind the selection of the path forward becomes much more difficult as those whose support you seek will not be paid to represent the vision. They will be motivated by a love of the outdoors.</p>	Santa Fe, NM	3/19/2015

<p>The Wasatch Mountains are a critical resource for Utahns and visitors from all parts of the world. Protecting the Wasatch Mountains' environment should drive the Mountain Accord Blueprint, and be a pre-condition to any development strategies seriously considered.</p> <p>Public transport up the canyon must be frequent, comparable in travel time to driving and affordable, or people will continue to drive. A railway would be visually intrusive, noisy and diminish the wilderness character of the canyon. Construction and operation would likely have damaging impacts to water quality and wildlife. Instead, a dedicated bus lane should be considered, constructed by widening the road to three lanes where practical, with an alternate flow lane to accommodate bus traffic during morning and afternoon peak times in the winter.</p> <p>Avalanche protection might be added in Little Cottonwood to improve reliability of access, if built with a visually acceptable design.</p> <p>Tunnels among Little Cottonwood, Big Cottonwood, and Park City would mainly support ski resort marketing and would do little to address regular transit needs for residents. Tunnels may pose significant environmental concerns during and after construction such as water pollution, air pollution, noise, and permanent visual disturbances in our scenic canyons. Tunnels would incur significant construction and maintenance costs, and would disproportionately benefit out-of-state ski-area customers rather than Utahns.</p> <p>Land exchanges that preserve pristine backcountry in the Wasatch while allowing limited additional development in already impacted areas are potentially a good idea. These exchanges also offer the potential for reducing conflicts over wilderness designation and other protections on public lands. Permanent protection for public lands, such as those proposed in the Wasatch Wilderness and Protection Act in 2010, is important for watershed, wildlife and back country solitude.</p> <p>One of the most important outcomes from the Mountain Accord process would be to create permanent, limited boundaries beyond which ski resorts will not be able to expand.</p> <p>Have potential impacts from the following factors been fully evaluated?</p> <p>*The Utah State Climatologist projects declining snow packs with spring snow disappearing by 2100. How will Climate Change impact demand for skiing?</p> <p>*Today's youth spend half as much time outdoors as their parents. How will this affect future ski area attendance?</p> <p>Doing the least harm to our unique environment is the prudent course for Mountain Accord in the face of uncertainties over what the actual demand will be for ski resort access in the future.</p>	Saratoga Springs, UT	4/28/2015
<p>The Wasatch Mountains are a critical resource for Utahns and visitors from all parts of the world. Protecting the Wasatch Mountains' environment should drive the Mountain Accord Blueprint, and be a pre-condition to any development strategies seriously considered.</p> <p>Public transport up the canyon must be frequent, comparable in travel time to driving and affordable, or people will continue to drive. A railway would be visually intrusive, noisy and diminish the wilderness character of the canyon. Construction and operation would likely have damaging impacts to water quality and wildlife. <p>Thank you for this opportunity to comment on the process you have been undertaking for a lengthy period, and for including many interested parties. I have long been interested in the future of the Wasatch range, having lived in Utah for almost four decades. I participated in the Wasatch Canyons master plan that was adopted in 1989, served on the Organizing Committee of the 2002 Winter Games, and have owned a timeshare in Iron Blossam at Snowbird since the late seventies when it was still land belonging to the US Forest Service! I returned to hike in the Wasatch last fall, observed surveyors in Grizzly Gulch with some trepidation, and have followed the Mountain Accord process even though I now live in Seattle. I regard this process as a singularly important endeavor.</p> <p>There have been comprehensive and valuable blueprints intending to preserve the natural qualities of the Central Wasatch and to protect this unique range for future generations. Previous recommendations have become even more salient as population pressure increases. They include:</p> <ul style="list-style-type: none"> <li>- Drinking water for valley residents is of paramount concern. The Wasatch mountains provide the only high quality drinking water for the entire valley. Its value to the region cannot be overestimated. Further development and continued urbanization of any of the seven canyons flanking Salt Lake City and environs will necessarily degrade this resource.</li> <li>- Each canyon has unique qualities which deserve to be preserved. City Creek provides pristine water; Red Butte hosts ample research opportunities, with valuable past knowledge, and has been largely untrammled; Emigration provides easy access for development but has become overdeveloped and has the worst water quality of the canyons; Millcreek has amenities for visitors but no overnight accommodation, and has been a major asset for local residents to hike, walk their dogs, cycle, and cross-country ski; Big and Little Cottonwood canyons serve the watershed needs of the valley, and are already a mecca for national and international all-season tourism.</li> </ul> <p>The uniqueness of each canyon argues for strict preservation of their natural qualities. I am against unifying any of them with the various modes of potential transportation that have appeared in the Mountain Accord discussion. A One Wasatch concept that has appeared frequently in the press (and promoted by Natalie Gochmour, Associate Dean of the David Eccles School of Business, and other spokespersons) is purely a marketing scheme to promote further competition with Colorado as a ski and summer recreation resort. There is already plenty for the ski resorts to work with and succeed. Whatever the supposed justification for a "One Wasatch" connecting the canyons with tunnels, gondolas, and year round travel between Park City and Big Cottonwood canyon - one or all of these would spoil what remains of the open, un-industrialized space for the community of local or visiting tourists to enjoy.</p> <p>With the appropriate stewardship of the US Forest Service, ski resorts could be confined to their current boundaries instead of continuing to cannibalize what remains of public land in the Central Wasatch. These lands are a public benefit, not subject to the needs of shareholders and the affluent. The current loss of open space on the valley floor increases the need for vast natural spaces in the canyons, Salt Lake's de facto playground, especially as the population along the Wasatch Front increases relentlessly.</p> <p>Everyone is aware that these lands cannot be free of development, but further urbanization in the form of hotels, condos, roads, and interconnects, marketed in the guise of environmental stewardship, will not serve the public in the long run. Development is irreversible, and our future depends as never before on the preservation of this unique range and treasured watershed.</p>	Seattle, WA	4/29/2015
<p>I believe the best way forward for the Wasach recreation area, including the ski areas of the Upper and Lower Cottonwood Canyon(s), are best provided for in the ONE Wasach concept/proposal.</p> <p>The Mountain Accord is deficient in this respect in ski lift linkages between resorts are not provided or allowed.</p> <p>It seems that many of our current canyon users seem to think that adding trains or busses up the canyons will ruin them. The reality is that with a continuously growing user base this is critical for their survival. If you think selfishly it is easy to say less buses, trains etc. therefore less people and more powder, climbing, fishing for me. The reality is that if we don't do something we will destroy our precious resource. More people will continue to flock to the canyons year after year which means more traffic, congestion, trash etc.. We need to improve transportation, parking, and access so that we don't end up looking like the west desert, littered with shotgun shells and shot up appliances.</p> <p>Trains Please!</p>	Silver Spring, MD Snowbird, UT	4/30/2015 4/29/2015

<p>To Mountain Accord, I believe it is absolutely pivotal to produce a long lasting, efficient, and eco-friendly alternative to motorized vehicles carrying those who enjoy the Central Wasatch up our Canyons. I drive Little Cottonwood Canyon 5 to 7 days a week, and cannot believe the amount of single passenger vehicles I see every day. I am just as much a culprit of this standard as I am a proponent of fixing it. That is why we must also advance our ideals along with our infrastructure. This means this proposed mode of transportation needs to be convenient. There needs to be parking and adequate accessibility from other public transportation, and it must be affordable. The convenience of driving one passenger vehicles in the hundreds is a dying principle and we must evolve. I'd like to see a train that is raised and tunneled in many areas to not effect back country access, animal migration, and will not have to be closed due to slides. I think a gondola like the towns of Breckenridge and Telluride have could be a good alternative for LCC and BCC also. Thanks</p>	Snowbird, UT	4/29/2015
<p>As an employee in Little Cottonwood canyon, and a 30 year resident of the Salt Lake valley. I would like to express my support for the planning and effort towards the Mountain Accord project. Transportation issues involving the mountains surrounding the Salt Lake Valley will only increase over the next decade and beyond. It is very forward thinking that this project is underway, and without expert knowledge in reviewing the suggested plans, it appears that the scope of the project involves a variety of solutions with various degrees of commitment and reach. It is my opinion that a solution involve areas beyond the Cottonwood Canyons – involving Parleys Canyon and Utah County. Any potential solution needs to be larger than the current needs as we would only have to revisit this problem in future years as growth continues.</p>	Snowbird, UT	4/29/2015
<p><del>Thank you for your efforts and considerations. Protection of the canyons must involve intelligent use, limiting vehicles not people. Elimination or limitation of access is simply not a viable option.</del> Hello, I would like to express my support to improve transportation to our mountain resorts and to make the highway in LCC safer. In LCC we are often times, winter and summer, dealing with major traffic congestion on the way up the canyon and frequently again on the way down. <u>Please study all transit solutions to help solve this problem! . . . We are desperate! Thanks for the help!</u></p>	Snowbird, UT	4/29/2015
<p>I have been coming up this canyon for over thirty years. This canyon is one of the busiest in the state. If it were in Europe it would have a train. I would love to see a tracks kind of transportation for this canyon. It would help with the safety and environmental worries that so plague this canyon. Thank you.</p>	Snowbird, UT	4/29/2015
<p>As an employee of Snowbird Ski and Summer resort, I would like to weigh in on my thoughts of the Mountain Accord. I have been reading through the website, and was pleased at what I saw proposed, transportation wise. This will make such a big impact on our canyon, to cut down the traffic, increase ways to get up and down, and connect to other parts of the Wasatch. I have heard voices of concern from friends who were very opposed to the Mountain Accord for environmental concerns, however, after reading more I can see that the plans could really be a benefit to the environment, the locals, and the tourists. I am glad I read more about what is happening, <u>and I really applaud increasing public transportation in whatever form works out best for our canyon that we all love so much.</u></p>	Snowbird, UT	4/29/2015
<p>I support improving transportation to all Utah Ski Resorts. Over the snow as defined in One Wasatch would be my preference. Ski area connectivity would help Utah's economy and compete with other ski regions. It would make transportation safer, faster and more convenient.</p>	Snowbird, UT	4/29/2015
<p>Mountain Accord is tasked with seeking an appropriate future balance among the various uses and environments within the Central Wasatch, including the backcountry. The current balance has been established by the Uinta-Wasatch-Cache Forest Plan. This plan was implemented after a thorough NEPA process which extensively studied Forest use and found the right balance and provided both permanence and flexibility over time. To plan for the future Mountain Accord must understand what is at risk before significantly modifying the current condition. The Carrying Capacity of Wilderness, backcountry, side country and ski areas is what defines each zone's acceptable level of activity. The Carrying Capacity of each use area needs to be measured and optimized before any wholesale implementation of changes are made to the shared environment. Although adjacent to each other the various recreational uses are quite different and each use has it's own particular values. An increase of thousands of skier days within a ski area is likely welcomed from an economic point of view. And because it represents a small percentage increase in the overall visitation rate it would not fundamentally change the experience. The ski areas are where we cluster high density activities. The Carrying Capacity of ski areas is quite high and much of the near future use can be managed by addition of lifts and runs. However, a similar numerical increase in winter backcountry use would be disastrous to the experience and the safety of users. In these undeveloped areas even a limited increase in visitation will cause congestion and visitors will feel very crowded. The multiple use portions of the backcountry are very important to Forest health. They provide a buffer between Wilderness and ski areas and are where various user groups can share terrain. These are the only locations where the diverse recreational opportunities desired on the Forest occur. They also are sensitive and protected environments for wildlife etc. that could be easily compromised by ski area expansion. The land exchanges proposed by Mountain Accord are not all the same. Some protect the backcountry from development and some put the backcountry at risk. Since any incremental loss of backcountry is irreplaceable each proposed land exchange should be studied individually and with care; not combined and authorized through a broad brush legislative land exchange process. The exception being those ski area proposed land exchanges that protect the backcountry. These are welcomed and can likely be legislatively mandated. However, proposed land exchanges that adversely impact the backcountry should go through the NEPA process to examine desired conditions and insure good solutions. These include those that would provide lift service to the eastern Little Cottonwood - Big Cottonwood ridge line which would destroy the character of the backcountry due to an increased ease of access. This would essentially turn prime backcountry into sidecountry. Just the potential burden on local Search and Rescue alone is enough to deter this idea. Other proposed Mountain Accord solutions such as tracks, or tunnels are better. In addition it's not just the currently popular backcountry areas that need protection. As yet to be popularized multiple use areas such as those found in American Fork will be needed in the future as an increasing population forces those seeking a less crowded, yet accessible, experience to venture outside of the Central Wasatch. Large land exchanges for these areas should not be granted without examination and study through the established Forest Plan and NEPA processes. There are other threats to the multiple use areas of the backcountry. Currently there is an abundance of Wilderness on the Forest which is vastly underutilized. No more Wilderness acreage need be added at the expense of the multiple use backcountry. Lands can be protected through other Mountain Accord proposed means which are less restrictive on current activities. Even if the size of the backcountry remains as it is, predicted increases in population may destroy the character of the winter environment. Maintaining an acceptable level of quality use, based on Carrying Capacity, can only be sustained by limits on visitation. Backcountry overuse, and resultant potential conflict, needs to be addressed for aesthetic and most importantly safety reasons. In very popular areas, on particular days, Carrying Capacity has already been reached. Too many people in the same drainage can cause problems. Ski lines, desired for their powder, are limited and easily exhausted. There is real danger that overcrowding can push users into avalanche threatened areas or of one group of users potentially endangering members of another group. After more than 40 years Powderbird still represents the single largest group of backcountry skiers in these areas and we do our share to enhance the backcountry experience and safety of the public. We provide the unique service of escorting skiers through this beautiful yet avalanche prone terrain. We are the most regulated user group on the Forest and we exercise overcrowding resolution through mobility and avoidance.</p> <p>We are very much in favor of maintaining every single backcountry ski run since any reduction at all in available terrain to Powderbird or others will simply increase crowding in the remaining areas. The more places we have to go the easier it is for us to avoid others. Our clients, as well as other users, are all members of the public that rightfully deserve, and prefer, limited encounters with others in a relatively safe shared environment. Through an extensive permitting process, including two Environmental Impact Statements, Powderbird's use of these areas has been, and is now, restricted in both time and place. Our use has been stable since the 1980's and capped since 1999. Our use is not growing...we are not the problem. Other backcountry skiers claim their groups' use has been increasing and is expected to further increase. It is fundamentally unfair of an unregulated, growing entity to ask the members of the public who have utilized our guide service since 1973 to step aside so their group will have more room to expand. The Mountain Accord process is the ideal venue, and now is the ideal time, to begin placing conditions on backcountry access in high use areas in order to keep an enjoyable and risk manageable environment for everyone. Restrictions should be considered for all users. Use restrictions similar to those already in place on rivers, trails, and campgrounds throughout the country, including, registration, performance standards compliance, code of conduct agreements and permits. A combination of these will ultimately be helpful in preserving a rich experience. Not all uses are the same. Ski areas are very very popular, Wilderness is where one should expect solitude, and multiple use terrain is where you can expect a somewhat in between, but high quality, experience. For the experience to remain acceptable the backcountry cannot be decreased in size, it should not be made more easily accessible and it needs to quickly be protected from over crowding through access restriction. Mountain Accord can achieve all these goals through applying an environmentally driven preferential treatment that this limited resource deserves.</p>	Snowbird, UT	4/8/2015

<p>I attended the Mountain Accord meeting that was held in Park City. I've also perused your website a number of times. Unlike many, who seem to be either for or against certain ideas, I seem to be having conflict, making decisions about the blueprint. I can see both good and bad, with man, of the scenarios. I've taken so long to provide comment, since I am having a difficult time coming up with a definitive vision, that I would like to see.</p> <p>My preference would be for the Wasatch to be like it was as I grew up hiking, backpacking, fishing, ski touring, hunting, and riding motorcycles, in the Central Wasatch. I also realize that this isn't going to happen. Mostly because there are more people living close to the area and using the Central Wasatch. The hiking trails are more crowded, the powder gets tracked out earlier, and there are fewer options for trail riding on my motorcycle. It was certain to happen, given the proximity to an area that would see great growth.</p> <p>I'm concerned about "undoing" certain things, if they are found to not be good choices, 40 years from now. Tunnels, rail systems, and aerial transport, seem like they would be permanent fixtures in the Wasatch. If cleaner energy buses were used, there is more flexibility with plan. Again, I see good and bad with many options. I have enjoyed visiting Telluride, CO and using their gondola for transportation.</p> <p>The area in question is already overused at times. Taking steps to increase visitation could make things more crowded. Maybe congestion is a good thing. It could help to create some balance. Encourage bicycle, motorcycle, and bus use. Discourage automobiles. Once my favorite hiking trails in Millcreek became crowded, I quit frequenting those trails, and the canyon. One less user to contribute to the congestion...</p> <p>Keep Grizzly Gulch as it is. No lifts. No development. No One Wasatch. Wait and learn from the linking of Canyons and Park City resorts. See how many people really use linked resorts.</p> <p>No transportation links between Big Cottonwood and Park City (trains, buses, opening Guardsman Pass in winter).</p> <p>Thank you for providing forums to learn about this process. I've found the Mountain Accord to be overwhelming for a simple person like myself. However, I will keep attending local meeting and further learning about the process.</p>	Snyderville, UT	5/1/2015

<p>I would like to express support for the comments provided by wasatchbackcountryalliance.org. Implementing controls now to protect key areas for human powered use is very important. Much like golf, downhill skiing is in a decline. The industry has created an environment that only the very rich can participate in. The business model of real estate development at the base of the resorts is not sustainable and will compound transportation issues in the canyons.</p> <p>The mountain accord needs to focus on recognizing the human powered users and protecting appropriate terrain.</p>	South Jordan, UT	4/30/2015

<p>I support ONE Wasatch and over-the-snow connectivity and improved transportation to/from Utah's ski resorts. If this project goes forward, I would be more willing to move my family and small software business to Park City. I would be more willing to invest in real estate, knowing the convenient World-class skiing opportunity this would present. My work requires access to highly skilled workers, and I think I could convince people to move with me if the entire Wasatch was open and convenient to access. Even if I was not able to relocate, I would be more interested in selecting Utah as a recreation destination. The ability to access more than one resort in a convenient manner would help Utah's economy, it would be fun, and it would make me think twice about visiting Colorado for my limited days on the snow. Improved transportation to make my trip from ski areas safer, faster, and more convenient would make me more likely to vacation in Utah with my family, and my four kids would love to explore the entire area. Thank you for taking my comments into consideration when deciding how to allocate your resources.</p> <p>Regards,</p>	Springfield, VA	4/30/2015

How will Climate Change impact demand for skiing? *Today's youth spend half as much time outdoors as their parents. How will this affect future ski area attendance? Doing the least harm to our unique environment is the prudent course for Mountain Accord in the face of uncertainties over what the actual demand will be for ski resort access in the future.</p>	Taylorsville, UT	4/28/2015
<p>The Wasatch Mountains are a critical resource for Utahns and visitors from all parts of the world. Protecting the Wasatch Mountains' environment should drive the Mountain Accord Blueprint, and be a pre-condition to any development strategies seriously considered. Public transport up the canyon must be frequent, comparable in travel time to driving and affordable, or people will continue to drive. A railway would be visually intrusive, noisy and diminish the wilderness character of the canyon. Construction and operation would likely have damaging impacts to water quality and wildlife. Instead, a dedicated bus lane should be considered, constructed by widening the road to three lanes where practical, with an alternate flow lane to accommodate bus traffic during morning and afternoon peak times in the winter. Avalanche protection might be added in Little Cottonwood to improve reliability of access, if built with a visually acceptable design. Tunnels among Little Cottonwood, Big Cottonwood, and Park City would mainly support ski resort marketing and would do little to address regular transit needs for residents. Tunnels may pose significant environmental concerns during and after construction such as water pollution, air pollution, noise, and permanent visual disturbances in our scenic canyons. Tunnels would incur significant construction and maintenance costs, and would disproportionately benefit out-of-state ski-area customers rather than Utahns. Land exchanges that preserve pristine backcountry in the Wasatch while allowing limited additional development in already impacted areas are potentially a good idea. These exchanges also offer the potential for reducing conflicts over wilderness designation and other protections on public lands. Permanent protection for public lands, such as those proposed in the Wasatch Wilderness and Protection Act in 2010, is important for watershed, wildlife and back country solitude. One of the most important outcomes from the Mountain Accord process would be to create permanent, limited boundaries beyond which ski resorts will not be able to expand. Have potential impacts from the following factors been fully evaluated? *The Utah State Climatologist projects declining snow packs with spring snow disappearing by 2100. How will Climate Change impact demand for skiing? *Today's youth spend half as much time outdoors as their parents. How will this affect future ski area attendance? Doing the least harm to our unique environment is the prudent course for Mountain Accord in the face of uncertainties over what the actual demand will be for ski resort access in the future.</p>	Taylorsville, UT	4/28/2015

<p>Dear Sirs:</p> <p>I want to express my appreciation to everyone who has participated in and assisted with the preparation of the Mountain Accord Blueprint and supporting documents. I was impressed with the quality, conciseness, and organization of the documents I was able to review. I took the survey on the MountainAccord.com website after reviewing the Blueprint document. Within the survey I included numerous comments. My specific comments on the Cottonwood Canyons scenario are repeated below.</p> <p>Cottonwood Canyons scenario.</p> <p>I think the scenario presented is reasonable. Of course, the devil is in the details. That said, I endorse the effort to provide permanent protection for over 2,000 acres of holdings owned by the ski resorts. This will provide much needed certainty for these lands and provide quality dispersed recreation, including backcountry skiing, hopefully in perpetuity. The Blueprint did not make it clear (at least to me) whether these holdings would be purchased by the federal government as funds became available, or if the resorts would continue to own them but sign some type of memorandum of understanding (MOU) that they would henceforth be managed by the USFS, or managed under USFS regulations, with public access allowed. Perhaps that remains to be determined. Nor does the Blueprint specify just what additional protections these lands would receive. I assume that would be determined ultimately by the land management designation the holdings receive. I'm not convinced that any of the federal land management designations (i.e., Wilderness, National Monument, National Scenic Area, etc.) identified in the Blueprint are warranted or needed for this acreage, if the management practices implemented prevent degradation of surface waters within the Canyons. Any of these proposed designations, but especially designation and management as a Wilderness area, might galvanize opposition to and possibly scuttle this land management proposal.</p> <p>The information concerning the benefits to the resorts, primarily Alta and Snowbird, is vague, so I am reticent to endorse this portion of the scenario. I do however applaud Mountain Accord for presenting the transit tunnel proposals between LCC and BCC, and between BCC and Park City. I have numerous concerns and reservations about the tunnel proposals but acknowledge that the tunnel options need to be evaluated, particularly if we do not wish to see Guardsman Pass become a main thoroughfare between SLC and Park City during the winter, or additional backcountry acreage consumed by new lifts to connect the resorts. Hopefully a comprehensive EIS will thoroughly examine the transit tunnel proposals.</p> <p>The Blueprint does not mention a consideration to expand the Alta ski area into the Mt. Wolverine/Catherine Pass/ Mt. Tuscarora area that I was informed of through Save Our Canyons back in February. Is this proposal still on the table? I do not support such an expansion.</p> <p>Some questions:</p> <p>The Cottonwood Canyons scenario mentions 258 acres for base area management (item # 2). I assume this is to accommodate transit stops in LCC, BCC, and Park City and is a cumulative figure (estimate)? This acreage seems high if it is only for that purpose. Would the additional water for snowmaking (item # 3) come from dewatering and diversion during tunnel excavation? Item # 5 states that the resorts would benefit from "approximately 416 acres in American Fork Canyon." Would this be an expansion of the Snowbird resort? The map that accompanies the Cottonwood Canyons scenario does not show any expansion in this area.</p> <p>In summary, I remain neutral / undecided on this scenario for the Canyons, primarily because of my concerns re: the transit tunnels between LCC, BCC, and Park City, but I endorse proceeding with an EIS for the tunnels.</p>	Taylorsville, UT	5/1/2015

<p>Significance for Utah</p> <p>Long distance destination skiers are usually attracted to the larger resorts.</p> <p>Whilst Utah has a unique selling proposition in terms of the Greatest Snow on Earth, this has not yet translated into a large inter-continental destination market.</p> <p>Part of the reason for this lies in the lack of direct flights to Salt Lake City from the major skier exporting countries, particularly Germany and Britain.</p> <p>However another reason is the lack of connected resorts in Utah which European skiers are used to experiencing. France led the way in linking up mega ski circuses in the period 1970-2000. In the last 20 years, Austria has begun to compete with this, creating ski lifts where previously buses were the only way to connect between areas. Austria is now reaping the benefits of this investment.</p> <p>In contrast, Switzerland, which has always had a reputation for high service standards, has seen a fall from 30 million skier visits at the millennium to about 25 million, largely as a result of having fewer connected areas, and being perceived as expensive.</p> <p>Utah has an opportunity, starting with the unification of Park City Mountain Resort and Canyons to transform its position in the destination skier market. The degree to which this is realised will depend not only on this connection, but the extent to which "One Wasatch" is delivered. No other North American ski region has resorts so close together to be able to create an entity approaching 20,000 skiable acres to rival the mega resorts of France and Austria.</p> <p>However, there is likely to be ambivalence amongst Utahn skiers and snowboarders about the desirability of sharing their slopes with additional destination visitors – "no friends on a powder day".</p> <p>From the perspective of economic development, inter-continental skiers and riders are likely to come for more than a week. That means they will be present at least five days, Monday to Friday, when the resorts need additional custom. Destination visitors also spend more in hotels, restaurants, on equipment hire and purchase of local transport than locals do. They are an important part of Utah's economy and could be even more so in the future.</p> <p>So even though very few such destination visitors are likely to participate in this consultation, please do not forget them and their likely needs if they are ever to add the Greatest Snow on Earth to their "bucket list".</p> <p>Cottonwood Canyons</p> <p>If the four Cottonwood Canyons resorts were connected, they would create a combined area of 7,000 skiable acres, almost as large as the new Park City / Canyons.</p> <p>These four resorts are also the heartland of Utah's mountain area averaging 500+ annual inches of snow.</p> <p>Resorts on the Park City side of the Wasatch have the high mileage groomed trails to attract international skiers; the four Salt Lake resorts have the quantity of snow which helps create the unique selling proposition. Neither of these separately will generate as much repeat international business compared to what can be achieved if visitors experience both sides of the Wasatch.</p> <p>The "One Wasatch" concept postulates a link via Twin Lakes Pass via chairlift. This is necessary to create the experience of a unified four resorts. But it is not sufficient.</p> <p>Twin Lakes Pass is one of the snowiest watersheds on the planet. It is inevitable that there will be times of lift closures during the skiing day. Visitors, local and destination, will find themselves caught in the "wrong canyon". As in Europe, this will be highly popular with local taxi drivers, but not anyone else.</p> <p>As part of the Mountain Accord process, I would like to support the idea of a rail tunnel from Snowbird, through Alta to a point between Solitude and Brighton. This should be built to allow high density traffic, possibly two lines with a loop either end.</p> <p>The entire route, which would be about 4 to 5 miles in length should be in a tunnel and / or protected by avalanche sheds. Ideally it would be connected by underground pedestrian walkways from the main hotels / lodges in Snowbird and Alta. If it is done as a funicular, with passing places, the link needs to be fast to allow a high frequency service.</p> <p>One of the principal benefits of this would be provide an alternative route into / out of Little Cottonwood Canyon when avalanche danger is high. The train could be used to move between Canyons and then Big Cottonwood Canyon, which is seldom affected by avalanches, could be an alternative ground route by car, bus or shuttle to Salt Lake City and the Airport.</p> <p>Would such a rail connection be worth it?</p> <p>The Mountain Accord documentation postulates an extensive public or public/private transport network for the "One Wasatch" area.</p> <p>The problem is persuading people, particularly local people, to stop using their cars.</p> <p>If one considers countries with traffic free villages, the rail option has in some cases been in existence before cars were a prevalent means of transport. The Zermatt - Visp link in Switzerland is typical of many Swiss mountain railways, being over 100 years old. There was not a major issue persuading people to leave their cars, because they never got used to using them to this resort in the first place.</p> <p>But in the USA, there will be massive resistance. One way to try and persuade locals of the benefits of rail travel, is to offer it first, where people cannot currently use their cars – a new link between the eastern ends of Big Cottonwood and Little Cottonwood Canyons.</p> <p>Once local people begin to become more comfortable with mountain rail travel, it may be time to review whether the network can be extended to some of the other areas proposed by Mountain Accord.</p> <p>What form(s) of transport should be encouraged / discouraged in the Cottonwood Canyons?</p> <p>One unique feature of the Cottonwood Canyons is the density and size of population resident near the foot of the Canyons. This is very different to examples of high-altitude traffic-free villages in the European Alps where the main valleys are usually populated with smaller towns or other villages. Visp, lying below Zermatt, has a population of fewer than 10,000 and nearby Brig is about 13,000. Such settlements do not generate the intense local traffic flows experienced on winter weekends in American cities such as Salt Lake City and Denver.</p> <p>Innsbruck in Austria is an example of one of the largest cities in Europe set in a mountain environment, but even here the population is only 120,000, only a fraction of the Salt Lake conurbation.</p> <p>I am unsure what demand figures Mountain Accord is planning for. A rather elderly study from 2006 still partially available on the internet, appears to indicate that for the period 1993 – 2003, traffic flows on SR 210 were about 8,000 vehicles per day on February and March weekends. If this is still the case, I presume that it means over 10,000 people moving up and down Little Cottonwood Canyon on such days.</p> <p>One of the greatest challenges is that a very high proportion of more than 10,000 people want to go up the Canyon between 7.30 and 8.45 am on winter weekends and come down between 3.30 and 5.30 pm. This intensity of flows will be very difficult to cater for.</p>	<p>United Kingdom 1a</p>	
---	--------------------------	--

<p>Access Gondola up Little Cottonwood Canyon</p> <p>There are obvious difficulties in sustaining service past almost 50 avalanche tracks. Siting the gondola line on the south side of the Canyon may mitigate this to some extent compared the avalanche threats to the road.</p> <p>However, even allowing for the fact that a ropeway would not twist as much as the road, the distance from the jaws of the Canyon to Alta is about 9 miles (14.5 km). Most modern gondolas travel at between 6 and 7.5 metres per second once they have left terminals. Even at the higher speed, a distance of 14.5 km would take over 32 minutes. However, this distance would probably require three ropeways in sequence, like the Olympe Gondola connecting Brides les Bains to the Three Valleys in France. Each station adds to the journey time. There would also need to be a station at Snowbird as well as Alta.</p> <p>In consequence, even if it were to be possible to shoehorn a lower terminus into the jaws of Little Cottonwood Canyon, the gondola journey time, not allowing for loading and unloading, would probably exceed 40 minutes to Alta and 35 minutes to Snowbird. Will this be acceptable to locals used to driving up the Canyon?</p> <p>Another critical factor is the location of the base loading station, and any stations up the line where skiers and riders are expecting to alight and start on trail. It is worth studying the access to the Olympe Gondola in France's Three Valleys on "how not to do it". The base area of this gondola in Brides les Bains is wedged at the entrance to a gorge with minimal car parking. Everyone has an uphill walk to the lift. At the top, the lift terminates next to the Olympic ice rink. Skiers and riders have a walk of almost 400 yards to the lifts which go uphill from the resort of Meribel. All of this takes more time and acts as a disincentive to use the gondola. This gondola is only half the length that a Little Cottonwood Gondola would need to be; and the French one has a 25 minute ride time.</p> <p>Is there enough land right at the mouth of Little Cottonwood Canyon to cater for perhaps 8,000 vehicles if Alta and Snowbird were to be largely car free? In a car park this size, the journey time from parking the vehicle to walking or being shuttled to the gondola base becomes significant.</p> <p>Finally will the access gondola generate massive lines at peak times to go up in the morning and back at the end of the afternoon? It is important to study capacities for gondolas. For example, Whistler – Blackcomb's Peak to Peak Gondola has an hourly capacity of 4,100 passengers. However, as this is between two mountains, there is substantial traffic going in both directions simultaneously. With an access gondola this would not be the case. Nearly all the traffic will want to go up in the early morning and back in the evening.</p> <p>The new Penkenbahn lift at Mayrhofen in Austria claims a peak capacity of 3,840 per hour, but this relies on 8 standing passengers per cabin for a ride which will take less than 9 minutes. Without standing passengers, the capacity will be 2,880 persons per hour.</p> <p>The capacity of the Olympe gondola at Meribel, is about 2,700 per hour along the three connected ropeways.</p> <p>The two gondolas developed for Sochi are the cutting edge of 3S technology. Sochi was the first to have a 3S lift with an intermediate station. Sochi also has the longest lift with 3S – but still only 5.5 kilometers (barely 40% of what would be needed at Little Cottonwood).</p> <p>I would suggest that Mountain Accord arranges to study modern examples of access gondolas to see how much of the peak weekend traffic in Little Cottonwood could be accommodated by this method. If the gondola is a merely an option alongside driving up to the resorts, it is likely to be underutilised – even with a heavy pricing incentive not to drive.</p> <p>Mountain Railway Option</p> <p>I am unable to get my head around how any form of mountain railway could transport 10,000 people, nine miles from the base of Little Cottonwood Canyon to Alta / Snowbird in a time window of under two hours. Whilst cable railways (funiculars) are capable of track speeds of 12 to 14 metres per second, they are for much shorter distances. Some of the quoted higher passenger capacities per hour for funiculars seem to be on short urban lines such as the 600 yards Kabataş-Taksim Funicular in Istanbul.</p> <p>For an example of a longer journey from urban to alpine, the Hungerburgbahn goes from central Innsbruck in Austria on the first stage of the Nordkette range journey. This funicular may have a line speed of up to 10 metres per second, but the maximum transport capacity is only 1,200 passengers per hour. And it is just over a mile in length.</p> <p>Track speeds on other forms of mountain railway are much slower, particular if gradients require "rack and pinion" or some of the steep grade technology to prevent slippage on the track.</p> <p>Some form of mountain railway, could obviously be better protected from avalanche danger, although the cost of constructing most of the line in avalanche sheds would be high and may be unsightly.</p> <p>The same strictures about the positioning of the base area and the top stations for a mountain railway apply as with a gondola.</p> <p>Congestions at the stations, particularly the lower terminus (applies to gondolas and railways) – and en route to the lower terminus.</p> <p>Although road congestion in the Canyons may appear to be the most severe problem, the road network to the base of Big and Little Cottonwood Canyons is not ideal to cater for high densities of early morning or late afternoon traffic. From Junction 6 of I-215 it is about 1.7 miles to the base of Big Cottonwood Canyon and 5.5 miles to the base of Little Cottonwood. The distance along SR 209 from Junction 295 on I-15 to the base of Little Cottonwood Canyon is about 7 miles.</p> <p>Any transport solution which relies on a large proportion of Canyon users driving to the foot of the Canyon and parking there, creates a "muddy gate" problem, where the approaches to the lower terminus become congested with private vehicles trying to reach the car park. Of course, one would like to think that most users could be persuaded to use public transport all the way from their homes to the slopes. In the American context, is this realistic?</p> <p>Why not test out buses first?</p> <p>Before investing in highly expensive gondola or rail options in Little Cottonwood Canyon, why not try a moderate improvement option?</p> <p>As an experiment, a partnership including, Utah Transit Authority, UDOT, Snowbird and Alta, could seek authorisation to close SR 210 on one Saturday early in April 2016. Only property owners in the Canyon, essential service vehicles and possibly shuttle services for destination visitors arriving to stay in or leave Alta / Snowbird, would be allowed to use the road on this day.</p> <p>The two resorts should try to stimulate late ski season demand for that day by a major incentive such as a free or very low cost lift ticket. UTA should provide a free bus service. UTA would round up every bus they could spare for the periods 7.00 to 9.00 am and from 3.30 to 5.30 pm. The aim would be to try transporting more than 10,000 people up Little Cottonwood Canyon in under two hours at the start of the day and back down again at the end. This would need a lot of buses.</p> <p>The advantage is that there could be multiple starting points around Salt Lake and Sandy, reducing the "muddy gate" problem. 250 bus trips up the Canyon by road may not seem a very green alternative, but it is considerably greener than 8,000 cars.</p> <p>It does little to address the avalanche issue except insofar that the smaller number of vehicles on SR210 should be easier to manage. However, if this looks like a possible improvement, even in the medium term, it is easier and more flexible to buy more buses than to introduce light rail. Whilst light rail has a much greater carrying capacity in urban areas, the logistics of mountain travel for skiing and snowboarding are very different.</p> <p>Commuters using light rail in the City create peaks Monday to Friday about 50 weeks per year (= 240 to 250 days annually).</p> <p>How many days is the traffic in Little Cottonwood Canyon really bursting?</p> <p>On how many days does the number of vehicles wanting to go up exceed 8,000 vehicles? 20 days? 30 days annually?</p> <p>What is the average daily traffic in Little Cottonwood Canyon? 6000 vehicles? 7,000 vehicles? These are still very high figures for a mountain road with considerable avalanche danger.</p> <p>The other issue with introducing a mountain rail or gondola solution into Little Cottonwood Canyon is displacement. Would this result in those who want to drive to a resort choosing Big Cottonwood instead? Understandably this will not be an acceptable outcome for Snowbird and Alta Resorts.</p> <p>The advantage of an enhanced bus option is that if it works for Little Cottonwood, it could, in time, be applied to Big Cottonwood as well.</p> <p>Mountain Rail in Parley's Canyon</p> <p>Despite what has been said above, I have more positive feelings about the potential to create a system to transport passengers from and to Salt Lake Airport to Park City by rail. A greater proportion of these would be destination visitors, using rail to transfer to their lodging, rather than locals. Destination visitors coming to Park City for several days are less sensitive to a journey taking an hour rather than half an hour than are local day visitors. For destination visitors on shorter breaks, time becomes more pressing. The arrival / departure of destination visitors is likely to be less subject to Saturday or Sunday time specific peaks than the travel needs of locals.</p> <p>I have not aimed to address all the issues considered by Mountain Accord; this response is more than long enough already.</p> <p>This response has been produced to stimulate further thoughts; it is definitely not intended to prescribe long term solutions.</p>	United Kingdom	
<p>To Whom it may concern:</p> <p>As someone who tries to take a ski vacation in Utah 2 or 3 times a year I want to express my support for the Mountain Accord proposal. I think any effort that will provide a more environmental sustainable way to access Utah's Wasatch Mountain Ski &amp; Snowboard Resorts should be pursued. Utah has some of the best skiing I've experienced anywhere but that great Mountain experience is threatened by un-planned growth resulting in traffic congestion and overbuilding in the fragile Mountain environment. The Mountain Accord, in my estimation, is a necessary first step in addressing these challenges and should be pursued. Thank you for taking into consideration this viewpoint. ☺</p>	Waltham, MA	5/1/2015
<p>The Mountain Accord proposal has the potential to protect the Central Wasatch Mountains through coordinated and cohesive planning. The overarching goal of Mountain Accord must be preservation of the wild and wilderness aspects of this area which is crucial to the health of the Wasatch Front. The watershed and ecosystem services of these lands trump all other considerations, include skiing, tourism, and transportation. In that light, strengthening watershed, forest, and wildland protections must be the main emphases of this plan.</p> <p>Thank you for the opportunity to comment on the Mountain Accord proposal.</p>	Wanship, UT	4/11/2015

<p>We've traveled to Utah from Washington, DC the past 2 winters - Powder Mountain in 2014 and Brighton in 2015. We've thoroughly enjoyed our experiences at both resorts.</p> <p>A couple of comments:</p> <p>Both resorts could benefit from a bus system to/from airports and even into town for shopping and restaurants.</p> <p>Neither location had a wide variety of restaurants in the resort vicinity. We had rented a car so were able to explore a bit, but might be worth exploring a bus option to attract more people into spending money in town. We drove 15 miles to grocery shop from Brighton. Also, could find no restaurants for dinner in the area other than the one a couple of miles down the hill. It was very good, but with the projected population growth will need more options.</p> <p>We'd be interested in resort connectivity. We couldn't find anyone who knew if we could buy lift tickets that we could use at Brighton and Alta.</p> <p>Employees at both resorts couldn't be more friendly and helpful in all aspects of our ski experience. Lessons for our boys were top-notch and fun. Easy to rent equipment and turn it in.</p>	Washington ,D.C.	3/17/2015
<p>I support ONE Wasatch and over-the-snow connectivity as I think it will help Utah's economy and be more fun.</p> <p>Please minimize development of the Wasatch Mountains! I can see that bus transportation could improve access. Please don't allow a trap line!</p>	Washington ,D.C.	5/1/2015
<p>I want to voice my support for One Wasatch. I come to Utah to ski each winter from Massachusetts. It would make our family's experience even better to have ski resorts linked and to have improved transportation available.</p> <p>The Wasatch Mountains are a critical resource for Utahns and visitors from all parts of the world. Protecting the Wasatch Mountains' environment should drive the Mountain Accord Blueprint, and be a pre-condition to any development strategies seriously considered.</p> <p>Public transport up the canyon must be frequent, comparable in travel time to driving and affordable, or people will continue to drive. A railway would be visually intrusive, noisy and diminish the wilderness character of the canyon. Construction and operation would likely have damaging impacts to water quality and wildlife. Instead, a dedicated bus lane should be considered, constructed by widening the road to three lanes where practical, with an alternate flow lane to accommodate bus traffic during morning and afternoon peak times in the winter.</p> <p>Avalanche protection might be added in Little Cottonwood to improve reliability of access, if built with a visually acceptable design.</p> <p>Tunnels among Little Cottonwood, Big Cottonwood, and Park City would mainly support ski resort marketing and would do little to address regular transit needs for residents. Tunnels may pose significant environmental concerns during and after construction such as water pollution, air pollution, noise, and permanent visual disturbances in our scenic canyons. Tunnels would incur significant construction and maintenance costs, and would disproportionately benefit out-of-state ski-area customers rather than Utahns.</p> <p>Land exchanges that preserve pristine backcountry in the Wasatch while allowing limited additional development in already impacted areas are potentially a good idea. These exchanges also offer the potential for reducing conflicts over wilderness designation and other protections on public lands. Permanent protection for public lands, such as those proposed in the Wasatch Wilderness and Protection Act in 2010, is important for watershed, wildlife and back country solitude.</p> <p>One of the most important outcomes from the Mountain Accord process would be to create permanent, limited boundaries beyond which ski resorts will not be able to expand.</p> <p>Have potential impacts from the following factors been fully evaluated?</p> <p>*The Utah State Climatologist projects declining snow packs with spring snow disappearing by 2100. How will Climate Change impact demand for skiing?</p> <p>*Today's youth spend half as much time outdoors as their parents. How will this affect future ski area attendance?</p> <p>Doing the least harm to our unique environment is the prudent course for Mountain Accord in the face of uncertainties over what the actual demand will be for ski resort access in the future.</p>	Wellesley, MA West Bountiful, UT	4/30/2015 4/28/2015

<p>Hello Mountain Accord,</p> <p>I strongly prefer the ski connectivity over snow as this method has been proven on six continents as being the most affordable system as well as most enjoyable for our guests. The train idea is sort of cool but at enormous expense both financially and environmentally.</p> <p>Good luck,</p>	Whistler, Canada	4/30/2015
<p>I have been following the one Wasatch planning process over several years. I have also been working as a consultant for Alta Ski Resort personally since 2007 and my company Ecosign Mountain Resort Planners has been actively involved in planning projects in the Wasatch area since the 90s.</p> <p>I live in Whistler and am an active backcountry skier.</p> <p>I support an over the snow connection between ski resorts in the One Wasatch Zone.</p> <p>I DO NOT support the concept of a train up Little Cottonwood Canyon connecting to Park City. Trains are a high cost, low capacity and low customer experience solution to the transportation problem in the One Wasatch Zone. The idea of a train has been overly romanticized and will not provide the optimal solution for transportation in the mountains.</p> <p>Cable Transport Over Snow Concept:</p> <ul style="list-style-type: none"> <li>· Best experience for customers because of views, continuous flow of system (no waiting for scheduled departures), opportunity for summer and winter recreation</li> <li>· Over snow concept will create the largest ski circus in North America. This is a massive marketing opportunity and positions all of the ski areas in Utah far ahead of other areas with disconnected resorts.</li> <li>· Footprint of lift towers has minimal impact on landscape.</li> <li>· As a backcountry skier I do not support the idea that lift development connecting ski areas should be limited to allow for undeveloped backcountry ski terrain. Skiing between resorts is the most energy efficient, low carbon emission, light impact way of moving people.</li> </ul> <p>There is a disturbing contradiction in the concept of developing transportation system with an incredibly high cost to the public sector which will have more of a carbon footprint as an alternative to over snow cable transportation simply for the goal of preserving land for ski touring vs. lift accessed skiing.</p> <p>There should be an over snow, cable transport lift connection between the 7 ski resorts in the One Wasatch zone. This is the most cost effective, efficient system which will provide the greatest benefit to the tourism industry as a whole and will ultimately create the optimal guest experience.</p> <p>I am a big proponent of the mountain accord. I ski all over the country and if there's better transportation between the big/little Cottonwood Canyons and Park city it will be the only place we'll go for a ski vacation because there will be nothing like it out there.</p>	Whistler, Canada	5/1/2015
<p>I support ONE Wasatch and over the snow connectivity.</p>	Wilmington, DE	4/30/2015
<p>After reading the major objectives of the MA transportation proposal it appears to me to be one not fully addressing the Wasatch One objectives. Specifically, WO proposes to connect the ski resorts to allow visitors to ski between resorts not just for transportation between the resorts. You must explain to ski industry and to the skiing public why connecting the areas by skiing is not even an alternative discussed. I would imagine that the ski industry has not bought into the MA proposal and, likely, never will unless the skiing public says that connecting the resorts by skiing is not important.</p> <p>It appears that the true objectives of the MA initiative is to prevent the ski areas from developing a lift system between the canyons so more terrain is accessible by skiers (that would be the European way). Setting up the strawman of a rail system through the canyons which would be, of course, unfeasible (cost and environment) is a way to make any alternative considered in the EIS strictly a transportation alternative.</p> <p>If the WO process doesn't look at ways to accommodate skiing between the canyons, my guess is that it will eventually be forced down your throat. If it were me, I'd look into ways to minimize the intrusion of a few additional lifts (like small tunnels to reduce the ridge line footprint). Putting up a few extra towers like how four lift towers will cover unacceptable winter quality problems is a solution that will eventually be needed.</p>	Woods Cross, UT	5/1/2015 3/17/2015
<p>Hello,</p> <p>I have led and been in several groups to Utah in the last few years. I also worked in Vail in lift maintenance so have a clue about resort life for the locals. Here are some comments:</p> <ol style="list-style-type: none"> <li>1) The interconnect seems like a good idea, but I wonder how much it will be used. Alta and Snowbird are already connected, as are Park City and Canyons. Solitude to Brighton seems like a no-brainer. Not sure that going beyond that makes sense.</li> <li>2) Transportation! We used the busses when we stayed in Murray and skied Alta/Snowbird. The bus service was AWFUL. Long lines, poor bus shelters, not enough capacity. Standing for that ride after a day of skiing is simply unacceptable, many of us are not in our 20's! Many in our group got fed up and rented cars, and then you have to find a parking place. My suggestion is a light rail with lots of capacity. Design in snow sheds so avis don't close the canyon. Try to minimize car travel up those roads. When we went to PM.Snow Basin, we chartered busses and that worked well there.</li> <li>3) Make the resorts work for the COMMUNITY, not just the skico. With Vail in town, you will see greed in monumental proportions, welcome to the \$10 cup of soup. (And poor wages for workers...) I know Utah is very pro-business and worker unfriendly, but when you have sub-standard wages, you wind up paying for them in other ways. Force fair wages, eliminate the illegal workforce and keep your community prosperous. The mountains are a community resource, the skico's make PLENTY. It won't kill them to be good to employees.</li> <li>4) Control the "Trophy Home Syndrome". Castles that sit empty use resources, contribute little and drive up the cost of living for everyone else. Your realtors and especially Vail will fight this as they are more interested in development than skiing. Perhaps a higher property tax for unoccupied properties? Think about it, trophy homes are like cancer, they gobble up resources, contribute little to the community, and make it hard for "ordinary folks" to live.</li> </ol> <p>Thanks for listening, looking forward to returning to Utah in a couple years. ☺</p>		3/17/2015
<p>While I understand the desire to ease traffic congestion to the tri-canyon area, I think adding trains and extra lanes will negatively effect the canyon environment and the experience had by those who recreate in it. It's already hard enough to have a wilderness experience so close to a major urban area. Making the canyon environment more urban is a step in the wrong direction. Please don't destroy the very thing that makes the Salt Lake area so special.</p>		3/17/2015
<p>I support one Wasatch I support increasing the size of all parking lots I support more hiking trails I support a gondola up LCC I support increased bus service. I support two lanes up LCC I do not support a train up LCC</p>		3/17/2015

<p>The problems associated with increased population and development will not resolve themselves without defined action. While we still have some amount of choice, and can still take steps to shape the future of our mountain environment, we must make some difficult decisions.</p> <p>One of the most significant issues we must face is management of transportation. Much as we wish we could continue to drive private cars, unrestricted, up the Cottonwood canyons (particularly Little Cottonwood), the need for a functional public transportation plan is evident. Thousands of cars travel up Little Cottonwood each day, resulting in parking problems and increased air pollution. In the winter, slow traffic increases exposure to avalanche danger. The crowds of people competing for parking at popular recreational sites detract from the aesthetics of attractive areas. Clearly, management of traffic is becoming critical.</p> <p>A proposed rail route up LCC is one solution which has been offered to alleviate traffic; however, it is expensive. Many people have voiced objections to the visual impact of a railway. Moreover, construction of a rail line would be a lengthy process which would create noise and negatively impact aesthetic quality. Perhaps a less intrusive option would be a shuttle bus system, running year-round, with enough vehicles to accommodate users, and enough flexibility to adjust to peak use periods, as well as times when fewer people travel. An increase in bus service could be implemented with less construction, with less permanent change to the environment and less expense. Public demand and response could be evaluated without major investment, and schedules could be adjusted to meet seasonal and daily peak periods.</p> <p>For either rail or shuttle service, a fee structure should be put in place to favor use of public transportation and to discourage the use of private vehicles. I can imagine a scenario in which early morning personal vehicles could access the canyon for either no fee or a minimal one (this accommodates focused climbers, skiers and hikers who want an early start to a long day, at a time when shuttles might not be in service). During the day, and especially on weekends, shuttles could be offered at a minimal fee rate - or for free - while fees for private vehicles would be higher. High occupancy for private cars could lower fees for use. Basically, cost of access can be manipulated to shape the kind of usage that is best for the mountain environment.</p> <p>I am in favor of the proposed land exchanges, which lead to consolidation of areas of development at the base of resorts and existing developed areas. As we consider how that development will be defined, I end up thinking that an enhanced bus/shuttle service will involve fewer permanent impacts in limited available areas than a rail line would. Some degree of resort development is inevitable, but the overall scale and visual impacts need to be managed with a comprehensive perspective.</p> <p>I applaud the collaboration that has been put into the Mountain Accord resolution so far. The guiding principles of compromise and negotiation is admirable. Thanks for the efforts and commitment.</p>		3/17/2015
<p>Thanks for the meeting tonight, March 17, 2015 at the Holladay Library. I would simply like to vote in support of the proposed shuttle bus transit, complete with the proposed tunnels for the Cottonwood canyons. Also, more emergent, I would like to vote in favor of railway transit between Salt Lake and Park City along the I -80 corridor.</p> <p>Thanks,</p>		3/17/2015
<p>As a former employee of the Alta Lodge and a sometimes Alta skier, PLEASE DO NOT GO THROUGH with this exchange. Alta is special because it DOES NOT have all the consumeristic crap up there. It is a beautiful, almost pristine place to go where a person doesn't have to see commercialism at every turn. Leave it alone. PLEASE. Thanks for your consideration Helen Guidotti</p>		3/18/2015
<p>I feel it is vital that equestrian uses be a part of the planning process!</p>		3/18/2015
<p>Hello,</p> <p>I am both a resort skier and a backcountry skier. I hold an Alta/Bird combined season pass. I also buy passes for my family. I travel to Utah regularly during the winter and spring to enjoy recreation in the mountains. My opinion is that the current balance between the resorts and the backcountry is roughly appropriate. I do not want to see more resort development. I do not want to see the resorts connected at the expense of other recreational uses. I do not want to see a lift in Grizzley Gulch. I do not want Snowbird or Alta to expand. I do not want any trains or other expensive transportation built up our canyons. (We could surely improve our bus service as a first step on that front.)</p> <p>Thank you for hearing my opinion.</p>		3/18/2015
<p>I have heard too many (deliberately) anti-future-think people dis the Blueprint, because: "You can't run a train up Little Cottonwood Canyon", "You can't construct a tunnel between the Cottonwood Canyons", "It will be far too expensive, BTW how much will it cost me", "We have many other needs that should be of a higher priority", etc.</p> <p>I think that these kinds of comment are not helpful in developing a much needed transportation/access solution for a very significant problem situation. Therefore, I recommend three things;</p> <ol style="list-style-type: none"> <li>1-Ignore the ignorant litany,</li> <li>2-Continue with honest public relations, focusing on educating the general public, and</li> <li>3-Commission FIC and more detailed design so that we can begin to rationally assess the better options.</li> </ol>		3/21/2015
<p>How can you ask the public to comment intelligently without estimates of costs for each Concept, and how the alignment of the rail line and extra bus express lanes would impact the canyons and residential areas along the train tracks/ bus lanes.</p> <p>There are other key questions. The first question to be asked and answered is who will pay for such ambition plans.</p> <p>A few of the other questions I can think of follow:</p> <ol style="list-style-type: none"> <li>1. Would the train require fencing to protect animals? If so would it restrict the public access to some recreational areas?</li> <li>2. Would any of the Concepts create other hospitality centers along new transit routes at the expense of existing hotels and other components of the tourism industry?</li> <li>3. Where would the parking facilities for access to public transportation be located?</li> <li>4. What are the transit times (how long would it take to get to the resorts)?</li> <li>5. What is the proposed frequency between trains during peak periods as well as other times during the year?</li> <li>6. Could the transit district afford to run trains during spring, summer and fall? UTA is already finding it difficult to provide adequate bus service because of TRAX and FrontRunner.</li> <li>7. What would be the cost of public transit?</li> <li>8. Would the train require transfer stations to get to the canyon?</li> <li>9. Would tourists, especially families, that stay in the valley forgo rental cars?</li> </ol> <p>It seems appropriate to see if toll roads, ride share, parking fees, and adequate parking at existing will reduce congestion in the canyon before spending millions because Snowbird wants a train.</p> <p>I would have hoped that the Mountain Accord committees would have discussed these questions. If so why not tell the public.</p> <p>Do you really think the public can provide good feedback with the answers to many of these questions?</p>		3/22/2015

<p>I think that the Mountain Accord is defiantly a group that has our best interest in mind. I think that most of the main goals of the plan are still very general but are all towards the best interest of the environment and the users of the environment. I like how they broke their goals into four separate categories and then further goals within those separate categories. I feel like that will give the creators of the plan the best potential to supply future users of the area the knowledge to make educated opinions about the plan. I will be interested to see how all of this ends up on the short term end but more on the long term end of things.</p>		3/22/2015
<p>I would like to start by thanking all the members of this committee for their efforts in addressing this truly critical issue. The Wasatch Mountains are a unique and profound part of Utah's personality and their preservation is an essential task. Preservation is my highest priority and unfortunately, some items in the Mountain Accord's plan don't seem to match my vision of preservation. The Cottonwoods' hold some of the greatest skiing in the world and we are fortunate to have four world class resorts within their boundaries. For many guests of these resorts, their proximity to wilderness only heightens the experience. Try to imagine any other tourist destination that combines majestic, untrammelled nature with a major city like Salt Lake. It's hard to find. Denver certainly doesn't have it. That is why I fear expanding the resort boundaries and connecting the canyons with each other and/or Park City will only diminish this distinct character of our canyons.</p> <p>I do recognize that traffic congestion in the canyons is a growing concern and I am well aware that the current transit infrastructure is ill equipped to handle predicted increases in use, but breaking down the natural barriers of our backyard with tunnels and trams isn't the answer. Nor is adding a tax burden to local citizens to fund these projects appropriate when the improvements will have a direct financial benefit to the ski resorts. Some ideas proposed in the Mountain Accord seem more inclined to feed a ski industry promotional machine than to preserve our mountains. Some ideas seem ready made for an article in Ski Magazine or a segment in the next Warren Miller movie. While I'm not trying to keep the Wasatch "to myself", I'm concerned that some Mountain Accord plans are being steered with the added bonus of lining the ski resorts pockets as opposed to responsibly managing our backyard.</p> <p>I am a backcountry skier. I am also a resort skier. I appreciate being able to ski at Alta or Snowbird, but I strongly feel that a plan for the Wasatch should not be centered around those buying a lift ticket. I would like to see Silver Fork, Grizzly Gulch and Wolverine, etc. kept "out of bounds" as part of this plan so that there are still some places left to experience a more natural ski experience.</p> <p>I'd also like to add that if a train is chosen as the means for L.C.C. transportation, that it A) stops at Alta and does not continue through a tunnel, B) is not merely a shuttle to the resorts during lift operation hours. (an early train that stops near White Pine would provide a great alternative for an already crowded lot) and C) has an adequate facility for parking at the mouth of the canyon. Currently, the biggest disincentive for taking UTA is the limited parking.</p> <p>Thank you again for inviting public comment and I look forward to seeing our Wasatch maintained and improved for the benefit of all.</p>		3/22/2015
<p>Dear board members, Having read though the Mountain accord I have several concerns with this project.</p> <p>The Board I do not think this board is well balanced. I think too many members are representing the private interests of the incorporated Cities as well as the Ski resorts. Thus I am afraid that the input that is being put forth by the citizens will be ignored and I think that the decision for development and connecting Little Cottonwood canyon with Park City has already been made. This reminds me of some advice my dad used to tell me. Never ask a barber if you need a hair cut. The couple seats that represent the people and groups that want to protect what little land is undeveloped does not represent the overwhelming majority who want no new development. So even if the couple of board members object, the majority of the board who represent commerce, will proceed putting these businesses private interests above the public good.</p> <p>The Land Swap The Mountain accord plan is not doing enough to protect what little untouched nature is left the Wasatch front. The biggest glaring injustice is the proposed land swap. I am not in agreement with the land swap that is being offered especially by Alta lifts. 100 plus acres in the heart of the town of Alta for land of little value. Giving Alta lifts 110 acres for development is appalling. Alta lifts shareholders have been in court for almost three years with the town of Alta trying to develop land that they were able to purchase below market value because they had originally agreed to keep it as open space. Once this land is made private Alta lifts will come back over time maybe 5 years maybe 25 and fight to have it re zoned for higher density and more development. Alta lifts should be asked to come back to the table with the real reasonable offer.</p> <p>Transportation Little Cottonwood Canyon and Big cottonwood Canyon is too narrow and small a canyon to put in a train system without destroying the fragile natural beauty of these canyons. I am aware that representatives have flown over to Europe to look at their train systems in Grindelwald and Wengen as well as ZERMATT. Having spent approximately two months a year in the Alps for the last 11 plus years in winter ski season as well as in the summer. I know these areas quite well. And these canyons are much wider and larger areas than The Wasatch canyons. These Wasatch canyons roads are much more comparable to the canyon where Saas-Fee ski resort is located. Saas-Fee is in a much narrower dead end canyon which is actually a side canyon on the way up to ZERMATT. Saas-Fee uses a bus system and is also a car free town that has a pay for parking structure for the entire town at the base of the village.</p> <p>Verbier is also one of the largest ski resorts in Switzerland and is at the top of a dead end road and also does not have a train that goes up to the village. I am concerned that the committee that went to visit the train in Grindelwald and Zermatt did not look at the entire transportation system. But were simply dazzled by both the cog trains and the car free villages.</p> <p>One Wasatch All humans want freedom. This is why we go to the mountains. When people go into nature they find true happiness and joy. When people can get away from any sign of man ( development ) They realize they do not need material possessions to make them happy. Buildings developments and giant mansions do not bring a sense of nature. Or peace and happiness. They can create feelings of Envy, Jealousy, Anger and resentment. One look at several of the ski resorts shows there has been no restraint to preserve this feeling of nature. These mega resort developments resemble shopping malls where the ski runs have become isles in a giant mall. Where everyone has ski in and ski out condos yet no one ever gets the peaceful joy and awe of being in nature but just inside some fancy development.</p> <p>One Wasatch's vision to create a European style ski experience is mistaken. The Wasatch is not the Alps. The Wasatch is one ridge line with over 50,000 people accessing less than 10 square miles. The Alps is Vast. When you look out at the mountain vistas while skiing in the Alps it looks the same as it had 5000 years ago. nothing has changed for over 5000 years! This is what gives people a great sense of freedom and happiness throughout the Alps. This will not be achieved by creating a giant resort development that goes over into Big and Little Cottonwood Canyon from Park city and Deer Valley through bonanza flats.</p> <p>I hope you will take in to account that once developed this precious resource will be gone forever. I appreciate your time and consideration in reading my email.</p>		3/23/2015
<p>Dear Jen, I watched the Online Panel discussion last night with great interest. Clearly, the people involved are all sincere and interested in preserving the central Wasatch. However, their priorities and interests are not precisely aligned.</p> <p>As you know my attachment to Alta is long and deep. I have been an annual visitor since 1973, my wife and I were married by Bill Levitt and 3 of my children were lodge employees after finishing college. I am an advisor to the Friends of Alta and an original founder of its predecessor the Alta Defense Fund.</p> <p>It is obvious that any final plan for the Mountain Accord will have to pass muster with Utah and especially SLC residents. However, it should also be noted that the priorities of residents might not be the same as the tourist community. As an out of stater greatly attached to the area I would like to make a few comments.</p> <ol style="list-style-type: none"> <li>1. The uniqueness of the area lies in its wilderness personality coupled with minimal development and an attachment to what many would consider old fashioned ways. For me this is what sets Alta and Little Cottonwood Canyon apart from all the other major US ski areas. I chose to return to the area year after year precisely because it was not Aspen, Vail or any one of the dozens of alternative destinations. If trains and tunnels etc. lead to a developed crowded experience I think I would go elsewhere and Alta would lose its uniqueness. I am not against progress or improvement. However, the guiding principle must be the protection of an irreplaceable natural resource and the business interests of ski areas, developers and others must take a back seat.</li> <li>2. I realize the population of SLC is increasing rapidly and it is an attractive location for all manner of businesses related to outdoor recreation. This inevitably results in greater demand for recreational activities and strains the transportation network. A more reliable and faster bus service would be desirable. However, private cars should never be excluded from the canyons. The thought of connecting chair lifts and tunnels etc. make me cringe as they would inevitably alter the character of the area.</li> </ol> <p>This is clearly a very complex issue which will not be solved to everyone's satisfaction. However, utmost care should be taken not to destroy what we have in the name of "progress"</p>		3/24/2015
<p>Hello, My husband and I have already submitted comments, but we were discussing this in more depth and came up with the following game plan:</p> <ul style="list-style-type: none"> <li>* Close BBC and LCC to private vehicles from 12/1-5/1 (or all year)</li> <li>* Build a central transportation hub on the despoiled land by the gravel mine on Wasatch, near 6200 S. Hub would have a multi-story parking structure and terminals for buses to Park City, BBC, and LCC.</li> <li>* Buses should run on natural gas!</li> <li>* Run express bus service to Deer Valley, Canyons, and PC resorts, perhaps 2x/AM and 2x/PM. Run express and local buses up BBC and LCC, every 15 minutes, from 7:30 AM-5:30 PM. Express buses stop only at Alta, Snowbird, Solitude, and Brighton. Locals stop at all backcountry trailheads.</li> <li>* Private car can purchase a fairly pricey day pass for travel that begins before 7:30 AM. Emergency shuttles available at a cost for travel after 5:30 PM. Some special bus service may be needed for late- or early-working employees.</li> <li>* Regular BBC and LCC canyon bus service is free to season pass holders at Alta/Snowbird and Brighton/Solitude; season bus pass available to locals w/o season ski area passes for affordable price. Non locals pay slightly more, and can buy daily/weekly/monthly passes.</li> </ul> <p>These ideas are not cheap, but are probably in line with the costs to create tunnels or aerial trams, which will do little to curb traffic and will instead further degrade what's left of our wilderness areas.</p> <p>Hope this is helpful!</p>		3/24/2015

<p>Dear Mountain Accord, First off, what you are coordinating here is what is needed to be done, in order for as many stakeholders to weigh-in on the future of Utah. In general, I feel that as much of the land that is able to be preserved as Wilderness or as wild as possible is needed. Utah is one of the fastest growing states and if the land isn't protected, it will fall to the developers for greater and greater recreation creations and not what nature has for us to enjoy, in its true state. It is what so many people find here, the wildness, and that will be lost if developed more. The other trend is for land managers to keep allowing more access for off-road use, and that has taken from the enjoyment of others and taken form wildlife its self. For what is already developed, more limits on numbers of cars, and developing other means of transport such as buses will help the traffic, noise and pollution issues. thanks for your time,</p>		3/25/2015
<p>Do not cut down trees do not demolish mountains do not infect global warming Do not affect snowfall "because utah is coming of its worst season in history" do not instal roads in the cottonwood canyons so that if you are staying in snowbird/alta/solitude/Brighton you do not have powder to yourself anymore because now it belongs to 10,000 other people -do not make air pollution worst "because slc is becoming like Los Angeles wether you want to know it or not" -do not Tare down the wastach national forest -do not harm wild life -do not change utah so much people leave -if don't do what I said me and the other 6 million skiers are going to aspen/snowmass</p>		3/25/2015
<p>I am absolutely adamant about ANY interconnecting the resorts! I can't express how infuriating this is to even think about. The Wasatch is so close to SO many near by that I feel these are our wonderful, beautiful, majestic play grounds that we who are close (and that is a lot of people) don't want to become some huge tourist destination. The money might poor in seasonally with tourist, but what about local citizens? I don't have answers I can only say that these are Utah mountains and we in Utah LOVE them and actually frown upon tourist. Ever hear the saying, "Local First"? Seems to running rampant these days. <del>Please take in to consideration the people who live here and not the greedy dollars that want to intrude</del></p>		3/25/2015
<p>Hello, I am a concerned citizen when it comes to One Wasatch. I do not agree with the expansion and the forward movement of One Wasatch. I see your "ideal" scenario, but when do our ideal scenarios ever happen? Never. One thing that makes utah so wonderful is the fact that we have distinct and separate mountain areas. And we have protected them. I can't take my dog hiking in the cottonwood canyons, but you think that blasting a hole through the mountains and building a train or a bus lane will have less impact on the watershed and environment than my dog. Something about that doesn't seem right. I don't think we need to increase the amount of people up our canyons. I go to the mountains to be in the beauty of nature and get away from people. Our mountains cannot withstand that amount of impact from people. Trails will become overcrowded and beautiful ates will be degraded die to overuse. The quality of the unique utah experience will be jeopardized. The ski resorts don't need to be bigger. They are fine just the way they are. Leave a little space for those of us who like to get away from the crowds. Don't bring the crowds to us. Preserve the raw beauty of our mountains. Don't degrade it by typing it apart for some fancy train and tunnel. Think of the impact that amount of construction equipment would have on the environment, let alone a full blown train. Also, there is an incredible amount of avalanche danger in littler cottonwood canyon. Putting up more condo units only increases the risk. Talk to the town of Alta. There are good reasons why they haven't expanded. areas are not safe or stable. The risk is too great. These mountains provide a lot of the salt lake valley's water. We need to keep it clean. Construction does not equal clean. If my dog can't go up these canyons neither should bulldozers and blasting equipment. I personally think that one Wasatch is not offering anything that will improve the quality of the lives of the people who live here. Site rising a train from sandy thru Alta to park City is novel. Fun for a touristy who will do it once. But for the people who live here? No way. It would be a hassle. I want to go where I want to go when I want to go there and not be tied to someone else's time schedule. Please leave our mountains alone. ☹</p>		3/25/2015
<p>I think one of the main stays to the plan is to have disincentives in place to discourage cars from driving up the canyons. The small fee for Millcreek Canyon use has greatly improved that canyon both in environment and in experience when hiking there. Thanks for all the efforts.</p>		3/25/2015
<p>No more canyons changes leave them the way they are !!!!! If I had my way there would be no development in our canyons. The ski resorts are wasting there money and messing up the canyons, enough is enough. I am against the Mountain Accord plan and this...</p>		3/25/2015
<p>The current proposed Blueprint for the Central Wasatch Mountains does not consider equestrian users. As the blueprint process continues, I request that current equestrian access and use be explicitly preserved and increased where possible when trail system is enhanced. This would also include ensuring adequate parking at trailheads. <del>Thank you for the opportunity to comment</del> ☹</p>		3/26/2015
<p>I love all the ideas that are being suggested. Increased mountain connectivity sounds fantastic. It would be awesome to be staying in Park City, Big Cottonwood Canyon, or Little Cottonwood Canyon and be able to access any of the 7 ski resorts from any of the ski resort you are happen to be without getting in a car and driving there. Improved year round transportation makes sense too. Also, improved bus and / or rail transportation from the airport and Salt Lake area. This all sounds truly amazing to me and I hope that it will happen!!!</p>		3/26/2015
<p>The current proposal concerning the development of the canyons covered by the Mountain Accord is a far reaching disaster. While I recognize the need to address the over 500,000 new potential visitors to Park City and Big and Little Cottonwood Canyons based on your population projections, I see absolutely no benefit in spending millions of tax payer dollars to link the canyons. This plan would only benefit the ski industry. A person hiking the trails, fishing, or many other forms of recreation, would have no interest in going up one canyon to access the other. In order to either tunnel through or go above ground to all three areas would be a terrible disruption of the watershed, let alone ruin the natural beauty of our canyons. Tunnels and ski lifts are not pretty. You point out that all these so called improvements will be paid by Utah taxpayers, or the Federal Government. The government whether on the Utah level or Federal level has no money. It is 100% taxpayer funded. The property taxes imposed on property owners in the canyons, are already disproportionate and it is unfair to increase the tax burden for those who either pay no fees to use these resources, or to benefit only one industry. There are many ways to increase revenues to help maintain the canyons. Those who desire to use the canyon should help pay for it. A fee per auto, such as Millcreek Canyon and American Fork Canyon, should be imposed upon users who make use of the canyons and it will raise much needed revenue. Those who already pay for their usage by their property taxes could use some help in the revenue raising area. Although the above suggestion may be thought of as only a first step, I don't believe we need to design an entire master plan, destroying the appearance of all three recreation areas, and disrupting the very fragile watershed, in a misguided attempt to kill a mosquito with a sledgehammer. Although some changes should be made, let's implement some that do little or no damage and that are reversible, such as digging tunnels or clearing land areas for trams would not be. Thank you.</p>		3/26/2015
<p>I was born and raised in the Wasatch. The access to the mountains and the solitude they provide is what has made them so popular and also is what provides us with a good quality of life. Reading the blueprint is VERY upsetting to say the least. I will just jump into the "what the backcountry users" get out of all of this. This is a sham and a crying shame. So we love the backcountry. We take all day or half a day using our own human powered will to achieve personal satisfaction and now we will be forced into gathering in a few places so we can feel "solitude". What a sad joke. A lift up to Tuscarora? Are you kidding???? I am not even aloud to spend my own personal income at Alta due to prejudices over which way I decide to move down a mountain on a piece of p-tex and wood. And now they want to take over an area that I hike regularly and feel blessed in its remoteness? When is enough enough. These businesses are making money. Are we making money traveling the backcountry or buying a season pass? No. And now they want forest service public land to be bought out/"leased" out and to build more lifts to damage the pristine environment (or what's left). I can not believe this is the conversation. This whole plan is about tourism. What about the people who actually call this place home. A billion \$\$\$ tunnel through the mountains???? These people have completely lost their minds. How about a big fat NO. Simple. No No No. Let's see if any of these companies would actually pay for this stuff on their own. Tax payers money. What a joke. With climate change, shit air, and a major lack of open land and fresh water, Utah is on a path of total destruction and has a history of jumping into development because it can. This news and the ideas being put out to accommodate everyone are inconceivable and will not help the "projected" numbers of people using the canyons in the future. This will be put in place rather, to accommodate and deliver this "projected" number. Thumbs down 100%. No deal. Why are we trying to accommodate any of this.... Good chance there will be strides towards the blueprint because many that live here will not do or say anything. Advocacy is a rare thing here. Concerned Backcountry Native Utah Resident</p>		3/26/2015
<p>PLEASE DO NOT BUILD OR CONSTRUCT AT ALL UP THE CANYONS!!!!!! More parking available at bottoms of canyons and more regular transportation though out the day and Night. Carpooling incentives. PROTECT OUR WILDERNESS!!!! NO TRAIN!!!! NOT THE ANSWER!!!! <del>The voices of thousands and millions if they only knew What impact this will have for the future</del></p>		3/26/2015

<p>Slow down this process as much as you can and take everything into consideration. We've already chewed up and polluted the mountains and water shed too much. Profits need to be set aside, capitalize on what we already have as is, improve what we have as is. Even on busy holiday seasons at the Ski resorts there is plenty of time and terrain. Millions will be moving here in the future. I am for conservation. No ski area expansion. No tunnels no connecting gondolas. I think I could support the LCC train as long as it cut down on pollution and erosion and was running very very early in the morning..</p>		3/26/2015
<p>It would be my wife and my desire to end any and all proposals for any more development within our canyon paradise. My wife and I totally disagree with any proposals for development. We have lived in the Salt Lake Valley all of our lives. We immensely enjoy hiking and snowshoeing in our canyon wilderness areas. My wife has often stated it rejuvenates her soul. I might add the same result for myself. In our opinion all of the canyons or at least a good portion of them within view of the Salt Lake Valley should be made wilderness areas in order to keep these greedy developers from destroying what is pristine and beautiful. If they succeed in their development plans a portion of this pristine area is lost forever.</p> <p>We support most of the Mountain Accord's goals and vision. If there are any town hall meetings or protests that will be taking place please inform us.</p>		3/27/2015
<p>To whom it may concern,</p> <p>I own a cabin on Church Road at Solitude ski resort. Currently, the skiers who ski up Summit lift and ski the back country end up skiing down Church road and back to the base at Solitude. Church road is a one lane road and the owners pay to have it plowed for access to the cabins. The one lane road is very dangerous for both skiers and vehicles to travel the same road. A previous contractor who was plowing the road quite because he was very concerned about liability with skiers. On several occasions, there were close calls with skiers, at a high rate of speed coming at him. On heavy winter snow falls, this one lane road is ~ 8 feet wide and 6-8 feet side walls, nowhere to go. This is a serious situation.</p> <p>With the proposed realignment of the ski lift and the increase in ski area, this will only increase the traffic on Church road. With that,</p> <ol style="list-style-type: none"> <li>1. There needs to be another route made to the base from Silver Fork, besides the road, or</li> <li>2. The road needs to be modified/expanded to accept both skiers and vehicles.</li> </ol> <p>This is a safety issue for the snow skiers! Below is a picture recently taken, and the snow fall was low this year.</p>		3/27/2015
<p><b>It is not a good idea to build a train up the canyon. It will destroy the environment, and increase accidents with more careless people.</b></p> <p>I hope my comments below have been reviewed, and I would like to offer more, specific thoughts and ideas: (forgive the disorganized bullets, the point is to get you to read it all!) • "Improvements"</p> <ul style="list-style-type: none"> <li>o I would like to cite an example of the Bell's canyon trail-head. As recent as 7-8 years ago, this trail was the best kept secret in the Wasatch Front. You'd pull into a rocky, dirt parking lot, right next to the city, hike to a gorgeous reservoir, and if ambitions, to a majestic waterfall. Traffic was minimal and the experience, remote. Once Sandy City improved the parking area with pavement, curb and gutter, and a big, fancy sign, the parking lot has been full every sunny day since.</li> <li>o My point is not to exclude people. Those who love and want to be in the mountains will find it, however, when we project population growth and consequently "improve" and "market" our beautiful, rugged, landscape, we actually draw more traffic, counter to the intended result. I am convinced that the traffic at Bell's canyon is actually a result of the improvements designed to accommodate it.</li> <li>o The majority of proposed improvements, marketing campaigns, and agreements associated with Mountain Accord help our image nationally and locally because we look cool, but is it validation that the people of Salt Lake County really want? We may convince the public Mountain Accord is a good idea with flashy names, and positive messaging, but is it really improving our environmental experience? These questions are addressed below: <ul style="list-style-type: none"> <li>• Defining True Gains</li> </ul> </li> <li>o Interconnect. I believe we should quietly maintain and grow our trail system as we always have, and if we are allow large business endeavors to develop key stretches of back-country that is owned by the public, we need to see very measurable, positive, gains for the SLCC public. Any business negotiation requires a fair trade. We have a lot of stake in this conversation. We should negotiate aggressively or walk. What could that mean? I don't know. But if they want an interconnected resort that develops our back-country and increases crowding at our Wasatch resorts, I would like to see locals get 35% discounts on key services. I want the resorts to sponsor free shuttles up and down the canyons to cut traffic and pollution. We should negotiate concrete benefits for locals in exchange for the enormous monetary gains they will have.</li> <li>o Economy. The excitement around tourist money coincides with the economic benefits of interconnect, and trains, etc. However, the hotel and restaurant jobs resulting therein are not high-income jobs that truly benefit the locals. The majority of the money goes to the corporate chains, and no tax revenue can compensate for the usurping of our natural resource. With a strong economy and strong tourism, no one is claiming that the Utah economy needs boosting by revamping it's canyons to appeal to more traffic. Trying to draw more economic growth here is folly to the locals who love the canyons.</li> <li>o Trains. Trains are a good idea for less pollution, but a bad idea for canyon maintenance and the natural feel of the environment. A city being close to the mountains means you protect the mountains, not bring the city in to the mountains. As a commuter of Trax, Fronrunner, and Car in the last 10 years, it is no secret that trains draw traffic, crime, and trash. Even more importantly, the feel of the environment is changed with noise and a rail power lines in the views. While it would look great on paper to say you can take the train from the Airport to Snowbird, the negatives outweigh the positives. Snowbird is already crowded on a powder-day as people who want to get there, will, and can afford to. Unavoidably, increased prices will keep many locals away from skiing anyway. A train may be convenient for a wealthy fly-in-fly-out skier, but allows anyone and both their dogs a direct ride to add congestion on our trails. Shuttles are a better idea because people still make the intentional choice to go to the canyon and ride the shuttle. You don't have vagrant traffic taking extra rides from downtown looking for unusual opportunities.</li> <li>o Land. The proposal's land trade-offs are unfair to the public. Snowbird is another great example. When it snows, the crowds and lines are extremely long, but people all over the world tell us on the lifts that we have "an amazing mountain here". It's true, we do have an amazing mountain, and the resorts need to expand so we can enjoy it more as the crowds and popularity grow. It is not necessarily in the interest of locals to limit expansion of individual resorts. The most valuable land to SLCC residents is Big and Little Cottonwood canyons. However, the promised land grab out of the interconnect deals is land further away that is not as valuable and does so on the foundation that we prevent the resorts from expanding. This not actually what we want for skiing: limiting supply and driving up costs in exchange for land that is not as scenic or dramatic. We should leverage this as a win-win where resorts can expand while they offer perks for locals.</li> </ul> <p>That is probably enough for now, but I'll chime in more later! The point is, we need to think about what we really want, before we invite and advertise to the world to come and use our resource at our expense and drive up our costs. Having separate, non-connected resorts increases local competition, preserves back-country, and maintains the feeling of isolation that we seek. We do not need to pave parking lots, put up signs, and build trains. Instead, we should have parking lots in the city where shuttles can take you and your bikes up the canyon without traffic, we should have a jogging/bike path up the canyons, and we should negotiate our valuable land with the resorts that will offer concrete benefits to locals.</p>		3/30/2015 3/30/2015
<p>Good morning,</p> <p>I have lived and/or worked in the following Corridors - Virginia - Rt. I-66 Technology Corridor (cramped with buildings and cars morning and evening), Massachusetts - Rt. 128 Corridor (cramped with buildings and cars morning and evening), California - Silicon Valley (cramped with buildings and cars morning and evening) - and the not named Corridor, State Street from Salt Lake City to Provo. The word "Corridor" is a big sign to developers that they may build it out. And they will sue to do so.</p> <p>May I suggest that the Subtitle for the Transportation Blueprint be changed to "Little Cottonwood Canyon/Park City Destinations". According to Webster's Dictionary (I was an English Major and am a published author) the appropriate meaning for Corridor here is a "strip of land forming a passageway through foreign held land" (could be privately held land). It is important that Park City Municipal be allowed to continue to acquire data through the verbiage change.</p> <p>May I humbly suggest that both Little Cottonwood Canyon and Park City derive their value as destinations, not as a passageway. Once they become a "corridor", commercial development begins and the Salt Lake City/Sandy Beltway through Park City becomes a reality.</p> <p>By the way, a tastefully done gondola between the destinations would be fine if the path is acceptable and minimized negative visual impacts.</p> <p>Thank you for all of the work that you are putting into this effort. I do believe that it is important to conduct these planning exercises because without goals that protect our values, it is human nature to spoil the very reason why people want to visit a destination.</p>		3/31/2015
<p><b>Do not destroy any natural resources or wild life Improve air quality And clean up slc</b></p> <p>I am very concerned that the equestrian voice has not been heard up to this point. We have so few places to enjoy our form of recreation along the Wasatch Front. We must protect the privileges we have and enhance them where we can. Please do not exclude us from your proposals.</p> <p>We have not seen much about phase 2, but we have concerns about impacts in American Fork canyon, especially around Tibble Fork. Expansion of the horse transfer station parking area has become necessary due to the high volume of horse trailers on any nice day. We also sorely need an equestrian parking area at the end of Milcreek Canyon Road. Please help us with improvements not eliminations. More trail access and more parking possibilities is what we implore you to consider.</p> <p>Thank you for you time and consideration.</p> <p>Utah Secretary, National Pony Express Association Member of Mountain Ridge Back Country Horseman, American Saddlehorse Association, Sandy City Recreational Trails Committee, and the Dimple Dell Advisory Board</p>		3/31/2015 3/31/2015

<p>I am a property owner in Little Cottonwood Canyon and have been an active user of the Wasatch ski areas for approximately 20 years. Having read the material available on line, the impact of the proposed tunnels between Little Cottonwood Canyon (LCC), Big Cottonwood Canyon (BCC), and Park City, is of high concern to me. I purchased the property I did due to the unique nature of the Little Cottonwood area. It was a destination with extremely limited development, it was quiet, and it was the home of the best ski area I could find. It was also only 8 miles from the Salt Lake City area and 31 miles from a major airport. I applaud the apparent goals to improve mass transit alternatives to LCC, BCC, and Park City. However, to route a mass transit "superhighway" through LCC, the end of BCC, to Park City would have significant negative impact on LCC and BCC. The proposal, if I read it correctly, also calls for improved express bus service to Park City through the I-80 corridor. I am wondering why the rail based system would not be placed there, where there is existing transportation infrastructure and would and have much less impact on the environment and negating the need for the tunnels. Did I miss it or is there an analysis of the financial costs of these proposals? I cannot even imagine what the cost of the tunnels would be and how that it could be financially feasible given the small amount of visitors to Snowbird/Alta in LCC and Solitude/Brighton in BCC. I saw the reported auto traffic up LCC and BCC but would have to reconcile that data to the actual attendance at the ski areas to be satisfied with the accuracy (for example, the data appears to be double-counted in that one auto going up the canyon also comes down, so that is in the data as two vehicles. When I count the parking spaces available at the LCC ski areas, the data doesn't seem to reconcile as the cars have to go somewhere and I don't think there is enough parking to accommodate the reported traffic. The nature of the traffic along I-80 is much different and the nature of the resorts on that side of the mountain is totally different than that in LCC and BCC. This is a picture from my deck. You are asking to run a rail line in the couple of hundred yards between my house and the Hellgate Cliff leading to a tunnel a half mile or so to the east. Unconscionable.</p>		4/3/2015
<p>Hello Mountain Accord Committee: Three quick points: 1) It is my hope Cottonwood and Millcreek canyons will be served by bus modes and not by light rail or suspended gondola. I am OK with rail going up Parleys and into Park City, but otherwise please keep trains and enclosed cable cars out of the canyons on the western slope. 2) Outdoor enthusiasts (hikers, skiers, bicyclists, etc.) need buses dedicated to traveling up and down Cottonwood and Millcreek canyons (and possibly to the entry gate to City Creek too) dropping-off and picking-up individuals on a regular schedule 7 days a week to minimize growing vehicular traffic/trailhead parking demands in the canyons. Bus funding might in part come from SL County's Zoo and Parks tax. Dedicated valley parking lots are needed and existing UTA lots might serve this purpose with no additional infrastructure expenditure other than signage and printing of information pamphlets needed. 3) Dog use in canyons is skyrocketing so please address this need as part of the MA process, as big-picture long-term, water quality degradation of our water shed will only accelerate as the result of increased human and domestic animal pressures; ergo, please consider setting aside space within valley utility corridors within Salt Lake Valley for off-leash dog parks as a possible solution. The same utility corridors criss-crossing Salt Lake Valley could also serve as solar farms and for community garden space.</p>		4/3/2015
<p>Would you please record and post all the public meetings? Increased development of the Central Wasatch to preserve the Central Wasatch. That seems to be the message Mountain Accord members want the public to hear. Underlying this message is the undeniable truth that the ski industry, including real estate and hotel interests, has persuaded local government that the tax payers should foot the bill for an elaborate rail system that will shuttle relatively wealthy ski tourists from Park City to the Cottonwood Canyons. The ski industry wants the proposed rail system to be a "wow factor" in its advertising to lure skiers here from around the country. I say again, the ski industry of the Central Wasatch wants hard working tax payers to pay for and maintain in perpetuity a ski train to shuttle wealthy skiers from one resort to another. This is an outrageous proposition, but as any good consultant that is expert at transferring money from the tax payers to private profits knows, you must think big and propose big, because you just might pull it off. No trains in the Cottonwood Canyons. Increased bus service, which can easily scale up in the winter and scale down in the off season makes sense. If you have to have a train, build it from Salt Lake City to Park City as this would actually help the Park City ski industry service sector employees that can't afford to live in Park City make the daily commute. Start charging for parking up the Cottonwood Canyons to encourage bus use. Take the hundreds of millions saved from not building and maintaining a ski train in the canyons and invest it in our schools, or our aging water system, or healthcare, or any number of worthy public investments that benefit all, not just the wealthy.</p>		4/3/2015 4/4/2015
<p>I am a very concerned and alarmed citizen of Utah about the changes to our beautiful Mountain range being proposed. I urge the planners to consider: Preserving land....which we can't make more of Protect watersheds and water resources Analyze and integrate environmental impacts PRIOR to implementing proposed actions Provide transportation alternatives that Result in environmental benefits to the mnts. Please protect our vital national Resources. Please don't destroy the Wasatch Mountain Range. It cannot be duplicated. ☹</p>		4/5/2015
<p>I appreciate all of the thought and effort that has gone into the Mountain Accord planning process. As a planner and landscape architect, I know how much work it can be to try to reach some sort of agreement when you have contentious issues at hand. I know that a lot of groups have come together to try to work out the best solution. I am a resident in Big Cottonwood Canyon, and also spend about 90% of my recreation time in the study area (hiking, skiing, trail running, and mountain biking).  I am in absolute agreement that something does need to change to help manage the impacts we are having on the canyons themselves, to manage traffic issues year round, and to help our local businesses and industries thrive. The canyons can be such a cluster on powder days, or when the climbers, bikers, and hikers are out to enjoy a beautiful weekend or holiday.  It seems to me like the traffic solution with the lowest impact would be a shuttle system that would utilize the existing roads in the canyons. The corridors in our canyons have already had a significant impact on the natural surroundings, and I don't feel that blasting new corridors to accommodate a train (or a separated trail all the way up the canyon) respects the terrain that we have already impacted so heavily, not to mention the visual impact. If it can work in Zion National Park, why can't it work in our canyons? I think shuttles that run frequently, and that stop at major recreation, residential, and business destinations throughout the canyon would serve all of us better. Key factors are the frequency, connections to rapid transit in the valley, and servicing a broad variety of destinations. Maybe some shuttle could serve the ski resorts only during ski season so they remain timely, while others could serve recreation access points, residential areas, and businesses. As a resident, I would love to have access to transit year round, with connections that take us downtown in a reasonable time frame. It would be great if traffic in the canyon was reduced to shuttles, residents, and businesses (employees/service) in the canyons year round.  If a connection absolutely must be made, I would rather see a gondola system like they have in Telluride, that serves as free public transit, without a station at the top -- just connect the bases of the resorts. It shouldn't be about getting people into the backcountry, or creating new lifts in already heavily traveled backcountry. If it's honestly about connecting resorts, then connect the bases. And pair that with a shuttle system to manage the traffic in and out of the canyons. I think shuttles in Millcreek would be great too -- maybe special ones for dogs, others for bikes. Telluride's gondola has animal specific gondolas.  I don't agree with the concept of connecting the canyons and resorts. I think that is simply replicating the sprawl in the valley, where all of the cities have grown together and you can't tell one city from another anymore. I think it's a better idea to enhance the unique experience to be had in each of the canyons. My husband sometimes works in Park City during the winters, and yes, it would be nice if he could have a more direct route, but I don't think that occasional convenience (for just a few people) is worth the impact of a tunnel system or a large train network in the canyons. And I don't honestly think that many people are going to ski two resorts in one day? It seems like it's a gimmicky attempt to lure more tourists up -- I would rather see quality development focused in each area instead. For example, Brighton doesn't have any quality eating establishments, either in the resort area or in the circle. It's okay if you want junk food, but if you want something healthier, or just a little nicer dining experience, you have to go down to the Silver Fork Lodge, or go to Solitude. And Brighton has nothing at all to offer summer canyon users. The Silver Lake Nature Center gets TONS of visitors every day in the summer, and there is nowhere for them to dine in the Brighton circle. In the summer, the guard road is a great way to make the drive between the Wasatch front and back. It keeps it a seasonal and unique experience. Why do we always think we have to have what we want exactly when we want it? And if we want to go to Park City for dinner after skiing, maybe we should work for it a bit with some skins on the bottom of our skis, taking us to some great shuttle systems at the resorts that can take us into town.  I don't mind the idea of swapping resort owned lands in high demand recreation areas or sensitive lands that should be protected for public lands at the base of the ski areas. I think it's great to cluster development to minimize impacts, and to keep development where it's logical, as long as sensitive and valuable lands are protected in return. I am a little concerned about the idea of turning over all of the developable land at the base of Alta to the resort though.  Thanks again for all of the work and efforts. Please just keep it sensible, simple, and low impact, and keep our canyons and ski areas unique.</p>		4/5/2015

<p>I am a life long skier who moved to Utah in 1972 for the incredible access to world class skiing from a urban environment. Like so many others I know, resort skiing has lost much of it's allure. MY anecdotal evidence is supported by the flat numbers reported by the ski industry it's self. Crowds, commercialization, ticket prices, all contribute to making skiing in the resorts less attractive and Nordic and backcountry skiing a more satisfying option.</p> <p>I appreciate and support the goals of Mountain Accord and want to make sure that dispersed recreational use gets the attention that the ski resorts and ski Utah seem to be demanding. Transportation alternatives are a great key to mitigating the effect population growth will have on the central Wasatch. I am in favor of both incentivizing public transportation as well as establishing fees for private transportation. Parking in Big and Little Cottonwood canyons should not be free, The connections to the ski area buses need to improve, and a plan to expand park and ride parking is long overdue. Buses in Big Cottonwood canyon should have more pull-outs to accommodate year round trail heads.</p> <p>The idea of trains and a tunnel do not strike me as prudent. With the revolution underway in using mobile apps to coordinate transportation, the astronomical expense of investing in the old train technology, no matter how sexy for marketing ski resorts, seems foolish.</p> <p>Subsidizing bus fares and making the connections seamless, would be much more economical way to increase the use of mass transit. Building snow sheds and adopting paid parking in the canyons would reduce the dangers of accidents on the roads. Ski resorts should use the transportation alternatives to decrease parking lots and expand lodging and other base commercial.</p> <p>I do want to see more permanent protection for much of the central Wasatch, weather it be as National Monument, Wilderness, or other designation that can offer permanent protection. Snowbird, Alta, Brighton, and Solitude should be allowed to expand the commercial properties at their base in trade for turning over private holdings in Grizzly Gulch, Flagstaff, Superior, and Silver Fork. Further expansion of ski area boundaries, beyond the base area proposals, should not continue. This resource is in danger of losing much of it's attraction to resort skiers and backcountry skiers alike from the further proliferation of ski lifts. The Wasatch is at a tipping point, it's a small area, and more ski lifts will detract from the mountain experience for all users and future generations.</p> <p>thank you for including my comments in future plans for the central Wasatch.</p>		4/6/2015
<p>Economic stimulation and increased revenue for the ski and tourism industries in Utah are parts of the expected outcomes of combining the seven ski resorts in the central Wasatch. Mountain Accord claims that their goals include "responsible stewardship of natural resources, quality recreation experiences, an environmentally sustainable transportation system, and a vibrant economy." Some of the ideas proposed in the blueprint could easily be considered environmentally friendly such as public transportation from Park City to the Salt Lake Airport and increased development of mass transit on east valley roads (Foothill Drive, Wasatch Boulevard, and Highland Drive). These improvements would likely decrease traffic congestion and emissions from personal automobiles, subsequently increasing air quality in our often times smoggy valley. However, some other aspects of the vision Mountain Accord has for the future of our backyard paradise do not sit so well from an environmental perspective.</p> <p>As we know, seven ski resorts already exist in the central Wasatch but the proposed plan of interconnect would drastically increase the area that is used by skiers as well as increase the area managed by ski resorts. Other than compromising wildlife areas by installing a light rail up Little Cottonwood Canyon and boring tunnels from Little Cottonwood Canyon to Park City, perforating each canyon in-between, if the projected blueprint is to be fulfilled, what other consequences would follow? Has Mountain Accord conducted any research or case study(ies) in order to envisage potential effects this project will have on flora and fauna or water and soil quality? Personally, I did a bit of research on effects that skiing and ski resort management have on wilderness areas. I would be grateful to share my findings, some of which are based on case studies that were conducted near ski resorts in the European Alps.</p> <p>Effects that skiing and ski resort management have on wildlife and wildlife areas:</p> <ul style="list-style-type: none"> <li>· The management of wildlife areas by ski resorts involves salting, snow-grooming, and fertilization, all of which are practices that can potentially alter ph levels and nutrient levels of soil.</li> <li>· Snow-grooming machines as well as snow-making machines both cause "irreparable damage to soil and vegetation."</li> <li>· Increased management of wildlife areas resulted in increased nutrient concentrations, namely nitrogen and phosphorus, which can lead to eutrophication.</li> <li>· Black grouse, a species that exists in the Swiss Alps, is found at half its normal population density at areas near ski resorts.</li> <li>· Levels of stress hormones in birds are higher near ski areas.</li> </ul> <p>Proposed Solution</p> <p>Mountain Accord should pursue their goal of increasing mass public transportation in the valley and from the valley to Park City without causing damage to wildlife and wildlife habitats. A bus system from Park City to the Salt Lake Airport is a perfect idea to cut down on traffic congestion and automobile emissions. Mountain Accord should also look into increasing mass transit infrastructure on the East side of the valley, which would also help with the same issues. However, blasting through the mountains to make way for a train tunnel does not seem like an environmentally-friendly transportation solution. Further development of the Wasatch should be discouraged; at least until extensive research has been done to indicate the potential hazards it would place on our beautiful backyard that is the Wasatch.</p> <p>References</p> <p>Jones, Laney. <p>Things change: seasons, climate, populations, technology, styles, sports, etc. . . . Putting a massive amount of money into canyon trains and tunnels creates a sunk cost that cannot be supported by the existing economic structure in that area. Does that mean extensive economic growth in the canyons: hotels, restaurants, retail outlets . . . ? The land swap suggests the possibility of such future enterprises, but does nothing to address the increased impact that might have on watershed management (for the valley) and sewer capacity (from the mountains.)</p> <p>The economic boost to the cities and counties involved, and the state, should these entities be asked to "contribute", would not pay for their share of funding in a fiscally responsible time frame.</p> <p>Those fixed asset would not be flexible assets. 95% (my guess) of enough trains to get thousands of people happily up canyon for winter sports would sit idle 6 or 7 months of the year. A few might be able to be used for summer visitors though UTA has not found economic impact sufficient to run more than an employee bus or two.</p> <p>Fuel efficient busses, hundreds of them (?) on a restricted highway (limited permits for commercial vehicles and residents (Think Zion National Park)), would allow canyon mass transit year round and the 95% to be utilized for expanded valley service or rented to other entities (Think Zion National Park and beyond) during the summer. As technology advances, upgrading busses would be more feasible than upgrading trains.</p> <p>And what is the carrying capacity of the canyons anyway? If the canyons had food, beds, water and sewer for a million people, would we want them at full capacity? Would they continue to be what we define as our Wasatch canyons or would they turn into an urban setting with "grand opening" museum lines on every trail, meadow and mountain? Sometimes bigger is better. Sometimes it is not.</p> <p>No matter your stand on global warming, it is interesting to note that, while the average snowfall over the last 100 years is over 500", each of the last three has been less than 400 and we' probably won't make that this year. The up side is less snow would allow more</p>		4/7/2015
<p>I appreciate all the hard work that has gone into this blueprint. However, I do not agree that connecting the canyons with each other or with Park City area is a good idea. I don't believe it is necessary to the ski industry or the public.</p> <p>The near future (10-50 years) of precipitation in the Wasatch is dubious. Without snow we have no water so making snow is a non-starter. How many days in the last year was it cold enough to make snow?</p> <p>For those who want to experience all the resorts in a short amount of time, use bus service. The canyons should be using bus service more and limit vehicle access with a toll at the base of the canyons.</p> <p>The beauty and serenity of the Wasatch should be protected at all costs from growth.</p>		4/7/2015
<p>I'm not finding anything related to how this would specifically affect home owners in these areas.</p> <p>Is there anything specifically? Where do I look? Thank you.</p>		4/7/2015
<p>Of course Corporate America is always out there trying to make another buck at anyone's expense. It is about the bottom line and they could care less what they means to life changing erasing the places the rest of us love. Do we need to let the politicians come out in support of selling off our heritage and the pristine irreplaceable places that will never come again. Not at all it is time to let the corporate wheel bumpers go find another choice not Utah not our canyons. These should be locked up into a permanent preservation of such places.</p>		4/7/2015
<p>Very interesting article regarding the rerouting of the elevated state route 99 Alaska Way Viaduct through a giant underground tunnel that runs underneath Seattle's downtown to the north side of the city. A mega 1.5 Billion dollar project that has had some issues with the boring machine breaking down, uneven ground structure, and major cost overruns, and who would be responsible for the costs. I can clearly see how the tunnel project that the ski resort owners have suggested could run into similar circumstances as those in Seattle. My concern has always been who would be responsible, and bear the burden of the cost overruns, (which in this article, suggest can run over 30% in many tunneling projects) and major burden of expenses. I believe that the state is very interested in pursuing tourism as the prime avenue for growth and revenue for the state. I would like to propose that none of the burden be put on property tax payers, but the expense should be born through bonding, perhaps further restaurant and hotel tax, and some on the ski resorts themselves. And any cost overruns be the responsibility of the Ski resorts and further bonding. As these projects help reduce our governmental costs, I believe that is why we elected these officials, to protect and maintain the integrity of the state and keep the burden of costs to a reasonable minimum for existing tax payers. I hope you will consider these thoughts.</p>		4/8/2015

<p>Greeting: Well it's been a long time coming. Hopefully this will be worth the wait. I'm glad to see that all sides, at least in the document have been willing to give up some of their long standing wants. In general the BluePrint looks like a well balanced compromise. I don't see any contingency plan for funding issues when they arise. Much of this is based on obtaining funding for various projects, primarily transportation. While I can readily see that the feds would give up money for busses/infrastructure in the valleys and through Parley's, I'd be surprised if you'd see a dime for Cottonwood transportation, especially a tunnel. I think they are wise enough to see that the resorts might want an interconnect, but could continue without, whereas the other projects effect the whole of the area and are needed for everyone that pays taxes. Personally I think a tunnel is a good solution to the many problems you were faced with, but when it comes to implementing it, are the parties, namely the seven resorts really willing to put their money on the tables? They are the prime benefactors of expansion/connection. Another way to look at this is...without the interconnect what is the liability to the taxpayers of Utah or The United States? I say not much. Otherwise, realignment of ski area boundaries, modest base area expansion, purchase of small inholdings, guaranteed land protection. All great.</p>		4/9/2015
<p>It seems like the equestrian use of American Fork canyon has not been considered yet. There are many equestrians that use the canyon everyday it is open. How will this transaction effect our use of the canyon? We really appreciate what Mountain Accord is doing for the future of our Wasatch Mountains. After many years of hiking, and skiing in the Wasatch, we have come to really appreciate the beauty and solitude the Wasatch mountains offer. Re the train up Little Cottonwood Canyon I offer the following: Winter Season What is the purpose of the train other than bringing more people to the ski resorts. Why ruin the scenic beauty of the canyon when an efficient shuttle or bus service could accommodate people on a more timely basis. I believe a user fee should be in effect and think an annual or seasonal pass could be initiated which would help to pay for the bus/shuttle service on a regular basis. The ski areas seem to be most crowded during "powder days". Why don't the ski resorts build 3-4 story parking, as they are the ones who benefit with large crowds. Why should taxpayers subsidize the ski areas with a train? I hear there would be federal funding, but that is still tax-payers money. We usually ski on the weekdays, and there never is a problem with parking unless it is a "powder day". Thus a shuttle service would be more economical and efficient than a train. There is always the parking problem to board the train, just doesn't seem practical, realistic or economical and a real threat to the environment. If we have more snow years like this one, we may not have any skiers! Summer Season A shuttle would be ideal for visitors in the summer, with stops for trailheads. Most don't like driving the canyon, parking is always a problem, and like at Zion or Yosemite, a shuttle driver offers interesting information that is always appreciated. The weekends are always the busiest and weather is a factor as well. An adjustable service could be negotiated for weekends and holidays. People enjoy the beauty and solitude of hiking in the Wasatch, not big buildings and commercial enterprises. Again if resorts want people let them build their own parking facilities. An annual pass could be issued that would attach to their window, that could cover year round accessibility and help to pay for the shuttle. I just can't envision people parking, getting on a bus, then off the bus, onto the train, and then off the train. Widening the canyon to 3 lanes would be much more efficient and do far less damage to the environment.</p>		4/9/2015 4/9/2015
<p>I'd like to recognize the breadth of the equestrian for the horse and rider in any future planning. The equestrian groups represent a surging population, and unlike cyclists or other potential off-road users that have multi-use access to roads, horsemen are restricted to very limited areas. That makes it paramount that the equestrian be considered prominently in the development of the Mountain Accord.</p>		4/10/2015
<p>Thank you</p>		4/11/2015
<p>I totally support a train up Parley's Canyon and completely oppose a train up cottonwood to park city.</p>		4/11/2015
<p>Thanks for all the hard work. The plan is great and meets its goals. Would rather not see canyons interconnected and a light rail up little cottonwood would be too expensive. More busses a must.</p>		4/12/2015
<p>The whole idea stinks. Just leave things alone. Greedy corporations get out. Go ruin someplace else you haven't already ruined.</p>		4/13/2015
<p>Hey Mountain Accord, According to the Zion National Park website: "In 1997, visitation was 2.4 million and increasing. The shuttle system was established to eliminate traffic and parking problems, protect vegetation, and restore tranquility to Zion Canyon." "Visitation more than doubled between 1982 and 2002, from 1.25 million to 2.59 million. Backcountry use has risen even more quickly: from 7,807 people camping in the backcountry in 1986 to 21,002 in 1999." "In 2004, nearly 2.7 million people visited Zion." "In 2014 approximately 3,211,596 people visited Zion NP." <del>Thanks with shuttle system.</del></p>		4/13/2015
<p>Thank you for the opportunity to comment on the proposed blueprint for the Mountain Accord. I truly appreciate the obvious hard work and thoughtfulness that has gone into the creation of this document, and I am grateful to have an opportunity to comment. I hope the suggestions below are helpful. &gt; We should, first and foremost, keep in mind that no one goes into the Wasatch Mountains seeking crowds, air and water pollution, noise, and an urban atmosphere; they can get plenty of that in Salt Lake City. Therefore, the final blueprint should give top priority to options that decrease all of those negative conditions. Indeed, they should become a litmus test for each option. &gt; One of the reasons why the Wasatch Range is so appealing to a broad range of people—tourists, dispersed recreationists, skiers, etc.—is precisely because the development in the mountains is limited. If Europeans want to experience an urban mountain experience, there is no reason to travel all the way to Utah; they can get that in Switzerland. If someone wants to hike on paved trails close to convenience stores and parking lots, they can access the Appalachian Mountains and the trails around crowded, over-developed resorts in California. The unique appeal of the Wasatch, as a "product," as a refuge, and as a place of enjoyment, is its relatively uncluttered, untamed nature. Any option that results in more development, without a corresponding reduction in other intrusive features and inappropriate structures, simply makes the Wasatch less meaningful, less attractive economically, and less valuable to local people. &gt; One of the guiding principles of this process should be the idea of "no net loss," i.e. for every additional acre developed, a corresponding acre should be restored. For every tree cut down, an equal amount of bio-mass should be added. Every increase in pollution (noise, air, water) should be matched by a commensurate decrease in pollution. No net loss should not be a far-off goal, but an absolute minimum—the least that we can do. Ideally, we should reclaim prized viewsheds, watersheds, and pristine conditions. But under no circumstances should we retro-grade. &gt; If each transportation option is evaluated according to the criteria outlined above, I think the resulting plan would optimize long-term, sustainable use by focusing on minimal impact, rather than maximizing load carrying capacity. The transportation option that has the smallest carbon footprint, creates least amount of air pollution, and impacts the land the least should be the preferred option. That means using existing developed corridors, limiting the width of transportation venues, minimizing automobile access, and maximizing opportunities for human-powered and clean energy-powered transportation. &gt; In my opinion, there is too much emphasis in the proposed blueprint on direct, short-term economic benefits, and an insufficient appreciation of long-term, sustainable economic benefits. Many people want to move to the Wasatch Front (with their businesses, their money, their innovative ideas) because of its proximity to untrammelled wilderness, clean watercourses, healthy forests, stunning vistas, and wildlife. This economic benefit is more difficult to quantify but in the long run much more important to the well-being of our community. In the 30 years I've lived here, I have never met anyone who said they moved here because they wanted to experience more traffic, condos, crowding, and pavement in the mountains. The great irony of loved places is that if too many people love them, they destroy them. Please don't let that happen to the Wasatch. Thank you again for the opportunity to participate.</p>		4/14/2015

<p>14 April 15 Dear Mountain Accord and The US Forest Service, Although I sent in a letter already addressing some of the proposals in the Mountain Accord plan, I am learning more and becoming more concerned. In this letter I would like to address the Land Swap issue of MY Public Land being traded into Private ownership to the Alta Lift Company. The value of the land being swapped is not equal. I understand that there are made-up values being placed on backcountry skiing and water that claim to make this an even swap. The Alta valley that is in question of becoming privately owned (for profit) is worth a tremendous amount more than the land along the Grizzly Gulch ridge. As I understand it, the Town of Alta was told 5 years ago that this land swap would never go through so it was not necessary to have a Master Plan for the area. Just a month ago, the public was informed that the land swap will probably go through. It seems to me like Alta Ski Area and the Forest Service have been making some "back room" deals and shady arrangements and now the Alta Lift Company has plans in place for this new private land they may acquire. The Town and the Public are unprepared to list their Master Plan and their development opinions. Because these decisions are so incredibly critical, I am begging you to PLEASE give us more time. Please give us time to talk to people – owners, citizens and patrons of the area – to get opinions and options for what Alta should look like in 25-50 years. The Public is absolutely unaware of the impact these decisions will make and it takes time to get information out and gather information. Personally, I would like to see small changes in Alta. Nothing major. I do NOT want to see another large Hotel, I do not think Alta needs more winter-only employee housing, I do not think that Alta needs more privately owned million-dollar residences that sit empty the majority of the year. I do not think that additional buildings need to be developed until we evaluate summer demand by opening our current businesses. I do not want to see the area along the rope-tow change or have to worry about trespassing near residences to ski back at the end of the day – either in-resort or back-country. I think improvements to Alta might include some type of Day Lodge for mass transit, a community center, a small amount of affordable housing and a small summer concert amphitheater. If the goal of the Lift Company is to make money, then they should open their lifts &amp; restaurants for the summer. Since they are the main business in the area, they could increase summer activity and encourage other businesses to open. There is no "center" for Alta. Snowbird has the Tram Deck where people can hang out and be social after skiing. If Alta had a Day lodge with underground parking (so parking spaces would not decrease) in the Wildcat parking area, people would have somewhere to "be" and leave their belongings if they take the bus. If there were inexpensive lockers and a warm seating area and maybe a nice social deck where people could hang out and maybe buy a snack, this might decrease the number of cars all trying to leave Alta at the same time on busy days and alleviate the traffic a little. The traffic problem is not all day long on storm days, it's right after the road opens and from 3:30-5:30pm. I wouldn't even mind seeing some type of local Alta bar or pizza place. Something affordable for both day skiers and local employees. Currently there are only lodges and a very expensive restaurant. I do agree that some changes in Alta could be beneficial and improve the experience for everyone. I am extremely fearful that plans are being rushed through and the public is not fully aware of the land swaps and the impact that this Public Forest Service Land moving into the hand of Private ownership will have on the Alta area. Snowbird cannot develop fast enough and I disagree with policy makers and the Federal Government allowing this previously-regulated development to occur. The public also needs to know what Snowbird's long-term plans are and they should have an influence on development – even if it's Snowbird's private land. This land in question has been protected by the Forest Service for many decades. Why is the Forest Service allowing our public land to become UN-protected? As our population grows, the need to regulate and protect our natural areas should be even more important! Selling out for private short-term profit is WRONG. One of the arguments for development is that millions of people the Wasatch every year. If it is not protected, it will become ruined. Please – continue to do what the Forest Service has done for our whole lifetimes – PROTECT the popular places from private profit development! It only takes one term of politicians and policy makers to sell-out an area for permanent development and change. Without Federal regulations in place, greed or corruption of a few state or local individuals can destroy areas that belong to and are enjoyed by the public. Before any big decisions are made, more information and more ACCURATE and DETAILED information need to be circulated through the public. This is not just an issue for the citizens of Utah. People across the entire US come to, spend money in and enjoy Alta. Does anyone really know what the Alta Lift Companies plans are for 160 acres in the Alta Valley? Those need to be presented and commented on by the public before any land swaps are allowed. I appreciate the creation of the Mountain Accord. I appreciate the efforts being made to come up with the best long-term plan for our Wasatch and especially the fragile and precious Cottonwood Canyons. I know that it is human nature to wait until the last minute to do anything, but I don't think enough details have been provided and the information about the potential for development of Alta has been given enough time or attention. Thank you for your time,</p>		4/14/2015
<p>Dear MA, Prior to the 2002 Olympics, venue development was considered and then rejected, claiming such activity posed potential environmental damage to the Cottonwood Canyons. Without supporting data, the Accord's Plan contradicts those conclusions.</p>		4/15/2015
<p>Good day, I am coming up on my eight-year anniversary of living in Salt Lake City, and as a long-time user of the Wasatch mountains would like to comment on the proposed mountain accord blueprint. I heavily recreate in the Wasatch year-round, primarily in the Cottonwood Canyons -- from rock and ice climbing to backcountry skiing to mountain biking. I strongly oppose the idea of a train up LCC. It would be massively expensive and irresponsible when there is already an excellent road up the canyon. Widening the road would be a better option, if necessary. Any transportation alternatives should be PRIMARILY focused on serving LOCAL RESIDENTS rather than benefitting for-profit entities operating in OUR public lands. This involves dispersed users such as backcountry skiers, mountain bikers and climbers. The possibility of ceding Grizzly Gulch is unacceptable. Grizzly is the ONLY public access point to a huge amount of prime backcountry terrain and must stay undeveloped. Most importantly, with the probability of reduced snowfall due to climate change, protecting our watershed is of the utmost importance. Ceding more water to visitors in a soon-to-be-water-starved valley with two million residents would be irresponsible. Please keep this fundamental human need in mind, as there is no recreation without local water. Thank you,</p>		4/15/2015
<p>It's a pleasure, given the quality of the ongoing discussion, to submit these comments. My main concern is that we need to do two specific things extremely well. Both are urgent. 1. We need to limit vehicle traffic in the canyons to a workable minimum. In no way should our canyons serve as transportation corridors for light rail or commuter traffic between Salt Lake and Park City. In the same spirit, trailhead parking should be replaced by shuttle buses (as in Zion), with visitor parking outside the canyons proper. In this way vital ecosystems can recover from destructive overuse. 2. Four canyon streams (City, Parley's, Big Cottonwood, and Little Cottonwood creeks) normally deliver most of Salt Lake City's water. The condition of their watersheds is crucial for our future in the valley. Because we face a changing climate, with greater probability of long-term droughts, concurrent fire, and more destructive storms, it's vital that the complex plant and animal communities that make the canyons precious can rebound as well as possible from stress. Our way of life depends on alpine ecosystems to protect our water at its source. Future plans must maximize their health. In a nutshell: less traffic, better hiking access, and dedicated care for vital ecosystems. I support the efforts of Save Our Canyons and the Sierra Club to keep our canyons healthy for the good of everyone.</p>		4/15/2015
<p>Hello, I want to add some comments about management of the Wasatch range. After flying over the range last week it struck me how little vegetation covers the mountains. I feel strongly that we should focus on rebuilding the forests by planting trees, shrubs and ground covers so that we can maintain this important watershed. As climate change continues, more precipitation will fall as rain and not snow and vegetation is vital to holding moisture in the soil and releasing it slowly instead of water rushing off the hillsides which removes soil, creates landslides and floods. It is also shown scientifically that more trees will attract more rain, and that more vegetation will improve air quality which we all know is greatly needed in this area. More development is probably not the best way to go for this area, at least not at this time. Grazing should be halted or at least greatly reduced to help build back a forest.</p>		4/15/2015
<p>To me it seems like the main transportation issue is Little Cottonwood Canyon. I think a train up LCC, one that terminates in Alta, is by far the best idea. If a train were to be put through the mountains directly connecting park city, Brighton and Alta I think we will risk having the entire area park citified! I live in Brighton and think things are pretty nice up here with park city on the other side of the ridge. Transportation up Big Cottonwood canyon from the valley could easily be improved by expanded bus services in winter and summer and during more hours of the day. If park city feels they want more public transit linking them to Salt Lake then more buses or a train could be placed in parleys canyon. I don't think that the forest service should be swapping any lands to better facilitate resort development. American Fork canyon needs to be protected just as we attempt to protect the cottonwoods. Utah has great skiing because we have low skier numbers, we don't need to try to get more skiers here because it will change the user experience and ruin what we have. If anything we should be taking land away from the ski areas as backcountry skiing is the only sector of the ski industry that is growing! As far as one wasatch goes, it seems like a gimmick to me, hire a guide and ski through our glorious backcountry the way it is! In other matters I would like to see a more extensive and linked tougher hiking trail network in the central Wasatch. a connection of the reed pine jaybird trail to upper bells canyon would be great as well as a trail connecting upper broads fork to upper mill B South and mill B south to Alta.</p>		4/16/2015
<p><b>Please protect our mountains and watersheds from development. Ski areas are big enough. If developers have their way, there will be no areas left for relaxation and beauty.</b></p>		4/16/2015
<p>I am a backcountry skier, hiker, fisherman and general muscle-powered user of the Wasatch. I encourage all planning that comes from this process, with particular attention to the following issues- 1) Water quality preservation is of utmost importance, 2) Transportation by car should be limited, bus service improved, LCC particularly should be examined for possible shuttling, train service, or similar alternatives, 3) No tunnels through the mountains, no gondola, ski lift or mechanized transport should be considered, 4) No further ski resort expansion should be allowed, particularly in Grizzly Gulch, Flagstaff, White Pine, American Fork side of the divide, 5) Overall service concerns must take precedence over developers' and resorts' needs.</p>		4/17/2015

<p>An Unpardonable Sin</p> <p>The quality and quantity of the snow, steep beautiful terrain, and easy access make the skiing/riding experience in the Wasatch Mountains (backcountry and resort) world class. This is a special place. But the quality of the skiing experience in the central Wasatch is in jeopardy. I see the proposals for expansion by the resorts and Ski Utah's "One Wasatch" simply as marketing tools to attract more tourists to our world-class resorts. As a native Utahn, Snowbird season pass holder, and frequent backcountry skier, I don't believe these proposals for expansion are in our community's best interest.</p> <p>The Alta and Snowbird ski resorts cannot accommodate more skiers/snowboarders without further compromising the already crowded skiing experience that exists there. Who wants to stand in longer and longer lines while waiting to ride the greatest snow on earth? Not only are the lines insufferably long, with larger and larger crowds the snow gets "skied out" faster and faster. Is this the kind of experience Ski Utah and the ski resorts want for their customers? At the same time, the backcountry cannot afford to be annexed any more by the resorts without compromising the riding experience there. The ski industry in Utah has an insatiable appetite for expansion and development at the expense of the environment and wilderness experience. Both the resorts and the backcountry/wilderness can co-exist harmoniously but it's time for permanent hard lines to be drawn. Tunnels and aerial trams connecting the Cottonwood Canyons and Park City would desecrate what little is left of a wilderness/backcountry experience that exists in the glorious but fragile central Wasatch range. Why connect the resorts? If I want to ski at Alta, I go to Alta. If I want to ski at Deer Valley, I go to Deer Valley. The concept of an interconnect is just a sightseeing gimmick for tourists. No local would dream of wasting quality ski time riding lifts between resorts. Don't ruin what makes this place special and unique just for more money.</p> <p>It's true, transportation challenges in BCC and LCC do need to be addressed. More efficient mass transit makes sense, but let's not reinvent the wheel with complicated expensive projects that permanently deface and deform more of this glorious little mountain range in which we are so fortunate to live</p>		4/17/2015
<p>Thank you for this opportunity to provide input for this important project. My recommendations are:</p> <ul style="list-style-type: none"> <li>Maintain water quality</li> <li>Preserve the beauty of our unique and incredible mountains</li> <li>Protect backcountry access</li> <li>Maintain the at-risk areas of our foothills, including the BST</li> <li>Incorporate Environment System Proposed Actions</li> <li>Incorporate Recreation Systems Proposed Actions</li> <li>Invest additional tax revenue in existing trail improvements as opposed to new ones</li> <li>Do not develop additional areas in the mountains</li> <li>Do not connect the Cottonwood Canyons with Summit County; there is no need and it will only benefit the developers financially</li> </ul>		4/17/2015
<p>As a lifetime resident of Salt Lake, I am genuinely appreciative of the collective efforts of everyone who has come together for the Mountain Accord. Thank you.</p> <p>Because so many cities in Utah, particularly Salt Lake City and Provo, continue to be numbered among the fastest growing cities in the United States, my hope is that when tough decisions are made if we error on any side, we error on the side of conserving what is left of the unique natural beauty found in our Wasatch Mountains. All too often, the Wasatch Mountains are compared to the Alps in Europe, a mountain range that dwarfs the size of our small range. Please save as much as you can of our small peaks and canyons in their natural state. The ski resorts need your guidance and restraint so that 25 years from now, future generations don't look back and wish we had done more to preserve this most unique of all treasures.</p> <p>Thank you for the opportunity to comment!</p>		4/17/2015
<p>I am a resident of Salt Lake City, and the outdoor recreation opportunities in the Wasatch are the primary reason that my family has decided to live here. I just wanted to say that while I do not agree with all the proposals in the blueprint on the Mountain Accord website, I am in support of the Mountain Accord process because I think that it is an opportunity to finally protect these mountains in a manner that will endure for years to come. I already left my comments a few months ago via the website. I was distraught about all the opportunities in the blueprint for continued commercialization and development in the Cottonwood Canyons, so my comments were probably pretty negative. However, the more that I have read and thought about these issues, I realize that reaching a public agreement is a better option than continuing to allow everything to proceed haphazardly. I support the Mountain Accord, and I look forward to continuing to participate in this process.</p>		4/17/2015
<p>It seems to me that the smartest thing to do from both an environmental and fiscal stand point is to run buses in the Cottonwoods on a more consistent basis. Right now with the current bus schedule it is hard to ride the bus. Parking structures would need to be built in numerous places throughout the valley. But this seems like it would be less disruptive than tearing up the mountainside to put in a train or a gondola. Also I would like to see more public bathrooms at heavily used trail heads like Olympus.</p>		4/17/2015
<p>To maintain the long term benefits of the Wasatch Mountains for residents and our many visitors, the Mountain Accord must place the highest priority on watershed preservation and environmental protection, with lower priorities for increased economic development. High capacity transit in the proposed Little Cottonwood/Park City corridor would be difficult to achieve without major harm to the present environment. Enhanced bus transit within the Cottonwood Canyons, appropriate to seasonal demands, may be the best solution to traffic and parking problems within these canyons.</p> <p>The Mountain Accord has carefully addressed the competing interests of more development and enhanced economic development as opposed to the long-term state of the environment and water needs of the Wasatch front population. The long term needs should have <del>priority in the Blueprint to resolve these problems</del></p>		4/18/2015
<p>Hello, I am writing to submit my comment for the Mountain Accord blueprint. I am a citizen of the Salt Lake Valley (Midvale, to be precise). I am an avid skier and rock climber, and I hike and run on the trails of the mountains in the summer.</p> <p>First, I would like to thank Mountain Accord participants -- I know that you probably receive a lot of criticism from angry and passionate citizens, and I am grateful for your planning to keep our canyons accessible and healthy for coming generations.</p> <p>My comments on each section of the Mountain Accord blueprint are below.</p> <p>Transportation: I wholeheartedly oppose any construction of a train or tram up any of the canyons. A train would be expensive to make and maintain; it would require expansion of the current roadway (even if it is above the road), which puts unnecessary strain on the watershed and could limit access to other recreation points in the canyons (rock climbing in lower Little Cottonwood, for example). A train would require train stops to be built and maintained; by their very nature, this would limit the train's use to the places that have the stops -- which most likely would be ski resorts. Building a train seems to service only the resorts; it would sideline other recreationists and force taxpayers and municipalities to pay for a ski resort's latest construction project in their attempts to lure more visitors. I would support improved bus service up the canyon. For the bus service to be viable, it should be year-round. There need to be more bus stops in the canyon so non-skiers also use it (stops at trailheads, fishing locations, picnic areas). Additionally, a good incentive system would be for ski resorts to offer a slight discount on day pass purchases for those who rode the UTA bus up the canyon. If the bus costs \$8, give the people who can produce their bus pass \$8 off a day pass. Ski resorts could also help encourage bus ridership by having free day use lockers for those who rode the bus. Riding the bus make skiing difficult because you don't have anywhere to leave your boots, bag, etc. Additionally, I would urge a fee for driving up the canyon. Make it more expensive to drive up the canyon than to take the bus. This change would require increased parking around the base of the canyon, since it is difficult to access the canyons on the standard bus service. But, a fee to drive up the canyon would limit cars, which would make it easier for buses to stop at trailheads and recreation areas that are in a narrow section of canyon -- less traffic would allow for safer and easier bus stops anywhere along the shoulder.</p> <p>Environment: My greatest concern in the Mountain Accord plan is the protection of the environment. I worry about the impact of any construction on the watershed; especially with the growth of our population and the decrease in our winter snowfall. We need to be planning for a drier and hotter future and not building tourist attractions on the very land that we depend upon for water.</p> <p>Recreation: I do not support any expansion of current ski resort boundaries. The proposed expansion of Brighton and Solitude's boundaries would lessen the area of backcountry terrain accessible by backcountry skiers. Despite it only being leased land, during the winter season, those resorts limit uphill travel, thus excluding use by any backcountry users. Grizzly Gulch is an important part of the Wasatch Mountains' backcountry terrain. Do not let this be developed!</p> <p>Economy: My only comment on the economy is this: Local ski resorts keep trying to expand and develop in attempts to bring more visitors. I understand that Utah depends upon the resort economy. I support that. However, winters are getting worse and less predictable; I do not want to foot the bill of an expensive resort development project if we get a winter with no snow and resorts shut down. Even if it is not footing the financial bill, we as local residents will be the ones who feel the environmental repercussions if a ski resort closes with a massive, new development on their land. Additionally, Colorado gets more ski visitors because it doesn't have weird liquor laws. Many people are still freaked out by the stigma and mystery in which Utah clouds itself. There are things that Utah as a state could do to draw more visitors here without sacrificing our watershed, our taxpayer dollars, and our equality of access to this land -- both resort visitors and local backcountry users deserve to have access to these mountains.</p> <p>Thank you for your time and efforts. This project is very important to me because these mountains are very important to me. I moved to Utah from out of state. I moved here for the mountains. The mountains are the reason that I live here, that I teach here, that I spend money here -- without this natural resource's conservation, this city will lose a huge sector of its population which moved here for the unparalleled recreation options. I know that it is easy to measure tourist dollars and out-of-towner economic impact; please don't forget what the people who live here, work here, and spend money here add to this economy. If these mountains are spoiled, a lot of us will leave. It will more difficult for so many of the new businesses to attract prospective employees, who are currently lured out here with promises of a high quality of life. Please don't make any decisions that will change that.</p>		4/19/2015
<p>To whom it may concern I am concerned about the watershed preservation. We are very venerable with our water situation. I believe ski areas should not expand beyond their boundaries or land trades between the forest service and the ski areas. I would like to see more of an emphasis on non motorized recreation. Please protest out mountains.</p>		4/19/2015

<p>We are responding to your request for comments on the development and connection of the ski areas in our Wasatch Mountains. My wife and I have skied all of our ski areas in the Big and Little Cottonwood canyons and on the Park City side for forty-nine years. We have also enjoyed hiking in these mountains all that time. These mountains, and the recreation they provide, are why we chose to live and raise our family in the Salt Lake area. We have also hiked extensively in the Alps of Switzerland, Austria, Italy, France and Germany. This knowledge is important as we consider the appropriate use and development of the Wasatch. Our Wasatch Mountains are a relatively small area as mountain ranges go. That we have protected some of it as wilderness is wonderful. And the skiing provided is fantastic, as several of our Swiss friends have remarked when visiting us. We need to be very careful to maintain this delicate balance between alpine skiing, and its mechanized invasion of the mountains, and the spectacular beauty of hiking on trails through undeveloped mountains. We have a unique setting, so close to urban areas. I do not see any overall benefit to expanding the boundaries of our ski areas, or connecting the Park City side to the Salt Lake Valley side. While skiing both sides in one day may be arguably something to boast about, realistically there is more than enough skiing in an area without having to spend part of your skiing day working over and back, just to say you did it. Certainly the distribution of skiers on both sides is presently acceptable. The limitation imposed on numbers by the narrow Cottonwood Canyons keeps their use/impact reasonable. Connecting the two sides would surely increase the amount of rooms and visitors on the Park City side, but would adversely affect (by increasing the number of daily skiers/users) the Salt Lake valley side. Knowing these mountains as we do, it is the Salt Lake side of the range that must be protected, for it is truly fantastic, not unlike a national park. Thank you for giving us the opportunity to express our thoughts.</p>		4/20/2015
<p>Dear Mountain Accord. I am in favor of the following points to curtail any development in the Wasatch Mountains.</p> <ol style="list-style-type: none"> <li>1. Prevent ski resorts from expanding outside their current boundaries.</li> <li>2. No land trades between resorts and the Forest Service – non-developable land on steep, remote mountain sides for developable land at the base of the ski resorts – more condos, traffic, etc.</li> <li>3. The central Wasatch is not the European Alps – a dishonest comparison commonly made by development interests. The central Wasatch is very small, unlike the Alps.</li> <li>4. Watershed preservation</li> <li>5. Viewscape preservation – no large buildings, no expansion of resorts</li> <li>6. Emphasis on non-motorized recreation</li> <li>7. Tram and lift interconnects for the resorts will do nothing to solve transportation issues. Interconnects only benefit resort marketing.</li> </ol>		4/20/2015
<p><b>** I totally support ONE Wasatch and over-the-snow connectivity.</b></p>		4/20/2015
<p>Dear Sirs: We live near the foot of Millcreek canyon. We make frequent use of these canyons for hiking, picnicking and cross-country skiing. They are precious to us. We oppose further residential and commercial development of the canyons, and are particularly opposed to land swaps between the Forest Service and developers which result in more building around the ski areas. This development results in more traffic in the canyons and physical and visual degradation of the canyons, and benefit only the developers. Once that development has occurred it cannot be reversed. We also oppose interconnects between the ski areas, which are unnecessary and would also degrade the canyon experience. The Mountain Accord analysis of Millcreek Canyon is very exhaustive and has some good suggestions, particularly providing a good uphill bike lane. Aside from the bike lane, we would not like to see additional widening of the road, which would just encourage more traffic and result in more congestion in the upper canyon. Please do not install parking meters in the canyon (what an awful idea). When you start a hike, you don't know when you will return. I wouldn't mind paying more at the booth.</p>		4/22/2015
<p>You have all drunk the kool ade!!! From Thaynes shaft all the way to the Mayflower mine is a labyrinth of tunnels, stopes, shafts. In addition there was smaller scale mining activities all the way to Alta. A tunnel?!? Are you insane? At some point of digging a tunnel of the scope/length you are conceiving those 130 year old and up to 1000 foot deep underground holes will collapse and perhaps trigger a chain reaction of epic magnitude. I lived in PC from 71-85 and said often "hope an earthquake never hits". As a ski instructor for 10 yr, a heavy equipment excavation operator for 10 summers (much of our work was up on both PC/DV mountains) I speak with some knowledge. In my opinion a tunnel from So SLC to PC is insanity. Respectfully,</p>		4/22/2015
<p>Dear Sirs/Madams: Below are my general comments on further development in the central Wasatch and the Mountain Accord process</p> <ol style="list-style-type: none"> <li>1. Prevent ski resorts from expanding outside their current boundaries.</li> <li>2. No land trades between resorts and the Forest Service – non-developable land on steep, remote mountain sides for developable land at the base of the ski resorts – more condos, traffic, etc.</li> <li>3. The central Wasatch is not the European Alps – a dishonest comparison commonly made by development interests.</li> <li>4. The central Wasatch is very small, unlike the Alps.</li> <li>5. Watershed preservation</li> <li>6. Viewscape preservation – no large buildings, no expansion of resorts</li> <li>7. Emphasis on non-motorized recreation</li> <li>8. Tram and lift interconnects for the resorts will do nothing to solve transportation issues. Interconnects only benefit resort marketing.</li> <li>9. Development is permanent, and never reversed.</li> </ol>		4/22/2015
<p>Hello, I attended the meeting at the Eccles theater in Park City. It seemed that transportation issues loomed large. I would like to submit random comments from my perspective. Tunnels and ski lifts over the Wasatch crest should be last on the list of options. I would like to see increased public transit between the SLC area and Park City. We live near Kimball Junction. The PC-SLC Connect is great to go to SLC all day. I frequently did a bus/bike commute when I worked near the University. I am retired now and sometimes I take the bus to SLC in the late afternoon to meet my husband. The current schedule does not work to go either direction for less than a full day. My husband would ride it to work in downtown SLC but he needs to leave work about 5:15-5:30, not 4:20 or 6:20 PM. I would like to see the Parleys Pathway bike path between Parleys Summit and the East Canyon exit on I-80 installed. We were part of a group several years ago to get this on a county planning map. I sometimes rode my bike from Kimball Junction to work in Research Park, well into my late 50's. I am just a regular cyclist, not an extreme athlete. Non-cyclists may not realize how much riding that recreational riders are up for, especially with the option to bus one direction or the other. Other people also brave this section of interstate to do this commute. Before the PC-SLC bus, my husband or I would ride this route to meet the other one in SLC so we didn't have two cars there at the end of the day. I'd like for Park City to maintain its get-away, resort feel, not become a suburb of the SL Valley. Except for maybe one trip to say they did it, the average skier is not going to drive to the base of a Cottonwood canyon, take a shuttle up to Solitude, then a lift to PCMR when they could just drive 30 min to their selected ski area. When we think of all the population in the area, and all the tourists, these "ski-link" connections serve only a very few people - the people spending up to and over \$100 per day for a downhill ski experience. I haven't found concrete numbers, but it is my impression that the younger generations aren't flocking to downhill skiing as their (aging out) boomer parents did. It does seem that the numbers for non-motorized sports are increasing - Nordic and backcountry skiing. I do not want additional ski lifts, towers, and maintenance access in the undeveloped areas. Do we really want to "pave" more paradise? HE** NO! Our national parks and wilderness areas are the best in the USA. They draw millions of tourists. For what? Nature! Not more motors and machinery. And not every place should be accessible to everyone. Maybe not accessible to anyone. I have some physical limitations now but no, I do not deserve access to everything. It's ok. Leave it alone. Leave it natural. In summary, more public transit on routes we already have in place, more bike paths, no more machinery in the mountains, keep our water clean (if there is any).</p>		4/22/2015
<p>I would like to submit my support of the letter that Wasatch Backcountry Alliance submitted regarding the Mountain Accord. That is the most preferred plan in my opinion.</p>		4/23/2015
<p>Thank You</p>		4/23/2015
<p>I support the positions outlined by the Wasatch Backcountry Alliance (attached): The central Wasatch is truly a special place that is on the verge of being destroyed by corporate greed. I first came to Utah in 2007 and specifically the Park City area. I instantly fell in love, to the point that when I graduated college in 2011 I decided to move to Utah. The first year that I lived here, I lived up in Park City and skied at The Canyons. In that first year, I was introduced to the backcountry and have done a large portion of my skiing in the backcountry ever since. In 2012 I moved down to Salt Lake and started skiing in Little Cottonwood canyon almost exclusively. The combination of snow and backcountry terrain simply makes it the best place on earth. The Mountain Accord is full of development ideas that will simply ruin this one of a kind landscape. The canyons do not need to be connected to one another. Increased buses and shuttles up each canyon with environmentally friendly (solar powered or propane buses like Zion has) buses is a good idea, but I hate the idea of trains, tunnels and lifts connecting the canyons and chopping up the backcountry. If the canyons were to be connected, I and many of my backcountry skiing friends will simply move out of the state and never come back. Please don't ruin the Wasatch! Thank you for your consideration.</p>		4/23/2015
<p>We all need places to have a peaceful environment to enjoy and to contemplate nature. This is especially important for our children and grandchildren! Money isn't everything!</p>		4/23/2015

<p>Hi, I wanted to share a few comments on the mtn accord proposal.</p> <ul style="list-style-type: none"> <li>- I do not support an interconnection between Big Cottonwood, Little Cottonwood and Park City.</li> <li>- Private land transfers need to include actions to preserve grizzly gulch</li> <li>- Land swaps should happen immediately prior to any future development plans being made</li> <li>- Ski area expansion is not in the best interest of the population and is only a benefit for the resorts.</li> <li>- The new honeycomb canyon lift should not drop below the elevation of the current lift and should not terminate in the silver fork drainage</li> <li>- I support a bus based transit system as proposed in appendix C of the transportation alternatives.</li> </ul>		4/23/2015
<p>I have reviewed the Mt. Accord web site and the possible "blueprint" for the future of the Central Wasatch Mts; I wanted to voice my thoughts about it. Though I understand the need to keep the current ski areas as viable economic entities and the access to them and the rest of the canyons' resources safe and reliable, I believe the following should be the primary objectives:</p> <ul style="list-style-type: none"> <li>· Maintaining as much of the canyons in an undeveloped state as possible using private/public land swaps, concentration-of-development strategies and whatever new land designation possible to keep it undeveloped. If done thoughtfully, this would serve everyone's agenda, including the ski areas'.</li> <li>· Whatever policies are needed to assure clean water and air.</li> <li>· The design of the access to each canyon to be the minimum needed to provide a flexible system for many uses and demographics. Given the projected increase of use of all the canyons and the need to reduce in-canyon car traffic and parking, this might include more and better buses, road improvements and separate bike lanes. The enormous impact of a rail line up Little Cottonwood Canyon would eliminate it as a possibility.</li> </ul>		4/23/2015
<p>There are three main reasons why I feel the One Wasatch connection plan is extremely bad for Northern Utah's resorts and local residents. The first reason is that the 'plan' can not be completed without severe and permanent damage to the Wasatch backcountry. Backcountry areas of the Wasatch range are exploding in popularity, and will continue to do so for the foreseeable future. As our state and its resorts get increasingly crowded with people, commerce and noise, there is a growing population that goes to the backcountry for quiet solitude in the wilderness, with no sign of humankind. Their backcountry experience will be rudely interrupted by the appearance of lifts that will cross and re-cross throughout the wilderness areas between resorts, and will not be avoidable to the backcountry enthusiast. The second reason is that it makes no sense whatsoever to compare One Wasatch with the connected resorts of the European Alps. As I wrote in a recent story: "The European Alps are 750 miles long and 125 miles wide. The mountain range in the ONE Wasatch plan is 120 miles long and averages five miles wide. Its widest point is a mere 18 miles. The highest elevation of the Wasatch range is 11,928. The Alps are nearly a mile higher, with numerous glaciers that never melt. The Wasatch range has no glaciers." In addition, the European connections pass through eight countries. By comparison, the Wasatch Range is miniscule. The third reason is that there is an appalling lack of research into this project. Foremost, there has been no serious investigation of whether resort connections will bring more visitors to Utah's resorts. Nor have the cheerleaders for the plan have been forthcoming about multiple roads that would be necessary for installing the lifts and would need to be maintained afterwards for potential evacuations and repairs. I interviewed Nathan Rafferty for my 'One Wasatch' story, which was a total rewrite of an unusable story by another author. When I asked Mr. Rafferty about the mechanics of the plan, such as lift towers and concrete beds, he stated that could be done by helicopter, which is not factually true. Heavy machinery would be required to dig the tower foundation beds, concrete mixing trucks would have to be driven into the backcountry to put in the tower pads, and roads would be necessary for the trucks and the laborers. The roads would have to be constantly maintained afterwards to allow for repairs and emergency evacuations. When I asked Mr. Rafferty about these facts, he grew very vague and eventually said that "Each resort would be in charge of that." What does that mean? Is there even a plan? The issue of environmental destruction in the backcountry that would be required for the installation and maintenance of these numerous lifts has not been addressed by Ski Utah or any of the resorts involved. Until it is discussed in a public forum, with factual and truthful answers given to the many questions of Utah backcountry lovers, this 'plan' should be put on a very long hold.</p>		4/23/2015
<p>This planning is an excellent starting point. Educating the public that there is a real cost to doing nothing is important. European countries have created multiple options to transport visitors through their resorts, over and through their mountains, valleys, and canyons. What are some of the financial models that have been used in other mountainous countries that can help Utah with this challenge?</p> <p>Guardman Pass:</p> <ul style="list-style-type: none"> <li>*It's an existing state road that could be improved for year round use. The growing population and increased use of the road is already creating pressure to make improvements. Why not get ahead of the demand and upgrade it to a year round state road? The excuse of cost is weak considering many of the year round state roads that have much less traffic.</li> <li>*Enormous environmental savings as visitors avoid doing the "horseshoe" driving from PC to the Cottonwood Canyons and vice versa. It would be an interesting statistic to know how many trips/miles per season are made between the Summit and SLC resorts.</li> </ul> <p>Conflict of Back Country and Resort Access between Brighton and Alta</p> <ul style="list-style-type: none"> <li>*Tunnels are a low impact means of connecting the canyons. Val d'Iser has two funicular tunnel trains. How have they made it pencil?</li> <li>*A tunnel would transport resort skiers without impacting Grizzly and other prime back country areas between BC and LC.</li> </ul> <p>Traffic Issues:</p> <p>With a great deal of kicking and screaming Zion National Park introduced busing during the peak season for the park. It is resounding success. People have adjusted and the overall experience in the canyon has been vastly improved. Can something be learned from the National Parks that have implemented mass transit alternatives? Parking and equipment needs are an issue but these challenges have been overcome by other resort areas. Educating the public that doing nothing is by far the most expensive and environmentally destructive alternative is important. The public in general doesn't understand the growing recreational pressure on the Wasatch Front and Back.</p>		4/23/2015
<p>To whom it may concern:</p> <p>I will be brief as I'm sure we are both short on time. I am an avid skier and mountain biker. My favorite ski resorts are Snowbird and Alta, one of my favorite bike trails in the LCC trail at the base of Little Cottonwood. The plan by Mountain Accord concerns me. I do not want the expansion planned.</p> <p>Under your plan my favorite trail would be gone. I've ridden it for years and would be furious if you removed it. Furious enough that if you destroy that trail, Little Cottonwood Canyon would never see a penny of my business again, and I would encourage everyone I know to do the same.</p> <p>We do not need or want the expansion options.</p> <p>Thank you for you time,</p>		4/24/2015

<p>I support designation of the Wasatch National Monument. We need to take action to preserve the quality of the Wasatch before it is too late.  <a href="http://saveourcanyons.org/campaigns/public-lands-stewardship-forest-management/wasatchnationalmonument/">http://saveourcanyons.org/campaigns/public-lands-stewardship-forest-management/wasatchnationalmonument/</a></p>		4/24/2015
<p>Thank you for taking the time to listen to the public on issues concerning the Salt Lake Valley citizens' backyard.  Here is my two cents:  Environment:  Reducing the amount of cars on the roads, which contribute to the biggest negative issue in Salt Lake: Air Quality, should be at the top of the list on things to fix. Since the people's health depend on this, this is critical.  Recreation:  Recreation accessibility is what separates the Salt Lake Valley from any other major city. This is why I and hundred of thousands of other people moved and choose to live here. Keeping the recreation accessibility (ie back country skiing access, hiking, etc...) should supersede any commercial development or endeavors. The Wasatch Mountains belong to the people and should not be compromised just so a few rich people can make more money.  Transportation:  This ties directly to the environment. I think before any hundreds of millions of dollars of tax payer's money should be invested into tunnels and trains, there are a few other rational and logical options.  1. Little Cottonwood:  - Increase frequency of buses up and down canyon.  - Charge for parking on peak periods with money going back to the state and not the resorts.  2. Big Cottonwood:  - Increase frequency of buses up and down canyon. The current schedule of buses is not convenient compared to LCC  - Develop more parking at the mount of BCC.  - Add the old bus routes going down Fort Union Blvd, which drives pass ample parking spots between 3300E and Wasatch Blvd. This is a no brainer. Rerouting these very convenient access points to the bus stops to go down 3300E to access hotels directly increased the number of people driving up BCC.  3. Big Cottonwood and PC area:  - Plow the Guardsman Road and run buses/shuttles between to areas. This will directly reducing the amount of cars going up and down Parley's Canyon and BCC.  4. Millcreek.  - Offer Free shuttle up and down the canyon on Fri, Sat, Sun and holidays.  - Make a official bike lane  5. Parley's to PC areas.</p>		4/24/2015
<p>I lived in Park City for many years, and was in the real estate business there.  One thing I can say for certain is that for some in the business community, no matter how much growth there is, it is never enough. They will continuously have new ideas about how to grow faster, always trying to stay ahead of some other resort. There will be a never-ending appetite to grow the boundaries of the ski areas, and to use public financing to improve transportation infrastructure. It is a never ending circular pursuit - We should require that all of the ski areas update the quality of their uphill equipment before expanding into new terrain. We should be utilizing the capacity of existing roadways more thoroughly with bus service, and ride sharing, before contemplating enormous investments in tunnels, and trains.  Growth will come, and it is inevitable. But we do not need to continuously strive to speed it up, because all that does is create more dependence on more growth.  The undeveloped areas in the central wasatch are a remarkable community resource for exploring, hiking, biking, and backcountry skiing - this enhances the quality of life for the entire region. From an environmental as well as social perspective, we should place equal, or greater value on those places that we preserve in a natural state. A balanced and long term approach will recognize that the undeveloped areas are important and valuable, and that is such a thing as too much growth.</p>		4/24/2015
<p>Crediting Mountain Accord with significantly "upgrading" the central Wasatch recreational trail system may be giving too much credit. All the resorts and many of the lakes, picnic areas, and outstanding views are already trail connected and maintained by Cottonwood Canyons Foundation, the Forest Service, or resorts.</p>		4/24/2015
<p>I support the Mountain Accord process and the progress made to date. I strongly support the 3 Key Actions identified in the Blueprint.  I believe the first priority is to maintain a quality watershed.  I am in general agreement with the Environment System Proposed Actions as well as the Recreation Systems Proposed Actions.  I strongly support linking ski areas through transit and trails rather than arial solutions such as ski lifts. I support a transportation system which is available in winter and summer.  Regarding the Economic Systems, I support additional tax revenue to support the Key Actions. I strongly support the concept of future development to the urban areas with high-quality, limited new development in the mountains.</p>		4/25/2015
<p>To all organizations and stakeholders who have participated in the process, thank you for your careful consideration of these issues.  To whom it may concern,  I would like to continue to enjoy the open spaces we have, as they are, with no further development. I have children and want them to know what nature is through their own experiences in the outdoors.</p>		4/25/2015

<p>Hi, After reading weekly pleas in the SL Tribune for comments, I have decided to comment. If my background matters, I am an avid resort skier and a casual summer hiker, and local SLC resident. A transplant from Michigan who moved here with close quality skiing as the primary driver. I met my wife here, and we have raised a family here. My general comments are: 1) I can't pretend to fully understand all the issues at stake here, but I am impressed by the inclusiveness of the process. My more specific comments in regards to transportation and space follow: 1) Transportation 1a) The Cottonwood canyon roads are essentially reversible one way roads. One way up in the AM, one way down in the PM. That is a recipe for congestion. Putting in a year round connection to the Park City side is brilliant. I would suggest opening this connection to cars, not just trains. 1b) Avalanche shelters need to be employed. I have lived in Washington state where these are effectively used for both car byways and trains. 1c) Charge for parking year round at trail heads and ski resorts. Nothing promotes car pooling like this simple tactic. The token fee to go up Millcreek canyon demonstrate the effectiveness of nominal fees. I purposefully carpool when going to trail-heads where parking fees are collected. Use the funds to capture leaky oil. 2) Space My opinions here will certainly offend my back-country skier friends.. I have not the data, but I see them as the '0.1 percenters' of the ski population when it comes to space. If we calculate the acreage/person/day ratio of a resort skier vs. the back-country skier, it has got to be off the charts and extremely lopsided in favor of the back-country skier. Why do we cut off so much space in the winter for these folks? They are a highly specialized group of people. Open up more space for the resorts and take it from these back-country areas. I believe a fair analogy would be a summer season situation: space reserved for yet another highly specialized and small (albiet growing) group, the climber. The climber requires specific land, but, their use does not eliminate so much land for the vast majority of the remainder of the population. The climber has specific space needs but not at such a giant cost to the remainder of the population. The back-country skier requires specific space but at a giant cost to the remainder of the population. Likewise, heli-skiing operations in the Wasatch should be <del>terminated: the same argument applies. Seems with a helicopter in your quiver, you could easily go fly over to the Uintah mountains.</del></p>		4/26/2015
<p>The spirit and intent on which the Mountain Accord has been forged is to be applauded. That the dozens of stakeholders, from widely varying points of view, were able to come together and rationally discuss how to manage one of Utah's most precious places -- the Central Wasatch -- on their own time, sets a very positive example and tone, irregardless of the effort's outcome. This is how I would like to see the transportation piece of the plan (which is, to me, what this process is mostly about) be rolled out: immediate phased implementation of Option D, beginning with Little Cottonwood Canyon. Changing mindsets about accessibility to this area, in particular, is going to take time. Many people, including myself, view the speed and ease of getting to Alta or Snowbird as one of the biggest benefits of living in Salt Lake City, and will often hop into their car -- alone -- to buzz up there to ski a few runs or take a quick hike or mountain bike ride. By creating gradual disincentives for car use (e.g. ticketing cars with less than two passengers) coupled with more frequent and fluid public transit (buses) is a good place to start in changing mindsets. I'd like to see implementation of Option A in what I'd call the immediate long term future--perhaps over a period of 20 years. I'm still not 100 percent clear on the ultimate cost or environmental impact of a train, but what I do know for certain is that the cars that are sure to accompany the Wasatch Front's forecasted explosive population growth will most definitely degrade not only the canyon's beauty and environmental quality, but the accessibility that so many people who live here take for granted as well. I also think the Mountain Accord staff members need to do a better job communicating the reason for this process in the first place. As far as I can tell, the notion of a train and tunnel are the part of this process that have received the most traction. I think it's necessary for people--including myself-- to have a concrete image of what things will look like here in 20, 30, 40, 50 years if human nature is allowed to run its course. Thanks for your time, ☺</p>		4/26/2015
<p>It appears that the proposed Mountain Accord overtly promotes economic advantages over the environment. The push to make the Wasatch more accessible will lead to it's inevitable destruction. Pumping more people into the canyons will lessen the quality of the experience for many. No rail in the canyons and no connections between Little and Big and Park City. Increase bus service and maybe only bus service in the canyons. There is not enough emphasis on promoting accessing the canyons by your own human powered means. Glad I am in my mid sixties. The Mountain Accord proposals sound more like a eulogy to me.</p>		4/26/2015
<p>I am a resident of Salt Lake City and my opinion on the future of the central Wasatch can be summarized as follows: 1) I am in favor of any land swaps to preserve the LCC/BCC divide. Ski resort boundaries must not expand an inch. They have encroached enough over the years. However I am in favor of exchanging public land inside current resort boundaries if for private land outside of the boundaries. a) IF resort boundaries do expand, uphill traffic must be allowed to continue to allow public access to their public land. b) IF lift access is gained to the top of the LCC/BCC divide on private land, resort users must be denied access to the ridgeline outside of the ski area boundary. Those areas belong to the public and its resources must remain unmolested because of the greed of resort ownership. 2) No new infrastructure of any kind. The current road system is adequate. As a frequent user, I do not believe we have a transportation problem. However, the bus system is broken and can be improved administratively. 3) There is no realistic demand for an interconnect. One cannot realistically enjoy more than two resorts in a day. Current resort connection are adequate and since I believe the transportation system is adequate, I believe it is not asking to much for a resort user to travel by road for an hour to use another set of ski areas on a daily basis if they desire to do so. The interconnect idea is both a marketing gimmick and a way for PC resorts to fill their hotels and have guest ski at SL county resorts. The interconnect is only attractive to vacationers and the novelty will wear off in a few seasons once word gets out that it is not really convenient. If ski resorts need to expand terrain because of overcrowding, why does ski utah want to draw more skiers to Utah? Seems like the current system is working. It is not the human powered recreationalist's fault that some people do not want to ski PC's terrain and sub par snow and we should not be punished because of it. 4) It is not a crazy idea that park city and maybe even the cottonwoods will not viable locations for ski areas in the near future do to climate change. Instead of over developing the land to milk every penny out of it, we should be preserving the land so it is still a beautiful place to visit when ski resorts no longer operate. We don't want to have a wasteland of vacant structures littering the landscape once lifts no longer spin. Who will pay for the restoration of our once wild mountains? 5) Much of the money made by the ski resorts lines the coffers of corporations out of state while the Utah taxpayers fund the infrastructure for make get skiers to the resorts. We deserve to be heard. 6) IF any backcountry terrain is lost due to denied access or overcrowding by sidecountry users, the resorts MUST finance the cost of keeping Mirror Lake Highway open year round so that human powered recreationalist have other options for quality winter recreation.</p>		4/26/2015
<p>This idea is BAD for Park City, BAD for Summit County, and BAD for Utah. Great for developers though... ☺</p>		4/26/2015
<p>I think the ideas put out are thoughtful &amp; are absolutely needed to provide for the future of our water shed, recreation &amp; preservation...I urge this plan to go forward.</p>		4/26/2015
<p>Hi, I am a resident of Salt Lake City and feel the Wasatch are a great treasure that should be preserved. My opinion basically lines up with that of the Wasatch Backcountry Alliance. As I see it, there are two main components to preserving the canyons, * Keep the ski areas within their existing boundaries. The ski areas already occupy the best/highest/most accessible terrain in the Wasatch and giving more of it to private interests seems unfair. The proposed land swaps in the Cottonwood Canyons Scenario are ok since they return more land to public use than is lost to private interest. * The canyons are currently being suffocated by car traffic. The most cost-effective solution seems to be a dedicated, high capacity bus system. The current bus system is at capacity, is expensive, and is slow. In addition to more buses, I would support not allowing private cars or requiring at least two persons on busy days.</p>		4/26/2015
<p>I fully support the Wasatch Backcountry Alliance recommendations on the Mountain Accord proposal. No interconnect tunnel or train. Increased interconnect only serves to increase commercial development. Commercial development is something that should NOT be a priority in such a special environmental us area. Keep the ski areas within their current boundaries. Increased ski development is contrary to the economic and environmental protection for these unique area. Perform land swaps immediately in Mt. Superior, grizzly gulch areas to maintain the ridgeline as a park effects in LCC. Keep the Solitude Honeycomb lift to it's existing foot print. Improve the bus access, dramatically increase number of buses and instal a reversible bus only lane on the existing road with environmentally esthetic avalanche sheds in high risk areas. A train and tunnels is a totally non stater economically and time frame wise DO NOT ALLOW THE MOUNTAIN ACCORD PROCESS TO BE MOSTLY AN INCREASE COMMERCIALIZATION PLAN. The lands you have are unique and must be preserved.</p>		4/26/2015

<p>Hey Developers!  Why not just pave everything and put up quads everywhere?! During my life-long enjoyment of The Cottonwood Canyons, it has been my great sorrow and disappointment to witness the rampant-unrelenting greed of people that have no feeling for anything except the Almighty Dollar.  Witness the vanished eagles around the summit of the Honeycomb Cliffs/Davenport Hill. From either Big or Little these eagles ranged freely. I have personally waited, watched, and marveled at these beautiful wild beings, so close to my home, for many years. Where are they now? Soon after the Ski-helicopters they vanished. Thank you, Snowbird-NOT!  I personally am affronted and disgusted that huge business and foreign interests have bought out any sense of reason within this process.  Never mind that this is a critical water-shed for over a million people!  Shame! Shame, I say upon anyone that supports expanding the colossal blunder proposed by greedy developers that will-absolutely-ruin what is left of the unique geology that is our Wasatch Mountains.  Hey, try drinking the water from Love Canal. Does anyone else recall the carnage caused by rampant greed?  I am 65 years old and do not want to pass on a legacy of neglect, greed, and toxicity to those must live with our decisions. Just once, vote with something other than a quick buck in mind.  I offer no apology,</p>		4/26/2015
<p>Dear Government Blueprint Designers:  I am in favor of 1. Improved transportation from the airport to Park City.  2. Leaving our canyons in their natural "God-given" state, as much as possible.  I am opposed to 1. building tunnels through the mountains to connect the canyons.  2. Buying up residential private property  3. increasing the boundaries of government owned land  4. Building rail tracks in our beautiful pristine canyons for trains  I agree with the Wasatch Backcountry Alliance that clean burning buses and vans are the best mode of transportation in our canyons.  Please refer to <a href="http://mountainaccord.com/wp-content/uploads/2014/10/Public-Letters.pdf">http://mountainaccord.com/wp-content/uploads/2014/10/Public-Letters.pdf</a>  Thank you for your time in considering my point of view.</p>		4/27/2015
<p>The Mountain Accord outcome I would like to see would focus on conservation of the land, Protecting our watershed and changes that would amount to a net reduction of development in the Central Wasatch.  Land swaps that would concentrate development at the base of resorts in trade for minimizing private land in the backcountry seem to make sense both economically and environmentally.  A Shuttle system involving busses or vans would be able to meet the varied recreational needs in the canyons. Trains are not conducive to multiple trailhead stops and are not as flexible as busses or vans for changing needs both over time and season. Plus the environmental cost of building rail in the canyon seems overwhelming for such a small area.  I don't support further connectivity for the resorts. There is no good way for this to be accomplished and the benefit would have nothing to do with those of us who live here. It is all for marketing a declining industry.  I would also favor fees such as we have in Millcreek Canyon. It makes sense that those that use the canyons for recreation should help in the maintenance of those facilities that we enjoy. Money collected should be earmarked for improvement and maintenance of those</p>		4/27/2015
<p>Greetings-  I support Mountain Accord and ONE Wasatch. I believe extensive research and studying needs to be conducted to determine what is the best option for those who work and play in the Wasatch range and especially for the environment.  Currently the canyons are packed with people and cars which is taking a toll on the canyons themselves and the surrounding environment. Something needs to be done to fix traffic and environmental impact the cars are causing.  I feel a combination of rail and on snow/aerial connections would be the perfect fit.  Thank you for your time. ☺</p>		4/27/2015
<p>Hello  I have been very involved in the Mountain Accord process from the inception as a member of the Recreation System Group, and these are my formal comments regarding the "blueprint" put forth by the Executive Board.  Transportation  <ul style="list-style-type: none"> <li>• I recognize that the traffic situation in Little Cottonwood Canyon is unsustainable on some winter days, and while I understand the impetus to promote a train version of a fixed guideway, I feel that the bus system is far from optimized and with proper implementation, could service both the ski resorts and dispersed users on a year-round basis far more effectively than a train.</li> <li>• Providing copious parking near the mouths of the canyon would be a critical component of this.</li> <li>• Without trying an optimized bus system using the existing infrastructure I feel it is impossible to justify major infrastructure changes (adding lanes or installing a train)</li> <li>• Charging a per-vehicle fee - either via a daily fee or an annual pass – would help subsidize the optimized bus/parking system and provide an incentive to ride the transit system</li> <li>• Incentivize ridership by making the bus fee free or only a nominal price.</li> <li>• The bus system would need to have both a Snowbird-servicing bus and multiple Alta express buses.</li> <li>• Current and future UDOT plans to add passing lanes on hwy 210 for private vehicles should be focused on improving bus transit systems.</li> <li>• Snowsheds and/or bridges over slide paths can/should be added for increased avalanche mitigation for the highway.</li> <li>• I fully support optimizing year-round Bus Rapid Transit for Big Cottonwood Canyon. Again, with copious parking at the mouth of the canyon.</li> <li>• A tunnel linking LCC and BCC is not needed. Improved public transit would alleviate the traffic issues associated with LCC, and the "safety" issues that have been ascribed to a tunnel have been overblown; there have not been any documented injuries/fatalities associated with overuse of LCC that would not be overcome with improved transit.</li> <li>• Tunnel connections would create more defacto resort sidcountry terrain, effectively increasing the resorts' footprints.</li> <li>• The tunnel would basically be a taxpayer-funded connection that would exist to benefit four businesses (ski resorts) with no/very little validation that such a connection would actually be economically beneficial to those businesses There are no significant "problems" that an LCC/BCC tunnel would solve, despite a considerable cost to taxpayers.</li> <li>• The same argument is applied to a fixed guideway system connecting BCC to Park City. It would not necessarily save time for PC-BCC travelers, is not supported by Park City officials, and would again be a taxpayer-subsidized benefit to a handful of businesses (ski resorts) who have not proven that such a connection would even be beneficial today, much less in the future considering global warming and the flat/declining trends of the resort skiing industry (according to their own study).</li> <li>• The question on the survey asking if the transit "solutions" are "environmentally-sustainable" is fundamentally flawed: transit systems are not intended to be "environmentally sustainable"; they are intended to transport people from point to point. Since NO ONE – including trans engineers who have looked into this project – knows if they'll actually be environmentally-sustainable (eg degrading the watershed) that point is misguided at best and badly misleading and irrelevant at worst. The question should be "Is this a solution that I as a user of the Central Wasatch would actually use and be willing to pay for?"</li> <li>• At the moment parking is the limiting factor for pressurized use in the Cottonwood Canyons; enabling as many people as possible to use the canyon will result in more user pressure. Optimizing Bus Rapid Transit will be an intermediate step to moving possibly-somewhat more people up the canyon to put only moderate additional use pressure on the canyons.</li> <li>• I am in full support of a year-round bus shuttle system for Mill Creek Canyon.</li> <li>• I am in full support of a train/light rail system linking the Salt Lake Valley with Park City. This is a system that I feel would be used far more extensively by commuters and lower-income resort workers around the clock on a more-regular schedule than a LCC canyon train that would be associated almost exclusively for time-intensive recreation.</li> <li>• The rationale provided for abandoning the Parley's rail transit - that was favored in the Trans system group - is that it would not be competitive with the freeway; however, this rationale was not applied to the successful SLC airport Trax line.</li> </ul> Recreation</p>		4/27/2015

<p>General Comments</p> <p>I live in Salt Lake valley and am a year-round user of the Wasatch. I Climb in Little Cottonwood and Big Cottonwood and Bell's Canyon in the spring, summer and fall. I hike and run the trails of Little Cottonwood and Big Cottonwood and Mill Creek, once the snow has melted. In the winter I ski the backcountry areas of Little Cottonwood and Big Cottonwood and Mill Creek. I also ski with my family in many of the ski resorts in the area. I appreciate the truly distinctive characters of each resort in the Wasatch and the variety of terrain and facilities each offers.</p> <p>The heads of upper Little and Big Cottonwood Canyons are quite developed. No one hiking under the lifts in Albion Basin or above Brighton is having anything like a pristine wilderness experience, no matter how brilliant the wild flowers. There is effectively very little backcountry skiing opportunity east of the Park City ridge line. From my perspective the balance of wilderness vs. development is already tipped decisively in favor of development, and the ski areas seem to have plenty of customers enjoying abundant lift-served skiing.</p> <p>Specific Comments</p> <p>1) Alta</p> <p>The Grizzly Gulch area where Alta runs their cat skiing operation is land owned by the ski lift company. They have made no secret of their desire to develop lifts in the area. Development of this area would be great loss to dispersed recreation. I'd like to see an attempt to swap this terrain for some greater development by Alta. I like the Alta resort because it ISN'T about condos and shopping, but I'm willing to trade some of that for a protected Grizzly Gulch.</p> <p>I oppose any change that would limit public access to public lands. A land swap opens the possibility that a private owner could charge a "backcountry fee" for visitors who wish to use the town of Alta as a starting point for their ski tour, hike or climb.</p> <p>I believe that currently all of Alta's buildings are on Forest Service land. It would make sense to trade the land under their buildings for the undeveloped parcels up on the mountainside. Perhaps a land buffer around these properties could be included in the swap. But the road through town, the parking, and the currently undeveloped areas should remain public in order to insure access to the surrounding public lands for future generations.</p> <p>2) Transportation</p> <p>I feel that the best and most economical near-term solution to the transportation issues up Big and Little Cottonwood is an expanded public UTA bus system. Regular buses running up both canyons would result in increased ridership. In the winter I rarely use the bus for backcountry ski access because there are so few runs up the canyon, even on the weekends. Similarly I never use UTA for access to climbing because there is effectively no useful schedule in the summer months and no stops near the major rock climbing centers. I think sufficiently regular bus service would be adopted by many backcountry enthusiasts. Perhaps a toll/user pass system similar to what is in place in Mill Creek, could be used in LCC and BCC. This could be used to offset the costs of the increased UTA service.</p> <p>I'm not in favor of the proposed tunnel between LCC, BCC and Park City. I'm not persuaded that folks driving from Park City to BCC and LCC is really a significant additional burden to the transportation requirement for those canyons. I think such a tunnel would greatly reduce the wilderness character of upper LCC and BCC.</p>		4/27/2015
<p>Water quality should be the MAIN objective for the plan</p> <p>Environmental thresholds developed that will protect water quality and guide future use of the canyons</p> <p>Plan should be written to expand to other canyons in the salt lake area and beyond</p> <p>Board made up of individuals that have zero interest (realtors, developers, landowners, etc) in the canyons</p> <p>The management plan needs to be developed with clear and concise guidelines that protect the watershed first and other uses allowed if in compliance with predetermined environmental thresholds.</p> <p><del>Good luck having any plan in place for the future of our canyon.</del></p> <p><del>I am writing to let you know that I support the official comment provided by Wasatch Backcountry Alliance.</del></p>		4/27/2015
<p>Don't put a train or add any bus lanes up Little Cottonwood Canyon. The estimated cost of \$5 billion is way out of line with any benefit to the public. Additional lanes and a train going up LLC will destroy the beauty and will detract from a quality of experience. LLC will look like a mini Parley's Canyon.</p> <p>Add more buses and parking. The only way to preserve the beauty of the canyon and protect the environment is to provide additional buses and parking facilities based away from the mouth of the canyons. Parking facilities must be provided to provide any public transit up the canyons. So why not start with that. Provide more parking at 6200 S and Wasatch Blvd. and 9400S and 20th E.</p> <p>Encourage ride sharing. Provide incentives to use of the bus and ride share by charging a toll and parking fees for vehicles with fewer than 3 occupants. If this doesn't relieve congestion, provide access to LLC with bus only access unless you're staying at the resort (same as Zion). There is no need for additionally bus lanes.</p> <p>As for the goal of maintaining a quality recreation experience – as it is now the wait to ride Snowbird's tram is too long. Watching 4 trams come and go while we're waiting in line is long enough. If you put more people up the canyon Snowbird will sell more tickets, but the public will not benefit in any way. The public can say I rode the train, but I spent the time I saved on waiting in line for the tram. Is this the quality experience Mountain Accord wants to maintain?</p> <p>The proposal will certainly benefit Snowbird, but it will detract from the goal of providing a quality recreational experience for visitors and residents.</p>		4/27/2015
<p>Dear Mountain Accord,</p> <p>I just wanted to go "on-record" that I agree with the Wasatch Backcountry Alliance comments on the Mountain Accord.</p> <p><del>Thank you very much.</del></p>		4/28/2015
<p>I am writing to express my complete agreement with the Wasatch Backcountry Alliance's comments on the Mountain Accord.</p> <p>In particular, I do not support the interconnection of LCC, BCC, and/or Park City in any combination or form.</p> <p>In terms of improving transportation, I believe that the current bus system could be optimized/expanded, existing parking lots expanded, and potentially a light rail or transit system linking SLC to PC developed.</p> <p>I strongly believe that the Superior-Emma ridgeline and Grizzly Gulch should be placed under permanent protection.</p> <p>I believe that any expansion of existing or proposed chairlifts in Honeycomb Canyon should not extend into the Silver Fork Drainage.</p> <p><del>Finally to cooperate for best backcountry access. I am in strong support of the establishment of unbill routes within ski areas that are expanding their boundaries into public lands.</del></p>		4/28/2015
<p>In reviewing the blueprint and proposed direction it seems to be heavily weighted on the side of developing economic ventures and installing light rail in Little Cottonwood Canyon.</p> <p>1) In my opinion the last thing on the list should be economic development, which would only increase the impact on the environment we so desperately want to preserve. More people on the mountain is not the right approach to preservation.</p> <p>2) How does a light rail system in Little Cottonwood Canyon not destroy that which we want to preserve?? Talk about a major impact on fragile areas! Surely this is not a desirable solution to traffic problems. And the expense would be astronomical! Please consider parking cars in other areas and busing before talking about light rail!!</p> <p>3) Has any consideration been given to the impact of your proposals on the people living at the mouth of the canyon? And have representatives from this area been included in the studies and discussions? To my knowledge the answer is no. It seems only reasonable to include those who are impacted the most in the decision making process.</p> <p>Thank you for your consideration of my comments.</p>		4/28/2015
<p>Hello,</p> <p>I am writing to state that I agree with the comments presented by the wasatch backcountry alliance.</p> <p>I am particularly concerned about interconnectedness between BCC, LCC and Park City. I support a viable and sustainable public transportation system that greatly reduces or eliminates private vehicles. The light rail or bus transit systems are both good alternatives. ☺</p>		4/28/2015
<p>I was a bit disappointed to read in this morning's Park Record that there was discussion about leaving the Mountain Accord. I feel the entire concept of a tunnel from the Cottonwoods to Park City is fiscal insanity and likely unwelcome, but I think there is a lot more that might come from the Mountain Accord agreements.</p> <p>Summit County and Park City already have significant traffic issues and they are clearly on track to get a lot worse. I am pleased that both the city and county councils are giving this a lot of attention lately, but the solutions are going to be difficult and expensive. The Mountain Accord efforts have received considerable attention from the Utah legislature and organizations like UDOT. The opportunity to be a part of the Accord's recommended solution should not be missed.</p> <p>If you don't want a mountain tunnel, there is no better place to fight against it than from inside the Accord meetings. Better yet, try and make sure that their solution includes upgrades to:</p> <ul style="list-style-type: none"> <li>• Our local mass transit</li> <li>• 224 and 248 entry ways</li> <li>• 40, running from 80 to Heber</li> <li>• Mass transit from SLC (ideally the airport) to Kimball and Park City</li> </ul> <p>Park City and Summit County already have a reputation within the Utah government as "the rich liberals who don't fit". The absolute last thing we need is to be the first group in the Mountain Accord to "take our ball and go home" because we don't like how things are evolving. Spend the next \$150,000 and consider it an investment. Try to work the system to get as much support as possible for the things we need on this side of the Wasatch. ☺</p>		4/28/2015

<p>Don't put a train or add any bus lanes up Little Cottonwood Canyon. The estimated cost of \$5 billion is way out of line with any benefit to the public. Additional lanes and a train going up LLC will destroy the beauty and will detract from a quality of experience. LLC will look like a mini Parley's Canyon.</p> <p>Add more buses and parking. The only way to preserve the beauty of the canyon and protect the environment is to provide additional buses and parking facilities based away from the mouth of the canyons. Parking facilities must be provided to provide any public transit up the canyons. So why not start with that. Provide more parking at 6200 S and Wasatch Blvd. and 9400S and 20th E.</p> <p>Encourage ride sharing. Provide incentives to use of the bus and ride share by charging a toll and parking fees for vehicles with fewer than 3 occupants. If this doesn't relieve congestion, provide access to LLC with bus only access unless you're staying at the resort (same as Zion). There is no need for additionally bus lanes.</p> <p>As for the goal of maintaining a quality recreation experience – as it is now the wait to ride Snowbird's tram is too long (watching 4 trams come and go before I get on). If you put more people up the canyon, Snowbird will sell more tickets, but the public will not benefit in any way. Certainly, the public may ride the train, but they will spend the time saved on waiting in line for the tram. Is this the quality experience Mountain Accord wants to maintain?</p>		4/28/2015
<p>Utah's ski industry supports ONE Wasatch and/or an over-the-snow connection of Utah's central Wasatch ski resorts.</p> <p><u>We also support improved transportation options both to and from the four resorts in the cottonwood canyons and from the three resorts in Park City.</u></p> <p>I am writing in support of One Wasatch and the over-the-snow connection between the ski resorts in the Central Wasatch. I believe this opportunity to connect these resorts over the snow and hopefully one day through tunnels and trains will add incalculable value to our state. I believe it will increase the quality of life and experience we have as locals and can offer visitors. These connections will allow everyone safe access to the majestic mountains and ski resorts we call home. I am in full support of moving forward with responsible intermountain connections through One Wasatch and Mountain Accord.</p> <p>Many thanks,</p>		4/29/2015
<p>Environment</p> <ol style="list-style-type: none"> <li>1. How durable are any protections to the environment in terms of future changes? E.g. the foothills development guidelines were easily ignored when developer money became involved and pro-development government was in power</li> <li>2. Further ski area and base expansion and development will lead to increased avalanche control and explosive use. How is this good for the environment</li> <li>3. What is impact on additives used in snow making on water quality of the Wasatch front</li> <li>4. How can connecting the Wasatch back to the cottonwoods do anything but increase use of the fragile ecosystems. Examples: Wasatch crest trail is overrun with bicycles, Canyons top ski lift has increased traffic from the Park City side to upper big cottonwood backcountry. Making it easier to access will just increase pressure on resources.</li> <li>5. The Wasatch mountains are unique in the US. Nowhere else can a city dweller escape into a beautiful natural environment so quickly. This is a resource that we cannot afford to lose and is a huge quality of life issue. As has happened countless times before, people who see an opportunity to make money or wish to carve out an existence in the mountains end up destroying the resource. We already have a city in the valley, do we need one in the mountains too??</li> </ol> <p>Recreational</p> <ol style="list-style-type: none"> <li>1. The value of the Wasatch mountains is in dispersed recreation. Ski areas are becoming out of reach for most people in terms of costs. This is one reason why backcountry skiing has become so popular and is a growing faster than downhill skiing.</li> <li>2. Ski area expansion limits access to backcountry users in winter and effects the quality of summer recreation.</li> <li>3. What zoning restrictions are there going to be on types of development within ski area boundaries? Ski areas are year round businesses. To attract customers, they have increasingly resorted to activities more commonly found in amusement parks (snowbird roller coaster on Superior as an example). Is there any real reason that our mountains have to be assaulted in this way?</li> <li>4. As ski areas develop, their costs do also. There is a need to attract more customers which inevitably leads to more development. A non-ending pressure for more and more development in the mountains</li> </ol> <p>Economy</p> <ol style="list-style-type: none"> <li>1. A great deal of effort is being directed to accommodate the ski industry's desire to link all of the ski areas. What benefit will this have to the year round recreational users of the canyons?</li> <li>2. Is there any reason why the ski areas cannot be profitable in their present configuration? If not, then why should the citizens of Utah shoulder huge costs to accommodate a failing industry.</li> </ol> <p>Transportation</p> <ol style="list-style-type: none"> <li>1. Some type of rapid transit needs to be in place for the canyons. With that, adequate parking in the city must be provided and the transit needs to be year round and stop at trailheads up the canyons. Presently, buses would be used more if there were adequate parking near the canyon mouths and if they stopped at more trail heads</li> <li>2. Over surface connection between the Wasatch back and the canyons would disrupt the environment and aesthetics to too great a degree and should not be considered.</li> <li>3. Connecting the Wasatch back with the cottonwoods would increase traffic in the canyons substantially and impact the character of the canyons. This needs to be considered carefully and not just in terms of ski area connection but year round recreation</li> </ol>		4/29/2015
<p>I support Mountain Accord's connecting the canyons. As Utah's population grows these transportation efforts will take cars off the roads, resulting in less traffic, cleaner air and easier access to our canyons.</p>		4/29/2015
<p><u>I SUPPORT 1 WASATCH ALL THE WAY! It would be the coolest thing</u></p>		4/29/2015
<p><u>I support ONE Wasatch and over-the-snow connectivity. I think this is a great way to advance the Utah ski industry and to give us a leg up!</u></p>		4/29/2015
<p>** I support ONE Wasatch and over-the-snow connectivity.</p> <p>** I support improved transportation to/from Utah's ski resorts.</p> <p>** ski area connectivity would help Utah's economy</p> <p>** ski area connectivity would be fun</p> <p>** ski area connectivity would help Utah compete with other ski regions</p> <p>** improved transportation would make my trip to the ski areas safer</p> <p>** improved transportation would make my trip to the ski areas faster</p> <p>** improved transportation would make my trip to the ski areas more convenient</p>		4/29/2015
<p>I've looked at the details and I think of our traffic issues in Park City. Building tunnels and trains is NOT the answer. The cost is tremendous and you say we are protecting our environment? This is totally wrong in every way. So few people that I know in SLC have any desire to ski up here. Very few parkies ski down the hill! This is something we do Public transportation at a reasonable cost ..yes . Tunnels and trains Absolutely Not.</p> <p><u>Thank you ☺</u></p>		4/29/2015
<p><u>I support ONE Wasatch and over-the-snow connectivity.</u></p>		4/29/2015
<p><u>I support ONE Wasatch and over-the-snow connectivity.</u></p>		4/29/2015
<p>I support ONE Wasatch and over the snow connectivity, as well as improved transportation to/from Utah's ski resorts. These measures will improve the quality of the experience we offer in our ski product and as a result, the economy.</p> <p>Thank you. ☺</p>		4/29/2015
<p>No extra bus lanes or trains up LLC. Provide more parking so we can take a bus. Provide incentives to ride the bus or ride share by charging a toll or parking fee for vehicles with fewer than 3 occupants. Don't spend so much money to support only one segment of the economy, especially a segment that pays so little to its employees.</p> <p>It's impractical for our family with all their gear, snacks, and lunch to take the train or bus to go skiing.</p>		4/29/2015
<p><u>I support improved transportation to/from Utah's ski resorts it would make my trips from NYC to Utah so much more efficient and fun!</u></p>		4/29/2015
<p>please, more backcountry access from resorts and less chairlifts. focus on the future which is human powered mountain travel.</p> <p>day and night uphill access on resorts is needed. charge \$ for it.</p>		4/29/2015
<p>I think a train is a safe and efficient way to carry people, gear, and supplies up and down the canyon. I think it would put out less emissions than busses and cars. I think that is would be a safe mode of transport and even create less risk for those driving the canyon. I think it would make for less traffic and that is always a plus. I think that many people would be thrilled to hear of a train and I know it would be very popular for locals and tourists alike. Just think, you could come all the way up to snowbird on the train from the airport!! I think that of all, the train is the most effective and eco smart solution to the transportation issues in the canyon. I hope that this counts for something because in all big cottonwood canyon is a dangerous canyon to drive. We don't need the emissions in our city, the pollution is bad enough. To build a train coming up the canyon would be so amazing! Eventually it might even be possible to connect the train all the way to Park City!</p> <p>Thank you!</p>		4/29/2015

Can u comment 5/1 or is 5/1 when u stop taking comments on the Blueprint? It's not explicit enough on your website.		4/29/2015
I support One Wasatch and everything it includes. Thank you!		4/29/2015
I want One Wasatch!!! I fully support it.		4/29/2015
I SUPPORT ONE WASATCH!!!		4/29/2015
I think a train is a safe and efficient way to carry people, gear, and supplies up and down the canyon. I think it would put out less emissions than busses and cars. To build a train coming up the canyon would be so amazing! Eventually it might even be possible to connect the train all the way to Park City! ☺		4/29/2015
Hello, I'm in favor of preserving Grizzly Gulch, Silver Fork, and all areas that are currently open to touring for backcountry touring. This SL Tribune article sums up my feeling on this subject quite well: <a href="http://www.sltrib.com/opinion/2446902-155/op-ed-before-expanding-ski-resorts-we">http://www.sltrib.com/opinion/2446902-155/op-ed-before-expanding-ski-resorts-we</a> The proximity to short and easy backcountry touring is one of the main reason we put our kids in Alta Ski Area kids programs and purchase season's passes at Alta. Without the options to backcountry ski in Grizzly Gulch and the areas between Brighton, Solitude and Alta, we'd be tempted to ski elsewhere. Thank you,		4/29/2015
I support the One Wasatch concept.		4/29/2015
I support One Wasatch in its endeavor to connect ski resorts and improve transportation between the ski resorts we have here in Utah.		4/29/2015
I am most familiar with the traffic problems associated with Little Cottonwood Canyon. I have converted to being an avid bus rider in the winter because there are numerous options available, but have to travel by car in the spring/summer/fall seasons when the ski bus is not running. Little Cottonwood is a narrow canyon with limited space. We have thousands of visitors to our beautiful recreational areas which could be enhanced and protected by a more comprehensive transit system. Personally I favor a train which takes up little actual space but can transport many people up and down the canyon. If it could also connect to the Brighton and Park City areas that would be a bonus for all concerned. The activity and amount of vehicles in the canyons will increase, we can either be pro active in promoting non-automobile traffic while providing a great and fun travel experience for visitors, or we can just keep complaining about the traffic, and the roads, and the number of people, and watch our beautiful mountain experience and environment gradually erode. I am in favor of a clean, environmentally friendly solution where people and nature can work together to provide access for the increasing number of people who want to be able to enjoy our mountain lifestyle for both winter and summer sports and sightseeing.		4/29/2015
It seems Mountain Accord Blueprint is only interested in widening the Road up Little Cottonwood Canyon or putting a Train up it. This is theft of land that belongs to the people. People use the lower Canyon and both these plans will destroy the Canyon!		4/29/2015
I definitely support one Wasatch and over the snow connectivity in Utah. It will make me that much more likely to go to Utah ski and will no doubt boost the economy. I cannot wait to see ONE Wasatch in action and to bring everyone I know!		4/29/2015
As Vice President of Wasatch Equality and speaking on behalf of the organization, we are disappointed in Mountain Accord's plans. How can this process that is supposed to decide the future of the Wasatch not take into account the snowboarding community? Snowboarders are an important part of the local community (as well as the tourist industry) that are severely affected by these plans! Snowboarders comprise approximately 40% of the snow-sliding population, and an even higher percentage of families or groups of skiers have a snowboarder among them. Currently, there are only three ski resorts in the world that do not allow snowboarding, and two of those are in the Wasatch. The Mountain Accord plans should seek to ensure that public use of the Wasatch is inclusive rather than exclusive. Under the proposed blueprint (which states that Alta's proposed expansion into Grizzly Gulch is "under consideration"), the Central Wasatch would have less terrain open for snowboarding in the future if Alta expands. Who would have thought that snowboarding terrain in the Wasatch could become more limited than it is today? Under these plans, the Wasatch would become even more exclusive than it currently is. How can the long-term plans for the future of the Wasatch disenfranchise such a large percentage of the snow-sliding public? Why would local families or businesses that contain snowboarders want to have their taxes pay for a transportation system that excludes them? Do we really want to let Alta expand into even more terrain and build a transportation network that services Alta's exclusionary policies? We feel like the 85% of National Forest land that Alta operates on is more than enough, and anything more is a land grab! Has Mountain Accord even considered that with Alta's expansion that the areas like Silver Fork Bowl, Wolverine Cirque, and Twin Lakes Pass could become by default skier-only sidecountry and backcountry? How will snowboarders access this terrain if the surrounding lift access is skier-only? How can you say this is a good plan for the future of the Wasatch? Also, please note that during this low-snow year, accessible terrain with adequate snow in upper Little Cottonwood Canyon was limited much of the year to the north-facing terrain already occupied by ski resorts and in Grizzly Gulch. So, if Alta is allowed to expand, the only place to backcountry snowboard and ski during low-snow years will no longer exist. Please take into account how Alta's proposed plans affect the snowboard community. ☺		4/29/2015
It is a really bad idea to ruin the earth and our future by building lift connections between resorts. It will hurt the animals, our air quality, it will make it so there's not much powder to ride. Please don't do it.		4/29/2015
I support ONE Wasatch and over-the-snow connectivity. I love skiing Utah and I would love to be able to ski with friends of all skill levels and enjoy all the terrain ONE wasatch has to offer! Thanks for your time,		4/29/2015
As a resident, and business owner, of Summit County I want to express my sincere dissatisfaction with the Mountain Accord. I urge Summit County to NOT invest any more money in the process. I've been following the Mountain Accord with great interest for some time. Conceptually, I admire the idea. However, the execution and inherent bias from stakeholders leaves me feeling that Mountain Accord is not in the best interest of Park City and Summit County.  1) Mountain Accord seems focused on prioritizing Wasatch Front issues and solutions, while asking for Summit County to pay for it. 2) The proposed solutions seem far too expensive and impractical to offer real value. For example, a multi billion dollar tunnel through the Wasatch mountains is a ludicrous pie in the sky idea. 3) Mountain Accord favors a strategy that effectively prevents and blocks One Wasatch. One Wasatch is of course favored by Ski Utah and is seen as a potentially significant boost for tourism, while also addressing movement across the Wasatch in a privately funded, minimally impactful manner.  I urge Summit County to no longer support Mountain Accord and stop wasting tax payer money on the process. Thank you in advance and please don't hesitate to contact me for any reason. ☺		4/29/2015
After reading the articles in today's Park Record, I'm convinced that it is important for Summit County leaders, as well as similar representatives from Park City, to remain an active part of the Mountain Accord planning process. All of the issues (environment, transportation, recreation, and the economy) included in this grand planning vision for future growth and development in the central Wasatch Mountains are related and relevant to the future of Summit Co. In my opinion, we, as citizens of this beautiful part of our country, should be placing the emphasis in future planning efforts on the environment and how to keep it healthy. Without clean air and water as a strong foundation future issues in transportation, recreation, and the economy will most certainly fall by the wayside. Please hang in there and keep Summit County involved. It will be worth the investment of the required finances, time, and energy.		4/29/2015
Hello, I am a Wasatch front resident (12 years) and I have experienced some of the highs and lows of snow totals, storm totals and skier totals. I love skiing, but haven't ventured up to the resorts for all but a couple of days for the past two years. Priorities and money are my two incentives to stay away. The Mountain Accord will cement the deal for me... I think the Mountain Accord is absolute bullsh\$. If you want to ski five resorts in the same day, why not just sit in a car in traffic up LCC on a powder day? I know that growth is inevitable along the Wasatch front, however managing that growth with more ski lifts, and a \$150.00 and increasing lift ticket is, in my opinion, making the sport of skiing even more inaccessible to the folks who live in this state. ***How would connectivity help the economy? More money...I suggest improving ski area access with train service so folks can actually get to the resorts on a day when skier numbers are high - and the resorts / infrastructure can make more money. ***How is connectivity fun? Sitting on a lift, then another lift, then another lift, to get to another resort. Go to France if you want Le Trois Valle. Come to Utah if you want fantastic snow and diverse ski options. ***Compete with what other region? Europe? Europe is Europe, Utah is Utah. I agree with Nato on the transportation front. There are significant improvements that need to be made before we can sustain higher numbers of skiers. Maybe that is how we need to be competing with other regions in the way of skier access. With fast trains, we could say to Colorado - "look at your I-70 junk show, we have a clean fast electric train" - right now everyone is in the same boat "powder day in the LCC parking lot, BCC is the same story" Thanks, and happy summer.		4/29/2015

I support ONE Wasatch and over-the-snow connectivity. Dear Committee, The Central Wasatch Mountains are an irreplaceable resource. The watershed is critical to the health of the Wasatch Front population and the Great Salt Lake. Any plans for development of this resource must be carefully and completely evaluated and considered. The Mountain Accord is a perfect place for this process to happen. In reviewing the System Group documents, I concur with the Environmental Groups analysis and support this being the primary driver. The Economic, Recreation and Transportation groups can only be successful if the resource is protected. Growth and development at the expense of the environment is short-sighted and will ultimately be counterproductive. I am opposed to a train going up the Cottonwood Canyons. It makes no sense at all in the narrow canyons. It will be vulnerable to avalanches, mud slides and rock and will degrade the hiking and skiing experiences. Energy efficient buses are much better. Resort skiing may have significant changes in store as we experience climate change. Expansion of the resorts is not a priority. These places are primarily public lands and should remain so. Extra fees and gates will remove an important recreational opportunity for families of limited means. I grew up picnicking at Storm Mountain. I have great memories of breakfasts there. Let's not lose site of the goal for economic gains for a few people. Thanks, PS. The comment form on your web page doesn't work. It says it cannot find the page when you hit the submit button. I hope others haven't had the same trouble being heard as I have.		4/29/2015 4/29/2015
I support ski area connectivity and think it would help Utah's economy only if it helps to reduce canyon traffic congestion. I like the tunnel idea to minimize impact on backcountry environment. I would like to voice my enthusiastic approval for the One Wasatch project. I have been skiing in the Wasatch resorts for the past 59 years and have been hearing rumors of such a plan for over 40 years. I have always dreamed of an over-the-snow connection between the resorts. It will create a European style ski experience that no one else on the North American continent can duplicate. I think it will be a home run for the Utah Ski Industry and a fabulous Marketing coup. It will enhance the ski experience, create jobs, and add measurably to the economy of Utah. <u>Leave my whole-hearted support to the One Wasatch effort. Dick Marriott</u>		4/29/2015 4/29/2015
Dear Mountain Accord committee: First, I support the process of mountain accord. It is a great leap of faith for me to think that good can come of this, but we are at a critical point and I hope we can move forward and protect our beautiful Wasatch Mountains. On transportation: I support mass transit from SLC to Park City I support East side bus service to connect to the canyons I support rapid bus service in the Cottonwood Canyons I do not support trains or tunnels as this does not solve the problems faced 4 season and multiple uses. I do support a single lane road widening. On Land trades: I support acquiring land held by the ski areas and other private property owners within the tri canyon area but I think land acquisition needs to be done carefully. I do not support any ski area expansion to ridge lines, and base area need to be carefully considered to not allow expansion of lift accessed skier access into new terrain. We need to make certain all values are considered and that land values are not inflated. The ski area industry is not growing, backcountry skiing is. Environment: watershed is of utmost importance. Not enough value can be placed on the quality of the experience. Overcrowding detracts from the experience, having areas built to handle more people can help other areas have less visitation. More research needs to be done identifying wildlife corridors before decisions can be made. Economics: ski areas and the money they bring in are a small part of our overall economy. Many people live and work here because of varied recreational experiences in the Wasatch mountains, and they contribute greatly to our economy, other travel here and hold conventions here because of the varied opportunities in the Wasatch mountains. Preserve the uniqueness of the Wasatch, this is what will help our economy. We need to identify properties that should be preserved, match them with a land conservancy organization and preserve into perpetuity. The preservation of land should not be tied to transportation, each should move forward independently. I believe the best way to preserve the Wasatch would use several entities including a National Monument designation, some Wilderness and some as Conservation Easements. Thank you for your time,		4/29/2015
No to trax little cotton wood canyon I believe that what is valuable and unique about the central Wasatch Cottonwood Canyons is that they contain ski areas in an essentially wilderness environment. There is a carrying capacity to the Cottonwood Canyons, mostly in terms of automobile travel traffic and areas given over to parking. I think the proposals that would increase development beyond current ski area base facilities should be avoided to preserve watershed protection and the long term value of the Cottonwood Canyons. Resort development can be accommodated in the Park City area as our ski Utah marketing efforts and preservation and conservation of the Cottonwood Canyons should be the overarching priorities for them. Transportation improvements should aim to reduce auto use by a program of incentives for public transit and disincentives for auto use in the Cottonwood Canyons and not as development inducing infrastructure. A dedicated lane shuttle system would serve our needs better than a billion dollar train system that would encourage additional development in the Cottonwoods. Thank you for undertaking this critical planning effort.		4/29/2015 4/29/2015
I support and love ONE Wasatch...just wish Sundance could get in on the mix. Hi - I support ONE Wasatch and over-the-snow connectivity because improved transportation would make my trip to the ski areas faster. <u>We do not need extra lanes or trains in cotton wood. Ski resorts are a private enterprise and should not be funded with public monies.</u>		4/29/2015 4/29/2015 4/30/2015
I do not support the interconnect of the cottonwoods and PC. I think the only viable transportation alternative is a better bus system and that system would need to support transport to dispersed use in the canyons and not just to the high traffic nodes. I want to see Grizzly Gulch included in the public/private land transfer.		4/30/2015
I support One wasatch for over the snow connectivity. I also think it will draw more guests to ski Utah. I support ONE Wasatch and over-the-snow connectivity. The resorts have an economical proposition for interconnectivity that does not depend on ONE DIME of taxpayer funding that is ready to go immediately. I am not in favor of committing BILLIONS of dollars of taxpayers funds for a light rail system when limiting parking and more frequent shuttle buses will work just as well - at much less cost. The Mountain Accord seems to be much more about political control and feeding BIG dollars to valley construction firms than anything else.		4/30/2015 4/30/2015
Dear Sirs I am a huge supporter of the ONE Wasatch project and generally improved connectivity between the various resorts in the Central Wasatch area. Such connectivity would emulate some of the great ski areas in Europe and create a huge competitive advantage over other North American ski areas as well as providing increased attraction for UK & European ski customers who tend to spend 1-2 weeks at a time on ski vacations. In Europe, despite such connectivity, individual resorts have managed to maintained their individual characteristics and attractions and the revenue sharing models must be highly developed No extra bus lanes or trains up LCC. Provide more parking so we can take a bus. Provide incentives to ride the bus or ride share by charging a toll or parking fee for vehicles with fewer than 3 occupants. Don't spend so much money to support only one segment of the economy, especially a segment that pays so little to its employees. <u>It's impractical for our family with all their gear, snacks, and lunch to take the train or bus to go skiing. ☹️</u>		4/30/2015 4/30/2015
Attached you will find the Salt Lake Chamber's official comment on the Mountain Accord Blueprint. Lane and I want to commend and thank each of you for your work in making this process a success. We also extend our sincere appreciation for Laynee, the project team and the management committee along with the hundreds of participants that have taken part in the progress thus far. Together your work to ensure that the Central Wasatch remain an asset for generations to come is extraordinary. This process has provided a needed forum for <u>long-term decisions and is an example of what make's Utah great: our ability to collaborate and compromise for the greater good.</u> Please register my vote of support for connecting the Wasatch ski resorts with ski lifts. thank you		4/30/2015
My name is Christopher Kautz. I am an active front-country and backcountry skier in the Wasatch. The ski areas are great. I do not need them to be larger or interconnected. Rather, I support a plan to deal proactively with traffic congestion and population growth in the valley and the Wasatch as a whole. Backcountry skiers are particularly interested in these issues because they negatively impact the backcountry experience. It is time to keep enough of the Wasatch wild so that the developed parts of it don't feel like a theme park! Regards,		4/30/2015
I support ONE Wasatch and over-the-snow connectivity. I support the official comment provided Wasatch Backcountry Alliance Certainly support the initiative and believe that the connectivity will be fantastic for Utah Skiing! For the love of god, No!		4/30/2015 4/30/2015 4/30/2015 4/30/2015
Please stop the development. We do not need a train or bus or plane or anything else. If you are going to use buses, which to me is the most logical way to go, but only if your going to make them free and close the canyons to auto traffic. I think this is the only solution and it should only be at peak tourist time, ie. Christmas, President Day Week and Spring Breaks and the buses should run every 10 min. Think about how Park City handled the Olympics before. No problems. I wish we could handle Sundance that well. Stop veiling the issue.		4/30/2015
Dear Sir or Madam, We are residents of Deer Valley and we are STRONG supporters of the One Wasatch concept. The linking of all the resorts would create a magnificent ski area and reduce pollution by discouraging long car journeys between resorts. Many skiers come to the area and choose to ski a different area each day, but this way they can ski to the different resorts rather than drive. It would be a world beater. We hope this goes ahead!		4/30/2015

Hi, I support ONE Wasatch and over-the-snow connectivity. Best,		4/30/2015
Open Big Cottonwood Canyon to Park City via Guardsman Pass year-round and realize the benefits of that road being used in both directions during peak traffic periods. Park City Municipal's provincialism should not affect this. This is the low cost/high benefit solution.		4/30/2015
It is my belief that the future of the central Wasatch needs to be one of balance for its many users. We have fine winter resorts as well as three beautiful wilderness areas. We have places for mountain-biking, hiking, camping, rock-climbing, ATV riding, and both backcountry and downhill skiing. This is a good balance considering how many people visit the Wasatch each year. I believe that the One Wasatch proposition is not in favour of this balance. Resorts need not be constantly expanding, and indeed cannot; the central Wasatch is a small area and indefinite expansion can only go so far before there is no more land to take. It must stop eventually, and I think the right time for that is now, while there are still places to go for everybody who loves the Wasatch.		4/30/2015
Hello, I am writing to let you know that I do not support the Mountain Accord proposal. There are too many unknowns and items that are not nailed down and I don't feel comfortable with it. Kind regards,		4/30/2015
I support connectivity of ski areas. America needs to learn from Europe! <u>And be even better!</u>		4/30/2015
<u>Improve transportation to Utah ski resorts, especially Lite Cottonwood Canyon</u>		4/30/2015
As I've pondered it the last few months, I've come to several conclusions: a) The wasatch is incredibly small, and incredibly beautiful b) Too much of it already is commercialized or private property		4/30/2015
I think that the land swaps need to be finalized for anything to be on the table. Unless all of Superior->Wolverine is protected from development, it is a bad plan. I think that anything other than minor base improvements to the ski areas should be prevented. <del>I think that we should look into dedicated bus lanes rather than use ICC further with a train.</del>		4/30/2015
<u>I support connecting the ski resorts. It would make our area much more attractive and profitable.</u>		4/30/2015
As a full time Utah resort skier - 8 years full time - well over a 1000 days, it would add variety to my skiing to decide where I was going to go to and then how I would return. I have had the Ski Utah pass three of the years, Snowbird-Alta pass two of the years, this year the Big Cottonwood pass, and an AltaBird pass. I have skied all 14 areas in Utah, and 10 of them in two of my Ski Utah pass days. I live at the mouth of Big Cottonwood Canyon. When I tell Easterners I ski Utah - they say - oh, Park City.. I say, yes but 6 other world class places within 30 minutes of my house, too.		4/30/2015
<del>Make ONE Wasatch become reality</del> I support resort connectivity and ONE Wasatch. Having skied extensively in Europe, I know that we can model the best of what their connected resorts have achieved. Connecting our Wasatch resorts would simplify access to their present footprints and responsibly open new terrain between them. <u>It would be a boon to the economy and would elevate the Wasatch experience for locals and visitors alike.</u>		4/30/2015
I have been a Utah resident for over two years, having recently moved here from Germany. I am an active duty Army officer who plans to remain in this beautiful state for the remainder of my career. One of the primary reasons for my and my family's decision to take the position here in Utah was the access to the outdoors. For such a large urban area to have wilderness so close, it is truly amazing. I live in Sandy and take my children hiking, backcountry skiing, and climbing on a regular basis. We enjoy long approaches and finding places where there are no crowds. I would like to see the Wasatch stay as it is...please don't allow the resorts to interconnect anymore than they already are. Please keep portions of the Wasatch wild so my children and their children will be able to explore and enjoy the backcountry for years to come. Thanks so much!		4/30/2015
Because im on my iPhone it will be brief: 1. Dont allow redirecting of ski lifts in silver, twin lakes, catherines, albin, or any other location. 2. Do not allow the building of new lifts, roads or tunnels except possibly avalanche proof roads, and the possibility of a train or tunnel as long as: A. It does require the use of forest service of open space land B. The big companies pay the majority or all of the bill. (If they pay the bill, then they deserve the profit for a certain amount of time, but not the fare regulations). The people of SLC have little or no use for a train. C. The train is required to stop at all the BC trail and summer trail access points. 3. Look further into the land swap with snowbird for adding structure at the bottom of the canyon.		4/30/2015
I am writing in support of the preservation of our precious backcountry skiing/riding areas in the Wasatch Range. I am in opposition to future connections between any of the canyons and ski resorts in the Wasatch Range. I have seen the backcountry use skyrocket over the years in this area as powder and serenity are a precious resource. I do not want to see what we have left get swallowed up by ski resorts and developers that threaten our resources and our access. I believe that our quality of life and open access to what is left of our backcountry terrain is more important than lining the pockets of wealthy investors.		4/30/2015
<u>Please don't let it become developed and ruin what makes it special. Protect the backcountry please!</u>		4/30/2015
The mountain rail systems are by far the best alternative. I have visited the Wasatch area for over 40 years. A system that is less impacted by weather is needed. Access is needed during weather events, so the Wasatch environment can be shared easily, rather than current methods. My support would be for a sophisticated light rail system or even commuter rail if possible. I also think some type of unique storage facilities could be available at these rail stations for ski or snowboard gear would be a way to reduce carry on baggage at these rail systems. Since many locals tend to frequent the same areas based on their ski passes and habits. This would off load the carry on problem and be a source of revenue for the system.		4/30/2015
I would like to go on record as supporting the Mountain Accord, and it's ongoing intent. While many are going to argue over the 4 different models proposed to improve the traffic problems we are seeing now, and get ahead of the future traffic snarls; the focus should remain on the fact that the Mountain Accord wants to "IMPROVE TRAFFIC". Growing up in Southern California, I have witnessed first hand the tremendous growth they went through in the 70's, 80' and 90's. I heard all the slow growth people (believing the "world is coming to an end" mantra supplied by that side) repeat how awful the environment is going to get, traffic is going to be a complete standstill, and their beautiful world is going to be destroyed by all the evil developers. The reality was much different. There are bad spots concerning traffic (at rush hours) still, but by and large, the traffic moves much smoother by multiples, today than back then. I had the opportunity to fly into LAX last weekend, and the air quality is wonderful! California instituted reforms/controls that Utah still insists not to; that could mitigate the inversions and summer smog. Developers did develop land, but did so in a responsible manner and the landscaping in Southern California neighborhoods is to be admired by the other 49 states (I know as I used to travel to all 50 states for 20 years) In conclusion, I want something to be accomplished by the Mountain Accord. I am actually one of those "Crazed" right wingers that thinks linking light rail between all three Wasatch Canyons, increasing bus hubs/routes is an amazing and progressive idea. It would be a World Class Destination Town bringing new visitor dollars to all who live and work here. Yes, our little ski town will be changed once again, but You Cannot Go Back.... I just wish some of the long time Parkites could understand that. If you did a mind shift and watched responsible growth implemented with progressive plans to ward off too much traffic; this little town could be envied by the entire world!!! Our Salt lake airport is thinking ahead by a decade or more. As we know they are completely rebuilding the airport to handle growth, traffic in and out; for the next 20-30 years of growth. Park City should follow their lead!		4/30/2015
Transportation is a major problem. Some days I decide to not go skiing because of the lack of parking and traffic. Please connect the resorts. This will reduce traffic. All the people from Park City can just ski to Alta instead of clogging up the road ways and taking up a parking spot with their empty spot at their condo in park city. This will be the coolest place on earth to ski. Let's do it! <u>A couple lifts will not make Utah a place that people won't want to visit hike and camp. The most popular campsite is right under the lift at Alta</u>		4/30/2015
As a ski area employee for many years, I have wondered how future development of the Cottonwoods would benefit the industry. It is imperative that a transportation solution be reached that will improve the quality of guest and employee experience. I hope that a plan can be implemented that incorporates an economic and environmental sustainable option. Development should be thoughtful and deliberate, but it should not come at the expense of timelines. I feel an analysis paralysis will derail the process and no change will take place. The models used by countries in Europe can have an application here in the US and input from civil planners from foreign agencies should be solicited.		4/30/2015

<p>I use the Wasatch range almost daily for trail running, hiking, biking, climbing, and animal/environmental observing. The mountains which I grew up in are a huge reason I graduated in Zoology. I love going into the mountains to watch ecology happen. Disrupting the fragile mountain ecosystem is something that cannot be done. Keep the mountain range what it is and let it evolve so that our kids and our kids kids can enjoy the range for what we remember it to be from when we were young.</p> <p>I plan on having my children grow up in those mountains like I did. I want them to have an appreciation for the world around them which is something that is learned only by being surrounded by the wilderness, the Wasatch range.</p>		4/30/2015
<p><u>Please don't turn these mountains into an amusement park.</u>          Having looked over the big plan my thoughts are:          1. Improve mass transit in the Salt Lake valley with TRAX and improved bus lines, include Park City and Heber in the improved transportation scheme.          2. In Big and Little Cottonwood Canyons use busses to shuttle day user and workers. Home owners could have a pass to use their vehicles.          3. Do not connect the canyons! Bigger isn't always better.          4. Keep all land and water protection proposals.          5. If overuse becomes a problem in the canyons, limit how many people are allowed on any given day. Access is a privilege not a right when the destruction of our land is a possibility.</p>		4/30/2015 4/30/2015
<p><u>Thanks for revisiting this comment.</u>          I believe if you make any further connections between the Cottonwood Canyons and the Wasatch Back you will ruin our environment and destroy wild life habitat.          Ten years ago I left Sandy and moved to Park City for clean air and the laid back lifestyle.          If you feel strongly about developing more recreational area look west to mountains between the SLC valley and Tooele.</p>		4/30/2015
<p><u>NO TO A TUNNEL AND OR TRAIN. Walking shoes yes.</u>          Thanks for allowing input. I am a daily skier at Brighton and Solitude. I have also skied Alta and Snowbird. I feel these two Canyons are quite different and so are the ski resorts in them. People who want to ski their particular resort can go up the canyon they prefer. There is no need in my opinion, for a tunnel or gondola to connect say Brighton with Alta.</p>		4/30/2015
<p><u>A good bus system should be adequate for future transportation in the Canyons, not a train or rail.</u>          Thank you for letting me comment. I am a new resident to Utah, I live in East Millcreek. I scanned most of the documents I could find. Please excuse my ignorance, if I missed one of the topics.</p> <ul style="list-style-type: none"> <li>• I did not see a definition of resident? Who do you serve? Is a resident someone who resides in the mountain community? county? surrounding counties? state? Does the plan address all populations of people; defined as residents of all social and economic strata?</li> <li>• I did not see the funding source of the "Annual Public investment" ? Does the funding plan expect city dwellers to pay for the lifestyle of mountain dwellers?</li> <li>• Winter activities, It's great to have revenue from ski tourism, but not at the expense of residents. Lift ticket pricing at Vail resorts is a premium, which will reduce usage from locals.</li> <li>• The "vision" for Winter usage is great. I like proposals for the ski terrain and transportation. Hopefully mass transit fares are not too much to the mountains.</li> <li>• I know your goal is to reduce traffic, air pollution, however my recent visits to Park City area and surrounding parks, I spent a lot of time looking for a parking space, several days I never found one and just kept driving. The documents use the term: "increase surface area" for parking. I would like to see in hot spots, parking garages. If they don't jive with the character of the locale / neighborhood, hide them, locate the parking garage underground.</li> <li>• Bathrooms, bathrooms, you can never have enough.</li> <li>• All bicycle routes should have proper signage for cyclist. Paved bicycle routes should not decay. Requires annual maintenance.</li> <li>• Does improved watershed mean additional storage if possible? Did not see discussion of water sport usage.</li> <li>• Can you work with the business community to increase cell phone coverage in dark areas? Provide more cell phone towers.</li> <li>• Did not see discussion of camping. What impact on campers?</li> </ul>		4/30/2015
<p>Please count me among hundreds, even thousands of Easterners who deplore the commercialization of the wilderness we value – and who, because we live so far away and visit only once or twice a year, comprise the silent majority. Probably, like me, the silent skiers and hikers in the East have immediate local concerns that grab their attention. When you hear from one of us, our input should count double.</p> <p>Please block plans to link these major resorts. Especially Little Cottonwood Canyon is too narrow to be 'scaled up.' Traffic cannot be managed – and plans for mass transit are so expensive they are unlikely to be realized. Since the 1980s I have skied Alta Snowbird. If plans to link these areas to Park City etc. go forward, I will transfer my loyalty to Big Sky.</p>		4/30/2015
<p><u>May Save our Canyons prevail against business interests.</u>  <u>Like I said we should use this as leverage to get the locals so they are working from home more (think about the big picture) Job creation, transportation etc. @</u></p> <p>There are plenty of lifts and roads encroaching on what's left of the wilderness in the heart of the Wasatch. The wild bits that remain have irreplaceable value that must be preserved. The resorts currently occupy most of the convenient and accessible high elevation north facing terrain in the central Wasatch. Areas like grizzly gulch and silver fork are already heavily used by nonmotorized user groups because there are already so few options for reliable and safe recreation in the winter and quiet backcountry outings in the summer. I've skied in the Wasatch backcountry since 1994 and I ride lifts there sometimes too. There are plenty of lifts but the backcountry has become quite crowded. Backcountry skiing is the fastest segment if growth in the ski industry and UT is justly famous for the BC terrain it offers. I sincerely hope that UT won't destroy the few wild lands that still exist in the central Wasatch. I want my young daughter to be able to enjoy the freedom of the hills. I hope the wild places so many of us love in the central Wasatch still exist when she's old enough to start earning her turns.</p>		4/30/2015 4/30/2015
<p>Please don't ruin the good thing we have going in the wasatch! I'm a back country skier, mtn biker, and rock climber. Having trains and chair lifts all over our wasatch wilderness would degrade what I love about Utah. Park city has plenty of room for tourism and growth. Leave the cottonwoods out of it. Heck, no one can ski the canyons resort in one day. Why connect to Brighton?</p>		4/30/2015
<p><u>Spent 2 seconds thinking about something other than money or expansion. There is more to life than having a huge mega resort to make more and more money.</u></p> <p>In public Mountain Accord meetings, SLC/Sandy/Alta promote a train from Sandy to Park City with massive tunnels through Big and Little Cottonwood Canyon, and massive new public development including a new 158,000 square foot Alta Town Center. Alta's 5 Hotels consume much of the \$1.5 million Alta town budget. Alta Hotel managers sit on the Alta Town Council.</p> <p>The Forest Service collects over a \$1 million a year in ski taxes, and canyon use taxes (camp sites). The ski resorts make a few million as well which is supported by 100's of tons of salt being used in the canyons.</p> <p>The State makes money on canyon use and tourism.          The County makes money on canyon use and tourism.          SLC, Sandy, Alta make money on canyon use and tourism.</p> <p>It seems above public land owners use the canyons for their purposes by writing regulations exclusively for their purposes and regulations to take private property for public recreation without paying just compensation.</p> <p>Regulations purportedly based on public health, welfare, safety are used to take private property for a public purpose without paying just compensation. But the canyon regulations are not science based nor are they based on a rational public health, welfare, or safety position.</p> <p>For decades, the public has been told the canyons are so fragile and delicate that one more cabin would tip the canyon into watershed chaos, yet now we hear a train tunnel protects the watershed and is good for water storage.</p> <p>It seems the 20% private canyon stake holder has been left out of the Mountain Accord process.</p> <p>What happened to the private property committee for 40 square miles (25,600 acres) of private land impacted by Mountain Accord?</p> <p>The talking point seems to be unlimited, massive public development protects the watershed, but a private cabin would damage the watershed.</p> <p>Can we get consistent, transparent, and collaborative talking points. Private land owners are currently being sued by parties on mountain accord over watershed protection of a few acres.</p> <p>Those parties promoting collaboration won't meet and actually sue parties seeking to collaborate.</p> <p>Would it be possible for the meetings to be recorded and posted on the website for future review and public consideration.</p> <p>Thank you for your public service on behalf of Mountain Accord,  <u>Private Canyon Land Owner - Big and Little Cottonwood Canyon</u></p>		4/30/2015
<p>I know that I am late in coming to learn about Mountain Accord, but I wish to register a comment before May 1. In spite of the negative letter to the editor in today's Tribune, your M A blueprint seems to be wanting to protect the watershed and wildlife of our area. I am always impressed by the character and work of the people who are supporting Mountain Accord, Peter Corroon and Skip Silloway and others I have met.</p> <p><u>Please count me in support of Mountain Accord!</u></p>		4/30/2015

<p>Connecting all areas via lifts should be the number 1 priority:  its easy  its good for business  its good for skiers  It doesn't impact those who want out of bounds  It will have minimal impact on environment  Alta/Snowbird already connected; Brighton/Solitude already connected; Canyons/PC will be connected; DV to PC/Canyons only requires dropping the rope  It will reduce and or balance traffic, especially up the Cottonwoods  It could be used all year round.</p>		4/30/2015
<p><u>Keep the Wasatch wild. I agree with the positions taken by the Alliance.</u>  The massive degradation that you propose by installing trains up both big and little Cottonwood canyon is reprehensible. Here is a list of reasons why that is a hugely bad idea:  1. Cost. Putting in trains will be billions of tax payers monies that only benefit contractors and ski resorts  2. Noise. The canyons are a place of "PEACE and QUIET".... or haven't you heard. Trains typically give off 110 to 120 decibels of noise... yea, great idea to preserve the peacefulness of the canyons. So never again will the canyons be a place where you can feel the nature, but you will forever hear the trains.... chug, chug, toot toot....  3. Will not achieve the necessary effect. Waiting for trains somewhere in Salt Lake valley, numerous stops and the same coming back would defeat almost all persons wanting to ski, as most of their day would be lost in riding the trains.  4. Massive destruction of the canyon for construction. Just how many trees, sides of hills and massive disruption to access for the years of construction would be needed. I bet you don't even have a clue.  Tunnels! What are you thinking.... even more construction (benefit to contractors and ski resorts), and even more massive expense! Shame on you.  More busses. Really, come on. Most of the time when I'm in the canyons, the busses have a very, very small ridership. Only early in the morning, and when the lifts close, do I see anything close to a reasonable number of people on the busses. But again; load up your car, drive your car, pollute SLC, park at a bus stop, unload your skis and into the buss, wait for a bus, ride bus to ski resort, arrive after several stops, then reverse the same process at day's end and typically spend 2 to 3 hours, where you can drive in less than 30 minutes. You must think people value their times at zero, and would rather be on a bus of sweaty skiers at the end of the day than home in 30 minutes. This is only a ploy by UTA to expand its evil reach. Did you know the head of UTA now makes \$511,000 per year! More than the president of the United States, Ralph Becker only makes \$157,000 per year. Please stop listening to the UTA, they are part of the problem!  Suggestion. Do what has worked so well in Millcreek. Add a toll station, charge 2-5 bucks to use the canyon. This will encourage multiple ridership, raise revenue, and decrease the traffic. KISS.... Keep It Simple Stupid.  Stop the crazy support of Vail, and Snowbird. Stop acting like you work for the ski resorts and the big contractors. Start acting like you actually have hiked to Red Pine lake, Maybird Gulch, Catherine's Pass and have sat on Twin Peaks (both of them).  Please listen to common sense, take a hike, sit by a lake and ask if a noisy expensive train, a parade of busses and tunnel has anything about preserving the canyons.... let alone the astronomical waste of taxpayer's money.</p>		4/30/2015 4/30/2015
<p>I will make my comments brief. I am an avid believer that the health of the people depends greatly on the health of the land, which is why I am greatly in favor of minimal to no new development in our natural landscapes, such as the beautiful mountains of Utah. The very thing that makes the mountains and landscapes so wonderful is their natural beauty, what they are untouched. That withers away with every new development. The priority should be in protecting what they are, preserving what they are, maintaining health and integrity of the lands, <u>and furthermore, the wildlife that inhabit them. This should be the number one priority.</u></p>		4/30/2015
<p>With tomorrows deadline for public comments, regarding the Mountain Accord, I offer the following personal opinion:  -Resist &amp; deny further canyon development....the loss of view corridors, pristine ridge lines, natural beauty with the environmental strains would be too much to sustain the asset we now enjoy. I think the resorts should be required to keep further development &amp; upgrading within the current boundaries. No new lifts, towers, access roads! I am very much opposed to swapping public land for private land. The now dead SkiLink issue is a perfect example of back door politics mixing with private special interests for the benefit of a few! Ski industry trends are changing &amp; growth is not increasing but morphing in other ski interests.  -NO to tunneling in either direction from Utah or Summit Counties to existing canyon resorts.....Rather improved public bus transportation &amp; more adequate parking facilities at canyon entrance or hubs throughout the valley  We have long been spoiled in our area where we can hop in a private vehicle &amp; be at the resorts inside of 30 minutes.....convenience for some will have to be balanced for the good of the whole.  -The purity of water is a huge concern. More people &amp; industry put our valuable &amp; needed resource at too big a risk for contamination.  -Real Estate interests carry far too much power &amp; sway in this state. The developers stand to gain much with the general public left to fund much &amp; fix the future problems development is bound to create.  -An existing trail system is in place &amp; should be maintained before further slicing of the assets—is it possible that there need be a limit to the number of daily users to our canyons? There is a finite amount of space, parking, width of trail, facilities, etc. We have seen pristine</p>		4/30/2015
<p><u>Tunnels are a ridiculous idea and self serving for the valley economic interests. These costs far exceed the presumed value. We need viable transportation options not these ill conceived falsely identified illogical alternatives.</u></p>		4/30/2015
<p>We need to reduce vehicle traffic in Park City. I would suggest creating a parking area similar to what e had during the olympics and bus into town OR create a gondola that would move people from these parking areas into PC. Adding a tunnel from the cottonwoods to PC seems counter intuitive given the already congested nature of driving in PC.  A gondola may be the best option to move people to the resorts from designated parking places.  Another option that I have seen used in the UK is "busways" They are used in Cambridge England and may have some applicability.</p>		4/30/2015
<p><del>My mind is racing with this a lot of thought. I hope that special interest groups do not dominate the conversation or solutions to our problems.</del>  Nefarious is a great word, it captures so much. An offense against moral law. In the instance of the Mtn. Accord the "early scoping" avoided or did not require a statement of Need and Purpose. It assumed the need was a transportation problem, and therefore the purpose would be to create a transportation system. From a more holistic perspective the Mtn. Accord should have solicited the various groups for their definition of "need".  We all recognize the population increase occurring in the urbanized area surrounding the Central Wasatch. However, what one does from a planning perspective varies from what one perceives their vested interest is. I believe an accurate and more sustainable statement of need would clearly state, "It is imperative to have a sustainable, functioning watershed, we call the Central Wasatch, and that it be protected to 2050 and beyond."  Protection must include a detailed analysis of what presently exists, and before any development, transportation, recreation and/or economic development be initiated what impact the proposed project would have on the "watershed." Instead, Mtn. Accord seems intent on building a transportation system, facilitating an expansion of the ski resorts and allowing for further development in the Central Wasatch, without knowing what impact it will have. If we adopted a statement of need similar to the one described above, then the statement of purpose could be crafted quite easily provided it answered the need question. If the Legacy Highway debacle taught us anything it was do your "need" analysis first, get agreement and then, before spending millions of dollars (or in the instance of Mtn. Accord, billions of dollars) have an agreed to purpose.</p>		4/30/2015
<p>support ONE Wasatch and over-the-snow connectivity.  Ski area connectivity would help Utah's economy and help Utah compete with other ski regions.</p>		4/30/2015
<p><u>Improved transportation would make my trip to the ski areas safer, faster, and more convenient</u></p>		4/30/2015
<p>This is the greatest idea to hit the Utah ski experience since the invention of the chair lift!!!  I overwhelmingly support the over the mountain connection of the seven ski resorts in the Cottonwood Canyons!!  From an avid skier position there is nothing that could compare to this experience anywhere else in the world. You could literally ski for days and never have to ski the same run twice.  The impact this would have on the economy of Utah would be phenomenal. 18,000 skiable acres would make Utah a skiers world destination! It would make Utah the top destination for skiers all over the world and have an impact on the Utah's economy that is probably hard to imagine and quantify. If there was any hesitation from skiers around the world to come to Utah this would illuminate that hesitation.</p>		4/30/2015
<p><del>I hope I'm able to convey my support for this over the mountain connection in words, readily. I would like to help suggest this in any way I can. Please don't hesitate to contact me if you would like any additional comments.</del>  Having grown up in these beautiful mountains and having enjoyed taking our kids hiking, skiing, snow shoeing, etc etc I'd like to encourage Mtn Accord to be very mindful of not disrupting this beauty by putting in trains, trax or tunnels anywhere in the Central Wasatch. We want to connect TO the mountains, not THRU the mountains!! Help keep our drinking water pristine and wonderful!  How about expanding the bus service tenfold! Zion NP and their shuttle program could serve as a brilliant model and it's right there under our nose! Tons of people, when surveyed recently, were in support of a fee for the canyons as well, similar to Millcreek.  Let's keep the beauty of this area for many, instead of lining the pockets of Corporations.  Thanks for all your efforts in helping all of us remember to celebrate this unique beauty.</p>		4/30/2015
<p>We are in full support of the One Wasatch concept.</p>		4/30/2015
<p>I support ONE wasatch and over the snow connectivity in utah! it would really boost utah's ski economy and make tourism more convenient and accessible. make it happen!</p>		4/30/2015
<p>love,  an avid utah skier</p>		4/30/2015
<p>I support ONE Wasatch and over-the-snow connectivity</p>		4/30/2015

<p>I am a big supporter of One Wasatch Connecting all areas via lifts should be the number 1 priority: its easy its good for business its good for skiers It doesn't really impact those who want out of bounds it will have minimal impact on environment Alta/Snowbird already connected; Brighton/Solitude already connected; Canyons/PC will be connected; DV to PC/Canyons only requires dropping the rope It will reduce and or balance traffic, especially up the Cottonwoods It could be used all year round.</p>		4/30/2015
<p>I am like a lot of people who left Utah for advanced education and came back for the recreational opportunities. Lots of people in my profession make more money than I do because they chose not to return. The loss of money is more than compensated when I make dawn patrol laps before work. 7/10 times those laps are done in Grizzly Gulch. I am never the only one in the parking lot. Any resort expansion invades heavily used backcountry space. And if you think the backcountry is limited to a few weirdos try parking at Mill D or Spruces or Bear Trap or White Pine or Grizzly Gulch after 9 am on any Saturday once the snow flies. Weirdos, I'll grant you but there are lot's of them. I've been backcountry skiing since the early 90's and have watched the explosion. There is no place like the Central Wasatch in the world. Montana, Wyoming and Idaho have more wilderness but lack the public access. The resorts are not hurting. Look at the money they are currently willing to throw around in lawsuits and acquisitions. They don't need an interconnect and more lifts, with a few exceptions, removes an irreplaceable resource. I will add that in looking at prices to take my family of 6 skiing I'm thinking of buying everyone an avalanche beacon. I would support land swaps with resorts in order to permanently protect places like Grizzly Gulch which is the last easily human powered accessible north facing area above 9000 feet left in the Central Wasatch. I know some of it is private land and some of it public. I support property owners rights but if Alta wants to expand there let them give up public Forest Service land on which they currently operate. How about Albion Basin? I would support a lift expansion in Honeycomb Canyon for Solitude providing it does not actually extend the range that inbound skiers are able to go. No opening up Silver Fork to Solitude skiers. In other words the lift will not begin lower than the Honeycomb Return lift thus effectively opening up the East Bowl of Silver Fork and west side of lower Silver Fork to side country access. Look at where the avalanche deaths are increasing and you'll see it's mostly coming from people leaving resorts and getting in trouble. The rail proposal, especially the idea of tunnel, I find dangerously amusing. A proposal to build a really expensive transport system to benefit a couple corporations? I would laugh if I didn't worry it would actually happen. Expand the bus service! Currently to get a bus to Alta without 2 exchanges or driving to the canyons and leaving my car at a the park and rides I have to get my family to the stop at 7:30. No buses currently stop at trailheads. We already have most the infrastructure, let's use it. Interconnect has been a dream for the ski companies for ever. NO! If Park City and Deer Valley want to drop their ropes I say go for it. Sol-Bright and the lift between Alta and Snowbirds Mineral Basin are fine. Hardly anyone uses them. New lifts or gondolas going over ridge lines to connect the canyons is a terrible idea. HATE HATE HATE this idea in any form. OneWasatch, Ski Link, Interconnect or whatever you want to call it, it's a terrible idea.</p>		4/30/2015
<p>This project appears to promote a future for the wasatch that benefits all Utah residents not just the greed of a few already wealthy individuals. I hope I am correct in this assertion because, as you state on your website, this place is unique to the world. I grew up in MD where special interests and development have completely ruined the area. People there don't lead active, healthy lives because they have little to no opportunity to go outside on public lands. As a backcountry skier I am very concerned about your attempt to "incentivize" the public transportation. It sounds like I am going to be punished for wanting to decide when and where I can ski. Also if you remove all private car access to the canyon I am certain that the commute up the canyon will become horrendously slow and inconvenient (like most public transportation in this city). If this is the case I may quit the sport and stop buying equipment from local businesses. I hope my opinions help.</p>		4/30/2015
<p>I am surprised at the lack of information that has been put out to the public about your "public comment period" I live in Utah County and just found out about the AFCanyon vision. It seems that a few are trying to shove this down our throats. Apparently you are all in this together calling each step of your Vision "Project Areas". Your deadline for public comment is tomorrow and most people in Utah County don't even know what you are doing. It states in your Vision that your project area only covers Salt Lake, Wasatch and Summit Counties but it will effect surrounding areas. Since most of the Wasatch Range is US National Forest, why are a few locals with their best interest at hand making decisions that effect PUBLIC lands? This is very disturbing to me. Maybe you should start making more long range plans and include your entire population. We all live here, have to put up with the different seasons and all depend on our precious water source. I think the resorts need to stop being catered to and you should actually</p>		4/30/2015
<p><del>After reviewing the proposal, the overall plan is very well thought out and realistic to the issues concerning the Canyons. As an employee of Snowbird, I appreciate the ideas for improved transportation up Big and Little Cottonwood Canyons. Reviewing the options, there seem to be issues with all the options. But, in a perfect word, The Light Rail seems like a great idea. Hopefully this type of transportation would hold a higher volume of riders than would a bus. Whatever the solution is to the transportation issue, having the ability to hold a high volume of riders with less busses, gondolas, etc. (or whatever mode of transportation) may have a big impact. I have taken the UTA Bus up to work in the mornings and they fill up very quickly. On the mornings where it has snowed significantly; it is not rare to have to miss the intended bus due to it already being full and then wait for the next bus behind it. So, part of me is skeptical of the bus service. People take it already now, but, the capacity is very limited at certain times, when it is in the winter months. So, finding a transportation system that can hold a large amount of people would be key. Some of the options that are listed seem to have a limited capacity.</del> Looking forward to the results of this project. This is exciting for the people who live here are also for the visitors. Having this kind of integrated system between city and outdoor environment will elevate Salt Lake's appeal.</p>		4/30/2015
<p>I am all for, 100% connecting the resorts. I just think there would be more variety in a day, fun ventures our family and friends and less travel time in a car! It's all part of a new type of adventure!</p>		4/30/2015
<p>I attended a meeting in Alta where charts where presented. In talking with the Mayor of Alta and others, there was a major sense of confusion about the future of the Gizly Gulch area. As a major property owner in this area, I believe that further study and clarification needs to take place in this very important area. I would strong oppose a ski lift to the top of Twin Peaks.</p>		4/30/2015
<p>I have been traveling to the Wasatch every year for about 10yrs. Prior to that I went to CO or WY. The most important factor in choosing my destination is backcountry terrain. The access to backcountry terrain in the Wasatch is second to none. My opinion is that you should protect and preserve it. The terrain is fantastic but is already under a lot of pressure. At times this year the backcountry was so tracked out that it looked like a resort. I'm aware that it was a bad snow year, but the backcountry user group is expanding, and reducing the amount of backcountry terrain only compounds the problem. I love visiting UT, but my ski partners (4 of us) have already had thoughts about going somewhere less crowded. Although we visit to backcountry ski, we typically spend at least 2 days resort skiing and maybe more if avalanche conditions are above moderate. That's money that will be spent in WY, British Columbia and other less developed places. Choose wisely...once its gone, its gone for good. Protect what makes UT special, or folks like me will look elsewhere. Thank you for your time.</p>		4/30/2015
<p>NO TUNNELS!! Preserve backcountry skiing areas!</p>		4/30/2015
<p>I agree with the Wasatch Backcountry Alliance's stance. Please do not allow development in our backcountry areas. They are worth more than gold... and the damage will far outweigh the benefits.</p>		4/30/2015
<p>How many train tracks have been laid and then pulled up. We definitely do not need another attempt to link Salt Lake Valley to Park City. This would be an environmental disaster.</p>		4/30/2015

<p>In visiting Alta, summer and winter are precious times. Both residents and visitors enjoy recreation there including just experiencing natural alpine beauty. This beauty consists of the watershed, plus the flora and fauna it supports yet they are all threatened by tunneling through to Big Cottonwood. Such a tunnel would cause huge destruction in both natural beauty viewed and the "natural experience" of all people, native flora and wildlife. Boring a tunnel and constructing a transportation corridor up Little Cottonwood Canyon, in addition to U-210, will disturb huge amounts of soil, and unearth old mining shafts leaching toxic chemicals and minerals into culinary ground water. Earthquakes, such as the one Nepal just experienced are a real danger along the Wasatch. We don't need an EIS to know a train/tunnel would likely be destroyed when we already earthquake faults exist and are will move, geologically speaking.</p> <p>Gone are the days when abundant water was a certainty. Both water quantity and quality are uncertain. Building a large-scale development, be it a transportation network, and/or business development in Alta, is unwise. Potential for decades long mega-droughts suggests planning should NOT devastate the terrain with a large-scale transportation system, nor encourage unrestricted numbers of visit up Little Cottonwood Canyon, or even encourage greater developments which require new and additional water resources. Water which is currently stored primarily in snow pack, and then as it melts, flows down stream beds or percolates through the rocks and soils into underground aquifers and reservoirs to become culinary water for the immediate area and down canyon, will likely decline in overall quantity. Drought years, or low snow years like 2014-2015 reminds us the quantity of water available is not constant, yet the demand for water will be either constant, but more likely increase, with the projected population growth in the Salt Lake Valley and the Wasatch back. Similarly if Alta were to grow at only 3% per year, it too would more than double in 23 years. Snowmelt water, percolating through the rocks could easily end in a different canyon than where the snow fell, reducing water quantity unpredictability and possibly quality in both canyons. Demands for water from residents will increase as populations increase and as global climate changes result in hotter, drier seasons. An ever-increasing deluge of people to Alta will destroy its natural beauty, pressuring native plants and wildlife to move to more remote areas to avoid people and find water. Water is a natural resource, but, unlike manna from heaven, can not be reliably counted on to provide just the exact quantity and quality needed by each and every individual and family. Planning for unspecified, non-quantified Town growth, plus similar growth in the number of visitors to Alta is illogical, unwise and will lead not only to economic ruin, but also ecological devastation.</p> <p>Alta, for itself, must act. Alta must decide the maximum number of residents it wants, the maximum number of hotels/condos beds, decide the number of desired winter visitors, and what the cap is on the number of summer visitors. This understanding of what Alta residents wants must be done BEFORE irretrievable damage occurs from over-use of the land, water and alpine environs. Alta must do this for itself, before the Mountain Accord process presumes to speak for Alta.</p>		4/30/2015
<p>Thank you to the Mountain Accord for putting in the effort to plan for the future of the Wasatch Mountains. I bought my home 17 years ago based on its proximity to Big &amp; Little Cottonwood Canyons and it has worked out well. Between my wife and I we average multiple weekly trips up the canyons across skiing, trail running, mountain biking, snowshoeing and occasionally camping. The Wasatch once seemed so large to me and while it now seems so much smaller it has only grown in importance. I began backcountry skiing over 20 years ago and the Wasatch backcountry is in desperate need of planning and protection.</p> <p>My reasons for leaving the ski resorts and taking to the backcountry are common: rising lift ticket prices, getting some exercise and spending some quiet and peaceful time in the mountains. I've watch many areas that used to be backcountry get annexed by the resorts only to have those resorts increasingly deny access to the public to those areas. (Alta pre-season and current Snowbird uphill policies)</p> <p>My educational background is in economics and my view of the current state of the ski industry is that they (the resorts) are fighting over a stagnating or even shrinking pie of # of skier days. By increasing their acreage, they hope to attract skiers from their competition to their resort. Increasing acreage means new lifts, new snowmaking and additional personnel which all result in higher lift ticket prices further slowing/shrinking the number of skier days. There are plenty of studies representing that the current direction of the ski industry is not sustainable, so I'll leave the details to them.</p> <p>The resorts already have not only the highest quality areas in terms of snowfall and slopes, but I believe they have far too much acreage already. I know any proposals to shrink them will seem far fetched, but that is how I view Alta's desire to expand into Grizzly Gulch and Solitude's proposed expansion into Silver Fork. The backcountry is exploding in popularity, much of it driven by the short-sightedness of the ski industry.</p> <p>Please stop any further ski resort expansion. Implement policies that resorts that are on public lands must allow greater public access. In the long run, I believe it will be the best thing for the general public, and even for the ski resorts, who often seem to be their own worst</p>		4/30/2015
<p><u>Basically I would like to have no more development better transport for people and more places to be in the mountains with dogs.</u></p> <p>ve attended the public forums and discussion group and I have two main concerns. I was going to use the web site questionnaire but it was not accessible.</p> <p>1) Park City city/county reps must stay actively involved in the process. The idea that we should withdraw from the process is penny-wise and pound-foolish. This development process will proceed with or without us. If we pull out, then our concerns and priorities will not be considered in the ultimate decisions. Then what will we do - object after the fact? Sit around and complain that we don't like the direction the development will take? Any refusal to fully participate is going to backfire on us. The population and traffic will continue to increase whether we plan for it or not. We should guide the effort in ways that make sense to locals - trying to "stop" the effort by turning our backs on it is futile.</p> <p>2) The amount of investment in connecting the PC to LCL/BCL via a vehicle tunnel is insanely "over the top" (no pun intended). It still is not clear to me as a 10-year full-time resident of Park City, PCMR employee, and recreational (in-bounds) skier what is expected to be achieved by such a broad capital investment route.</p> <p>Who is actually going to go through this tunnel? Not folks coming from the greater SLC area - they'd almost certainly opt for driving (at 70 mph) the 5 1/2 miles (maximum) distance from the mouth of the Cottonwoods via Interstate 215 and then 15 1/2 miles up 80 to Kimball Jct into PC rather than a 2-lane curving slow drive for 15 miles up Route 210 or 190 and then a tunnel (which should have a toll attached to it?) in order to get to a two lane steep town road into Deer Valley or Park City (Canyons Resort visitors would be much more likely to just go 80-to-224). As long as traffic from Kimball Junction into PC/DV is addressed (with the full recognition that whether we like it or not, an increase in capacity on 224 or a truly effective bulk public transit system needs to be added on this route), 80 is always going to carry the vast bulk of traffic. Since 190/210 are already very limited in capacity, it is not realistic to think that these roads can handle the amount of increased traffic that would need to justify the expense of building a tunnel, and these roads are not going to be widened.</p> <p>So, that leaves local people going PC-to-Cottonwoods - what are the traffic demands and actual numbers of people making this trek each year, and when are they traveling? Aren't we talking about the vast majority being a relatively small number of skiers/boarders during the winter, and an even smaller number in the summer? Is this what we're trying to remove from Routes 224/80/215? This drive is 50 minutes, 45 miles each way, contributing carbon all the way, yet, it's a fairly mindless and simple drive. Wouldn't it be more conservative and cost-effective for this small number of people to have a skier/boarder/visitor transport system (gondola, lift, over-snow transport) between PC and the top of the Cottonwoods, with short duration (electric powered) shuttles to the resorts? Charge \$10 each way or \$15 round trip per person, with group/midweek discounts. All we're doing is traipsing over the ridge to enjoy the other side for a day - it should be low-impact environmentally and less hassle than driving 90 miles in one day and dealing with parking lot settings. The construction of such a transport system would be minimal compared to blasting a tunnel, could be completed in one off-season, and would provide immediate benefit to the Cottonwoods resorts. As Vail creates the inter-resort gondola this summer, the "fear and loathing" of a gondola construction process likely will dissipate - Europe is full of these, and they're wonderful! The PC side efforts could then be focused on the 224 route improvements, which are inevitable regardless of what is done for a PC-Cottonwoods connect.</p>		4/30/2015 4/30/2015
<p>We are not in support of Mtn Accord building/developing/creating any tunnels into Park City for transportation needs.</p> <p>The cost amount is ridiculous and does not reflect the needs of the PC community nor show much intelligence for the ROI of such an endeavor.</p> <p><u>Please mark us as Not In Support of the Mtn Accord direction!</u></p>		4/30/2015
<p>I'm totally opposed to your ill thought out, yet another developer greed program</p> <p><u>Come on, this is a transportation plan suited for a totally different environment.</u></p>		4/30/2015
<p>I wanted to strongly voice my opposition to the Mountain Accord proposal in relation to the following quote:</p> <p>"Light rail transit (LRT) in exclusive guideway up Little Cottonwood Canyon to the Park City area, including tunnel connections between Alta, Big Cottonwood Canyon and Park City."</p> <p><u>I am opposed to any connect to RCC and/or PC - especially by rail and/or aerial tram. We need to preserve the uniqueness of the LCC as it is and connecting the three/two would be a travesty.</u></p>		4/30/2015
<p>I support One Wasatch and would like to see an improved connection and transportation between the resorts. Thank you.</p> <p><u>It would be a travesty to put a train up Little Cottonwood Canyon. Building a train would do irreparable damage to the environment and beauty of the canyon. The canyon does not belong to the ski resorts, the ski tourists or the local skiers. It belongs to the everyday Utahn. If something must be done to upgrade the ski experience and deal with existing issues, a gondola system connecting the resorts should be carefully studied as a preferable alternative. It would do far less damage to the environment and not block access to Little Cottonwood or other canyons for any Utahn. As a state, we simply cannot afford to spend billions to build a train up the canyon. Some people say that this money will come from the federal government. If the federal government gives money for this project, they will consider that their obligation to help Utah is met. If we can get billions, that money should be used to upgrade, repair or expand the transportation and road system throughout the Salt Lake valley, particularly on the west side. If we had any "extra" money, it should certainly go towards education or other top priorities that would benefit many more of our citizens. Putting a train up Little Cottonwood Canyon is a terrible idea, designed to benefit just a few of the wealthiest among us at the expense of other pressing needs. Ravaging this spectacular canyon to benefit this small segment of our population is not only indefensible but inexcusable.</u></p>		4/30/2015 4/30/2015
<p>I appreciate the opportunity to submit a few comments regarding the Mountain Accord Blueprint.</p> <p>I am encouraged by the transparency of this process and the overall state of the blueprint. As a life-long resident of the Wasatch Front and now a father, I am a very vested stakeholder in our mountains. For decades I have hiked, run, climbed, and explored the terrain just east of home and, as I have too suddenly arrived at middle-age, I realize this place helps define me. I and my family are very supportive of efforts to increase protection of the Central Wasatch over increased development in these areas. I want my children to have the same opportunities for experiencing solitude so close to an urban core as I have. I also think the plants and animals that have been here much longer than we have deserve significant consideration as we decide their future. Overall, I throw my support behind Save Our Canyon's <u>seat at the table.</u></p>		4/30/2015

<p>1.) I do not support an interconnection between BCC, ICC and Park City, or any combination thereof, including tunnels. The resulting direct, cumulative and indirect impacts to dispersed recreational experiences and the environment are potentially significant, while economic costs and benefits to the public are unknown.</p> <p>2.) I strongly support the development of a purpose and need statement that balances the "Systems" Mountain Accord is addressing, without giving undue bias to any one element or proposal. Only then can an environmental analysis that considers an appropriate range of alternatives be conducted. We believe this range includes measures designed to provide reliable, low-cost, low impact transportation to both dispersed and developed recreational nodes in the Canyons.</p> <p>3.) I support the general outline of the Cottonwood Canyon Task Force proposal in concept, with several important considerations:</p> <p>*Private land transfers and/or preservation actions must include Grizzly Gulch.</p> <p>*Land swaps should be pursued immediately, as a precursor to future development. Lands would be placed into a designation providing a higher level of protection than under the current forest plan.</p> <p>*All ski areas expanding their footprint on public land would establish an uphill route inside their permit boundary, and will consider boundary restrictions. These efforts will help minimize the impacts of expansion on backcountry terrain and compensate for lost access.</p> <p>*Alignment of the new lift in Honeycomb Canyon will not drop below the elevation of the current lift and will not terminate in the Silver Fork drainage.</p> <p>*I support a bus-based transportation system as outlined in our proposed Transportation Alternative presented in Appendix C.</p>		4/30/2015
<p><b>Problem Statement</b> The growth of population is a pressing matter that needs to be planned for in the state of Utah. The Mountain Accord Blueprint seeks to address this issue, but it's priorities must be changed. According to the Mountain Accord Blueprint, by 2040 the population will increase by half a million people and annual visitors to the Wasatch Mountains will increase by almost 2 million. Our community in Salt Lake City, and in our Wasatch Mountains will feel the ramifications of growth and the ramifications of our own actions, in response to growth. A constant theme of the Blueprint is the increase of infrastructure and transportation so that Utah can be competitive economically. Little attention is given to the protection of our delicate watershed and our delicate mountain ecosystems. Part of the Blueprint seeks to boost environmental protection, but not enough attention is paid here. Environmental protection should be number one on the list, because degradation of our mountains will lead to a decline in visitors and economic gains. This is especially threatening because of rising global temperatures and dryer climates; this last winter was the hottest winter since records began.</p> <p><b>Proposed Solution</b> The Blueprint needs to be changed so that environmental protection is priority number one. The Wasatch Mountains have a natural carrying capacity that we shouldn't exceed. Mountain Accord seeks to protect additional lands, along the Wasatch Front and Back, and to broaden watershed protections. This is a great start, but we need to take this one step further. Climate change looms in all of our back yards and threatens the lifestyles of everyone around the Wasatch Mountains. For this reason I propose that the blueprint commits to researching, installing, and using sustainable energies within the Wasatch Mountains by 2040.</p> <p>Local Salt Lake City residents would, almost, all agree that transportation up to the canyons needs to be improved. Building a light rail would have an impact on our watershed and mountain ecosystems at first, however, in the long-term this would be beneficial for our valley. It is imperative that cars are taken off the road. Public transit should be improved and expanded. Along with better public transit there needs to be incentives for using public transit. Using a system of disincentives for driving, like paid parking and less parking would also be an effective option. There are unnecessary expansions in the Blueprint that need to be taken out, like the proposed tunneling from Little Cottonwood Canyon to Big Cottonwood Canyon, to Park City. Expansion of transit should be for the local communities that will use them year round, not for the tourist that visits once a year.</p> <p>Continual commercialization of the Wasatch is not the answer to our expanding population. The Blueprint seeks to improve and connect the trail network, which would include new trails. The Wasatch Mountains should be left natural. My fellow hikers and skiers agree that exploring the mountains have been some of the most memorable times. I will always remember the time I got to the top of Mt. Superior and a storm rolled in. It was one of the scariest times of my life, and one of the most rewarding. I didn't need a trail cut out for me to get up there. Like I've said before, a majority of this plan is to increase tourism, why not make a plan to take care of the people that actually use these beautiful mountains?</p> <p><b>Major Obstacles</b> There are many investors in this project, many of which are the resorts that push for more and more commercialization. Of course they want more transportation, land to develop, and easier access to all they have to offer, but we cannot put the people, that call this place their home, in jeopardy for a few extra bucks. The ski industry brings in a lot of money for Utah and provides a lot of jobs, so it is easy to say that we should expand and build infrastructure for their sake. But many of our livelihoods depend upon these mountains. To increase public transit on the scale proposed would cost the state a fortune. Finding this kind of money would be no easy feat and would require many investors. These investors would need to see a reason to invest and that their money would be returned. Making economic growth last on the list of the new blueprint would admittedly look questionable to some. It may be hard to convince some to invest in a sustainable Utah. Not everyone will support this change in priorities, but the local residents of Salt Lake, and Utah, would benefit. This would be a major step in combatting climate change and a major win for local Utah residents.</p>		4/30/2015
<p><b>If you think this is a good idea, you're wrong. Honestly, the resorts are doing fine as it is and to close more space in the wasatch backcountry would be nuts.</b></p> <p>I am opposed to more development in our canyons. The transportation problems could be solved very quickly and affordably by using buses to all the resorts. There is no reason to spend millions of dollars digging tunnels through all our mountains to connect the resorts.</p>		4/30/2015
<p><b>Environment</b></p> <p>A. The Mountain Accord Process figure on page shows how previous studies flow into the ideal system – however it does not show what happens if needed data does not exist or further data is needed. The environmental group has been demanding more pertinent baseline data in order to make important, long lasting decisions for the Wasatch Mountains, however a blueprint with definitive statements regarding transportation alternatives is still issued without that important information. Too many processes have relied too heavily on the NEPA process to vet all the data, but NEPA documents often fall very short on adequate analyses of cumulative impacts.</p> <p>B. Additionally, the blueprint needs an explanation of how the alternatives will be chosen and how the NEPA will be structured to assure the public that all possible alternatives are getting adequately analyzed.</p> <p>C. The statement 'identify priorities and develop a program for environmental restoration program' assumes it is known where environmental restoration needs and does not need to happen already. It doesn't appear as this is the case in speaking with the environmental group. It would make better ecological sense to identify high priority and high quality areas that are in tact, healthy and pristine vegetation communities and make sure those are protected, then identify areas that need restoration to potentially better connect high quality, pristine areas for wildlife and environmental preservation.</p> <p><b>Economics</b></p> <p>A. There have been and continue to be many broad statements such as 'preserve land, protect watersheds and water resources, monitor environmental health, implement an environmental restoration and/or enhancement program', and equally broad statements about finding funding mechanisms for these needs. There needs to be an economic analysis of these land management actions of preserving, protecting, monitoring and restoration and should be included in the economics section of the NEPA document. This could be done through analyses and valuations of Ecosystem Services and potential subsequent damages to a functional ecosystem. It could also be accomplished by having much greater detail on what exactly 'preserve, protect, monitor, enhance and restore' mean in terms of where each of these would happen and how, then put a valuation on a number of relatively large scale projects every year. These management actions are also economic drivers.</p> <p>B. There needs to be a valuation of the lands the ski areas are 'giving up' as to their underlying potential for development vs what they are receiving. Are the lands they are giving up truly develop-able and to what degree? That information should be made available to the public.</p> <p><b>Transportation</b> In the Cottonwood Canyons scenario on page 2, it implies that if the Ski Areas make the land swap, " a mountain rail system which would provide reliable, fast, unique and marketable transit to the resorts and to major dispersed recreation access points." First, this implies the mountain rail system would be built, even though that alternative has not yet been fully vetted through the NEPA process or other necessary land management decisions. It implies we have already backed ourselves into a corner promising the Ski Areas something that may not come to be. Does this mean that if the rail system proposal were dropped, we are back to the drawing board regarding land swaps with the ski areas?</p> <p><b>Planning</b> Also in the Cottonwood Canyons scenario (same page), #5 states that the ski area propose and benefit from ~ 416 acres in American Fork Canyon. There are many issues with this statement</p> <ol style="list-style-type: none"> <li>1) This is too broad as to what could happen here, even though the area of American Fork Canyon is not in the boundaries of the Mountain Accord.</li> <li>2) This is the type of proposal flies in the face of the purpose of the Mountain Accord process– the process is to avoid doing things piecemeal in our Wasatch Mountains.</li> <li>3) It makes an underlying statement that anything outside the Mountain Accord Boundary doesn't affect the Wasatch Mountains, which is a dire misunderstanding.</li> <li>4) Unless the Mountain Accord wishes to expand its planning boundaries, this type of proposal should be off limits at this time.</li> </ol> <p>Further, the multitude of mining claims/mineral rights(?) in the midst of the Canyons leaves too many unknown possibilities in terms of building, private ownership, and land uses to be able to intelligently move forward. It would be good to know 1) whether those lands are develop-able 2) whether the owners of the mining claims been contacted or not and/or whether they had any input (or at least a percentage of the owners that have been contacted).</p> <p><b>Side note:</b> The ad for Staker Parsons at the end of the Wasatch Choices 2040 publication is distasteful. The notation of thanks at the beginning of the document should have sufficed, as Staker Parsons now appears to have a very strong conflict of interest.</p>		4/30/2015

<p>A transportation only Gondola or Aerial Tram with stops in the towns of Park City, Brighton and Alta; combined with additional bus service to the Cottonwoods (including the dedicated bus lane in little cottonwood canyon), would best serve the needs of accommodating growing traffic into the canyons while mitigating environmental impacts and preserving the current balanced recreational opportunities in the central Wasatch Mtns.</p> <p>Limiting stops to the towns of Park City, Brighton and Alta without opening ski runs between the resorts would meet the transportation needs of inter-canyon travelers while preserving the backcountry recreational opportunities for skiers, snowmobilers, helicopter skiers, snowcat skiers and snow shoeing hikers.</p> <p>Going over the mountains rather than through them (i.e. like in tunnels) provides a very scenic ride through the heart of the Wasatch that displays all of Utah's great winter recreational activities in one ride. A gondola also allows vacationing skiers in the cottonwoods to travel to Park City for shopping and dining without having to ski their way over to Park City and then back to the Cottonwoods. A gondola makes it easier to carry purchases back to their hotels in the Cottonwoods (impractical to do while skiing). A gondola is preferred to an Aerial Tram as it allows riders to sit during the ride and is continuously picking up riders so they don't have a significant wait time for a ride.</p>		4/30/2015
<p>I have grown up part of my life in Utah, I was educated in Utah, I own a home in Park City and I have been an avid skier in Utah for three decades. I fully support improved transportation and connectivity between the resorts. I support ONE Wasatch and over-the-snow connectivity and I support improved transportation to and from Utah's ski resorts.</p> <p>I lived in Europe for three years and I skied frequently in the Alps and I saw what an amazing thing their system was and what it did for both people who lived there and people who visited there. This would be amazing for Utah residents and visitors by making things go faster, more convenient, safer, and in many ways more enjoyable.</p> <p>Let's do this!!!</p>		4/30/2015
<p>Our wild places are precious, limited, holy and rare and must be preserved in as close to their original form as possible so as to ensure that we and all future generations can continue to experience the joy of spiritual, emotional and physical renewal received from spending time in such places of pristine beauty. Limit the resorts to their present "footprint"; there is more than adequate space existing for the developed areas; any additional development would only line the pockets of a few, while compromising what is, again, holy and precious to thousands -- ultimately tens or hundreds of thousands -- of others. Thank you.</p>		4/30/2015
<p>Why have a train system?  It's not flexible.  It can't be detoured.  It can't go over uneven tracks.  I opt for a wider roadway up the canyons that will allow both cyclists and drivers not fear one another. Let's add a few more parking lots or safer off the side parking.  I'd ride the bus to my favorite trailhead if the bus driver would stop and pickup at places that are "flag down" stops. Expand the bus coverage please. Give bus drivers permission for flag down stops and unmarked stop stops.  Use the flex-trans buses when the numbers aren't high for full sized buses.  I am an avid back country hiker. I get an estimated 200 to 400 miles of hiking on many of the same trails in the tri-canyons. Last year I hiked the Appalachian Trail. In some of the heavier over night areas let's try moldering (sp) privies to protect the landscape from butt flowers. Not everyone packs out used tp. Also why not try setting up some designated camp sites like around Lake Blanche &amp; Desolation Lake.  I am not for the expansion of development. I don't want to see a back country tram connecting ski resorts. Why not look into maintained cat tracks?  I want to see the areas around the ski resorts protected from expansion. Who the hell approved Snowbird's concrete summit bunker? Get that Damn piece of rubbish off the summit! It ruins my skyline view of the prestigious Wasatch Mountains.  Instead of expanding winter activities why not add to the summer and hip seasonal activities? Winters are getting shorter. The snow, well, look at the last 3 winters, blah.  I want to see the watershed protections expanded. If the ground can't absorb the water it runs off.</p>		4/30/2015
<p>As a former resident of Utah who returns frequently for skiing and hiking opportunities in the Wasatch, it is important to me that the environment and local needs take precedence over those of developers and corporations, particularly those from out-of-state who are only seeking to double or triple their profits by ruining prime backcountry ski areas with mega-ski lifts, trash, buildings, or even proposing ridiculous things like roller coasters. Roller coasters belong at Lagoon, not at a ski resort. The people who come to the Wasatch, particularly the Cottonwood Canyons, come to enjoy the outdoors, the wildflowers, the rugged peaks, the fabulous snow, and the great hiking. The people who live in the Salt Lake Valley deserve access to clean water, clean air, and unspoiled PUBLIC lands. The Wasatch allows people from all walks of life to enjoy the outdoors for a variety of activities, even though some developers would like to limit that to wealthy people only.</p> <p>One reason I no longer live in Utah is the air quality. After a second bout of pneumonia caused by a nearly month-long inversion one winter in the Cache Valley, it was time to find some cleaner air. Nothing is worse than coming down from a gorgeous, sunny day of skiing at Alta, only to see the low brown cloud hanging over the Salt Lake Valley, and feeling the temperature drop as your vehicle is enveloped by the muck. I have used the ski bus when possible, and feel additional parking and more frequent trips would increase my usage. I would also be perfectly happy to leave my car at the bottom of the canyon for hiking if I had access to a shuttle that ran frequently to the various trailheads. Although I frequently hike with a group and we do make an effort to car pool, it is clear the usage of the canyon areas is increasing and we often cannot find parking. Transit for the Wasatch is important.</p> <p>I think the Blueprint is a balanced plan for the current and future use of the Wasatch.</p>		4/30/2015
<p>Thank you for working through this process. The proposed blueprint obviously represents much hard work by many people.</p> <p>Some quick conclusions:</p> <ul style="list-style-type: none"> <li>- Watershed protection is paramount.</li> <li>- Use of the Wasatch Mountains is already skyrocketing. More and improved access points and interconnected trails are overdue.</li> <li>- Better mass transit is a must. However, the proposed train system seems very invasive and extremely expensive, and would be underutilized for decades. Regular, reliable bus service and restrictions (higher costs) for private vehicles seem like a better alternative.</li> <li>- The transportation nodes in Big and Little Cottonwood Canyons would create overwhelming pressure for more development. Isn't this what we are trying to avoid?</li> <li>- Ski areas expansion plans should stop. New development should be limited to the current existing footprints of the resorts. One Wasatch should Not be implemented.</li> <li>- Wilderness or National Monument protection should be seriously considered for the entire Wasatch range.</li> <li>- Economic development should be emphasized in the cities and towns, not in the mountains.</li> </ul> <p>I am looking forward to the continuing Mountain Accord process.</p>		4/30/2015
<p>I am responding to the Mountain Accord Proposed Blueprint. I would like to speak out against providing transportation connections between Alta and Brighton, and Brighton and Park City. I believe that providing those connections would only benefit the downhill skiers and impact the backcountry skiers, hikers, boarders, snowshoers and lovers of nature. Ski lift or train connections would certainly impact the beauty and serenity of Wasatch ridges, saddles, passes, and views. I have been using the Central Wasatch Mountains summer and winter for years. My family had a cabin on the Brighton Loop and I spent many summers in Brighton as a child. I remember hiking and back country skiing to Lake Solitude before the Solitude Ski Resort was built. I remember the beautiful shady forests, large trees, and wild flowers that lined the trail. I have hiked the trail many times since the resort was built and looked at the scarred mountain sides that have not recovered since the construction. I realize that we can't go back to those old days, but, we can preserve the back country that we have left.</p> <p>We can preserve an environment that gives exercise, adventure, joy, beauty and peace of mind to all recreationists year round.</p> <p>What can we do about the transportation bottle necks that occur and will occur as our population grows? I know we will miss our cars. We hike and snowshoe year round in the Wasatch and always attempt to carpool to our destinations. I would propose the use of clean fuel buses and restrictions on car use in the canyon. This has worked well in our National Parks. However, we would need buses that stop at various trailheads up and down the canyons in addition to the buses that take you to the resorts.</p> <p>Let's not over develop our Central Wasatch to a point that it will lose its characteristic beauty and serenity that is its uniqueness. It not a place for amusement parks, private villas, outlet malls, etc. It is a place for all of us to enjoy its beauty year round and for generations to come.</p>		4/30/2015
<p>Thank you for all of your hard work and for the opportunity to comment on your blueprint. Most of your conclusions are sound, in particular the suggestion to improve the trail system, to implement land swaps, and to preserve the wild nature of the Wasatch Mountains.</p> <p>Your transportation plan, however, leaves much to be desired.</p> <p>I am a 37-year resident of Park City who lived in Salt Lake for 8 years before that. In 1976 Alexis Kelner and I wrote "Wasatch Tours, A Ski Touring Guide to the Wasatch Front". We republished the book in the mid 90's and observed at that time that a large number of beginner and intermediate ski tours had been taken over by ski area expansion. In the past 20 years, that trend has continued.</p> <p>With that in mind, I have great concerns that your transportation plan would almost totally eliminate the remaining moderate backcountry skiing options in the tri-canyon area. A train connection between the Cottonwood canyons would allow skiers to start out at any of the local resorts, ski the side country, then catch a train back to where they started. Your plan provides great benefit for the ski areas and tourists who visit from around the world, but it gives little or nothing to the locals. Much more balance is needed.</p> <p>I would support improved bus transportation in the Cottonwood canyons, and to Park City via I-80. Creating special bus lanes up the canyons seems like a good alternative. A multi-billion dollar taxpayer-funded train makes little sense.</p>		4/30/2015
<p>Please tally my as opposed to the train, etc. and blue print of the Mt. Accord.</p>		4/30/2015
<p>Having skied in several interconnected European resorts, I definitely see the enthusiasm of multiple resort access however, we must be over diligent in assessing the impact of increasing the resorts footprint.</p> <ul style="list-style-type: none"> <li>-Decreasing the amount of individual automobile traffic up the canyons or over Parleys into the PC area is paramount. Whether it's by train or by bus, it needs to happen / on the flip side adding increased, convenient and affordable mass transit to the canyons and the PC area poses an increase in skier days or general activity thus creating potential overuse of existing facilities (long lift lines, overcrowding, etc)</li> <li>-Overcrowding will increase pressure for resorts to expand their footprint or set capacity limits enabling or requiring resorts to significantly increase user fees. This in turn may drive an increase of backcountry usage. Working to find a balance between development and preservation is, of course, the goal, but please consider minimizing the potential impact any decisions may bear consequences on the one asset we can preserve in perpetuity; the Central Wasatch Back!</li> </ul>		4/30/2015

<p>After moving to Utah in 2009, I found that the backcountry skiing here is what made me stay, and is what I love most about the Wasatch. To me this is what makes the Wasatch feel like home. As a student at Westminster College, and retired U.S. Ski Team member, I can think of no greater loss to the state of Utah than more intrusion in to the backcountry. The educational and recreational value of the Wasatch needs to be recognized for what it is, the greatest playground anyone could have in their back yard. More development of the backcountry to me means the destruction of opportunity for future generations of skiers. Please recognize that we have a resource that is unlike anywhere in the world, and this area is most valuable to Utah if it is protected and left undeveloped.</p>	4/30/2015
<p>My husband, Colter, and I moved to Utah from California four years ago in large part because of its amazing mountains and abundant snow. We wanted to live in a place where we could make backcountry experiences part of our weekly, if not daily, life. We wanted our children to grow up knowing what it's like to ski off piste and hike in the wilderness. So, we boxed everything up, loaded up the uHaul and drove toward the Wasatch. We bought a house and enrolled our kids in the public schools. We upgraded from Avalung packs to airbag packs, got lighter skis, and bought a topo of the Wasatch. We are here to stay and we want to know our mountains. We got passes to Alta for the first two winters as Utahns, Snowbird for the second two, but we've easily doubled our resort days with those spent in the backcountry.</p> <p>We are concerned with the current proposed balance of land use, as it feels slanted toward development and away from preservation. The ultimate goal should be to allow equal access to the Wasatch for all user groups, including human-powered. The current blueprint over emphasizes lift- and tram-accessed terrain.</p> <p>We are excited about the possibility of protecting the ridge line between Emma's and Mt. Superior as this is prime backcountry terrain. However, Alta's plans to develop a lift up Tuscarora create high impact in another coveted wilderness area. Grizzly Gulch is such a great place for beginners and families to hone their backcountry skills with relatively low risk and easy access. In addition, Solitude's proposed Honeycomb Canyon lift threatens the wilderness character of Silver Fork Canyon.</p> <p>We hope that our children will have the opportunity to ski in wilderness areas as well as at the resorts. They are only 6 and 8, so we have yet to take them into the backcountry, but we have bought lift tickets for them at Alta, Snowbird, Solitude, Brighton, and The Canyons.</p> <p>We cannot imagine a scenario in which the current resort offerings would fail to meet our desire for groomed runs and lift-assisted skiing. Were the resorts to expend unhindered into the current backcountry terrain, however, it becomes easy to envision an environment in which there are no backcountry experiences to be had in our local mountains. That would be a sad day for our family.</p> <p>With the possible exception of the dedicated bus lane, we are not in favor of any of the proposed transportation options from a wilderness point of view (we always carpool whenever we are headed into the backcountry). Any efforts to enhance connectivity between ski resorts, such as tunnels at the head of the canyons or an aerial tramway seem like a bad idea for several reasons. First of all, they denigrate a relatively small area of wilderness by turning it into a virtual highway, interrupting the visual, auditory and olfactory purity of that backcountry environment. Second, it is an awful lot of money to spend on something that will undoubtedly see very few users, especially once skiers learn how much valuable skiing time is wasted traversing between resorts. Third, we do not fully understand the impact of these routes, whether above ground or below, on the wildlife and watershed. Finally, these options would only serve to feed the coffers of the connected resorts and should therefore be funded by those corporations that would reap the benefit of their use, and not tax-payer dollars. An LCC train line is attractive not as a supplement to, but as a replacement for the current road, if and only if it allows for dispersed use.</p> <p>In addition to the funding of future transportation options, we are concerned about the fragility of the watershed and the potential impact of any development upon it. It looks as though the resorts are already receiving access to additional water resources in order to make early-season snow. Let's hope that this is where their exploitation of our precious resource ends.</p> <p>Finally, we are happy to see that the plan includes proposals around expanded summertime trail networks. We look forward to exploring these trails with our family.</p> <p>Thank you for all the work on this critical plan, and for your consideration of all points of view.</p>	4/30/2015
<p>The Mountain Accord initiative is an ambitious and complicated process. I appreciate the efforts of the Mountain Accord staff and members. I volunteered countless hours as an Environmental System member.</p> <p>My observations are that the proposed Blueprint is heavily tilted towards development over preservation. This is not to discount the suggested land protections and conservation proposals.</p> <p>Public opinion over the years consistently supports more conservation and less development in the Central Wasatch. This sentiment is not present in the current proposal. Private industry/landowners that choose to do business in the watershed are beholden to the strict rules that come with operating in such a venue. General public support (not just recreationists) is needed for increasing commerce and development in the canyons – and this is not demonstrable in any form of general public polling.</p> <p>On the whole, commercial industry wants and gets:</p> <ul style="list-style-type: none"> <li>-Resort expansion</li> <li>-Base development</li> <li>-Water for development</li> <li>-Water for snowmaking</li> <li>-Subsidized mass transit</li> <li>-Interconnected resorts</li> </ul> <p>The conservation community gets protections of some important tracts of lands, but at an imbalanced cost to the community at large (see list above).</p> <p>The outcome of the current Blueprint, if it comes to fruition, is excessive crowding and impact to the canyons.</p> <p>I would suggest the following recommendations to balance the Blueprint.</p> <ol style="list-style-type: none"> <li>1. Retain all suggested open land protections, including Grizzly Gulch-Catherines Pass.</li> <li>2. No resort expansion beyond current boundaries and NO interconnect- of any type (Tunnels and aerial lifts included).</li> </ol> <p>In exchange for these protections, the resorts get water for snowmaking and modest base development (to be determined, but with strict controls and no more parking lots). In addition, mass transit needs a visionary improvement.</p> <p>Mass transit should be improved with the goal of decreasing private automobile use. The resorts and their patrons are the main beneficiaries of such a system. Attempting to re-think the bus system is an appropriate next step towards upgrading mass transit. Using snowsheds and utilizing efficient and dynamic capacity models would be a logical next step. Convenience and more cost-effective than driving a car is necessary for long term success of the system.</p> <p>In conclusion, the revised blueprint must shift towards more protections of the Central Wasatch if the public concedes water rights, base development, and the impacts of an improved mass transit system</p>	4/30/2015
<p><b>I am against any destruction of Little Cottonwood Canyon for extra Lanes for Busses or for a Train. Increased Bus service is the best and cheapest plan.</b></p>	4/30/2015
<p>It is not acceptable to even consider paving more Lanes up Little Cottonwood Canyon or run a Train up it!</p>	4/30/2015
<p>The best solution is Increased Bus service up existing road would not destroy the Canyon and would be inexpensive.</p>	
<p>All Employees but top management of Ski Resorts, must be required to take the Bus.</p>	
<p>The road 210 is Not a dangerous road according to the Data. The Population growth will be very limited in Salt Lake Valley, most growth will occur in Utah Valley. The Blueprint seems devised to facilitate Land being taken from the public to benefit wealthy Ski Resort owners.</p>	
<p>There are many positive aspects of the Mountain Accord proposal and it's against my nature to dwell on the negative but there are some flaws that need to be improved.</p> <p>Cottonwood Canyons Scenario:</p> <p>The Economy System Group calls for growth in destination-based travel and tourism. Alta Ski Area boundaries are proposed to stay fixed (it is the only one of the 7 resorts that can't expand). If this process will set ski area boundaries once and for all I support Alta expansion; either in Grizzly Gulch or from Twin Lakes Pass south along the Patsy Marley ridge to Catherine's Pass.</p> <p>As initially configured the Alta portion of the land exchange seems in lieu of ski area boundary expansion and seems disproportionate. The size of this exchange creates the potential to change the business model from skiing and ski related services to one based on real estate.</p> <p>I support the Alta Ski Lift Company gaining control of the property on which their structures are built and a modest additional amount for services related to transit oriented visitors but oppose a transfer that includes the whole 160 acres that would make Alta a target for development even with the good intentions of the current owners. The Town has retained its openness in large part due to the Forest Service's bias to protect and resist change. Massive private ownership with a Return on Investment approach would intrinsically change the character of Alta.</p> <p>Transportation:</p> <p>Of the 5 Proposed Alternatives 4 are either train or bus through a tunnel to BCC. The 5th is System management (with incentives for transit and disincentives for cars but nothing about improving the road, reducing avalanche hazards, etc).</p> <p>There are 14 "Corridor Purposes" that seemed crafted in favor of trains (and grudgingly bus) but it doesn't address transfer from auto to transit in the valley (but acknowledges it is Multi-Modal) and uses a 1 hour metric to measure success (currently is the failure rate more than 10% for the year?).</p> <p>In who's mind and since when did LCC/Alta become a corridor rather than a destination?</p> <p>I don't think there is anyone that believes that the road will be retired (replaced entirely by a train or BRT) so I'm concerned that a train first plan will prevent smaller and easier improvements in the short term. I favor upgrading aspects of the current road while adding a reversible flow lane for transit to provide an alternative to single occupant vehicles. I am not opposed to moving forward with procuring a right of way for a new alignment for future transit but this should not be the primary goal at this time.</p>	4/30/2015
<p><b>Keep as much of the wasatch front undeveloped as possible.</b></p>	4/30/2015
<p>The more trafficked the Wasatch gets, whether cars/buses/trams/people the less attractive they, the Wasatch, and Salt Lake become. When its all just another subdivision, there is less allure, less solitude when you go there. There's enough room for everyone now, but more pressure will taint the experience for everyone. Keep the Wasatch the jewel it is. Land swaps to minimize commercial footprints, no ski area expansion, limit traffic or increase transit with low carbon footprint techniques. Be conservative, preserve!</p>	4/30/2015

<p>Hello, I recently just moved to Utah a few weeks ago. I have been dreaming up this move from the east coast to here for many years now. When I heard about this blueprint, I was very disappointed in all of the people who want to destroy the Wasatch. Get over yourselves and the money that it could make this state. Stop always thinking about money and enjoy the pure beauty of the mountains. Obviously you people don't have a love for the mountains, shame on you. The reason I moved here is because I am a backcountry skier and I want to be able to enjoy the Wasatch Mountain Range for many years to come. Also it is the WATER SHED for many people. What else is there more to say, it is the fucking WATER SHED! Do you realize where we live? Do we want to be like California? Don't destroy the mountains or the state of Utah, leave it alone and keep it's natural beauty! We backcountry skiers are going to take you down as well as all the other people who love to enjoy all the activities the mountains have to offer year round. FUCK THE MOUNTAIN ACCORD BLUEPRINT ☹️</p>		4/30/2015
<p>Dear Mountain Accord, Thanks for the time and effort developing the alternatives presented. My comments primarily concern transportation in the Cottonwood Canyons. The bottom line is the need to develop a vision for transportation that serves the needs of the Cottonwoods for the next 100 years and beyond. I've had the opportunity to use the train to Zermatt, Switzerland as well as other mass transit systems in Europe and Japan to access skiing. They all work quite well. Zermatt is a wonderful ski town with no downside to not having cars. In my opinion it can be model of how the Cottonwoods can be sustainably developed for generations to come. Additionally, I've had the opportunity to use the gondola transportation system between the towns of Mountain Village and Telluride for a number of years in all seasons. For a short distance transportation system it works quite well and could be a model for linking Big and Little Cottonwood Canyons. The use of individual cars for transportation in these canyon is an anachronism of the 20th century. A mass transit system that is sustainable for the next 100 years is essential.</p>		4/30/2015
<p>No. To everything. No more, ski lifts, no more "cabins", no more roads, no trains, no tunnels, no more power lines, no more gondolas, no more restaurants, no more stores. No, to everything. -Skier, hiker, backpacker, camper, and mountain lover ☹️</p>		4/30/2015
<p>This is absolutely a horrible idea. I've lived by this canyon my whole life. Watched it grow from a small ski area to an international ski area. The crowds come and go. But the canyon has seen enough changes and this idea of putting a light rail up the canyon would destroy so many good things. Leave it alone. Figure out better parking in the canyon. Possible a parking lot just west of entry 1. There are only a handful of days when additional parking is warranted. Otherwise the crowds are handled just fine. Quit wasting money on unwanted ideas from outsiders ☹️</p>		4/30/2015
<p>Hello, Just a few more last comments on this subject. This whole process has been a joke I feel. If we live in a democracy, why don't we just have a popular vote, statewide to see what the PEOPLE think, not the powers that be. It seems that the folks with the money will eventually get their ways for their profit while people who recreate on our public lands will suffer losing prime cuts of our sacred backcountry that is already too crowded most days. The train up Little Cottonwood, over to Park City then the airport is a good idea, I think other than the environmental impacts. But, it will cost alot of \$\$ and no one will ride it April thru December, and unless there is a parking fee at the resorts or a fee to get in the canyon alot of folks won't use it and see it as an inconvenience. If we want all involved to have an equal input it must be put on the ballot and voted on. Please don't let people with financial interests pay people off who can make these decisions for us. Thanks and have a great day. Joe Day</p>		4/30/2015
<p>To Whom It May Concern: On behalf of the School for International Expedition Training, a registered Utah 501(c)3, I would like to share our position on the land use of the Wasatch Backcountry. Overall, we feel that conserving and protecting as much land as possible is extremely important for environmental, economic and recreational reasons. We feel that the protection of the Superior Ridgeline, starting in the Twin Peaks Wilderness should extend as far eastward as possible and with the most protection possible. We feel that the current Blueprint places too much emphasis on development and not enough on preservation of the environment and human powered recreation. • We do not support an interconnection project between BCC and LCC and/or PC, including tunnels. • We feel strongly that the Grizzly Gulch area must be preserved and kept intact so that human powered recreation continues to be an enjoyable opportunity for generations to come. • We do not favor the expansion of ski area boundaries, especially those that impact the uphill traffic of human powered recreation. • We support land transfers and land swaps, from private to protected public land, that help protect what's left of human powered recreation areas. Transportation: In general, we support development of low cost, low impact transportation system in the Wasatch. We support a bus-based transportation system as outlined in the Wasatch Backcountry Alliance / Winter Wildlands Alliance's comments on the Mountain Accord's Blueprint (<a href="http://wasatchbackcountryalliance.org/wp-content/uploads/2015/04/Blueprint_CommentsWithAppendices_WBAWWA_4_14_15.pdf">http://wasatchbackcountryalliance.org/wp-content/uploads/2015/04/Blueprint_CommentsWithAppendices_WBAWWA_4_14_15.pdf</a>), Transportation Alternatives appendix C, that is, • We support high quality/capacity bus systems in the LCC and BCC area but without a connection to PC • We support the use of clean fuel in all busses • We feel that more information needs to be gathered before trains are considered in the canyons, particularly the issues outlined on page C-7 to 8 of the aforementioned WBA/WWA document • We support incentives for carpooling and disincentives for single occupancy vehicles • We support increased parking at the base of BCC and LCC • We support an express but that makes no more than 2 stops between the mouth and head of each canyon • We do not support year-round use of Guardsman Pass Rd Thank you for taking the time to read our thoughts. ☹️</p>		4/30/2015
<p>The blueprint should include a broader scope for sustainable economic development to go alongside the purpose of preservation of the watershed and natural environment. Look what has been done in the mountains of Switzerland for a good example.</p>		4/30/2015
<p>The beauty of our canyons must be preserved. Once they have been tampered with, they can never be restored to what they are today. Please allow nature to be fully appreciated without human interference. We love our mountains and find peace there. Please do not take that away from so many citizens of this state.</p>		4/30/2015
<p>I believe the Mountain Accord process seems very specific in terms of transit options, but I feel there is very little substance to other areas, specifically measures for environmental protection for watershed lands and for open space preservation. I do not feel there is a balance for these areas, I feel it is more heavily weighted and planned for the transportation measures for ski area access. I do not believe it has adequate information on the impact on watershed, water resource, wildlife habitat, and natural characteristics for public lands. I think there is a need for additional public transportation to meet growing use and increase in population. I do feel however that the transit options over to Park City from the Cottonwoods seem excessive and driven by ski area interest, and not necessary to meet a broader public need for a variety of recreational pursuits. I feel the population they would serve is small and disproportionate to such a large impact to the natural environment, and if it would entail a large tax payer expense. I feel the impact to the wild character of these lands and the watershed would be detrimentally impacted through these connections.</p>		4/30/2015
<p>Thank you for all the work on this project. It is certainly better to have a plan then to go forward without one. I am very much opposed to tying together the tops of the canyons any more then they already are. I oppose any tunnels, trains or above ground solutions. I believe all of these have unacceptable implications for water, wildlife and quality of recreation. The current bus system should be improved to help address transport. In 2004 there were 40 buses a day arriving at Alta before 2PM. The last few years there have been 18. Buses can provide much more flexibility in meeting demand and can integrate better with valley transport. Additional ski lockers would make riding the bus more convenient. Spending 100's of millions of dollars on tunnels or trains would create infrastructure that is not flexible and would force increased usage to recoup the investment at a time of uncertain climate changes. The money would be better spent widening the existing roads, buying more buses and improving avalanche mitigation. I am in favor of converting any private land in the canyons back to public. It is likely that the majority of this land was gotten as an unintended consequence of antiquated mining laws and should never have been in private hands. I am in favor of trading it for base area lands as long as they are not used to develop additional lodging of any kind. Additional lodging in the canyons would only put pressure on increased usage. I know it is not possible to make everybody happy but the foremost goal must be to preserve what exists as much as possible. Large scale schemes to connect all the ski areas for bragging rights are a blatant attempt to use public money and lands for private gain. The net result would make local ski areas unaffordable for local skiers while bringing in more affluent tourists. Not everything has to get bigger and "better" all the time. If transportation issues make it so that tourists don't want to come here to ski then that will help solve the forecast increase in usage. Increasing accessibility will only encourage development for increased usage which will not solve the problem but will destroy what you are trying to protect.</p>		4/30/2015
<p>Think about HWY 189 as the way around the mountain, not the Cottonwood Canyons. It could be just as fast and much, much cheaper. TWIMC,</p>		4/30/2015
<p>While I appreciate the efforts of all involved and input from the public, I have several concerns which I will touch upon in the comments below. These comments are what I included in the survey(Mtn accord comments 4/30 to survey). Sorry if they seem a bit disjointed. Many thanks for providing this opportunity to all of us! Please note that I am 63, female, a backcountry and resort user(ski), retired on a fixed income, and caring for a sick husband(cancer). And I was still able to enjoy a number of backcountry ski days at the top of the Central Wasatch and hiking in Millcreek and Emigration Canyon. If indeed we could be facing an extended drought, these areas are going to become more precious. There are many days that one can enjoy relative solitude in many of these areas, but our prime areas of shared use could get relatively smaller, and this concerns me. It's not just about recreation, but what we need to 'survive' in the West. It's about water and the conversation should start there. My survey comments are attached.</p>		4/30/2015

<p>The primary concern of the Accord should be to prevent the exploitation of our mountains beyond their ability to accommodate reasonable levels of use. As the population along the Wasatch front rises, the available land and resources do not. Not everyone can stand on the summit of Mt. Everest at the same time. Economic interests can maximize compatible utilization but must be constrained by those whose primary responsibility is to preserve the unique aspects of natural Utah's mountains. Abusing the Wasatch front simply because it is adjacent to a large city is not wise. Just as we do not want a tram taking us to the bottom of the Grand Canyon, our mountains must not become another Disneyland.</p>		4/30/2015
<p>I have attended community meetings and been apprised of most of the evolving changes to the Accord. I feel that the Mountain Accord has shifted over time from representing my perspective to become something I feel I need to fight against. Development and money seem to be trumping all else (big surprise). I listened to representatives of the economic component regale listeners with romantic visions of trains traveling up Little Cottonwood canyon just like in the Alps where "trains are barely noticeable." Disingenuous BS. You can put the whole Wasatch in one Alps' drainage; there is no correlation between the two scenarios. Why not be forward thinkers and trend setters for the rest of the world and decide that mountains should be protected for their own merit such that they mustn't necessarily be sources for economic gain?</p> <p>Expansion of ski resorts is also malarkey. Resorts already are too big to ski in any single day and linking them together and expanding them is simply an exercise in marketing so they can advertise to out of state folks how big they are. No one can actually ski that much terrain so the actual skier experience impact is nearly nil. All this development for advertising purposes is ludicrous. Ever been to Solitude? There is no one there! No one in line. No one on the slopes. And they need more room? Hogwash.</p> <p>I oppose establishing any mechanical link between the Cottonwoods and Park city or between the Cottonwoods. This is such an obviously slippery slope that will lead to further degradation of the resource, I'm surprised anyone (without profit motives) supports it. Trains are too much money. I won't foot the bill for a transportation system designed to enhance resort profits. Buses are cheap, agile, and adaptable. The current bus system is weak sauce and needs revamping.</p> <p>I live here because of the Wasatch, primarily the tri-canyons. I spend hundreds of hours in these mountains every year. I hope that the desire for profit doesn't win this time and the needs of the non-monied majority outweigh the powerful interests of the monied few.</p>		4/30/2015
<p>There are so many parts of this ambitious plan it is hard to see what it is really about, who's behind it, and what are the positives and negatives. Usually, the best way to understand the goals of a project such as this is to see who is putting the money behind it. From the information I have seen, this information is not included. It is important to be transparent with such a large scale project.</p> <p>From the standpoint of a property owner in Alta, it would seem that while there are positives in swapping some private land for public land in the vicinity of the present ski area and lodges, it comes with the price of the additional development of a proposed 102 additional "units". Units of what I'm not sure. Rooms? Condos? Houses?</p> <p>It may well be that the health of the Alta Ski Company is dependent on an increased number of skier days. If that is the case, and the only way to get that is by development, then perhaps the additional 102 units would be acceptable. Otherwise, I would not be in favor of additional development.</p> <p>On the transportation front, getting as many automobiles off the Alta access road as possible is an admirable goal, by bus or rail. The idea of a rail line to Salt Lake is interesting, but the idea of a tunnel through to Brighton and Park City, with the present water problems in Alta is a real concern.</p>		4/30/2015
<p>I wish to make two points. First, I am touching base tonight to add my voice requesting a high priority in our canyons be bicyclist' safety, and to request cycling safety be made an important part of MA transportation planning in the Central Wasatch. This means incorporating paved shoulders providing bicyclists with adequate safety-spacing away from motorists and adding separate paved bike paths where appropriate. Area cyclists love to ride Wasatch Front canyons, but tiny sometimes nonexistent shoulders makes canyon riding hazardous. As populations grow, so will canyon cycling densities. Thus, I am requesting canyon transportation planning include bicycling-specific shoulder enhancements and separate paved bike paths where appropriate.</p> <p>Second, please preserve our watershed; as MA unfolds, please don't open the door to on-going continuous nibbling away of finite forest lands. The Wasatch National Front is not only a paramount watershed for northern Utah, but it does double-duty as a world-class playground for local outdoor enthusiasts and visitors; furthermore, its proximity provides a key differentiating characteristic and an important attribute which makes living adjacent to the Central Wasatch so fantastic, it contributes to our quality of life and manifests itself as an important legacy we must preserve for future generations.</p> <p>Thank you for listening, and thank you for making this channel available</p>		4/30/2015
<p>I have lived on the Wasatch Front for over 40 years. My family and I have enjoyed hiking, skiing and camping in our wonderful mountains. There are few places with similar great alpine terrain close to a metropolitan area.</p> <p>I am opposed to commercial development our this precious resource.</p> <p><u>We do not need tunnels, rail lines or interconnects for ski resorts in the Wasatch.</u></p>		4/30/2015
<p>I attended a presentation about Mountain Accord at the Salt Lake City library and am familiar with the proposals. The plans for a rail line and possible tunnel from Alta to Brighton are a real concern and a well organized bus system possibly similar to that at Zion National Park should be considered. The land swap of Grizzly Gulch for additional land at ski area bases makes good sense. The presentation attended did not include representatives from the ski industry so I did not hear their proposals but overbuilding in the Cottonwood canyons is a concern.</p>		4/30/2015
<p>We strongly object to both the process and substantive conclusions of the Mountain Accord deal.</p> <p>These comments represent only a few of the many important issues that this proposal raises, in part because of the difficulty of getting good information about what is actually being proposed (and the true cost to taxpayers of that proposal) and because of the shortness of the timeline for public comment.</p> <p>The report fails to adequately consider alternatives or adequately explain why some alternatives are being excluded from further consideration.</p> <p>The report fails to adequately consider alternatives or adequately explain why some alternatives are being excluded from further consideration. For example, one of the most obvious solutions for managing traffic in Little Cottonwood Canyon is increasing "bus service in mixed traffic up Little Cottonwood Canyon." This alternative, however, like many others has gotten short shrift in Mountain Accord's analysis.</p> <p>Specifically, the Transportation Purposes and Alternatives Report available on the Mountain Accord website proposes to drop this alternative from further consideration based wholly on a conclusory assertion, with no accompanying analysis or facts, that this alternative succeeds only in "reducing avalanche-related risk and delay" and would "fail to meet the other 13 purposes." No explanation is given as to why this option would not "reduce auto use and congestion in Little Cottonwood Canyon," "reduce vehicle emissions in the Cottonwood Canyons to improve air quality," "reduce parking impacts on environment, safety, and economy," "support land use goals for reduced sprawl and concentrated development," "improve access and connections for pedestrians and bicyclists," "protect or enhance the natural and scenic resources of the Cottonwood Canyons," "protect and enhance community character" or any of the other articulated goals for the plan.</p> <p>It defies logic to assume that more frequent and better timed bus service, coordinated with bus service schedules throughout the valley, would not decrease auto use, vehicle emissions, and parking demands in Little Cottonwood Canyon. This failure to grapple fairly with the issues at hand suggests a rigged, agenda-driven analysis rather than a careful, fair consideration of potential alternatives.</p> <p>Moreover, one wonders how the proposed approach "protects watershed health, water supply, and water quality" better than increased busing, given that the negotiated proposal requires providing increased water for culinary purposes to Alta and increased water (in unquantified amounts) for snowmaking at the resorts.</p> <p>Additionally, while Alternative D, Transportation system management alternatives—which "are combinations of incentives for transit use and disincentives to auto use, without adding new transit guideways or expanding roadways"—is mentioned as an alternative that will continue to be considered, the Report evinces very little actual consideration of this alternative. It seems that a deal has already been struck between the existing players (who do not represent all relevant stakeholders) and that other alternatives are falling by the wayside without careful study. There seems to be little actual data in the report, so it seems unlikely that any alternative has received enough consideration to be eliminated from consideration at this stage. Other alternatives that could be considered include mandatory car pool restrictions on canyon-driving during peak winter hours, changing (and potentially extending) the existing passing lane into a middle traffic lane that could serve uphill traffic only during morning peak hours and downhill traffic only during the afternoon peak hours, etc.</p> <p>The report also fails to prioritize the many listed goals in any meaningful way and assumes that increased tourism in the Canyons is an unmitigated good.</p> <p>No sense of relative priority is given and the report fails to explain, for example, why creating a unique "traveler experience" in the canyon should be given equal weight with reducing congestion and parking demands. Relatedly, the report also assumes that increasing tourism in the Canyons is an unqualified good without any explanation for why that is so.</p> <p>The proposed deal will sacrifice Little Cottonwood Canyon by transforming it into a transportation corridor and will destroy much of its natural environment, appeal, and beauty.</p> <p>It would be one thing to build a rail line if there were no existing road, as such infrastructure might be necessary to allow Utahns to access and enjoy the canyons. However, doubling up on infrastructure in the canyon unnecessarily destroys the natural environment and beauty of the Canyon. Doubling up on infrastructure will likely stress the natural environment and may threaten existing species, wildlife corridors, watersheds, and other natural conditions.</p> <p>The proposed deal represents an elitist plan for the Canyons that will benefit only a small number of Utahns at potentially tremendous cost both to average recreational users and taxpayers.</p> <p>One of the primary focuses of the deal is to preserve "backcountry areas for dispersed recreation," a goal which benefits a vanishingly small percentage of Utah residents. Only about 7% of Utahns ski and the number that have the time, training, and resources to backcountry ski is much smaller.</p> <p>Yet, in order to benefit the admittedly small ("dispersed") number of people who can take advantage of backcountry skiing, the proposal sacrifices the beauty enjoyment of the lower part of the canyon – the part that Utahns likely access most frequently, including trails like the Quarry Trail along Little Cottonwood Canyon.</p> <p>For most Utahns, the Canyons are a journey and an experience, and destination resorts like the ski-resorts are largely beside the point. Utahns love their canyons for the ability to hike with their families on trails that can be accessed from the valley quickly and for other similar</p>		4/30/2015
<p>I'm in favor of improving transportation to and from the resorts and to enabling skiers to ski from one resort to the others.</p> <p>Let's get the mountain accord done!</p>		5/1/2015

<p>The railroad can only be of one kind to tackle the canyon grades; a Swiss-style rack railway, as have existed in Switzerland for over 100 years, powered by overhead electric wires, just like UTA's TRAX light rail system and the S-line streetcar. The huge environmental advantage of an electric line on mountain grades is "regenerative braking". The traction motors on the locomotives are switched to reverse polarity on their downgrade runs, acting both as a braking mechanism, as well as shooting electric current back into the overhead power source wires. This reduces electric power consumption in a way that TRAX and S-line can. The railroad/transit company organized to build and operate the Little Cottonwood mountain railroad can only succeed if it is a stand-alone enterprise, totally "separate and apart" from the Utah Transit Authority. Hiring for project and management positions would have to be not only national, but international. It would have to be a corporation with a completely different, better corporate culture, management practices, and attitude than UTA. Although its core business will be people public transportation like UTA, the L.C. mountain railroad will have to be, by the very nature of its territory, topography, and service clientel/stakeholders, a "different beast". And that's the way it is in Switzerland, one of the single-most, best-served-by-rail-transportation countries in the world. The Swiss national rail network is world-renowned for how it operates "like clockwork" "You can set your watch by the arrival and departure of the trains" is a world-famous expression about Swiss rail service. It is a mix of state-owned, public, and private railways, track of standard and narrow gauges, mostly 2-rail routes, but tracks with a toothed rack as a midline rail for drop-down pinion drives in the locomotives for the steep-grade routes. The Little Cottonwood/Trans Wasatch railroad, being the only public access to the L.C. canyon, would also carry freight and supplies. Among its rail car fleet would be baggage cars; box cars; flat cars for carrying (1) shipping containers, (2) road vehicles, and (3) open utilitarian loads; gondolas/hoppers for bulk materials. In other words, the hotels, restaurants, resorts, stores, and private residences in Little Cottonwood Canyon would receive all their supplies by rail timely, fully-functional fashion just like limited-access locations not just in Switzerland, but in other parts of the world. With an operating line all the way to the "Wasatch back", the over-the-mountain east-slope communities, there is the potential for "reverse commuting", a "back haul" market. I had my eyes opened wide, made very aware of this by attending the Park City Open House. Park city area residents are quite concerned about the possible increased flow of Wasatch Front visitors to their Wasatch Back.</p>		5/1/2015
<p>I am 100% against any tunnels through cottonseed canyon, or any other sections of the Wasatch mountain range. Growth in the area has become such a cluster of . People, construction, etc. Traffic in park city is a joke. If we want that much growth we would move to the east or west coast. Connecting all the resorts together is crazy. It takes away the charm and character of each individual resort. Now that Vail has arrived, life in park city as we know it is over.... I miss the days not so long ago when it was fun to reside in the area. Wildlife is disappearing before our very eyes! Every nook and cranny of the Wasatch range is becoming over run with huge ugly mansion that are occupied maybe 30 days out of a year. More restaurants, shops. Parking lots. all over priced and over rated... all for the almighty dollar. Please stop with all the commercial junk that keeps popping up .. I feel a connection up cottonwood would only harm our back country, wildlife and our water, just to name a few. When is enough going to be enough ? We are slowly killing everything we all love,, the mountains. To imagine the mountain range with tunnels and trams is very sad indeed. What about the wildlife? ? That is there home. The tourists and the wealthy have enough already. It is frightening to imagine how the area will look in the near future. It saddens me to think we would flush the wonder of the back country for the sake of skiing and the tourist industry. I am seriously considering leaving the area. This is all out of control. !! It's stopped being fun, it is a giant cluster of tourism. Look what happened to Colorado! !. Welcome to the new Colorado folks! All for Greed. Skiing is NOT the only thing that keeps the wheels turning. . Please STOP THIS MADNESS!</p>		5/1/2015
<p>Hello, I support improved transportation to/from Utah's ski resorts. Here is why: ** ski area connectivity would help Utah's economy ** ski area connectivity would be fun ** ski area connectivity would help Utah compete with other ski regions ** improved transportation would make my trip to the ski areas safer ** improved transportation would make my trip to the ski areas faster ** improved transportation would make my trip to the ski areas more convenient Thank you for considering our voice and opinion!</p>		5/1/2015
<p>Regarding Mountain Accord: The Wasatch tri canyon is a relative small Mountain area with some great and unique features. It is getting loved to death they do not need further crowd promotion. It provides unique close access for numerous outdoor recreation activities. The biggest uniqueness factor is a wilderness/natural mountain escape from the urban crowd, noise, and pollution found below and that the canyons are not transportation through ways. It also is the primary source of some of the best urban water around. Thus the Mtn Accord plan should have a stronger plan/ tone towards preservation, environmental, water, and people capacity management. The State, Salt Lake County, Salt Lake City, would be much better served long term working towards developing other recreation alternatives and especially locations that would relieve some of the natural and growing use pressure on the Tri-Canyons. The Cottonwood canyons access was a factor in me first coming to Utah for college in 1980. I went to Denver for work following Grad school in '87. The close access of the Cottonwood canyons was a significant factor in returning to Utah in 2002. I purchased my first backcountry ski set up from Charlie Sturgis in '81 when he was at Wasatch touring. I'd love to have back the Wasatch that existed in the early and mid eighties.....not reality. I also have enjoyed the ski resorts. I don't want them to go away but I also don't want them to expand. They have benefited greatly from public lands use but shouldn't be or feel entitled to continue expanding. The canyons are exploited enough. April 16, 2015 experienced the headaches of traffic and parking for skiing in the canyons. However, the worst part of the experience that day was waiting 45+minutes on the Snowbird plaza for a lift ticket. Snowbird, try fixing your service before further canyon development. A unique character and draw of the canyons is that they are essentially deadends for traffic. There should not be development of through traffic in the canyons. There should be investment and development of better public transport from PC to SLC through Parleys for year round need. Better UTA transport from the valley to and up the canyons. Cog rail would be needed up the canyon, not light rail. This seems ludicrously destructive, inflexible, and expensive just so Snowbird can feel like Zermatt. It seems like buses could be much cheaper, flexible to all users and adaptable to technological transportation improvements. Use of the canyons should not become elitist and expensive for the general public. The greatest growth in use has been alternatives to lift served skiing. It used to be illegal to leave the resort for backcountry skiing, now it is promoted. But there is not corresponding open access for users in the resort boundaries. Lift served access beyond the area boundaries should again become restricted. I think the idea of land exchanges in exchange for some further development of existing ski bases is a good idea only if it includes important pieces like Grizzly gulch. Why is there not any discussion about helicopter use in the canyons. It is a huge detriment to the backcountry experience. Everyone should experience the difference of a peaceful quiet nature tour through the drainages versus what it sounds like with a helicopter buzzing around. Keep the water pure.</p>		5/1/2015
<p>As a native of Salt Lake and a long term member of Save our Canyons, it is fair to say an open conversation with the public on the future of the Wasatch and the canyons that make it is over due. My comment is simple. The less development the better. The existing Forest Service leases and amount of private property is just fine the way it is. The "Connect Concept" is unnecessary, they connect all ready for those who take the effort. Traffic is difficult and will remain difficult. The UTA and private limo services' have done much to improve it. I believe improvement on that level remains available. The best answer for these mountains is to leave them alone and work on improved public transport systems. Thank you for this opportunity to share my thoughts</p>		5/1/2015

<p>I am a 59 year old attorney. I've worked @ a downtown law firm in SLC for 34 years. I spend my weekends skiing/hiking/biking in the Wasatch. That is why I live here. Striking a balance between development and conservation in hard. I make two comments :</p> <ol style="list-style-type: none"> <li>1. With my friends &amp; peers, winter use is shifting from resort skiing to side country and back country skiing. This is not what the resort operators want to hear, but my sense is the growth in winter use will not be conventional resort skiing.</li> <li>2. In making the choice whether to develop wild places, I feel the burden is on the developer to show a compelling justification. Because the decision is so permanent : wilderness lost cannot be re-claimed; its lost forever. Doubts should be resolved in favor of preservation, only w/ a compelling case is wilderness sacrificed.</li> </ol>		5/1/2015
<p>Please accept the following comments on the Mountain Accord Proposed Central Wasatch Blueprint.</p> <p>The train and tunnels concept for transportation is unworkable and is the worst possible approach to canyon transportation; it is the most expensive, most environmentally damaging, least flexible, would take the longest to put into service, and will do the least to reduce the number of cars driving up the canyons. Improved bus service, a shuttle system, or Bus Rapid Transit would all be better solutions. I am encouraged to see that disincentives to the use of private vehicles are being considered, in conjunction with improved public transportation – this will be necessary to convince people to leave their cars outside the canyons.</p> <p>The idea of exchanging public and private lands in order to cluster development and allow permanent protection for undeveloped land is a good one. However, it is important that the details be fully spelled out before any development is approved, based on these exchanges. For example, if additional culinary water for the Alta Ski Resort base area is made available, it must be clearly defined how that water is to be used. It would be far more detrimental to Environment (and Recreation), if that water was used to enable the construction of ‘cabins’ in Albion Basin, etc, where development has been water-limited, than if that water was used for high-density housing (hotels, condos) in the Alta base area. It must be clear how that water is to be allocated before its ‘cost’ as a bargaining chip is assessed. Most importantly, the nature of the ‘protection’ of Public Lands that are to be preserved must be clearly defined and permanent, before this protection is exchanged for development allowed elsewhere within the Wasatch. Absolutely this must be something more permanent than the Forest Plan – it must be codified in federal legislation or executive order, preferably the former.</p> <p>Expanded ski resort boundaries are detrimental to the ‘Environment’ system, and not a clear benefit to the ‘Recreation’ system. Many who recreate in the canyons would prefer to do so outside of ski resort boundaries. Backcountry skiing is the only downhill snow sport that is growing, in the US. Expanded ski resorts are detrimental to backcountry skiing activity in the Wasatch. As far as catering to ski resorts and real estate developers; we, as Utah residents and US citizens, are not obligated to foster the continuing growth of the ski areas or real estate development. We are not obligated to give up the mountain experience that we love, just so the ski areas and real estate developers can capture additional profit that they feel is somehow ‘getting away’. From a January 14, 2015 New York Times article regarding One Wasatch:</p> <p>“(Utah) Residents have repeatedly said they love their ski resorts but don’t want them to grow. In a study conducted in 2009 and 2010 as part of work on the future of the most popular mountain canyons, nearly all Utah residents interviewed said they did not want resorts to expand beyond their existing boundaries. The long-range plan for the Uinta-Wasatch-Cache National Forest calls for no such expansion.”</p> <p>By Ski Utah’s own numbers, all the revenue generated by skiing/snowboarding (not only tickets and gear, but lodging, meals, car rental, etc.) accounts for less than 1% of Utah’s economy. Why are we degrading our Wasatch Mountains and canyons to please such a small industry?</p> <p>In general: before any development piece of the compromises can begin, it is critical that environmental impact evaluation be completed. The Mountain Accord concept is necessary for planning the future of the central Wasatch, but it is essential that we do not allow a rush into development without careful consideration of its impact.</p> <p>I support ONE Wasatch and over-the-snow connectivity on private property</p> <p>I support improved transportation to/from Utah’s ski resorts - it will help our putrid air quality and road congestion, as well as safety.</p> <p>All of the proposed changes to the Mountain Accord project are wonderful and should be implemented. Thank you for all of your work toward this great improvement!</p> <p>I fully support the one Wasatch concept. As a member of the governors office of economic development board, I feel this is a critical component to managing our transportation based economy and the challenges of growth for the next 20+ years.</p>		5/1/2015
<p><del>I support over the snow connectivity.</del></p>		5/1/2015
<p><del>I support ONE Wasatch and over-the-snow connectivity.</del></p>		5/1/2015
<p><del>I support improved transportation to/from Utah’s ski resorts - it will help our putrid air quality and road congestion, as well as safety.</del></p>		5/1/2015
<p><del>All of the proposed changes to the Mountain Accord project are wonderful and should be implemented. Thank you for all of your work toward this great improvement!</del></p>		5/1/2015
<p><del>I fully support the one Wasatch concept. As a member of the governors office of economic development board, I feel this is a critical component to managing our transportation based economy and the challenges of growth for the next 20+ years.</del></p>		5/1/2015
<p><del>I support over the snow connectivity.</del></p>		5/1/2015
<p><del>I support ONE Wasatch and over-the-snow connectivity.</del></p>		5/1/2015
<p><del>I support ONE Wasatch and over-the-snow connectivity as well as improved transportation to/from Utah’s ski resorts. The European areas have done a great job of connecting resorts and developing transportation systems in very crowded and compact regions, while maintaining a really enjoyable mountain experience for everyone. As crowds and impacts on the mountains continue to grow here in the Wasatch, we can learn a lot from the European model about how to manage resorts effectively and maintain the incredible mountain experience and access that we are so fortunate to have</del></p>		5/1/2015
<p><del>I support improved transportation to/from Utah’s ski resorts. I believe it would save energy and improve the air-quality in Salt Lake County.</del></p>		5/1/2015
<p><del>Let’s all look on the bright side of life!</del></p>		5/1/2015
<p>I support the Mountain Accord process and ONE Wasatch and improved and enhanced transportation to and for the ski resorts on the Wasatch Front. As one who promoted the ski industry for 8 years as Managing Director of the Utah Office of Tourism (as well as Film and Global Branding), I know the economic importance of the ski industry. Not just from the skiers, but also from outdoor recreation enthusiasts who enjoy it’s hiking and biking trails and those who visit to get in beauty and out of the valley. We have, as we promote, "The Greatest Snow on Earth". Let’s make the appropriate plans to also provide and enjoy the One Connectivity and transportation necessary, that will enhance the experience, protect lives and the environment</p>		5/1/2015
<p>To Whom It Concerns,</p>		5/1/2015
<p>The ski and snowboard industry is significant to Utah’s tourism economy. In a world where travelers can choose where and how they spend their vacation dollars, Utah need to remain competitive and innovative in order to lure these travelers away from surrounding states and other areas of the world. For this reason I support ONE WASATCH and Over-the-Snow Connectivity! This effort will improve transportation to/from Utah’s ski resorts and give the State a competitive advantage when competing for out-of-state visitor dollars. ☺</p>		5/1/2015
<p>I am in love with the Wasatch. I ski, hike, climb and run in these mountains nearly every day. I started my time in Utah living up in Little Cottonwood Canyon and will always have a deep connection to these mountains. I support the direction the Mountain Accord is taking with its proposed blueprint especially in that it takes into consideration that the road towards generating policy should be fluid and more research can always be done to improve and inform decisions. I support seeking federal protections and establishing environmental monitoring and reporting. I also think that generating a fees system, although not initially popular, would be a good means of generating funds that could be used towards trail maintenance and would hopefully cut down on the people who just drive up our canyons and don’t actually do anything while they are there besides pollute. I support keeping further development out of the canyons. I am curious to see what sorts of transportation alternatives will eventually be proposed and look forward to continuing to be apart of the conversation. Thank you for including me</p>		5/1/2015
<p>I support:</p>		5/1/2015
<p>One Wasatch and the OVER the snow connection between resorts.</p>		5/1/2015
<p>Improved year round transportation in ALL canyons - including Millcreek.</p>		5/1/2015
<p>I oppose:</p>		5/1/2015
<p><del>The tunnel from Little/Big Cottonwood to Park City!</del></p>		5/1/2015
<p><del>I support ONE Wasatch and over-the-snow connectivity which would establish Utah as the premier US ski destination.</del></p>		5/1/2015
<p><del>I support ski area connectivity and improved transportation to/from Utah’s ski resorts. I stand strongly in my belief that such improvements will not only help Utah become a global player in the skiing landscape, but it will distinguish Utah from its competitors.</del></p>		5/1/2015
<p>Attention Mountain Accord Process:</p>		5/1/2015
<p>I support ONE Wasatch and over-the-snow connectivity to help Utah’s economy and improved transportation between resorts.</p>		5/1/2015
<p>Thank you for your time and effort.</p>		5/1/2015
<p>Train is my vote, up little cottonwood... just like we have done it in Europe in the 19th century in high altitude...</p>		5/1/2015
<p><del>It will bring a safe, consistent ride up to ppl... and scenic ride!</del></p>		5/1/2015
<p>I am in full support of the Mountain Accord and look forward to more connectivity between the ski resorts. The train through Alta will be a great improvement to the transportation problem and provided a much needed addition egress to a close out canyon. Great work.</p>		5/1/2015
<p><del>I support ONE Wasatch and over-the-snow connectivity. The ski area connectivity would help UT’s economy, and would make my trip to the ski areas safer, faster and more convenient. Thanks.</del></p>		5/1/2015
<p><del>I fully support the Wasatch Backcountry Alliance stance toward the Mountain Accord blueprint. Thanks for your work.</del></p>		5/1/2015
<p>To Whom It May Concern:</p>		5/1/2015
<p>I applaud all the transit plans and land preservation strategies that Mountain Accord has developed, but I strongly believe that water and water usage will become the most crucial part of this debate. Offering tax incentives for ripping up lawns and parking lot strips, slowly raising water costs or taxes based on income and not just on water usage, having city-wide watering schedules that are strictly enforced (with extremely heavy fines at stake) and also offering tax breaks for families that have two children or less might be good additions to this plan.</p> <p>Thank you.</p>		5/1/2015

<p>I'm a backcountry user, so I want the BC to remain BC. Simple. If you want more details, reread the Wasatch Backcountry Alliance position. I've quoted the Summary below.</p> <p>Also, please look at the map of the Wasatch and Colorado overlaid on top of Europe at <a href="http://wasatchbackcountryalliance.org/resources/">http://wasatchbackcountryalliance.org/resources/</a>.</p> <p>This shows clearly what a small area we have to protect in our backyards. I believe we need to preserve as much of it as possible in its current state.</p> <p>We do not support an interconnection between Big Cottonwood Canyon, Little Cottonwood Canyon and Park City, or any combination thereof.</p> <p>This includes tunnels. The resulting direct, cumulative and indirect impacts to dispersed recreational experiences and the environment are potentially significant, while economic costs and benefits to the public are not known. As a next step, we strongly support development of a purpose and need statement that balances the "Systems" Mountain Accord is addressing, without giving undue bias to any one element or proposal. Only then can an environmental analysis that considers an appropriate range of alternatives be conducted. We believe this range includes measures designed to provide reliable, lowest, low-impact transportation to both dispersed and developed recreational nodes in the Canyons. .</p> <p>We support the general outline of the Cottonwood Canyon Task Force proposal in concept, with several important considerations:</p> <ul style="list-style-type: none"> <li>o Private land transfers and/or preservation actions must include Grizzly Gulch.</li> <li>o Land swaps should be pursued immediately, as a precursor to future development. Lands would be placed into a designation providing a higher level of protection than under the current forest plan.</li> <li>o All ski areas expanding their footprint on public land would establish an uphill route inside their permit boundary, and will consider boundary restrictions. These efforts will help minimize the impacts of expansion on backcountry terrain and compensate for lost access.</li> <li>o We support the other provisions – water rights and development – proposed by the CCTF, contingent on land use regulations and approval following public environmental review.</li> <li>o Alignment of the new lift in Honeycomb Canyon will not drop below the elevation of the current lift and will not terminate in the Silver Fork drainage (e.g. it will remain in Honeycomb).</li> <li>o We support a bus-based transportation system as outlined in our proposed Transportation Alternative presented in Appendix C</li> </ul>		5/1/2015
<p>The main objective of your proposal appears to be to reduce the number of cars in the canyons. I disagree that it is a problem.</p> <p>If your proposal is accepted and completed, the SLC mountain experience will be a "Disneyland" experience - tunnels, light rail systems, more long chair lifts, etc. This is not like Europe with its' vast mountain areas. The money spent on your proposal will be a big waste of "other people's money".</p> <p>I ski a lot in the winter (my wife is a ski instructor), and I don't see a big traffic problem unless there is an accident or a "blue bird powder day". The number of cars in the canyon will automatically be reduced when the public feels that crowds are too big and the wait times at ski resorts are too long. People will then drive to other areas to ski, hike and bike. (BTW, most bicyclists are a danger to themselves and others, especially going downhill too fast when the roads are wet and icy - FYI, I am a bicyclist. Maybe some limits should be placed on them.) The proximity of the canyons and populated areas here is unique, but perhaps some people will have to get used to driving farther to recreate like the rest of the country.</p> <p>If you want to reduce the number of cars in the canyon, it can be done by simply limiting the number of legal parking spaces along the roads. I have seen this done in California. Many ski resorts limit the number of tickets they sell, and this automatically limits the number of cars. The resorts could sell parking spaces in the summer for more income - free enterprise!</p> <p>Requiring people to take a bus is unacceptable. It is very inconvenient to take all of your equipment on a bus, especially for the east coast visitors who fly here in the morning and expect to ski in the afternoon. In addition, you rarely know the weather conditions on the mountain when you start in the valley, so having a car at the resort is really necessary for most people.</p> <p>It is ridiculous to make canyon users have a canyon pass. Can't you envision the back up at the bottom of the canyon as people stop to show their pass or buy one.</p> <p>Also, it is ridiculous to add a tax to the purchase of a ski ticket. It is already a big expense to buy a ticket and food for a day - especially for a whole family. And, why should skiers have to pay an extra tax when other users don't?</p> <p>I feel that the proposal went overboard in trying to sell the agenda of the environmentalists and big government proponents who think spending more of other peoples money will solve their perceived problems. You used "climate change" repeatedly when you really meant "global warming" - which is still unproven. Other irrelevant issues were also mentioned.</p> <p>Thank you for the opportunity to comment. I hope the final plan will be more practical and less costly.</p> <p>P.S. Why aren't some of you aren't at city and county meetings when the politicians are approving big concentrated housing developments along the foothills?</p>		5/1/2015
<p>To whom it may concern. The traffic in the canyons will only get worse in time. Utah needs to plan and take action. European ski resorts have dealt with this issue with large parking lots in valleys below resorts and trains or tramways to the resorts for the public and limited vehicle access for employees. Plan now or the future is grim as the gridlock will only get worse. It will become a supply and demand algorithm eventually....access will go to the highest bidder and they will not be from Utah.</p>		5/1/2015
<p>I also support improved transportation to all Utah resorts.</p> <p>Thanks.</p>		5/1/2015
<p>As a native of Utah who has been skiing for over 40 years, I have seen a variety of changes take place at the different ski resorts and areas they are located. Most of these changes have luckily been for the good of the resort and the skiing experience. I think that the Mountain Accord would only add to those past decisions. Having taken numerous trips to ski in Europe over the years, it always amazed me that we didn't have more connected resorts in the US and especially Utah. In addition to not having more transportation options to/from the different resorts that didn't require driving in a car.</p> <p><del>Hopefully some sort of not all of the Mountain Accord will continue on.</del></p> <p><del>I am in total support of One Wasatch, and the inter-connect. It will put us on the map, create a distinct competitive advantage to other states, and add to the wonderful experiences we enjoy living in Utah.</del></p>		5/1/2015
<p>I support One Wasatch and over the snow connectivity which will continue the progression of Utah's tourism industry.</p>		5/1/2015
<p>I support improved transportation to and from Utah's Ski Resorts as a resident who lives in one of our ski communities and commutes to the SL Valley each day.</p>		5/1/2015
<p>Amidst the flood of comments, I was searching for a unique angle based on my concerns and experience in the backcountry. I would like to focus my comments on the protection of Grizzly Gulch as undeveloped backcountry terrain. In my opinion, youth, beginner, and intermediate backcountry users are underrepresented in this debate. Easy to intermediate terrain is in short supply in the Wasatch, especially at higher elevations. If one is trying to give a child, visitor, or beginner a chance to learn and experience touring in a relatively safe environment, Grizzly is the ideal spot. On high-risk avalanche days, those of us with a lower risk tolerance can get out and enjoy our beautiful canyons. If the drought conditions of the past several winters continue, Grizzly will remain ski/rideable when other low angle options such as Mill D are not. Please preserve Grizzly in order to provide human powered backcountry recreation for all ages and skill levels.</p>		5/1/2015
<p>As currently proposed, under a smoke screen of caring for the environment, the Mountain Accord seems to be a blueprint for massive economic exploitation and commercial development. Expansion and linkage of the area ski resorts is inappropriate, as are the grandiose transportation plans that go beyond improved bus service.</p> <p>The Central Wasatch Range is actually a very small and fragile geographic and topographical area. This region should remain as pristine as possible, as watershed for the Wasatch Front and habitat for non human creatures. Further human intrusion should be restricted to hiking and backcountry skiing. The future generations that will inhabit the Wasatch Front will be much better served by a Wasatch Range that remains wild, affordable, and 'quaint'. The non commercial simplicity of Alta and Brighton are very unique and should not be spoiled. ☹</p>		5/1/2015
<p>I think it's a great opportunity for the Wasatch, but needs to be balanced properly. The land-swap trades for land to be placed into national forest is totally great! But there is still a chance that the Mountain Accord will want to put a lift in connecting Brighton to Alta and elsewhere. I don't believe this will provide any real transportation solutions and personally I think we have enough and will loose adjacent backcountry if resorts are allowed to expand. Further, I'm believe that any additional lifts connecting resorts throughout the Wasatch would be an eye sore in contrast to the natural surroundings. However, the train and bus options are definitely something we need.</p> <p>Thank you for the consideration,</p>		5/1/2015
<p>To Mtn Accord,</p> <p>I am a resident of Salt Lake County. In general I prefer to use the Cottonwood Canyons for recreation year round.</p> <p>I go there to get away from city life and would not like to see any more roads nor ski links between resorts.</p> <p>More cars mean more pollution and more dangerous driving conditions to the Cottonwood canyons.</p> <p>Alternatively, mass transit bus routes could be improved and the park 'n ride lots do not have enough capacity in the locations where people tend to use them for the canyons.</p> <p>The Park City transit lines and lots are fine-tuned and seem to work well in my limited use during the winter. I also enjoy Park City in the summer.</p> <p>I do not feel the need to link Park City to the Cottonwood Canyon resorts a la Euro style resorts and am concerned about the impact on wildlife which is the main reason I use these areas!</p> <p>In the last 15 years, I have seen moose in MillCreek Canyon &amp; Bear Trap Fork- Big Cottonwood Canyon, a bear at the Canyons Resort and a cougar on White Pine ridge in Little Cottonwood Canyon. I like how these areas are diverse and access is different between the 3 Canyons and Park City.</p> <p>Unless there is a true study of current wildlife and an EIS on wildlife for each stage of the Mountain Accord, I do not support any development in the Millcreek and Cottonwood Canyons.</p> <p>Thank you for allowing public comments!</p>		5/1/2015
<p>I support improved transportation in our canyons and a long term plan to maintain quality backcountry only space while managing the needs of our growing ski tourism.</p>		5/1/2015

<p><u>I support over the snow connectivity, not the current Mountain Accord blueprint.</u></p> <p>The idea of a railroad up Little Cottonwood Canyon came as a surprise, even a shock to most people. For those who followed the Envsion Utah mountain planning process, it was a reminder of what they had heard before. For even fewer who had read and remembered the human history in the canyon, it was a curious "full circle" argument.</p> <p>As for me, it was an exhilarating refresher of an idea I "brainstormed" when I was a poor, struggling University of Utah student living in a rooming house in the winter of '72-'73. In the model railroad hobby the verb would be: "imagined". I had arrived in Utah in the summer of '71 as a minig engineering major to work a summer job at Kennecott's Arthur and Magna concentrators (now supplanted and razed) on the hill above Magna. I was so enraptured by Utah that I stayed and transferred to U. of U. that fall. By the second winter, as a life-long railfan and history buff, I had learned the history of Little Cottonwood Canyon, and read about the unique narrow gauge railway the mining companies had built from the junctions with the standard gauge common carriers in the valleyto the mines at Alta. At first, short strings of ore "jimmies" were pulled up the canyon by horses and mules, with single loaded jimneys coasted down with a man applying a primitive manual brake. Eventually, a type of steam locomotive propelled by meshing gears, called a "Shay" after its inventor, was used to more efficiently, and especially more safely yet slower downhill, haul the ore jimmies. The grades on the canyon right-of-way were much too steep to employ a conventional side-rod driven steam engine which relied on steel wheel on steel rail adhesion to not only propel itself, but also pull a viable load of tonnage. Much of the current highway to Snowbird and Alta, especially in the upper 1/2 - 2/3 of the canyon is built on the railway's grade. Besides learning that, in preceding years I had read several books surveying world railways, and had inculcated quite a knowledge of Swiss railroads for someone who had never traveled there.</p> <p>My conception for Little Cottonwood, since a Swiss style rack railroad was the only practical rail transit which could haul passengers up and down the canyon, was to build the railroad on top of the highway grade, since the highway would be decommissioned as a public road and converted to a mostly one-lane private access/utility road for the railroad, private property owners and government agencies and utilities in the canyon. The shared rail/road right-of-way would be widened at selected strategic locations for rail passing sidings or set-out spurs, or to retain 2 lanes or provide a pull-over lane for the private road. This would be accomplished by cutting further into the northside up-slope and/or putting in more base fill grade on the southside down-slope. Due to snow slide paths being well documented, custom designed location-centric snow sheds could be built in all slide paths. These would NOT be conventional snowsheds with solid walls on both sides, Rather they would be "verandah"-style with only one solid wall hewn into the north up-slope side, a plain sloping roof with southside overhang to facilitate slide movement, and an open southside "wall" consisting only of the necessary support posts for the snowshed roof/cover. The open, "veranda" southside wall would let in natural light in all seasons; allow better air flow to ventilate, especially when internal combustion machines are use on road or rail (during maintenance or emergency situations); and, conveniently and critically, be excellent locations for double-track and/or 2-lane road situations.</p> <p>The proposal for a "mountain railway" to not just go up Little Cottonwood Canyon, but through the ridge to the top of Big Cottonwood Canyon, and then again through the Spine of the Wasatches to access Park City and/or Deer Valley Resort is extraordinarily BOLD, AUDACIOUS, INNOVATIVE, FORWARD-LOOKING, not to mention leading to a truly sustainable future.</p> <p>We are in the midst of an out-of-control population explosion that shows no signs of ending, and only a few instances of easing its rate. To paraphrase a common folk phrase: so many, too many, "cannot see the overpopulation for the people." The only way to channel and ameliorate this humanity crush into L.C. canyon is through the medium and means of a railroad—a railroad that is the EXCLUSIVE public transportation into the canyon—and I mean ALL PUBLIC transit: no private passenger vehicles allowed, except for such things as shuttles in the resort properties. This capture of public transit will enable the railroad to be operated as a for-profit enterprise which allows the company to finance its very expensive construction, especially its 2 monumentally expensive tunnel projects, using NO government financing, ONLY loan guarantees if need be. Eventually all construction loans would be paid off, at which time fares could be lowered from affordable to cheap, with consequent continuous annual operating profits which would not only pay steady blue chip dividends to smart shareholders who bought in, but also, provide continuing funds for equipment upgrades and facilities improvement.</p> <p style="text-align: right;">END OF PART 1.</p>		<p>5/1/2015</p> <p>5/1/2015</p>
<p><u>Bring train up Parleys canyon - not cottonwood.</u></p>		<p>5/1/2015</p>
<p><u>I support ONE Wasatch and over-the-snow connectivity.</u></p>		<p>5/1/2015</p>
<p><u>I support One WASATCH and over the snow connectivity.</u></p> <p>It would be fun and it would allow us to compete with other ski resort towns.</p>		<p>5/1/2015</p>
<p>As an Environmental Planner and resort employee, I fully support the stated objectives of the Mountain Accord. Although, I am concerned that there needs to be more emphasis on preserving open space and limiting development of any kind. Once our open space is developed, it's gone forever. Public opinion consistently supports preservation and conservation. Emphasis should be on preserving the environment and improving public transportation within the current infrastructure. I do not support an interconnect of any type. Please revise the blueprint and make preservation of open space a top priority.</p> <p><u>Thank you for considering my comments.</u> ☺</p>		<p>5/1/2015</p>
<p><u>I support ONE Wasatch and over the snow connectivity.</u> It would be great for Utah, great for the entire industry. ONE Wasatch will create a unique and important messaging point as well as a competitive advantage in the destination ski market.</p>		<p>5/1/2015</p>
<p><u>I support the effort to connect all ski resorts in the three canyons. It's only right that they finally are connected.</u></p> <p>Hi,</p> <p>Here are my comments to the Mountain Accords Blueprint for the future of the Central Wasatch Mountains (also attached as a Word file).</p> <p>I moved to Utah in 1992 to spend one winter season. Now, I have lived here for 23 years and the reason is the mountains. We have easy access to recreation, beautiful mountains with both great ski areas and backcountry skiing, sometimes from the same parking lot. That is special; it is something I like to tell my family and friends in Europe. I lived and worked in Little Cottonwood Canyon for 7 years and know how special it is. What I really treasure about the Central Wasatch is the feeling you get when you're in the mountains, so close to the city, but yet so far away. It's amazing, considering it is a fairly small mountain range. With the small size and increased recreation and business pressure come challenges, both on the environment and transportation. I appreciate the public process that the Mountain Accord facilitates and the opportunity to submit comments. Following are some of the key issues that are closest to my heart.</p> <p>I use both the ski resorts and the backcountry areas, and value both just as much. Land swaps are crucial to ensure that prime outdoor areas are protected from development, and that some development is encouraged at the base areas of ski resorts. But, expanding the ski resort boundaries is not necessary for bringing more people to the Wasatch, nor is it a solution for the transportation problems. Expansion will only degrade the recreation experience, for backcountry users and ski area users alike. We need breathing room, not mountains with man-made structures wherever you see. In a small mountain environment it will not take much to turn the mountain into suburbs of Salt Lake City. There's nothing unique or special about that. It is Disneyland packaged in a winter scene. In particular, Grizzly Gulch should not be developed and needs to be in the land swap package with the area from Emma's to Mt. Superior. Grizzly Gulch is special; it is very family friendly, encouraging people of all ages to become more active.</p> <p>One of the goals listed in the Mountain Accord mission is to develop an urban-mountain brand that is unique in the world. We already have that. We just need to improve on what is there, and make it accessible for more people. Gear sales are on the rise for backcountry winter activities. The increasing popularity has made it to national news sites such as New York Times and Forbes Life. On the economic side: diverse, balanced offering of activities will win over lopsided heavy emphasis on one particular use.</p> <p>I have traveled to the mountains by car and by bus over the years. For the most part, the travel is not so bad. But then there are the days when everybody wants to get up there, which creates a huge traffic problem. I believe connecting the city and the resorts with trains and tunnels is too big of a cost compared to the value of the solution. That money is better used somewhere else (schools for example). A more efficient bus offering is necessary. Encouraging carpooling is a must. Driving alone in a car on a high use day should be discouraged. Also, connecting resorts via lift will not solve any transportation problems. It is just a marketing tool, and an unnecessary one. Another issue too is that Alta does not allow snowboarders. How does the connection work then? Not for all, that's for sure.</p> <p>Thank you for making this process so public. Don't let the economic pressures from ski resorts outweigh the natural environment qualities and health, and the quality of life. There's a lot to lose if expansion happens.</p>		<p>5/1/2015</p> <p>5/1/2015</p>
<p><u>To whom it may concern:</u></p> <p>I am a Salt Lake city resident and recreate in the wasatch mountains regularly in the form of hiking primarily. I've lived here since 2003 and have noticed that the canyons are heavily used for recreation by many different interests. Its hard to handle and provide for competing interests. Since its important watershed for millions of residents all or the bulk of consideration should be given to watershed protection and environmental protection. Development has always been proposed since I've lived here primarily from ski resorts that purport to support the community and be careful stewards of the environment. To the contrary it appears the resorts primary interests are to themselves and higher profits. We have seen this continually with snowbird and current proposals to connect Park City and the canyons. Certainly these proposed uses are inappropriate given that only very few people will benefit while the risks to the community will be spread to all who live in the metropolitan area. As a simple matter of equity this would be unfair and inappropriate use of public lands. Increased runs and snowmaking are also real threats to the community and would only benefit a small number of people for a limited period of time. In short, environmental protection should be the guiding principle in any future proposals in terms of management in the central wasatch range. ☺</p>		<p>5/1/2015</p>

<p>I am writing to provide comment on the proposed Mountain Accord. I've noticed that the proposal works to balance the economy, environment, recreation and transportation. The balance should be weighted heavily on the environment. That being said, it's difficult to say that a multi-billion dollar investment to increase economy, transportation and recreation outweighs environmental impacts. However, if the next steps are carried out with careful thought and priority on the Wasatch environment, then this could be beneficial to all Utah residents and beyond. Please consider the following comments:</p> <ol style="list-style-type: none"> <li>1) The Park City to Little Cottonwood transit corridor should be limited to mass transit. If not, then the amount of private winter/summer traffic vehicles in these corridors would increase dramatically and negate any environmental benefits.</li> <li>2) Their should be a cost to access Big &amp; Little Cottonwood canyons with private vehicles for non-canyon residents. A notable amount of private traffic traveling these canyons has no intent beyond taking a "windshield tour" of the canyon. People will not make a change unless it hits their wallet. It reasonable to expect a fee to access the canyons with a private vehicle if the choice to use public transit is waived. Of course, this would not apply to residents of the canyon that already pay high property taxes in the canyon.</li> <li>3) The accord should be contingent upon a all resorts involved agreeing to a "all-mountain" pass similar to Vail Resorts Epic Pass</li> <li>4) The Accord should include plans to increase restrictions or provide intermittent parking areas along the canyon roads. There are currently no rules for parking and is causing danger to the public.</li> <li>5) The three "E's" need to be paramount...Environment, Environment, Environment. That being said, we agree to allowing the resorts to benefit from the increased users resulting from the accord; however, the resorts should not be granted a right to develop additional lands and further exhaust the canyons' resources (ie, water, preserved lands, species and habitat). This concession in exchange for other considerations being presented by the resorts is unacceptable. We need to preserve the lands we have left and cannot buy into the hidden agenda of "big money." I'm very afraid that they see this as the next step in their grand real estate play. Please do not let this happen.</li> </ol> <p>Thank you for considering our comment. We are putting a lot of trust and hope that these words will be heard and seriously considered.</p>		5/1/2015
<p>My thoughts/comments regarding the proposed blueprint- I am concerned that this blueprint seems to be overly development driven. Ski area expansion is not a transportation solution. For me ski area expansion into Grizzly Gulch is an absolute red line. Grizzly Gulch lies at the head/intersection of upper Big and Little Cottonwood canyons, development in this area would permanently negatively effect human powered recreation the the core of the Wasatch. I am somewhat skeptical about any transfer of public land to private entities. Alta and Snowbird already operate almost entirely on public land. I think we need to see some very specific numbers- for example how much the ski areas are paying in lease fees vs their total proceeds from the use of our public land- before there is any more talk of transferring more public assets in to private hands. I also cannot support the proposal to link Little and Big Cottonwood Canyons and the Park City area with either rail, road, or tunnel connection. This again would seem to involve spending a lot of public funds to benefit the ski resorts. It is not clear to me how bringing in more skiers from the Park City area is going to relieve congestion in Little Cottonwood canyon. A little background- I moved to Utah in 1991, spent a number of years living and working in Alta and now live in SLC. I enjoy skiing both at the resorts and in the backcountry in the winter and mountain bike extensively in the summer. I do not feel that I am anti ski resort/industry so much that I believe enough of the terrain in the Wasatch has been dedicated to that use.</p>		5/1/2015
<p>I wholeheartedly support One Wasatch. We need to be proactive in dealing with the challenges of moving people around in fewer vehicles. Utah needs to collectively market its ski areas as one while highlighting the diversity of each. It is an economic boon!</p>		5/1/2015
<p>Hello Mountain Accord: In transportation planning for the Central Wasatch please recognize a pressing safety need cyclists have for increased shoulder width in Wasatch Front canyons. The absence of adequate road shoulder pushes cyclists into traffic lanes and this not only creates user-conflicts but places riders in harms' way. Area riders desperately need wider road shoulders in all Wasatch Front canyons and especially on the up-hill right-hand lanes. As populations grow, bike density in area canyons will continue to expand making this a high priority for active transportation planners, and I hope, for MA strategists too. Thank you for listening, and thank you for making this channel available,</p>		5/1/2015
<p>The Mountain Accord blueprint addresses many important issues such as a trail network, transit service, and reduction of traffic congestion. However, the survey for public comment creates several questions for me due to the lack of details provided to survey takers. Parts of the blueprint are written in such a way that if feels as though we are being lead to believe the rail line is the direction we need to go and support. I am concerned about the cost of a rail line, the environmental impacts of it, especially on the watershed, and the tunneling that comes with it. What are the costs to mass transit riders in this valley who depend on it for transportation? And what is the trickle down impact on low-income riders for an elaborate rail system up the canyon designed primarily for visitors? If the fundamental goal is to reduce traffic congestion and move more people efficiently up the canyon, with less environmental impact, then there are better options than the rail line. I hope the executive committee has not bought off on the rail line at this point and keeps things like the BRT (Bus Rapid Transit) on the table. ☹</p>		5/1/2015
<p>I feel that the bus system is far from optimized and if well thought out it could service all users year round more effectively than a tunnel. we also need increased parking at the mouths of the canyons. I also think we need to charge a per vehicle fee or have an annual pass to provide incentive to ride the bus. A tunnel is not needed in the Cottonwoods and would destroy sensitive lands for generations to come. I support permanent protection for Emma ridge to Superior in LCC. Grizzly Gulch should also be put into protection with NO chairlift. There need to be areas where people can walk in the summer and year round for free and have solitude and be in nature. If the chairlift in Honeycomb is a consideration, it need to be aligned so that it does not impact the silver fork backcountry. I support enabling the ski resorts to utilize more water for snowmaking</p> <ul style="list-style-type: none"> <li>• I support adding potential land and altering zoning for additional development at the various resorts' bases.</li> <li>• I support enabling the ski resorts to expand their summertime activities within their existing footprints.</li> <li>• I support enhanced modern avalanche mitigation techniques (ie Gas-X) above Alta. I do NOT support a chairlift on Flagstaff peak</li> </ul> <p>I am concerned that the ski resorts are getting many of their desired "gets", and their "gives" are more along the lines of "we are not taking as much as we could take", at the expense of potential environmental and backcountry terrain preservation. Overall I have found the "blueprint" to NOT be reflective of the thousands of hours of work that people put into the system group meetings and submeetings over the past several months. Therefore I do not support the "blueprint" in its current form, but I am a strong believer in the Mountain Accord ideals and timing, and am very hopeful that a more equitable balance of gives and takes can be achieved to accommodate many constituents'/stakeholders' desires. thank you, ☹</p>		5/1/2015
<p>I support ONE Wasatch and over-the-snow connectivity. I support the Mountain Accord study and planning process. There is some controversy over whether Summit County would want a train to end in Park City after coming up Little and Big Cottonwood Canyons. If a train is determined to be the best alternative and Summit County is not interested in being the end of the line, then they should have the ability to opt out of that particular plan. Keeping status quo on giving us access to the central Wasatch is not an alternative with a projected doubling of the population. I support over the snow possibilities and new transportation alternatives to improve public access into the Central Wasatch. I believe the summer access and dispersed recreation need is possibly more important than the winter skiing access. One of Utah's strong economic development brands is an active lifestyle in close proximity with ease of accessibility to mountain recreation venues. Mountain Biking, Hiking, Skiing, technical mountaineering are all major draws for the workforce of our future. Companies locating and expanding here are trying to attract the best and brightest of the Millennial Generation. The Millennials are very mobile and have a high interest in an active lifestyle. The Wasatch Front and Back will continue to attract major employers like Adobe and Goldman Sachs because of the lifestyle they offer by living here. Easy access into the mountains is critical to allow this work force to hike, ski or bike before or after work and be able to enjoy a balanced work and recreational life. There is balance that can occur with the stakeholders involved with Mountain Accord. Keep the process working and find that balance between the environment, water resource, recreation and protecting Utah's unique asset of having a mountain playground so close to a</p>		5/1/2015 5/1/2015
<p>Utah's Air Quality according to the National Standard is not what Utah would like it to be, I don't recall the rating but according to media reports air quality could be a lot better, Winter Especially ??? The question that I have ??? is this issue about connecting and creating larger Resorts/ Ski Areas or is it about transportation ??, if it is about transporting people from one area to another and keeping them out of their vehicle, buses etc.I think maybe it's a no brainer ??? Just my own personal opinion. Lets think even further from the normal and envision connecting Resorts to each other and also to the Salt Lake Valley, is this crazy or what !!! But if some type of transportation, Cable or Rail could be implemented , MAYBE this would lessen the Air Quality Problems and Make Resort Transportation a bit more efficient !???? Again just my own personal thoughts. Thanks</p>		5/1/2015
<p>Dear Sir or Madam, Improved transportation would make my trip to the ski areas safer, faster and more convenient. It also would serve the tourist industry and improve Utah's economy. I urge you to make this a top priority. Thank you,</p>		5/1/2015

<p>Mountain Accord, I support the development of mountain bike trails that cross between the trails in Wasatch, Utah, Davis, Salt Lake and Summit County. <del>Also support some sort of mass transit system/connectivity to help limit the cars in the canyons etc.</del></p>		5/1/2015
<p>As a former SLC resident and frequent visitor to the Wasatch mountains, I would like to support the highest protection from development of this incredible mountain range. The access to a quality, backcountry makes the Wasatch unique and makes SLC an amazing place to live. While the economic drive to expand continues, this ultimately degrades the experience in the Wasatch and in the long run will be very detrimental. I do not support inter-connecting the canyons via any means including tunnels. I strongly believe that Grizzly Gulch should not be developed and should remain preserved. I think that as much land as possible should be preserved. If this means land swaps I support those to prevent future development. Ski lifts should not be put into Silver Fork Canyon. Any ski area expansion should require uphill skiing and boundary restrictions should be evaluated to allow as much backcountry ski option as possible.</p>		5/1/2015
<p>Please connect all ski resorts over The snow. Tramways chairlifts . This Is the only and cheapest way. Forget expensive tunnels and Monorails.</p>		5/1/2015
<p>Mountain Accord, I am a Salt Lake native who uses all the local canyons very frequently, I have several concerns with the mountain accord. Me and my family ski in our world class resorts and I ski in the backcountry. I do not support any resort interconnection, I believe currently the Wasatch offers both world class resort and backcountry skiing, to which I both use. As a local resident who has decided to remain close to the central Wasatch to raise my own family, largely because of the skiing; I fail to see how an interconnect of ski resorts would benefit me or family in the future. Our resorts or awesome an interconnect wouldn't resolve transportation issues, and appears only to be novelty concept to allure tourists. I think preservation is absolutely necessary in the Grizzly Gulch area for backcountry access. As vast as the Wasatch is, this is the most accessible high elevation trailhead (important particularly in winter like this one). Preservation for an rapidly increasing backcountry usage is imperative. Final, I don't support a tunnel, I think a mass transportation improvement is needed. Living 20 miles from the top of both canyons; taking public transportation with indirect routes, more than doubles the one way commute time versus driving. Living in the valley this is neither a logical or convenient solution. I would hope public transportation can be improved so it can become one. Thank you for your consideration.</p>		5/1/2015
<p>A short summary of the plan of mountain accord would be to say, "how can we drop more people into these mountains that are already under strain from the multiple uses of each season." Perhaps it would be better to plan funds, manpower and civic plans for finding other mountain areas with no present strain beyond the city side of the Wasatch mountains and provide ease for city dwellers to commute out to new areas. If a national forest is failing under use, why plan on increasing the use at great expense when it is really other national forest land that could be incorporated into the growth that could deal with population growth. The population growth is in the suburbs. New roads and trails could easily solve the problem.</p>		5/1/2015
<p>The plan for the transition of private land to public in exchange for ski area expansion and additional development is great. However, lifts should not be built in grizzly gulch, up mt wolverine, or anywhere that makes terrain in grizzly gulch and wolverine cirque sidecountry or within ski area bounds. This area needs to remain backcountry. The other ski area expansions are fine, and the idea of another lift to make the Brighton- solitude connection better is great. Thanks,</p>		5/1/2015
<p>Utah is coming together to be a connected ski industry and a connected ski location. The flow of skiers between resorts will have a dramatic and expansive effect on locals and vacationers. The scale, size and feel of a day on the slopes in Utah will expand into what feels like a vacation in a day. It poses problems for some and solutions for others that is the truth but it poses opportunities and offers conservation within a ski system instead of between them. We all love our Utah resorts, one day we hope to have Utah as a resort... to leave one and enter another without a border that relies on a ticket or a location but is ski Utah and connect Utah. ☺</p>		5/1/2015
<p>To whom it may concern, My only comment, as a long term resident (Since 1974) and having enjoyed the uniqueness of the Wasatch Mountains all these years (and yes I am a resort skier, hiker and back country user) is I hate this "blueprint" of trying to "improve" this very fragile area. I do not believe that our watershed or mountains will be "improved" (only to the benefit of the ski resorts). I have only attended one meeting at the SLC Public library (transportation and economy) a while back and I was not impressed about how the transportation plans are being proposed. Tunnels, Trams, gondolas, linking resorts, etc. Lets work with the bus system ideas, yes, this is not "upscale" idea but these mountains are very unique. NO more expansions and development in the canyons. NONE</p>		5/1/2015
<p>Dear Mountain Accord, I think it's great that you all are bringing attention to the beautiful mountains that we all have to share and enjoy, and our really exceptional water supply, and the need to protect them as the population and tourism grows in our state. I'm sure that all of you have many different parties, with mostly economic interests in mind, who wish for you to make decisions in their favor. I think that, since these mountains are all of ours, though, we should consider what would be best for the people who use them, which is actually all of us, since every last one of us uses water. Many of us also use the mountains as a way to enjoy and experience nature. We are so lucky to be able to live in a city, and have this accessible wilderness so close to us. That is what is so great and unique about those mountains - they are wilderness. So, I believe that our first duty is to preserve this wilderness, for the sake of our water supply and for the sake of our human need to experience our earth untouched. The way to preserve our wilderness is not to tunnel and bulldoze through it, running trains and trams through and across it's amazing canyons and creeks. There are roads that already exist up these canyons, allowing us to access them. The answer is, rather, to limit the numbers of vehicles that can be up there at any given time. Access to the mountains would be permitted. They could be free permits, but they would be a requirement. Some people might think that this is a nuisance. They might think and feel that they should be able to go up into those mountains whenever they feel like it, but those same people will probably also realize that the reason they go into the mountains is to get away. If you allow the whole city into the mountains, complete with a train, it is no longer "getting away." And the effect of too many humans on wilderness is destruction. Requiring permits would be allowing use, but preserving what we love about it. For those who want to hop up there at the last minute, maybe there could be busses that anyone could take without needing a permit. Perhaps you could work out a deal with the ski industry, making sure their quotas could be met, while limiting the number of cars that are allowed to go up there. As far as the private land amid this wilderness, take whatever money would be used to build a train up the canyon, and use it instead to buy up as much private land as possible, and turn it into wilderness. I realize that none of my suggestions promote economic growth or jobs, but they do promote the best interest of the people who drink the water that trickles down those mountains, and the people who watch the seasons change on the trails in those canyons. I have no doubt that all of you have the ability to more efficiently haul crowds of people around those mountains, and turn it into something that could end up being like an outdoor adventure theme park. But really, what we love about those mountains, even what tourists love about those mountains, is how untouched they are. Instead of coming up with the best plan of how to change them, I'd rather you came up with the best plan to keep them the way they are. Thank you for your consideration.</p>		5/1/2015

<p>I have been involved with land management, recreational access, and environmental protection issues in the Wasatch since the 1980's. Despite frequent controversy, progress has been made. Unlike some in the environmental community I view the Mountain Accord process with deep skepticism. What I see in the blueprint is an economic development proposal with a veneer of environmental protection and land transfer. The "recreation" component is largely what Ed Abbey eloquently termed "industrial tourism." For the blueprint to be a good deal for the general public the protective elements like land transfers to public ownership, watershed protection, and permanently defined ski area boundaries must be implemented as an integral part of any development elements like zoning changes and consolidation of private lands near the highways. The transportation vision does not adequately consider funding. Is the taxpayer being asked to pay for ski industry infrastructure? The idea of tunnels between the canyons was opposed by environmental groups at the time of the Olympics, and I believe the concerns of that era are still valid. The proposed "regional trails" look like mountain bike thoroughfares that will be of no use and possible detriment to hikers, bird watchers, and others desiring a quiet experience in the mountains. In my travels I have examined land management in areas such as the urban interface National Forests near Los Angeles, the mix of wilderness and ski areas around Aspen, Colorado, and the heavily used forest areas in New England. The Mountain Accord seems much more pro- development than what is on the ground in other heavily used mountain areas. Some change in the Central Wasatch is inevitable, and I will watch this planning process closely. Perhaps the final blueprint plan will strike a reasonable balance between protection and economic activity.</p>		5/1/2015
<p>Hi, I want to thank you all for valuing the local public's input because, quite frankly, I think we are the ones impacted the most by the decisions that are going to be made. With that said, as a Salt Lake resident and more importantly, someone who spends a lot of time recreating in the nearby Wasatch mountains, I implore that there not be any future development of these beloved mountains. When I first moved here from Ohio, I was blown away at the beauty and prospect of spending years discovering these mountains. It's been five years now and while I'm far from bored of these craggy peaks, I have come to realize that this range tiny! It is already difficult to feel like you've truly escaped when you can see Snowbird's tram from so far away and most hikes in the Cottonwoods are littered with chair lifts. For backcountry skiers, high elevation north facing terrain is coveted as it gets the most snow and remains the best quality of snow. It is no coincidence that this is where the resorts have placed themselves. Sure, an extra lift here or there, and a boundary extension doesn't seem like much now, but what we have to remember is that they already operate in the best possible terrain! Add low snow years on top of that (last four seasons) and the acreage available to backcountry skiers and various other user groups diminishes at a startling rate. I understand the ski resorts are business and would like to expand but why should their interests be given priority? It is well known that the locals are not in favor of resort expansion. Are we going to develop and permanently alter the Wasatch further for the sake of tourists and the resort executives? Ultimately, I just wish that the individuals and groups making the decisions that affect the Wasatch Mountains will refrain from approving development that will permanently mar the beautiful land that so much of us love. I won't go into the hypotheticals of global warming affecting the ski industry but I will say that the canyons are enjoyed year round and as such, should be preserved for year round activities, not just winter. Thanks again,</p>		5/1/2015
<p><b>Please protect our beautiful mountains from further development. We have enough! It is our duty to protect what is left of our God given wilderness</b></p>		5/1/2015
<p><b>I support the Mountain Accord initiative. It's good for the Utah economy and the snow sports industry.</b></p>		5/1/2015
<p>More needs to be done to protect the canyons and the Wasatch. The current version of the plan leads us down a path that is hard to come back from. Minimalistic development with a plan to encourage greater ridership of current transportation and benefits for those who seek alternative options on high traffic days while refraining from large scale projects that disrupt the area and water supply are what I would like to see. We only get the chance to halt these developments once, while the future holds bountiful opportunity for change as better options emerge.</p>		5/1/2015
<p>Hello, my name is Gandhi. As a user of backcountry and also a season pass holder for the past 15 years I would like to join in agreement with all those who Wouk like to preserve our canyons as they are. No more lifts and definitely no more tunnels and development. Wolverine cirque area needs to stay the way it is for backcountry users, as a snowboarder who also rides and enjoys both sides; the backcountry and the lifts I would like for our canyons to be protected for further development. Let's keep our resorts as they are and out backcountry protected. Resorts have enough accessible terrain. Further development and drilling a tunnel through a mountain is going against preserving and taking care of our environment. We need more details and more information our to Lucas and public</p>		5/1/2015
<p>I appreciate the opportunity to respond to your hard work. May I preface my comments with this quote: "A man [sic] on foot, on horseback or on a bicycle will see more, feel more, enjoy more in one mile than the motorized tourists can in a hundred miles." — Edward Abbey, Desert Solitaire As a year-round resident of Alta beginning my thirteenth year here in the Canyon, I appreciate the attempt to create a big picture proposal on how to manage population growth and user groups in the Wasatch Canyons. I find it unfortunate that the proposed solutions are predicated on public land swaps largely benefiting ski areas, particularly the Flagstaff-Emmas through Grizzly Gulch areas in trade for the main swath of acreage in development zone of Alta proper. What a sweetheart deal for the Alta lift company, one which will in one fell swoop create a company town owned by the privately held interests of the Alta lifts. The incentives are hardly tempting—a billion dollar plus taxpayer funded train through the mountains to Park City, limitless numbers of tourists traveling back and forth through that corridor without spending a dime to stay slopeside in Alta, the potential destruction of the business models the Alta Lodges have worked to create, and more skiers skiing out the coveted snow even faster and with less regard for the environment in which they're skiing. Ease of access does not create reverence, just like overproduction of anything does not create value. Why should visitors to Alta pay attention to the environment at all—they'll be able to travel to it without the natural limitations of Little Cottonwood Canyon's winding two lane highway and the avalanche abatement that keeps people indoors (and commands a premium to stay slopeside in Alta) when snow levels are high. All upside for the lift companies throughout the Wasatch, but all downsides for the community, skiers, and ultimately the product of the natural beauty and natural carrying capacity of Little Cottonwood Canyon. I always find it interesting to watch our guests, having worked in hospitality since I first arrived in Alta, in how they respond to interlodge and being unable to leave the lodges or their homes in Alta when Avalanche control work is being done. Most freak out. Perhaps, for the first time in their lives, their modern conception of themselves as captains of the universe are challenged. They are unable to meet the timelines which they insist they must maintain in order to go back to work, make their flights, catch their shuttles, etc. Some guests, and they often become the guests that "get" Alta and return again and again, most for decades, grasp that here Nature, that ephemeral beauty that becomes more elusive every year, refuses to be tamed. Humans are humans with a small h, and the Mountains and the forces that are larger than us still rule. There are fewer and fewer places in the world that allow us to acknowledge that we as human beings cannot and should not reign supreme. Some people will pay almost any amount of money to be reminded of that, and many will sacrifice a great deal to protect places that make this truth obvious. Alta is one of those places. Don't muck it up with expensive boondoggles like a tunnel train to Park City and the thin inducement of a base facility area with more employee housing and a community center. As if an artificially created base facility area that hasn't grown organically with a more robust year round economy here will be created overnight with these structures. As others have noted, there are natural limitations to the carrying capacity of Little Cottonwood Canyon that are already in place, such as the limitations of the highway and the necessity of avalanche abatement work. I suspect the train has traction because it is a workaround for another legal limitation, the forest service's restriction on allowing traffic up canyon until all parking spots are filled. My positive suggestions with an eye to big picture solutions? Work to acknowledge that limited access to any desirable drives up value. If you strive to be bold and innovative, close Little Cottonwood Canyon to cars and make public transportation free, like Crested Butte, Aspen, and Zion National Park. Watch the animals flood back in and watch tourism numbers and dollars increase as they have in the wildest places in the world like the Kruger in South Africa. As the Canyon is being loved to death by seeing annual visitation numbers that purportedly rival the National Parks, I'll propose a land swap. Make the areas from Superior through Grizzly Gulch National Monuments. If the ski areas kick up a fuss, remind them that they have benefitted from public land use in creating multi-million dollar industries since the late 1930s, and limited, profitable, reasonable growth is something that the public can and will support. Stop being such greedy gusses and enjoy what they have created in a reasonable way. They're pushing their luck in being so short-sighted with their development ambitions. After all, even with our current supposed crisis over transportation to the mountains, we still enjoy arguably the most accessible skiing in the world from an international airport and a major metropolitan area. Disincentivize car use by tolling those that choose to drive up any canyon. Make bus service more robust, and dedicate part of the current road to a rapid bus service lane. Invest in avalanche sheds. They are much less expensive than rail systems or re-routing the current highway. By the way, it would be great if you made this process more democratic. It is not necessarily true that our public representatives will represent the public's will in these matters. Thank you for letting me voice my opinions, and for galvanizing discussion by your proposals.</p>		5/1/2015

<p>As a local ski instructor for forty years I do not support the interconnection of Little Cottonwood Canyon, Big Cottonwood Canyon and Park City by any means including tunnels. After forty years of working at our resorts I now spend the majority of the winter in the backcountry of the Wasatch. The environmental impact and the non existent benefits to the general public are so overwhelming huge that to pursue this idea for the benefit of the very few elite that would be served is a horrible plan for the future of the Wasatch. I do support the continued pursuit of low impact/low cost plans for improvement of the transportation systems in the canyons, i.e. bus systems. I do not support the idea of a train in Little Cottonwood Canyon. I do not think it would serve the majority of users, especially we locals, that frequent the canyon at various points other than the resorts.</p> <p>I support the development of a purpose and need statement that has more balance in regard to the "Systems" that the Mountain Accord is addressing and is not biased to any one element or proposal or user group. The Wasatch belongs to us and we should not be asked to give up access or preservation for economic development that benefits the few.</p> <p>I believe that the Grizzly Gulch/Tuscarora area needs to be preserved and also the Silver Fork area needs to be preserved as backcountry. I'm OK with base improvements at the resorts. I truly feel that all of the ski resorts should maintain an uphill travel route through their terrain. They could even sell special passes for use of such areas. To continue to prohibit all uphill travel at the resorts does a huge injustice to UT residents and out of town guests looking for avenues of winter exercise near the resorts.</p> <p>Please accept these comments in regard to the Mountain Accord Blueprint.</p>		5/1/2015
<p>I am the oldest of four members of the Charbin Trust that owns an old family cabin on Snow Haven Lane. My family bought the property in 1897 and built the cabin, which still stands, in 1904. It is the second oldest cabin in Brighton. Our water supply comes from a dedicated spring that was deeded to us by the State of Utah in 1897. The oldest cabin in Brighton (1901) is still owned by the original family and is also located on Snow Haven Lane a stones throw away.</p> <p>These cabins are useable about 3 1/2 to 4 1/2 months each year depending on the arrival of spring and fall. Yet the taxes on our cabin are almost twice as high as our 3,000 square foot house on an acre in Holladay.</p> <p>There have been many changes to the Canyon over the years, some good, some bad, some that reflected expansion greed and some that showed good stewardship of our lands. I am very concerned when I hear that the Mountain Accord plans have not been fully disclosed because they are in the "development period." You can gather all the public comments in the world but without specifics it means nothing.</p> <p>What has been disclosed, and appears to be the driving force is the ski industry. Conversations about how the skiers can go from one canyon to another "just like Europe" show the true colors of the plan. I'm curious what percentage of skiers or boarders would want (or can afford) to ski all the canyons in one day or change every day especially as some resorts don't allow snowboarders and each resort has a different degree of difficulty. I agree that we need the tourist dollars but we don't need to "prostitute" our mountains to get them. Expansion can't always be the answer just as we don't need to destroy the local charm of our mountains to accommodate the growing numbers of users in the canyons.</p> <p>One proposal shows a tunnel from Brighton to Park City. From what I could see on the map it appears the opening would be on Snow Haven Lane. That either destroys our cabins (and the others nearby) or makes it impossible to access them. Where will it come out in Park City? How will it affect the water from all the old mines and what about the changes in elevation? How much water will it destroy in Brighton?</p> <p>Another proposal is an aerial tram on the East side of our property. How nice for us to have to have our property littered with crap from above and our quiet hill side where we often see deer defaced with hideous towers. Either proposal will likely destroy our spring leaving us no water.</p> <p>The dollars needed to implement the Mountain Accord proposals are staggering. Where is the money coming from? Special interest groups pushing this idea? Already overburdened tax payers? What if I don't want my 111 year old cabin destroyed or loose our water? What about the other property owners? I understand eminent domain has not been ruled out.</p> <p>I haven't seen anything on how we will increase fire and police protection or the water shed. What about the infrastructure? Many parts of Brighton have no water or fire hydrants. Speaking of water, property owners have long been told that Brighton water is really "virtual shares" that there are no more shares available. Two years ago the price for a share, should you find someone that would sell, was \$50,000. Where is the water going to come from for all the people that come with the expansion?</p> <p>What about sewer? We were forced to connect to the sewer even with our extremely limited use and now have received a letter stating we will be billed for year round sewer even though it is impossible to use the cabin after it freezes.</p> <p>What about the additional power needed? More ugly towers? A new power plant? More cell towers?</p> <p>Why can't we charge a small toll for cars and trucks that don't belong to property owners like American Fork Canyon? Why can't we make the bus service more efficient? The current bus schedule from Salt Lake to Park City is very inadequate. Multiple runs in all three canyons would help. We could probable offer free bus service for 100 years for the price of the proposals. Don't complain about the snow and buses getting stuck. Give me a break. Weigh the percentage of days or hours lost with a stuck bus against the construction of a train up one or two canyons, not to mention the tunnels or trams.</p> <p>I know one objective is to decrease traffic. Did it ever occur to anyone that the traffic and lack of parking are actually keeping the canyons from being over run? If you replace cars with a train up (for example) Little Cottonwood and a tunnel to Brighton, the number of hikers, bikers, campers, fishermen, etc could quadruple or more. I have visions of a solid mass of bikes and hikers on every trail and fishermen side by side on the streams. Not to mention that there will have to be transportation from the tunnel to the various spots and trail heads in the canyon. A huge bus terminal? What will happen to the ecosystem and the watershed with that many people?</p> <p>I know we are smart enough to figure out some solutions. Let's start with a reasonable approach instead of a massive, massive project that is irreversible once begun.</p> <p>Thank you for this comment period.</p>		5/1/2015
<p>Our family and friends think of Utah as our other home and we continually enjoy introducing it to many of our friends and they all love it! The ONE WASATCH has been introduced and of course, my avid skier of a son and husband were thrilled that it can become a reality and the new skiing areas and ease of transportation for me as the chauffeur of the clan is very attractive.</p> <p><u>We support One Wasatch!</u></p>		5/1/2015
<ol style="list-style-type: none"> <li>1) I think we should charge autos for using the canyons. We should charge single riders more.</li> <li>2) Take the income from the autos in #1 and fund a better and cheaper bus system.</li> <li>3) We should be smarter about the size (big and small) of the buses and the scheduling. The buses should run from the base of the canyon and to the resorts with the ability to stop at various places along the way.</li> <li>4) Why can't we get electric buses that capture the energy coming down only to re-use it on the way back up? My car does. Units such as this will make financial sense, environmental sense, as well as everybody feeling better about mass transit in the canyon.</li> <li>5) I love my ski resorts, but they have enough of our small and precious mountain range. They need to live off of what they have. period.</li> <li>6) Lets not forget about the folks who use the back-country to ski. I have seen 40 years of back-country skier giving up terrain to ski resorts, pushing folks into more difficult and dangerous areas.</li> </ol> <p>Thanks for the opportunity for me to comment.</p>		5/1/2015
<p><u>I'm resenting this:</u></p> <p>While I know that change, development and conservation of our most wonderful Wasatch Front is needed, I worry about the motivating factor driving the change. I understand much of the mountain land is PRIVATELY owned, that money and those land owners are powerful, that all of us mountain users need to "SHARE", the blue print is looking at public moneys which are weak. I know the roads, parking and trail maintenance are most important in keeping the mountains healthy. I worry about the "watershed" reports used are outdated, the low snowpack years not offsetting the cost the ski industry is putting into their pockets, and the UTA not currently being able to stay in the black.</p> <p>I know we all have to give a little, but the transportation piece is most worrisome to me.</p>		5/1/2015
<p>I can't imagine having a drivable connection between Alta and Brighton will not affect the watershed.</p> <p>I also can't imagine a drivable connection between Alta and Brighton helping to mitigate the parking capacity issue.</p> <p>Though the interconnect is probably a done deal, it is clear that it is a tourism promotion gimmick more than a popular expansion of ski terrain. Think about it. Skiing from Deer Valley to Snowbird and back? How many skiers will actually want to do that? And, if done because of curiosity, how many will want to do it again?</p> <p>The transit discussion in Little Cottonwood Canyon is important. To consider a tram in place of cars has two problems. One, the cost of a tram system and the number of cars needed to move skiers/visitors up and down the canyon is mind boggling. Two, is the question about parking at the bottom of the canyon. Above ground would become the biggest cluster imaginable. Underground would be a Kennecott sized dig.</p> <p>A bus system is akin to the Tram but slightly less expensive.</p> <p>Why not consider improving the ore-cart roadway on the south side of Little Cottonwood Canyon and make Alta Canyon a one-way drive; one lane up and one lane down. Above and below ground parking in Alta would be less expensive and intrusive than at the bottom of</p>		5/1/2015
<p>I have a Ph.D., in computer science. I work remotely for a worldwide company headquartered in California. I can live anywhere I want. I choose Salt Lake because:</p> <ul style="list-style-type: none"> <li>- hiking the Wasatch</li> <li>- quick access to an international airport</li> </ul> <p><u>The wasatch does NOT need further development</u></p>		5/1/2015
<p>I recommend that all ski resorts start a paid parking of \$5 per vehicle that come to use their facilities and park in their lots. This money should go directly towards the government transportation expansion plan. No tax dollars should be used to foot the bill for any transportation expansion in the canyons. Those who take public transportation would not have any parking fees. This would cut down on vehicles in the canyons and put the costs on those who impact the area the most.</p> <p>I also would recommend looking at the different strategies that have been used in areas of Europe for their ski resorts. After extensive research you should implement the best one based on the environmental impact towards our watershed and wildlife, the economic feasibility on a cost based analysis and a path for continued growth. The Wasatch should not be for sale, but it can be for rent as long as the landlord (government) holds all the cards. Local tax payers should not have to foot the bill for any expansion, that should lay at the hands of the ski resorts who want more people attending the services that they offer.</p>		5/1/2015

<p>Not sure but I hope this is the place to make my comments. If not, please forward to the appropriate place/person.  I am a long-term Park City resident. Owned since 1997 and retired here in 2003. My wife and I have enjoyed the area since then and are eager to see continued improvement without the over-development and destruction of the ambience that we cherish.  Traffic: of course, we have noticed the increased congestion and occasional traffic jams and are concerned that the increasing population growth will exacerbate this situation. However, after having lived in Europe and on the East Coast, we don't think that this is nearly as serious a problem as many of our friends and hysterical residents. Getting to Salt Lake is still relatively easy and access to the airport is the best we've ever had. So, everybody chill out.  Tunnel: we would love to be able to ski all 7 Wasatch resorts and that would certainly create a world-class ski area. However, the idea that a tunnel is necessary to accomplish this objective sounds like an overstatement and would be an extremely expensive solution. We have skied the Quatre Valles area in France - Courchevel, Meribel and Val Thorens - those villages are all connected with above ground lifts and should be the model for the Wasatch resorts. So, it seems to me that an expensive, under-utilized (4 months/year, mainly daylight hours, mainly for tourists and skiers, etc...) is not a good idea, nor an effective way to spend anybody's money, public or private.  Public transportation: improved public transportation between Park City and the Salt Lake Valley would benefit all parties. A system that would be used during the whole year, by tourists and commuters alike would make sense. I know that there are commuters in both directions and I assume that the growth projections show increasing volumes. Some sort of improved public transportation would be justified. Just adding lanes to I-80 is not the solution - see Houston - not doing anything also does not work - see Austin. Maybe extending the existing light rail system from the Valley?  Benefits to Park City: I am concerned that just making it easier to bring tourists to Park City for a day or evening and getting them back to Sandy or Draper or ??? would not benefit Park City significantly; in fact, it would just increase the crowds here and not add much to our economy. Tourists need to come here, stay, eat, shop, etc... not just come to play and leave. I understand the issues associated with the access to both Cottonwood Canyons, but that should not be allowed to dominate the planning process.</p>		5/1/2015
<p>Thank you for the work done so far on this plan. I have many comments but I would like to keep things brief and focus on some aspects most important to me.  From the economy system group, I appreciate the goal of improving the quality of experience for residents and visitors, and the metrics of visitors that can reach key destinations without an automobile in less than an hour.  I think it would be extremely beneficial to have a connection between Fashion Place and Big or Little Cottonwood, whether it be a continuation or TRAX or a creation of a light rail transit system. It is very difficult to get to those mountains without a car. I bike everywhere in the city and take buses or TRAX when needed, but biking to the mountain and home is exhausting. I live in center city, but for those in downtown or the avenues it is almost impossible.  From the transportation system group, I appreciate the goals of accommodating and encouraging bike and pedestrian use of transportation corridors, and ensuring the transportation experience is safe and promotes health. Sometimes biking is hard because the lanes have debris in them or dirt is blown up from passing cars. Increasing the number of protected bike lanes and other options are important to explore.  Providing incentives that Reduce Vehicle Miles Traveled (VMT) increase safety in addition to improving air quality and other environmental benefits.  I also support increasing the percentage of trips to-and-from mountain destinations accommodated by alternate modes (i.e. non-SOV, mode split) and providing access to a range of destinations (activity and development centers as well as dispersed recreation).</p>		5/1/2015
<p><b>** I support ONE Wasatch and over-the-snow connectivity.</b>  <b>** I support improved transportation to/from Utah's ski resorts.</b></p>		5/1/2015
<p>Our response to the Mountain Accord Study  To All Mountain Accord members,  Thank you, thank you for studying these problems and for trying to come to an agreement. These are the areas that we believe are most important:  • Protecting the public domain of the Central Wasatch Mountains.  • Study the impact on the mountains, to protect the watershed, wildlife and environment.  • Keeping development outside the canyons and retaining the character and quality of the local areas.  • We heartily agree that we are not Europe, and surely not Colorado, California, or Canada. We should recognize our uniqueness and want to stay that way.  • Watershed protection is a priority in any mass transit development. Single occupancy vehicular traffic is unacceptable. Park and ride is a necessity.  • All aspects of avalanche control should be respected, and safety recommendations followed by all citizens &amp; tourists without question.  All of our canyons are different, and it is fun to be able to decide among friends which area is the consensus for each day. The diversity and beauty of each canyon is not to be overlooked. We do not need or want overhead snow chairs going by, diminishing our enjoyment of the natural beauty. We are used to our canyons and treasure each of them in their natural state. We feel that the resort connection issue has been concocted by the ski business is to appease the affluent as a novelty and to make more money. Let's leave our canyons alone as much as possible and let them retain their quiet beauty, interrupted only by the cascading stream. Let's not mess with this! Every time we put a stream under a road, we are sorry for its loss. I agree that we should get people to the canyons, not through them. In our family we have five generations of environmentalists (we used to call them Nature Lovers). My grandfather was the foremost naturalist in Salt Lake City at the time with his world-class collections of insects and bird eggs, all categorized by species, date, location, and collector. In my grandparents home that is all we heard people talk about - birds, insects &amp; butterflies. School children were invited to see these collections, to identify and to study them. My father carried on all of the traditions of Grandfather. His idea of fun was to go to the "Black Sews" to watch for birds. As a young man he wanted some skis, so he had his brother make him some. They were long heavy and had a screw at the front of the ski for winding up rope to go uphill. As a physician and surgeon my father made house calls to patients homes night and day. He loved having company on his frequent calls. His enticement on Sunday calls was "If you come with me we could go up the canyon and watch the birds". We always took him up on that invitation. Back to the matter at hand - To decrease the need for connections between resorts on the Wasatch. Mountain Accord suggests that bus rapid transit, rail, limited single occupancy vehicle use &amp; increased park &amp; ride could be a less invasive abuse of our canyons. This would certainly decrease the need for resort connections. "Any solution that has a negative impact on watershed, environment, flora &amp; fauna would be irresponsible." I thoroughly agree. As part of the land exchange, I was pleased that Mt. Superior would be protected. I was shocked that anyone could think of desecrating such a magnificent mountain. It must never be possible to do so. I believe that it is true that 96% of Utahns agree to protect our wonderful mountains &amp; canyons for all future generations. The Guardsman's Pass road should be closed in the winter, as is now the practice. Why do we need to connect the ski resorts? They are doing fine. An open road in winter only means more development. Please leave Bonanza Flat alone in its beauty for all to see and respond to. The giant hotel almost to Guardsman's Pass is so insensitive to the land and destroys the awesomeness of reaching the pass. Let's retain Bonanza Flat in a pristine state. Last observation - It is sad that it is now so difficult for young families to be able to ski together at the resorts without spending a fortune. Skiing shouldn't be just for the wealthy. When I was in High School our parents gave us a dollar to go skiing (60 cents for bus fare and 40 cents for rope tow tickets). We packed our own lunches and leaned against our crossed skis to eat lunch. Below us a magnificent view of White Pine in all it's pristine glory. We flourished in the powder, the rope tows were hard to hold onto, but we were "skiing".  Last year I was invited to lunch at Snowbird. After which we were invited to go through the mountain in the new tunnel. On the other side we looked down at White Pine. I felt sad looking at a crisscrossed dirt roads and a maintenance truck.  Therefore our priorities:- No tunnels through the mountains.- No new roads connecting ski areas.- No overhead lifts connecting canyons.- Watershed protection as the #1 priority.- Access to the canyons from the city for all.  Salt Lakers have always been great picnickers. Its "up the canyon" for brunch with bacon &amp; eggs, biscuits, hot coffee or for steak dinner with freshly cut corn on the cob or a basket of sandwiches. Each time we appreciated our camp spot in the canyon.  Let's not hack up the mountains for projects that only reward the privileged few. Each of our canyons is unique and presents a different experience on the ride up. This is very much a part of the pleasure, always amazing, always worthy of our respect.</p>		5/1/2015
<p>There has been too much emphasis placed on business interests and not enough on stewardship and reversing the mistakes of the past.  Billions of Dollars on tunnels and railway lines! Money that will never produce an economic return, even measured in centuries (otherwise private entities would be clamoring to do it). How does that create a sustainable, vibrant economy?  More pandering to a ski industry that has already benefited so much from exclusive use of public land. Look at the valuations now placed on those ski areas!  Look at the maps! Designate what's left for human powered. Require the ski areas to swap their key parcels of land (Grizzly, Emma, Flagstaff) for the land under their ski lifts, or pull out those lifts!  Don't allow the ski areas more land for base area development.  Just congestion charge/price LCC road. The market will find solutions: Uber, Lyft, ride share vans, etc.</p>		5/1/2015
<p>Though I can understand the perspective of people not wishing to see further transportation developments in the Wasatch, I find that viewpoint short sighted. The population of the Wasatch Front and Back has been growing at an amazing rate and shows no signs of abatement, due in no small part to the opportunities for easily accessible outdoor recreation. At the same time, traffic congestion, and automobile related pollution threaten everyone's ability to enjoy these resources. Viewed in this light, it is important for us to look beyond short term solutions and look towards sustainable transportation options to get people to their recreation destinations, whether they be modern ski resorts or rustic trail heads. Looking at the mass transit options offered in Europe, Japan, and even nearby in Zion national park is essential. Though perhaps initially viewed as inconvenient and environmentally unfriendly, the installation of a train or monorail, and the subsequent ban on all passenger vehicles in our canyons would create a much more streamlined, less environmentally impactful commute to our destinations of choice over the long term. Ease of use, affordability, and environmental soundness are paramount to this discussion, as an imbalance of any of these aspects could render the project a failure. All these things considered, however, and the Wasatch could provide a model for future urban/outdoor integrations around the world.</p>		5/1/2015
<p>Inherent in utilization of the Wasatch front is access for singletrack mountain bikes, and avoidance of motorized intrusion.  Thank you for the opportunity to comment.</p>		5/1/2015

<p>just submitted my comments on the webpage, but wanted to make sure they went through.</p> <p>I am a Salt Lake resident, have been for 18 years. Love the mountains, and glad to see the accord is making best efforts to improve access and preserve our mountains!</p> <p>I am an avid biker both mountain and road.</p> <p>I did not read much on how the accord is going to improve road biking conditions up the canyons. I would hope that if rail systems or the like we put into the canyons that bike lanes or wider shoulders could also be integrated.</p> <p>As for the mountain biking. I feel like salt lake is falling behind on our trails systems. I speak mainly of the shoreline by the U and avenues. While cities like Draper have made huge improvements, drawing all levels of mountain bikers, and high school teams to their trails, there is no real draw to the U shoreline.</p> <p>I would love to see and be a part of developing similar trails systems to corner canyon here in the Salt Lake hills. Some uphill and downhill specific trails. Some real gradual casual trails and some with berms and rollers. Is anything in the proposal for such things?</p> <p>I know I am speaking of an area not on the map, but what are the mountain biking trail improvements for Parleys, or Millcreek, or Cottonwoods?</p> <p>How about the land from Parleys summit to Lambs canyon on the South side of the freeway? Is that public land?</p> <p>I often think when I load up with all my biking friends as we travel to Jackson Hole, WY to ride Teton Pass. Why cant we have this same thing in Parley's Canyon? Or East Canyon? Or Emigration Canyon?</p> <p>I would love to hear more about the biking plans for these areas and how I can get involved.</p>		5/1/2015
<ol style="list-style-type: none"> <li>1. "Station stops on a mountain-rail system which would provide reliable, fast, unique, and marketable transit to the resorts and to major dispersed recreation access points. The canyon road would still be open to vehicular traffic."</li> <li>--- This sounds a lot like SkiLink, an idea that was going to do more harm to wilderness areas than it claimed. That idea could not overcome the immense cost of the proposed service and the time it would have taken to go between resorts on either side of the Wasatch. I am not sure this new, proposed, rail system will be any better.</li> <li>2. RE: "The Wasatch trail system...supports a wide variety of recreation uses, including activities such as mountain biking, which have experienced an explosion in use. In some areas, high use is leading to resource degradation, particularly on trails that were not originally designed for recreation uses."</li> <li>--- The enhanced trail system should not cross what is now considered the last area of roadless wilderness in the central Wasatch. Any expansion into existing wilderness only threatens watershed and wildlife habitat with human encroachment.</li> <li>3. I am hesitant to support improving and, especially, connecting the existing regional trail network if that will allow greater access to areas that are currently hard for humans to reach. The increase in traffic will undoubtedly do more harm than good. For example: mountain bike trails were built at Dead Horse State Park to accommodate increased numbers of mountain-bikers visiting Moab; however, they have not always stayed on allotted trails and damage to vegetation and the cryptobiotic soil near the path (in addition to trash that is left) is plainly visible. There is also the fact that the camping experience for those that are not mountain bikers and who don't want to be part of that culture, has been irreparably damaged.</li> <li>4. The concept of "implement an environmental monitoring program and create an adaptive management plan" needs additional explanation. Who will run this program? How will it be funded? Who gets the final say?</li> <li>5. I heartily support increasing the amount of land under federal protection but how will that be achieved when Utah's Congressional delegates are actively working to decrease federal land protection?</li> <li>6. I support using the "Zion vision" for canyon access but what studies have been done regarding additional parking that will be needed to accommodate this plan? This would surely increase pressure on neighborhoods at the mouths of both Little and Big Cottonwood canyons, just as the streets in Springdale absorb daily parking for a lot of visitors. Has this been considered?</li> <li>7. Will any ski permit boundary expansion affect the current wilderness areas?</li> <li>8. RE: allocating additional water for snow-making — has consideration been given to priorities for access to water if Utah experiences more winters with little snow? What happens if reservoir levels drop and rationing needs to be implemented? Where do ski resorts rank in relation to residents in any rationing scheme? (What California is currently going through provides a good lesson.)</li> <li>9. I completely support the idea protecting and expanding key wildlife corridors.</li> <li>10. According to the Proposed Blueprint, it appears that the public will have another chance to comment during Phase 2; is this the case?</li> </ol>		5/1/2015
<p><u>I'd like to voice my support for more mtb trail funding.</u></p>		5/1/2015
<p>While I understand that there is a growing population and that traffic in the Wasatch is expected to increase because of it, but I don't believe Wasatch traffic will increase linearly with population growth. I believe a more in depth study needs to be conducted in order to better understand the demographics of the population that is expected to move to the Wasatch front due to economic growth. Only then should a decision be made as to how to handle the increased traffic in the central Wasatch.</p> <p>As an avid hiker, backpacker and snowboarder, I don't want any additional transportation added to the central Wasatch. The proposed tunnels, arial trams and light rail systems only serve the ski industry and do not benefit locals. If these systems were to be installed, there is no going back to the way that the Wasatch was before. The Wasatch will be forever scarred and the allure that these mountains currently have will be gone. If that happens, there will be no tourists and these transportation systems will become unsustainable and unneeded. We are not the Alps. We are not Colorado. We are Utah. If people want to be able to ski several (more than 4) resorts in the same day, let them go to those places. We don't want to be just like those places. That isn't who we are.</p> <p>I do not support the mountain accord. Please do not alter the Wasatch!</p>		5/1/2015
<p>The resorts are over crowded as it is, more access will mean even more people. More protection for the environment will be a must but the chances that prolonged upkeep will continue to be funded is a huge risk. Being a horticulturist in park city, I see the extensive damage that comes from the tourism market. I would like to see the tourist areas contained not expanded. There must be better ways to increase tourism revenue without building on backcountry that locals value so much.</p>		5/1/2015
<p>We need to protect our watershed from development. No new construction in the mountains. The water needs to stay uncontaminated for the benefit of all residents of the valley. We can continue to enjoy the mountains while maintaining water quality.</p>		5/1/2015
<p>** I support ONE Wasatch and over-the-snow connectivity.</p>		5/1/2015

<p>I fully support better transportation to the Utah sky resorts. This will be stimulus to our local economy.</p>		5/1/2015
<p>I am in support of the ONE WASATCH proposal which provides for easier over the snow connectivity between the Wasatch Front ski areas. Connecting these ski areas, not unlike what has been done (without any impact on water quality/supply and wildlife) in Europe for the past 50 years, would provide a competitive advantage to the State of Utah Winter tourism which no other winter destinations in the US could offer or match. I am also in support of each area (Summit County, Little and Big Cottonwood Canyons) seeking transportation solutions which would make access to their ski resorts more efficient and more environmentally friendly. I can however not support the idea of rail transportation through tunnels from the Cottonwood Canyons to Summit County. I believe that this idea would be incredibly costly and have serious negative impacts on the environment. <u>Thank you for all the work your group has been doing.</u></p>		5/1/2015
<p>I am in support of the ONE Wasatch Over the Snow proposal to connect ski resorts and provide alternate transportation and connectivity. Ski area connectivity would help Utah's ski resorts to compete with other ski regions and help Utah's economy.</p>		5/1/2015
<p>I have chosen to live and work near the Wasatch because of the wonderful backcountry recreation opportunities available here. The Salt Lake Valley is quietly becoming a major tech and innovation hub due to a large influx of young talented people who are attracted to the beautiful mountains and the recreational opportunities they provide. Please don't shut us all out of the backcountry in order to appease a few land owners. The Wasatch is one of the top backcountry skiing locations in the world. Please do not ruin this unique resource. <u>P.S. Please, no interconnect! Save Grizzly Gulch!</u></p>		5/1/2015
<p><u>I do not support connecting resorts as it will destroy my back country skiing experience</u></p>		5/1/2015
<p>I support One Wasatch over the snow connection of the ski areas. It would help the Utah economy grow, it would not interfere with back country skiers as it is all on private land.</p>		5/1/2015
<p><u>I do not support the tunnel plan to Park City or the trains up LCC.</u></p>		5/1/2015
<p>I feel connecting the ski resorts should have been done 20 years ago! Lets rip the Band-Aid off and get this done! We could rival the ski experience in Europe with the connection. I dont think a tunnel should be ruled out to keep the ridge lines "clean". Start thinking 50 years <u>down the road not just about tomorrow. Im a parent that drives my kid to LCC every weekend and the traffic is unhealthy and unneeded. Thanks for your consideration</u></p>		5/1/2015
<p>I support greater connectivity between the Utah ski resorts in the Wastach range. I do not believe the aerial connection alternatives (gondola, trams) between Little and Big Cottonwood Canyons and the eastern Wasatch should be dropped from future study in favor of expensive rail and tunnel systems. Currently most of the transportation problems are in the winter peak season. Aerial connections have proven to provide the most economical and environmentally friendly transportation links connecting ski resorts and mountain villages throughout Europe, over a number of years. In the winter, they are an extension of the existing lift systems, in the summer they provide a scenic excursion. More consideration needs to be given as to who would likely be the main users of these systems before vast amounts of public money are spent on providing connections that may not be attractive to the end users. The most likely users of connections between the ski areas are destination visitors staying in one location who would like the opportunity to ski at the other resorts during their stay. Transit options that provide better links from the airport to the resorts will be the most successful in convincing these guests that they do not need to rent a vehicle for the duration of their vacation. Aerial links between the ski areas will help Utah compete against other international destinations with large ski circuses. Utah residents with second homes are most likely to use their car to take their family to the resort where they own a second home. Once at the resort, an aerial connection would be an attractive way for them to experience one of the other ski areas. The presence of these connection might make the decision to purchase more attractive. Utah day skiers are more likely to go to one resort for the day and return home, so are less likely to care about connections between the resorts. They want the most economical and shortest trip from their home to the resort of their choice and the transit options must provide this if they are to be convinced to leave their car at home. The cost of transit must be less than the cost to drive and park before people will give up the convenience of the car.</p>		5/1/2015
<p><u>I support improved transportation to/from Utah's ski resorts. That may be as simple as increasing bus options in the Canyons. Right now, I don't think they accommodate busy days very well.</u></p>		5/1/2015
<p><u>I would like to say that I support ONE Wasatch and the over-the-snow connectivity. I also support the improved transportation to/from Utah's ski resorts, which will help all Utahans that love to Ski/Ride</u></p>		5/1/2015
<p><u>Join up the resorts Park City, The Canyons, Deer Valley etc and make the resorts world class!</u></p>		5/1/2015
<p>Hello. These are my thoughts regarding your proposals. I think that no matter what you do, you need to at the very least offset your actions. I want to see investing into renewable energy sources. I want to see that you offset carbon emissions with your financial gains. Anything that you do not offset will come at a cost to the population. We have extraordinary leaders such as Elon Musk who are doing their best to further this earth and to save it from human irresponsibility and I want to see that you guys do the same. You are in a powerful position, and you have the chance to do something great. I support your ideas, but I want to see it done properly. I can only feel good about your efforts if they take us one step closer to a sustainable planet. If you do not at least fully cover your environmental and social cost (pollution, resources used, health problems due to bad air), then you are taking us one step backwards. You have to believe me when I say that my generation is literally fighting for the future. I am 20 years old and come from a family that is heavily involved in Global sustainability issues ranging from packaging to sustainable business initiatives with Al Gore. If you want to be accepted by the forward thinking leaders of this community, you will need to bring us one step closer to a sustainable planet. Remember that.</p>		5/1/2015

<p>We are in a drought cycle. It is not the first; and even if it abates, it will not be the last. The current drought cycle amply illustrates that the common interest which should unite all, residents and visitors alike, is the availability of sufficient water of an acceptable quality. Water trumps all, even economic development and, in my view, even the serious concerns over air quality. Mountain Accord cannot please everyone, nor satisfy all competing interests; hence it must prioritize; and it must place water resources at the top of its priorities.</p> <p>One might say that the uses of the central Wasatch are both "secular" and "sacred". I would label as "secular" those purposes which engage with the Wasatch for the economic value of its resources; and as "sacred" in some sense those purposes which engage with the Wasatch primarily for non-economic values. It has long served both secular and sacred purposes, and should continue to do so. But all such engagements must yield to its most fundamental and universally needed function, that of providing the residents of Salt Lake and Summit and Utah and Wasatch Counties with water. After providing and protecting this four-county water supply, the other secular and sacred purposes should be prioritized.</p> <p>The Wasatch has limits. It has geographical limits, and it has precipitation limits. No amount of wishing or planning is going to increase either. The challenge to the growing communities that surround the Wasatch is not merely to balance the many competing uses of the Wasatch; but also to limit some, and even deny some. All uses of the Wasatch must yield to those limits. The Mountain Accord blueprint assumes that those limits have not yet been reached. For lower priority purposes, those limits may have already been reached. For higher priority purposes, there may be room yet for more demands to be placed on this unique local resource.</p> <p>I have read that everyone has the right to visit Yellowstone Park, but not all at the same time. That means that when more access is sought than the resource can withstand, management must directly or indirectly limit access. This is a fact already well known in many contexts. Visitors to Zions National Park leave their cars at the entrance and ride a shuttle. Visitors to Hwy 150, the Mirror Lake road, are assessed a user fee if doing anything other than passing thru. Grand Canyon hikers and Green River runners are required to submit to a lottery system to obtain permits. The best way to minimize the degradation of our central Wasatch resource in the face of growing uses is to limit access, meaning both traffic access and development access. There is ample evidence that improved access generally means more use of that access, after which crowds will enlarge and uses proliferate. Often it follows that the very resources for which access was expanded are stressed and degraded in quality.</p> <p>I suggest that: 1) the top priority should be water resource preservation for all who depend on it; 2) a second priority should be the preservation of the existing balance of various uses, both "sacred" and "secular"; and 3) the preservation of this marvelous area is best accomplished by discouraging the expansion of transportation infrastructure (no tunnels, no trams). Instead, allow a modest increase in overall usage by finding ways to better use the existing infrastructure (a bus system which serves both destination users (skiers) and dispersed users (non-skiers)). Then the inevitable use of public funds will benefit a larger segment of the local public than the tunnel and tram proposals, which would likely involve the use of public funds for the primary purpose of providing privately owned resorts with another national marketing message, and expanding rather than limiting the already growing pressures on the central Wasatch. ☐</p>		5/1/2015
<p>Dear Mountain Accord Committee;</p> <p>Over the last few months I have spent time attending the public hearings and interviewing Salt Lake Residents and Athletes. Over the last few months, I have developed a great appreciation for everything done by Mountain Accord and all the future plans you have in mind. After learning about what Mountain Accord is about, I am in great favor of it, preserving our lands, increasing transportation, boosting the economy, and maintaining recreation. However, when presenting the topic to others, I have found many people are misinformed. With so many propositions like Ski Link and One Wasatch being presented, Salt Lake Residents seem to believe this is just another one of those plans. For school, I was asked to do a report on something local, something we care about, something that affects us all citizens of Salt Lake. For my report I opted to present Mountain Accord. I have put together a report that is easy to read for those that do not know what Mountain Accord is about. I chose to do this, because after almost three hours of trying to understand the blueprint, I was still lost. For me, the only way I was actually able to understand what Mountain Accord is about, was through attendance to the meetings.</p> <p>Increasing the understanding of Mountain Accord is just about the only downfall I see to the plan. Many people do not understand the information they are being presented with, and it blurs their opinion on the matter. In hopes of giving a clearer view of the proposition at hand, I put together a representation of the blueprint, and developed a video explaining Mountain Accord. I spent multiple hours on this each week; to make me best understand the topic.</p> <p>I grew up here in Utah, at the base of Little Cottonwood Canyon to be precise. I love living here, this is one of the most beautiful places in the country, but it is a shame to see how we are treating the environment. I always thought there were too many vehicles traveling up the canyon, and I am happy to see there is a plan to change that. One thing I do not agree with though, is the idea to put in a train system. The installation of a train would require the extinction of vehicle traffic traveling these roads. There is not the room for a train, but I think the idea is great. If you were to build on the road, it would work, but then you would eliminate cars, which I AM IN FAVOR OF. Think of Zions, half the park is ONLY accessible by transportation provided for by the park, that's how it should be here. Let's change this world.</p> <p>I would love to get more involved with Mountain Accord, if there is anything more I can please contact me at hunterbrighton@gmail.com or cell: 801-455-9021</p> <p><a href="https://www.youtube.com/watch?v=uH3ZPTU_nVg">https://www.youtube.com/watch?v=uH3ZPTU_nVg</a></p>		5/1/2015
<p>The following attached letter had been published in the Park Record. Both Park City and Summit County appear to be wrestling with staying involved. I truly feel this has to be examined further with the community involved, especially the tunnel. I get the feeling that after this public input phase we will no longer have a say. Many of my community members in Park City feel you made your mind up already and the many meetings were just for show. Please prove me wrong.</p>		5/1/2015
<p>just wanted to express my support for improved transportation and connectivity among Utah ski areas. Thank you,</p>		5/1/2015
<p>Keep up the great work ! My kids and I enjoy the freedom and mobility from the service !!</p>		5/1/2015
<p>Please complete this plan ASAP and limit vehicles in our canyons. Thank You!</p>		5/1/2015
<p>I have a few comments I would like to make.</p> <ol style="list-style-type: none"> <li>1 I feel that it is important to keep the canyons and Wasatch back separated. Each area has its own character and history. I don't want park City to take over Big Cottonwood. We should keep areas for locals rather than sell everything for the top dollar, I guess money usually wins out, but planning can steer development or preservation.</li> <li>2 I am OK with some expansion at the ski areas, I feel it can be done without affecting back country adversely. Example Snowbird going into upper American Fork versus going into White Pine. With increasing population the areas will need to expand or new areas open (Kennicott has some nice terrain)</li> <li>3 The best public transportation would be more bus service with more areas to park in the valley. The ski areas could have incentives for ride share and disincentives for single drivers. It will be hard to get people out of cars, I often bring two pairs of skis, hard to do on a bus. Thank you for your consideration,</li> </ol>		5/1/2015
<p>I want to voice my strongest opposition to the Mountain Accord. No trains, not now, not ever! The proposal will allow more destruction in Little Cottonwood Canyon than what 2 atom bombs did in WWII on Japan. How can it be a good thing? Greed and profiteering are the true motives. Throwing in a miniscule amount of enticements to joe average citizen to lull us to sleep while you wreak havoc on our lives now, and destroy the native beauty of this canyon for all future generations should be a criminal offense for all parties involved who are <u>elected officials, government employees, and private citizens who will profit from this. Then see who wants it.</u></p>		5/1/2015
<p>The mountain accord appears to be a genuine effort to balance protection of sensitive lands with economic and transportation development. Some of the stories I hear about roller coasters crossing the access road etc. really concern me. I am a big believer in master planning. I would only suggest everyone go slow. Plan for the protection of the lands first. Restrict the number of cars allowed in the canyon, if needed. Provide high quality public transit. I remember someone even considering a cog-train for Little Cottonwood Canyon and eliminate cars all together. These precious mountains are all of our responsibility to preserve whether we use them or not</p>		5/1/2015

<p>Mountain Accord, My name is Andrew Berwald, and I lived in SLC for 4 years and moved away to California for work last June. During my time in Salt Lake, I spent a great deal of it in the Wasatch and I enjoyed my time there thoroughly. I was a season pass holder all four years and I did a lot of hiking in the Spring, Summer and Fall seasons. The accessible hiking, world-class skiing, and natural serenity provided by the mountains are what I think about most when looking back on my time spent in Utah. I hold the Wasatch Mountains very dearly. I know an out-of-towner's opinion may not matter as much as others, but I cannot support expansion of resorts or tunneling through the mountains. The Wasatch Mountains are an invaluable resource that needs to be protected at all costs. They are not simply an economic tool, they are the foundation on which the entire Salt Lake area is built. They need to be held in reverence, and not seen as an exploitable commodity. They provide the water, recreation, spiritual sanctuary, inspiration, humility and so much more for the local community – not to mention the habitat for the plants and animals that preserve the value of the mountain range. I realize there is a very significant effort from the ski resort companies to develop and further expand into neighboring territory, but this very simply needs to be kept to a minimum. They already have a very significant presence in the mountain range (please see attached picture if you need to be reminded of their proximity and footprint). Allowing further expansion and connection of these resorts would further the impact that they already have on the Wasatch. The gaps between the resorts need to stay to allow for animal travel, and the resorts are definitely already big enough. Look at the size of Canyons on the attached map. That place is already a giant ski resort, even before it is attached to PCMR. Please do not be swayed by the starry projections of jobs and revenue made by the resorts. I don't deny that it is a powerful marketing campaign, but the jobs will only see a temporary spike and the Wasatch simply cannot endure further long-term stress placed by the ski resorts. These aren't the Alps. They aren't even the Rockies of Summit County or the Sierras of California and Nevada. They are the Wasatch – a small mountain range that is already very crowded. The natural resources of the Wasatch need to be preserved at all costs, especially with the threat of drought and climate change looming over the Southwest US. I will be back to ski at Snowbird and other resorts as much as possible as I go through my life. I love the Wasatch Mountains and the Salt Lake City area. However, I do not know if I will be able to keep that promise if they are further "developed" by the ski resorts. This is not development. It is consumption of a limited and invaluable resource. I've read the plans laid out by the Mountain Accord and I cannot stand behind any further resort expansion or tunnels in the Wasatch. The resorts provide a great place for families and friends to get together and recreate with each other. However, we need to be clear. This is not development; it is consumption. The Wasatch has taken millions of years to develop. We would be fools to destroy it in such a short timespan as the era of ski resorts.</p>		5/2/2015
<p>I appreciate the perceived need to provide more transit service up little cottonwood canyon. Alta and snowbird only reach peak capacity 6-10 days per year, less on years like this past winter. I feel the people associated with mountain accord would like to see the train system, a major and grandiose plan and criminally expensive. A few extra buses on the busy days may help those that don't drive well in snow. However, this is a WINTER sport and snowy roads happen. My comment is to be conservative. The two resorts receive a majority of their customers from the local residents in the valley and anything more costly and / inconvenient will lose revenue for the resorts. Skiing is already expensive enough for the locals, who earn much less income than do east and west coast residents. Unfortunately automobiles are the fastest, most convenient and least expensive transportation method we have. And this can be verified by a UTA publication of just a few years ago. And interestingly enough, in a town meeting with one of our state representative last week, he basically knew nothing about the mountain accords proposals. Unfortunately government does need to be involved to some degree, as do the voters. Please be conservative and leave the road as is. A guardrail would really help in regards to safety. Thank you.</p>		5/2/2015
<p>This comment is coming in a day late and may be voided for that reason. Here's hoping it will somehow still make it's way into the pool: Skiing in resorts is wonderful and valuable to Utah's economy. Skiing in the backcountry is wonderful and valuable to Utah's economy. Backcountry needs protection. Equipment advancement is making backcountry skiing more popular than ever. Please add provisions that would ensure grizzly gulch, patsy marley, wolverine cirque and that section of the Wasatch is protected from development. Thank you. I love Utah. Moved here from Washington over a decade ago and I never want to leave.</p>		5/2/2015
<p>To: Mountain Accord Comments. We have studied the proposals regarding the Wasatch area. Our concerns are: Sacrificing the irreplaceable beauty and natural resources for the sake of more development. Allowing further development to dictate the need for additional roads, tunnels and bike lanes. Planning large changes accommodating "dreaming big". We are not anti-development, but hope the parties involved will consider: "Dreaming small" - protecting our environment by expanding wilderness areas. Dropping the idea of a ski interconnect proposed by ski resorts. Establishing trail repairs on a regular schedule. Using established boundaries to keep existing ski resorts from expansion. Not expanding transportation into existing wilderness areas. Ensuring year-round recreational activities rather than focusing solely on winter sports. Honoring the stewardship we have to keep our natural areas of beauty and wildlife pristine. Rehabilitating and restoring those areas which have been allowed to deteriorate. Once changes and expansion has happened, what it replaces is gone and no amount of work, regret or commitment will bring it back. Retaining existing public lands rather than diminishing the areas for economic gain. We have lived in this area since 1961; we have skied, hiked and camped throughout the entire state and consider the Wasatch area one of Utah's greatest assets. Native Utahans and tourists new to the area deserve to see and enjoy it as it is; minimal changes will be welcomed, but the new "exotic" changes are an insult to those who cam here hundreds of years and established a place like no other in the world. PLEASE "DREAM SMALL" or at least "SMALLER". Thank you for all the hard work, hearings and meetings to inform the public on this most important issue. And thank you for allowing comments beyond the initial deadline. We appreciate this accommodation.</p>		5/2/2015

And thank you for allowing comments beyond the initial deadline. We appreciate this accommodation.</p> <p>Hello Mountain Accord: DAVE is the best alternative. I have lived in SLC most of my life, and support full public access to the backcountry. These are our public lands, and I feel it is appropriate to maintain public access. I support protection of the watershed in the strongest terms, we need that water! I do NOT support the commercial development of these public lands, no interconnecting all the ski resorts. Alta and Snowboard are connected now, and the high lift ticket prices effectively limit most of the public from using this access. In addition, if you use the Alta/Snowbird access route, you spend most of your day going between resorts, not skiing. I think it is not reasonable for skiers to travel between resorts in Park City and the Cottonwood canyons in one day. Much of the day would be spent in traveling from one resort to another. Please do not trade in our wilderness, watershed and public access for the commercial gain of a few. Please leave the lands and water the way it is for my children.</p>		5/2/2015
<p>I believe that what is valuable and unique about the central Wasatch Cottonwood Canyons is that they contain ski areas in an essentially wilderness environment. There is a carrying capacity to the Cottonwood Canyons, mostly in terms of automobile travel traffic and areas given over to parking. I think the proposals that would increase development beyond current ski area base facilities should be avoided to preserve watershed protection and the long term value of the Cottonwood Canyons. Resort development can be accommodated in the Park City area as our ski Utah marketing efforts and preservation and conservation of the Cottonwood Canyons should be the overarching priorities for them. Transportation improvements should aim to reduce auto use by a program of incentives for public transit and disincentives for auto use in the Cottonwood Canyons and not as development inducing infrastructure. A dedicated lane shuttle system would serve our needs better than a billion dollar train system that would encourage additional development in the Cottonwoods. Thank you for undertaking this critical planning effort.</p> <p>I have lived in SLC most of my life, and support full public access to the backcountry. <p>I believe that what is valuable and unique about the central Wasatch Cottonwood Canyons is that they contain ski areas in an essentially wilderness environment. There is a carrying capacity to the Cottonwood Canyons, mostly in terms of automobile travel traffic and areas given over to parking. I think the proposals that would increase development beyond current ski area base facilities should be avoided to preserve watershed protection and the long term value of the Cottonwood Canyons. Resort development can be accommodated in the Park City area as our ski Utah marketing efforts and preservation and conservation of the Cottonwood Canyons should be the overarching priorities for them. Transportation improvements should aim to reduce auto use by a program of incentives for public transit and disincentives for auto use in the Cottonwood Canyons and not as development inducing infrastructure. A dedicated lane shuttle system would serve our needs better than a billion dollar train system that would encourage additional development in the Cottonwoods. Thank you for undertaking this critical planning effort.</p>		

I have lived in Utah for over 60 years and have used the Wasatch Canyons extensively. I am most familiar with Little Cottonwood Canyon.

1. General Comments:

a. Not all interests are equal. The Blueprint needs a strong statement that the environmental health of the Wasatch is the first and dominant priority, and that all other elements are conditional upon satisfaction of this goal.

b. Timing of implementation of the Plan. There are many moving parts and the entire plan obviously cannot be implemented at one time. Parts that may be easy to implement must be carefully considered and perhaps intentionally held off until other critical elements are implemented. It would not serve the interests of the public if land swaps and additional building of rooms and cabins proceed but the transportation plan is never implemented due to funding and political concerns.

c. Timing of implementation of the Plan. Parts of the plan may be implemented on an interim basis. For example, a tariff on traffic in Big and Little Cottonwood Canyons could be implemented in very short order. This could serve as funding source for longer term transportation needs.

2. Interim Transportation Fixes

There are things that could be done to help reduce traffic in Little Cottonwood Canyon in the near future.

a. A toll booth could be installed, similar to Millcreek Canyon. The fee could be waived for those with multiple riders in a car. This would reduce traffic, help push users into busses, and also start to raise funds to one day make a more permanent solution to traffic.

b. Pay to park. When I used by Mountain Collective pass at Snowmass last year, the parking lot attendant said "That will be \$20, oh wait, I see there are four in the car. No charge after all." Aspen has reduced traffic by charging for parking and pushing more folks into fewer vehicles. A canyon toll or pay to park would do the same. And it is inexpensive to implement.

3. Light Rail Transit to the Ski Resorts.

Is a light rail train connecting the Salt Lake valley to the resorts in Little and Big Cottonwood Canyons a good idea? There are some positives. I believe it would work well in the wintertime to get skier to the resorts.

There is one overarching negative to the proposal (assuming cost of construction is no object). A train station at Alta connecting Alta to the entire population of Salt Lake Valley would focus too many summertime mountain visitors in a single location. If the light rail system were built, some visitors would go to Snowbird and some onto Big Cottonwood Canyon, but a very large number would likely go to Alta to begin their recreational activity there. The fragile ecosystems at Alta could not withstand this onslaught of visitors. Alta will continue to receive many visitors in the summer whether a light rail system is built or not. However cars and busses that can stop anywhere would result in a greater distribution of hikers and bikers and other visitors than a light rail system.

For this reason alone I question the advisability of the light rail proposal. The winter transportation needs could be met with busses coupled with various regulations such as tolls or the mandating no private vehicles in the canyons. Private vehicle and busses that can distribute the impact on the canyon uses in the summer months is better than a light rail system concentrating all visitors into just a few locations.

4. Proposed Land Exchange with the Forest Service and Alta Ski Lifts

Alta Ski Lifts proposes to exchange with the Forest Service approximately 440 acres of land on various steep slopes surrounding Alta for approximately 160 acres of flat land on the valley floor. Alta Ski Lifts is proposing that it will not exchange land it owns in Grizzly Gulch at this time. At the information session I attended Alta Ski Lifts argued that it needed Grizzly Gulch in order to build an above ground connection to the resorts in Big Cottonwood, and that if, as and when a tunnel from Little Cottonwood to Brighton was constructed Alta Ski Lifts would be willing to give up its holdings in Grizzly Gulch since the tunnel connection would forever eliminate the need for an above ground connection.

There are several problems with the proposal:

a) Valuation issues. The land on the valley floor is much, much, much more valuable than the land that Alta proposes to exchange. The land Alta Ski Lifts proposes to exchange is completely unbuildable. It consists of a steep slope of land near the face of Devils Castle and land on the north side of the valley that is sometimes referred to as the Emma Mine land. In contrast, the land on the valley floor is buildable. There is a sewer line there. Zoning regulations are fluid and could easily be adjusted to allow all types of buildings in addition to the 100 plus unit hotel that Alta Ski Lifts has identified. Arguments that water concerns will prevent building the valley are based only on political arguments about the water, not any actual limit on water or ownership or regulations that could not be changed. An entire "Solitude-type" base village could be constructed on the 160 acre valley floor that Alta Ski Lifts hopes to end up with.

It is difficult to imagine an appraiser valuing the unbuildable slopes Alta Ski Lifts owns as equivalent to the value of the 160 acres on the valley floor. If I personally were offered a choice between purchasing 2 acres of land on the valley floor at Alta (part of the 160 under consideration), or purchasing 80 acres of land on the face of Devil Castle at the same price, the decision would be a no brainer. Let me buy the 2 acres parcel and pass on the 80 acre parcel.

The solution is to exchange only an amount of land on the valley floor that is equivalent in value to the 440 acres Alta Ski Lifts hopes to exchange. If the value of the 440 acres is equivalent to 10 acres on the valley floor, let Alta Ski Lifts trade for a 10 acres parcel. If the value of the 440 acres is equivalent to 30 acres on the valley floor, let Alta Ski Lifts trade for a 30 acres parcel. Don't get locked into the 160 acres proposal until value is established.

b) The land belonging to the Schrontz Estate. Alta Ski Lifts briefly owned a 25 acre parcel of private land adjacent to the 160 acre valley floor proposed in the exchange. The land is to the east of the valley floor in Albion Basin and is now owned by the heirs of Jodie Schrontz.

The Schrontz Estate is hoping to sell 10 home sites on the land. The best information I have is that they have successfully permitted the subdivision of the property and that the value each home site is well in excess of \$1,000,000.

The value of this land should be considered by the appraiser when considering the value of the 160 acre parcel that Alta Ski Lifts hopes to acquire through exchange.

The Schrontz heirs should be approached to see if they have any interest in exchanging their land for and parcel of equal value on the valley floor. Alta Ski Lifts is not necessarily the only party with land to exchange for the very valuable valley floor land. Concentrated development on 25 acres on the valley floor could perhaps be even more valuable to the Schrontz Estate than 10 single family homes on a slope in Albion Basin. Concentrating development on the valley floor and preserving the 25 acre site proposed for development by the Schrontz Estate would be in keeping with the environmental principles of the Mountain Accord.

c) Value of Grizzly Gulch lands owned by Alta.

Alta Ski Lifts' proposal to exchange the Grizzly Gulch land only after its knows a tunnel will be constructed to connect Alta and Big Cottonwood Canyon. This makes little or no sense. First, if Alta Ski Lifts has already somehow acquired the entire 160 valley floor before they know that a tunnel will be built, then there is not further land for them to acquire in exchange for their Grizzly Gulch lands. Second, Alta Ski Lifts existing ski lifts are built on Forest Service lands. There is no reason they need to hold onto the Grizzly Gulch lands in order to build a ski lift in Grizzly Gulch. It could be built on Forest Service Lands.

Thank you for considering these comments. I have not participated in the meetings envisioning Alta's future and there add no comments on Alta beyond those above.

Layne Jones  
Mountain Accord Program Manager  
375 West 200 South, Ste. 2075  
Salt Lake City, UT 84101

Dear Ms. Jones:

Thank you for the opportunity to offer comment on the Mountain Accord Draft Blueprint. It is commendable to have gotten to this point considering the complexities of the issues, the heartfelt concern for the Central Wasatch, the environmental concerns, and the economic considerations at stake. I hope that my comments will be of some use. From 2002 to 2008, I served as the Salt Lake District Ranger and following that I was the National Winter Sports Manager for the Forest Service until retiring in 2013. Prior to that, I worked for nearly 20 years on ski area and community development projects in Colorado. I view the entire Mountain Accord process, including the draft Blueprint as remarkable and something I did not see in over 30 years with the agency. While my section-by-section comments below do include some areas of personal support, I felt that focusing more on areas of concern might be of more utility in crafting the final Blueprint and as information to carry forward into Phase 2.

A. Environment A large part of - and potentially the entire - Land Protection program appears to depend on a tenuous real estate transaction whereby ski areas would exchange 2,150 acres of land they own for 258 acres of land currently owned by the Federal government around the base of the various ski areas. While it is a reasonable goal for the Forest Service to exchange out of lands that have essentially lost their natural character and that are difficult for manage as wildlands, agency requirements for land exchanges are incredibly complex and time-consuming efforts and frequently are never consummated. This will especially be the case given the status of Federal lands in the Cottonwood Canyons and applicable Federal laws and regulations and should be somehow recognized in the final Blueprint in order to manage stake-holder expectations.

Forest Service regulations requires following the strict requirements of the Uniform Appraisal Standards for Federal Land Acquisition, U.S. Department of Justice and the Appraisal Institute, and that land exchanges be conducted on an equal value basis (36 CFR 254.3(c)). Even legislatively mandated typically carry these requirements. Location and existing local land use ordinances are extremely important in appraising a parcel's fair market value. Many of the ski areas' holdings are in steep, relatively isolated locations making them difficult, perhaps even impossible, to develop. As such, they would have a relatively low value compared to many Federal land parcels at base areas.

Many of the private lands in the Cottonwood Canyons - including those owned by ski areas - have multiple owners. Frequently, parties who assert they own a particular property actually only own a portion of the surface estate and the rest of the title is held by various other owners. In many cases, the mineral rights are owned by an entirely separate group of owners. Forest Service policy strongly discourages acquiring partial ownership of lands that are encumbered in this way, but even if it does it would seriously diminish the appraised value of the property offered. Also, these properties could be encumbered by reserved and outstanding access rights that other property owners nearby have. Acquiring less than the "full bundle" of property rights could create future management headaches for the Forest Service and should not be considered as a part of any exchange.

Improving National Forest "manageability" by acquiring contiguous parcels to provide for a more or less homogenous ownership pattern is also an important consideration in determining whether the agency would initiate a land exchange process. It is not clear that this would be the case with the exchange outlined in the Blueprint and it appears that in some cases the agency might acquire more management problems than benefits and in some cases further complicate ownership patterns.

B. Recreation The non-Wilderness portions of Cottonwood Canyons would clearly benefit from designation as a National Recreation Area. This designation would help to ensure consistent management and that the area gets the attention it deserves. However, this and other designations typically do not ensure increased Federal funding for administration and maintenance, and the increased visitation that would result could present additional challenges. Most of the other potential designations, such as Wilderness, National Conservation Area, and National Monument do not seem suitable options, especially on the scale of the entire Central Wasatch.

Simply "exploring" user fee options doesn't address the historic shortfall in funding for operation and maintenance. In addition, user fees are a contentious issue nationally for Federal land management agencies and in the end may not viable.

Constructing new trail segments for a better connected regional system is a worthwhile goal. However, maintenance of existing trails is already lagging far behind the needs, and in places these deteriorated segments are adversely affecting the environment, including the watershed. Without a guaranteed funding mechanism for maintenance, this situation could easily worsen by increasing trail mileage.

The draft Blueprint seems to assume that user-created impacts can be addressed simply by improvements to mass transit and by focusing new recreation development at currently developed sites - primarily ski areas. Though worthwhile, these steps are unlikely to mitigate the looming grow and impacts. Some ski areas already offer summer programs, but often it is not the type of recreation activities that users are seeking. While difficult and inherently subjective, any long term effort to address user-created impacts will fall short without assessing the carrying capacity of the limited land base in the Cottonwood Canyons to support ever growing recreation demands.

It is unfortunate that the Mountain Accord process did not examine other types of recreation uses and facilities in the Cottonwood Canyons. Specifically, motorized trail use, developed campgrounds, and picnicking and other developed day use is not addressed. These uses and facilities also have environmental impacts, the demand for more of this type of recreation is increasing, and they sometimes interact with uses that are addressed in Blueprint. The Mountain Accord process could have been a forum to discuss whether there should be more of these types of facilities, whether some should be closed and rehabilitated, and whether motorized recreation should even be allowed in the Cottonwood Canyons.

C. Economy The measures identified to preserve community character and quality of life, such as some of the mass transit improvements, thoughtful design of infrastructure, and developing funding sources for environmental protection are commendable.

In large part, the foundation of Mountain Accord seems based on the need to respond to a rapidly growing population and recreation demands in the Central Wasatch and protect its environmental qualities. It should be recognized that additional recreation developments and taking steps "to ensure that Ensure Utah's tourism market is competitive now and into the future" will likely add more fuel to fire and is to some degree at cross purposes with the stated need for Mountain Accord.

D. Transportation I support transit incentives, year-round bus service in the Cottonwood Canyons, improved transit service on existing roadways in the Salt Lake Valley and between the Salt Lake Valley and Summit County, and in Big and Little Cottonwood Canyons.

I do not support a transit connection in the Little Cottonwood/Park City corridor. Other than for improved marketing, none of the Mountain Accord documentation provides any justification for this, whether the connections would be by highway, rail, tunnel, car, bus, gondola, or chairlift.

Especially in Little Cottonwood Canyon, the most critical and well-documented need is for a road system that is reliable and safe from avalanches and that doesn't rely on military artillery. While effective, artillery avalanche control still requires shutting down the highway for extended periods, but in addition it is a program that is entirely dependent on the U.S. Army for its continuation. Measures such as bridges and well-designed snowsheds could do much to mitigate the avalanche hazard to cars and buses. These measures would be costly, but do not begin to compare to the cost for other measures described in the Blueprint, such as tunnels. Yet, improving the reliability and safety of State Highway 210 is scarcely mentioned in Mountain Accord documents.

E. Proposed Next Steps Completing Blueprint will represent a remarkable accomplishment, given the number and disparate interests of the stakeholders and it will provide excellent information to carry into the NEPA process (Phase 2). However, because it packages so many different, often unrelated, sometimes tenuous components, and with multiple parties responsible for implementation, the Blueprint will present an immense challenge to process under NEPA. In addition, some aspects of the Mountain Accord process may actually prove problematic for when an EIS is prepared:

The large expenditure of time and money to prepare the Blueprint and reach a consensus agreement may raise questions about whether an EIS process can be objectively conducted. In addition, it is unclear whether the agreement will stand if some components of it cannot be implemented because of environmental considerations, cost, or a disagreement among one or more of the responsible parties.

Before an agency agrees to initiate an environmental review under NEPA, it should be convinced there is in fact a public "purpose and need" for a project(s). For many of the potential actions, the draft Blueprint doesn't do this and the Forest Service has long avoided using maintaining/improving a State's, region or permit holder's competitive position as sufficient evidence of purpose and need.

At various points along the way and likely in an understandable attempt to bolster participation, the Mountain Accord process stressed the importance of the Blueprint and tended to portray Phase 2 as something of a formality. For example, the Blueprint noted that the Transit range of alternatives would be finalized and then the EIS process initiated. Yet NEPA regulations describe the Alternatives section as "the heart of an EIS" (40 CFR §1502.13) and that this should come after the scoping that's completed as part of the NEPA process.

While extremely useful, it wouldn't be appropriate to shortcut NEPA scoping or constrain the range of NEPA alternatives simply because of what's been accomplished through Mountain Accord.

Thanks again the opportunity to participate.

5/1/2015

**MOUNTAIN ACCORD: THE PROPOSED CENTRAL WASATCH BLUEPRINT**

I strongly support the idea of increased protections for lands in the Central Wasatch. I know that the exact boundaries and proposed federal designations have not been determined, but in general I think the key consideration in making that determination should be to act in the interest of the Environment System ---- in furtherance of ecosystem health and water quality. In short, I support such designations if they protect environmental quality even if they hinder economic or recreation activity. The Economic and Recreation Systems are a lower priority than the Environment System. I can think of only one exception, which is this: it would not be good to extend wilderness boundaries so far into the Salt Lake Valley that they blocked the completion of still-incomplete segments of the Bonneville Shoreline Trail. The concept of a continuous trail is sufficiently valuable, and the likely accommodations needed given how close the trail is to urban areas are sufficiently small, to compromise wilderness boundaries in that one instance.

There are multiple things alluded to in the Blueprint or other Mountain Accord documentation that do not provide a supporting rationale, substantiating data, or sufficient project detail to allow for me to feel like I can comment meaningfully. The Transportation System Group did a pretty good job by creating their Transportation Corridor Purposes and Alternatives report, and I commend them for that, but it could be improved with more data. For example, at an open house a Snowbird representative said a major part of the rationale for a tunnel connecting Big and Little Cottonwood is that avalanches trap people up LCC and a tunnel would provide a way to get back down to the SL valley. But I can't find that rationale stated in the Blueprint, nor any supporting data (e.g., how often avalanches trap people up LCC). And the other systems besides Transportation provide even less information. Let's take the Recreation System as an example.

>>> In the FAQ (p. 4) it says "Pending public feedback, Mountain Accord intends to begin implementing actions to enhance the trail network immediately in Phase Two." What enhancements are included in these immediate actions?

>>> Blueprint p. 7 shows a map of an "Enhanced Regional Trail Network." There is no discussion there or on pp. 10-11 of what an "enhanced" trail network would mean. I look at that map and see an orange line heading up Millcreek Canyon, and in this comment period you are asking me whether I think that orange line up Millcreek Canyon is a good idea or a bad idea. But I can't say, since I don't know what that line represents. There are some kinds of trail network ideas in Millcreek that I might think are a good idea and some that I might think are a bad idea. Is it better signage, or is it a multi-use paved path similar to Provo Canyon heading up to Vivian Park? Those are very different levels of "enhanced."

>>> The same p. 7 map shows an orange line going up Emigration Canyon, down into and partially up Parley's. But there's no supporting text saying whether this is a paved trail, a singletrack trail, or something else. There no discussion of how it relates to the work of the Emigration Canyon Roadway Improvement Committee or how it relates to the Parley's Canyon Trail (a separate joint venture of Salt Lake and Summit Counties' governments). And there's no discussion of why the trail doesn't connect to Kimball Junction. It seems to die off at or around Parley's Summit.

The graphics on pp. 2-3 create the impression (whether intended or not) that the four systems are of equal importance, or are given equal weight in considering the long-term future of the Central Wasatch. I do not know if Mountain Accord stakeholders explicitly discussed the relative importance of each system, but I will propose that Environment is really the most important of the four ---- and that within Environment, ecosystem health is the primary value and a supply of high quality water for urban valley use is the second most important value.

The Economy and Recreation systems are of a lower and roughly co-equal importance. They contribute to opportunities to enjoy a high quality of life and should be leveraged to the extent that they do not compromise the Environment system. The Transportation stakeholders recognized, I think sagely, that their work is really in service of recreation and economic needs, and is a matter of aligning projects to those systems' long-term visions (while, again, not compromising the Environment system). Even if this is not the consensus view of the Mountain Accord stakeholders, I wish that the blueprint included some sort of explanation of the viewpoint that the stakeholders take to the relationship of the systems to each other, and allow for public comment on that viewpoint.

Page 4 presents some statistics about the Central Wasatch but does not explain what "Central Wasatch" means. One statistic says the 2014 population is 1.1M. That makes the reader think that "Central Wasatch" includes urban valleys like the Salt Lake Valley. Another statistic says peak daily use in 2014 was 50,000 people. But does that mean 50,000 people used the "Central Wasatch" to include the urban valleys? Probably not. Probably in this case the statistic only applies to mountainous areas. The two statistics, however, are both labeled simply as "Central Wasatch." For clarity, the document needs to define, and explain with maps, two different geographic areas: the Central Wasatch Mountains that are probably what the peak daily use is talking about, and the broader area (I don't know what term to use for it). This idea would solve another problem that seems to recur, which I have seen at multiple open houses, which is people wondering whether Mountain Accord applies to American Fork Canyon. That question is a symptom of a core problem, which is that the geographic area in the scope of Mountain Accord is not clearly laid out at the front of the blueprint.

On Page 6 the Economic and Recreation Centers map is missing the "Recreation Hub" symbols for Olympic Park and for Quinn's Junction (see the Recreation Trail Network map on the same page and the combined map on p. 7).

Public opinion poll data should be folded into the Blueprint. For example, the Blueprint proposes to expand areas under enhanced federal protection. You should search for public polls on whether people support the idea of expanded protection of the Central Wasatch. I believe such polling was done, maybe as part of Envision Utah. Also, the Blueprint proposes ski area expansions. The Blueprint should cite polling data on whether the local public supports ski area expansion. I believe this was also covered in Envision Utah. If ski area expansion does not have public support, then Mountain Accord should be straightforward about it, saying that expansion does not have public support but is a necessary part of the compromise negotiated with resort owners.

On pp. 12-13, I think the discussion of the Economy System is off-base or needs work. Here, the distinction between the "Central Wasatch" meaning specifically the mountains and the "Central Wasatch" meaning the mountains and surrounding valleys becomes crucially important. For example, the text states "Compact development patterns centered around transit would limit sprawl in urban and mountain areas." Is this advocating for condominiums around mountain-rail stops up in the canyons, or only advocating for high-density development around transit stops in the valleys? It's a big difference.

Still on pp. 12-13, it says Utah tourism generates \$1B in annual tax revenue. Is data specific to the Central Wasatch not available? And this number needs to come with a sense of scale, i.e., that \$1B is out of the total of \$X billion that is generated as annual tax revenue from all sources.

Still on pp. 12-13, it says the built environment will increase 43% in the project area. It doesn't define the "project area." And it doesn't say what is being measured that is increasing (the acreage covered, the dollar value, something else???) And it doesn't say how this fact is at all relevant to Mountain Accord. How would Mountain Accord be different if that number were 20%? Or 80%? And it doesn't discuss whether Mountain Accord can, will, or should influence that number. I can't find anywhere where it says Mountain Accord seeks to maintain quality of life and access to recreation while minimizing the growth in the built environment in the mountains, even though that seems like a reasonable thing to say. [Also note, in the Idealized Economy System document, the first paragraph says the population in the surrounding counties is projected to grow 43%, which is not at all the same thing as the built environment but coincidentally is the same value. Neither one has a footnote saying where the data is coming from.]

Still on pp. 12-13, the second set of proposed actions says to generate sustainable economic growth to reinvest in the Central Wasatch mountains. That is commendable. But the economic growth doesn't have to happen IN THE MOUNTAINS for it to provide funding to invest in the mountains.

Still on pp. 12-13, the projections specifically of growth in dispersed winter recreation (perhaps with backcountry skiing listed separately as well) and growth in lift-served skiing/snowboarding in paragraph one of the Idealized Economy System need a citation to the source of that data.

The Idealized Economy System document says currently the Central Wasatch gets 3.2M ski visits per year. Built into the Cottonwood Scenario, and applying to all Central Wasatch resorts, should be an agreement that there be no increased development of guest-serving facilities other than lifts/transport applied for outside of base areas until such time as annual ski visits exceed X. In other words, assume the current on-mountain development (restaurants, warming huts, etc.) is sufficient for current guest population needs. There would be no additional such stuff built on USFS land until the number of guests grows at least by X, creating a defensible new demand. Any facilities torn down and replaced would have to have the same or reduced footprint and any facilities needed for staff would only be what is minimally needed for staff... not guests. Consider this the reaction to that thing Snowbird is plopping onto Hidden Peak.

The Idealized Economy System also suffers from a failure of imagination. For example, really, an idealized economy system in the mountains would have all the resorts and businesses be locally owned, because in general locally owned businesses provide a greater return to the local economy in the broader sense. But they don't say that. It may not be practically achievable, but really that would be ideal.

Still on pp. 12-13, I think the third Key Action, "Ensure Utah's tourism market is competitive now and into the future," needs a closer look. Personally I don't think that should be a goal or key action. What this does is it prioritizes public investment in tourism-related development over other types of development, and there's no rationale presented for doing so. For example, if Salt Lake County government has \$2M in economic incentive money, and is choosing whether to give it to someone to expand a hotel at a ski resort or give it to Adobe to expand a software development and support office down in the valley --- why is the hotel more justified as a use of public monies? Tourism-related jobs are not particularly high income, not particularly stable (i.e., more often seasonal or part-time), etc.

Still on pp. 12-13, I think there should be discussion (in some sort of supporting document, not in the blueprint, as this will need to be detailed) about whether stagnant levels of tourism are bad (or, if in two different scenarios tourism might grow 5% or it might grow 8%, why is 8% better for overall community quality of life than 5%?). Some communities have fewer tourist visits per resident than Salt Lake County and Summit County do. Do those communities have a poorer quality of life for that reason?

On pp. 14-15, there should be a link to more extensive discussion (more extensive than the Corridor Purposes and Alternatives currently has) as to why year-round bus is adequate for BCC but not for LCC.

Still on pp. 14-15, the last Key Action, about pedestrian and cyclist safety, should have more context or detail (either in the blueprint or in the Corridor Purposes and Alternatives or in a similar document). For example, over the last 20 years how many cyclists have been killed in collisions with motor vehicles in each canyon? How many hospitalized? What are some ideas for improving safety and access?

#### LITTLE COTTONWOOD CANYON ALIGNMENTS AND CROSS SECTIONS

The document states (p. 1) that the roadside alignment "would need a significant amount of snow sheds to allow avalanches to flow over the rail line." It further states that "the alignment independent of the roadway travels around most of the avalanche paths, greatly reducing the number and length of snowsheds." Can these claims not be quantified, even if only with rough estimates? What is a "significant" amount of snowsheds? What is meant by "most of the avalanche paths"? How many avalanche paths are there and how many are avoided by each alignment of the rail line?

The discussion of snowsheds also raises a question. A rationale (presented at public forum on the Transportation System held at SLC public library in late 2014 or early 2015) for having the tunnel connection between BCC and LCC was that Hwy 210 has significant avalanche risk and can strand people at the ski resorts. I cannot find any discussion in the Mountain Accord documentation of the quantification of this problem (how many times has it happened in the last, say, 20 years, with what mean and standard deviation of time the roadway was closed?) and the viability of snowsheds over the road as an alternative mitigation strategy.

#### PROPOSED COTTONWOOD CANYONS SCENARIO F.

The land swaps and protections sound great, and the allowances for base area development, culinary water, and snowmaking water sound acceptable in principle. However, the document should quantify "additional water" for snowmaking. some amount of "additional" may be fine, some other, far more astronomical amount of "additional" might not be. And it should discuss water prioritization (even if only as background ---- for example, in a multi-year drought can local authorities suspend part or all of the snowmaking water allocation to resorts? If so, under what authority and are specific triggers defined?).

In the list on p. 2 describing what the ski areas get, item #1 I wish were reworded to say that any mass transit system developed in the future to serve a Cottonwood Canyon will include that canyon's ski resorts as station stops. The current wording has multiple problems. First, it makes it sound like if the mountain rail doesn't happen, then the whole scenario is kaput. Second, it is unclear whether it is demanding mountain rail in one Cottonwood Canyon, or in both. Third, it opens the question of timing. For example, if a mountain rail proposal is tied up in procedural hurdles for twelve years before final approval, do the other elements of the scenario (the land swaps, the water allocations, etc.) all wait for those twelve years, because they are beholden to the mountain rail item?

In the list on p. 2 describing what the ski areas get, item #4 seems to cause public worry. More detail on this item should be a priority for the future. It might be a good idea to have ground-level photos of the areas involved, with the boundary expansions superimposed on the photos. At the open houses I attended, people seemed to struggle to visualize where the new boundaries would be.

The map on page 2 should be improved. There are projection issues. More importantly, there's a color of shading ---- a light yellow, probably most prominent within Solitude's and Snowbird's boundaries ---- that is not explained in the map legend. Are those private lands, or public lands held by an entity other than UISES, or something else?

Dear Mountain Accord,

Please incorporate my comments into the record of public comments. I am a full time resident of Salt Lake City.

1. We need to be removing manmade infrastructure from the canyons, not adding more to it. A bus based transportation system, along with larger roadside parking areas is the answer. For example, Spruces in BCC is often overflowing with vehicles back country skiers, boarders and snowshoers. There is no reason whatsoever that the additional existing parking areas should not be plowed in the winter to enhance dispersed human powered recreation in that area in the winter. The buses need to stop, whenever and wherever backcountry users wish to board and exit the bus.

3. Adding a railroad up any of the canyons is a terrible idea for many reasons, including, but not limited to the following:

a. It is a tax payer subsidy to the ski industry. There is no justification for installing rail other than getting significantly more people to the resorts. And guess what, as soon as that super highway is built the resorts will be paying huge sums of money to lobbyist to force the government to sell public land to them so they can expand. After all, is that not the reason for building a superhighway to their doorstep.

b. Taxpayers would be much better served to have their money spent to buy out the offending resorts and return the land to dispersed public use.

c. The railroad infrastructure and necessary avalanche sheds will be an eyesore and nothing more than the further industrialization of land which should be kept as backcountry for dispersed human use.

d. Railroads will deny the public access to the back country. Today, you can walk/ski/run etc. anywhere from the road into the backcountry. Once there is a railroad this access will be illegal. Fences and police will prevent the public from crossing the railroad tracks at any point other than just a very few locations. This is simply locking the public out of land that they have historically had easy access to. Once fewer people access the back country, the ski resorts will expand... why not? no one else is using the land. It is wasted. I challenge each of you to find a single example in Utah where the public has the unfettered right to cross active rail lines. Don't be fooled by a proponent of the rail lines saying that access will be permitted. As soon as one person is hit or injured by a trail, the rules will change, the fences will go up and the police will be out in force.

e. Fences along the railroad right of way will be a significant barrier to the movement of animals who now have unfettered access.

f. The ski resorts want the railroad to bring people to their doorstep, NONSTOP or as close as they can get. There will be few if any stops along the way for back country users to access the back country. The trails will be geared solely to support the resorts, not the residents to enjoy the use of the backcountry.

g. Did I mention that the railroad is a multi-BILLION dollar taxpayer give away to a few wealthy (non-local) companies. It will do NOTHING to improve the quality of life for the residents who currently call the Wasatch Front home and it will significantly reduce the access to the back country.

3. I am OK with selling small pieces of public land at or near the BASE of some of the ski resorts to private interests (and necessarily the owners of the resort.) I am not in favor of connecting the resorts in one canyon to those in another canyon.

4. Grizzly gulch should be transferred to the public and should the lands on the south side of Mt. Superior. Davenport Hill, Mt. Wolverine, and Mt. Tuscarora should all be public land and designated wilderness.

5. Solitude shall not expand into Silver fork. Snowbird shall not expand into White Pine. These areas shall remain public and private inholdings should be bought and transferred to the public. White Pine Should be Wilderness in LCC as should Temptation Ridge. Snowbird shall not be permitted to expand there. If the Canyons/PC and Deer Valley resorts want to connect themselves, I am fine with that, just stay off of the ridgeline.

6. The "recreation idealized" system is the best system to improve the quality of life for the existing residents of the Wasatch Front. Grandeur Peak, Mt Aire, the Wasatch Crest, the Northern Powder Circuit/Katherine Pass and the Wasatch Crest shall all be designated wilderness and the "desirable outcome" shall be changed to reflect this where it does not presently. Many of the private inholdings in the Tri Canyon area should be purchased by the public and remain in public hands.

7. Dogs. There is no reason to keep dogs out the watershed. We permit thousands of deer, elk, mountain goats, moose, mountain lions, bobcats, coyotes along with hundred of thousands if not millions of rodents, birds and other animal to defecate at will in the watershed with no one to clean up after them. And that is OK, but a few dogs with many owners who clean up after them, somehow destroys our drinking water. Get some scientific data. Every year we permit tons of ski wax to be smeared directly onto the water we drink. Ski wax is full of chemicals (I encourage you to obtain the list of all ingredients some time.) These chemicals are not removed by normal water treatment. Yet this is somehow all OK as long as a dog does not poop in the mountains? This makes absolutely not scientific sense.

As a final comment, the use of the Tri Canyon areas should be optimized to improve the quality of life for the existing residents of the Wasatch Front. It should not be optimized for temporary construction jobs, profit for large out of state corporation who seek only to extract money from the resource here (we have the copper mine in the Oquirrths to fill that need.) The area east of the Wasatch Crest around Park City is a lost cause. Develop the hell out of it. It is trashed and industrialized already. Just keep it off of the Wasatch Crest. There is a lot of talk of "balance" in Mountain Accord. It is often a euphemism for proposing the continued commercial exploitation and further industrial of the Tri Canyon area and the uses therein. This is unacceptable. A true balance is much more along the lines of what I have outlined with additional wilderness and less infrastructure in the canyons.

Hello

I have these are thoughts a friend of mine has put in writing. I have edited several of the points and am in 100% agreement with the following idea

Transportation

- I recognize that the traffic situation in Little Cottonwood Canyon is unsustainable on some winter days, and while I understand the impetus to promote a train version of a fixed guideway, I feel that the bus system is far from optimized and with proper implementation, could service both the ski resorts and dispersed users on a year-round basis far more effectively than a train.
- Providing copious parking near the mouths of the canyon would be a critical component of this.
- Without trying an optimized bus system using the existing infrastructure I feel it is impossible to justify major infrastructure changes (adding lanes or a installing a train)
- Charging a per-vehicle fee - either via a daily fee or an annual pass - would help subsidize the optimized bus/parking system and provide an incentive to ride the transit system
- Incentivize ridership by making the bus fee free or only a nominal price.
- The bus system would need to have both a Snowbird-servicing bus and multiple Alta express buses.
- Current and future UDOT plans to add passing lanes on hwy 210 for private vehicles should be focused on improving bus transit systems.
- Snowsheds and/or bridges over slide paths can/should be added for increased avalanche mitigation for the highway.
- I fully support optimizing year-round Bus Rapid Transit for Big Cottonwood Canyon. Again, with copious parking at the mouth of the canyon.
- A tunnel linking LCC and BCC is not needed. Improved public transit would alleviate the traffic issues associated with LCC, and the "safety" issues that have been ascribed to a tunnel have been overblown; there have not been any documented injuries/fatalities associated with overuse of LCC that would not be overcome with improved transit.
- Tunnel connections would create more defacto resort sidecountry terrain, effectively increasing the resorts' footprints.
- The tunnel would basically be a taxpayer-funded connection that would exist to benefit four businesses (ski resorts) with no/very little validation that such a connection would actually be economically beneficial to those businesses. There are no significant "problems" that an LCC/BCC tunnel would solve, despite a considerable cost to taxpayers.
- The same argument is applied to a fixed guideway system connecting BCC to Park City. It would not necessarily save time for PC-BCC travelers, is not supported by Park City officials, and would again be a taxpayer-subsidized benefit to a handful of businesses (ski resorts) who have not proven that such a connection would even be beneficial today, much less in the future considering global warming and the flat/declining trends of the resort skiing industry (according to their own study).
- The question on the survey asking if the transit "solutions" are "environmentally-sustainable" is fundamentally flawed: transit systems are not intended to be "environmentally sustainable"; they are intended to transport people from point to point. Since NO ONE - including trans engineers who have looked into this project - knows if they'll actually be environmentally-sustainable (eg degrading the watershed) that point is misguided at best and badly misleading and irrelevant at worst. The question should be "Is this a solution that I as a user of the Central Wasatch would actually use and be willing to pay for?"
- At the moment parking is the limiting factor for pressurized use in the Cottonwood Canyons; enabling as many people as possible to use the canyon will result in more user pressure. Optimizing Bus Rapid Transit will be an intermediate step to moving possibly-somewhat more people up the canyon to put only moderate additional use pressure on the canyons.
- I am in full support of a year-round bus shuttle system for Mill Creek Canyon.
- I am in full support of a train/light rail system linking the Salt Lake Valley with Park City. This is a system that I feel would be used far more extensively by commuters and lower-income resort workers around the clock on a more-regular schedule than a LCC canyon train that would be associated almost exclusively for time-intensive recreation.
- The rationale provided for abandoning the Parley's rail transit - that was favored in the Trans system group - is that it would not be competitive with the freeway; however, this rationale was not applied to the successful SLC airport Trax line.

Recreation

Any new road/transit construction must have improved road cycling facilities (wider shoulders, exclusive bike lanes, disconnected paved bike paths)

- LCC/BCC parking areas need to be enlarged and enhanced for the major dispersed user trailheads, with optional stops for the Bus Rapid Transit at White Pine, Argenta, Butler Fork, Mineral Fork, etc.
- I support the permanent protection of the Emma Ridges to Superior ridgeline from development.
- I do NOT support a chairlift in Grizzly Gulch. I recognize that it is private property, but I also appreciate that much of Alta's operations are on public land and that they stand to benefit greatly from enhanced base development on a lot of lucrative land, additional water use, increased snowmaking, and improved LCC transit. Grizzly Gulch and the surrounding area should be put into some sort of permanent protection.
- I am not supportive of chairlifts and development into the American Fork Canyon. EVER.
- I could be supportive of a re-aligned chairlift in Honeycomb Canyon, depending on the alignment, provided there are no effects on Silver Fork backcountry
- I am supportive of Brighton's formal adoption of Hidden Canyon, provided any chairlift reaches back towards the Great Western chairlift.
- I am supportive of increased connectivity between Brighton and Solitude in the SolBright area.
- I am supportive of enhanced facilities at identified high-use nodes to both concentrate use in appropriate close-in areas and disperse use in more-remote areas

I am in support of modifying wilderness boundaries to accommodate new and existing sections of the Bonneville Shoreline Trail.

- I fail to understand how the Mountain Accord can consider all forms of recreation in the Central Wasatch except for one of the most significant and controversial forms: Wasatch Powderbirds. To me this "oversight" of neglecting helicopter skiing in our tiny range - that was based on a Forest Service administrative timeline that was arbitrarily changed from 5 year renewals to 10 years - is an egregious omission.

Economics

- I support enabling the ski resorts to utilize more water for snowmaking
- I support adding potential land and altering zoning for additional development at the various resorts' bases.
- I support enabling the ski resorts to expand their summertime activities within their existing footprints.
- I support enhanced modern avalanche mitigation techniques (ie Gas-X) above Alta. I do NOT support a chairlift on Flagstaff peak
- I do not support extraordinarily-expensive, taxpayer-funded "solutions" to "problems" that enable profit maximization for ski resorts whose lift tickets are pricing their customers out of an already-flat-to-declining market.

Environment

- I am not an environmental specialist, so I cannot comment on the survey question: "does the Blueprint achieve environmental stewardship of the natural resources?"
- I know that the EPA has determined that ski resort development has a more profound effect on watershed integrity than ANY other development. But I am cautiously optimistic that SLC Water and various other governing bodies will ensure water quality despite the threats associated with increased use, transit, and development.
- I am in favor of a re-forestation effort on (particularly) the Emma ridgeline area
- I am becoming increasingly convinced that simple people-pressure on the canyons is having a degrading effect on the watershed, and dramatically increasing opportunities to transport people up the canyons will have a commensurate effect on the watershed quality.
- I am concerned that the ski resorts are getting many of their desired "gets", and their "gives" are more along the lines of "we are not taking as much as we could take", at the expense of potential environmental and backcountry terrain preservation.

Overall I have found the "blueprint" (it should have been called a "proposal") to NOT be reflective of the thousands of hours of work that people put into the system group meetings and submeetings over the summer; it confirms to me that the Exec board was made up of a lot of important People who were not very engaged in the process and therefore created a plan that represented their impressions/interests rather than what was determined by the System Groups.

Therefore I do not support the "blueprint" in its current form, but I am a strong believer in the Mountain Accord ideals and timing, and am very hopeful that a more equitable balance of gives and takes can be achieved to accommodate many constituents'/stakeholders' desires, if they are all willing to concede on some of their desires.

I've updated my comment letter. Please use the updated version below:  
 I support Mt. Accord's blueprint proposal for increased environmental protection of Wasatch lands and enhanced recreation trail networks. However, I am opposed to the following elements of the transportation blueprint: a) proposed resort expansion into current prime back-country ski areas, b) the proposal for a train or bus rapid transit (BRT) lane in Little Cottonwood Canyon (LCC), and c) the proposed connection of the LCC, Big Cottonwood Canyon (BCC) and Park City.  
 I have also added the following addendums to the letter I submitted previously this week: d) a response to Mt Accord's Transportation Corridor Purposes and Alternatives, e) proposed revisions to the current blueprint rather than moving to a finalized version, f) suggestions for encouraging public comment on future proposals.

--a--Alta's proposal to expand into Grizzly Gulch with a new chair lift and Solitude's proposal to expand into Silver Fork with a chair lift re-alignment would be a great loss to the back-country ski community!! Grizzly Gulch in particular is my main back-country terrain that I ski 2-3 times a month for most of the winter. Based on my experience, it seems like the majority of back-country skiers are Utahans, while the majority of resort skiers are out-of-staters. By giving up more back-country terrain to the ski resorts we are catering to out-of-staters and at the same time restricting our own ability to enjoy the Wasatch wilderness. I am proud to support Wasatch Backcountry Alliance, and I hope they will succeed at opposing these proposals.

--b--I am opposed to the train and bus rapid transit BRT lane proposal in LCC for the following 10 reasons: b1) the urbanization feel that it would bring to the canyon, b2) the potential loss of bouldering and other rock-climbing opportunities, b3) the increased risk they would add to driving the canyon, b4) the impact on the environment, b5) the potential lack of utility for dispersed users at late hours, b6) the increased risk for pedestrian-traffic fatalities due to increased foot traffic from a fixed stop schedule, b7) the potential loss of parking opportunities, b8) the cost, b9-b10) the disconnect between this transportation proposal and Mt. Accord's own "ideal system" research on transportation and growth.

--b1--If a train or bus were added to LCC alongside the existing roadway it would make the canyon feel more urban/developed. I use this canyon regularly, 3-5 times a month throughout the year, to escape the city and enjoy our amazing Wasatch wilderness through rock-climbing, bouldering, ice-climbing, hiking, biking, back-country skiing, alpine skiing, cross-country skiing and running. If a train were added, it would be a diesel cog locomotive due to the grade of LCC which averages about 8%, as electric trains cannot travel this steep of a grade. I am concerned about seeing, hearing, and smelling a train in the canyon when I am trying to escape the city and enjoy the wilderness. This would greatly detract from my recreational experience.

--b2--Along these lines, how would developing a train alongside LCC road affect the bouldering and rock-climbing access and experience? In particular, some boulders are within 20 feet of the road, so I wonder how a train or BRT could 'fit' and preserve the existing bouldering experience. I would hope that bouldering and climbing opportunities would not be lost. I also hope that it would not endanger climbers or cause increased stress due to proximity of train tracks or the bus lane.

--b3--I am concerned about the dangers that a train or BRT system would bring to the car traffic through the canyon. Driving personal vehicles would become more dangerous because we would now be sandwiched between the opposing lane and a train or BRT lane. This is especially dangerous in the winter time where cars slide off the road. An increase in traffic fatalities seems likely as cars slide into a train or bus instead. Are there measures that can be taken so that this transportation proposal does not reduce the safety of personal vehicle traffic?

--b4--The canyon is part of a protected watershed and a fragile ecosystem. I am concerned about the environmental impact of building a train or widening the road for the BRT lane.

--b5--As a dispersed user, I would need several stops throughout the canyon in order for the transportation proposal to accommodate my usage: Gritmill, Gate Buttriss, Coalpit Buttriss, Lisa Falls, Maybird Slide Area, Tanner Gulch and White Pine. In order for the transportation proposal to be useful for me in the summer time, I would also need services that run until 10pm at night. Otherwise, I will likely continue to drive the canyon.

--b6--Given that some freedom is lost from a fixed stop schedule, it will also be important to have a safe trail system since foot-traffic alongside the road will increase in response to fewer access points. This trail system will need to run the length of the canyon, otherwise pedestrian-traffic fatalities could increase.

--b7--I hope that existing parking opportunities will not be lost or reduced as a result of the transportation proposal.

--b8--The cost of financing a train is estimated at a billion dollars – a steep price tag to be financed by Utah tax payers relative to the fraction of Utahans who use LCC on a regular basis. Also, what are the costs of clearing land slides and avalanches from train tracks? ☹

b9--I am concerned about the disconnect between the results from MA's transportation and growth research, which show traffic volumes in LCC to be constant over the past 11 years, and the proposal to put in a train or BRT. In the "Existing Conditions & Future Trendlines of the Transportation System" MA says: "In the study area, traffic volumes have remained relatively constant for 11 years" (pg 9) and "Traffic in the Cottonwood Canyons typically operates at free-flow speeds, with the exception of congestion problems at peak times (ie, snow days, peak ski days)" (pg 9). MA also describes peak traffic times as snow days which they estimate to occur 10-15 days/year (4-5.5%, pg1). On pg 5 of this document it describes how "climate change shortens the winter season". Based on MA's research, the transportation problem is only present about 5% of the year, with potential to decrease in the future as a result of climate change. How is a transportation proposal that is costly in terms of money, recreational experience, and environmental impact a good solution to this rare problem?

--b10--Along these lines, MA's transportation and growth research also does not show LCC to have projected future issues with traffic congestion. Figure 46 "Map of Traffic Congestion in 2040 without Long Range Transportation Improvements" (pg 50) indicates a lot of traffic congestion issues throughout SLC in response to the 43% projected population growth that is expected by 2040. However, LCC is not an area of concern on this map. If there is no projection of a traffic congestion problem by 2040 in LCC, then why do we need this train or BRT solution?

Wouldn't increasing the number of buses during peak times make more sense than a train or a BRT lane?

--c-- Finally, I am opposed to the plans to use tunnels or trams to link the LCC, BCC and Park City area. Again this would be a costly project (billions of dollars), which does not appear to respond to needs from the MA's "ideal system" research. The "Transportation Corridor Purposes and Alternatives" document cites that tunnels are needed to provide alternative evacuation routes from the canyons. The only potential value is perhaps that <1-2% of the year when a major snowstorm shuts down the LCC exit. But the environmental damage to the canyons and the cost of this construction is hardly justification for this minor and rare inconvenience!

--c1--I am concerned that MA's blueprint for the canyons was proposed by ski resorts and/or stake-holders seeking land development. Connecting the canyons in this way would again mean a loss of back-country terrain (likely grizzly gulch, silver fork, and more), as resort skiers would be guaranteed a simple return to their home resort.

--c2--I am also concerned that linking the canyons in this way would increase deaths from avalanches. Most resort skiers are not equipped with back-country beacons, gear and training. Thus, linking the ski resorts would facilitate naïve travel into the back-country and lead to even more resort skier deaths.

--d--Response to Mt Accord's Transportation Corridor Purposes and Alternatives:  
 On the MA website's comments submission form, it asks for response to the Transportation Corridor Purposes and Alternatives document. This document outlines 14 purposes of the transportation proposal. In my view, the goals outlined here are not equally important (although it appears they are given equal weight), and the list is incomplete.

--d1--In particular: "9. Create unique, attractive traveler experience" is not a need, but a "want" that was designed around arguing for a train and tunnel/tram canyon connections.

--d2--Items: "3.reducing avalanche-related risks and delay" and "4. providing new evacuation options from the canyons" are only relevant a few days of the year, typically <1-2% of the year, as it is not just a snowstorm but avalanche danger that shuts down the road.

--d3--Similarly "14. protect and enhance community character" is not a need that I look for in a transportation proposal.

--d4--What about other important goals such as "15. A financially tenable solution" and "16. A solution that can be implemented quickly and effectively". These two new goals can be fulfilled by increasing bus capacity but not a train, BRT or tunnel solution.

--d5--That said, in my view adding buses to alleviate peak usage times still accomplishes 9/14 goals (1,2,5-7, 10-13), while the train likely accomplishes 4/14 (4-6,11), and possibly 3 more (9, 10, 12). There is not enough information to evaluate if either proposal meets item 8.

Regarding the other items, I feel that the answer is either "No" (7,13) for the train/tunnel or there is not enough information to evaluate whether the train/tunnel proposal fulfills the need (1-3,14).  
 Adding a train and tunnel appears to be a much riskier and far costlier proposal than increasing bus capacity during peak usage times.

--e--Proposal: Revise the Proposed Blueprint  
 Rather than advancing to the "Final Blueprint" stage, the proposed blueprint should be revised to include more options for protecting the Wasatch wilderness. Here are some suggestions:

--e1--Instead of a train or BRT lane, there should be an increase in buses to relieve congestion at peak usage times. ☹

e2—In light of the acknowledged climate change, ski resorts should reduce their size. Perhaps each ski resort could discontinue one lift. In addition to helping the environment by providing more habitat space and reduced water usage from snowmaking, this would be supported by SLC's growing back-country ski population.

--e3—Ski resorts should reduce their water usage. This would be helpful as climate change has been decreasing our water supply.

--e4—Protection of grizzly gulch and silver fork from ski resort acquisition.

--e5—Develop a plan to relieve traffic congestion on foothill blvd and the foothill blvd/I-215 off ramp. This exit and road are congested year-round every weekday morning and evening. Furthermore, it is also severely congested that 5% of the year when the snow storms hit. Morning congestion not only affects those who commute to work on foothill blvd, but also those using the I-215, as the traffic often backs up onto the highway, creating hazardous conditions for all west-bound travelers. Evening congestion on this road delays or even prevents post-work recreation opportunities for many SLC residents. Improving this congestion would be a good use of resources as it would benefit the majority of SLC residents on a regular basis, and not just the few who enjoy downhill resort skiing on powder days.

--f—Suggestions for encouraging public comment on future proposals. It took about 20 hours to research and write this letter. Not everyone is as interested in reading 20+ documents and 444+ pages, and many are likely intimidated.

--f1—In the future it would be helpful if MA could provide a form letter highlighting each specific proposal in the blueprint to help guide the public on writing a response letter. Specific documents with page numbers could be cited for each point, in case the reader wished for further details before agreeing/disagreeing. At least this would have been helpful for me.

--f2—Maybe organizations such as WBA, SOC, and SCLA could use this form letter to publish their stance on each proposal. This would also help make it more transparent for the public to know which elements of the blueprint are being supported/refuted by these organizations.

In summary, I do support the following aspects of the blueprint: increased environmental protection of Wasatch lands and enhanced recreation trail networks. However, the transportation blueprint focuses the majority of financial resources on LCC and connecting the canyons. This would benefit the ski industry and land developers, but would be detrimental to the vast majority of the Wasatch front population -- both recreationally and financially. The proposed blueprint should be revised to reflect a greater focus on more important transportation needs and the preservation of the Wasatch wilderness.

These are thoughts a friend of mine has put in writing. I've carefully read and am in 100% agreement with the following ideas:

#### Transportation

- I recognize that the traffic situation in Little Cottonwood Canyon is unsustainable on some winter days, and while I understand the impetus to promote a train version of a fixed guideway, I feel that the bus system is far from optimized and with proper implementation, could service both the ski resorts and dispersed users on a year-round basis far more effectively than a train.
- Providing copious parking near the mouths of the canyon would be a critical component of this.
- Without trying an optimized bus system using the existing infrastructure I feel it is impossible to justify major infrastructure changes (adding lanes or installing a train)
- Charging a per-vehicle fee - either via a daily fee or an annual pass - would help subsidize the optimized bus/parking system and provide an incentive to ride the transit system
- Incentivize ridership by making the bus fee free or only a nominal price.
- The bus system would need to have both a Snowbird-servicing bus and multiple Alta express buses.
- Current and future UDOT plans to add passing lanes on hwy 210 for private vehicles should be focused on improving bus transit systems.
- Snowsheds and/or bridges over slide paths can/should be added for increased avalanche mitigation for the highway.
- I fully support optimizing year-round Bus Rapid Transit for Big Cottonwood Canyon. Again, with copious parking at the mouth of the canyon.
- A tunnel linking LCC and BCC is not needed. Improved public transit would alleviate the traffic issues associated with LCC, and the "safety" issues that have been ascribed to a tunnel have been overblown; there have not been any documented injuries/fatalities associated with overuse of LCC that would not be overcome with improved transit.
- Tunnel connections would create more defacto resort sidecountry terrain, effectively increasing the resorts' footprints.
- The tunnel would basically be a taxpayer-funded connection that would exist to benefit four businesses (ski resorts) with no/very little validation that such a connection would actually be economically beneficial to those businesses. There are no significant "problems" that an LCC/BCC tunnel would solve, despite a considerable cost to taxpayers.
- The same argument is applied to a fixed guideway system connecting BCC to Park City. It would not necessarily save time for PC-BCC travelers, is not supported by Park City officials, and would again be a taxpayer-subsidized benefit to a handful of businesses (ski resorts) who have not proven that such a connection would even be beneficial today, much less in the future considering global warming and the flat/declining trends of the resort skiing industry (according to their own study).
- The question on the survey asking if the transit "solutions" are "environmentally-sustainable" is fundamentally flawed: transit systems are not intended to be "environmentally sustainable"; they are intended to transport people from point to point. Since NO ONE - including trans engineers who have looked into this project - knows if they'll actually be environmentally-sustainable (eg degrading the watershed) that point is misguided at best and badly misleading and irrelevant at worst. The question should be "Is this a solution that I as a user of the Central Wasatch would actually use and be willing to pay for?"
- At the moment parking is the limiting factor for pressurized use in the Cottonwood Canyons; enabling as many people as possible to use the canyon will result in more user pressure. Optimizing Bus Rapid Transit will be an intermediate step to moving possibly-somewhat more people up the canyon to put only moderate additional use pressure on the canyons.
- I am in full support of a year-round bus shuttle system for Mill Creek Canyon.
- I am in full support of a train/light rail system linking the Salt Lake Valley with Park City. This is a system that I feel would be used far more extensively by commuters and lower-income resort workers around the clock on a more-regular schedule than a LCC canyon train that would be associated almost exclusively for time-intensive recreation.
- The rationale provided for abandoning the Parley's rail transit - that was favored in the Trans system group - is that it would not be competitive with the freeway; however, this rationale was not applied to the successful SLC airport Trax line.

I do NOT support a chairlift on Flagstaff peak</li> <li>• I do not support extraordinarily-expensive, taxpayer-funded “solutions” to “problems” that enable profit maximization for ski resorts whose lift tickets are pricing their customers out of an already-flat-to-declining market.</li> </ul> <p>Environment</p> <ul style="list-style-type: none"> <li>• I am not an environmental specialist, so I cannot comment on the survey question: “does the Blueprint achieve environmental stewardship of the natural resources?”</li> <li>• I know that the EPA has determined that ski resort development has a more profound effect on watershed integrity than ANY other development. But I am cautiously optimistic that SLC Water and various other governing bodies will ensure water quality despite the threats</li> </ul>		
<ul style="list-style-type: none"> <li>• I am in favor of a re-forestation effort on (particularly) the Emma ridgeline area</li> <li>• I am becoming increasingly convinced that simple people-pressure on the canyons is having a degrading effect on the watershed, and dramatically increasing opportunities to transport people up the canyons will have a commensurate effect on the watershed quality.</li> <li>• I am concerned that the ski resorts are getting many of their desired “gets”, and their “gives” are more along the lines of “we are not taking as much as we could take”, at the expense of potential environmental and backcountry terrain preservation.</li> </ul> <p>Overall I have found the “blueprint” (it should have been called a “ proposal”) to NOT be reflective of the thousands of hours of work that people put into the system group meetings and submeetings over the summer; it confirms to me that the Exec board was made up of a lot of Important People who were not very engaged in the process and therefore created a plan that represented their impressions/interests rather than what was determined by the System Groups.</p> <p>Therefore I do not support the “blueprint” in its current form, but I am a strong believer in the Mountain Accord ideals and timing, and am very hopeful that a more equitable balance of gives and takes can be achieved to accommodate many constituents’/stakeholders’ desires, IF they are all willing to concede on some of their desires.</p>		5/1/2015
<p>May 1, 2015  Subject: Comments on Mountain Accord  Dear Mt Accord Executive Committee:</p> <p>I appreciate the opportunity to participate in the Mountain Accord program and provide my input and comments for your consideration. I live in Sandy, Utah and very regularly recreate in Big and Little Cottonwood Canyons. I am a skier, mountain biker, hiker, and runner. I moved to Utah 24 years ago. I had been coming to ski here at least annually for 10 years prior. A major part of my decision to move to Utah was the Central Wasatch and the Cottonwood Canyons. I truly love the beauty of the area, and the wilderness and near wilderness experiences that are possible only 20 minutes from my home in the Valley. I am a hydrologist, and my career here as a consulting hydrologist has been primarily planning and protecting our existing water supplies, development of new clean water supplies, and attempting to clean up polluted water supplies, such as Hill AFB and Geneva Steel, which unfortunately is not possible with the current technologies and funding our society allocates towards those problems. I understand the importance of the quantity of pristine mountain water that we in the Valley utilize from Big and Little Cottonwood Canyon for drinking water.</p> <p>I am most familiar with the planning issues and challenges in Little Cottonwood Canyon (LCC), and to a lesser extent in Big Cottonwood Canyon. Therefore my comments are focused on LCC more, but my overarching comments can be extended to my opinions on the entire Central Wasatch.</p> <p>Land Swap – Cottonwoods Canyon Task Force (CCTF)</p> <ol style="list-style-type: none"> <li>1. The most troubling part of Mtn Accord to me is the CCTF. We went through the month’s long “public” Mtn Accord process, and ended up with a closed door, secret process with CCTF. I was disappointed to attend the Mtn Accord public meetings where Mayor Becker spoke for 10 minutes without being able to share much insight on the deals that were being hatched – because they were closed. It leaked out that Alta Ski Area was demanding a train and tunnel as part of the proposed swap. I understand Alta later changed its position, however, that news undermines the premise of the Mtn Accord process and public input on transportation solutions. I am still skeptical that Mtn Accord decisions won’t be tweaked to match whatever the ski areas want from the land swap.</li> <li>2. That said, I am supportive of the land swap to allow the US Forest Service to own and manage the currently undeveloped upper mountain lands and put the developed or partially developed lands at the base of the ski base areas into ski area management. I premise my support on the understanding the ski areas would acquire lands of equal or lesser value than they are giving up. My support is also conditioned on following:</li> <li>3. The land exchanges be subject to NEPA.</li> <li>4. The ski areas should give up all of their upper mountain undeveloped holdings. This should not be a piece meal process where they offer up some and not all. Specifically Alta Ski Resort should give up all its miscellaneous holdings in the Albion Basin. I support Alta Ski Area being able to trade for land in the base area that they currently have buildings on.</li> <li>5. If the ski areas land appraised value would result in the ski areas receiving excessively large tracts of land at the base areas, then the excess land should be purchased from the resorts. I think more than 50 acres beyond the land the ski areas currently have buildings on would be excessive. I am supportive of allowing the ski areas to purchase additional acreage if the valuation is out of balance the other way.</li> <li>6. The private inholdings in upper mountain lands should also be brought into public ownership. It is not beneficial to have the ski area land swap and leave behind all the properties that have brought conflict to Central Wasatch for so many years.</li> <li>7. As part of the swap I support the Town of Alta acquiring land through this process in the base area for public purposes such as transit, trailheads, watershed protection, and community space be deeded to public bodies responsible for those purposes.</li> </ol> <p>One Wasatch</p> <p>I believe the largest economic benefit to the Central Wasatch would be a limited, environmentally responsible implementation of One Wasatch. Limited lifts, only where they are required to link the resorts. For the ski community this would result in worldwide draw and appeal – hence a great boost to the economy. It would not provide any transportation solution. The lifts would only be operated during the ski season, they would not be in operation for summer use. It is very disappointing to me that One Wasatch has been eliminated from consideration during CCTF negotiation of the land swap. My understanding is the backcountry advocates and environmental groups have demanded One Wasatch be dropped, and because of this stance have accepted the mass transit tunnel connection between the canyons and Park City. I believe a limited One Wasatch is significantly more environmentally friendly and a bigger boost to the economy. ☺</p>		5/1/2015

<p>Recreation: Although I like where the Cottonwoods Taskforce is at with their land preservation, I don't think the exchange needs to be a light rail. Why should the resorts be getting a light rail for protecting land they don't own? They aren't actually giving anything up here and I think a reward like a light rail is a little obnoxious. The only entities giving something up is the public and mother nature. I don't agree with Snowbird going into Mary Ellen and AF canyon. People camp back there and it's quiet and serene and all you hear at night is the wolves. Why would you do this? Again, the only improvement to the transit we need is buses. Not trains. I don't really think we need stronger trail connections between recreation destinations. The point of being out there is to... be out there. Not to be surrounded by people.</p> <p>Environment: I support the ideas proposed here!!!! I think it's awesome! I hope they can happen! It's hard to see it when you look at the proposals for trains and trams and tunnels. Protecting the lands under the Cottonwoods Task force doesn't mean we should have free reign over everything else. I really like the environmental health monitoring and the protection and restoration programs suggested here. I hope we don't have to negate these ideals with the wishes for more money. In conclusion, it's hard to feel like we as a people have any say in these matters, especially when greed and money talk so much louder. So, I truly, truly hope that these comments are being read and considered and that it is not just something that "looks good" on Mountain Accord's part. I appreciate your mission statement but so many of us are skeptical that the Mountain Accord is really here for our good. I want to believe it, and I want to believe my voice can be heard and that my love for this place means something. I want to believe we aren't just stuck at the mercy of those with \$\$ in their eyes. I left my career at ESPN last year to come back here because there is no amount of sexy job titles or money that is worth the quality of life I have here. I, like many others, came here because of the mountains and the fact that I can camp in the saddles of White Pine and wake up, hike down and go to my job downtown the next morning. This place is special. Please, please protect our wilderness. Don't blow it up, eat the land and hurt the wildlife. We need to be different than Colorado and stand for something other than shiny development and money, that's been done before! Please protect our mountains!!!</p>		5/1/2015
<p>I am writing to oppose the mountain accord in its current format and agree with the letter below, written by Tom Diegel. Words are his, thoughts are also mine. I have been very involved in the Mountain Accord process from the inception as a member of the Recreation System Group, and these are my formal comments regarding the "blueprint" put forth by the Executive Board.</p> <p>Transportation</p> <ul style="list-style-type: none"> <li>· I recognize that the traffic situation in Little Cottonwood Canyon is unsustainable on some winter days, and while I understand the impetus to promote a train version of a fixed guideway, I feel that the bus system is far from optimized and with proper implementation, could service both the ski resorts and dispersed users on a year-round basis far more effectively than a train.</li> <li>· Providing copious parking near the mouths of the canyon would be a critical component of this.</li> <li>· Without trying an optimized bus system using the existing infrastructure I feel it is impossible to justify major infrastructure changes (adding lanes or installing a train)</li> <li>· Charging a per-vehicle fee - either via a daily fee or an annual pass - would help subsidize the optimized bus/parking system and provide an incentive to ride the transit system</li> <li>· Incentivize ridership by making the bus fee free or only a nominal price.</li> <li>· The bus system would need to have both a Snowbird-servicing bus and multiple Alta express buses.</li> <li>· Current and future UDOT plans to add passing lanes on hwy 210 for private vehicles should be focused on improving bus transit systems.</li> <li>· Snowsheds and/or bridges over slide paths can/should be added for increased avalanche mitigation for the highway.</li> <li>· I fully support optimizing year-round Bus Rapid Transit for Big Cottonwood Canyon. Again, with copious parking at the mouth of the canyon.</li> <li>· A tunnel linking LCC and BCC is not needed. Improved public transit would alleviate the traffic issues associated with LCC, and the "safety" issues that have been ascribed to a tunnel have been overblown; there have not been any documented injuries/fatalities associated with overuse of LCC that would not be overcome with improved transit.</li> <li>· Tunnel connections would create more defacto resort sidecountry terrain, effectively increasing the resorts' footprints.</li> <li>· The tunnel would basically be a taxpayer-funded connection that would exist to benefit four businesses (ski resorts) with no/very little validation that such a connection would actually be economically beneficial to those businesses. There are no significant "problems" that an LCC/BCC tunnel would solve, despite a considerable cost to taxpayers.</li> <li>· The same argument is applied to a fixed guideway system connecting BCC to Park City. It would not necessarily save time for PC-BCC travelers, is not supported by Park City officials, and would again be a taxpayer-subsidized benefit to a handful of businesses (ski resorts) who have not proven that such a connection would even be beneficial today, much less in the future considering global warming and the flat/declining trends of the resort skiing industry (according to their own study).</li> <li>· The question on the survey asking if the transit "solutions" are "environmentally-sustainable" is fundamentally flawed: transit systems are not intended to be "environmentally sustainable"; they are intended to transport people from point to point. Since NO ONE - including trans engineers who have looked into this project - knows if they'll actually be environmentally-sustainable (eg degrading the watershed) that point is misguided at best and badly misleading and irrelevant at worst. The question should be "Is this a solution that I as a user of the Central Wasatch would actually use and be willing to pay for?"</li> <li>· At the moment parking is the limiting factor for pressurized use in the Cottonwood Canyons; enabling as many people as possible to use the canyon will result in more user pressure. Optimizing Bus Rapid Transit will be an intermediate step to moving possibly-somewhat more people up the canyon to put only moderate additional use pressure on the canyons.</li> <li>· I am in full support of a year-round bus shuttle system for Mill Creek Canyon.</li> <li>· I am in full support of a train/light rail system linking the Salt Lake Valley with Park City. This is a system that I feel would be used far more extensively by commuters and lower-income resort workers around the clock on a more-regular schedule than a LCC canyon train that would be associated almost exclusively for time-intensive recreation.</li> <li>· The rationale provided for abandoning the Parley's rail transit - that was favored in the Trans system group - is that it would not be competitive with the freeway; however, this rationale was not applied to the successful SLC airport Trax line.</li> </ul>		5/1/2015

<p>Recreation- I am in full support of creating a trails network in the upper reaches of the two canyons</p> <ul style="list-style-type: none"> <li>• The trails should be a mix of hiking exclusive, mountain biking exclusive, and shared (and/or with management techniques conducive to habits; ie Snowbird's new trail being uphill til the tram runs and then it becomes downhill).</li> <li>• Any new road/transit construction must have improved road cycling facilities (wider shoulders, exclusive bike lanes, disconnected paved bike paths)</li> <li>• LCC/BCC parking areas need to be enlarged and enhanced for the major dispersed user trailheads, with optional stops for the Bus Rapid Transit at White Pine, Argenta, Butler Fork, Mineral Fork, etc.</li> <li>• I support the permanent protection of the Emma Ridges to Superior ridgeline from development.</li> <li>• I do NOT support a chairlift in Grizzly Gulch. I recognize that it is private property, but I also appreciate that much of Alta's operations are on public land and that they stand to benefit greatly from enhanced base development on a lot of lucrative land, additional water use, increased snowmaking, and improved LCC transit. Grizzly Gulch and the surrounding area should be put into some sort of permanent protection.</li> <li>• I could (NOT AND NEVER WILL BE) be supportive of chairlifts and development into the American Fork Canyon depending on alignment and scope.</li> <li>• I could be supportive of a re-aligned chairlift in Honeycomb Canyon, depending on the alignment, provided there are no effects on Silver Fork backcountry</li> <li>• I am supportive of Brighton's formal adoption of Hidden Canyon, provided any chairlift reaches back towards the Great Western chairlift.</li> <li>• I am supportive of increased connectivity between Brighton and Solitude in the SolBright area.</li> <li>• I am supportive of enhanced facilities at identified high-use nodes to both concentrate use in appropriate close-in areas and disperse use in more-remote areas</li> </ul> <p>I am in support of modifying wilderness boundaries to accommodate new and existing sections of the Bonneville Shoreline Trail.</p> <ul style="list-style-type: none"> <li>• I fail to understand how the Mountain Accord can consider all forms of recreation in the Central Wasatch except for one of the most significant and controversial forms: Wasatch Powderbirds. To me this "oversight" of neglecting helicopter skiing in our tiny range—that was based on a Forest Service administrative timeline that was arbitrarily changed from 5 year renewals to 10 years - is an egregious omission.</li> </ul> <p>Economics- I support enabling the ski resorts to utilize more water for snowmaking</p> <ul style="list-style-type: none"> <li>• I support adding potential land and altering zoning for additional development at the various resorts' bases.</li> <li>• I support enabling the ski resorts to expand their summertime activities within their existing footprints.</li> <li>• I support enhanced modern avalanche mitigation techniques (ie Gas-X) above Alta. I do NOT support a chairlift on Flagstaff peak</li> <li>• I do not support extraordinarily-expensive, taxpayer-funded "solutions" to "problems" that enable profit maximization for ski resorts whose lift tickets are pricing their customers out of an already-flat-to-declining market.</li> </ul> <p>Environment- I am not an environmental specialist, so I cannot comment on the survey question: "does the Blueprint achieve environmental stewardship of the natural resources?"</p> <ul style="list-style-type: none"> <li>• I know that the EPA has determined that ski resort development has a more profound effect on watershed integrity than ANY other development. But I am cautiously optimistic that SLC Water and various other governing bodies will ensure water quality despite the threats associated with increased use, transit, and development.</li> <li>• I am in favor of a re-forestation effort on (particularly) the Emma ridgeline area</li> <li>• I am becoming increasingly convinced that simple people-pressure on the canyons is having a degrading effect on the watershed, and dramatically increasing opportunities to transport people up the canyons will have a commensurate effect on the watershed quality.</li> <li>• I am concerned that the ski resorts are getting many of their desired "gets", and their "gives" are more along the lines of "we are not taking as much as we could take", at the expense of potential environmental and backcountry terrain preservation.</li> </ul> <p>Overall I have found the "blueprint" (it should have been called a "proposal") to NOT be reflective of the thousands of hours of work that people put into the system group meetings and submeetings over the summer; it confirms to me that the Exec board was made up of a lot of Important People who were not very engaged in the process and therefore created a plan that represented their impressions/interests rather than what was determined by the System Groups.</p> <p>Therefore I DO NOT support the "blueprint" in its current form, but I am a strong believer in the Mountain Accord ideals and timing, and am very hopeful that a more equitable balance of gives and takes can be achieved to accommodate many constituents'/stakeholders' desires, IF they are all willing to concede on some of their desires</p>		5/1/2015
<p>First of all, thank you for your continued efforts to receive comments from the public and make the process very accessible. I have worked in the transportation industry in the past and know that it is a challenge.</p> <p>That being said, I am surprised that a more robust bus system is not the primary proposal for the blue print. If the train or dedicated bus lane were even feasible to build, the following proposal would still need to be implemented to solve the local transportation issue in the interim. Any widening of Little Cottonwood Canyon would take the better part of a decade to complete and would certainly restrict access during construction. This begs the question of 'why not focus on improving the existing bus infrastructure as the primary means to the end?' Well because that's not as exciting as marketing a train the Europeans can. However their canyons do not occupy a relatively small area that directly impacts a major metro area's water supply like the Wasatch range does.</p> <p>The following are very actionable suggestions that maximize existing infrastructure and provide ski resort users with a reliable system that would greatly alleviate the individual vehicle use currently happening in the Cottonwood Canyons.</p> <p>Dedicated Canyon Buses: Each canyon should operate dedicated buses rather than have the buses coming from the various Trax stops all the way to the resorts. This current systems results in buses rarely arriving at the mouth of the canyon location on time. This also results in buses being very full by the time they get to the most popular pick up point. Many local residents turn to hitchhiking instead, which is neither safe nor legal.</p> <p>Continuous Bus Hours: There is currently very limited bus service in the canyons. I encourage you to review the schedules thoroughly. Many locals have the luxury of spending only half of a day in the canyons due to backcountry use and/or season passes at the resorts. I and many others frequently opt not to take the bus because it is not feasible to leave the resort in time to make it to work or other obligations prior to 2:00 pm. The bus schedule seems to only be designed for tourists who prefer to ski from open to close. Even in that scenario, there is limited service in the morning, so if you miss the one bus you have to wait 30 minutes for the next. This again leads to locals opting for hitch hiking or getting back in their personal vehicle and ignoring 4x4 requirements. With dedicated canyon buses, there should be uninterrupted and frequent bus service.</p> <p>Extended Bus Hours: All bus service stops within an hour and a half of the lifts closing. This is not enough time for those choosing to dine at the mountain and still utilize public transportation. Ideally a visitor would be able to use the bus system to connect to transportation and enjoy the dining options that the valley has to offer and still return to lodging at the resorts. Many tourists opt to stay in the valley since the resort amenities in the cottonwood canyons are lacking. This would provide a Win-Win for those staying in the valley who wish to remain on the mountain through the evening and those staying at the resort wishing to enjoy Salt Lake City.</p> <p>Park City Express Ski Bus: I have to invoke my personal experience with this topic. I have been to Europe where they connect massive resorts with extraordinarily long and boring runs as well as trams, trains, chairs, and gondolas. I quickly learned that traveling between resorts was a complete waste of my day with more time spent on lifts than skiing. I had a Big Cottonwood Pass last year and only skied both resorts in the same day one time because it was such a tedious connection that took an hour out of my day... I can't imagine trying to connect from Park City to Snowbird and then back again! This doesn't even include the issue of 2 of the 7 resorts not allowing snowboarders, which renders the connections useless anyways. So I am proposing an express bus from Park City with limited stops that would connect visitors to the mouth of each canyon where they can board a dedicated canyon bus. This is better than using lifts to connect because visitors could take a bus that would allow them to be on the slopes of their desired resort at open instead of beginning the 2 hour journey or riding lifts once the resort of origin opens. Park City visitors and/or residents could then also enjoy the food and drink options at these resorts without worrying about having to be on lifts early enough to get back to their original resort prior to close. In Zermatt, Switzerland I witnessed a group of Italians trying to find accommodations for the night because they did not get on the last connecting lift to cross back into Italy before 3:30 pm.</p> <p>Utilize Existing Parking Structures: Many local users gravitate toward the mouth of each canyon as a designated meet up. However, building adequate parking in these areas is neither feasible nor a good idea to maintain the character of the canyons. The commercial hub located at 3000 E and 6200 S already contains parking infrastructure, a ski shop, coffee shops, restaurants, etc. to become a hub for ski transportation.</p>		3/17/2015
<p>Offer a One Wasatch Pass: The lure of multiple resorts on one pass in Europe and Colorado has less to do with attempting to cover multiple resorts in one day, which is difficult and not enjoyable, but rather the flexibility to decide the day of or the night before where you would like to go skiing. Many people would gladly pay a premium for a combination day pass in order to have that flexibility. I know less about the financial viability of this option, but it should be considered as an alternative to physically connecting the resorts.</p> <p>Restricted Car Access/Parking: This is a complicated issue, but the fact stands that there is more demand than supply in the cottonwood canyons and that is only getting worse. The regular and reliable bus system would need to be implemented prior to restricting vehicle use in the canyons. If continuous and frequent bus service is implemented it may reduce the need for this option all together. I would personally never drive to the resort if I knew I could take a bus within 15 minutes of parking and then catch a bus within 15 minutes of deciding to head back to my car. However, if demand continues then carpool lots and other vehicle restrictions need to be evaluated. A train is not the solution. The parking lots at these resorts represent the max number of users that make sense for an enjoyable experience. Please don't turn us into the 30+ minute lift line waits of Colorado.</p> <p>The suggestions I have outlined benefit each of the 4 system groups.</p> <p>Transportation is enhanced for both local and visiting users reducing the need for individual vehicles in the canyons as well as for connecting to Park City. These options are also more easily implemented and would have a significant impact.</p> <p>Economy is enhanced by allowing resort users to spend more time in recreation hubs due to extended bus service as well as opening up more dining and lodging options for visitors by having more convenient access.</p> <p>Recreation is preserved for backcountry users which are a quickly growing user group as well as focus on enjoying recreation itself, not spending time on lifts. Also increasing the number of user at the resorts detracts from the experience that attracts visitors to Utah in the first place.</p> <p>Environment is both protected and enhanced by reducing individual cars in stop-and-go traffic as well maintaining the existing watershed protections and not altering the character of Little Cottonwood Canyon with a train or widened road.</p>		3/17/2015

I am a Utah transplant from Massachusetts. Growing up I considered myself an explorer: I was in Boy Scouts, I would ride my local mountain bike trails tirelessly to find new places, spent countless days hiking the White Mountains and beyond...the list goes on. Skiing New England, I got a taste of both my own aversion to crowded ski resorts and also the sense of freedom and euphoria that is possible to attain with exploring sidecountry and backcountry ski terrain. Now, admittedly, I won't exactly claim that I am a backcountry skier. Sugarbush, Vermont's sidecountry, Tuckerman's Ravine in NH, and other relatively low-risk out of bounds skiing has been the scope of my experience. I lived in Breckenridge, CO for two winters and got tired of the crazy lift lines and the ritzy/touristy vibes, so I sought out a new place to work and ski, and landed at Alta. This past winter was my second season working there, and both seasons I was yearning to finally take my Avy 1 class, invest time into studying books/gaining experience and invest money into the proper gear, and get out there on the skin track for real. However, finding that Alta and LCC in general are vastly different from larger resort towns like Breck in that they don't receive nearly the same crowds, I found myself content with exploring the seemingly never-ending inbounds terrain. I was okay with saving money for the time being and getting to know the area a little better first to maintain a healthy respect for the backcountry, instead of trying to be a hero and rushing out of bounds. That said, all along I've known in the back of my head that before long, the day will come when I will finally find the drive to commit and step in with both feet and explore the Wasatch on my own two feet. With two seasons skiing strictly at the resort, I feel that that day is approaching.

As the people in charge of this grand Mountain Accord plan, the leaders of, you guys owe it not to me, but the thousands if not more people just like me who are eager and aspiring to venture into backcountry skiing for the first time. I know that Alta is but one of the 7 resorts in the picture here, but the reason Alta is so special and stands out in my mind (having skied 6 of the 7) is because in my mind it most closely parallels what I imagine the Wasatch backcountry to be like. It is like a time machine - the development is minimal, the experience is pure, and it allows people to find a greater connection with nature and the community, which is really what skiing is all about. Authenticity, not publicity and exponential growth. It parallels the best parts of Utah in so many ways, all the preserved wild spaces that people flock to from all over the world. Having never experienced dawn patrols or any other aspect of backcountry skiing in the Wasatch, Alta to me feels like a first step, a gateway into a higher realm that is in grave danger of being permanently altered beyond recognition of what so many generations before us have come to love.

First and foremost, the idea of a publicly funded or subsidized transit/connection system that exists for the benefit of big business is utterly absurd. Not that I support these large corporations and the agencies involved in developing their operations even if it was self-funded, but the idea that they are trying to push for government funding and taxpayer dollars to carry out a plan that isn't unanimously supported by the public is pathetic and cowardly. Secondly, having the idea drilled into my brain two winters in a row that the watershed LCC is highly fragile and in need of protection and preservation, it really paints the proponents of these grand developments as scumbag hypocrites for wanting to commercially expand these areas knowing they will endanger the ecosystems and threaten the watershed even more than it already is. We do not need all of the certain construction runoff we do not need an aerial tram between Park City and BCC and we certainly don't need tunnels connecting any of the canyons. I saw a comment on the WBA website claiming that one reason tunnels between the canyon heads were proposed is because they could provide a solution to the "emergency" of being stuck up canyon during a road closure - I can tell you firsthand from my experience as a bartender at Alta, I was working during the one stand-out Christmas week storm when the roads were closed until about 9pm; the bar was packed and nobody seemed to be in a state of emergency. People kind of just dealt with it, they accepted they'd have to just drink some beer, eat some nachos, and get home a little later than expected. It was an experience to be enjoyed, not an inconvenience or a burden. The road was closed and that was that. Is it insensitive to ignore the possibility that, sure, there could truly be an emergency down valley that somebody up the canyon needs to be present for? I think you could look at it that way, yes, but I believe the toll of implementing these tunnels absolutely outweighs the need to mitigate the risk of maybe a few cases a year where this occurs. These canyons have been operating commercially as far back as when Alta opened 77 years ago without the need - why all of a sudden is this an issue? These tunnels would just be extra unnecessary gimmicks adding to the grandeur of the fancy ski vacation experience. Park City and its surrounding areas already have enough glitz and glamour to appease the high rollers. Tourists, ski resort executives, and locals with extremely expensive taste - who speak neither for the majority of the ski industry nor the soul of the sport - would be the only ones to benefit from a plan of this caliber because they are the only ones who care for amenities like the ones proposed. Despite how "imperative" it is for businesses to continually expand and growth to be logged on the charts, it is not sustainable. If these plans pass and development is given the green light, what's going to happen twenty years down the road? Is whatever remains of the backcountry going to get forced out of the hands from the people who know it and love it the most when people get enough of their newfound access? Then what? There's no more land to seize; what will the resorts that need growth do? Local skiers and riders understand what skiing is about and know that these luxuries aren't necessary. They certainly don't cry every night because there aren't more skiers out on the hill or in the backcountry; they just want to go skiing. There needs to be a major shift in the attitudes and approach to environmental humility and reserve of these big enterprises that generate such large scale business on the land to which they owe the majority of their wealth and success. I understand the motives for some of the proposed ideas from an environmental standpoint, and I acknowledge the fact that skiers are certainly guilty of having a substantial carbon footprint. Which is why, despite knowing it would be frowned upon by LCC/BCC locals who live in the canyon and get the place to themselves when the roads close, I can possibly get behind the idea of a train up the canyons to help cut back on individual vehicle emissions. Or at least a designated bus lane. That said, fairness to backcountry skiers is of paramount importance and stops at major trailheads to disperse human-powered traffic are a must.

If you read my message and the thousands of others that are sure to flood your inboxes, please know that your time and thoughtful consideration of the concerns of genuine, well-meaning citizens like myself is highly appreciated. This is a monumental possible turning point for the future of one of our country's most beautiful and beloved wild areas, and we the people need your help in preserving its natural splendor. Please take seriously the overwhelmingly positive effects that wide open, undeveloped spaces have on the mental and physical health of the community that enjoys them, and really ask yourselves if caving in to the financial pressure to please big business and their clientele is what this state - both its people and its remote environments that foster ecosystems - needs. I hope you understand that if the natural world and its intrinsic value have ever shaped your life in any way, if perhaps the beauty of the great outdoors and the fantastic access to these amazing, dare I say sacred, spaces that already exists here is what brought you to Utah in the first place; I hope you understand that deep down in your hearts, you already know what the right decision is. My only hope then is that you will have the courage to follow your hearts and make that decision. Long live wild spaces and smiling faces.

Please find attached the comments of the Utah Chapter on the Mountain Accord Blueprint. Thank you,  
Utah Chapter, Sierra Club

To Whom It May Concern: Throughout its century-plus history, the Sierra Club has been at the forefront of the movement to protect America's wild places and the beauty, clean water, wildlife habitat, restorative and recreational opportunities they provide. Here in Utah, the Wasatch Mountains are a unique resource to the citizens of Utah and visitors from all parts of the world. The Utah Chapter of the Sierra Club supports the Mountain Accord blueprint process and the efforts to preserve the quality of experience in key backcountry terrain, provide enduring protection against ski resort and residential expansion and resolve transportation issues involved in accessing the mountains. The discussion of environmental concerns in the Blueprint is conceptually sound but we feel needs to be more central to planning. Protecting the Wasatch environment should drive other parts of the Blueprint and be a pre-condition to any development strategies seriously considered. We believe that some aspects of the Mountain Accord process have the potential to yield positive outcomes for both conservationists and developers. However, we oppose other parts of the February 2015 Mountain Accord Blueprint and believe other areas deserve further study before informed comments can be made. Train versus Bus in Little Cottonwood Canyon  
A railway would be visually intrusive, very noisy, and diminish the wilderness character of the canyon. Construction and operation would likely have damaging impacts to water quality and wildlife. Understandably the ski resorts would like better guest access during times of heavy demand. Public transport up the canyon must be frequent, comparable in travel time to driving, affordable and potentially protected from road-sweeping avalanches. We believe better access might be achieved with improved bus service. A dedicated bus lane could be considered, constructed by widening the road to three lanes where practical, with an alternate flow lane to accommodate bus traffic during morning and afternoon peak times in the winter. Avalanche protection might be added in Little Cottonwood to improve reliability of access, if built with a visually acceptable design. Fare costs must be kept low or people will continue to drive. As compared to an expensive, slow, likely cog-railway service, bus service would be preferable because: • The frequency of rail service would probably not be as good as buses because trains would carry more passengers per trip than a bus.

- In low demand times during the year and during each day, operating a train may not be economical, or result in expensive fares and infrequent service.
- Bus service could be scaled to match demand more flexibly than a train, by using vans and various size buses, while maintaining a frequent schedule.
- A special maintenance facility for the railway may be needed near the mouth of Little Cottonwood in a prime residential area or in the scenic upper part of the canyon. Tunnels and other Transit Issues

The Sierra Club does not see any persuasive evidence that the ski industry marketing concept of "One Wasatch" would benefit the region. Such a major change to the existing ski resort infrastructure should be evaluated on a needs-and-cost basis as well as an environmental impact basis. At this stage, the need is not a given and the cost and environmental impacts are not known. Instead, we believe the Blueprint should address the greatest transit needs for residents and guests, above and distinct from ski resort marketing and profitability. We therefore would look favorably upon improved transit between Salt Lake City and Park City, such as improved bus service or train. However, we are highly skeptical of tunnels in Little Cottonwood, Big Cottonwood, and Park City and cannot support inter-canyon/resort train service as articulated in the Blueprint. We believe that this aspect of the plan: • serves primarily as a ski resort marketing device that would do little to address regular transit needs for city residents and guests, and

- would pose multiple environmental concerns during and after construction such as water pollution, air pollution, noise, and permanent visual disturbances in our scenic canyons, and
- would incur significant construction and maintenance costs, presumably paid by Utah taxpayers who would not generally benefit from them.

#### Land Swaps

The Blueprint proposes a number of land parcel exchanges. The Utah Chapter agrees in principle to preserving pristine backcountry in the Wasatch while allowing limited additional development in less sensitive locations. However, it was difficult to see at the scale provided exactly where the various land parcels are located, what visual and other environmental impacts might result, and what the process would be for each change in ownership. Therefore, we support the general concept of land swap but reserve final judgment until we see the details. Further, the land swap should be reviewed and approved parcel-by-parcel rather than in toto.

#### Further Study Needed

How accurate are growth forecasts for recreational skiing/snowboarding given the following factors?

- Climate Change. The Utah State Climatologist projects spring snow disappearing by 2100. This might result in demand for skiing being much below the projections of Ski Utah, a massive increase in water supply desired for snowmaking, or use of artificial ski surfaces at lower elevations.
- Declining Interest of Youth in being Outdoors. Today's youth spend half as much time outdoors as their parents (America's Great Outdoors 2011). How will this affect future ski area attendance?

5/1/2015

5/1/2015

3/27/2015

• Cost of Lift Tickets. The economic impact of Mountain Accord has yet to be determined. However it is reasonable to assume that skiers/snowboarders will bear the costs of improved access and expanded facilities through more expensive lift tickets. How will these increased costs impact demand for skiing? How much usage would shift to other areas such as Sundance, Snowbasin, Powder Mountain, etc.? Skiing is already unaffordable for most middle income Utah families; only 7% of Utah residents currently ski in resorts. How much will lift ticket price increases further reduce access for Utahns?

What would be the economic impact on access to the canyons?

• Part of the plan for reducing vehicle access to the Cottonwood canyons is an "economic disincentive" or fee per vehicle. This could make access to the canyons more challenging or impossible for youth and economically disadvantaged people.

• Having toll booths at the mouth of the canyons, either when entering or exiting, would be unfavorably received by canyon users.

• Is increasing the cost of using the canyons worth the tradeoff to improve resort skier access for a few winter months? Would every canyon user be subsidizing a ski industry that caters to wealthy non-residents?

Without further studies on long-term climate and population/demographic trends, accurate environmental and economic projections for many aspects of the Blueprint can only be guessed at.

Conclusion

The Utah Chapter of the Sierra Club appreciates the inclusive Mountain Accord process. We agree with protecting land that is currently threatened with development and limiting the footprint of future development in the Wasatch. Any Mountain Accord agreement that increases transportation capacity should ensure protection of the environment, ensure that transit improvements primarily benefit residents and visitors while secondarily improving ski resort marketing, and are cost effective to those bearing the costs.

Finally, the Sierra Club believes that doing the least harm to our unique environment is the prudent course for Mountain Accord in the face of uncertainties over what the actual demand will be for ski resort access in the future. The future demand discussed in the in the Blueprint is an uncertain projection due to economic, societal and climate change impacts. Further independent study is recommended regarding future visitation patterns and potential impacts of development.

Hello, I totally agree with the Utah Chapter of the Sierra Club with respect to the Mountain Accord, as follows:

Train versus Bus up Little Cottonwood Canyon

A railway would be visually intrusive, very noisy, and diminish the wilderness character of the canyon. Construction and operation would likely have damaging impacts to water quality and wildlife.

Understandably the ski resorts would like better guest access during times of heavy demand. Public transport up the canyon must be frequent, comparable in travel time to driving, affordable and potentially protected from road-sweeping avalanches. We believe better access might be achieved with improved bus service. A dedicated bus lane could be considered, constructed by widening the road to three lanes where practical, with an alternate flow lane to accommodate bus traffic during morning and afternoon peak times in the winter.

Avalanche protection might be added in Little Cottonwood to improve reliability of access, if built with a visually acceptable design. Fare costs must be kept low or people will continue to drive.

As compared to an expensive, slow, likely cog-railway service, bus service would be preferable because:

The frequency of rail service would probably not be as good as buses because trains would carry more passengers per trip than a bus.

In low demand times during the year and during each day, operating a train may not be economical, or result in expensive fares and infrequent service.

Bus service could be scaled to match demand more flexibly than a train, by using vans and various size buses, while maintaining a frequent schedule.

A special maintenance facility for the railway may be needed near the mouth of Little Cottonwood in a prime residential area or in the scenic upper part of the canyon.

Tunnels and other Transit Issues

The Sierra Club does not see any persuasive evidence that the ski industry marketing concept of "One Wasatch" would benefit the region. Such a major change to the existing ski resort infrastructure should be evaluated on a needs-and-cost basis as well as an environmental impact basis. At this stage, the need is not a given and the cost and environmental impacts are not known.

Instead, we believe the Blueprint should address the greatest transit needs for residents and guests, above and distinct from ski resort marketing and profitability. We therefore would look favorably upon improved transit between Salt Lake City and Park City, such as improved bus service or train. However, we are highly skeptical of tunnels in Little Cottonwood, Big Cottonwood, and Park City and cannot support inter-canyon/resort train service as articulated in the Blueprint. We believe that this aspect of the plan:

serves primarily as a ski resort marketing device that would do little to address regular transit needs for city residents and guests, and

would pose multiple environmental concerns during and after construction such as water pollution, air pollution, noise, and permanent visual disturbances in our scenic canyons, and

would incur significant construction and maintenance costs, presumably paid by Utah taxpayers who would not generally benefit from them.

Land Swaps

The Blueprint proposes a number of land parcel exchanges. The Utah Chapter agrees in principle to preserving pristine backcountry in the Wasatch while allowing limited additional development in less sensitive locations. However, it was difficult to see at the scale provided exactly where the various land parcels are located, what visual and other environmental impacts might result, and what the process would be for each change in ownership. Therefore, we support the general concept of land swap but reserve final judgment until we see the details. Further, the land swap should be reviewed and approved parcel-by-parcel rather than in toto.

To Whom It May Concern:

Below reflects some of my thoughts and concerns that have come up during the Mountain Accord Process.

Transportation

- I recognize that the traffic situation in Little Cottonwood Canyon is unsustainable on some winter days, and while I understand the impetus to promote a train version of a fixed guideway, I feel that the bus system is far from optimized and with proper implementation, could service both the ski resorts and dispersed users on a year-round basis far more effectively than a train.
- Providing copious parking near the mouths of the canyon would be a critical component of this.
- Without trying an optimized bus system using the existing infrastructure I feel it is impossible to justify major infrastructure changes (adding lanes or installing a train)
- Charging a per-vehicle fee - either via a daily fee or an annual pass - would help subsidize the optimized bus/parking system and provide an incentive to ride the transit system
- Incentivize ridership by making the bus fee free or only a nominal price.
- The bus system would need to have both a Snowbird-servicing bus and multiple Alta express buses.
- Current and future UDOT plans to add passing lanes on hwy 210 for private vehicles should be focused on improving bus transit systems.
- Snowsheds and/or bridges over slide paths can/should be added for increased avalanche mitigation for the highway.
- I fully support optimizing year-round Bus Rapid Transit for Big Cottonwood Canyon. Again, with copious parking at the mouth of the canyon.
- A tunnel linking LCC and BCC is not needed. Improved public transit would alleviate the traffic issues associated with LCC, and the "safety" issues that have been ascribed to a tunnel have been overblown; there have not been any documented injuries/fatalities associated with overuse of LCC that would not be overcome with improved transit.
- Tunnel connections would create more defacto resort sidecountry terrain, effectively increasing the resorts' footprints.
- The tunnel would basically be a taxpayer-funded connection that would exist to benefit four businesses (ski resorts) with no/very little validation that such a connection would actually be economically beneficial to those businesses. There are no significant "problems" that an LCC/BCC tunnel would solve, despite a considerable cost to taxpayers.
- The same argument is applied to a fixed guideway system connecting BCC to Park City. It would not necessarily save time for PC-BCC travelers, is not supported by Park City officials, and would again be a taxpayer-subsidized benefit to a handful of businesses (ski resorts) who have not proven that such a connection would even be beneficial today, much less in the future considering global warming and the flat/declining trends of the resort skiing industry (according to their own study).
- The question on the survey asking if the transit "solutions" are "environmentally-sustainable" is fundamentally flawed: transit systems are not intended to be "environmentally sustainable"; they are intended to transport people from point to point. Since NO ONE - including trans engineers who have looked into this project - knows if they'll actually be environmentally-sustainable (eg degrading the watershed) that point is misguided at best and badly misleading and irrelevant at worst. The question should be "Is this a solution that I as a user of the Central Wasatch would actually use and be willing to pay for?"
- At the moment parking is the limiting factor for pressurized use in the Cottonwood Canyons; enabling as many people as possible to use the canyon will result in more user pressure. Optimizing Bus Rapid Transit will be an intermediate step to moving possibly-somewhat more people up the canyon to put only moderate additional use pressure on the canyons.
- I am in full support of a year-round bus shuttle system for Mill Creek Canyon.
- I am in full support of a train/light rail system linking the Salt Lake Valley with Park City. This is a system that I feel would be used far more extensively by commuters and lower-income resort workers around the clock on a more-regular schedule than a LCC canyon train that would be associated almost exclusively for time-intensive recreation.
- The rationale provided for abandoning the Parley's rail transit - that was favored in the Trans system group - is that it would not be competitive with the freeway; however, this rationale was not applied to the successful SLC airport Trax line.

Recreation

- I am in full support of creating a trails network in the upper reaches of the two canyons
  - The trails should be a mix of hiking exclusive, mountain biking exclusive, and shared (and/or with management techniques conducive to habits; ie Snowbird's new trail being uphill til the tram runs and then it becomes downhill).
  - Any new road/transit construction must have improved road cycling facilities (wider shoulders, exclusive bike lanes, disconnected paved bike paths)
  - LCC/BCC parking areas need to be enlarged and enhanced for the major dispersed user trailheads, with optional stops for the Bus Rapid Transit at White Pine, Argenta, Butler Fork, Mineral Fork, etc.
  - I support the permanent protection of the Emma Ridges to Superior ridgeline from development.
  - I do NOT support a chairlift in Grizzly Gulch. I recognize that it is private property, but I also appreciate that much of Alta's operations are on public land and that they stand to benefit greatly from enhanced base development on a lot of lucrative land, additional water use, increased snowmaking, and improved LCC transit. Grizzly Gulch and the surrounding area should be put into some sort of permanent protection.
  - I could be supportive of chairlifts and development into the American Fork Canyon depending on alignment and scope.
  - I could be supportive of a re-aligned chairlift in Honeycomb Canyon, depending on the alignment, provided there are no effects on Silver Fork backcountry
  - I am supportive of Brighton's formal adoption of Hidden Canyon, provided any chairlift reaches back towards the Great Western chairlift.
  - I am supportive of increased connectivity between Brighton and Solitude in the SolBright area.
  - I am supportive of enhanced facilities at identified high-use nodes to both concentrate use in appropriate close-in areas and disperse use in more-remote areas
- I am in support of modifying wilderness boundaries to accommodate new and existing sections of the Bonneville Shoreline Trail.
- I fail to understand how the Mountain Accord can consider all forms of recreation in the Central Wasatch except for one of the most significant and controversial forms: Wasatch Powderbirds. To me this "oversight" of neglecting helicopter skiing in our tiny range - that was based on a Forest Service administrative timeline that was arbitrarily changed from 5 year renewals to 10 years - is an egregious omission.

Economics

- I support enabling the ski resorts to utilize more water for snowmaking
- I support adding potential land and altering zoning for additional development at the various resorts' bases.
- I support enabling the ski resorts to expand their summertime activities within their existing footprints.
- I support enhanced modern avalanche mitigation techniques (ie Gas-X) above Alta. I do NOT support a chairlift on Flagstaff peak
- I do not support extraordinarily-expensive, taxpayer-funded "solutions" to "problems" that enable profit maximization for ski resorts whose lift tickets are pricing their customers out of an already-flat-to-declining market.

Environment

- I am not an environmental specialist, so I cannot comment on the survey question: "does the Blueprint achieve environmental stewardship of the natural resources?"
- I know that the EPA has determined that ski resort development has a more profound effect on watershed integrity than ANY other development. But I am cautiously optimistic that SLC Water and various other governing bodies will ensure water quality despite the threats associated with increased use, transit, and development.
- I am in favor of a re-forestation effort on (particularly) the Emma ridgeline area
- I am becoming increasingly convinced that simple people-pressure on the canyons is having a degrading effect on the watershed, and dramatically increasing opportunities to transport people up the canyons will have a commensurate effect on the watershed quality.
- I am concerned that the ski resorts are getting many of their desired "gets", and their "gives" are more along the lines of "we are not taking as much as we could take", at the expense of potential environmental and backcountry terrain preservation.

Overall I have found the "blueprint" (it should have been called a "proposal") to NOT be reflective of the thousands of hours of work that people put into the system group meetings and submeetings over the summer; it confirms to me that the Exec board was made up of a lot of important people who were not very engaged in the process and therefore created a plan that represented their impressions/interests rather than what was determined by the System Groups.

Therefore I do not support the "blueprint" in its current form, but I am a strong believer in the Mountain Accord ideals and timing, and am very hopeful that a more equitable balance of gives and takes can be achieved to accommodate many constituents'/stakeholders' desires, IF they are all willing to concede on some of their desires.

(end of comments)

4/24/2015

4/24/2015

4/24/2015

<p>I have been very involved in the Mountain Accord process as a member of Wasatch Backcountry Alliance, and these are my formal comments regarding the “blueprint” put forth by the Executive Board.</p> <p>Transportation</p> <ul style="list-style-type: none"> <li>• The traffic in LCC is significant on SOME days. Those SOME days are often the weekends and when fresh snow happens. Not all days pose a traffic problem.</li> <li>• Resorts could change be part of the solution by changing hours/ticket prices to spread the traffic patterns.</li> <li>• Incentivize ridership by making the bus fee free or only a nominal price.</li> <li>• Buses need to be more time efficient – it takes too long to ride a bus to Alta with all the stops.</li> <li>• Providing significantly more parking near the mouths of the canyon would be a critical component of this.</li> <li>• Snowsheds and/or bridges over slide paths can/should be added for increased avalanche mitigation for the highway. This is done elsewhere in the country and world – why is it not implemented in Utah?</li> <li>• I support enhanced modern avalanche mitigation techniques (ie Gas-X) above Alta. No need for a lift up Flagstaff when Gas-X is a proven solution.</li> <li>• A tunnel linking LCC and BCC is not needed or will provide any real benefit.</li> <li>• Tunnel connections would create more defacto resort sidecountry terrain, effectively increasing the resorts’ footprints and decreasing the backcountry experience.</li> <li>• Adding a tunnel would be a tax payer funded benefit to privately held ski resorts. There are no significant “problems” that an LCC/BCC tunnel would solve, despite a considerable cost to taxpayers.</li> <li>• I do not support a fixed guideway system connecting BCC to Park City. This is not supported by Park City officials and would be a tax payer subsidy to ski resorts and not a transportations solution.</li> <li>• I think the Wasatch PowderBirds should be on a 5 year permit system instead of 10 years. I wish they would fly outside of the most crowded parts of the Wasatch – that would significantly reduce the conflict between user groups and increase the quality of the backcountry experience. Does the Wasatch need helicopter skiing or is it kept around to appease the elite few at the expense of quality wilderness experience for many?</li> </ul> <p>Economics</p> <ul style="list-style-type: none"> <li>• I support adding potential land and zoning for additional community developments at the ski resorts’ bases. I don’t support more condos that get used a couple of times per year by the elite while workers travel up and down the canyon as prices are too high for affordable living within canyons.</li> <li>• I do not support more “high end” housing in BCC or LCC.</li> <li>• I support enabling the ski resorts to expand their summertime activities within their existing footprints. Solitude does a great job with trials and Frisbee gold. Park City Has exceptional mtn biking trails that are just as iconic as the winter activities. <p>Environment</p> <ul style="list-style-type: none"> <li>• I am not an environmental specialist, so I cannot comment on the survey question: “does the Blueprint achieve environmental stewardship of the natural resources?” Although my gut feeling is no the blueprint does not achieve environmental stewardship of natural resources as not enough research has been done on the many proposals.</li> <li>• The EPA has determined that ski resort development has a more profound effect on watershed integrity than ANY other development.</li> </ul> <p>Recreation</p> <ul style="list-style-type: none"> <li>• I support keeping resorts in existing boundaries.</li> <li>• I am supportive of increased connectivity between Brighton and Solitude in the SolBright area.</li> <li>• I am in full support of creating a trails network in the upper reaches of BCC and LCC. Park City has trails that have significant amount of users.</li> <li>• The trails should be a mix of hiking exclusive, mountain biking exclusive, and shared.</li> </ul> </li></ul>		4/28/2015
<ul style="list-style-type: none"> <li>• I could be supportive of chairlifts and development into the American Fork Canyon depending on alignment and scope of base areas. This could add significantly more customers to Snowbird if the drive from Provo/Orem was significantly reduced.</li> <li>• I could be supportive of a re-aligned chairlift in Honeycomb Canyon, depending on the alignment, provided there are no effects on Silver Fork backcountry</li> <li>• I am supportive of Brighton’s formal adoption of Hidden Canyon, provided any chairlift reaches back towards the Great Western chairlift.</li> <li>• I am supportive of increased connectivity between Brighton and Solitude in the SolBright area.</li> <li>• I am in support of modifying wilderness boundaries to accommodate the Bonneville Shoreline Trail. It would be a huge benefit to have a quality trail that goes along the entire Wasatch Front.</li> </ul> <p>In summary, I do not support extraordinarily-expensive, taxpayer-funded “solutions” to “problems” that enable profit maximization for ski resorts whose lift tickets are pricing their customers out of an already-flat-to-declining market. Backcountry use is one of the best things of the Wasatch and a balanced and responsible land use with be a treasure for generations. I have yet to see a ski area decrease it’s footprint in the Wasatch. I’m a believer in the Mountain Accord process but feel the board is made up of people who don’t represent the wishes of the people or are working to create a sustainable and balanced use of the limited mountain resources that make the Wasatch. ☹</p>		4/28/2015
<p>I support Mt. Accord’s blueprint proposal for increased environmental protection of Wasatch lands and enhanced recreation trail networks. However, I am opposed to the following elements of the transportation blueprint: a) proposed resort expansion into current prime back-country ski areas, b) the proposal for a train or rapid transit bus lane in Little Cottonwood Canyon (LCC), and c) the proposed connection of the LCC, Big Cottonwood Canyon (BCC) and Park City.</p> <p>--a--Alta’s proposal to expand into Grizzly Gulch with a new chair lift and Solitude’s proposal to expand into Silver Fork with a chair lift re-alignment would be a great loss to the back-country ski community!! Grizzly Gulch in particular is my main back-country terrain that I ski 2-3 times a month for most of the winter. Based on my experience, it seems like the majority of back-country skiers are Utahans, while the majority of resort skiers are out-of-staters. By giving up more back-country terrain to the ski resorts we are catering to out-of-staters and at the same time restricting our own ability to enjoy the Wasatch wilderness. I am proud to support Wasatch Backcountry Alliance, and I hope they will succeed at opposing these proposals</p> <p>--b0--I am opposed to the train or bus rapid transit BRT lane proposal “proposed transportation plan” (PTP) in LCC for the following 9 reasons: b1) the urbanization feel that it would bring to the canyon, b2) the potential loss of bouldering and other rock-climbing opportunities, b3) the increased risk they would add to driving the canyon, b4) the impact on the environment, b5) the potential lack of utility for dispersed users at late hours, b6) the increased risk for pedestrian-traffic fatalities due to increased foot traffic from a fixed stop schedule, b7) the potential loss of parking opportunities, b8) the cost of financing this PTP, b9-b10) the disconnect between this PTP and Mt. Accord’s own “ideal system” research on transportation and growth.</p> <p>--b1--If a train or bus were added to LCC alongside the existing roadway it would make the canyon feel more urban/developed. I use this canyon regularly, 3-5 times a month throughout the year, to escape the city and enjoy our amazing Wasatch wilderness through rock-climbing, bouldering, ice-climbing, hiking, biking, back-country skiing, alpine skiing, cross-country skiing and running. If a train were added, it would be a diesel cog locomotive due to the grade of LCC which averages about 8%, as electric trains cannot travel this steep of a grade. I am concerned about seeing, hearing, and smelling a train in the canyon when I am trying to escape the city and enjoy the wilderness. This would greatly detract from my recreational experiences.</p> <p>--b2--Along these lines, how would developing a train alongside LCC road affect the bouldering and rock-climbing access and experience? In particular, some boulders are within 20 feet of the road, so I wonder how a train or BRT could “fit” and preserve the existing bouldering experience. I would hope that bouldering and climbing opportunities would not be lost. I also hope that it would not endanger climbers or cause increased stress due to proximity of train tracks or the bus lane.</p> <p>--b3--I am concerned about the dangers that a train or BRT system would bring to the car traffic through the canyon. Driving personal vehicles would become more dangerous because we would now be sandwiched between the opposing lane and a train or BRT lane. This is especially dangerous in the winter time where cars slide off the road. An increase in traffic fatalities seems likely as cars slide into a train or bus instead. Are there measures that can be taken so that this PTP does not reduce the safety of personal vehicle traffic?</p> <p>--b4--The canyon is part of a protected watershed and a fragile ecosystem. I am concerned about the environmental impact of building a train or widening the road for the BRT lane.</p> <p>--b5--As a dispersed user, I would need several stops throughout the canyon in order for the PTP to accommodate my usage: Gritmill, Gate Butress, Coalpit Butress, Lisa Falls, Maybird Slide Area, Tanner Gulch and White Pine. In order for the PTP to be useful for me in the summer time, I would also need services that run until 10pm at night. Otherwise, I will likely continue to drive the canyon.</p> <p>--b6--Given that some freedom is lost from a fixed stop schedule, it will also be important to have a safe trail system since foot-traffic alongside the road will increase in response to fewer access points. This trail system will need to run the length of the canyon, otherwise pedestrian-traffic fatalities could increase.</p> <p>--b7--I hope that existing parking opportunities will not be lost or reduced as a result of the PTP.</p> <p>--b8--The cost of financing a train is estimated at a billion dollars – a steep price tag to be financed by Utah tax payers relative to the fraction of Utahans who use LCC on a regular basis. Also, what are the costs of clearing land slides and avalanches from train tracks?</p> <p>--b9--Finally, I am concerned about the disconnect between the results from MA’s transportation and growth research, which show traffic volumes in LCC to be constant over the past 11 years, and the proposal to put in a train or BRT. In the “Existing Conditions &amp; Future Trendlines of the Transportation System” MA says: “In the study area, traffic volumes have remained relatively constant for 11 years” (pg 9) and “Traffic in the Cottonwood Canyons typically operates at free-flow speeds, with the exception of congestion problems at peak times (ie, snow days, peak ski days)” (pg 9). The study area includes LCC. MA also describes peak traffic times as snow days which they estimate to occur 10-15 days/year (4-5.5%, pg1). On pg 5 of this document it describes how “climate change shortens the winter season”. Based on MA’s research, the transportation problem is only present 5% of the year, with potential to decrease in the future as a result of climate change. How is a transportation proposal that is costly in terms of money, recreational experience, and environmental impact a good solution to this rare problem? ☹</p>		4/29/2015

b10—Along these lines, MA's transportation and growth research also does not show LCC to have projected future issues with traffic congestion. Figure 46 "Map of Traffic Congestion in 2040 without Long Range Transportation Improvements" (pg 50) indicates a lot of traffic congestion issues throughout SLC in response to the 43% projected population growth that is expected by 2040. However, LCC is not an area of concern on this map. If there is no projection of a traffic congestion problem by 2040 in LCC, then why do we need an immediate solution?

Wouldn't increasing the number of buses during peak times make more sense than a train or a BRT?

--c-- Finally, I am opposed to the plans to use tunnels or trams to link the LCC, BCC and Park City area. Again this would be a costly project (billions of dollars), which does not appear to respond to needs from the MA's "ideal system" research. I am concerned that this was proposed by ski resorts and/or stake-holders seeking land development and resort expansion. Connecting the canyons in this way would again mean a loss of back-country terrain (likely grizzly gulch, silver fork, and more), as resort skiers would be guaranteed a simple return to their home resort. I am also concerned that linking the canyons in this way would increase deaths from avalanches. Most resort skiers are not equipped with back-country beacons, gear and training. Thus, linking the ski resorts would facilitate naïve travel into the back-country and lead to even more resort skier deaths.

I do support the following aspects of the blueprint: increased environmental protection of Wasatch lands and enhanced recreation trail networks. However, the transportation blueprint focuses the majority of financial resources on LCC and connecting the canyons. This As a new transplant to the Salt Lake City Area I see lots of positive items with the Mountain Accord process, however I also see several items which are very concerning for me. I have listed my points below as bullet points and have closed with some possible solutions and other idea

Items which I support in the Mountain Accord as written  
Environment

Preserve land, protect watersheds and water resources

- Secure additional protections on federal lands to provide permanent and predictable management.
- Work with ski areas to place lands in the upper Cottonwood Canyons into protective public ownership.
- Prioritize and acquire private lands from willing sellers.
- Identify and protect key wildlife corridors.
- Broaden watershed protections.

Monitor environmental health

- Implement an environmental monitoring program and create adaptive management plan.
- Analyze and mitigate environmental impacts prior to implementing proposed actions.

Protect and restore the environment

- Implement an environmental restoration program.

- Provide transportation alternatives that result in environmental benefits to the mountains.

Transportation

Transit incentives and automobile disincentives including parking/pricing strategies.

Year-round local bus service in Big Cottonwood Canyon.

Fast transit service from the airport to the Park City area via I-80.

Improved transit service on US 40 and I-80 between Quinn's Junction and Kimball Junction.

Improved transit connections in Summit County.

Shuttle service in Mill Creek Canyon.

High capacity transit connections in the eastern Salt Lake Valley.

Safety and access improvements for bicyclists and pedestrians.

Recreation

Improve and connect the regional trail network

- Construct and improve trail segments.
- Connect recreation destinations with trails.

Preserve key backcountry terrain

Economy

Encourage development patterns that preserve community character and quality of life

- Invest in transit solutions that ease congestion.
- Design infrastructure that is locally authentic and compatible with the character objectives of each community.
- Focus most future development in urban areas, as identified in Wasatch Choices 2040.
- Provide the option for a car-free experience for residents, workforce, and visitors.

Generate sustainable economic growth to reinvest in the Central Wasatch mountains

- Increase tax revenue that can be captured for reinvestment in the Central Wasatch (e.g., preservation, restoration, improvements, etc.).
- Prioritize and fund opportunities to protect and enhance the environment.

Ensure Utah's tourism market is competitive now and into the future

- Develop an urban-mountain brand that is unique in the world.
- Improve the visitor experience for residents and recreationists in summer and winter with high quality transit choices to mountain activity centers.
- Allow limited new development in the mountains, focused around thoughtfully designed transit stops that provide excellent access to many types of recreation.

Items I would like to see added in Mountain Accord

Transportation

- I would like to see a Local Bus route that would allow users to stop more often in the cottonwood canyons to promote the user experience for users who recreate outside of the traditional ski area stops
- Promote the third lane to change directions at different times of the day. AM hours the third lane is only for uphill traffic, PM hours the third lane is for downhill traffic much like major cities do during rush hour traffic or
- Use of the existing lanes in Little Cottonwood to give the Up canyon bus right away this could increase the usage of the bus transportation in LCC.

Environment

- I would like to see the USFS encouraged to look at different designations for parts of the central Wasatch. The one which might be the most practical for the Central Wasatch would be a National Recreation Area in addition to the Wilderness Areas which are already established. Mount Hood National Recreation Area is a great example.

Recreation

- I would like to see Grizzly Gulch added into the land swap program to provide protection for this wonderful backcountry area.

Items that I do not support in Mountain Accord

Transportation

- Any Tunnel connections
- Rail as it is currently laid out in the Mountain Accord Blueprint

Environmental

- Any interconnection of the LCC, BCC, and Park City areas, including tunnels or aerial tramways. Human powered interconnection would still be possible

4/30/2015

<p>1) 24 hour Bus only access for all private users, Private car access for resort employees/ DOT/delivery/EMS in the winter season, with several stops along the way to promote numerous users. The addition of Express buses which did not stop would also be ideal. Summer season mixed bus service and private vehicle. To work this plan would need to provide access for tourist arriving late at the airport, early AM/PM users of the public lands outside of the traditional resort timeframes. Bus service could be based around the biggest days of use or it could be set up with a weekday schedule and a (weekend, holiday, powder day schedule). For ease of use visiting skiers could purchase bus passes at the airport, with lift tickets, or on board the bus. Ideally, a visitor could arrive in LCC with only one connection (tax and bus) from the airport to the resorts of LCC. A better solution would be a direct airport to LCC resorts allowing the visitors ease of use. A great example to look at would be DisneyWorld in Orlando. Disney has set up a transportation option from the airport directly to various lodging options within the resort, to make it even easier to use the fee is included in the cost of the lodging with Disney.</p> <p>2) 24 hour Bus only for all outside of DOT/delivery/EMS - see above for more details'</p>	<p>4/30/2015</p>
<p>Thank you for bringing everyone to the table and trying to come to a joint solution that all will be happy with. But please do not let the tax revenue generated by 7 businesses (several of which are not owned by Utah companies) completely override the voices of the people who vote in the elected officials, pay taxes, and share ownership in federal land. With every passing below-average winter, the ski resorts seem frantic to find ways to generate more revenue, but we should not let them take control of additional public land at the expense of the backcountry users. Allowing the resorts access to more customers is a great way to allow them to increase revenues without handing them public property. Backcountry skiing is a hugely expanding economic sector, and one that is particularly near and dear to the economy of Salt Lake City. The international standard for backcountry snowboarding equipment was developed and patented in our city, and we have become a magnet for the backcountry community, both user-wise and business-wise. Countless economic studies have indicated that backcountry skiing/snowboarding is the largest growth segment of the industry, not resort skiing. We currently possess one of the most coveted and beloved backcountry skiing areas in the entire world, and I fear that a few businesses facing declining profits is going to trick the local government into believing that their expansion is in the best interest of the local economy. Instead, we should be focusing on the direction of the market and the demand and embrace backcountry recreation.</p> <ul style="list-style-type: none"> <li>· I do not support the idea of connecting the ski resorts by allowing them to expand into land currently used by the public for free</li> <li>o I support Solitude realigning their Honeycomb Return lift, but I do not think it should enable easy access to Silver Fork, as this will have the indirect effect of a ski resort expanding into the backcountry. A permanently closed boundary at this point would certainly make that type of lift alignment an easier pill to swallow</li> <li>· I do not support any development in Grizzly Gulch. It is likely one of the most popular backcountry skiing access areas in the entire country. Alta is already allowed to utilize their property in the area for their economic benefit with catskiing. Building chairlifts in Grizzly Gulch will take land from the public as well as significantly advance the idea of connecting the LCC and BCC ski resorts. Depending on the lift alignment, the backcountry areas of Silver, Days and Cardiff Forks as well as Wolverine Cirque and the Brighton Lakes area could all become "ski resort side country". Public safety would become a major concern as we would likely see a tremendous increase in backcountry accidents and rescue operations. And just as with the Honeycomb lift, this would transfer a huge amount of highly coveted public backcountry to de-facto ski resort use.</li> <li>o I conditionally support Alta's alternate plan to build a lift up Tuscarora. The condition would be that the alignment does not allow easy access to the peak, which would lead to the same issues created by a lift in Grizzly Gulch. Much of the south/west facing terrain around Patsey Marley is largely un-utilized by both the public and the resort guests due to its somewhat awkward ingress/egress issues (currently too difficult for most resort skier to access, and unappealing to backcountry users because they basically end up in a ski resort). I think this area would be a great compromise for the expansion of Alta. But I believe considerations should be taken to protect the backcountry areas of Grizzly Gulch, Wolverine Cirque and the Brighton Lakes area, particularly the area known as Rocky Point above Lake Catherine. These are hugely popular and often very crowded backcountry ski areas. Additionally, anyone who is familiar with Wolverine Cirque knows that providing resort customers with easy access to that area is a frightening idea to say the least. The likelihood of injuries, fatalities and search and rescue operations is tremendous.</li> <li>· I applaud Snowbird's proposed land swap. Their development into AF Canyon has substantially less impact on backcountry recreationalists (or SLC watershed) than the potential development of LCC/BCC ridgeline property. The idea that they will also somehow "give up" on any expansion plans into White Pine Canyon tells me that they are willing to seriously consider the public's interest when planning their own future. I hope they will continue to respect the wishes of the public as they begin an inevitable expansion into AF and Utah County, which I understand are outside the scope of the Mountain Accord.</li> <li>· I conditionally support Brighton's expansion plans as they seek to officially operate in an area most already consider to be de-facto resort terrain due to the ease of access from the Great Western lift. The "condition" is that the plan to protect land in the Guardsman's Pass area is officially passed, mitigating the risk of a never-ending push to connect Brighton to PCMR by slowly assuming control of the progressively expanding sidecountry terrain</li> <li>· I support a train up LCC primarily as a means of mitigating the substantial public safety risk posed by the numerous avalanche paths the road is exposed to. That risk is exponentially increased by individual drivers and the traffic issues they create. I believe a train would significantly reduce those issues. This would also help Alta and Snowbird gain access to more customers, as the current parking limitations cap their potential income.</li> <li>o I would use such a train when I wanted to go be a customer of Alta or Snowbird, but would need to consider whether it was the best option for me for days when I want to utilize the backcountry. I would need to consider where the train stopped and its schedule of operation.</li> </ul>	<p>4/30/2015</p>
<ul style="list-style-type: none"> <li>· I do not support ANY connection of Park City to either of the Cottonwood Canyons whatsoever. These are drastically different areas that derive a great deal of their value from their unique qualities. The desire for PC based ski businesses to provide access to areas outside of their own property/permit is a simple one to understand given the significant difference in snowfall, and in turn the value of product from their perspective. However, those businesses have substantially more freedom to build, develop and enhance their land when compared to the Cottonwood resorts because they operate outside of the SLC watershed and tend to have a bit more private land to work with than the Cottonwood resorts do. The watershed and Forest land protection that gives them more freedom is precisely why they should not be allowed to expand... Protection! With the Cottonwoods resorts ALL trying to expand, the load on the public Forest land and the watershed is already increasing. With the now-underway development to create the largest ski resort in America, I think the PC resorts should be encouraged to continue operating on their side of the Wasatch Crest without trying to gobble up the entire mountain range.</li> <li>· I support a designated bus lane up BCC to help reduce the number of cars in the canyon</li> <li>· I strongly support an expanded year-round bus schedule in BCC to help alleviate the issue of parking on the side of the road in the summer. BCC seems to attract a huge amount of summer recreationalists, but there are next to no parking lots in the ideal places for those recreationalists. A bus with frequent stops would be excellent for transportation as well as reducing the number of cars in the canyon and reducing the occasional environmental and public safety impacts of cars trying to park in places they shouldn't</li> <li>· I believe all transportation solutions should consider dispersed backcountry recreationalists, but do not believe this should be a "deal breaker"</li> <li>· While I do not support any connection between the Cottonwoods and PC (as stated above), I do not oppose a tunnel between BCC and LCC. I do not think it would create a significant impact on backcountry recreation (depending on the exact route the tunnel took). I also recognize the theoretical need for Snowbird or Alta to have a secondary exit when the canyon is closed due to avalanche hazard.</li> <li>· I believe that any project meant to further the interests of a private business should be funded exclusively by private sources. In the case of most of the resort expansion plans, the public is already contributing significant value by allowing the private use of public land. Additional financial support to private business is utterly inappropriate. In the case of plans that have more widespread benefit, I think careful consideration should be made to determine how much of the costs should come from public vs private sources. For example, I think Alta and Snowbird should contribute the majority of the funding for a train because it is primarily their businesses that have created the need for such a project, and their businesses would benefit financially by the increased access provided. If dispersed backcountry users' needs are addressed in the plan (frequent stops, early/late hours) then an appropriate amount of funding should come from the public as well. If the train ONLY stops at the doorstep of private businesses, then I believe those businesses should contribute the lions share of the funding.</li> <li>· I support the idea of an expanded trails network in the upper Cottonwood Canyons. I believe they should be designed to serve all users (hikers, rock climbers, mountain bikers, etc) while minimizing environmental impact.</li> <li>· I believe that any expanded water rights granted to the Cottonwood ski resorts should come with a clause that in the event of a significant drought, their expanded rights are suspended. I recognize that some of this water will be for expanded lodging and that may need to be considered specifically, but I'm primarily concerned with the idea of private resorts making snow with potential drinking water during times of drought.</li> </ul>	<p>4/30/2015</p>

<p>Hello - I am writing to comment on the Mt accord blueprint and express my disapproval of the current proposal by mountain accord. I commented very early on via the survey but have given much more thought to the blue print and would like to expand my thoughts here</p> <p>My Background: I had been coming for ski vacations to the Wasatch for a few years, before moving here this September. I convinced my job to let me work remotely from here because of the incredible access to the mountains. My wife and I are avid skiers and are now members of a growing community of outdoor enthusiasts surrounding the Wasatch. We are looking to buy a house in Sandy or Cottonwood Heights. I am an avid BC skier and also have an Alta/Snowbird season pass and am most concerned over the "proposed cottonwood canyons scenario" and the balance between Backcountry and Resort skiing. This balance is why I moved here. Given that I have skied in all the resorts and the vast majority of the popular BC ski terrain I believe I have a valuable perspective on the balance between uses in the canyons</p> <p>Here are the key thoughts I have on the plan:</p> <p>Superior to Emma ridge: I am glad this is likely going to be protected, as I ski here very often, but I think we should not overvalue what the resorts are "giving up. If it was develop-able it would be developed. There is no "easy" way down from the ridge for a cat track for beginner skiers, it is south facing and doesn't hold snow in early or late season and would likely not pass with the city/forest for water quality reasons. And given how many backcountry skiers are alta/snowbird pass holders, I dont think they would want to upset the skiing community in salt lake. So the likelihood of it ever getting developed in my opinion is slim to none and now the resorts are trying to get "something" out of it. They already have exclusive access to operate on some of the most coveted public ski terrain in the country and restrict access there to BC skiers. They should not be allowed to take even more public land than they already have in exchange for this asset (they should be given resort development rights on their current land/base areas, more on that below)</p> <p>Grizzly gulch: This must be part of the land swap and it must be protected. There have been multiple times this season when I have stood atop Patsy Marley with a clear view into Alta and into Grizzly Gulch and could easily see more skiers in Grizzly than in the Albion Basin side of Alta. This shows how popular Grizzly really is. Please do not allow this extremely popular area to be privatized and have its use limited. Please make this clear to readers that it is not protected in the current negotiation, but still under negotiation.</p> <p>Mary Ellen: I don't understand why this is not part of the blueprint, if it could be part of the land swap? This is a large chunk of the extremely limited, true undeveloped alpine terrain that Snowbird has taken over this year. Some may think that it is not used. I also have a snowmobile to access BC skiing and I have been amazed at how many other groups get up into Mary Ellen and similar gulches to recreate in true alpine setting. Also, there is an issue of how much Mary Ellen would be open, if part of snowbird. Snowbird this year, anytime we have gotten more than a foot of snow has struggled to open Mineral Basin until days after the snowstorm, as they are busy working on gad valley, peruvian gulch and baldy. They then move on to Mineral Basin and Road to Provo usually a day or 2 later. This already provides multiple days of fresh powder runs given the staggered avalanche control and vast terrain. Now if Snowbird also had Mary Ellen, they couldn't even start to control it until all of Mineral to Bookends was controlled, limiting the days you could ski in Mary Ellen. Additionally if the land was swapped and Mary Ellen was given away, it will never be able to get it back if the operations of the resort only runs the lift on limited days. They already provide a very similar ski experience in Mineral Basin and have no need to expand to Mary Ellen.</p> <p>Silver Fork: This is a very important and popular backcountry area that I spent over 15 days in this year. I was never alone in Silver Fork, as usually dozens of other skiers were hiking and skiing in this terrain. Solitude should not be allowed to encroach on this highly used undeveloped backcountry area. Skiing in Silver Fork can feel like you are deep in the wilderness, while only a short hike from the Grizzly parking lot. Slicing up the canyon with a boundary line, cat tracks, avalanche control and safety vehicles ruins this serene area and limits the popular ski terrain in the canyon. Solitude already has an expanse of hike to terrain that is low traffic and sells itself on being the least crowded resort. So why doe they need to take ski terrain with high BC usage? They already have more terrain than they have skiers to ski and they have very good hike to terrain in Honeycomb canyon. Additionally, I have read that they want to relocate the Honeycomb lift. This is not called out in the blue print and a misrepresentation of the proposal. Please do not allow Silver fork to be developed.</p> <p>Hidden Canyon: This terrain below 10420 is very popular BC ski terrain and it should be kept backcountry with side-country lift access, but not limited by being in resort boundaries and having resorts deny access to BC users. Brighton skiers can already enter this terrain via traversing/hiking from the lift and it has been shared terrain. Putting a lift in hidden canyon was not explicitly part of the plan, but I have heard from many sources, if the boundary was expanded a new lift would be placed. This is misleading and not an equitable compromise between user groups</p> <p>Other plans Alta is circulating (lift up to Wolverine/Tuscaroura): This land sees extremely high backcounty traffic and would be a huge waste if a lift was placed up here. It is a tiny magical island of backcountry terrain high in the epicenter of the Wasatch surrounded by development that needs to stay protected. It is a very small piece of land for the resorts not to take. Additionally it would not make great ski resort terrain given its steepness and aspect of the Alta side does not hold snow well. ☹</p>		4/30/2015
<p>Unclear plan/details: I think for most users of the Wasatch, what impacts them most are the details of the plan. The specific boundary lines, how much development, where exactly there will be new chairlifts. Much more than the high level thoughts and conclusions. And there were a few details that I, and likely many others missed that could have a large effect on my experience in the Wasatch. For me these are Grizzly Gulch, Silver fork, and Hidden Canyon and the associated lifts that would be put in. I understand it is still early in the planning process, but if you want to engage the public in meaningful discussion we have to talk about the real details that would affect our daily use and let them be clear to the public</p> <p>Base area development: I am largely in favor of further development where there is already major resort development. I understand there is a large user group of resort skiers and they contribute to the local economy.</p> <p>Taxpayer funded transit: While how much transit up the canyons will cost and who will pay for it are still unknowns, I would like to add my voice to the many who agree there is a need to find a sustainable transportation solution in the canyons particularly during high volume times, but given the need is resort driven, I think that federal/state money should not be driving financial backing behind the project</p> <p>Overall balance of the ski terrain in the canyons: When I ski and hike in the canyons I understand there is a huge diversity of users and a small area to recreate. from the most extreme backcountry skiers/climbers/alpinists to the most high end resort goers and everything in between. Right now the resort skiers have the best terrain for resort skiing. None of the proposed expansions would be as good ski terrain as the Cirque at Snowbird, or High Traverse at Alta. But the expansion would encroach on the terrain available to BC users. We have some of the largest resorts and the best in-bounds ski terrain in the country in BCC/LCC, and we have some of the best (but also most crowded) backcountry skiing in the world. This is a fine balance that has been struck between the two and I do not believe this proposal improves the balance.</p> <p>What skiers really want: Skiers love the current resort terrain, but do not need more. I have ridden many chairlifts, talked to may friends, locals and visitors about the proposed plan and future of the Wasatch, and overwhelmingly resort skiers love the terrain in Utah, its what keeps them coming back every year, but the current resorts are so big that they have yet to even ski it all. Even locals that work at the resorts or visitors who have been coming for 15 years still find new in bounds terrain to explore. I have ridden up the lift with many visitors to snowbird that come for a week and never even make it to Gad 2 or explore bookends... they would not make it into Mary Ellen nor see any need for even more terrain. New terrain would not make them come more often or spend more money at the resorts nor would it change their experience. Same is true for the other resorts. If anything, transit connecting the resorts in a way that does not affect BC terrain (tunnels) could allow skiers to have more variety and more ski terrain.</p> <p>Bottom line: Please help the resorts grow and fuel our tourist economy, but do not do it at the expense of the limited terrain that is fueling huge growth and economic activity from backcountry skiers. Maintain the current balance and allow all user groups to enjoy the incredible Central Wasatch</p> <p>Thanks you for your time and consideration</p>		4/30/2015

MOUNTAIN ACCORD

## MOUNTAIN ACCORD

### INTRODUCTION

Mountain Accord was established to make critical decisions and implement solutions to preserve the Central Wasatch and ensure its long term vitality. The Central Wasatch Mountains are one of Utah's most pristine and valuable natural resources. In the face of a rapidly growing population, those values could be at risk unless action is taken now. This unprecedented collaboration of diverse groups created a proposed Blueprint for the future of the Central Wasatch that balances the four systems of the Central Wasatch Mountains – environment, recreation, transportation, and economy. The objective for the proposed Blueprint is to meet Mountain Accord's purposes, which include responsible stewardship of natural resources, preservation of quality recreation experiences, establishing an environmentally sustainable transportation system, and contributing to a vibrant economy.

The core of the proposed Blueprint is an integrated set of proposed actions intended to address the goals of Mountain Accord. It recommends initiating an Environmental Impact Statement on a range of alternatives in order to better understand the impacts, benefits, and costs of the alternatives prior to making final decisions. To inform the public about the proposed Blueprint, it has been advertised via social media, emails to public and professional organizations, through agency websites, radio public service announcements, and other public notices. In addition, the proposed Blueprint is available on the Mountain Accord website and has been presented at a number of open houses and other public events to reach as broad an audience as possible. A list of frequently asked questions and responses about Mountain Accord and the proposed Blueprint are included in Appendix A.

An Interim Public Comment Summary was prepared in April 2015 that summarized public comments received from February 4 to March 16, 2015. That report, in addition to a full list of all comments received to that point, was provided to the Executive Board and posted online [here](#). This FINAL report is an update to the interim report and summarizes ALL public comments received during the formal comment period from February 4, 2015 through May 1, 2015. For ease of reading, substantive text changes have been highlighted in gray. ALL of the tables have been updated with the latest analytics and are therefore not highlighted. The contents of this report will serve to inform the Executive Board as it begins to refine the proposed Blueprint and develop next steps. The current expectation is that the Executive Board could adopt a final Blueprint in July. The adoption of the Blueprint will mark the culmination of Phase One.

The proposed actions and range of alternatives described in the final Blueprint will be carried forward into Phase Two. During Phase Two, the Mountain Accord project team will work through appropriate agencies and entities to implement the proposed

actions identified in Phase One. Some of these actions will require federal funding or federal agency approvals and will be subject to formal review under the National Environmental Policy Act (NEPA). This may require that detailed analyses of the actions and their environmental impacts be recorded in a document such as an Environmental Impact Statement (EIS). The NEPA process (or processes) in Phase Two may take several years to complete depending on the nature of the proposed actions and their impacts.

Other proposed actions that do not require federal agency approvals or funding will move forward under the authority of appropriate state or local agencies during Phase Two. During this phase, there will be additional opportunities for public involvement and feedback.

## REPORT OBJECTIVES

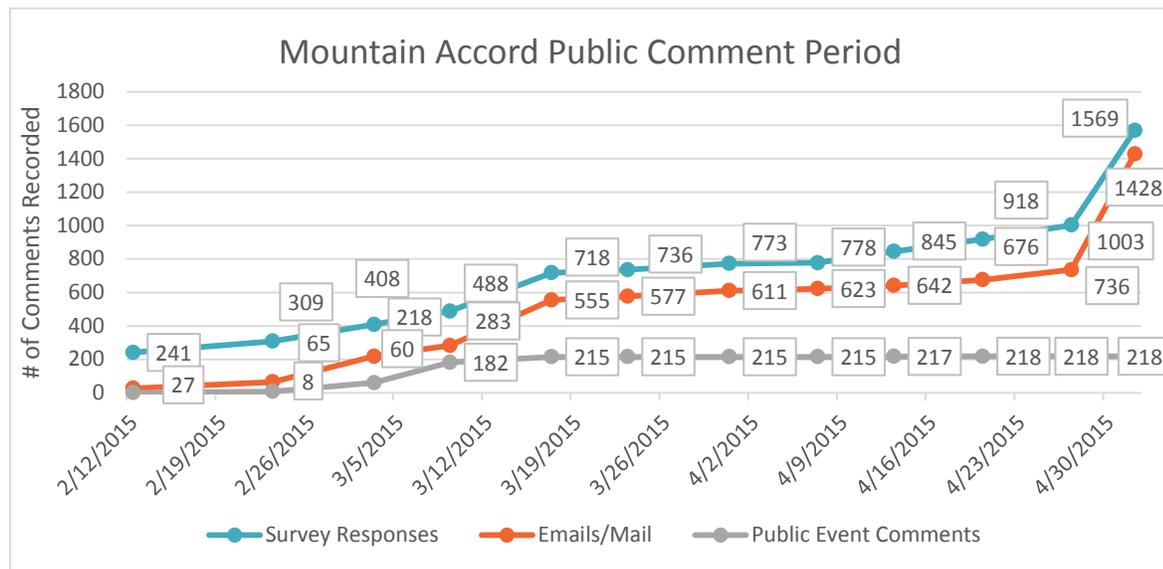

This report describes the methodology involved in soliciting, cataloging, and analyzing comments received during the public comment period and summarizes comment content relative to the proposed Blueprint and the process for its development. It is intended to inform Executive Board next steps and convey to the public the process of and results from documenting and reviewing all input received. The content of this summary, along with the comment analysis tool, provides information for potential revisions to the Blueprint. The intent of this summary is to provide an overview of the public comment process; the volume, type, and source of comments; analytics around key topics; and general themes represented in the comments. It is not intended to provide an exhaustive account of all public comments although full lists of comments have been made available to the Executive Board and are posted online [here](#). Respondents providing feedback to Mountain Accord were self-selected and comments received may not represent the views of the public at large. In considering these views, it is important for the public and decision makers to understand that this process makes no attempt to treat input as if it were a vote. Instead, the content analysis process ensures that every comment is considered at some point in the decision process.

## PUBLIC COMMENT ACTIVITIES

Public comments were solicited and received from a variety of channels. From February 4 through May 1, a total of 3,215 comments were submitted. Table 1 presents the channels through which the comments were received and Figure 1 shows the rate at which comments came in from each channel. The map in Figure 2 presents the geographic distribution of comments submitted within Utah. In addition, Mountain Accord received comments from individuals in 30 other states and 4 foreign countries.

**Table 1. Total Comments Received from February 4 through May 1, 2015**

Source	Count
Survey Responses	1,569
Emails/mailed letters	1,428
Public Events	218
<b>Total Comments</b>	<b>3,215</b>

**Figure 1. Comment Activity**

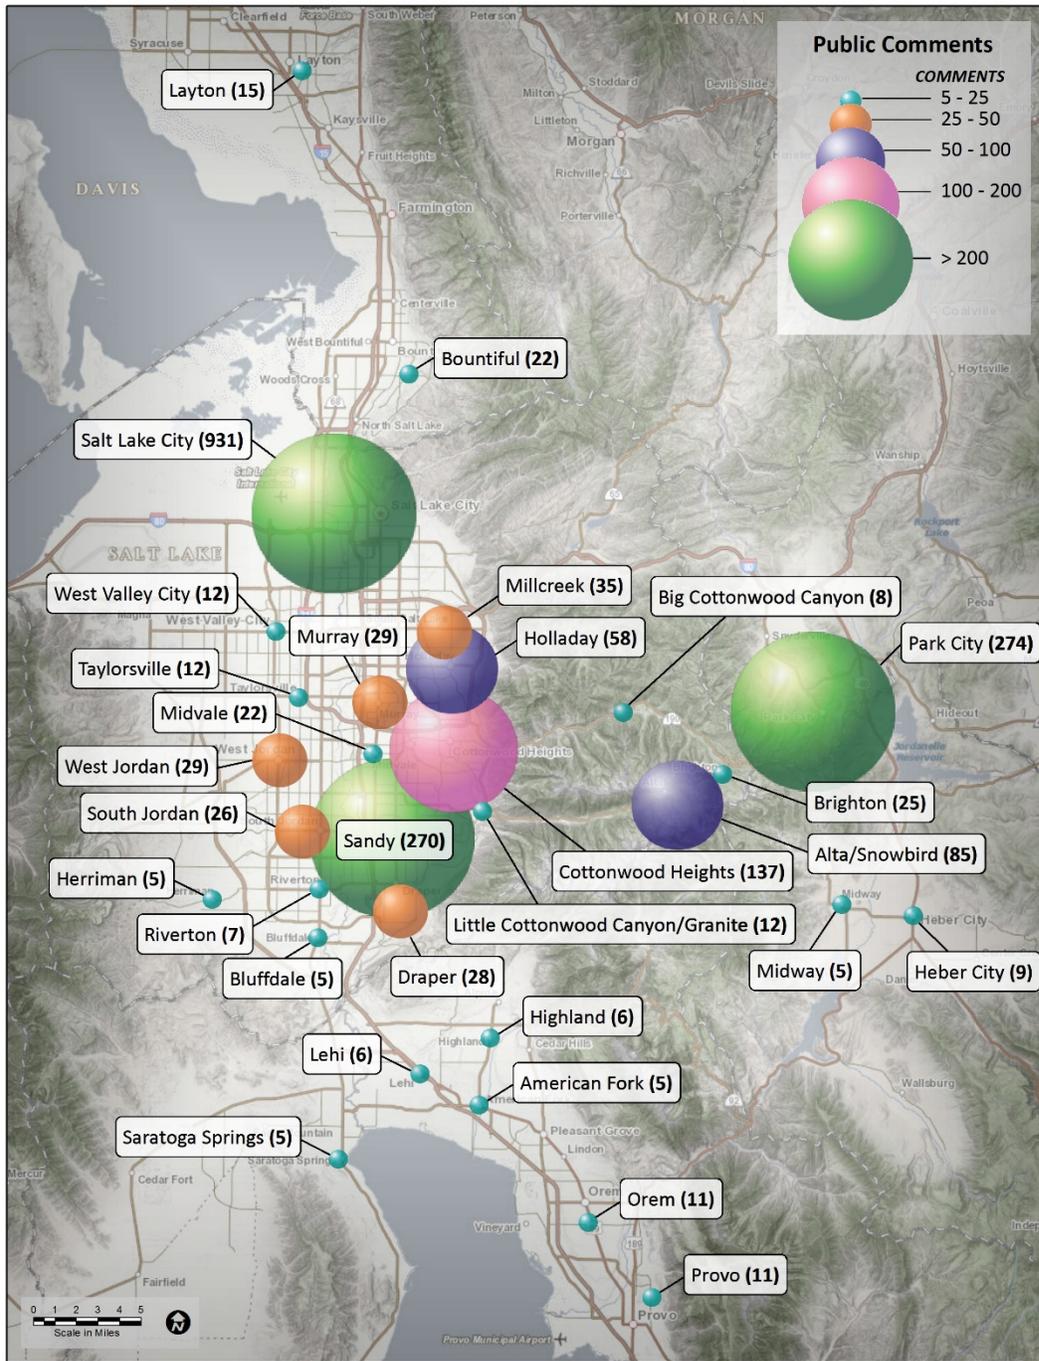

Figure 2. Geographic Distribution of Comments

Many of the comments received came from the survey that was made available on the Mountain Accord website. This survey has eight closed-ended questions and four sub-questions with text fields in which respondents could type comments. Not all survey respondents answered the text field sub questions. Survey question summary graphs from February 4 to May 1 are included as Appendix B to this report.

This survey has radio button questions (choices range from “very well” to “very poorly” or “undecided”) and four sub questions with text fields for expanded responses.

1. Overall, how well does the proposed Blueprint meet the purpose of Mountain Accord?
2. How well does the proposed Blueprint achieve “responsible stewardship of the natural resources?”
3. How well does the proposed Blueprint achieve “quality recreation experiences?”
4. How well does the proposed Blueprint achieve “a vibrant economy?”
5. How well does the proposed Blueprint achieve “an environmentally-sustainable transit system?”
  - Please provide any additional feedback on how the proposed Blueprint could better meet the purpose of Mountain Accord.
6. How well does the Cottonwood Canyons Scenario serve public interests?
  - Please provide any additional feedback on the Cottonwood Canyons Scenario.
7. How well do the listed purposes (intended outcomes) for each corridor address the critical transportation needs in that corridor?
  - Please provide any additional feedback on purposes or needs for transportation improvements in the identified corridors.
8. How well does the range of transportation alternatives in each corridor meet the listed purposes for that corridor?
  - Please provide any additional feedback on the alternatives. Are there alternatives that would meet the purposes better than others? Should we consider additional alternatives?

In addition to individual public comments, Mountain Accord also received letters from official representatives from the organizations listed below. **These letters are available in their entirety on the Mountain Accord website.** Comments in these

letters were coded and analyzed using the same process as comments received through other avenues:

- **Alta Ski Area:** general support for improved transportation in Little Cottonwood Canyon, watershed protections, connecting Little Cottonwood Canyon to Big Cottonwood Canyon to improve transportation ingress/egress, and land trades
- **Bike Utah:** recommendation for road bicycle plans in all four canyons and mountain bicycle master plans for new soft trails and trail improvements
- **Friends of Alta:** call for more detailed information; emphasis on protecting and restoring the environment as the highest priority
- **Little Cottonwood Canyon Communities:** concerns with process and conclusions of proposed Blueprint
- **Log Haven Restaurant:** concerns about private property rights, a more diverse definition of recreational uses, and ensuring the shuttle service in Mill Creek Canyon is not mandatory
- **Salt Lake Chamber:** general support for proposed Blueprint; recommendation for advancing Blueprint transportation options to environmental impact study phase that includes properly vetted study items
- **Salt Lake Climbers Alliance:** general support for federal land designations, mass transit solution, land exchanges, trail connectivity, fee structure, better trailhead parking, and an environmental scorecard; concerns about watershed impacts, ski area expansion, mass transit impacts to climbing resources, and limited resources of Salt Lake Ranger District
- **Save Our Canyons:** concerns about protecting the watershed and environmental values in the Wasatch; recommendation for landscape-level conservation and multiple actions moving into NEPA process as opposed to a single proposed action
- **School for International Expedition Training:** concern that proposed Blueprint emphasizes development over preservation; therefore concerned about an interconnection in the canyons and ski area boundary expansion, while supporting land transfers to protect recreation areas and preserving human-powered access to Grizzly Gulch; additionally, support a low-cost bus-based transportation system (as outlined in the Wasatch Backcountry Alliance Appendix C), increased canyon area base parking, disincentives for single occupancy vehicles and concerned with year-round use of Guardsman Pass Road
- **Ski Utah:** support for ONE Wasatch and over-the-snow connection of central Wasatch ski resorts; support for improved transportation options in canyons and from Park City resorts
- **Utah Chapter of Sierra Club:** general support for process; emphasis that environmental concerns should drive and be central to any development strategies; opposed to rail in Little Cottonwood Canyon due to environmental

impacts but supportive of bus service; skeptical of tunnels in the canyons due to environmental unknowns and cost but support for improved transit between Salt Lake City and Park City including buses and trains; general support for land exchanges and protections but suggest more details are needed; support improving access to mountains for all income levels; recommendation for more study on climate change, projected growth factors, and economic impacts

- **Utah Open Lands:** concerns with the process due to current vagueness and possible special interest conflicts of decision-makers; emphasis on land preservation and watershed protection as highest priorities; requesting more details be examined for individual land exchanges, particularly their development potential; also supportive of a bus-based system to be more flexible in the face of future climate change
- **Utah Physicians for a Healthy Environment:** support for goals of improving air quality and environmental protection; concerns about disproportionate consideration for ski industry above environmental protection, especially related to watershed and infrastructure cost for trains and tunnels; support for buses and carpooling, as well as rail linking Salt Lake Valley and Park City
- **Wasatch Backcountry Alliance/Winter Wildlands Alliance:** emphasis that the purpose of Mountain Accord should be to preserve environment and recreation opportunities in Central Wasatch; opposed to interconnection in canyons due to perceived negative effects on backcountry users; general support (with caveats) for Cottonwood Canyon Task Force proposal
- **Wasatch Equality (snowboarder organization):** concerns about reduced access/terrain for snowboarders under proposed Blueprint due to Alta's expansion, especially if it includes Grizzly Gulch
- **Wasatch Front Regional Council:** general support for process and interested in broad range of options in NEPA process
- **Wasatch Mountain Club:** general support with concerns about trails network and need for further definition
- **Wasatch Powderbird Guides:** general support for land exchanges that protect the backcountry but call for more study through NEPA process of others; recommendation for better management of backcountry use in the future

## PUBLIC COMMENT ANALYSIS PROCESS

All of the public comments received are cataloged in a Microsoft Excel®-based workbook tool and, using a coding framework and process, each comment is categorized in a number of ways for cross-compilation and analysis. Coding enables sorting and analysis for characteristics such as the following:

- Support
- Opposition
- Process-related comments
- Actions by system groups
- Resources (such as ski areas or watershed), etc.
- Locations of interest

This tool helps identify trends and preferences among respondents and offers a general sense of support and opposition to the overall proposed Blueprint as well as discrete actions within the Blueprint.

In order to capture intent, as part of the cataloging and coding process, **comments** (submitted by a single individual or group letter) that address multiple topics have been split into discrete remarks. **Remarks** are all or a portion of a comment that address a single subject or issue, and **a single comment may have a number of discrete remarks**. For example, if an individual provided a multi-topic response to an open-ended survey question, the comment was broken apart into separate and unique remarks and coded.

During the cataloging process, some remarks did not include enough information to be coded completely. For example, if a location was not indicated, that characteristic field would necessarily be blank. The tables in the next section have a row for remarks that are cataloged but do not indicate a characteristic for the field described in the table. The term “Other” was applied if a remark referenced something for which there is no specific code – for example, concerns about ticket prices to Salt Lake City Airport.

Finally, if a topic was repeated several times, it was captured in the notes section of the tool so that it could be quickly referenced for this report and to ensure that all concerns were given attention.

## PUBLIC COMMENT SUMMARY

### Overview

From February 4 through March 16, 2015, a total of **1,488 comments** were received through the channels indicated in Table 1. From March 17 through May 1, 2015 an additional **1,727** were received for a total of **3,215 comments**. From these comments, **6,872 discrete remarks** are recorded and inform this summary. **System Group comments** have been pulled out for particular attention and are included in **Appendix C**.

**Table 2. Overview of Total Remarks from February 4 through May 1, 2015**

Remarks Overview	#	%
Total Remarks Cataloged to Date	6,872	100%
Remarks Supporting an Action	3,555	52%
Remarks Opposing an Action	2,314	34%
Remarks About the Process	942	14%
(blank)	51	1%
Other	10	0%

## Summary of Changes

The volume of comments received more than doubled from March 16 to May 1, 2015. The tone of the comments received during this time shifted somewhat from earlier comments, particularly toward increased support for bus-based transportation models as being more flexible, less expensive and less environmentally damaging than tunnels, further support of the Cottonwoods Canyon Scenario, and increased opposition to the transit interconnect between Park City and the Cottonwood Canyons.

Top issues of public interest are listed below (*most frequently cited resources for each action are italicized*):

- Rail in exclusive guideway (*transportation infrastructure*)
- Tunnels (*environmental impacts*)
- The connection between Little Cottonwood Canyon and Park City (*environmental impacts*)
- Limited mountain development (*environmental impacts*), especially ski resort expansion (*climate change*)
- Cottonwood Canyons Scenario of land exchange and water rights (*ski industry*)
- Zion National Park model of limited access (*air quality and environmental impacts*)
- Desire to explore cost effective solutions
- Concern that environmental factors should be the real driver over economic interests
- Concern that a train/tunnels seems to be a predetermined outcome
- Concern about parking and sense it is a necessary component

A summary of ALL survey responses to the general question, “How well does the proposed Blueprint meet the purpose of Mountain Accord?” is shown in Figure 3.

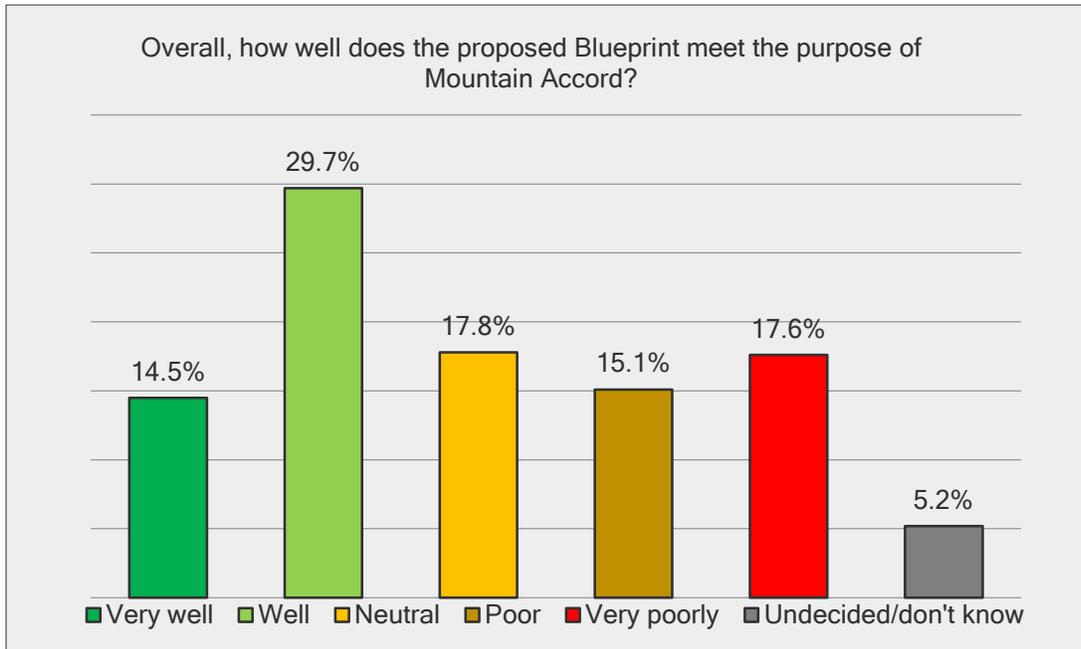

Figure 3. Overall Survey Summary – Blueprint and Purpose of Mountain Accord

## Overarching Themes

Given the volume of comments and remarks received, the range of interest expressed is broad and loosely captured below (*resources cited most frequently by those expressing support or opposition are italicized*):

- The most supported actions are buses (900 remarks, 13% [previously 9%], *environmental impacts*), trains (404 remarks, 6%, *transportation infrastructure*), the Cottonwoods Canyon Scenario (346 remarks, 5%, *land preservation*), and transit generally (312 remarks, 5%, *transportation infrastructure*).
- The most opposed actions are a connection between Little Cottonwood Canyon and Park City (488 remarks, 7%, *environmental impacts*), tunnels (426 remarks, 6% [previously 4%], *environmental impacts*), trains (351 remarks, 5%, *environmental impacts*), and development in the mountains (207 remarks, 3%, *environmental impacts*).
- There are 686 remarks (10% [previously 7%], *land preservation*) about the Cottonwood Canyons Scenario, with 346 remarks in support, 154 remarks in opposition, and 84 remarks about more details in the process.
- There are 395 remarks (6%) about other processes and more specifics, without clearly supporting or opposing an action.

- There are 212 remarks (3%) about the decision-making process.
- There are 177 remarks (3%) about special interests.

## System Summary

Specific actions were coded within each system; remarks were further coded for general aspects (opposition, support, process, etc.) as well as the resource referenced (e.g., trails, ski industry, watershed, etc.).

**Table 3. Remarks by System Group Action through May 1, 2015**

Remarks by System Group Actions	#	%
Environment	1,047	15%
Economy	1,060	15%
Recreation	333	5%
Transportation	4,068	59%
(blank)	356	5%
Other	8	0%

### Environment Action

The proposed Blueprint aims to address threats, restore degraded areas, and increasingly protect environmental resources through increased protection of lands with high resource values, restoration of impaired streams and waterways, mitigation of invasive weeds, and other tools. Of critical importance, the proposed Blueprint would establish a program that would allow the identification of changing environmental conditions and adjustment to management practices to ensure long-term environmental health in the Central Wasatch mountains, particularly in the face of a changing climate.

- The majority of remarks for this action are related to the Cottonwood Canyons Scenario (686 remarks with 346 in support and 154 in opposition). Also, 141 remarks are about the decision making and public process combined.
  - Sampling of remarks:
    - Win/win scenario for all involved and represents a good middle ground.
    - Supportive of land exchanges as a means to preserve land.
    - Scenario only helps ski resorts.
    - No more ski area development and ski area expansion.
    - If predicated on tunnels and connections, not worth it.

- Support permanent protection of Emma Ridge, lift in Hidden Canyon, and re-aligned lift in Honeycomb Canyon as long as no effects on Silver Fork backcountry.
- Grizzly Gulch needs to be resolved.
- Questions and concerns over Mary Ellen (outside of Mountain Accord study area).
- Remarks about protecting the watershed actions are the next most common (110, 2%).
  - Sampling of remarks:
    - Watershed and water resources should be preserved above all else.
    - Should preserve water, not make more available for snowmaking.
    - Limit or restrict use instead of expanding use.
    - Preservation should be favored over development.

## Economy Actions

Economic actions in the proposed Blueprint aim to provide the model for a world-class transit system to connect the Wasatch Front's powerful and diverse economy to the specialized economies of Park City, Summit, and Wasatch counties. While current development patterns are automobile-oriented and offer little choice, the proposed Blueprint could deliver new mobility options. Compact development patterns centered around transit would limit sprawl in urban and mountain areas. It would also allow economic activity – such as workforce, tourist, and resident commerce – to reduce reliance on automobiles.

- There are 380 comments (6% [previously 4%]) regarding ski area expansion in the Wasatch, of which 207 are in opposition, 15 in support, and 145 about the process.
  - Sampling of remarks:
    - Ski resorts are already crowding the backcountry.
    - Ski resort expansion is proven to be bad for the watershed.
    - Expansion leads to consolidation; don't want to lose the character of each resort.
    - Permanent boundaries should be created for ski areas as part of Mountain Accord.
    - Has the process factored in climate change and declining interest in resort skiing?
    - Uphill access needs to be a condition for any expansion.

- There are 317 (5%) remarks on One Wasatch, with 214 in support and 101 opposed.
  - Sampling of remarks:
    - Keeps ski industry competitive.
    - Creates a unique unparalleled experience.
    - Has fewer negative impacts than creating a tunnel connection; lower in cost and more practical.
    - Environmental and visual impacts are great.
    - Degrades backcountry recreation experience, puts more skiers into backcountry, and grows the sidecountry.
    - The ski industry is flat so why invest the money?
    - Ski resorts are already big enough.
    - Could degrade the unique character of each resort.
    - Ski resorts are drivers – economy is the only thing benefiting.
- Development in the mountains garners the next most remarks with 288 (4%), most of which are in opposition (245).
  - Sampling of remarks:
    - Additional development would endanger the watershed.
    - The Central Wasatch is fine as it is – please leave it alone.
    - Development endangers development, stop while we can.
    - If you build it, they will come.

## Recreation Actions

The proposed Blueprint includes a comprehensive program that would protect recreation access and preserve the variety of recreation options available for current and future generations. Over time, population growth, increases in recreation demand, and growth in new types of recreation will put continually greater pressure on the developed and undeveloped recreation areas of the Central Wasatch. This will result in crowding, resource damage, and degraded recreational experiences. The proposed Blueprint offers an approach to permanently protect treasured landscapes and provide opportunities for active, healthy lifestyles and connection to the outdoors. It would support the developed summer and winter recreation experiences available at ski areas, as well as the dispersed recreation experiences available in the undeveloped areas of the Wasatch.

- The most remarked upon action in this area was trail expansion (124 remarks, 2%), with most generally supportive (113).
  - Sampling of remarks:

- More trails connecting the Wasatch front and back would be great.
- Maintaining existing trails should also be prioritized.
- Access for mountain bikers and hikers should be regulated to avoid conflicts.
- Remarks expressed regarding protecting dispersed recreation were the next most common (86 remarks, 1%) and also generally supportive (74).
  - Sampling of remarks:
    - Need to preserve backcountry experiences.
    - Concerns about induced use, overuse, crowding.
    - Concerns about other uses not addressed directly, such as pedestrian and cycling, motorcycles, free-fliers, snowmobiling, and equestrian uses.
    - Transit should support dispersed recreation groups.
    - Climbing and other adjacent dispersed uses would be greatly impacted by a train going up Little Cottonwood Canyon.

## Transportation Actions

Connecting residents and visitors to mountain destinations and connecting communities and people to jobs via efficient and sustainable transit choices are key in the proposed Blueprint. The solutions would manage the impacts of a rapidly growing population in ways that would reduce reliance on automobiles and decrease impacts on the environment. The proposed transit network would not only provide a more sustainable way to travel, it would also provide a powerful tool for the region to shape growth, reduce sprawl, and promote transit-oriented development that supports economic growth, quality of life, and environmental protection.

- Bus specific remarks are the most prevalent (931, 14%), with 900 being supportive and 20 in opposition.
  - Sampling of remarks:
    - Would require the least natural and economic impact.
    - Buses offer most flexibility for different users.
    - Existing bus service leaves much to be desired – improve that first.
    - Natural gas shuttles would improve air quality.
- Rail specific remarks are the second most prevalent (804 remarks, 12% [previously 15%]), with 404 of those being specifically supportive, and 351 in opposition, and 20 being about specific additional processes or details.
  - Sampling of remarks:

- Provides a unique, appealing, and attractive alternative to reduce auto use.
  - Would enhance the recreation experience.
  - Offers a proactive solution instead of short-term solutions that delay the inevitable.
  - Improves safety: no icy roads, no traffic accidents, could avoid avalanche issues.
  - Cleaner and less environmental impacts than busses, especially in the long run, with fewer air quality impacts.
  - More reliable.
  - Serves community into the long term.
  - Concern over environmental and watershed disturbances.
  - The additional Right of Way required for a train or additional lanes is not realistic in Little Cottonwood Canyon.
  - Induces additional use when the area is already too crowded.
  - Concerns over increased development.
  - Access and impacts to recreation (frequently noted, Little Cottonwood Canyon trail and climbing areas in lower Little Cottonwood Canyon).
  - Implications of high cost and questions about who will pay. A train would be too expensive to ride.
  - Trains can't be as flexible for dispersed recreationists to access trails.
  - Consider options that are less permanent and damaging.
  - Where will people park to use rail?
  - Consider light rail connections from the canyons to downtown Salt Lake City (University area and Sugarhouse populations).
  - Would like to see rail in Parleys Canyon.
  - Would like to see more detail on transit stops, alignments, and impacts.
  - Would support rail only if the canyons are closed off to cars.
- The transit interconnect between Little Cottonwood Canyon and Park City received a total of 611 remarks (9%), 488 of which are in opposition [previously 178] and 95 directly supportive [previously 76]. The remaining 25 are process related.
    - Sampling of remarks:
      - Could boost Utah tourism.

- Improves public transportation infrastructure.
- General support for enhanced connectivity.
- Increases recreational variety.
- Degrades unique experience and character of each canyon.
- Degrades backcountry/recreation experience.
- Increases access and induces additional use creating concerns about overcrowding.
- Don't want corridor to be a commuting corridor.
- Would prefer an alternative through Parleys Canyon.
- Tunnels received a total of 522 remarks (8%), 426 in opposition and 77 in support.
  - Sampling of remarks:
    - Environmental concerns – degrades wilderness experience, watershed, and water quality.
    - Costs (infrastructure and environmental) exceed economic benefits.
    - Building tunnels in a known fault zone is too dangerous.
    - The geology of the Wasatch will make tunneling prohibitively expensive.
  - Sampling of remarks:
    - Could unlock additional mineral and water resources.
    - Would keep environmental and visual impacts mostly below ground.

## Resource Summary

Remarks were coded by specific resources referenced. Examples include air quality and noise; water resources, watershed, groundwater, water quality; wildlife and wildlife habitat; resort skiing; backcountry skiing terrain; solitude and wilderness experience; community character/aesthetics; land use; and others.

**Table 4. Remarks by Resource Categories through May 1, 2015**

Remarks by Resource Categories	#	%
Natural Environment	1,945	28%
Recreation	1,535	22%
Built Environment	1,246	18%
(blank)	2,123	31%
Other	23	0%

## Natural Environment

Of the 847 remarks (12% [previously 9%]) citing general ecology or the environment; 410 are opposing an action, 356 are supporting an action, 28 are regarding decision making, and 27 reference additional process or details.

- Sampling of remarks:
  - We should do what is the least environmentally damaging.
  - Better transit would enhance the ecology of the canyons by reducing impact.
  - Limiting access to the canyons will keep the natural beauty intact that people come to visit.
  - There would be too much environmental impact.
  - Development in Little Cottonwood Canyon will irreparably damage the stream and riparian corridor.
  - Please keep our mountains as natural as possible.
  - Preserving the land and the ecosystems should be the priority.
  - Environmental monitoring needs to be included to ensure that the natural functions are protected.
  - Has the carrying capacity of environmental systems been considered in this process?

Water is called out in 272 remarks (4%), and there are 265 that reference climate, 255 on wilderness, 150 on air quality, and 64 on visual resources (viewshed, etc.).

- Sampling of remarks:
  - Protecting the watershed and water quality should be priority #1.
  - Strongly support additional land and watershed protection.
  - Environmentally sustainable transit system, like light rail, would be cleaner and have less environmental impact.
  - Anything we can do to minimize carbon emissions is a good thing.
  - There should be more designated wilderness areas.
  - It is unnecessary to connect resorts at the cost of landscape, wildlife, watershed, and backcountry recreation.
  - Why set into motion a plan that does not take the change from warming\ temperatures into consideration?
  - Tunnel and roadway construction will have a negative impact on the environment and will destroy the beauty of the canyon landscape.
  - The proposal is about making money and not saving canyons and the environment.

## Recreation

Resort skiing is the most prevalent recreation resource cited with 694 remarks (10% [previously 12%]), of which 376 are supporting an action, 218 opposing, and 61 referring to special interests.

- Sampling of remarks:
  - Getting to the ski resorts on transit would make us more likely to return to Utah.
  - The ski bus service is terrible – improving that would make things much better.
  - Utah snow is the best in the world. The connections would make the experience the best as well.
  - Limit development to existing base areas.
  - Skiing at multiple resorts in a day is too rare to merit connecting.

Dispersed recreation (294 remarks, 4%) also is a prevalent theme along with backcountry skiing (200 remarks), other recreation (151 remarks), and trails (92 remarks).

- Sampling of remarks:
  - I didn't realize that much of the land I use is actually private property and would support allowing more concentrated development at the resorts in exchange for the more land to become public and protected (assuming we can still bike and hike on those public lands).
  - To accommodate the needs of dispersed recreation, the routes will have to include stops (and pick-ups) at trailheads and run early enough and often enough to meet the needs of hikers, backcountry skiers and snowshoers.
  - Any transportation system must give non-alpine skiers access to hiking trails not just ski lodges.
  - Ensure that dogs and their owners have access to Millcreek Canyon.
  - The amount of true backcountry terrain continues to become more and more crowded.
  - Recreation user conflicts between hikers and bikers on Central Wasatch trails is only going to get worse.

## Built Environment

Transportation infrastructure was the most heavily cited resource overall (588 remarks, or 9% [previously 16%]) with 407 being in support of an action and 131 being in opposition.

- Sampling of remarks:
  - Buses in the canyons are superior to trains.
  - Massive parking structures should be built at the base of the canyons.
  - No trains, no lanes up Little Cottonwood Canyon.
  - Transportation hubs should be established at key nodes.
  - Any type of mass transit will be too slow to get used.

## Geographic Summary

Many of the actions in the proposed Blueprint are linked to geographic locations in the area and remarks were cataloged to indicate any reference to a location or region. Table 5 presents the distribution of remarks by these areas.

**Table 5. Remarks about Locations through May 1, 2015**

Remarks About Locations	#	%
Central Wasatch Mountains	1,589	23%
Cottonwood Canyons	1,802	26%
Parley's Canyon/I80	237	3%
Alta	240	3%
Park City	952	14%
Millcreek Canyon	77	1%
Salt Lake County	39	1%
(blank)	1,793	26%
Other	143	2%

- Of the 1,802 remarks (26% [previously 29%]) regarding the Cottonwood Canyons, there are more comments in support (1,144) than opposition (547) to specific actions, with most of the support for buses (579) and most of the opposition to a train (232).
- Of the 1,589 remarks (23% [previously 27%]) regarding the Central Wasatch Mountains, 283 reference the Cottonwood Canyons Scenario, 221 reference ski area expansion, 134 reference One Wasatch, 134 reference development, and 120 reference transit in general.
- Of the 952 remarks (14% [previously 10%]) regarding Park City, 407 reference the interconnect (351 in opposition and 40 in support) and 280 reference tunnels.
- Of the 240 remarks (3%) regarding Alta, 79 reference the Cottonwood Canyon Scenario and 46 reference ski area expansion.

**APPENDIX A**  
Frequently Asked Questions

## Frequently Asked Questions

Many of the official comments received as well as those spoken at public events include questions about the proposed Blueprint, the process, and other concerns. A collection of the most frequently asked questions is included here along with responses.

### **How do these proposals help the environment, especially water resources?**

**The proposed Blueprint describes specific actions in the Environment section to preserve land and protect watersheds and water resources.** These include:

- Preserve land, protect watersheds and water resources.
  - Secure additional protections on federal lands to provide permanent and predictable management.
  - Work with ski areas to place lands in the upper Cottonwood Canyons into protective public ownership.
  - Prioritize and acquire private lands from willing sellers.
  - Identify and protect key wildlife corridors.
- Broaden watershed protections.
- Monitor environmental health.
  - Implement an environmental monitoring program and create adaptive management plan.
  - Analyze and mitigate environmental impacts prior to implementing proposed actions.
- Protect and restore the environment.
  - Implement an environmental restoration program.
  - Provide transportation alternatives that result in environmental benefits to the mountains.

In addition, proposed transportation, economy, and recreation actions provide strategies that can protect vital natural resources. These include the following:

- Effective transit service can reduce automobile use which, in turn, reduces emissions, fossil fuel consumption, and pollutants in storm-water runoff from roads and parking lots.
- Effective transit service, combined with land use plans and policies that encourage transit- oriented development, can reduce sprawling development patterns, promote concentrated development and open space protection, and further reduce environmental and water impacts associated with automobiles and development.

- Focusing growing recreation use to appropriately manage and improve areas can prevent unmanaged degradation of sensitive environmental resources by over-use.

### Have the natural limits to use and impacts in the canyons been studied?

**Use and impacts were studied in the 1985 Wasatch-Cache National Forest Land and Resource Management Plan (Forest Plan) and the subsequent 2003 Revised Forest Plan.** It has been suggested that carrying capacity be analyzed further if an EIS is developed as part of Phase Two.

The 1985 Wasatch-Cache National Forest Land and Resource Management Plan (Forest Plan) and the subsequent 2003 Revised Forest Plan have established direction for managing National Forest System lands in the canyons. The direction is based on comprehensive studies and analysis, as well as extensive public involvement, documented in EISs for both Forest Planning processes. The EISs took a hard look at the use and impacts that have occurred in the canyons, as well as the current and projected use and impacts in developing direction designed at long-term sustainable management and use of the land. Though direction for long term sustainable use is provided, the plans did not conduct detailed capacity studies nor did they set hard limits on use, rather they identified monitoring parameters designed to measure use and impact and thresholds for when management actions would become needed. The plans also addressed capacity in the canyons by limiting parking and ski area development to existing boundaries. An EIS as part of Phase Two of Mountain Accord will look closely at use (including induced use) and possibly carrying capacity.

### What are the possible federal and state land designations that are being considered?

**There are many types of protections that can be explored for U.S. Forest lands – such as National Recreation Area, National Conservation Area, Wilderness, or National Monument. Currently no state land designations are being considered.** A small working group, the Federal Lands Taskforce, has been convened to discuss the lands that could receive federal designation and what the appropriate designations are. The intent is to maintain the same balance and diversity of uses that we have today well into the future in addition to providing certainty about future land use. When a detailed proposal is available, we will have additional opportunities for public comment. Read more on federal land designations [here](#).

### What about climate change? How does this affect plans and future infrastructure?

**Recognizing that climate change could have significant impacts on our natural resources and way of life, analysis of climate change was**

**incorporated into the Environment System Group's Existing Conditions and Future Trendlines report and will be part of Phase Two analysis in the EIS.**

[http://mountainaccord.com/wp-content/uploads/2014/10/MA\\_Env\\_Existing\\_Conditions\\_Future\\_Trends\\_FINAL.pdf](http://mountainaccord.com/wp-content/uploads/2014/10/MA_Env_Existing_Conditions_Future_Trends_FINAL.pdf)).

Understanding impacts caused by climate change will also be considered in Phase Two. In addition, a goal of no net increase to greenhouse gas emissions is expected to encourage not only sustainable transit solutions but also green building that reaches very low to net zero energy development for buildings contemplated for development under this plan.

### **Why is Grizzly Gulch listed as “under consideration” as part of the Cottonwood Canyons Scenario?**

**At the time the proposed Blueprint went out for public comment, there was no resolution on how Grizzly Gulch would be incorporated into the proposed land scenario.** Through public input and stakeholder involvement, Mountain Accord seeks to identify the path forward as it relates to the Grizzly Gulch component as part of adopting a final Blueprint.

### **Why aren't we considering lower cost and lower impact alternatives? Is there consideration of a model similar to Zion National Park of limiting access and using shuttles?**

**Yes, we are proposing to consider both lower cost and impact alternatives as well as a Zion style shuttle system.** Lower cost and lower impact alternatives (e.g., adding additional bus capacity and implementing a shuttle system) can be analyzed as part of the range of alternatives moving forward into an EIS. In addition, transportation system management alternatives, which are combinations of incentives for transit use and disincentives to auto use, without adding new transit guideways or expanding roadways would also be an alternative evaluated in an EIS.

### **Concerns over transit proposals include environmental and community impacts, induced use, cost, access and impacts to dispersed recreation, and connection/tunnel concerns between Little Cottonwood Canyon/Park City. How will those impacts be evaluated and addressed? When will details be available on transit alternatives, transit alignments, transit stops, cost, parking infrastructure required, etc.?**

**Details on transit proposals, including impacts, alignments, etc., will be part of the EIS that is proposed to be developed in Phase Two.** Mountain Accord expects to coordinate with the appropriate federal agencies (including the Federal Transit Administration, the U.S. Forest Service and potentially others) regarding preparation of an EIS that will analyze, among other actions, a range of transit and transportation system management alternatives. The Blueprint recommends that an EIS evaluate various alignment options, including alignments in the Valley (on 7200 or 9400 South), Little Cottonwood Canyon to Big Cottonwood Canyon and Park

City, and from Park City to Quinn's Junction and Kimball Junction. The EIS would be prepared under the direction of the federal agencies, and it would analyze impacts and benefits to communities (including induced impacts), the natural environment, transportation, noise, air quality, and other resources. Cost estimates would be developed and we would ask the public and other stakeholders to provide input and comments on the alternatives, impacts, and other issues. This input and the analysis would help inform decisions on the transportation alternatives and potentially other actions. A preferred alternative could be identified during the National Environmental Policy Act (NEPA) process, but the final federal agency decisions will not be made until the NEPA process is complete.

### **Why aren't we considering rail in Parleys Canyon instead of the tunnel connection?**

**Currently automobiles are the competitive mode of transportation on I-80. However in the latter part of the 25-year planning horizon, rail may become a more competitive option.** An express bus on I-80 meets all the identified purposes for the I-80 corridor and at lower costs and impacts than extending rail up Parleys Canyon. This is because I-80 is primarily a commuter and freight corridor with high capacity for automobiles and little congestion. Based on traffic projections for the next 15 or more years, a rail line from the airport to Summit County via Parleys Canyon (an extension from the existing TRAX system west of the University) would have substantially slower travel times than cars or an express bus on I-80. In the latter part of the 25-year planning horizon, if congestion grows substantially on I-80, rail in this corridor would be more competitive with automobile travel times, providing a transportation choice and therefore is part of the longer term vision of Mountain Accord but is not proposed at this time.

### **How does Mountain Accord relate to ONE Wasatch?**

**The proposed Mountain Accord Blueprint proposes multiple components to balance environment, watershed, recreation, and economic needs. Instead of or in addition to connecting some or all the resorts via ski lifts, the proposed Blueprint proposes to connect the canyons via transit and trails.** Transit connections would be year-round, all-weather, and would also connect the population bases in the Park City area and the Salt Lake Valley with the resorts and other recreation opportunities in the mountains, reducing the need for automobiles. Chair lifts are generally not considered a viable form of transportation because many times they are exposed to weather, require a lift ticket, are not wheelchair accessible, do not operate all day or year-round, and are for one single, limited purpose, etc. The proposed Blueprint contemplates tunnels in higher elevation areas to preserve iconic ridgelines, watershed, and hiking/ backcountry skiing areas. Any proposed tunnel would serve only transit vehicles, not private automobiles. A combination of transit and trails would allow loop hiking and biking (starting in one canyon and finishing in another).

ONE Wasatch is a proposal introduced by Ski Utah in 2014 to connect all seven Wasatch Front ski resorts with ski lifts or gondolas. Ski Utah and all seven resorts support the proposal. Ski industry and tourism experts have stated that the ONE Wasatch proposal would create marketing value for the state of Utah and enhance the resort experience.

The proposed Blueprint offers an alternative to ONE Wasatch that would create marketing value for the state of Utah, enhance the experience for resort-goers and other recreationalists, and provide year-round solutions to pressing transportation problems.

*Note that ONE Wasatch should not be confused with SkiLink. SkiLink was a proposal in 2012 to connect the Canyons Resort with Solitude Resort via a ski lift on the north side of Big Cottonwood Canyon. Federal legislation was introduced to sell 30 acres of U.S. Forest Service lands to accommodate the project. The SkiLink proposal is no longer being considered.*

**Will trail connections include separate trails for mountain bikers and hikers? What considerations are being made for different recreation user groups (free-fliers, equestrians, snowmobilers, etc.)?**

Trail connections have not been contemplated to include separate trails for mountain bikers and hikers. A trails implementation plan is currently being developed and those details have not yet been defined. There are many user groups that recreate in the Central Wasatch. Consideration of the impacts to various user groups will be contemplated in Phase Two.

**How will NEPA be structured in Phase Two?**

**At this time, it is uncertain whether there will be one or many separate NEPA processes to address the proposed actions. A NEPA approach will be finalized once a final Blueprint is adopted.** Once a final Blueprint has been adopted and a range of proposed actions and alternatives has been decided upon, the executive committee through its consulting team will work collaboratively to finalize a NEPA approach to implementing actions with current federal partners (U.S. Forest Service, Federal Transit Administration, and Federal Highway Administration).

**How much does this cost and who is paying for it?**

**Phase One funding has come from the State of Utah, local jurisdictions involved in Mountain Accord, and limited contributions from private entities. Blueprint implementation costs are unknown and will be determined in Phase Two.** Since the proposed Blueprint proposes a range of options, there is a range of estimated costs from \$50 million to several billion dollars depending on the alternatives selected. Costs, including funding sources, will be part of the NEPA process in Phase Two.

**Is a decision on the Blueprint binding? What decisions are we actually making when the Blueprint is adopted? How is public input being used to refine the proposed Blueprint?**

**The proposed Blueprint is a planning document and is not binding. Public input will be considered by the Executive Board to inform revisions to a final Blueprint.** Mountain Accord is a regional collaborative with no legal authority and will look to federal, state, and local partners to make decisions through their appropriate regulatory processes. Public input is critical to the Mountain Accord program and is carefully being read and considered by the consulting team and members of the Executive Board to identify issues, concerns, and interests of the general public and will inform the refinement of the proposed Blueprint and next steps. Submitted comments have been cataloged, coded, and summarized and made available to the Executive Board throughout the public comment period. In addition, full lists of all public comments have been made available as well.

MOUNTAIN ACCORD

## APPENDIX C

### System Group Member Comments

Email System Group Comments February 4 - May 1, 2015	City	Date
<p><b>Comment</b></p> <p>To Mountain Accord Executive Committee:</p> <p>First, my thanks to the executive committee, stakeholders, participants, and consultants for all their stressful hard work in trying to organize, negotiate, and compromise in an effort to realize a vision. I have been lucky enough to be aware of this process much prior to the "Mountain Accord" direction with Envision Utah and Wasatch 2040 and have seen first hand the abundant amount of data, research and collaboration that has brought us to this Blueprint. It has not been easy, and I'm sure many people have lost much sleep in the past 5 years. Now we are reaching a much heavier time in an effort to move forward with a plan, and the work in many ways is just beginning. I hope and support the participants of Mountain Accord in maintaining their energy, hope, sound mind, and perseverance to take this to the end.</p> <p>In addressing the Blueprint, I want - just like all the other stakeholders - an improved way of operating and sustaining our transportation, economy, and environment. Having a formal background in sustainability and ecology and being an avid recreationalist, I realize that we are talking about a system that must meet triple-bottom-line requirements (people, planet, profit). First, this balance most likely not going to err on the side of anyone single person's wants or beliefs. In fact the solution may hurt/burden and require most of us to stretch our mind in understanding certain options and rely very heavily on faith, science, trust, and commitment. Therefore we can no longer afford to just be an environmentalist, or economist, or humanitarian, we must strive to be a part of this new Renaissance age and be naturalists, thinking in this 3-dimensional capacity.</p> <p>The Blueprint as it sits may or may not be the solution we are looking for in dealing with increased pressure on our natural resources, population growth, and maintaining healthy commerce. However, I do have faith and the necessary commitment to see it through as it is, even with a train through LCC to Park City and back to SLC. The train is only one component though, I also believe that this transportation line and the entire system proposed needs to have policy, environmental parameters and monitoring, public awareness and stewardship, and an economic plan to go along with it. The transportation system cannot succeed on its own without the other legs of sustainability. They are all equally important.</p> <p>The reason this Blueprint could work, is number one, it's not definite yet. Even if we pass the Blueprint, there are other checks and balances in place that could rule amendments (be them on the train, economic hubs, or environmental priorities). Second, we have access to the technology, desire, and priorities to build additional infrastructure/development without further degrading, but rather improving current environmental conditions. We can live a balanced life with nature, we just have to put our money, brains, and action where our mouth is. I have noticed for a very long time it's easy to put time and money into building something new and shiny, but we have always as a society had difficulty putting equal time and money into maintaining or improving existing infrastructure, in this case our natural resources. This way of thinking needs improvement. If we are going to upgrade our economy, transportation, recreation, then we must improve our environment. The best part of this is I know we can do this, we just have to get it done.</p> <p>My vision for a plan (just like the Blueprint and shared among most) includes: an efficient, useful transportation that supports economic vitality without changing who we are in regards to the "sense of place" or brand of a town (like Alta), business, or community; and actively improves our natural resources (with mine reclamation and ecological restoration) through public stewardship and awareness. I want to see every business support the economic hubs, every person use the transit system, every outdoor visitor to appreciate the recreational system, and every person who calls themselves an environmentalist or says they care about the environment be outside working, getting dirty, to improve the environment (no matter who they are). I don't think it is fair to say the current Blueprint because that means in my eyes an unwillingness to work hard to realize our shared vision. Failure will only be due to our lack of commitment and willingness to work on improving not only our situation, but as human beings, and our children's future. We must lead by example for the generations to come; the future is in our hands to work for what we want - this has never changed and never will.</p> <p>Whatever else happens, please don't let them put a lift up Grizzly Gulch!</p> <p>Thanks for your consideration.</p>	Alta	5/1/2015
<p>Dear Alta Resident,</p> <p>Many thanks to those who attended the Mountain Accord meeting in Alta on February 23, and who have shared comments with us. Please help us reach a wider audience by forwarding this email to those who were unable to attend, or anyone else you think would be interested. We hope that Alta Town leaders and Mountain Accord staff heard us. Don't stop now. We must all provide written comment and do so by March 16th.</p> <p>It is imperative that you visit <a href="http://mountainaccord.com/get-involved/">http://mountainaccord.com/get-involved/</a> to review the Blueprint. Please tell them what you support and why by March 16 - be thoughtful and constructive, explaining your opinions. The form on the Mountain Accord website is over simplified and confusing so we encourage you to submit your comments directly via email to <a href="mailto:comment@mountainaccord.com">comment@mountainaccord.com</a>. The Alta Town Council Members and Mayor Palfari have expressed on multiple occasions that they want your voice, so use this opportunity to communicate with them, as well as Salt Lake City Mayor Ralph Becker, Salt Lake County Mayor Ben McAdams, Sandy Mayor Tom Dolan and Cathy Kihoro and Dave Whitteck of the USFS. All emails are below to copy and paste or you can reply all to this email.</p> <p>To: <a href="mailto:comment@mountainaccord.com">comment@mountainaccord.com</a></p> <p>FCM believes that watershed, wildlife and open space are the foundation of our unique area of canyon experience. They are why people come to Alta, our identity. We acknowledge the need for a solution to the sometimes difficult transportation situation. We are FOR a Bus Rapid Transit (BRT) system coming up the canyon that incentivizes use. Our reasons are listed below but are summarized as the BRT being more flexible, less destructive to the environment and less costly. With regard to interconnect via Alta, we have great concerns about a tunnel. Adverse impacts on the underground stream flow, aquifers and other cumulative impacts to our community and environment would need to be VERY carefully studied. There is still a great deal of information needed on the Blueprint, however we encourage you to include your opinions on a tunnel with your comments.</p> <p>Specifically, some of our reasons FOR supporting the BRT option:</p> <ol style="list-style-type: none"> <li>1. Returns more of the environmental and character aspects of our end of canyon location.</li> <li>2. The BRT, while no costs have been estimated, will surely be less costly than the train up LCC.</li> <li>3. The BRT solution is most flexible and can be easily altered in circumstances require. Not so with the train.</li> <li>4. The train is an acknowledged marketing effort. Those dollars should be used to support BRT.</li> <li>5. The BRT will meld well with the proposed Town of Alta base facility plan.</li> <li>6. The BRT will be much less disruptive to the watershed than the train would be.</li> <li>7. The BRT makes use of an existing roadway to provide a viable transportation solution while mitigating environmental and character impacts to our canyon.</li> </ol> <p>Below are links to the Mountain Accord and several articles for background.</p> <ol style="list-style-type: none"> <li>1. Mountain Accord Proposed Blueprint for the Central Wasatch Mountains.</li> <li>2. Cottonwoods Canyon Negotiations Takeforce by Save Our Canyons.</li> <li>3. We're Not That Special by Tom Clyde (Park Record).</li> <li>4. Slippery Slope: Canyon Conservationsists have to give a little to get a little by Cathy Frasier (Ely Weekly)</li> <li>5. Transit, recreation focus on grand plan for the Central Wasatch by Jason Lee (KSL.com)</li> </ol> <p>If you believe in our efforts to protect the Alta Experience, please show it by making a donation to help us continue.</p>	Alta	3/4/2015
<p>The jaw dropping silence at the Olympic Park meeting was obvious when the train was revealed and announced that the blue print proposals were made by a consensus of the executive board. The outcome was not unexpected because it was obvious early on (the second group meeting and despite assurances by the group leaders to the contrary) that the goal of the Mountain Accord was a train up little cottonwood. With the forest service east of new facilities, especially parking, in the canyons, more land being put into protected designation and increased restrictions on building. I am very afraid of wholesale condemnation of private property and homes to build transit hubs, rail terminals and train systems inside our communities. Brighton and Silver Fork were communities and destinations for peace and quiet some 100 years before skiing came to town and to turn our neighborhoods into seasonal rail terminals and transit hubs would be totally unacceptable and will be met with total opposition. The water systems for our communities are from mine tunnels and springs, are single sourced and fragile and barely adequate to not only the residents but also the growing number of visitors. For decades engineers, hydrologists and geologists have warned that tunnels through the Wasatch Mountains would have a negative impact on the canyons an example would be park city mines is paying or has paid Salt Lake City for water draining from Twin. Takes into a mine tunnel is the Mountain Accord ready to address providing water to affected communities with the blessing of Salt Lake City and its control of the watershed?</p> <p>Environmental Group member</p>	Brighton	2/18/2015
<p>I have been actively involved with Mountain Accord since its inception, serving on the Recreation System group representing an environmental organization. I have also done a great deal of outreach and community engagement to encourage public comment. I am a resident of Cottonwood Heights but the community where I work and play is Alta. I moved here after college 5 years ago and fell in love with Alta's unique environment and community.</p> <p>While I am happy to see a large group of representative stakeholders at the table working to plan for the Central Wasatch, I am deeply concerned about some of the proposed actions on the Blueprint. The proposed land swap between the Mountain Accord and the Forest Service is one level for upper elevation land does provide a unique opportunity for conservation between the Emma's and Superior ridgeline, however, the potential for development in the base facility site is concerning. I believe it should be a value for value transfer and possibly only include the land that Alta's existing facilities currently occupy. I see a great opportunity to place the area into a permanent protective land designation such as a conservation area, national recreation area or a national monument. I believe we need to protect the Central Wasatch from any further development and preserve this beautiful area for generations to come. I support the permanent protection of the Emma Ridge to Superior ridgeline from development.</p> <p>I recognize that there is a need for an improvement in public transportation in LCC. However, I am not yet convinced that a train is the most cost effective, efficient or best answer. I look forward to further examination of cumulative impacts during the NEPA process. I feel that the bus system is far from optimized and with proper implementation, could serve both the ski resorts and dispersed users on a year-round basis far more effectively than a train.</p> <p>I am extremely concerned about the potential connection from Alta with BCC and Park City. I think this would change the character of our top of the canyon community forever and may be detrimental to the environment. The tunnel would basically be a taxpayer-funded connection that would exist to benefit four businesses (ski resorts) with no/very little validation that such a connection would actually be economically beneficial to those businesses. There are no significant "problems" that an LCC/BCC tunnel would solve, despite a considerable cost to taxpayers.</p> <p>I do NOT support a chairlift in Grizzly Gulch. I recognize that it is private property, but I also appreciate that much of Alta's operations are on public land and that they stand to benefit greatly from enhanced base development on a lot of lucrative land, additional water use, increased snowmaking, and improved LCC transit. Grizzly Gulch and the surrounding area should be put into some sort of permanent protection. I believe that the current balance of ski area and back country terrain should be maintained.</p> <ul style="list-style-type: none"> <li>- I support enabling the ski resorts to expand their summertime activities within their existing footprints.</li> <li>- I support enhanced modern avalanche mitigation techniques (ie Gas-X) above Alta. I do NOT support a chairlift on Flagstaff peak</li> <li>- I do not support extraordinarily expensive, taxpayer-funded "solutions" to "problems" that enable profit maximization for ski resorts whose lift tickets are pricing their customers out of an already flat-to-declining market.</li> </ul>	Cottonwood Heights	4/30/2015
<p>This suggestion was made at the NEPA seminar 3/10/2015 and at more than one of the earlier comment programs.</p> <p>MT: Accord is getting, and will continue to get, significant push-back on the blueprint pattern that focuses on a train up the LCC. We strongly feel that there has not been enough consideration given to alternate methods and means of transportation up the canyons. As a result, the possibility of causing irreparable damage to the ecology, historic site(s), and living environment of the lower LCC canyon is not specifically included in the blueprint. In addition, the MA corridor "purposed criteria" seems to be written to support your initial goal of an expensive train and insure that less costly options are eliminated from consideration.</p> <p>During the system group meetings, members of the environmental group requested, multiple times, joint meetings between the various groups to compare notes and possibly come up with jointly accepted range of transportation alternatives. This did not happen for whatever reason(s).</p> <p>I suggest that the system groups be re-convened to accomplish this task. In addition, it may be valuable to entertain the thought of including representatives from outside (public) groups. The objective would not be to disqualify the concept of a train/rail transportation but to formulate a minimum impact alternative that would be used as the lower limit of transportation studied during the EIS process. The criteria should read that we want less pollution in the canyon balanced by the smallest footprint possible.</p> <p>The objective would also be to look at transportation hubs where travel up the canyon(s) could be centralized and possibly be a point where patrons can park and/or transfer to other means of transport up the canyon. In addition a sensible "flex" alternative could be developed to handle the traffic during peak and non-peak days.</p> <p>Environmental:</p> <p>All costs protect watershed. Funding mechanism needed to sustain, manage and enforce protection plan. Airport tax, car rental fee, transportation fee, must be used to offset environmental impact of transportation including auto and air traffic into SLC and Heber.</p> <p>Under "Proposed Cottonwood Canyons Scenario", it appeared to me it is assumed there will be a rail and tunnel system? I am opposed to tunneling of any sort. In my opinion, it appears from the way one links to this section from the Environmental sub Committee. I believe there would be a negative impact to watershed and environment with tunnel option. Cost benefit analysis would unlikely show a positive outcome. Benefits would go to a low expense of majority and environment. I'm against any sort of linking between Park City, BCC and LCC. (Other than express/local bus and shuttle service)</p> <p>Strongly support all efforts to enhance, manage existing flora with managed plan to mitigate noxious invasive species.</p> <p>Strongly support efforts to mitigate future impact on climate change including mapping and reducing CO2 footprints.</p> <p>Recreation:</p> <p>As an avid backcountry skier and mountain biker I have an intimate relationship with the Wasatch.</p> <p>What exactly is Protective Public Ownership? What funds the ongoing management and protection of these areas?</p> <p>Where are and how does the ski areas in American Fork fit into the plan? Doesn't show on map and is outside area of focus.</p> <p>Areas included in Ski Area Land Swap should be valued based on actual economic viability of private expansion in these areas. Less value given to places not likely developed due to geographic topography, etc.</p> <p>Not in favor of reducing mountain bike or back country skiing access to existing trails/areas.</p> <p>In favor of reducing hell ski operations and strengthening rules which dictate when and where operations are allowed. Penalties should be steep and enforceable.</p> <p>Economy:</p> <p>I believe "sustaining economic growth" in the Wasatch is counter to this entire process. Limiting, controlling and enforcing commercial business is the only way to accomplish the primary goal of the Mountain Accord... protecting the watershed and pristine nature of the area.</p> <p>Reserves should be placed on the mt of land made available for all employees should be required to take mass transit or private shuttle. Existing parking lots should be acceptable land for increased development.</p> <p>Stronger regulations and enforceable penalties are the only way to manage the greed of the corporate growth machine. If you'd like I'll tell you how I really feel ☺</p> <p>Ongoing appropriation of state and local municipal funding to manage preservation and improve existing conditions... not enable development.</p> <p>Transportation: best for transit(2)</p> <p>In my humble opinion, enhancing Local Bus, Express Bus and Shuttle service is a short and long term piece of the solution for 880, and the Cottonwood canyons. No tunnels. No light or heavy rail. No Ariel Tram or connections other than bus and shuttle between Park City, BCC and LCC. However, enhancing rail between the airport and the transportation HUBs on the Wasatch Front makes sense to me. Long term perhaps up 880 to Kimball Junction or Quinn's.</p> <p>Supply should meet variable demand based on seasonal requirements. Identified HUBs seem reasonable.</p> <p>Park and ride areas to the south of 880, at 880 and between 880 and Mill Creek, BCC and LCC should be enhanced and managed intentionally to serve the seasonal and time-of-day needs. If we could depend on the bus we will ride the bus.</p> <p>Reducing parking availability, charging additional fees for car rental, fees for parking at ski resorts or ski towns. Make it more desirable to take public transport or shuttle reducing the rental car numbers and SLC cars traveling all corridors to recreation destinations.</p> <p>Transportation Management System is not defined... what's this?</p> <p>Fees (a % of ALL fees and taxes related to this initiative) should be used for funding and sustaining management, enforcement and to offset the cost of public transportation options. Possibly fund a grant pool for incentivizing environmentally friendly vehicle use i.e. electric shuttle vans, natural gas vehicles, etc...</p>	LCC	3/12/2015
<p>April 28, 2015</p> <p>Mountain Accord Blueprint Comments</p> <p>Greetings, As one of the primary authors of the comments submitted by the Wasatch Backcountry Alliance (WBA), I support and endorse the WBA comments. In order to not be redundant, I submit only the following brief comments: NEPA The Mountain Accord is being conducted as a precursor to the NEPA process. Therefore it is not unreasonable to view the intent of the Mountain Accord as essentially NEPA Scoping. Funding for the Mountain Accord includes money with a likely source that includes funds provided by the State of Utah that are essentially being passed through the State from Federal sources. Based on the funding factor alone, there is likely a Federal nexus and therefore, the Mountain Accord process in its entirety must be part of legal record as per NEPA requirements. Therefore all comments must be reviewed, addressed and responded to as per NEPA regulations.</p> <p>Public Involvement The Mountain Accord has failed in terms of getting the public informed and involved. Considering the large amount of funding provided, it is a surprise that more money was not allocated for an aggressive Public Relations campaign. Moving forward, the Mountain Accord must do a better job at public involvement. Ski Area Expansion</p> <p>I personally do not support ski area expansion in any manner. Dispersed users have been losing terrain for the last 40 years. Backcountry skier numbers and densities have been growing rapidly. There is no justification to increase the footprint of for-profit ski areas at the expense of other public lands users. In addition, ski area expansion has the potential for significant impacts to wildlife, natural habitats and the watershed health of the Central Wasatch.</p> <p>The impacts of ski area expansion such as increased use of sediments must be analyzed very rigorously. One example is Solitude's proposed expansion into Silver Fork. While encompassing only 70 acres, it provides easy "no-effort, glide return" access, along with associated impacts to an additional 250 acres of new sediments in Silver Fork alone for a total impact of 320 acres. I have attached a map detailing the area of these impacts to this letter. This is similar to the 1990 lift at the Canyons Resort which has been shown to have verifiable impacts to dispersed public lands users on the Park City Ridge/line and Big Cottonwood Canyon.</p> <p>Entrenched Consultants</p> <p>I support and suggest that a new set of consultants be used for portions of the NEPA analysis. This will allow the project to be evaluated with a fresh set of eyes and may provide additional out-of-the-box thinking. Based on my experience with the Transportation subgroup, I feel that some of the consultants may be too close to and biased by the agencies that they have had long-term relationships with.</p> <p>In closing, I would like to thank the Mountain Accord for allowing me to be part of the process.</p>	Salt Lake City	4/28/2015

<p>I support the permanent protection of the Emma Ridges to Superior ridge line from development.</p> <p>I do NOT support a chairlift in Grizzly Gulch. I recognize that it is private property, but I also appreciate that much of Alta's operations are on public land and that they stand to benefit greatly from enhanced base development on a lot of inactive land, additional water use, increased snowmaking, and improved LCC transit.</p> <p>I support adding potential lands and zoning for additional development at the various resorts' bases.</p> <p>I support enabling the ski resorts to expand their summertime activities within their existing footprints.</p> <p>I support enhanced modern avalanche mitigation techniques (ie GSA-X) above Alta. I do NOT support a chairlift on Flagstaff peak.</p> <p>I do not support extraordinarily expensive, taxpayer-funded "solutions" to "problems" that enable profit maximization for ski resorts whose lift tickets are pricing their customers out of an already flat-to-declining market.</p> <p>Environment</p> <p>I am not an environmental specialist, so I cannot comment on the survey question: "Does the Blueprint achieve environmental stewardship of the natural resources?"</p> <p>I know that the EPA has determined that ski resort development has a more profound effect on watershed integrity than ANY other development. But I am cautiously optimistic that SLC Water and various other governing bodies will ensure water quality despite the threats associated with increased use, transit, and development.</p> <p>I am in favor of a re-forestation effort on (particularly) the Emma ridge line area.</p> <p>I am becoming increasingly convinced that simple people pressure on the watershed, and dramatically increasing opportunities to transport people up the canyons will have a commensurate effect on the watershed quality.</p> <p>I am concerned that the ski resorts are getting many of their desired "guts", and their "gives" are more along the lines of "we are not taking it much as we could take", at the expense of potential environmental and backcountry terrain preservation.</p> <p>Overall I have found the "Blueprint" (it should have been called a "proposal") NOT to be reflective of the thousands of hours of work that people put into the system meetings and submissions over the summer; it confirms to me that the Exec Board was made up of a lot of Important People who were not very engaged in the process and therefore created a plan that represented their impressions/interests rather than what was determined by the System Group.</p> <p>I also feel that the survey questions are far too vague and their wording is misleading, and that using "statistics" generated from this survey will lead to incorrect conclusions regarding public sentiment.</p> <p>Therefore I do not support the "Blueprint" in its current form, but I am a strong believer that a more equitable balance of gives and takes can be achieved to accommodate many constituents/stakeholders' desires, if they are all willing to concede on some of their desires. ☺</p>	
<p>Comment to Mountain Accord From Economic System Group Member Dennis Gorenham 3/9/15</p> <p>My comments are broken into three short sections: 1) Blue print comments, 2) NEPA comments, and 3) Immediate steps.</p> <p>1)After reading through the Blueprint, there is very little I can't agree with. I think the Executive Committee and the Cottonwood Negotiation Task Force has done a good job identifying issues and trying to negotiate solutions. That said, I am getting more uneasy about what I am hearing at the open houses and public forums.</p> <p>The Blueprint outlines general recommendations resulting from these negotiations. The details we are starting to hear now are basically the resorts will swap private land in lieu of other considerations. On the surface these trades sound reasonable but the resorts are hedging their bets by basically saying the trades will happen only if they get everything they want. What if we get through this and the transportation solution does not quite get to what the resorts want; can they then renege on the whole swap. Or would they do a partial swap that could basically leave us with the same issues we currently have?</p> <p>I don't think any of us ever thought the results of the Mountain Accord process would result in quick fix, but with the stipulations the resorts are putting on the land swaps, it may never be done. But, it needs to get done!</p> <p>The resorts want to do some expansion and development so they need private land and water at their base. They also say that the land swaps won't happen if they don't get a transportation system that gets more people to the resorts. It seems obvious to only way to enhance the economy, ensure quality dispersed recreation, and protect the environment is to design, fund and construct a long term transportation system both to and up the canyons. This solution must meet the needs of the resorts and dispersed recreationists, and must also be environmentally sound. This must be done no matter what the cost. Nobody looks back now at transportation issues like the freeway through Glenwood Canyon and says it was a bad deal. It was very expensive, but was environmentally sound and boon to the region's economy. It must protect the water and visual quality in the canyons.</p> <p>Once the land swaps are complete, the affected local governments and the Forest Service should consider designations for these areas that would protect them in perpetuity. This should also include acquisition of parcels owned by private land owners other than the resorts.</p> <p>2)At the public forum at the City Library on 2/18 I had requested we add suggestions for issues to be addressed in the FIS.</p> <p>The visual impact of various transportation solutions must be fully evaluated in the NEPA process. GIS data is easily obtainable to allow full and detailed analysis of every transportation scenario. GIS technology, the quality of DEMs, and the power of computers allow that each and every possible solution must be analyzed to determine line-of-sight impact. For example, an aerial solution to Little Cottonwood Canyon would require several very tall towers and could have a detrimental visual impact on many other parts of the Canyon.</p> <p>All GIS data, modeling applications, and results should be available to stakeholders and the public. Not just the final decisions.</p> <p>Many of the Mountain Accord stakeholders have their own GIS capabilities and should be allowed access to all raw GIS data to conduct their own analysis using the same data. Licensing for data during the NEPA process should allow that.</p> <p>3)There are many actions that could take place immediately and would not require waiting for the results of a NEPA process and whatever might follow that. 1) The Bonneville Shoreline Trail should be completed as soon as possible, at least those sections that do not have private land or wilderness boundary issues. 2) Complete other trails and sections of trails in the foothills and up the mountain basically showed ready. 3) Expand bus service for summer users of train and resorts in the foothills and up the canyons. This is especially necessary as we see increasing use of trails (e.g. Mt. Olympus) and various summer activities and events up the canyons. This is a longer term project but promoting public mass transit use to these areas.</p> <p>Thank you very much and I look forward for opportunities to participate more as the NEPA process progresses.</p>	3/10/2015
<p>The residents of the salt lake valley are fortunate to have such a collaborative effort to take place. As the plan moves forward I would like to see that the recreational opportunities of the free flying community be protected. I am a member of local organizations representing paragliders and hang gliders, speedfliers and speed riders, and basejumpers.</p> <p>As board members may be aware Utah is a world class destination for these sports and participants travel from around the world to fly here. National distance records have been set from sites in big cottonwood canyon. Many of our sites are within the borders of areas that have been retained as under consideration for enhanced protection. Flying sports in the wasatch can easily be documented as customary and have taken place for decades. Our users are extremely low impact, lower than hikers runners skiers and bikers by far. The majority of our use occurs in the air, however we do require mountain tops to launch or jump, along with various areas in the canyon bottoms for attend or unplanned landings. We use no fossil fuels in our enjoyment of our public lands, make no noise, and leave no trace.</p> <p>However we feel a potential for a world class destination for these sports and participants travel from around the world to fly here. National distance records have been set from sites in big cottonwood canyon. Many of our sites are within the borders of areas that have been retained as under consideration for enhanced protection. Flying sports in the wasatch can easily be documented as customary and have taken place for decades. Our users are extremely low impact, lower than hikers runners skiers and bikers by far. The majority of our use occurs in the air, however we do require mountain tops to launch or jump, along with various areas in the canyon bottoms for attend or unplanned landings. We use no fossil fuels in our enjoyment of our public lands, make no noise, and leave no trace.</p> <p>Unfortunately almost all of the federal land managers controlling wilderness, national monument, and national park land have severely restricted, but more often, prohibited paragliders, hang gliders and basejumpers. Generally we are lumped in with powered aircraft. Very often our pilots are aggressively harassed and commonly criminally prosecuted for both intentional and unintentional use of our public lands. This does not occur with land managers who administer national forest and BLM land.</p> <p>The wasatch is unique as our use of these lands will provide any change in designation and we expect to have continued access to our land.</p> <p>Our organizations would like a part of the discussion about land designation changes and to secure the right to continue our recreational use of our lands.</p> <p>I work, recreate, and love to someday own a home in the canyons. I am born and raised in Utah and hope to continue to enjoy the recreation and quality of life which makes me so proud of my home state. I would appreciate the chance to discuss this future of future proposals in greater detail with members of the executive committee.</p> <p>Thank you for all your hard work.</p>	3/12/2015
<p>Recreation System Group member, Mountain Accord University of Utah, Department of Parks, Recreation, and Tourism, NOLS Liaison Big Cottonwood Community Council person President Emeritus Home Owners' Association / Liaison USDA Forest Service</p> <p>(The numbers on this list are not a rank order, they are used for convenience of organizing; these ideas are my personal opinion informed by my associations listed above but do not represent a consensus of any of those bodies)</p> <p>1. Resort Expansion</p> <p>Negotiated through a public process, the USDA Wasatch-Cache Forest Plan set aside upon no ski resort expansion more than a decade back. Now, the Mountain Accord, through the nearly secret Cottonwood Canyons Task Force (CCTF) is telling us again – after the Mountain Accord is done with you – that's when there will be no more ski resort expansion. Ski resorts will always want to expand, this will never end unless someone says no more. No more was said long ago with the Forest Plan so please respect those who negotiated and those who have lived under the no more ski resort expansion. Giving the ski resort more land by the CCTF is not a compromise, a compromise is matching new land for ski resort expansion with land removed from ski resort use. A true compromise would be a boundary shift retaining the same acreage, not a boundary expansion.</p> <p>The CCTF land swap and ski resort expansion is a bad faith agreement. The most critical piece of land, Grizzly Gulch is not even part of the agreement – hence more room for ski resort expansion after the Mountain Accord's turn saying no more expansion. If Alta puts chairs on private property in Grizzly Gulch, then they negotiated with the public in bad faith about agreeing to no more expansion during the Forest Plan development. Agairt Brighton into Hidden Canyon makes it easier to connect to Park City – sounds like One Wasatch. Solitude into Silver Fork makes it easier to connect into Grizzly Gulch and connecting to Alta. Solitude into Silver Fork only makes sense if there is a new chair or private property up to the Honeycomb Ridge overlooking Grizzly Gulch. This CCTF is nothing more than a One Wasatch secret, all that is missing is the name. One Wasatch! Ski resort managers are a smart bunch and like smart chess players, they make small moves now with the big move still eleven moves out.</p> <p>2. Resort Property Consolidation</p> <p>Trading ski resort owned parcels for a protective easement for Forest Service lands at the base of the resorts has potential as a viable compromise. Examining this issue is a good goal for the Mountain Accord. These properties outside the resorts, if truly protected from development can be worth the consolidated base development if the base development is kept low profile. The Brighton circle is a quiet community and may not appreciate a noisy neighbor of a nightgite ski resort. Please survey the residents first. The Big Cottonwood highway is already one of the most dangerous roads in Utah and adding more, and later right right only contribute to a hazardous drive through the canyon.</p> <p>3. A Train and a Tunnel</p> <p>Giving four ski resorts a multi billion dollar train is misguided. The problem of the Cottonwoods is overcrowding. The train, like One Wasatch are marketing attempts to lure out-of-state and out of country skiers. But we are overcrowded now, we can't handle more out of state and out of country skiers without losing in-state skiers and boarders. Long lift lines at Alta have finished driving many local people away from downhill skiing. The resorts and canyons are at risk. At best, a train will pack more people into longer lift lines and ski resort managers will insist on expanding yet again! This train is not a sustainable proposition. If giving cars to the canyon is a goal behind the train, this is a dangerous starting point toward that goal. Mountain Accord's Transportation System Group leader said at the League of Women Voters' presentation at the Salt Lake City Library that never did the transportation system group consider that public cars would be restricted in the Cottonwoods. Yet, that is a sustainable goal – that of restricting public cars out of the Cottonwoods – especially in the Cottonwoods.</p> <p>4. Cars and Public Transportation, shuttle buses, and trains</p> <p>Mountain Accord should study shuttle bus service over trains. The roads are already there. Car pool discounts, high tech toll booths with license plate scanners that allow payments on line or by phone in advance, should come long before trains are considered. Shuttle bus expansion is ready to go. Think about the absurdity of a train tunnel to Brighton. A train from Alta would drop people off at Brighton, missing all the stops of picnic areas, hiking trails, and campgrounds in Big Cottonwood complex. With a train, a shuttle bus system is still required to take people down Big Cottonwood to the trails and sites, just to shuttle them back up to the train at Brighton in the evening to then ride the train all the way back down Little Cottonwood Canyon? Who are kidding that Big Cottonwood and a tunnel at Brighton or Solitude? If the train runs between Brighton and Solitude, where will it go? There is a Church Camp, Nordic Track, private resorts, and a fire station completely blocking the way. Be honest, think it through, are you announcing an eminent domain taking of private property for an absurd train?</p> <p>5. Snowbirds, American Fork and development</p> <p>The notion of a land swap in American Fork Canyon for the expansion of Snowbird in trade for protected land along the Superior Ridge and Face has potential. If Snowbird can demonstrate how they can be a better steward of the land</p>	3/13/2015
<p>over the out of control ATV use in upper American Fork/Mineral Fork area, there is room for some negotiation. No details seem to be available, but there seems to be potential for some land swapping between Mineral Basin/American Fork and face of Superior and Superior ridge. Shame on Alta for threatening to expand into Grizzly Gulch, Patry Marley, and Tuscara. That is blasphemous or at least thought holding of these areas. When Alta negotiated on the Forest Plan, they agreed to no more expansion. If they were holding out secret plans to expand on private property, they should give back the public land to the public for back country use.</p> <p>6. Multi-use trail equal mountain-bike trails</p> <p>The Cottonwood Canyons are the most beautiful where the terrain is gentler and wide open. The Cottonwoods are tight, steep, and constricted. Great for narrow hiking trails, poor choice for mountain bikes. Hiking is the traditional use of the Cottonwoods in the summer and mountain bikes endanger hikers and the time-honored peaceful experience of walking safely. Miller's odds / even days allow hikers to be safe half the time and endanger half the time. Mountain bikers are not natural, their pace is not natural, their mechanical clanging noises are not natural. What in nature goes at the pace of a mountain biker? What brings bigger fear to a hiker with children than a mountain bike coming downhill? Don't pretend that multi-use trails are hiker friendly. Mountain bikers are expanding into the back-country faster than the ski resorts are. Their pace is not natural, their mechanical clanging noises are not natural. What in nature goes at the pace of a mountain biker? What brings bigger fear to a hiker with children than a mountain bike coming downhill? Don't pretend that multi-use trails are hiker friendly. <p>I think that overall the Executive Group has done a good job with their "consensus Blueprint" for the future of the Central Wasatch, but as is usually the case, the "benefits" vs. the "draws" will be in the details. My support for and opposition to the details are as follows: 1) Preservation – Preservation of our unique mountain resource should be the principal goal of Mountain Accord.</p> <ol style="list-style-type: none"> <li>Support additional protection for public lands as a National Conservation Area (no motorized use), Conservation Management Area, National Conservation Area, National Recreation Area, or National Scenic Area to preserve current use, and modification of existing Wilderness Areas to improve boundaries (see 3e), but not for expansion of wilderness.</li> <li>Support the Cottonwood Canyon Task Force's negotiated recommendations for a package of land use protections and adjustments in Big and Little Cottonwood Canyons including Grizzly Gulch, and efforts of the Mt Accord Land Use Group's continuing efforts to identify other critical parcels of private land that could be brought into public ownership. 2) Transportation – Too many cars is the critical issue in the Central Wasatch Canyons. I support transit solutions as follows:       <ol style="list-style-type: none"> <li>The transit-based solution is too much, in both cost and impact and should be dropped.</li> <li>Support maintaining our dead end canyons with improvements to the existing roads to support year round bus traffic (including avalanche shelters).</li> <li>My favored transit solution would be something as close to the shuttle bus situation in Zion Canyon as possible, i.e., natural gas powered (or electric) with in pavement recharging like USU is working on) buses with large windows that emphasize the visual/recreational experience rather than the transportation experience.</li> <li>A fee/funding system that encourages electric, vehicle restrictions, canyon entry fees, parking fees, and low transit fares.</li> <li>Transit stops favored over parking spaces.</li> <li>Good (no chip seal) 3" bike lanes up and down Millcreek, BCC, and LCC. 3) Trails – I support the effort on a Comprehensive Trails Plan for the Central Wasatch, which I hope will include:       <ol style="list-style-type: none"> <li>A mix of hiking and biking trails and well-used day trail restrictions to accommodate different user needs.</li> <li>Specialized bike trails like downhill or terrain parks should be kept to the developed ski areas, not the backcountry.</li> <li>Paved bike lanes in Mill Creek, Big Cottonwood and Little Cottonwood as well as the St. George studied Parley's Bike Trail should be included in both the Trails Plan and the Transportation Plan.</li> <li>Completion of the Bonneville Shoreline Trail between Parley's Canyon and Hidden Valley Park in Sandy.</li> <li>Any Mt. Accord recommended changes in Wilderness boundary designation should include minor alterations that would provide a regular USFS land buffer along terrain features inside the west edge of the Mt Olympus, Twin Peaks and Lone Peak Wildernesses to allow construction of the BST without Wilderness restrictions.</li> </ol> </li> <li>New paved (or other hardened surface) trails and viewpoints at selected transit stops to important canyon features (Douglas Falls, Liza Falls, etc.), canyon overlooks (first portion of Broad Fork and White Pine trails, lower LCC climbing area, etc.) to accommodate crowds of casual canyon visitors.</li> <li>I also support some sort of managed trail reservation/lottery system in the future for some trails on some days (weekend and holidays) to start to preserve user experience. 4) Next Steps – Major steps in MT Accord like land trades and transit improvement will likely take years to develop, but there are elements of the plan that could be initiated ASAP such as:       <ol style="list-style-type: none"> <li>Establishing a united management, education, and funding organization for the Central Wasatch should be done as soon as possible to begin working on preserving the resource.</li> <li>UDOT is planning to pave the bottom of BCC this year without provisions for major improvement of the bike lanes. SL/CAC and others are trying to get UDOT to do whatever it can to improve the safety of the bike lanes within the existing right-of-way and cliff to stream conditions. Even 6 inches or a foot of new pavement would help. Please use whatever powers of persuasion Mt Accord can exert to assist this effort and convince UDOT to do its best to improve the safety of the BCC bike lanes NOW!</li> <li>Some of the efforts on the Comprehensive Trails Plan for the Central Wasatch may wait on NEPA review, but work on some trail maintenance and securing funding could begin now.</li> </ol> </li> </ol> <p>5) Final Comment – I suggest that Mt Accord not use the terms "idealized solution" and "ideal future" since there can be no such outcome without some reference to population control along the Wasatch Front. (Sorry – I couldn't resist that!)</p> </li></ol>	<p>4/3/2015</p>
<p>May 1, 2015 Comments on the Mountain Accord Blueprint</p> <p>The Mountain Accord overall has been an admirable process that hopefully will meet the goal of preserving and protecting the Wasatch Mountains that are so near and dear to our hearts, and to the health and well being of the communities surrounding them. I am supportive of the intent of the overall process and hope that a solution that preserves the Wasatch Mountains can be reached.</p> <p>I am not sure if I support the details of the Blueprint since it's pretty hard to digest the implications due to poor presentation. My general view is that the Blueprint needs a second round of vetting after comments are taken. At this point I am supportive of some of the general concepts, but would like a better UDOT before proceeding.</p> <p>I am submitting comments in two major areas – bicycling and mountain biking, and general comments on the Mountain Accord.</p> <p>First, however, a comment on the presentation of the materials. The materials – the Blueprint, Idealized Systems, Cottonwood Canyons Scenario, etc. are presented in a generally poor manner which makes understanding them very difficult. While I brought this up to the project team, little was done to change this. One has to click on many, many different links to try and put all the pieces together. And hence it is hard to know if you have all of the current and relevant information. Everything should have been consolidated into one PDF of all material – blueprint, idealized scenarios, idealized systems, etc. For this reason, I would recommend that you extend further the comment period past May 1, 2015.</p> <p>Additionally, there are not enough details on proposed major outcomes, particularly on trails and transportation.</p> <p>Generally, the presentation and information currently available is a hodgepodge and is very hard to work with. It is hugely frustrating to work with this, and makes it difficult to synthesize the material. For each area in the blueprint, there are at least 21 documents to digest, but not easy way to go back and forth or look at them all at once. This makes it difficult for most people to understand the implications and options in the Blueprint.</p> <p>Comments on the Mountain Accord</p> <ol style="list-style-type: none"> <li>Bicycling in the Wasatch Mountains       <ol style="list-style-type: none"> <li>Road cycling           <ol style="list-style-type: none"> <li>All of the canyons in the MA area are heavily used by road cyclists. While this is well known, the Blueprint doesn't have much to say on this. In the transportation Mountain Accord Transportation Corridor Purposes and Alternatives document preferred alternative, it is one of the Corridor Purposes, however there's no clear idea of what this means. There is no mention of road cycling in the Transportation Mode Summary document. While cycling in the canyons is mostly recreational, it occurs in the same corridors as all transportation modes. That isn't even mentioned is an unfortunate omission. Road cycling is an activity that is enjoyed by thousands of people each year, and needs to be considered when crafting any transportation solution since any solution would impact road cycling.</li> <li>A Plan for Road Cycling in the Canyons (Big and Little Cottonwood, Millcreek, Parley's) is needed.</li> <li>Road cycling needs a comprehensive cycling plan for each and all of the canyons. Big Cottonwood Mountain Council has submitted to the Mountain Accord an excellent plan for that canyon. There is also some sort of plan for Millcreek, although I'm not sure how comprehensive it is. As far as I know, there is no plan for Little Cottonwood or Parley's Canyon. Emigration Canyon currently has a draft plan as well.</li> <li>A Cycling Plan for the Mountain Accord area should have at least the following components:               <ol style="list-style-type: none"> <li>Comprehensive outlook that encompasses all 4 canyons including the roads connecting the bases of each canyon (Wasatch Blvd, etc).</li> <li>Specific plans and process for each canyon.</li> <li>Plan objectives                   <ol style="list-style-type: none"> <li>Safety</li> <li>Infrastructure                       <ol style="list-style-type: none"> <li>On Road facilities                           <ol style="list-style-type: none"> <li>Off road paved trails</li> <li>Education of cyclists and motorists</li> <li>Enforcement</li> <li>Accommodation</li> <li>Tourism, events, and economics</li> <li>Interaction between cycling and motorized transportation                               <ol style="list-style-type: none"> <li>Cars</li> <li>Trains</li> <li>Buses</li> </ol> </li> </ol> </li> <li>Other</li> </ol> </li> </ol> </li> </ol> </li> <li>Alternative bike path in Big or Little Cottonwood Canyon – This could be a great option for some cyclists. It would allow riders to be away from traffic, and have in some ways a more pleasant experience. However, it would have many difficulties.           <ol style="list-style-type: none"> <li>Safety – while the climb portion of a bike path would be safe, the descent may not. Both canyons are steep and cyclists can travel at times as fast as a car or faster. A bike path is narrow, and likely would not have enough room to dismount safely at typical rates of speed for cyclists.</li> <li>Experience – riders choose to climb in the canyons because of the beauty and the challenge. The road is a traditional route for this challenge. A bike path may work, depending on the design, but many riders may choose the road regardless.</li> <li>Maintenance and seasonal use – A bike path would run into issue of maintenance in the harsh winters of the canyons. Pavement stability would be an issue. Snow removal issues would mean that the path might not be usable during the winter and spring thus cyclists would end up using the road anyway.</li> <li>From an environmental perspective, a bike path would reduce the most moderate mountain biking, but not to the detriment of preservation of the land and bios.</li> <li>Recommendation – if a bike path is built, on road cycling needs to be preserved as well thus giving cyclists two alternatives.</li> </ol> </li> </ol> </li> <li>Parley's Canyon Trail       <ol style="list-style-type: none"> <li>As part of the Mountain Accord study area, the Parley's Canyon Trail should be built. This proposed paved trail would connect from Mountain Dell Reservoir on 80 to Parley's Summit. Salt Lake County has completed a feasibility study, <a href="http://slo.org/recreation/planning/html/Parley_Canyon.html">http://slo.org/recreation/planning/html/Parley_Canyon.html</a></li> <li>Wasatch Loop Trail – The Parley's Canyon trail is also part of the larger Wasatch Loop Trail, a proposed 240 mile figure 8 recreational loop trail through the Wasatch. The trail would extend from Provo to Ogdon on the Wasatch Front, and from Eden Valley to Heber/Midway on the Wasatch Back with the cross bars of the 8 being Weber or Ogdon Canyon in the north, Parley's Canyon in the center, and Provo Canyon in the south. Much of the Wasatch Loop Trail has been completed. For a map of the Wasatch Loop Trail, see the link to the Salt Lake County study above.</li> <li>A paved trail connecting the mouth of Parley's Canyon to Mountain Dell should be implemented as well.</li> <li>Recommendation – Both the Wasatch Loop Trail and Parley's Canyon Trail should be considered as part of the Mountain Accord planning process.</li> </ol> </li> <li>Mountain Biking in the Mountain Accord area       <ol style="list-style-type: none"> <li>Recreational Trails Plan – There is a great need for a recreational trails plan that takes into account the needs of mountain bikers and hikers both. This plan should be developed as soon as possible.</li> <li>Mountain Bike Connectivity is important in the Wasatch Mountains           <ol style="list-style-type: none"> <li>Needs of Mountain Bikers are generally different from those of road cyclists since the location and surface is different.</li> <li>The Wasatch Wilderness Bill (designations) as possible. Boundaries could be adjusted to accommodate mountain biking, but not to the detriment of preservation of the land and bios.</li> <li>There is not much detail on the proposed trails plan. While this eventually would be fully developed, the map in the blueprint is far too small to understand the implications.</li> </ol> </li> </ol> </li> <li>A soft surface trail plan for the Wasatch should include       <ol style="list-style-type: none"> <li>Funding mechanisms (similar to Park City's).</li> <li>Safety</li> <li>Maintenance.</li> <li>Some mountain bike only trails should be considered.</li> <li>Boundary adjustment of the Mt. Olympus Wilderness to accommodate mountain biking on the Bonneville Shoreline Trail. Please do this as soon as possible so that this important trail corridor can be completed.</li> <li>Funding needs to be provided via tax mechanisms or otherwise to develop a public-private partnership similar to that of Summit County and the Mountain Trails Foundation.</li> </ol> </li> <li>Transportation       <ol style="list-style-type: none"> <li>I am unclear why at least attempting to improve bus service is not on the table. Currently, bus service is barely adequate in the canyons. For example, if one wants to ski an afternoon half day at Alta or Snowbird, there is no bus that works for this. The park and ride lots are often full, hence utilizing the bus is not easy or is impossible. Many of the buses are full at the end of the day as well.</li> <li>Another short term solution that would help is to include a UTA pass with each day pass sold at the discount locations in the Salt Lake Valley. Lift pass kiosks could be set up at the park and ride lots to facilitate this too.</li> <li>I am not sure what to think about the proposed train system. It seems like a really expensive option and that the cost/benefit ratio would be really high. I am unclear why at least trying to improve bus service shouldn't be tried first. Would this actually improve conditions or just add more users to the canyon?</li> <li>Please do consider fee based use of Big and Little Cottonwood canyons similar to Millcreek Canyon.</li> <li>I don't support linking Big and Little Cottonwood Canyons.</li> <li>I don't support keeping Guardian's Pass open in the winter.</li> <li>I don't support any above ground connectors from Park City to the Cottonwood Canyons.</li> </ol> </li> <li>Economy       <ol style="list-style-type: none"> <li>The value of dispersed recreation needs to be considered in addition to the ski areas. Many companies move to Utah (Black Diamond, Petri, etc) because of the dispersed recreation and that they are in the business of providing gear for that. Developing this portion of the economy should be considered as well.</li> <li>I like the idea of reinvesting tax revenue in the Central Wasatch.</li> </ol> </li> <li>Environment       <ol style="list-style-type: none"> <li>Land Preservation           <ol style="list-style-type: none"> <li>Wilderness               <ol style="list-style-type: none"> <li>I am supportive of designating as much wilderness as possible. Please consider the recommendations of the Wasatch Wilderness Bill.</li> <li>Ski Areas and the Wasatch Mountains                   <ol style="list-style-type: none"> <li>I think that the boundaries of the ski areas are fine where they are currently. There is not a need for additional terrain.</li> <li>Most discussions around ski area expansion focus on the impact to winter backcountry recreation. However, it to my view that the impact to the biota (flora, fauna) and to summer recreation is far greater. Ski area expansion means additional lifts which require roads, which impact summer hiking, and increase stress on wildlife and flora.</li> <li>I would be okay with some of the intent of the Proposed Cottonwood Canyons Scenario, but only if Grizzly Gulch is closed to ski area expansion. I would also not be supportive of any new housing in Alton Basin in Alta. The ski area expansion on public land, so asking to remove some of their private land from development consideration is a reasonable request.</li> </ol> </li> </ol> </li> <li>Additionally, there is no mention of affordable housing for ski area employees. This is an important part of reducing car to Utah residents, and improving conditions for employees.</li> <li>I am very opposed to One Wasatch. This would impact summer uses, view sheds, flora, fauna, and would have little benefit to Utah residents.</li> <li>Connectivity between Salt Lake and Brighton is okay with me.</li> <li>Connectivity between Alta and Snowbird is okay with me as well.</li> <li>I do not support connection the Park City areas with the Cottonwood areas. This would be too much encroachment on the land. I also don't support connecting Big and Little Cottonwood Canyons.</li> </ol> </li> </ol> </li> </ol> </li></ol>	<p>5/1/2015</p>
<p>Dear Committee Members: The Wasatch Mountain Club has concerns regarding the specific details of the trail network envisioned by the Mountain Accord. While we generally support this initiative in details, emerge the devil does come out. Currently most trails in the Wasatch are listed as multi use. This usually means that hiking and biking are allowed. In reality, many trails are rocky and steep and the majority of the use on these is hiking. In the case of single tracks, the majority of use migrates to biking. We believe that where adequately designed multi use trails can serve both user groups. This means that there is good visibility for bikers and hikers to see each other there are no surprises. It also means a trail wider than a single track so there is plenty of passing room and with fewer switchbacks and longer straight courses. Multi use trails will likely need a better construction standard and more frequent maintenance. For example, if the trail from Alta to Solitude/Brighton through Twin Lakes Pass is to become a true multi use trail there are rough sections that clearly need to be improved. Since it is also a very hiking trail the above recommendations should be followed. The trail to Katherine Pass is currently listed as multi use. This trail receives heavy hiking use from both the Alta and Brighton sides. This trail should really be for pedestrian use only. There are simply too many people on it. Another concern is what opens up when a trail is improved to be more bike compatible. The Grizzly Gulch trail will make upper Silver Fork and pines west available to the increased traffic over Twin Lakes Pass. We think that the trails in Silver Fork and Days Fork should be restricted to foot travel so there would need to be an increased level of information and potentially enforcement. There are other examples where increased bike use due to trail improvement will lead to user conflicts. Now is the time to address these. We know that adding restrictions later creates more ill will and conflict than working it out early. We feel this discussion needs to be added to the trail network discussions.</p> <p>"I have heard too many (deliberately) anti-future think people die a blueprint, because: "You can't run a train up Little Cottonwood Canyon", "You can't construct a tunnel between the Cottonwood Canyons", "It will be far too expensive, BTW how much will it cost me?", "We have many other needs that should be of a higher priority", etc. I think that these kinds of comment are not helpful in developing a much needed transportation/access solution for a very significant problem situation. Therefore, I recommend three things:</p> <ol style="list-style-type: none"> <li>Ignore the ignorant idiots.</li> <li>Continue with honest public relations, focusing on educating the general public, and</li> <li>Commence IIS and more detailed design, so that we can begin to rationally assess the better options.</li> </ol>	<p>5/11/2015</p>
	<p>3/21/2015</p>

<p>"Hello, I am a Salt Lake City resident and have been a partner for 43 years in an outdoor specialty store, Wasatch Touring. We rent and sell human-powered outdoor equipment for Nordic skiing, backcountry skiing, hiking, kayaking, and hiking. Our customers come from all over the world. They comment on the pristine beauty of our Wasatch Mountains. Often Europeans mention that they come to Utah because it is not over developed with ski lifts crisscrossing every mountain. In the Wasatch, they can ski at an area day and four or skate ski the next, without leaving their car. For this and other reasons, I believe we should have controlled and limited development in the Wasatch Mountains. Now is the time to protect this precious resource for clean drinking water, dispersed recreation, wildlife and the beautiful, undeveloped vistas for future generations. Transportation We could solve the traffic congestion problems by developing a bus system that is efficient and affordable. Some buses could drop directly to the ski areas while others could stop at state canyons for dispersed recreation. A simple, efficient, and affordable bus system could solve the problem. Charging people to park up the canyon may discourage people from driving their vehicles, but I feel having an incentive might be more powerful than a penalty. I would not recommend widening the canyon roads or installing trains or tunnels. This solution is too expensive and has a detrimental environmental impact on a sensitive watershed. Recreation The Wasatch Mountains provide many ways to recreate. Our focus should be to protect the undeveloped land for dispersed recreation. We no longer live in an era where bigger is better. Today, you can have a unique skiing experience at eight different ski areas all within one hour of Salt Lake City. Connecting the ski areas may seem like a good idea for marketing Utah as a destination for downhill skiing, but it will have a major negative impact on all the other forms of recreation. Economic Wasatch Touring's vendors that have moved to Utah include Petzl, Black Diamond, Rosignol, Salomon, Marker, Voile, Allie, Sauro, Quality Bicycle Products, and Specialized Bicycle. They chose this area because their products are used in the mountains and their employees enjoy playing in the the outdoors. I support of land swaps are a better for accommodations, restaurants, and cultural options that will draw people and revenue to the business's year round. I don't want ski areas to expand with ski lifts or mountain-top construction, such as the eyegore on Hidden Peak. Adding more ski lifts won't improve the quality of the skiing experience and will increase the cost of lift tickets. By preserving and protecting the land around the ski areas, businesses can build a new clientele offering year-round, alternative forms of outdoor recreation and mountain activities. Environment The best thing we could do for the environment of the Central Wasatch would be to protect it. We have a valuable resource that provides us with our drinking water and a habitat for wildlife and algae vegetation. This fantastic natural landscape in proximity to a major metropolitan area is unique and offers an escape from the busy mechanized city life. This sanctuary of undeveloped landscape offers a connection with life in it's natural state and provides solace to all that have the opportunity to hike its trails. By concentrating future development at the base of the ski areas we can protect the surrounding environment (plants, animals, and water quality) for all of us and future generations. "Mother Nature should be respected with reverence." Edward Abbey Thank you for reading my comment.</p>	<p>3/15/2015</p>
<p>April 8, 2015 Mountain Accord is tasked with seeking an appropriate future balance among the various uses and environments within the Central Wasatch, including the backcountry. The current balance has been established by the Uinta-Wasatch-Cache Forest Plan. This plan was implemented after a thorough NEPA process which extensively studied Forest use and found the right balance and provided both permanence and flexibility over time. To plan for the future Mountain Accord must understand what is at risk before significantly modifying the current condition. The Carrying Capacity of each use area needs to be measured and optimized before any wholesale implementation of changes are made to the shared environment. Although adjacent to each other the various recreational uses are quite different and each use has its own particular values. An increase of thousands of skier visits to a ski area is likely welcomed from an economic point of view. And because it represents a small percentage increase in the overall visitation rate it would not fundamentally change the experience. The ski areas are where we cluster high density activities. The Carrying Capacity of ski areas is quite high and much of the new future use can be managed by addition of lifts and runs. However, a similar numerical increase in winter backcountry use would be disastrous to the experience and the safety of users. In these undeveloped areas even a limited increase in visitation will cause congestion and visitors will feel very crowded. The multiple use portions of the backcountry are very important to Forest health. They provide a buffer between Wilderness and ski areas and are where various user groups can share terrain. These are the only locations where the diverse recreational opportunities desired on the Forest occur. They also are sensitive and protected environments for wildlife etc. that could be easily compromised by ski area expansion. The land exchanges proposed by Mountain Accord are not all the same. Some protect the backcountry from development and some peg the backcountry at risk. Since any incremental loss of backcountry is irreplaceable each proposed land exchange should be studied individually and with care; not combined and authorized through a broad brush legislative land exchange process. The exception being those ski area proposed land exchanges that protect the backcountry. These are welcomed and can likely be legislatively mandated. However, proposed land exchanges that adversely impact the backcountry should go through the NEPA process to examine desired conditions and insure good solutions. These include those that would provide lift service to the single largest group of backcountry skiers in these areas and we do our share to enhance the backcountry experience and safety of the public. Other proposed Mountain Accord solutions such as tracks, or tunnels are better. In addition it's not just the currently popular backcountry areas that need protection. As yet to be popularized multiple use areas such as those found in American Fork will be needed in the future as an increasing population forces those seeking a less crowded, yet accessible, experience to venture outside of the Central Wasatch. Large land exchanges for these areas should not be granted without examination and study through the established Forest Plan and NEPA processes. There are other threats to the multiple use areas of the backcountry. Currently there is an abundance of Wilderness on the Forest which is vastly underutilized. No more Wilderness acreage need be added at the expense of the multiple use backcountry. Lands can be protected through other Mountain Accord proposed means which are less restrictive on current activities. Even if the size of the backcountry remains as is, predicted increases in population may destroy the character of the winter environment. Maintaining an acceptable level of quality use, based on Carrying Capacity, can only be sustained by limits on visitation. Backcountry overuse, and resultant potential conflict, needs to be addressed for aesthetic and most importantly safety reasons. In very popular areas, on particular days, Carrying Capacity has already been reached. Too many people in the same drainage can cause problems. Ski lines, desired for their power, are limited and easily exhausted. There is fuel danger that overcrowding can push users into avalanche threatened areas or of one group of users potentially endangering members of another group. After more than 40 years Powderbird still represents the single largest group of backcountry skiers in these areas and we do our share to enhance the backcountry experience and safety of the public. We provide the unique service of escorting skiers through this beautiful yet avalanche prone terrain. We are the most regulated user group on the Forest and we exercise overcrowding resolution through mobility and avoidance. We are very much in favor of maintaining every single backcountry ski run since any reduction at an available terrain to Powderbird or others will simply increase crowding in the remaining areas. The more places we have to go the easier it is for us to avoid others. Our clients, as well as other users, are all members of the public that rightfully deserve, and prefer, limited encounters with others in a relatively safe shared environment. Through an extensive permitting process, including two Environmental Impact Statements, Powderbird's use of these areas has been, and is now, restricted in both time and place. Our use has been stable since the 1980's and capped since 1999. Our use is not growing...we are not the problem.</p>	
<p>Other backcountry skiers claim their groups' use has been increasing and is expected to further increase. It is fundamentally unfair of an unregulated, growing entity to ask the members of the public who have utilized our guide service since 1973 to step aside so their group will have more room to expand. The Mountain Accord process is the ideal venue, and now is the ideal time, to begin placing conditions on backcountry access in high use areas in order to keep an enjoyable and risk manageable environment for everyone. Restrictions should be conditions similar to those already in place on trails, and campgrounds throughout the country, including, registration, performance standards compliance, code of conduct agreements and permits. A combination of these will ultimately be helpful in preserving a rich experience. Not all uses are the same. Ski areas are very popular. Wilderness is where one should expect solitude, and multiple use terrain is where you can expect a somewhat in between, but high quality, experience. For the experience to remain acceptable the backcountry cannot be decreased in size, it should not be made more easily accessible and it needs to quickly be protected from over crowding and access restriction. Mountain Accord can achieve all these goals through applying an environmentally driven preferential treatment that this limited resource deserves. Powderbird Helicopter Skiing</p>	
<p>I grew up in Salt Lake City and have spent a lot of time in and around the Wasatch canyons, and particularly Little Cottonwood. As a resident of downtown Salt Lake City, I value the Wasatch for its watershed, recreation opportunities, and open space. I believe that Mountain Accord can have a very positive impact on the Wasatch and surrounding communities. While I largely agree with the overarching goals and actions within the Blueprint, there are three areas that I am particularly concerned about: 1) Proposed connection over/through Grizzly Gulch Part of what makes Little Cottonwood Canyon, and particularly the town of Alta unique, is its relative isolation. I'm concerned that a tunnel through the top of the canyon into Park City will turn Alta into an extension of Park City. I believe this would be a detriment to the unique heritage, culture, and character of each community. Furthermore, from an environmental and watershed protection standpoint, I'm concerned that a tunnel would increase access to an area that is already highly visited. There is a benefit from both an environmental protection as well as user experience to limited access. Regarding a proposed lift over Grizzly Gulch, I am also not in favor. Lifts could be a considered a means of transportation (to the elite few who can afford lift tickets) maybe 5 months out of the year. I am concerned about the limits of this as a viable transportation alternative, but more so for its impact on the environment and watershed. For the remaining six months out of the year, we are left with an unsightly lift line that will be visible even far beyond the Grizzly Gulch area. I think we would be giving up too much in the way of open space, and the outdoor experience, by allowing a new lift in that area. 2) Mode of public transportation up LCC I support a bus rapid transit system over a train. As a Salt Lake resident I would love to have a reliable and quick public transit option up the canyon. I'm concerned, however, about the cost of a train as well as the inflexibility of a train. A train requires a significant investment in infrastructure, in time, money, and space. Studies show that bus transit systems are a fraction of the cost of a train and may be quicker to implement. I would prefer to see an investment in a bus system, with money spent on marketing the bus system to overcome past stereotypes. 3) Proposed land swap between Forest Service and Alta Lifts Co. I am in favor of a consolidation of lands, particularly if it includes more wilderness or other land protections for the Wasatch as a whole. However, I have many concerns about the swap between the Forest Service and Alta Lifts Co. entirely benefiting the lift company. I believe that if a town center is truly to be created, a portion of that land MUST be dedicated, within the swap agreement, for public purposes that benefit the community and its year-round visitors. Lands must be dedicated for public use in a covenant running with the land. In particular, if we are trying to encourage use of public transportation up and down canyon, then there needs to be some sort of PUBLIC infrastructure to support that. I'm concerned about visitors and residents being offered access to the Alta area if the new infrastructure is designed to attract high spending out of state dollars. It is the Town of Alta, where Alta Lifts Co. is just one of other businesses, not the other way around. And finally, keep Alta unique by not trying to compare ourselves to the Alps. We are a unique experience in and of itself. Thank you for all your time and effort with Mountain Accord. "</p>	<p>5/1/2015</p>
<p>I support the Mountain Accord study and planning process. There is some controversy over whether Summit County would want a train to end in Park City after coming up Little and Big Cottonwood Canyons. If a train is determined to be the best alternative and Summit County is not interested in being the end of the line, then they should have the ability to opt out of that particular plan. Keeping status quo on giving us access to the central Wasatch is not an alternative with a projected doubling of the population. I support over the snow possibilities and new transportation alternatives to improve public access into the Central Wasatch. I believe the summer access and dispersed recreation need is possibly more important than the winter skiing access. One of Utah's strong economic development brands is an active lifestyle in close proximity with ease of accessibility to mountain recreation venues. Mountain Biking, Hiking, Skiing, technical mountaineering are all major draws for the workforce of our future. Companies locating and expanding here are trying to attract the best and brightest of the Millennial Generation. The Millennial are very mobile and seek high intensity in an active lifestyle. The Wasatch Front and Back will continue to attract major employers like Adobe and Goldman Sachs because of the lifestyle they offer by living here. Easy access into the mountains is critical to allow this workforce to hike, ski, or bike before or after work and be able to enjoy a balanced work and recreational life. There is a balance that can occur with the stakeholders involved with Mountain Accord. Keep the process working and find that balance between the environment, water resource, recreation and protecting Utah's unique asset of having a mountain playground so close to a major U.S. city. "</p>	
<p>I am in full support of the Mountain Accord and look forward to more connectivity between the ski resorts. The train through Alta will be a great improvement to the transportation problems and provided a much needed addition egress to a close out canyon. Great work. "</p>	<p>5/1/2015</p>
<p>"It is truly a wonderful and amazing experience to play a small part in this process. I think it represents the best of all of us to be willing to come together to seek solutions for the best future for the Wasatch. Thank you to everyone for their time, energy, and emotion around all the issues. This is a one-time opportunity for us to reach an agreement and it would be a tragedy for us to let it pass by. Following are my thoughts about what I would like as the final result from the Mountain Accord process. First, it might be helpful to summarize some of the most important generally agreed upon principles that have resulted from the Mountain Accord process. 1) Everyone will experience shared pain and shared gain. An agreement too lopsided in any direction will not work. 2) Future urban development will occur almost exclusively in the surrounding cities and not in the Wasatch canyons. This includes all areas in the Wasatch and not just in the area immediately covered by the Mountain Accord. 3) Protecting our watershed is of primary importance. 4) The wilderness and environment of the Wasatch must be protected. 5) Most participants want the Mountain Accord process to end future land and water use conflicts. It will be a serious shortfall of the process if we kick any major cans down the road. 6) The Wasatch is important to the economic growth of our region for our future. It also might be helpful to note the major wishes for the ski resorts and the dispersed recreation users. 1) I believe the ski resorts have consistently said having an efficient, safe, reliable mass transit system is very important to them. 2) The ski resorts would like to grow their businesses. 3) The dispersed recreation users want the existing ski resort boundaries maintained. There must be an agreement for no future requests for ski resort expansion. 4) The dispersed recreation users want all areas not in the ski resort boundaries protected by Wilderness, Special Management Areas, and/or National Monuments. These designations give us the best protections for our watershed the environment and rule out most future conflicts. Following are my comments on the negotiations with each of the ski resorts and on specific topics. SOUTHWEST SKI RESORT: Southwest is asking for an extension of the Honeycomb ski lift down to the intersection of Honeycomb Canyon and Silver Fork Canyon, some base consolidation, water for snowmaking and mass transit. In exchange they are willing to trade land at the top of Big Cottonwood Canyon, and I presume no more ski resort expansion ever in any direction and support of complete and final protection of public land in the Wasatch. This trade is probably acceptable. It includes a relatively equal amount of pain and gain for both sides. The details of the base consolidation needs to be defined and agreed on for any final agreement. The exact ski lift extension needs to be defined and agreed on for any final agreement. BRIGHTON SKI RESORT: Brighton is asking ski area expansion and a lift in Hidden Canyon, water for snowmaking, and mass transit. Dispersed recreation users are asking for no further ski resort expansion ever in any direction and support of complete and final protection of public land in the Wasatch. The details of the base consolidation needs to be defined and agreed on for any final agreement. The exact ski area expansion and ski lift needs to be defined and agreed on for any final agreement. This proposal seems lopsided in favor of Brighton Ski Resort. Where is their pain? PARK CITY SKI RESORTS: seem to be most interested in an effective mass transit system. It is important they agree to land and water protection in the form of Wilderness, or National Monuments and no development on the SE side of the Wasatch crest. ALTA SKI RESORT: Alta is asking for mass transit, land for a transportation hub near their base, water for snowmaking, and a lift up Grizzly Gulch. Alta seems unwilling to share any of the pain and is too lopsided in favor of Alta to allow for any final agreement. Alta would have to agree to transfer to public ownership all land on the north side of the Little Cottonwood Canyon road, and the area immediately adjacent to it. SNOWBIRD SKI RESORT: Snowbird is asking for mass transit, land at its base for development, water for snow making, and ski resort expansion down Mineral Basin and into Mary Ellen Gulch. Snowbird is willing to trade all their land on the north side of Little Cottonwood road, and a piece in White Pine. What is being proposed is much too lopsided in favor of Snowbird. Snowbird is asking for an enormous amount of ski area expansion and development in Alpine Canyon and cannot be supported by the dispersed recreation users and environmental organizations. It would be fair for Snowbird to receive mass transit, land at their base, and water for snow making in exchange would have to agree to transfer to public ownership all land on the north side of the Little Cottonwood Canyon road and White Pine, no ski resort expansion ever in any direction, and support of complete and final protection of public land in the Wasatch. SKI RESORT EXPANSION: For over 20 years the US Forest Service and Salt Lake County master plans have explicitly stated there would be no future expansion of ski resort boundaries. Numerous times over many years ski areas have asked for expansion of their boundaries and the Forest Service has always turned them down. Both have stated the existing balance between developed and dispersed recreation land use was fair and balanced and should not be changed. While small changes in ski area boundaries might be acceptable it is very important the Mountain Accord final agreement support those values. Attached you will find the Salt Lake Chamber's official comment on the Mountain Accord Blueprint. Lane and I want to commend and thank each of you for your work in making this process a success. We also extend our sincere appreciation for Laynee, the project team and the management committee along with the hundreds of participants that have taken part in the progress thus far. Together your work to ensure that the Central Wasatch remain an asset for generations to come is extraordinary. This process has provided a needed forum for long term decisions and is an example of what make's Utah great: our ability to collaborate and compromise for the greater good.</p>	<p>4/30/2015</p>

<p>The Mountain Accord initiative is an ambitious and complicated process. I appreciate the efforts of the Mountain Accord staff and members. I volunteered countless hours as an Environmental System member.</p> <p>My observations are that the proposed Blueprint is heavily tilted towards development over preservation. This is not to discount the suggested land protections and conservation proposals.</p> <p>Public opinion over the years consistently supports more conservation and less development in the Central Wasatch. This sentiment is not present in the current proposal. Private industry/landowners that choose to do business in the watershed are beholden to the strict rules that come with operating in such a venue. General public support (not just recreationists) is needed for increasing commerce and development in the canyons – and this is not demonstrable in any form of general public polling.</p> <p>On the whole, commercial industry wants and gets:  - Resort expansion  - Base development  - Water for development  - Water for snowmaking  - Subsidized mass transit  - Interconnected resorts</p> <p>The conservation community gets protections of some important tracts of lands, but at an imbalance cost to the community at large (see list above).</p> <p>The outcome of the current Blueprint, if it comes to fruition, is excessive crowding and impact to the canyons.</p> <p>I would suggest the following recommendations to balance the Blueprint.</p> <ol style="list-style-type: none"> <li>1. Retain all suggested open land protections, including Grizzly Gulch-Catherines Pass.</li> <li>2. No resort expansion beyond current boundaries and NO interconnect of any type (Tunnels and aerial lifts included).</li> </ol> <p>In exchange for these protections, the resorts get water for snowmaking and modest base development (to be determined, but with strict controls and no more parking lots). In addition, mass transit needs a visionary improvement.</p> <p>Mass transit should be improved with the goal of decreasing private automobile use. The resorts and their patrons are the main beneficiaries of such a system. Attempting to re-think the bus system is an appropriate next step towards upgrading mass transit. Using snowsheds and utilizing efficient and dynamic capacity models would be a logical next step. Convenience and more cost-effective than driving a car is necessary for long term success of the system.</p> <p>In conclusion, the revised blueprint must shift towards more protections of the Central Wasatch if the public concedes water rights, base development, and the impacts of an improved mass transit system.</p> <p>-</p>	<p>4/30/2015</p>
<p>Introduction</p> <p>The concepts within the Mountain Accord are sufficiently vague causing an overall concern that any support for the concepts is premature. Understanding the complexity of planning that will be necessary for implementing the varied aspects considered by Mountain Accord, the very premise of the Mountain Accord is concerning as well. Taking a broad swath of land and jurisdictions and allowing a select group (partially made up of for profit companies whose bottom line will be benefitted by the outcome) to come to consensus on how these areas should be planned, circumvents the public process. It applies undue pressure and influence to any project by project analysis and public hearing that subsequently occur.</p> <p>Most visioning processes, though useful in understanding broad concerns and needs, often fail to implement with integrity the environmental or community benefits envisioned by these processes. Too many visioning efforts result in the economic development and transportation elements getting funded and moving forward while meaningful preservation is sidelined, partially accomplished, left to chance or worse development occurs instead.</p> <p>Land preservation and Watershed protection needs to be the highest priority for all those at the table. It is fundamental to long term economic vitality and should not be undermined by short term economic concerns as the recreational opportunity, clean water and environmental health once compromised cannot be replaced. Transportation solutions should not be driving the process. It is disheartening to see the scoping document appear on the register indicating that Transportation solutions will drive the process and further questions the viability and stability of the process.</p> <p>Land Swaps – Having protected land from development for the past 25 years, anytime there is discussion regarding taking protected land and making it developable there are concerns. The bar needs to be sufficiently high, so that this idea does not become routine. This land swap has the potential to set a dangerous precedent. Consideration should be given not just to the amount of acres proposed but also the relative development potential, the planning and zoning currently existing and the eventual development considerations given to the property. Additionally a concept which has been part of other federal regulatory process is that it shouldn't be a one to one match but rather a ratio where there is a several fold increase of protected land.</p> <p>Additional protections for already protected land – Additional layers of protection for already protected land is fundamentally a good thing. Utah Open Lands has long held that conservation easements are critical as a layer of defense and protection when land is purchased or zoned as open space. With this said no one would pay a full market value for a piece of land that had already had the development rights stripped away. Whatever the additional layer of protection turns out to be whether it be Wilderness designation or something similar the trade off should be commensurate with the recognition that it is protected already and therefore trade offs should not be considered as if the land protected was somehow in danger of being developed.</p> <p>Economic Centers or Transit Oriented Development – this concept in theory is dynamic and should aid in reducing air pollution, traffic congestion and create walkable communities. In practice there are several concerns. Blindly supporting this concept without proper regard for the consequence of how these areas actually get rezoned and the potential lawsuits that it might open up is foolhardy. The concept of economic centers is troubling as most of these communities lack requisite and appropriate ordinances to ensure that these centers, which will necessarily benefit the landowners within these centers, will actually provide a benefit to the community reversing decades of positive planning in which clustered development or mixed uses were supported but also the relative development potential, the planning and zoning currently existing and the eventual development considerations given to the property. Additionally a concept which has been part of other federal regulatory process is that it shouldn't be a one to one match but rather a ratio where there is a several fold increase of protected land.</p> <p>Train or transportation solution – A recent New York Times article explored the train versus bus transportation solution in many cities. The conclusion, buses are not as sexy but they are more efficient, are not fixed and therefore can actually accommodate a ridership that gets people where they need to go and are more cost effective. We are not Europe we are a car centered community which suggests that buses accommodate the need better. A train that aims to solve a transportation problem that exists perhaps 20 days out of any given year in the cottonwood canyons, doesn't make sense. A train in the canyons will not pay for itself in ridership and therefore will potentially increase undesirable development as a means to finance shortfalls. Current fares are too costly to truly capture the family of four wanting to recreate in the mountains. \$5 per trip – \$40 for the day will not be cost effective for any family. Additionally, as climate change alters current recreational pursuits in ways we may not be able to envision a bus line will be far more adaptive to those changes than a fixed solution.</p> <p>-</p>	<p>5/1/2015</p>
<p>*May 1, 2015  Subject: Comments on Mountain Accord  Dear Mt Accord Executive Committee:</p> <p>I appreciate the opportunity to participate in the Mountain Accord program and provide my input and comments for your consideration. I live in Sandy, Utah and very regularly recreate in Big and Little Cottonwood Canyons. I am a skier, mountain biker, hiker, and runner. I moved to Utah 24 years ago. I had been coming to ski here at least annually for 10 years prior. A major part of my decision to move to Utah was the Central Wasatch and the Cottonwood Canyons. I truly love the beauty of the area, and the wilderness and near wilderness experiences that are possible only 20 minutes from my home in the Valley. I am a hydrologist, and my career here as a consulting hydrologist has been primarily planning and protecting our existing water supplies, development of new clean water supplies, and attempting to clean up polluted water supplies, such as Hill ARB and Geneva and Steel, which unfortunately is not possible with the current technologies and funding our society allocates towards those problems. I understand the importance of the quantity of pristine mountain water that we in the Valley utilize from Big and Little Cottonwood Canyons for drinking water.</p> <p>I am most familiar with the planning issues and challenges in Little Cottonwood Canyon (LCC), and to a lesser extent in Big Cottonwood Canyon. Therefore my comments are focused on LCC more, but my overarching comments can be extended to my opinions on the entire Central Wasatch.</p> <p>Land Swap – Cottonwoods Canyon Task Force (CCTF)</p> <ol style="list-style-type: none"> <li>1. The most troubling part of Mt Accord to me is the CCTF. We went through the month's long "public" Mt Accord process, and ended up with a closed door, secret process with CCTF. I was disappointed to attend the Mt Accord public meetings where Mayor Becker spoke for 10 minutes without being able to share much insight on the deals that were being hatched – because they were closed. It leaked out that Alta Ski Area was demanding a train and tunnel as part of the proposed swap. I understand Alta later changed its position, however, that news undermines the premise of the Mt Accord process and public input on transportation solutions. I am still skeptical that Mt Accord decisions won't be twisted to match whatever the ski areas want from the land swap.</li> <li>2. That said, I am supportive of the land swap to allow the US Forest Service to own and manage the currently undeveloped upper mountain lands and put the development or partially developed lands at the base of the ski base areas into ski area management. I premise my support on the understanding the ski areas would acquire lands of equal or lesser value than they are giving up. My support is also conditioned on following: <ol style="list-style-type: none"> <li>3. The land exchanges be equal.</li> <li>4. The ski areas should give up all of their upper mountain undeveloped holdings. This should not be a piece meal process where they offer up some and not all. Specifically Alta Ski Resort should give up all its miscellaneous holdings in the Albion Basin. I support Alta Ski Area being able to trade for land in the base area that they currently have buildings on.</li> <li>5. If the ski areas land appraisal value would result in the ski areas receiving excessively large tracts of land at the base areas, then the excess land should be purchased from the resorts. I think more than 50 acres beyond the land the ski areas currently have buildings on would be excessive. I am supportive of allowing the ski areas to purchase additional acreage if the valuation is out of balance the other way.</li> <li>6. The private inholdings in upper mountain lands should also be brought into public ownership. It is not beneficial to have the ski area land swap and leave behind all the properties that have brought conflict to Central Wasatch for so many years.</li> </ol> </li> <li>7. As part of the swap I support the Town of Alta acquiring land through this process in the base area for public purposes such as transit, trailheads, watershed protection, and community space be devoted to public bodies responsible for those purposes.</li> </ol> <p>One Wasatch</p> <p>I believe the largest economic benefit to the Central Wasatch would be a limited, environmentally responsible implementation of One Wasatch. Limited lifts, only where they are required to link the resorts. For the ski community this would result in worldwide draw and appeal – hence a great boost to the economy. It would not provide any transportation solution. The lifts would only be operated during the ski season, they would not be in operation for summer use. It is very disappointing to me that One Wasatch has been eliminated from consideration during CCTF negotiation of the land swap. My understanding is the backcountry advocates and environmental groups have demanded One Wasatch be dropped, and because of this stance have accepted the mass transit tunnel connection between the canyons and Park City. I believe a limited One Wasatch is significantly more environmentally friendly and a bigger boost to the economy.</p> <p>Environment</p> <ol style="list-style-type: none"> <li>1. My primary concern with environment is that it was found early in the Mt Accord process there is not enough scientific data to adequately understand the environmental impacts of actions being considered by the systems groups.</li> <li>2. The key question is what is the carrying capacity of the canyons? How many humans and activities can it sustain? Will it be limited or need to be managed in the future? If you don't define this, then how can Mt Accord master plan transportation solutions. I believe the numbers will need to be managed in the future.</li> <li>3. The natural environment is the economic engine for the businesses and governments in the Central Wasatch. Without the natural environment the ski areas, hotels, etc., wouldn't exist. It is the highest priority of Mt Accord to protect, preserve, and hopefully enhance the natural environment. Once it is degraded, it would be costly and almost impossible to restore.</li> <li>4. Watershed protection is critical! I support saving the canyons from development in lieu of degrading water quality. Yes you can treat the water down canyons, but at what increased cost to the taxpayers. Watershed protection is a proactive tool in minimizing water treatment costs for the growing population.</li> <li>5. With the growing population it is important to truly set aside certain portions of the Central Wasatch from development.</li> <li>6. I strongly support Mt Accord implementing the following next steps: protection of key wildlife corridors, mine tailings and environmental restoration programs, and development of a management plan for environmental resources.</li> </ol> <p>7. Federal Designations. I support designation of additional Wilderness in the Central Wasatch. I support Federal Designations that add a layer of protection that preserves habitat connectivity and conservation of ecosystem services (benefits to humans from the environment) on USFS lands in the Central Wasatch that are not currently managed as Wilderness.</p> <p>Recreation</p> <ol style="list-style-type: none"> <li>1. I strongly support saving LCC and BCC unique "closed canyon", "end of canyon", "top of the canyon" recreational experience. The experience cannot be replicated but could be destroyed. It is why I moved here.</li> <li>2. Support enhancements and additions to a Central Wasatch regional trail network that accommodates and reduces different user group conflicts.</li> <li>3. I support securing new designation on USFS lands to protect areas from development while allowing current recreational uses.</li> <li>4. I support conservation of wildlife habitat that also enhances the outdoor experience.</li> <li>5. I support preserving a variety of recreational uses.</li> <li>6. I support preserving key backcountry terrain. With the exception of a limited One Wasatch.</li> <li>7. I support improving transit service to recreation areas, as long as it also serves dispersed backcountry users.</li> <li>8. I support studying user fee options to increase transit options and generate funds for environmental and recreation stewardship efforts.</li> <li>9. I support of directing recreationists to identified high use nodes with infrastructure that can accommodate those recreationists.</li> </ol> <p>Economy</p> <ol style="list-style-type: none"> <li>1. I support Mt Accord key action to "Encourage development patterns that preserve community character and quality of life" because watershed, wildlife and open spaces are the foundations of the area's economy. I support focusing development outside of the mountain areas, in urban areas. I support development within the existing surplus water contract between the Town of Alta and Salt Lake City.</li> <li>2. Alta's unique location at the top of Little Cottonwood Canyon provides an economic advantage to local businesses and also provides economic benefit to the greater Salt Lake Valley. I do not support the changes that an interconnect transit system would have on the unique character and appeal of Alta. These concerns include losing the "end of canyon" charm by becoming a throughway. For me and many visitors Alta is a destination that should be preserved for future generations to be able to experience.</li> <li>3. I support minimal development in the mountains that is focused around thoughtfully designed transit stops at existing development nodes in the canyons (at the ski resorts).</li> <li>4. I support enhanced avalanche mitigation techniques on LCC and BCC for safety and to increase the economic viability of the businesses.</li> <li>5. I support environmentally friendly transportation solutions to enhance economic viability.</li> <li>6. I do not support extraordinarily expensive, taxpayer-funded solutions to problems mainly benefiting private industry businesses.</li> <li>7. I support a limited One Wasatch.</li> </ol> <p>Transportation</p> <ol style="list-style-type: none"> <li>1. Transportation solutions should include watershed and environmental protection as the highest priority.</li> <li>2. I am opposed to a transit system link between the LCC, BCC and Park City. It will degrade the environment of the canyons.</li> <li>3. I am totally supportive of improved, enhanced transit systems in LCC, BCC, and to Park City. Obviously they should be safe, reliable, cost effective, and environmentally friendly.</li> <li>4. After a recent trip to Europe this winter (first time in my adult life) I am very disappointed in the Transportation Group consultants not bringing forth any creative, innovative ideas. There are many. They missed the boat! This is America, we can do anything. We can be better than Europe and they are kicking our ass in transportation innovation in my opinion. I went many places on many different public transit systems and I enjoyed them all.</li> <li>5. I support enhanced transit combined with incentives to reduce vehicles and traffic on the canyon roads. The preferred solutions should be phasing with convenient parking near the base of canyon that provides stopping points for dispersed recreation. I support studying a vehicle and/or user fee for transportation in BCC and LCC.</li> <li>6. The environmental "carrying capacity" of the Wasatch is needed to define the carrying capacity of the transportation solutions.</li> <li>7. For LCC and BCC I believe Bus Rapid Transit (BRT) is the best option presented to us. It uses existing right of way (no new corridor), it is phasable and variable by season, it serves dispersed users, and it is way more cost effective than a train.</li> <li>8. That said, I am not opposed to a train if it is required to be in the same corridor as the road. I do not support a new transit corridor, most especially if stream crossings are required.</li> <li>9. I support avalanche control mitigation along the LCC road corridor to enhance public safety. If we had snow sheds and avalanche tunnels now, I suspect 95% of the public inconvenience and ski area winning would be gone already. Make it happen.</li> <li>10. I support improvements for the safety of road cyclists everywhere.</li> </ol> <p>-</p> <p>I believe that what is valuable and unique about the central Wasatch Cottonwood Canyons is that they contain ski areas in an essentially wilderness environment. There is a carrying capacity to the Cottonwood Canyons, mostly in terms of automobile travel traffic and areas given over to parking. I think the proposals that would increase development beyond current ski area base facilities should be avoided to preserve watershed protection and the long term value of the Cottonwood Canyons. Resort development can be accommodated in the Park City area as our ski Utah marketing efforts and preservation and conservation of the Cottonwood Canyons should be the overarching priorities for them. Transportation improvements should aim to reduce auto use by a program of incentives for public transit and disincentives for auto use in the Cottonwood Canyons and not a development inducing infrastructure. A dedicated lane shuttle system would serve our needs better than a billion dollar train system that would encourage additional development in the Cottonwoods. Thank you for undertaking this critical planning effort.</p>	<p>5/1/2015</p> <p>4/29/2015</p>

<p>Mountain Accord Planners 375 West 200 South, Suite 275 Salt Lake City, UT 84101</p> <p>The Wasatch Mountains are a critical resource for Utahns and visitors from all parts of the world. Protecting the Wasatch Mountains' environment should drive the Mountain Accord Blueprint, and be a pre-condition to any development strategies seriously considered.</p> <p>Public transport up the canyon must be frequent, comparable in travel time to driving and affordable, or people will continue to drive. A railway would be visually intrusive, noisy and diminish the wilderness character of the canyon. Construction and operation would likely have damaging impacts to water quality and wildlife. Instead, a dedicated bus lane should be considered, constructed by widening the road to three lanes where practical, with an alternate flow lane to accommodate bus traffic during morning and afternoon peak times in the winter. Avalanche protection might be added in Little Cottonwood to improve reliability of access, if built with a visually acceptable design.</p> <p>Tunnels among Little Cottonwood, Big Cottonwood, and Park City would mainly support ski resort marketing and would do little to address regular transit needs for residents. Tunnels may pose significant environmental concerns during and after construction such as water pollution, air pollution, noise, and permanent visual disturbances in our scenic canyons. Tunnels would incur significant construction and maintenance costs, and would disproportionately benefit out-of-state ski-area customers rather than Utahns.</p> <p>Land exchanges that preserve pristine backcountry in the Wasatch while allowing limited additional development in already impacted areas are potentially a good idea. These exchanges also offer the potential for reducing conflicts over wilderness designation and other protections on public lands. Permanent protection for public lands, such as those proposed in the Wasatch Wilderness and Protection Act in 2010, is important for watershed, wildlife and back country solitude.</p> <p>One of the most important outcomes from the Mountain Accord process would be to create permanent, limited boundaries beyond which ski resorts will not be able to expand. Have potential impacts from the following factors been fully evaluated?</p> <p>*The Utah State Climatologist projects declining snow packs with spring snow disappearing by 2100. How will Climate Change impact demand for skiing? *Today's youth spend half as much time outdoors as their parents. How will this affect future ski area attendance?</p> <p>Doing the least harm to our unique environment is the prudent course for Mountain Accord in the face of uncertainties over what the actual demand will be for ski resort access in the future.</p>	<p>4/28/2015</p>
<p>Thank you for the opportunity to offer comment on the Mountain Accord Draft Blueprint. It is commendable to have gotten to this point considering the complexities of the issues, the heartfelt concern for the Central Wasatch, the environmental concerns, and the economic considerations at stake. I hope that my comments will be of some use. From 2002 to 2006, I served as the Salt Lake District Ranger and following that I was the National Winter Sports Manager for the Forest Service until retiring in 2013. Prior to that, I worked for nearly 20 years on ski area and community development projects in Colorado. I view the entire Mountain Accord process, including the draft Blueprint as remarkable and something I did not see in over 30 years with the agency. While my section-by-section comments below do include some areas of personal support, I felt that focusing more on areas of concern might be of more utility in crafting the final Blueprint and as information to carry forward into Phase 2.</p> <p>A. Environment</p> <p>A large part of - and potentially the entire - Land Protection program appears to depend on a tenuous real estate transaction whereby ski areas would exchange 2,150 acres of land they own for 258 acres of land currently owned by the Federal government around the base of the various ski areas. While it is a reasonable goal for the Forest Service to exchange out of lands that have essentially lost their natural character and that are difficult for manage as wildlands, agency requirements for land exchanges are incredibly complex and time-consuming efforts and frequently are never consummated. This will especially be the case given the status of Federal lands in the Cottonwood Canyons and applicable Federal laws and regulations and should be somehow recognized in the final Blueprint in order to manage stakeholder expectations.</p> <p>Forest Service regulations requires following the strict requirements of the Uniform Appraisal Standards for Federal Land Acquisition, U.S. Department of Justice and the Appraisal Institute, and that land exchanges be conducted on an equal value basis (36 CFR 254.3(c)). Even legislatively mandated typically carry these requirements. Location and existing local land use ordinances are extremely important in appraising a parcel's fair market value. Many of the ski areas' holdings are in steep, relatively isolated locations making them difficult, perhaps even impossible, to develop. As such, they would have a relatively low value compared to many Federal land parcels at base areas.</p> <p>Many of the private lands in the Cottonwood Canyons - including those owned by ski areas - have multiple owners. Frequently, parties who assert they own a particular property actually only own a portion of the surface estate and the rest of the title is held by various other owners. In many cases, the mineral rights are owned by an entirely separate group of owners. Forest Service policy strongly discourages acquiring partial ownership of lands that are encumbered in this way, but even if it does it would seriously diminish the appraised value of the property offered. Also, these properties could be encumbered by reserved and outstanding access rights that other property owners nearby have. Acquiring less than the "full bundle" of property rights could create future management headaches for the Forest Service and should not be considered as a part of any exchange.</p> <p>Imposing National Forest "manageability" by acquiring contiguous parcels to provide for a more or less homogeneous ownership pattern is also an important consideration in determining whether the agency would initiate a land exchange process. It is not clear that this would be the case with the exchanges outlined in the Blueprint and it appears that in some cases the agency might acquire more management problems than benefits and in some cases further complicate ownership patterns.</p> <p>B. Recreation</p> <p>The new Wilderness portions of Cottonwood Canyons would clearly benefit from designation as a National Recreation Area. This designation would help to ensure consistent management and that the area gets the attention it deserves. However, this and other designations typically do not ensure increased Federal funding for administration and maintenance, and the increased visitation that would result could present additional challenges. Most of the other potential designations, such as Wilderness, National Conservation Area, and National Monument do not seem suitable options, especially on the scale of the entire Central Wasatch.</p> <p>Simply "exploring" user fee options doesn't address the historic shortfall in funding for operation and maintenance. In addition, user fees are a contentious issue nationally for Federal land management agencies and in the end may not viable.</p> <p>Constructing new trail segments for a better connected regional system is a worthwhile goal. However, maintenance of existing trails is already lagging far behind the needs, and in places these deteriorated segments are adversely affecting the environment, including the watershed. Without a guaranteed funding mechanism for maintenance, this situation could easily worsen by increasing trail mileage.</p> <p>The draft Blueprint seems to assume that user-created impacts can be addressed simply by improvements to mass transit and by focusing new recreation development at currently developed sites - primarily ski areas. Though worthwhile, these steps are unlikely to mitigate the looming growth and impacts. Some ski areas already offer summer programs, but often it is not the type of recreation activities that users are seeking. While efficient and inherently subjective, any long term effort to address user-created impacts will fall short without assessing the carrying capacity of the limited land base in the Cottonwood Canyons to support ever growing recreation demands.</p> <p>It is unfortunate that the Mountain Accord process did not examine other types of recreation uses and facilities in the Cottonwood Canyons. Specifically, motorized trail use, developed campgrounds, and picnicking and other developed day use is not addressed. These uses and facilities also have environmental impacts, the demand for more of this type of recreation is increasing, and they sometimes interact with uses that are addressed in Blueprint. The Mountain Accord process could have been a forum to discuss whether there should be more of these types of facilities, whether some should be closed and rehabilitated, and whether motorized recreation should even be allowed in the Cottonwood Canyons.</p> <p>C. Economy</p> <p>The measures identified to preserve community character and quality of life, such as some of the mass transit improvements, thoughtful design of infrastructure, and developing funding sources for environmental protection are commendable. In large part, the foundation of Mountain Accord seems based on the need to respond to a rapidly growing population and recreation demands in the Central Wasatch and protect its environmental qualities. It should be recognized that additional recreation developments and taking steps "to ensure that Ensure Utah's tourism market is competitive now and into the future" will likely add more fuel to fire and to some degree at cross purposes with the stated need for Mountain Accord.</p> <p>D. Transportation</p> <p>Passport Transit Incentives, year-round bus service in the Cottonwood Canyons, improved transit service on existing roadways in the Salt Lake Valley and between the Salt Lake Valley and Summit County, and in Big and Little Cottonwood Canyons.</p> <p>I do not support a transit connection in the Little Cottonwood/Park City corridor. Other than for improved marketing, none of the Mountain Accord documentation provides any justification for this, whether the connections would be by highway, rail, tunnel, car, bus, gondola, or chairlift.</p> <p>Especially in the Little Cottonwood Canyon, the most critical and well-documented need for a road system that is reliable and safe from avalanches and that doesn't rely on military artillery. While effective, artillery avalanche control still requires shutting down the highway for extended periods, but in addition it is a program that is entirely dependent on the U.S. Army for its continuation. Measures such as bridges and well-designed snow sheds could do much to mitigate the avalanche hazard to cars and buses. These measures would be costly, but do not begin to compare to the cost for other measures described in the Blueprint, such as tunnels. Yes, improving the reliability and safety of State Highway 210 is scarcely mentioned in Mountain Accord documents.</p> <p>E. Proposed Next Steps</p> <p>Completing Blueprint will represent a remarkable accomplishment, given the number and disparate interests of the stakeholders and it will provide excellent information to carry into the NEPA process (Phase 2). However, because it packages so many different, often unrelated, sometimes tenuous components, and with multiple parties responsible for implementation, the Blueprint will present an immense challenge to process under NEPA. In addition, some aspects of the Mountain Accord process may actually prove problematic for when an EIS is prepared:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> The large expenditure of time and money to prepare the Blueprint and reach a consensus agreement may raise questions about whether an EIS process can be objectively conducted. In addition, it is unclear whether the agreement will stand if some components of it cannot be implemented because of environmental considerations, cost, or a disagreement among one or more of the responsible parties.</li> <li><input type="checkbox"/> Before an agency agrees to initiate an environmental review under NEPA, it should be convinced there is in fact a public "purpose and need" for a project(s). For many of the potential actions, the draft Blueprint doesn't do this and the Forest Service has long avoided using maintaining/improving a State's, region or permit holder's competitive position as sufficient evidence of purpose and need.</li> <li><input type="checkbox"/> At various points along the way and likely in an understandable attempt to bolster participation, the Mountain Accord process stressed the importance of the Blueprint and tending to portray Phase 2 as something of a formality. For example, the Blueprint noted that the "broad range of alternatives would be finalized and then the EIS process initiated. Yet NEPA regulations describe the Alternatives section as "the heart of an EIS" (40 CFR 9150.11) and that this should come after the scoping that's completed as part of the NEPA process. While extremely useful, it wouldn't be appropriate to shortcut NEPA scoping or constrain the range of NEPA alternatives simply because of what's been accomplished through Mountain Accord.</li> </ul> <p>Thanks again for the opportunity to participate.</p> <p>I support the One Wasatch concept.</p>	<p>5/1/2015</p>

Proposed Blueprint Open Ended Survey Comments Feb. 4 - May 1, 2015			
Question	Comment	City	Date
Please provide any additional feedback on how the proposed blueprint could better meet the purpose of Mountain Accord.			
	Carving a rail track up Little Cottonwood Canyon in no way represents responsible stewardship of the natural resources. While it is clear that a solution is needed to provide better access to LCC, this is not the solution. A highly dedicated bus system would move the parking down into areas better able to handle it. I'm not talking about the existing Salt Lake transit bus, but something similar to what Breckenridge has done for their valley level parking. Secondly, connecting all of the Cottonwood Canyon resorts together should not be a priority. Instead of trying to copy a European concept of connectivity, maintain the uniquely American one that is already in place.	Albuquerque	03/04/2015
	I think the train could be a good idea in the night areas. I don't like connections from little cottonwood to Brighton to Park City. This is environmentally too intrusive unless they were tunnels (even an aerial approach would be better.) Grizzly Gulch is a wonderful place to hike and a train would ruin what makes it beautiful. I also think that trail system enhancement may be too intrusive. These are mountains and we don't want them to feel like parks with bulldozer tracks and retaining walls. With that much human activity, much native wildlife, elk, bears, other predators, will leave and we will feel much like we do in the city. Lets build the trains in certain parts keeping disturbance to a minimum but leave everything else the way it is. If people want to hike, let them hike on the trails we have. Maybe even start a permit system for certain trails	Alpine	02/08/2015
	The canyons and mountains should be protected in their natural state. Development and growth should be stopped. Future generations should be able to enjoy the mountains in an undeveloped and unexploited way.	Alpine, Ut	04/30/2015
	A rail system serving Alta/Snowbird from the mouth of the Little Cottonwood canyon worked well during the mining years ---Do it again but modeled after the European structures! Absent installing a rail system, consideration should be given toward providing cost savings incentives for skiers who arrive later and leave earlier than the full day, thus avoiding the "rush hours."	ALTA	02/09/2015
	A train up Little Cottonwood Canyon is a bad idea both financially and environmentally. A much better option would be a dedicated rapid bus lane.	Alta	03/04/2015
	comments below	Alta	03/10/2015
	Honestly, I think this entire proposal gives us a chance to catch up with the rest of America. We are asking the many (the taxpayers) to transfer huge sums of money to the few (ski resort owners). By funding a huge, expensive, invasive train system we will enable those few owners to make loads more money. By approving the land swaps in alta, we can get rid of all those pesky small business owners (all the lodges and shuttle companies) and create lots more entry level seasonal jobs in alta. Maybe we can even move to a system that is forced to use foreign work exchange employees like most of the rest of the big ski areas in the U.S. For some reason, it's hard to find local workers that can earn minimum wage for a 3 or 4 month full commitment, then are cut loose. With all the newly developable land transferred to alta ski lifts, maybe we can move towards the kind of "vibrant community" we find at deer cove in deer valley. Or maybe even attract a big money buyer, like the well known and always respected by the locals or their empathy and generosity and land stewardship, like maybe valley resorts, inc. I respect any businesses right to do as they wish within the law, but I resent the fact that we as taxpayers need to fund their growth. How about as a simple start to finding a solution to the traffic problem; instead of letting cars come up the canyons free and charge to take the bus, we simply reverse it. Bus riders come up canyon free. Improve the road by expanding to a dedicated bus lane. Increase parking at the bases. Tweak the schedules and routes to make them more user friendly. Have we used up the entire 4 billion budget yet? Thank you for your work on this project	Alta	05/01/2015
	I have sent a separate email detailing an initial reaction.	Alta	04/03/2015
	I would like to see usage of the roads limited/toll road if there is an alternate (train) available in the canyons.	Alta	02/24/2015
	Not sure if train system connects LCC to Park city. If tunnel system is being incorporated then the light rail needs to be extended to Park city. I also would love to know the hours of operation for light rail systems I feel to best boost economics for areas it is essential to have trains providing safe transport into later night time hours to boost bar and restaurant sales.	Alta	03/07/2015
	Short version The Mountain Accord has made some admirable progress, but at the same time it has failed to mediate the compromises among the different interest groups needed to publish a real Blueprint. To be credible as a twenty-five year plan, the Mountain Accord must balance the inherently competing interests of economic growth with environmental impact by creating specific targets for future growth of day use visitors, residential housing stock, and tourist facilities. These hard numbers are missing from the current Mountain Accord Plan, making it into a marketing document - for those in favor of public funds for transportation systems that are in favor of creating more land for commercial development - rather than a proper Blueprint that balances competing interests. Without hard numbers it is impossible to tell what the Mountain Accord really means for any of our communities and I hence feel all responsible citizens will oppose it until those issues have been resolved. Long Version The Mountain Accord is an ambitious effort. It has done a good job of bringing together diverse groups and creating a regional dialogue. It has published baseline information and inspired the sort of community interaction that underpins any effective planning process. I feel the "Vision, Goals and Metrics" document is an excellent framework to measure the efficacy of the Mountain Accord process and actions. That said I have two main, significant, concerns. The first is that many of the goals and metrics outlined in the Mountain Accord are inherently in conflict, and the goals are not in fact goals (or objectives) but rather a taxonomy of metrics that allows one to capture data. For example, it is obvious that some of the economic goals - like hotel utilization or total day use visits - are in opposition to some of the environmental goals like impact on watersheds or impact upon core areas. Mountain Accord has done a great job of classifying the areas of a community dialog that we need to resolve in balancing these important interests and concerns, but heretofore has done little or nothing to make concrete quantitative statements about the desired future state. Mountain Accord talks about a 25 year plan, but a 25 year plan without any defined quantitative objectives (hard numbers) feels more like a marketing effort for those who want to see significant economic growth enabled by a new transportation system. Metrics without defined objectives are, in my estimation, an abdication of civic responsibility. Mountain Accord has created a framework for the dialog, but has not taken the next step in balancing the competing interests and publicly declaring the results of that balancing effort. The whole point of a planning effort should be to make definite commitments about what future state we desire. These statements must be specific and quantitative to have any meaning. Talking about different objectives is not a plan, it is rather making a series of statements that are designed to ensure that different groups feel they have been heard. Without resolving the differences between those groups, Mountain Accord has bypassed any definitive statements in that regard, instead relying on extrapolations of current trends without asking the fundamental question of what each of our individual communities wants to see in terms of specific growth figures. The Mayor of Alta, Tom Pollard, recently commented at a public forum that he felt the community of Alta would like to see "reasonable growth". From my conversations with various community stakeholders, I agree with his assessment. Yet, by itself, this is a meaningless statement, for one man's reasonable growth is another man unbridled and destructive economic development. I urge Mountain Accord to actually create a real "Blueprint" that has some of the important goals described as 25 year targets or target ranges. My second objection is that to the extent one can find specific numbers for growth or historical use, these are usually at the level of Wasatch aggregates. The Mountain Accord has consistently claimed it was seeking local community input, but at the same time it has failed to provide a baseline of historical information that is relevant to the local communities. Growth over the last 25 years for the Wasatch region is useful background, but as a member of the Alta community I find Alta specific figures regarding the growth in the number of skiers, summer visitors, hotel room and housing stock in the Town of Alta much more important to a 25 year future plan for Alta, than the Wasatch numbers that have been provided. To ask for community input without providing baseline figures that are relevant to that community is tantamount to asking for uninformed opinions. That is irresponsible. In summary, goals and metrics without quantified objectives are marketing campaigns, not 25 year Blueprints. The hard part in such planning efforts is balancing the competing demands of different interest groups, and in my estimation, Mountain Accord has sidestepped the difficult step of driving specific compromises among those groups.	Alta	05/01/2015
	The notion of a railroad being built up LCC seems crazy. Where would it go? If on Hwy 210, there will be disruption to automobile access for years and severe avalanche danger all along the route probably requiring sheds to be built over both the rail line and the roadway. Sheds over the roadway will lead to severe black ice problems for drivers which will lead to a great deal more salt spread on the roadways which will in turn contaminate the watershed. If the railroad is on the south side of the canyon it will have to be carved mostly out of pristine nature and where does it go once it leaves Snowbird? Up the Bypass Road? There isn't enough room for two tracks and all the homeowners will violently object. Tunnel under Peruvian Ridge? Good luck! Across the Creek to the Hellgate Condos and then up Hwy 210? Severe avalanche issues and all homeowners along 210 will fight it. It makes absolutely no sense when a high-speed tram or gondola could move the same number of people just as rapidly with a minimal impact on nature and the existing infrastructure. It is very clear the UTA just wants to build a railroad and is dismissing the tram/gondola solution without even considering it. All the "we are going to protect nature in the canyons" stuff is hypocritical nonsense if the solution to transportation issues is to construct a railroad (which will need 2 tracks) up through a wilderness area. I'm disgusted.	Alta	02/10/2015
	There has been too much emphasis placed on business interests and not enough on stewardship and reversing the mistakes of the past. Billions of Dollars on tunnels and railway that will never be recoverable over a 100 year timeframe. How does that create a sustainably vibrant economy? More pondering to a ski industry that has already benefited so much from exclusive use of public land. Look at the maps! Designate what's left for human power. Require the ski areas to swap their key parcels of land (Grizzly, Emma, Flagstaff) for the land under their ski lifts, or pull out those lifts! Don't allow the ski areas more land for base area development. Just congestion charge/price LCC road. The market will find solutions (Uber, ride share vans, etc.)	Alta	05/01/2015
	With the exception of tunnels between Little Cottonwood, Big cottonwood and Gardsmans, which seems like too much, I think this is a well thought out and viable plan.	alta	02/05/2015
	My suggestion would be to outsource specialists in this area who have mutual concerns of protecting what is currently in place.	ALTA, UT	03/07/2015
	I believe it to be a good plan for the recreational user. I worry that it is too restrictive from a commercial development point of view. Saying now that only 100 more lodging unit will be built in Alta ever???	Alta Utah	04/30/2015
	I am highly concerned about the environmental impacts of construction and expanded roadways, rail lines, and/or gondola/tramway in Little Cottonwood Canyon. Further, I believe construction of a tunnel when have especially detrimental environmental impacts, including effects on water quality, soil erosion, and widespread growth of invasive plant species that would threaten beloved wildflowers in the Cottonwood Canyons and the greater Wasatch. A tunnel would also forever change the character of Little Cottonwood Canyon and its end of the road charm. I don't believe the proposed Blueprint meets the goal of responsible stewardship of natural resources. I also am concerned that it does not meet the goal of providing recreation experiences. The Wasatch is already very crowded, and I'm not sure it can support all of the people that expanded transportation might bring.	Alta, UT	04/30/2015
	The growth of Annual Visitors (pg 5) from 5.7M to 7.2M over 27 years calculates to 0.86% per year of growth. Surely this growth can be managed with incremental improvements in road, number of busses, avalanche diversion so the road can remain open 24/7. This rail project will be a fortune to build (\$10B) and will serve so few people now or in the future that this cost is not only unjustified, but obscene. And during the 10 or 15 years of construction, the damage to the environment and enjoyment of the affected areas will be huge. More important, in the next 5-10 years, a revolution in personal transportation will render the options presented in the ACCORD to be unnecessary, irrelevant, economically unsustainable and ironically unused. Why? Much more convenient options will emerge that will be far more economical to operate and far more effective than driving to any train station, parking one's car, waiting for a train, and then taking what will by then be an impossibly expensive fare.	Alta, UT	02/26/2015
	I truly feel that the two Cottonwood canyons need to be connected, preferably by ski lifts and skiing terrain.	Alta, Utah	04/29/2015
	Funny how mountain accord deadline is May 1, 2015 and afcvision is unheard of in Utah county. Your own study admits mountain accord is salt lake, Wasatch and summit counties "project area" but other areas will be affected. Does that mean you are showing snowbird down American fork canyons throat because you have your agenda done for the entire Wasatch range from front and back sides? Or is the plan called SLCC the plan called SLCC the plan called SLCC the plan called SLCC your crap here in Utah valley. I have not had a chance to read all of your documents but interesting almost 70percent of ski industry from out of state. Should us "happy valley" folks give up our canyon to make all the pretty people happy and the salt lake people pleased with clean drinking water? Wow	American fork	04/30/2015
	The Light rail transit (LRT) proposal is preposterous as it would make Little Cottonwood Canyon a transportation corridor which would further degrade the natural resources and beauty of the canyon. Providing more access to the Cottonwood canyons is not the answer to protecting the land and watershed for future generations. I agree with more eco-friendly transportation alternatives but a rail system into the canyon is not the answer. Further, environmentally sustainable transportation doesn't protect the land itself if the transportation itself dramatically increase use to the areas. Connecting Park City and Salt Lake valley via Little Cottonwood canyon in any form is a mistake. By installing a rail-line we are essentially making this wildland a glorified park. The Wasatch Front rail system (TRAX, FrontRunner and the Sugar House Trolley) has improved the transportation system in the Salt Lake Valley. However, I believe that rail based systems in the Cottonwood Canyons (or Mill Creek) would have unacceptable impacts to the environment and the wilderness character of these canyons. The construction of rail lines in the canyons would more than double the infrastructure footprint and likely impact sensitive riparian zones. Extensive cut and fill excavations would likely be required for rail construction resulting in widespread scarring of the landscape. An elevated rail system would have unacceptable visual impacts. Rail lines also restrict access: forming "hard" barriers for hikers, skiers and snow shoe travel. A rail system in the Cottonwood Canyons is "overkill," and that current and future transportation demand in the canyons can be met with a properly designed shuttle system.	American Fork	04/14/2015

	More honesty (currently called transparency) would help the public digest the pros and cons of Mountain Accord. The public is told a 2 mile tunnel disturbing and excavating 156.44 cubic yards of Mt. Superior protects the watershed, but a 3,000 square foot cabin's footings in Alta disturbing 97 cubic yards of material damages the watershed. The public is told a boring tunnels is good and tunnels are used to store water and protect the watershed. How can one store water in a 2 mile tunnel and have a train going back and forth in it at the same time? It appears UDOT uses 600 tons of salt in Little Cottonwood Canyon to support commercial skiing, hotels, and tourism which is ok for the watershed, but a cabin with no salt loading is out. What will 10,000 people per day do in Alta when they get there? Snowbird barely has enough attractions to keep 10,000 tourists happy for 1 day a year at Oktoberfest. The public is told massive public development costing billions protects the watershed, but a small private cabins in Alta destroys the watershed. \$20 million taxpayer dollars promoting massive public development and \$22 million for lawsuits to stop microscopic private cabins. The public statements are not credible and in fact laughable. While officials spout the watershed story, eyes roll in the audience, textings of haha messages are occurring as the official speaks. 20% of the canyons are private property. Massive public development on 80% protects the watershed but minimal private development damages the watershed. This is not an honest conversation. Why not say the truth? We can have massive public development and watershed protection simultaneously. We can have private development and watershed protection simultaneously, we just don't want private parties to develop. It's not a watershed issue. There is no legal, science, or public policy to support private development, the folks at the table just don't want. Let's have the public PR story match the backroom actions. That would be helpful to Mountain Accord. Mountain Accord is a great process. More honesty would make it mega great.	American Fork, UT	02/22/2015
	I don't think the "accord" takes into account climate change. Yes, this might have been the right solution 50-25 years ago but it is certainly too focused on skiing for the reality that snow might not be as plentiful for the next 25-50 years.	Berkeley	04/30/2015
	comments submitted by email	Big Cottonwood Canyon	05/01/2015
	I think this is a terrible idea. I think the mountains need to be left alone. I think people from Park City just don't want to drive down Parleys and over to Little CottonWood. Which they should have to.	Bluffdale	03/16/2015
	you people are only looking after what you want. Have you even considered or even invited any of the back horsemen groups that have used these canyons for longer than skiers have ever used them? You are not considering all who use these areas. Your agenda to me is very expensive and will destroy what people like me have used this public land for, for decades upon decades. Stop just thinking about your agenda your it the only ones who have rights to this land	Bluffdale	03/15/2015
	I applaud the concept of the Mountain Accord. I would like to see priorities established and clearly stated that put conservation, protection, and stewardship as top priorities. In the event of multiple parties not reaching agreement, the default choice must be the one that offers the highest level of environmental protection, watershed protection, preservation, and conservation of resources. I believe it is not feasible now, and will be less feasible in the future, to develop more and more with the intention of enhancing visitor's experiences in Utah and attracting ever-increasing numbers to the Wasatch. Stability is more important and sustainable than continued growth. The REAL stakeholders here are the citizens who rely on the Wasatch for water, solitude, wild terrain and the benefits they bring. The economy must be the lowest priority in the Blueprint. Much of what makes Utah a ski destination can not be improved by more roads, hotels, condos, restaurants, etc. The natural terrain, unmatched snowfall, and unparalleled scenery are the reasons people come to Utah. Why this is not apparent to more people baffles me. The Wasatch is a small mountain range. Resorts in the Wasatch must not be allowed to compare themselves to, or aspire to be in the same league as resorts in other states or countries. The grand resorts in major ranges such as the Alps, Sierra Nevada, and Rocky Mountains have an advantage the Wasatch can never match - their sheer breadth and expanse. HOWEVER, the Wasatch have unmatched assets mentioned in the previous paragraph, that can not be improved upon.	Bluffdale, UT	03/31/2015
	Please see the comments of Winter Wildlands Alliance and Wasatch Backcountry Alliance. As someone who helped compile that input, I am fully vested in the position taken by that letter - just as the thousands of other individual backcountry skiers, snowboarders and snowshoers who enjoy the Wasatch are. We trust in these groups to listen to us, and provide a collective voice. As one of the few who actually gets to pursue my vocation and avocation simultaneously, I take this quite seriously. Hopefully all members of the Mountain Accord Executive Committee will read and consider those comments in full, and work with us to find solutions as this effort moves forward. Thank you for all of your efforts thus far.	BOISE, ID	05/02/2015
	The blueprint seems to lean toward development and transportation. I would like protection of the back country to be given more consideration. Thx, mm	Boise, Id	03/06/2015
	I don't think the ski resorts need to be expanded. There is tons of terrain that can be accessed by the current ski area boundaries. I feel like the blue print focuses on four months of the year (December, January, February and March). And if these changes happen it greatly affects the areas for the other eight months of the year. Don't expand the ski resorts and don't expand the transportation system. People come to Utah to ski what we currently have.	Bountiful	05/01/2015
	In terms of dollars, the proposed blueprint is heavily skewed toward the ski resorts. The transportation option amounts to a large taxpayer subsidy to the ski resorts. Preservation of existing natural areas in the Wasatch could be had for practically nothing.	Bountiful	04/29/2015
	more details really needed to begin to have opinion. like concept, and we definitely need to address what is going to be a much larger problem in the future.	Bountiful	02/05/2015
	My primary concern with regards to those canyons are drinking water and preserving natural beauty. I would like as much wilderness as possible. The other concerns are secondary.	Bountiful	02/13/2015
	The train and tunnel idea is good and will provide a good long term solution for transportation, while also achieving protection of iconic areas of the Wasatch	Bountiful	02/18/2015
	The Wasatch Mountains are essentially a metropolitan area, as compared to the Uinta Mountains which are primarily a wilderness area. Making this distinction clear would help frame the discussion more clearly.	Bountiful	04/30/2015
	As a retire tunnel engineer, I am especially interested in the fixed-rail connections to Brighton, Alta and Park City. Is upgrading for rail service of the existing Park City to Alta drainage tunnel part of the thinking? Are 360 degree tunnels in the canyons to overcome the steepest parts of possible lines (like those in Switzerland built in the 1850's) part of the thinking? If yes to either question : where do I find out more, where can I be of help with free advise?	Bountiful and Mt.Haven	02/06/2015
	It seems to me that our beautiful mountains should be kept in a pristine and sustainable condition to be maintained as they are for many future generations. The Mountain Accord seems to be focused on a "for profit" agenda. This is not what I have envisioned for our beautiful mountains.	Bountiful, UT	04/28/2015
	More advanced travel systems, super fast modern trains along existing corridors Logan to St George. Less development in our canyons and better protection of USFS, BLM and state trust lands in our state. No state take over of federal lands... Utah ownership of federal lands is not viable.	Bountiful, UT	05/02/2015
	So far, you have done a really good job of collaboration by all stakeholders.	Bountiful, UT 84010	03/31/2015
	I feel that any discussion about the future of the canyons is a benefit. Planning will help avoid haphazard developments and provide a guideline as pressure on the canyon resources continues to increase. The mountain accord should not be set in stone, but should instead act as a guideline with flexibility as public pressure which will ultimately result on key decisions is gauged. Just like the Legacy parkway, which after fits and starts was finally built in a much improved form than originally conceived, the Mountain Accord should be sensitive to future input and allow for some modification.	Bountiful, Utah	03/14/2015
	Just avoid trains. Please, no trains.	Breckenridge	05/01/2015
	Balancing the four systems or interest segments is the key goal of this proposal. As a cabin owner at Brighton I would appreciate modest economic upgrade of services and renewed vigor to the offerings for locals as well as visitors. I am also fervently in support of careful preservation of our natural landscape and backcountry ski access on USFS and other public lands. Movement toward a more efficient means of transporting visitors to the areas via a mass transit European style mechanism would greatly enhance attractiveness of the resort areas while limiting emissions, traffic bottlenecks and parking constraints. Of special interest to me is the view of MountainAccord in proposing alternative people movers from one side of the Wasatch to the other one day, far reducing the I-80 problem.	Brighton	04/14/2015
	Hall I have not had the time to review this information in detail, that being said I would like to thank you all for jumping into this population dilemma. I have lived at the top of Big Cottonwood since 1974 and have seen the changes. I have seen ski area operators thru cash and politics advance their own agenda for personal profit and I have seen the state with similar tactics; building permits & inspections, taxes, police, trash, pets etc. The USFS has had a confused hand in all this over the years also. The combined effort of all has alienated residents and visitors. I am anxious to study your proposals and for now I would put my confidence with Lanev. Thank you again for this opportunity	Brighton	04/30/2015
	The blueprint does not provide specific plans for preservation of the ridge line between Guardsman's Pass and Mill Creek Canyon. This should be a priority area due to the high usage for recreational activities in both summer and winter, and the current pressure from development. Preservation of this area is key to meeting the environmental objectives of the plan.	Brighton	04/23/2015
	This plan is short sided and is addressing Tourist mind use. Let's put Our monies and Fed Money into mass transit for people who Need and use it DAILY.	brighton	05/01/2015
	Ski Area Expansion does not "preserve" OUR National Forest Lands. Ski Area expansion just turns OUR Beautiful, Unique, Wasatch Mountains into a DisneyLand Experience. Leave more wilderness and untouched lands for the Future Generations. Once it is gone, it is gone forever.	Brighton UT	04/13/2015
	A train/light rail system with limited stops from downtown SLC/SLC airport, up LCC (stopping at Alta and SB), through a tunnel into BCC (stopping at Brighton parking lot) through a tunnel to Park City (stopping in downtown PC) is the best option for transportation, the environment, preservation, recreation, and all of the interested environments. With a rail system you will discourage driving, and better control mountain Access with limited stops, not only for skiers but for all recreation and mountain enjoyment. People do not like to ride busses and will not use them. Trains are comfortable and reliable and people will use them. Tunnels have minimal environmental impact and preserve natural aesthetics. The European countries which share the Alps also care deeply about their mountains and preserving the environments, rely on the mountains for recreation - and they are completely dependent on well thought-out train systems that very delicately transport millions of people through a very well preserved environment. Recreational demand on these mountains will only increase - so let's do it right and manage the recreational pressure with a rail system.	Brighton Utah	03/17/2015
	I am undecided on all of the above topics because it is very difficult to understand (from this web page) exactly what the proposed blueprint is! I see several options listed under "proposed blueprint" and it is not clear which is the most likely. I agree that the major concerns are environmental, economic and recreation. I believe the BCC's seduced reality, while part of its appeal, also make it difficult for homeowners to rent their properties in the winter. I have spent a lot of time skiing in France, Switzerland, Austria and Italy and it seems obvious to me that we need to follow their lead. While I lived in Zurich and Geneva I was able to take a train (with one or two easy changes) from both of these major city centers or the airports to the ski lift in Zermatt or Chamonix. No cars, no traffic and an incredible skiing experience. I would also say that with these train systems the European countries did a very good job preserving their environments in these mountains. In BCC or LCC, if you had a train system connecting to Park City residents and renters could take an evening ride over the mountain into Park City for dinner or after ski. This would be a huge boost for all three of these economies! It would discourage driving in the evening. Your proposal, while better than anything else I've seen, still excludes the possibility that BCC residents and renters will have evening access to the bars and restaurants in Park City. The very obvious option to me (and I believe one of your blueprints) would be to a light rail connect from SLC airport/downtown, south along the Wasatch front, up little Cottonwood with stops in SB and Alta, through a tunnel into Brighton parking lot and a stop there, and through another tunnel into Park City. For me, it seems very important that this train line will continue (perhaps less frequently) late into the evening so Park City could gain the Economic benefit of more BCC and LCC homeowners and renters using their restaurants. At the same time, with so many houses and cabins in BCC, an evening connection will provide an additional economic injection to Park City which should certainly be welcome! So with this necessary evening connection in mind, the light rail with the above connection (which done in the European manner could be minimal impact to the environment) is the obvious best option. If you consider the economic interests (and I believe you have) of all the interested parties, not just the ski resorts - Park City business owners (tax payers), BCC house/cabin owners (tax payers), ski resorts (large business and tax payers), the SLC and PC local governments (tax spenders), - why not look at this project as a public/private cooperation expanding the possibilities to include the light rail train system. This is absolutely the best option.	Brighton Utah	03/16/2015
	I only say poorly as connecting both canyons and park city is pointless and opens the door to adding wasatch county, heber etc. In essence this proposal is full urbanization of the mountains. Otherwise, light rail from SLC to PC for sure. SLC to LCC, perhaps. BUT the line is crossed with PC to LCC interconnects in any form. If the goal is to preserve and to protect, then why make it an Urban Mountain range via a massive increase in transportation???	Brighton, UT	02/09/2015
	My main concern is the future environment of the canyons. The transportation proposals, as I understand them essentially ignore environment almost entirely. If you make the Cottonwood canyons accessible from the Park City side, you might as well count on the canyons becoming nothing more than an extension of the developers' developments and that is wholly unacceptable to me as a canyon resident. Publicity plus accessibility always lead to over-development. These mountains belong to the people, not the developers. Developers, such as Talisker, Vail Resorts and Deer Valley are concerned with one thing and one thing only and that is MONEY. It is obvious that when you combine such companies with the plans of the UTA and DOT, whose business is to build the biggest and most expensive transit system possible (again MONEY), environment takes last place. I'm in favor of a much scaled down version of the mass transit proposal. Why the discussion is dominated by the entities mentioned is ridiculous. I thought this was to be an open process for and from the people. UTA and the DOT work for us, we do not work for them! Nor are we beholden to them.	Brighton, Utah	03/06/2015
	There are many great goals and ideals represented in the overall Blueprint. Yet, many of the options appear to be totally unrealistic cost wise. There needs to be more direct attention to the funding sources that will be benefiting from this increase in supposed tourism. This means at the very least that the ski resorts, the Summit County Property Tax Base, Second and Third Homeowners and all Real Estate entities need to be footing the bill for these proposed improvements. Missing is the expansion of Permit Users in the NFS that are dedicated to educational opportunities. These include both summer and winter interests. Avalanche Education is primary in the Winter. Watershed concerns heads up the Summer interest category. The Canyons Protection needs to be the foremost concern, and this should not be restricted to the upper areas of the Canyons.	Brighton, Utah 84121	05/01/2015

	I support ONE Wasatch!	Carlsbad, CA	04/29/2015
	I would need to study it more, but it appears to be an excellent plan.	Cedar City	03/01/2015
	Any connecting roads or transit systems that connect Park City to the Cottonwood canyons will destroy some of the most pristine and accessible wilderness areas. These areas are easily accessed which makes them enjoyable for all those who cannot venture deeper into the mountains without assistance. There is very little benefit to allowing access through the cottonwoods. Those canyons are already overloaded with people and traffic. Allowing through traffic will only increase the problem of ski resorts that are at capacity on busy days.	Cedar Hills	04/29/2015
	Over the snow connections need to be protected to allow the seven resorts to connect.	Centerville	02/05/2015
	The sooner you do this, the better.	Charleston, Utah	02/09/2015
	I would like to see more transit from the airport to Park City or a PC bus stop	Chattanooga TN/ Park City	02/07/2015
	As an out of town skier, I could be more impressed with proposals of the mountain accord. I believe it strikes the correct balance of protecting the beauty of the cottonwood canyons while also enabling continued development of the resorts. It would be amazing to visit Utah for a week and never to step foot in a car. The thought of staying in Park City and being able to ski Alta with a quick train ride is wonderful.	Chicago	02/09/2015
	It seems to me that the obvious and easiest way to reduce the impact of recreation upon the Wasatch Mountains in Salt Lake County would be to encourage and incentivize Kennebec into opening sections of the Oquirrh Mountains up for recreational opportunities. Well obvious to me but apparently not anyone involved with the stakeholder group. Opening the Oquirrh Mountains to recreational activities would also alleviate the future traffic concerns with everyone trying to get across town from the west bench to the east bench.	Copperton	04/30/2015
	Please include more mountain biking in the Cottonwood Canyons.	Cotton Wood Heights	04/30/2015
	1) Guardsman's Pass has been a right of way in the state of Utah. It can not be a holding for a ski resort. As with the roads in San Juan county, it should be taken to court. This road needs to be used as the roads around Colorado i.e., Vail! 2) Same as above with Cardiff road, Mineral road, Silver Fork. 3) Water is Gold. Water is more important than air pollution. No more water for snow making. I have seen several oil spills caused by cabin owners and ski resort private shuttles, and US Forest service snow mobiles. There is no monitoring of this in the mountains. 4) We need to protect our water. 5) No more expansion to lands. The resorts can build a new resort in the West mountains near the cooper mine for eagle mountain and other residents of the west si	Cottonwood Heights	03/12/2015
	A key legacy of the Central Wasatch that MUST be preserved is that each canyon provides a unique experience. This unique "brand" has attracted tourists just fine for decades. We are not Colorado nor are we the European Alps. By connecting Big/Little Cottonwood Canyons to Park City with invasive infrastructure, we are only homogenizing the experience in each canyon while destroying the local character. Not all locals nor tourists want a glitzy, overdeveloped "Park City" experience. The economic side of this blueprint seems to only focus on developing resources for tourists (big spending, infrequent users) rather than further developing more sustainable local markets (smaller spending, year-round users).	Cottonwood Heights	02/05/2015
	After working and recreating in Little Cottonwood Canyon for the last 35 years transportation has become one of the big challenges. On busy days all parking can be taken up and the current bus system doesn't keep up with demand. There is a need for better transportation and incentive to use it.	Cottonwood Heights	03/12/2015
	Almost any change to the transportation is a good thing. Shuttles, Trams, tunnels and rail all are expensive but very needed.	Cottonwood Heights	02/05/2015
	As an Environmental Planner and resort employee, I fully support the stated objectives of the Mountain Accord blueprint. Although, I have concerns that the Mountain Accord is not placing enough emphasis on environmental protection. Preserving open space and limiting development of any kind should be the top priority. Once open space is developed, it's gone forever. I am concerned about how developing year round roads between Park City and BCC will affect traffic and crowding in BCC. I do not support an interconnect of any kind. Please consider putting more limits on development while working to improve public transportation systems. Public opinion, over the years, consistently supports conservation over development. Please revise the blueprint with this in mind.	Cottonwood Heights	05/01/2015
	Aside from the little cottonwood/ park city corridor, I think that the current blueprint is an acceptable set of tradeoffs between conservation and development. Unfortunately, as long as the train and tunnel are still in the plan I cannot support any proposal. Grizzly gulch is one of the most iconic areas of the Wasatch and cannot sustain any more development. how many visitor days does secret lake get every year?	cottonwood heights	04/24/2015
	Be more concerned about the Environment.	cottonwood heights	04/29/2015
	Bus service year round to all ski resorts is preferable to all alternatives.	Cottonwood Heights	04/30/2015
	Congratulations on the tremendous amount of work and thought that went into this blueprint. The devil is in the details however. The ski resorts are the overwhelming problem since their emphasis is on connection and expansion. They are correct in assuming that population growth must be addressed, and so it is important to implement transportation solutions that will more quickly bring recreationists to their destinations. But the resorts are big enough. Resort-skiing numbers are down. In the face of climate change, the snowpack may be seriously affected in the coming years. Connecting resorts will look good in advertising, but traveling by lift or tunnel is time consuming and an unnecessary invasion of pristine areas and watershed lands. The important thing, in the end, is the protection of the wild ecosystems of these mountains. When Man destroys these, he will have destroyed the value of the Wasatch. To develop, to expand, to build is so easy, but would result in tragedy. The travesty would be permanent.	Cottonwood Heights	04/30/2015
	Destroying Little Cottonwood Canyon seems to be the main goal of Mountain Accord. It will destroy it, to put in a Train or more Lanes. It will destroy a quality experience in the Canyon. It is irresponsible to even entertain the idea of more Lanes or a Train up Little Cottonwood Canyon.	cottonwood heights	04/29/2015
	Don't destroy Little Cottonwood Canyon by putting in more Lanes or a Train.	Cottonwood Heights	05/01/2015
	Don't ruin an amazing backcountry area. Tunnels don't make sense, it's only an hour drive from snowbird to park city. Just build trains up the cottonwood canyons and a big park and ride at the base.	Cottonwood Heights	05/01/2015
	Don't ruin Little Cottonwood Canyon by more Lanes or a Train.	cottonwood heights	04/29/2015
	Drop the tunnel idea. Very expensive, does little more than provide ease of access for tourists who could take a bus without such a vast investment. The cost to build and maintain would be difficult to sustain. The potential to adversely impact the area with tunnel construction is very real. The energy and resources spent could well be spent in many other ways to protect and preserve the area for access to all Utahns, not just elite visitors from out of state.	Cottonwood Heights	03/09/2015
	Higher resolution maps, with topographic lines.	Cottonwood Heights	02/12/2015
	I agree with the Blueprint for transportation alternatives in Big and Little Cottonwood canyons. However, the demand just isn't there to connect BCC and LCC directly to Park City. A tunnel system is extremely expensive. The usage wouldn't justify the cost (or the damage to the watershed during construction activities). Leave the Wasatch Front and the Wasatch "back" as separate entities. Only the extremely wealthy are pushing to connect the two. The tunnels (or train connections) throw a red herring into the process, that will cause the entire project to fail. I can not support connecting the Wasatch Front and back. Even nature doesn't want them connected. There's a reason that our orographic storms leave a lot more snow in BCC and LCC than in PC.	Cottonwood Heights	02/27/2015
	I am a resident of Cottonwood Heights, and a skier and hiker to Little Cottonwood Canyon on most week-ends. I have never had an issue with traffic, other than when there's an avalanche that closes parts of the road. An avalanche would still affect any buses and/or trains that travel up the canyon in the winter, so building a train line or a bus lane would not help at all in weather related instances. On busy ski days, there may be more traffic at certain times in the morning and afternoon, but it's steady and is for only a short period of time. Also, building a train line or a bus lane would destroy the quiet and beauty that people LOVE about Little Cottonwood Canyon. The residents are happy with the way things are, and tourists appreciate the beauty as well. This appears to be a political and financial driven project.	Cottonwood Heights	03/16/2015
	I am afraid that too much weight will be given to the economics of this and too little to the environmental and recreational aspects. There is a limited capacity to the wasatch that no amount of additional transportation will change.	Cottonwood Heights	03/06/2015
	I am not convinced the Mountain Accord will meet its stated purposes. Stewardship: As an ecologist, I know that increased use of the canyons will cause wildlife and natural services (e.g., water quality) to suffer. Increased expansion of ski areas and trains will further reduce the ability to find peace and solitude within the Wasatch and will reduce habitat available to wildlife. Expanded lanes for buses and/or train system will further reduce the ability of the creeks to function naturally due to loss of floodplain habitat that helps to mitigate flood events and which serve as buffer areas that preserve water quality. Train use through tunnels could potentially disrupt wildlife use of adjacent areas (due to noise) and/or fragment migration corridors. Recreation: As rock-climber, hiker and backcountry skier, I am in favor of land swaps that consolidate public lands in backcountry access areas; but I strongly believe that Grizzly Gulch must remain undeveloped. I am also not in favor of further development of Silver Fork. The mix of backcountry access and low-giltz quality ski resorts are a draw for locals and tourists alike. If trains connected the majority of ski resorts within the Wasatch, it might severely strain the hell ski business. Environmentally-friendly transit: As an instructor of sustainability, I am not convinced that a train system is really the best option. There is very high cost of such a system at a time when there is great uncertainty regarding the future of snowpack in the Wasatch due to climate change, which translates into great uncertainty regarding tourism to ski areas. A very large amount of materials and energy is required to construct and maintain such a system, as opposed to expanding/improving bus service and encouraging carpooling and low-emission vehicle use via greater incentives. Construction is sure to have immediate and lasting impact on the landscape (see above comments). The lack of adequate transit stations along the proposed train route will do little to reduce hiker and backcountry skier use of personal vehicles, thus doing little to reduce air quality. (Recommendation: if trains are implemented, then increase transit stations along route and provide seasonal passes to public transit and/or major discounts on public transit when season ski passes are purchased.) I think a better option are electric buses (run on electricity generated from wind and solar) with increased incentives for use (see recommendation above) as well as a year-round in Big Cottonwood Canyon. I am not in favor of linking the Wasatch front and back via tunnels because I believe it will make traffic worse, not better.	Cottonwood Heights	03/16/2015
	I am very opposed to any further development in the Wasatch, particularly regarding the rail service. The more you give people the more they want and it will result in the entire range being developed with very little undisturbed areas for the protection of natural resources. More people drink more water skiing or otherwise and where will the water come from. This state needs to work on POPULATION control!	Cottonwood Heights	02/04/2015
	I believe that any plan for the Mountain Accord has to be integrated with the transit plan in the SL valley. I strongly support finding alternatives to the current travel options up the canyons. I believe a rail option is the best for LCC and that an electric or natural gas bus system up BCC and an electric or natural gas shuttle in MCC all make sense, but you need to link it to a plan other than parking garages at the mouths of each canyon.	Cottonwood Heights	03/09/2015
	I do not see how any of this would help our current condition, I only see this having negative effects. Why not invest in cleaner more fuel and emission efficient buses?	Cottonwood Heights	03/16/2015
	I like the blueprint - although it seems to be predetermined to utilize a train as the major transportation solution in LCC.	Cottonwood Heights	03/05/2015
	I like the idea of rail in the cottonwood canyons. I've tried to utilize the current bus setup from my home in Cottonwood Heights. On a moderate powder day the bus was over an hour late - and very difficult to get a seat in on the way home. I also truly support the hiking/biking trail that would connect Emigration Canyon to Summit Park. THIS makes sense. There is already an old road there to utilize. This sort of recreation expansion would benefit the Utah Outdoor Community year round - not just for a few months during winter.	Cottonwood Heights	04/29/2015
	I selected "don't know" on all of these questions because the proposed blueprint seems a bit too vague. At a high level, I like what the 10 page blueprint has to say, but when I drill down into the details I'm not sure I understand what is going to happen. Will our watershed really be protected? Will the environment really be protected? I like the idea of acquiring private land in order to retain accessibility, expanding the trail systems, etc. I cannot tell how mountain biking would be affected by various land designations, if additional opportunities were available, or if we would lose trails.	Cottonwood Heights	03/06/2015
	I strongly oppose putting a light rail up Little Cottonwood Canyon and tunnels to connect the canyons. I also oppose any ski interlink between the resorts as proposed by One Wasatch. Transportation development should have a minimal impact on the environment, which these would not. I support using increased bus service for summer access to the canyons and use of Guardsman Pass to connect Big Cottonwood Canyon with Park City.	Cottonwood Heights	03/29/2015
	I teach paragliding and would love to see more access and more landing options for our pilots. With Wilderness areas we are not supposed to launch and land foot aviation which seems silly, would like to see some changes to encourage and allow non-motorized free flight.	Cottonwood Heights	03/12/2015
	I think it will be important to more explicitly state how the areas impacted by the transportation expansion will be protected into the future. Without such assurances and acknowledgments up front it seems these lands will be open to future development around them that could particularly harm the natural environment important to both wildlife and outdoor enthusiasts, particularly if they come from acquisition of private land. Whether real or perceived concern, it should be more adequately addressed.	Cottonwood Heights	02/04/2015

<p>I was extraordinarily disappointed in the information given on transportation during the February 11th meeting. The information on hiking and biking trails was fine, albeit limited. It should have included which trails/trail sections were new versus which were being rebuilt and an example of what the new access points for all those trails will look like. When I learned that the keystone of this proposal was transportation I was excited. I was excited to hear that we were finally doing away with land swaps and right of ways across the mountainside and ridgelines and were instead going to replace it with a light-rail type of system. But then I thought, This system is going to be extraordinarily expensive at about \$100 M per mile and about 8 miles of boring to do that is \$800 M plus the 15 miles of rail line to connect to the light rail station in Sandy to Park City. Back of the napkin math brings the price of this piece of the line to \$1,000,000,000. This puts the per year bond cost at about \$67 M. Alta estimates that it has 2500 people per ski day and I will assume that it has 1250/day the rest of the year. I will also assume that the rest of the resorts have similar traffic levels. This means that there are approximately 2.5 million resort users up Big and Little per year. This means that every ticket would have to cost about \$26.50 to cover costs. So to take my family of three up the canyons for a day of skiing or hiking it will cost me \$80. THIS IS NOT REASONABLE. Thus, everyone will balk at the cost. We will then get the wilderness areas with some major subtractions. The Trails. The bus up Millcreek (should be done anyway). The building permits. The land swaps. And the Major Subtraction Ski-Link. Finally, I don't think that light-rail can handle the populations coming down the mountain in the afternoon. 236 people per car at absolute max and probably 165 skiers. On a peak day we will need about 60 cars up each canyon to bring the skiers down. Can rail handle that population? Can it do it safely? Can it handle peak loads in an affordable fashion? (i.e. minimum fall and spring loads will be around 1000 people per canyon with maximum winter loads of around 10,000. The traffic isn't near as stable as city traffic.) I would propose that ski-link (tunnel or gondola) gets banished from public discourse and the dream of linking the seven ski resorts (i.e. the public boondoggle) gets set out to the Great Salt Lake. If the ski resorts want an inter-connect they need to do it out of 100% private money and without affecting ANY public lands. If this involves a tunnel (and it must) then they need to pay 100% of the tunnel cost. A ski lift or gondola up both Big and Little (but not connecting any of the resorts) should be able to handle the traffic loads. If it has multiple drop off points then it can get all the other users (bikers, hikers, flower hunters, artists...) to within a reasonable distance of their destinations. Regarding Salt Lake giving up its water rights to snow making, I hope that SLC looks at this proposal under a 1/1000 year drought scenario. Over the 50 years this holds sway we will have a 1/20 chance of having that 1/1000 year drought. This means that the ski resorts need to be listed as the last in line on the water right.</p>	<p>Cottonwood Heights</p>	<p>03/02/2015</p>
<p>I'm generally pleased with the research and planning efforts to this point. My concern is that the emphasis to date has focused almost solely on the future. I understand this is critical, but I believe there needs to be equal emphasis on the immediate concerns and issues (i.e. parking and transportation concerns). I believe it would be more beneficial to plan and make recommendations for the short term as well as long term.</p>	<p>Cottonwood Heights</p>	<p>02/27/2015</p>
<p>It is not environmental stewardship to deteriorate our backcountry areas by ill-conceived connecting lifts that destroy watershed, wild land, hiking/biking terrain and natural habitat. A true "transportation solution" would not involve ski lifts - but would instead involve high-speed train transport up I-80 to Park City as well as up Fort Union to the mouth of Big Cottonwood and up 9400 S to Wasatch and the mouth of Little Cottonwood.</p>	<p>Cottonwood Heights</p>	<p>02/06/2015</p>
<p>It seems like the Blueprint would work just fine for the people who stand to make the big bucks. I want to know how you propose to run light-rail transit up Big and Little Cottonwood Canyons without sacrificing the integrity of the landscape? How do you propose to get light rail up the S-curve, for example, and how much footage on the side off to the side of the road, specifically, do you propose to take?</p>	<p>Cottonwood Heights</p>	<p>03/09/2015</p>
<p>It seems to me that the Mountain Accord is prioritizing economic opportunity first, and then recreation QUANTITY. Other environmental and transit elements appear to be incorporated as a way to facilitate those first two priorities. The problem I see is that the existing trail infrastructure can only accommodate so many people before the quality of the experience and the environmental impacts become too great. The solution is not to create more connections between places (thus increasing the rate of people entering an area, but not the actual capacity of that area), and the solution is DEFINITELY not to take existing high quality wild areas and develop them. Those approaches only suit economic needs at the expense of the kind of long term stewardship that is required in the face of excessive population growth in Utah. The solution is to reduce vehicle traffic to existing recreation areas by implementing well-designed mass-transit, and to cap daily visitation rates to recreation areas to a level that can preserve the quality of the experience and minimize environmental and ecological issues. Remember, our drinking water comes from these canyons, and over developing these areas to increase economic potential will have the byproduct of increasing waste and pollution. Remember also that these wild areas are critical habitat for fish and wildlife, and that these populations are already constrained by urban-wildland development on all sides of the Wasatch Canyons. As we are faced with an increasing population in Utah, we cannot perpetually sacrifice our natural areas and our natural resources to accommodate limitless growth. The result will be that the very recreation opportunities that put Utah on the map will be degraded to a point that people won't want to compete with endless crowds to access whatever remains of our resources. A skiing example is relevant here. Utah, hands down, has the greatest snow on Earth and everyone who skis or rides knows it. But what happens on an excellent ski day? Crowds descend on the resorts, and even with limits in place that resorts stop selling tickets when the parking lots fill, every slope becomes crowded and the experience is degraded. Does increasing the rate of people arriving at resorts (through mass transit and connections among ski areas) help preserve the quality of Utah ski resorts? Not at all. Nested around our developed areas are some absolutely incredible backcountry ski areas. Grizzly Gulch, in particular, is a skiing oasis. I am particularly concerned about the proposed connection between Alta and Brighton that would cross through all the backcountry areas between these resorts. Those areas are one of a kind, and once developed, cannot be reclaimed. They also represent the resource that Utah, in particular, collectively "own" that the canyons and surrounding areas will always provide economic opportunities for the state of Utah. Therefore, rather than prioritize economic development in the blue print, it would be better to prioritize maintaining those high quality, currently undeveloped areas first, ensuring that ecological considerations are a top priority, and then fit in further development around those two main priorities. Stewardship of wild areas and natural resources provides a long term benefit. Development of those areas provides a short term gain (diminishing when crowds degrade the quality of the experience) and a long term loss (because recovering wild areas is infinitely more expensive than developing them in the first place).</p>	<p>Cottonwood Heights</p>	<p>03/10/2015</p>
<p>It will not, simply put, accomplish anything positive.</p>	<p>Cottonwood heights</p>	<p>03/17/2015</p>
<p>Just keep meeting and collaborating. Thank you for all this work.</p>	<p>Cottonwood Heights</p>	<p>04/29/2015</p>
<p>Just leave the canyons wild!!!!</p>	<p>Cottonwood Heights</p>	<p>04/30/2015</p>
<p>More frequent buses up the Canyons Not more lanes!</p>	<p>cottonwood heights</p>	<p>04/29/2015</p>
<p>Overall I am happy with the blueprint. My concern is with the transportation proposals.</p>	<p>Cottonwood Heights</p>	<p>04/26/2015</p>
<p>People have to use it for it to be environmentally sustainable. I need more information before I can decide whether or not people will literally and figuratively get on board.</p>	<p>cottonwood heights</p>	<p>03/13/2015</p>
<p>Please, please, please, please do not put anymore infrastructure in our canyons. Even small changes, like the addition of cell towers in LCC, is disruptive and takes away from the reason we go in the mountains in the first place, to get away from it all. Adding roads, trains, infrastructure, etc. does not enhance this experience. The Wasatch is very small and making it smaller detracts from the experiences that are rapidly being taken away by expansion as it is.</p>	<p>Cottonwood Heights</p>	<p>04/07/2015</p>
<p>restrict lift-served back-country/side-country/etc access. adding a tram to solitude from PC will seriously degrade back-country recreation for all by overloading traditional back-country areas. there is already a road that connects PC to BCC. run a bus for those that need to access BCC or LCC from PC. Keep lift served skiing in the ski resorts!</p>	<p>cottonwood heights</p>	<p>05/01/2015</p>
<p>Stop building stuff on the mountains. They are to remain rugged and beautiful, unless of course we as humans scar and ruin them.</p>	<p>Cottonwood heights</p>	<p>03/27/2015</p>
<p>Thank you for all of the hard work. I am in full support of the light rail transit in LCC to/from Park City via tunnels. This option is head and shoulders better than other similar proposals. With regard to the light rail, I'm assuming this is a weather-independent solution: when powder/panic hits, will this system prove to be the best possible transportation option? How will this system be designed to accommodate powder traffic volume while still being financially viable on typical days? As a mountain biker, I'm concerned with the access limitations we've created by transitioning extensive acreage to wilderness. This is particularly challenging along the lower elevation foothills. As we consider transitioning more land into the hands of the public, I support preservation but I think mntb access should be supported and expanded. The relatively small size of the central Wasatch allows for some amazing ride options to/from the Wasatch Front to the Wasatch Back. I have some concerns about the transportation system in the valley. I don't think we should expect folks from the UofU and/or Park City to drive and/or train it to State St. In Sandy in order to catch the light rail up LCC. The pickup station at the entrance to LCC will be a high volume station. We should be realistic with natural migration trending toward the shortest distance between points A and B. Generally speaking, I support me mtb trails wherever possible. The Central Wasatch is the perfect size for epic-style rides to and from the Wasatch front/back/AT/Provo Canyon. Similar to the situation with skiing, we have the potential to further develop and capitalize on the world-class nature of the area in regards to mountain biking.</p>	<p>Cottonwood Heights</p>	<p>04/08/2015</p>
<p>The questions above do not seem to fit as the blueprint offers a plethora of ideas but hasn't YET solved anything.</p>	<p>Cottonwood Heights</p>	<p>04/30/2015</p>
<p>The blueprint appears to put a priority on "economy," with changes that will financially benefit the few ski resorts. With the anticipated drought conditions and evolving weather patterns, it strikes me as irresponsible to underwrite new roads, tunneling, etc. to benefit a few businesses dependent on snow pack. I fail to see the benefit to skiers, other than saving some an hour's drive. You can only ski so many resorts in a day (i.e., only one). I personally enjoy the canyons for hiking and photography with the beauty, solitude, and cleaner air that they offer. Toward that end, I support public transportation and/or usage fees to limit individual cars. These approaches appear to work well at such places as Millcreek and American Fork Canyons (usage fees) and Zions National Park (public transportation available at parking lots).</p>	<p>Cottonwood Heights</p>	<p>04/15/2015</p>
<p>The Blueprint could do "very well" in Recreation, Economy and Transit if we implemented the ONE Wasatch resort concept. Don't let this opportunity pass. It's been discussed for decades - Now let's do it. Get it on the table and on the Blueprint. We have used and abused the Wasatch for economic gain and basic needs since the pioneers. It always bounced back. With a few lifts and careful planning we can improve the recreation, economy and the transit while still protecting the natural resources.</p>	<p>Cottonwood Heights</p>	<p>02/12/2015</p>
<p>The blueprint needs to answer to the people not to Mountain Accord. The people want better transportation but no expansion. I don't think a train is the answer. I think a canyon parking pass and a better bus system could solve the problem and not cause more impact to the canyons.</p>	<p>Cottonwood Heights</p>	<p>03/02/2015</p>
<p>The connecting trails is a great to see, and in particular the BST is a huge part of the daily life of residents, and extended/finishing it would be fantastic. The additional transportation development obviously poses environmental concerns, but if they can be done with minimal impact, that would be desirable.</p>	<p>Cottonwood Heights</p>	<p>02/05/2015</p>
<p>The current plan lacks detail to comment. Especially where lands are concerned. Before going any further that needs to be spelled out ASAP.</p>	<p>Cottonwood Heights</p>	<p>02/04/2015</p>
<p>The destruction of Little Cottonwood Canyon for a Train or extra lanes is unacceptable. It would destroy the environment of the Canyon! Responsible stewardship of the land is Not destroying it for extra lanes or a Train that very few will ride. A quality recreation experience is not going to happen in LCC with a train coming through it or extra lanes creating hard barriers for dispersed users in places. A vibrant economy can not be achieved by destroying the Canyon they come to see, or saddling taxpayers with a huge bill for a Train. An environmentally sustainable transit system is more frequent busses.</p>	<p>COTTONWOOD HEIGHTS</p>	<p>03/16/2015</p>
<p>The legacy of one of Utah's most important resources will be lost with this plan. Protection of our watershed for future generations will be jeopardized with the addition of rail on a new route up Little Cottonwood. I hear the goal of preservation of our watershed but a new corridor is a major disruption of the ecosystem. Connections of all the resorts will make us a copy of Europe instead of unique. I am a season pass holder and daily I praise the local feel of our resorts. This will be lost with the proposed expansion. Smart express buses on existing routes with parking solutions and transit hubs will enable growth with conservation.</p>	<p>COTTONWOOD HEIGHTS</p>	<p>02/09/2015</p>
<p>The plans for a Train or widening the road in Little Cottonwood Canyon would destroy it. L.C.C. was too Environmentally Sensitive to hold events in the 2002 Olympics. Its a main source of water for many. The Little Cottonwood Canyon Trail is a very popular and has heavy use eight months out of the year. This Trail belongs to the people and is not to be destroyed to make Ski Resorts richer or give job security to UTA or Udote. Bus service in Little Cottonwood Canyon is not frequent enough and does not go into late spring, more buses is the answer. Employees of Ski Resort need to be required to ride a Bus.</p>	<p>cottonwood heights</p>	<p>03/13/2015</p>
<p>The prime objective of the accord should be to preserve and strengthen the watershed. The mountains are already overused for skiing. Improvements should be made in providing non skiing recreational use - better trail access and improved trails. Natural gas or electric bus access should be FREE with multiple stops for trail access during ski off season. Make car access expensive except for canyon residents or resort guests.</p>	<p>cottonwood heights</p>	<p>04/30/2015</p>

	The stated purpose is not, in my strong opinion, even approached, much less met. A real plan to protect the canyons would have had a HUNDRED YEAR focus. This is a 40 year real estate professional's development plan for our mountains--not a protection plan of any kind, for any place, much less the mountains, in my assessment. Twenty years from now, we'll be back at the same tables wondering what happened, because neither wilderness nor watershed is addressed, in any substantive way, in a permanent fashion in this "blueprint." Let's also acknowledge the fact that "rail" is a 19th century solution to a 21st century problem. If this were anything other than a real estate scheme, you shouldn't have been DISCUSSING rail at any point; it's well established to be prohibitively expensive, particularly for "small" urban areas with almost no existing rail service. If this were anything other than a real estate development scheme, you would have been talking about designing rights of way, not "rail lines." A protection plan would have focused on developing a proper transportation "network" across all the counties in question, with much less emphasis on "getting to the X canyons" in particular, and more on a plan to make it possible for anyone to walk out of their home (regardless of "density") and walk to a transit stop within a block of that home, and be able to go to work or play anywhere on the Wasatch Front/Back, for either work or school, without getting into a car. A properly working network of that kind would serve the tourist trade JUST as well as it would Utahns, and it would do so year round. However, a "network" of that nature wouldn't push "dense development" in specific places. It would allow denser development to evolve naturally over time; and it wouldn't make developers much money. It's nice that so many people sat down at the table together, but in the end? The mountains are still at the mercy of those who would exploit them for short term financial gain, and those of us who rely on the mountains for water, etc. are left sitting at the end of an empty pipe.	Cottonwood Heights	03/03/2015
	there is zero need to connect the back with the front (by lift or tunnel). anything summit county (deer valley, vail) is doing is strictly for tourism. i'd gladly pay \$345 per year per person to NOT bring more tourists to the cottonwood canyons.	Cottonwood Heights	02/24/2015
	This is very interesting. I'm not sure that the transit system as proposed is financially sustainable. I don't understand the concept of looking for a solution in a vacuum that does not include what that solution would cost, or how that cost would be funded.	Cottonwood Heights	02/27/2015
	Too many concessions to resorts at the expense of the wilderness.	Cottonwood Heights	03/19/2015
	Too much concession is given to ski resorts. There should be no physical expansion outside physical boundaries in the Cottonwood Canyons.	Cottonwood Heights	05/01/2015
	Too much emphasis on the Cottonwood Canyons to Park City connection. This should be way down on the priority list of the transportation solutions.	Cottonwood Heights	04/27/2015
	Utilizing the existing transportation alignments as proposed makes the most sense. I don't think busses up the canyons with the exception of Parleys will be utilized. Rail or Aerial Tram/Gondola up Little with Aerial or tunnel to Big & PC makes the most sense to me.	Cottonwood Heights	02/11/2015
	We don't need more roads. We need viable mass transit. Trains and tunnels would be the best, albeit not the cheapest. The backcountry land would remain intact, and transportation would be solved. And if it eventually connects to the East side of the Range toward Heber, the mountains local population could now chose to live in a way cheaper community and help avoid the population growth over the SLC Valley.	Cottonwood Heights	04/29/2015
	While I cannot say in regards to a "vibrant economy", What we have in the Wasatch Mtns /Cottonwood canyons / Park City area is priceless. Over the past 25 yrs however I have personally witnessed more traffic, more building, more congestion especially in Park City, but also in Big / Little canyons too. Preserve and protect should be the first priority. Clean, sustainable natural resources are why we moved here in the first place. Sadly that is slowly slipping from our grasp, and this winter is a precursor of what is to come with the advancement of Global Warming. An old line from a movie is fairly prophetic: "If you build it, they will come."	Cottonwood Heights	03/12/2015
	While I think the environmental analysis uses the best available scenarios for global warming, I'm concerned that too much planning is based on what the analysis admits is "uncertainty" for future precipitation amounts and forms. First of all, I think there's been too much linkage between regional population growth prognostications and growth in the skiing/snowboarding industry. My guess is that skiing and snowboarding user numbers are going to be essentially flat, if not decline, over the next fifty years. A lack of naturally falling snow and increasing difficulties in manufacturing artificial snow due to warmer nighttime temperatures are going to make skiing and snowboarding less appealing. Hence, we might not need dramatic transportation infrastructure. The Accord seems to assume the ski industry's rosy growth figures, which are self-serving, and which don't look at global warming with enough sobriety. I also question the overall regional population growth estimates. As water becomes more difficult to find in northern Utah and as the public acknowledges that withdrawing Bear River water from Great Salt Lake would create more problems than benefits, water is going to limit population growth due to its dramatic increase in costs. Granted, we can generate a lot of "new water" via conservation, but there are limits to that resource. My guess is that a dramatic decrease in available water will not only dampen population growth. It's also going to upend centuries-old water law maxims that simply won't make sense. I realize how difficult it is to plan for "uncertainties" and I think the Mountain Accord is about as good as one could hope for in trying to balance competing interests. I do think, however, that it places too much emphasis on growth. I'm afraid that there's too much "if we build it, they will come" approach to transit projects; i.e. putting the cart before the horse. That growth might not materialize, and I'd suggest putting the most fanciful transit options (tunnels and rail) on the back burner. They might not be needed, and if we went ahead too soon, the environmental and financial costs would be tragically spent.	Cottonwood Heights	04/29/2015
	It seems like there is more concern to increase recreational use with the hope of generating additional revenue with only a nod to environmental concern. Perhaps it would be a better plan to limit or decrease winter mountain recreation, develop new economic opportunities from other sources and in the long run maintain, develop, and improve vital, life-giving resources of clean air and water. After all, tourism is a finicky, soft industry...bad air quality, adverse snow conditions, poor water supply, over crowded conditions (to name just a few) result in a poor tourism economy.	Cottonwood Heights City	02/20/2015
	The Blueprint will shift transportation from one overcrowded corridor system which will strain other transport corridors and put unsustainable numbers of people on the mountain tops. This is a very poor, if not disastrous, idea.	Cottonwood Heights City	04/21/2015
	The Mountain Accord fails to prioritize the various competing interests. For example, surely water resources take a higher priority than ski resort development.	Cottonwood Heights City	05/02/2015
	This is a real pretty brochure, but doesn't say much about the impact to the land, the existing trails and current residents. Some of the arguments in favor of running light rail up LCC include avalanche road closures, traffic, parking, pollution, etc. Unless you put this thing underground (which will be an exciting ride up, unless you consider intermittent windows or views into the canyon) then it doesn't do anything different than a CNG bus would do, which aren't crowded now. If you're going to do a project of any scale, do it right and spend the money to build a tunnel and have the train/components engineered correctly so you don't fup the canyon. LCC is amazing, don't ruin the trails (especially the quarry trail). This needs to be low-profile, low-impact (including quiet), etc. or leave it alone. Are you going to close the road to vehicles? Is the train going to be mandatory? If not, what is different than CNG buses ... think and plan beyond a marketing scheme, please	Cottonwood Heights, San Francisco	03/12/2015
	Highest priority must be given to protection of the watershed and what remains of our natural environment, with a much lower priority for increased economic development (i.e. inter-connected ski areas). Improved bus transportation, subject to seasonal demand is important and appears to be properly addressed. All existing federal lands should remain federal lands to receive offer the best protection for the natural environment.	Cottonwood Heights, UT	04/18/2015
	It is very important to me that the remaining natural environment be preserved in the Cottonwood canyons and that actions be taken to limit further degradation.	Cottonwood Heights, UT	04/18/2015
	The details are missing, but that is probably to be expected at this stage. It's not clear how the grand plan will be implemented, enforced, funded. I have three primary concerns: Watershed, watershed, watershed.	Cottonwood Heights, Utah	03/05/2015
	Regarding traffic, I support the approach of incentivizing public transportation (free) and de-incentivizing auto traffic. That is a bullet point, so obviously it is being looked at, but change the most harmful with the least damage. Regarding Little Cottonwood Canyon, any plan which negatively altered climbing access would be poorly received. It is such a part of the jewel which is Little Cottonwood and too much is already restricted (or blown apart). Thank you!	Cottonwood Heights, Utah	05/01/2015
	The "blueprint" fails to define where the tracks component would be located within little cottonwood canyon. I have read it several times, I have attended meetings, and I have never had this question answered by anyone associated with this proposal. However, I have learned through extensive research that the answer of Mountain Accord is to build a rail line up the south side of Little Cottonwood Creek. No wonder Mountain Accord does not include that information in its "report". Sandwiching the creek between the existing road and a tracks line on the south side of the creek entirely ruins the outdoor get-away nature of the unique access the valley residents have to our wonderful mountains. The mountain experience will be entirely ruined forever. Deceitful. The multiple choice questions are a carefully calculated facade designed to trick the public into answering generic feel good questions in a way that supports a hidden agenda without revealing the truth so that an informed public survey will garner real responses. I entirely reject the proposal of a rail system going up the south side of little cottonwood creek. Such a rail system will entirely end the canyon I visit at least 2 weekends and 2 weekdays of every month. Reveal the truth, publish the truth, and start over. If you do not want to reveal the truth, it is because you know the public reaction will be overwhelmingly negative. Suggestion: Put the rail system under the existing road. A double deck approach. You get your rail under an avalanche protection cover, and we keep our canyon reasonably accessible.	Cottonwood Heights, Utah	03/15/2015
	Any proposal that promotes more visitor days is counter productive. The Wasatch is a resource limited environment. It is already over capacity in terms of use. The current Wilderness areas provide limited Wilderness Experience, the remaining is beat and over run. Promoting further use will only exacerbate the current problems. Maintaining or enhancing the economic potential is the real rub. My experiences in the Wasatch do not need enhancement to benefit someone else's pocket book. That includes State Government. Further development or build out of the Wasatch will not achieve the stated goals, as noble as they sound. This proposal is an attempt to have our cake and eat it too. What I propose is far more draconian, user limits need to be put in place. This will become more necessary as the use increases. Major Rivers already have a lottery system for permitting access in which users seem to support. As it stands, the Mountain Accord proposal is only kicking the can down the road.	Cottonwood Heights	02/05/2015
	As Background, I moved to Cottonwood Heights from Boston because the access to both backcountry and resort recreation could be so quick and easy. I Backcountry ski, Hike and Bike in the canyons 4-5 times per week and also have a pass to Snowbird/Alta and ski there 1-3 days per week. I am also a financial analyst and understand the economic implication of this study. Overall I think the blueprint is a decent compromise where all parties give up some ground so that the canyons can succeed for everyone. -Tunnels with bus/train service would be the ideal way to transport from LCC to BCC to PC and I suggest they be implemented first. This would relieve some traffic from the road up the canyon without having to add additional lanes. -Preserving grizzly gulch should not be a "maybe" and must be part of the land swap to make it an equitable exchange. There are times I am on Patsy Marley and can see more people recreating in Grizzly than on lifts at alta. Keeping grizzly will keep BC skiers coming to LCC and SLC - Its unclear to me how rail/2 dedicated lanes of bus service would fit in LCC without having a major effect on the landscape of the canyon. I do not think a 4 lane highway or raised rail is "responsible stewardship of the natural resources" and would be a visual detriment to the beauty of the canyon. - Mary Ellen should be preserved with the true wilderness that the greater american fork canyon is. This is a 4 season recreation area for many people seeking a more true backcountry experience that cannot be had in the cottonwoods due to the high level of development and traffic. LCC in particular already has significant development and that development should be contained to LCC and not sprawl into American fork. There are also many snowmobilers who are not allowed in LCC/BCC. - Additionally, Snowbird is already a massive resort and no visitors I talk to see any need for it to be bigger. Most tourists hardly scratch the surface of their terrain. Additionally Snowbird already has a hard time keeping its existing terrain open due to avalanche danger and would likely have a very hard time opening Mary Ellen on top of their current terrain. - I think a plan to relocate the powderbird heli ski operation out of the LCC/BCC ridge line should be included in the plan long term. As the population and backcountry use increases there is just not enough room along that specific ridgeline for tourers and helicopters. The Helicopters can easily fly a bit further while tourers cannot, yet the huge touring population contributes significantly to the local economy and they should not be deterred from the canyon. For more detail my cell is 617-459-8789 and my email is nicholasvasquez@gmail.com	Cottonwood Heights	02/10/2015
	Given experiences in other areas, I believe that simply providing light rail and other transit options will not be enough to change behavior. I would consider park and ride options using the "congestion charge" technology used in London or Oslo. This would mean that cars still wishing to drive up the canyons would have to pay a fee to do so. This is done on line with no toll booths. Automatic license plate recognition systems monitor the car entering the canyon and a charge made. The owner would have to pay the charge before the end of the day or set up a auto credit card payment, which is what most people do in London. You only pay when you enter the charging zone. Administration is kept to a minimum. It does force drivers to consider the cost of taking their car or parking and riding. The cost of parking and riding needs to be lower than taking the car. The income from the "congestion charge" can be used to subsidize the transit price. You retain the flexibility for people who need the car, young families, people with mobility problems. Without it, transit facilities will not get economic use.	Deer Valley part of year. Otherwise London	02/05/2015
	I don't think that environmental protection is being achieved when the proposal calls for huge transit up the Canyons.	Denver	03/03/2015
	As a tax paying snowboarder, I find any expansion of Alta extremely offensive. How dare you try to even further limit accessibility in the Wasatch. This plan is a direct attack on snowboarders and shows the extent that discrimination is accepted in Utah.	Don't worry about it	04/30/2015
	Buses are not a solution. They sit in the same traffic delays. Plus they stop running at 5:30. Can't have dinner after skiing. Can't socialize. They are ridiculous in their current use. I would like to see an ELEVATED electric monorail similar to Disney world so the impact on the ground is minimal. Little noise, disturb the animals, safer from avalanches, does not clog road. Something that can even be used by commuters in PC and Heber to quickly reach technology jobs in Draper and Lehi	Draper	04/30/2015

	Forest Service designation of public lands is adequate - additional designations are not appropriate given the proximity of these lands to a major population center and increase in demand to use these resources. Current Blueprint does not adequately how to address the expected increase in population and demand to access the public lands... an improved trail network is good, but it does not address increased demand on picnic areas, campgrounds, ski areas, parking and backcountry uses. The blue print should address how to responsibly accommodate the expected increase in demand through identifying areas for additional parking, picnic areas, acceptable ski area expansion areas, improved access to backcountry areas, campgrounds, etc. The current blueprint seems slanted to placing more restrictions on public lands rather than providing a plan to provide more access to public lands in a way that minimizes the impact and helps to preserve the wonderful resource we have. Public lands belong to the public and the blueprint should be facilitating public access and use in a responsible, sustainable way. More restrictions are not in the best interest of the public at large, but the few who do not desire to share the backcountry in particular with others. We have great resource here. People come from all over the world to use it. In my opinion the blueprint needs to strive to make it convenient to access and use, but do so in a manner that minimizes the impact on the resource. Improved transportation linked to Park City and improvement of infrastructure to support the coming increase in demand need more of a priority than acquiring the private lands and placing more restrictions on public lands.	Draper	04/30/2015
	Full disclosure: I don't ski. But the idea of great driving routes through the central Wasatch is exciting. I would travel between Park City and the Salt Lake metro more often because the drive would be fantastic. More people would visit the mountains year-round, bringing business to the ski resorts. Instead of being out-of-the-way, the central Wasatch could become the most beautiful part of a well-connected Salt Lake City metro.	Draper	02/04/2015
	How is it that relatively recent changes in resort ownership happen to benefit so positively from exploiting our natural resources? Like many concerned citizens I fail to see any benefit from the transportation proposal in this plan.	Draper	05/02/2015
	I can't imagine this valley without it's little cottonwood canyon just as it is.	Draper	05/01/2015
	I would love to see large park n rides at the bottom of the cottonwood canyons with increased bus service, more stops at trailheads, and avalanche bridges.	Draper	02/04/2015
	In the whole Mountain Accord process locals need to be realistic that intensive development in the alpine watershed has a real impact on the watershed and that Wasatch Front population will grow and snowpack will become increasingly unreliable. The NY Times article at the bottom is worth a read because the Wasatch Front will start hitting California style water limits in the next couple of decades. We need to do all we can to preserve our watershed. Linking Big and Little Cottonwood to the Summit County style intensive development and million dollar lots will pressure the watershed greatly. What Canyons Resort did to destroy their watershed should be a big red flag for the 600K people who rely on Big and Little Cottonwood for water. We can afford the same mistakes in the more critical watersheds. Take a look at the quality of East Canyon Stream over the past 2 decades. It went from a high quality fishery to a EPA impaired waterway. The headwaters are in Canyons Resort and intensive alpine development crushed that stream. Take a look at before and after photos and some snippets from water quality studies on East Canyon. <a href="https://www.facebook.com/pages/Stop-Skilink/188174407941048?sk=photos_stream">https://www.facebook.com/pages/Stop-Skilink/188174407941048?sk=photos_stream</a> Specific feedback is that SL County Watershed managers ought to have a huge voice in the entire process. I think that smarter parking policies in Big and Little Cottonwood can go a long way. 3, 4 or more in a car get good parking while solo drivers park in distant spots or pay a fee like JHMR. LPG or CNG powered buses in combo with more expensive and restrictive parking can solve much of the traffic issues. A train on a separate alignment is too expensive and too impactful to the watershed and viewshed in LCC. Linking LCC and BCC creates risk and development pressure in the critical watershed. "The idea, at least until the latter part of the 20th century, was that water would be cheap and plentiful and the focus was on developing new supplies," said Heather Cooley, water program director for the Pacific Institute, an environmental research group based in Oakland. "Folks realize we have now reached the limits of supply, so the focus is on demand." <a href="http://www.nytimes.com/california-drought-tests-history-o...">http://www.nytimes.com/california-drought-tests-history-o...</a>	Draper	04/05/2015
	None, but I did want to comment on the transit up Little Cottonwood to Park City. I think that this is a genius solution and totally support it.	Draper	02/05/2015
	Schoonover no trains and no tunnels in our canyons you can get more buses thanks	Draper	03/12/2015
	Stewardship of our Watershed Health and Recreation Resources vs Killing the Goose that laid the Golden Egg. Elements of the Wasatch Accord "proposed blueprint" are very good, but some of the options still under consideration represent significant short sighted folly, in my view. Notable positives include the transfer of private land to public in exchange for specific, discreet and thoughtful ski area base camp development makes sense. It provides certainty for the preservation of both watershed health to important holdings, and certainty to the resorts for base camp support facilities that can be developed with best management practices in mind for protection of water quality (rather than ad hoc and less planned dispersed development). However, several options on the transportation table will almost certainly exceed the carrying capacity of a healthy watershed, resulting in degradation of the mountain recreation experience and healthy watershed. While the Wasatch Accord and blueprint study notes the trips to the Wasatch are nearly 2x that of Zion NP and population pressure is expected to increase many times over in the future, all but one of the transit alternatives are based on the premise that added transportation of more people is better. Quite the contrary. Look at the heralded successful approach of Zion. Leadership and stewardship of the Wasatch would emulate that successful approach of managed access to retain the recreation experience and health of the ecosystem. Notably, Zion does not have the same pristine drinking water supply water quality resource to protect, yet the value of a reliable and high quality water supply in the Wasatch will increase dramatically to supply the growth in the region. The only sustainable transportation options are those which recognize and honor the healthy population carrying capacity of the mountain watershed, both in terms of vehicles coming up the canyon, but also in the safe number of people who can and should be "extracting" recreational resource value from the area. Do we want an experience that boasts 80,000 persons on the mountain in a day with respective "footprint" of deleterious impact on the recreation and local environment, or a healthy experience which boasts a quality recreation and quality watershed health? The transportation decision we make will dictate the protection or decimation of our resource, and respective value we receive in return. What is the healthy carrying capacity, and what is the transportation management scheme which assures that? That is the question and strategy we should follow.	draper	02/15/2015
	The proposal relieves economic congestion to the Park City area, in exchange for land protections surrounding the Park City area. It does not benefit those that love big and little cottonwood canyons - the majority of the patrons. Instead, it creates a transit system that will draw more destination tourists from the park city area into big and little cottonwood recreation areas, and also vagrant traffic on public transit from the valleys. This does not benefit those who truly love, use, and appreciate the local resource. The protections offered in exchange are vague and unsubstantial. Increased use, and increased marketing will only bring more people and commercial traffic to the area, damaging the environment. When rapid growth is a concern, why do we push to grow it faster? Jobs created will be low wage, resort jobs, developers will benefit wildly with large property/business owners, while local, Salt Lake Valley people stand little to gain.	Draper	03/06/2015
	There's a good existing trail connect from Big Cottonwood canyon (at the elbow on the Guard Road) to the top of PCMR. Including this option would improve your regional/recreational trail connections solution	Draper	02/10/2015
	Outstanding, comprehensive solution - well done!	Draper, Utah	02/09/2015
	Less development the better for canyons. Continue to work on trails and transit to reduce impact.	East millcreek	05/02/2015
	I absolutely support the blueprints proposal of a train providing access to the canyons. Taking as many cars and buses off the narrow canyon roads would decrease pollution, lower the number of accidents, decrease congestion in the canyon and provide Utah with a unique approach to mountain access that doesn't exist anywhere else in the world. Being able to take a train from downtown to so many world class resorts would be a huge differentiation from other competing winter sports venues across North America and the globe. Let's make it happen!	East Millcreek Township	02/05/2015
	Unouched areas are what I want to see more of. Less transport and especially less over to Summit County. Don't ruin Summit County like you already have to the Canyons and SLC.	Echo, UT	04/16/2015
	The maps are a little difficult to read. More interactive maps (like ski areas have) would be helpful. There are features through ESRI and others that allow you to hover over a portion of the map and have something that is geo tagged to pop up a detail that gives more information. I know these are intended to be very general but some of the ideas like transfer of private land across the Hwy from Alta could easily be depicted this way. I did not see a cost analysis any where in your presentation. Even a just some general figures like How much is Rail per mile? How much is dedicated bus lanes per mile? How much are gondolas per mile? tunnels? Where will the money come from is where the rubber meets the road. Feds, State, resorts, general public (locals and tourists) all play a huge role in how we pay for this.	eeefrum	02/05/2015
	I feel a transit corridor with light rail or something similar is essential to this plan	Fruit Heights	04/21/2015
	A realistic, more economically feasible solution for Little Cottonwood Canyon needs to be implemented. Connecting canyons via tunnels is unnecessary and very expensive. The exact same statement can be made for the construction of a light rail. Utilizing natural gas powered buses that can respond to the demand is a much more environmentally and economically responsible. The purpose of Mountain Accord seems to be striving for economic development and less interested in conservation and minimizing impact. To be honest, I am disappointed in what has been proposed thus far. I had hope that Mountain Accord was well aligned with my goals for the Central Wasatch. Now it seems clear that it is just another proposal to make money for the state in the long run.	Granite	02/12/2015
	Current signage indicating avalanche-related canyon closure is insufficient to inform idiots and enthusiasts alike.	Granite	03/15/2015
	I am concerned about the environmental impacts of a rail line going from Sandy or Cottonwood Heights up Little Cottonwood Canyon. This seems to allow economics to trump the environment and I believe that there are more effective as well as cost-effective ways to achieve the same results.	Granite	04/05/2015
	I have grown up in the shadows of Little Cottonwood Canyon. When I went through my divorce I found a lot of peace and solace on the trails I grew up on. My friends and I have done group dates or hikes up those trails. I went trail running with a good friend on the quarry trail. The community loves those mountains, please don't ruin them by increasing traffic and destroying the landscape with more man made items. One of the things that keeps Utah unique is our beautiful mountains, I can get to Park City in 45 minutes from my house. I have been rock climbing in both Parley's and Little Cottonwood and there is a huge difference between the two. One is peaceful and beautiful and one is loud and busy. Please don't ruin one of the best things about Utah to save people 15 minutes of driving time.	Granite	03/15/2015
	The blueprint is truly ridiculous. I live at the mouth of Little Cottonwood and I have rarely seen the canyon as crowded as you say it is in the photos contained in the blueprint. I drive up weekly and there is never any traffic. Did you take the photos on days the canyons were closed due to storms or avalanche control? It's almost comical. BCC and LCC just simply aren't crowded. I strongly oppose any building of tunnels or byways through to Park City. Stay out of some of the most beautiful canyons in the country.	Granite	02/04/2015
	You're hearing from an 88 year-old skier who has skied all over the world. I applaud the Mountain Accord initiatives. Only pro-active intelligent analysis will preserve the extraordinary Wasatch natural resources. In particular I would like to focus on the Albin Basin and Alta complex. With the authority of my world-wide experience I can proclaim that there is nothing like it anywhere. It must be preserved as it is. It could easily be developed in ways that would destroy its unique character. Please preserve this jewel for future generations. There are plenty of other locations that are willing and able to support development.	Greenwich, CT	02/06/2015
	the term "responsible" is subject to ones interpretation depending on ones view point. It is possible for some one not in tune with our historic view to say that what is proposed is not responsible in light of a view point which says there should be more development of the Alta Town area.	Greenwich, CT. 06831	02/05/2015
	Digging tunnels is NOT the solution!! We need to incentivize people to use the already existing transit, ie if you ride the bus to ski you get X off your ticket/pass...or creating a lane that is strictly bus access so if we drive we can see the obvious benefit to taking the bus. A tunnel to Park City is not cost or environmentally effective...why not work to create a routine all day bus system up/down Parley's that would not only serve skiers but also people that work in PC/SLC. Bottom line, unfortunately, we are a very "ME" focused society, so we need to find a way to convince people that using public transit is beneficial to "ME", ie. I can do work and respond to txt and email on my way to ski and take care of business so my ski day can be that much longer, and I don't risk being a distracted driver!	Heber	05/01/2015
	The Accord addresses a number of Wasatch Back goals concerning development Vs stewardship. To me that language is optimistic in Park City and a dream for Wasatch County. I do not have the feeling that Wasatch County currently possess the ability to implement anything but unlimited growth. Which I was wrong...	Heber	04/01/2015
	Forget about it and don't waste tax money. There is more than enough bureaucracy already.	Heber City	02/10/2015
	I feel that the human footprint in wilderness areas has already encroached on wildlife to an unacceptable level. Even though I am an avid skier, I am not in favor of ski resort expansion into any additional area, regardless is the area is already "side country". The loss of Grizzly Gulch to Alta is unacceptable. My recommendation for mass transit and private transit up the canyons is to increase the availability of the ski bus to run all year long. Can we convert the buses to use propane or in the future, electricity? As for private transportation... lets ban single passenger vehicles from the canyons and charge a fee to any car pool that is not using an electric or hybrid vehicle. We need to get serious about air quality and decreasing greenhouse gas emissions before it is too late.	Heber City	04/09/2015
	I like all aspects of the proposed action. However, I suggest revising the format of you document to make it easier to read. I use a 23 inch monitor on my desktop. Your choice of a very wide format for each page is very difficult to read when I get the font to a readable size (11 to 12 point). I am constantly scrolling from side to side. On any screen of a smaller size, it is going to even more difficult. Do not make potential proponents ignore your message due to this format.	Heber City	02/10/2015
	On the face of it, it is a compromise, not necessarily bad, between the resorts versus taxpayer burdens and encroachment on limited wild lands near SLC. If the build out of new developments (these will inevitably become towns and perhaps small cities) can be kept in check, a centralized on/hotel area is not a bad tradeoff. The high alpine areas will not support more of the mega-home development that this plan is a precursor to.	Heber City, Utah	04/14/2015
	I think it looks good as is. I prefer the current blueprints and I am happy that there is little housing and a lot of protected lands, increased transportation and recreational use areas.	Herriman	04/30/2015

	The blueprint uses misleading terms to describe the transportation corridor between Big Cottonwood canyon and Park City. It is not clear that existing public watershed land would be impacted and potentially lost forever if such a corridor were built. The blueprint should include a path to charge for private transportation in the Cottonwood canyons. With this option in place, public transportation becomes a means to limit vehicular impact on the canyons.	Herriman	04/30/2015
	I think all you are doing is destroying the Pristine mountains that the Utah born locals Like myself grew up in and love.For Commercial profit and hiding it behind a veil of environmental issues to do it...if this organization had any desire to preserve the wasatch mountains It would limit development in these places that people should only be invited to visit. Not stay There is nothing here preserving Utah's public interest all of these proposals only serve the interest of Utah politicians that are bowing down to slip up some of Colorado/California investor profits via taxes this is why the federal government wants to take it from you.I am not much for federal government meddling in state affairs. But I think in Utahs case big brothers/uncle Sam is right. This seems like a lot of very greedy people that can not see the forest through the trees and they see the dollar signs through those trees and are willing to tear them down to get a better view of those dollars. Asking for public input as though it matters we see the development of parking lots and such that will just coincidentally and conveniently lie in with your mass transit routes (train) that has not been approved yet.	Herriman	02/10/2015
	I think the plans need to recognize that the canyons are used in three distinct ways: 1--Summer. Fewer visitors doing many different things. Parking lots are often full. People are going to many various locations. Traffic is not a major problem (now) but access points are generally insufficient. Note full lots at most hiking trails, notably those in the Alibon Basin. 2--Winter, typical day. Current transportation and access seems to be working well. 3--Winter, holiday and weekend. This is the current problem. Too much traffic and environmental impact. However, this really is only a few days a year. Also, the plans do not consider the need for additional restrooms. In the summer, there are very few restroom facilities (none at Brighton resort). This is ironic since dogs are not allowed in the canyon. However, human waste is certainly being left throughout the area, especially in the summer.	Herriman, UT	03/11/2015
	I have lived all of my life in Cottonwood Heights and Little Cottonwood Canyon. Specifically I lived in Little Cottonwood Canyon in Wasatch Resort for 17 years. In my opinion the goals of preserving the recreation experience, watershed, and unique beauty are not being met by your proposed actions with light rail transit up Little Cottonwood Canyon and connecting to Park City. It appears that you say that you are looking out for the environment, but actually 95% of the system groups were those who would benefit economically from this new transit line. This proposed action will only detract from the experience in these canyons. There are already a lot of people who visit these canyons. The mountain accords proposal will just bring more people and congestion. You won't be able to enjoy the peace of nature anymore. Rather it will be a place of constant movement and noise. There will be no tranquility left. It appears that those who stand to benefit most are the ski resorts and other groups that are economically invested as well. This is truly not about air quality or preserving the wilderness. In fact it is the exact opposite. It looks more like a parasitic relationship where one benefits and the other one is harmed. How can blasting through the mountain be beneficial for our watershed and the wildlife? It appears that the Wasatch Front will stand to lose a very valuable and irreplaceable resource just so that a few economic groups can benefit. This is not the right thing to do. I am a skier who enjoys the ski resorts in Little Cottonwood Canyon, but I do not believe that this proposal is the answer to traffic concerns. The only thing it will accomplish is to make certain groups more money at the expense of our canyons. Please consider my comments when making these decisions. My grandfather fought for the environment and the water in Little Cottonwood creek when I was a child. My mother has also worked with the Forest Service and fought to preserve the water in Little Cottonwood Creek. A study was done by Brigham Young University's Biology Department which linked the de-watering of the creek to certain environmental changes in the mouth of the canyon. My point is that certain consequences can't be mitigated away no matter how much you try to rationalize them. I feel it is in my opinion a biased proposal because of so many conflicts of interest. It really makes me feel depressed that my children will not be able to enjoy the same Wasatch front that I grew up in. Instead of being a place of refuge and peace from city life, it will be just a continuation of it just a little higher up. Please look into other alternatives that do not have such an environmentally devastating impact. For example what about a shuttle service up the canyon like they have in Muir woods CA and in Zion National Park.	Highland	03/06/2015
	I like the idea of buying up private land for to protect and increased environmental protection for other lands. I am strongly against selling off parts of the LLC to be privately owned. I don't like the proposal for a train and tunnel in little cottonwood canyon and an aerial connection between big cottonwood canyon. there should not be any new lifts, trams, or gondolas allowed in LLC and BCC, or anywhere on public land along the wasatch. Trams, lifts and gondolas, and high rise condos all pollute the landscape and take away from the experience of being outdoors. Guardsman's pass already connect BCC to park city, why not just pave the dirt sections and plow it in the winter and only allow busses to connect people along guardsman's pass?A train is just flat out excessive and would be way to disruptive to the mountain environment.I think a better idea would be to have something similar to what they do at Zions national park, where you park and take the bus to where you want to go and no cars are allowed. You could have a big parking garage where the current park and ride is at the base of BCC and have busses that go up both canyons all day and restrict all cars, or add a significant fee to drive a car up like \$30 or something.	Highland	04/16/2015
	please not add. Train and All lifts to our mountains.....	Highland	04/16/2015
	The fastest growing area along the Wasatch Front is Utah County, and this is where a third of the Wasatch Front lives today. I would like to see more options for getting to the ski areas from Utah County. For instance, a single ski lift and parking lot near Tibble Fork Reservoir in American Fork Canyon to Mineral Basin/Snowbird may alleviate drive traffic up to LCC/BCC/PC by a third.	Highland	03/12/2015
	Very against trading current public lands for private lands.	Highland utah	02/07/2015
	Alleviating traffic congestion and parking problems - Install gondolas and large parking lots at the mouths of Big and Little CC's, similar to Canyons Resort and Breckenridge. Vibrant Economy - Launch a marketing campaign to convince the world that Utah is not as stodgy and restrictive as many think. Utah resorts have neglected season after season many things that Colorado has done right. Excellent guest services, ample parking, a live and let live culture, business partnerships that help offset the cost of travel (Frontier Airlines), competitors, low season pass prices, the list goes on. The Mountain Accord is a ruse to build and sell million dollar cold beds. Give this up, and start attracting more visitors through the things mentioned above, and not attracting a few "one percenters".	Holladay	03/11/2015
	Be careful not to destroy the resource you are trying to protect. I am opposed to aerial links between the resorts. If tunnel links are to be built, let them become the primary access to the Cottonwood Canyon resorts via high-capacity rail to Park City via Parley's Canyon. Yes, that would be greater distance to Snowbird or Solitude, but it could be quick (and certainly more than competitive with Colorado resort access), and it would prevent aesthetic destruction of the Cottonwood Canyons by adding more rail/bus/bike lanes, etc. Please make sure that hikers will still have easy access to the many trailheads in the Cottonwood Canyons. The ski resorts are not the only destinations. I like the Millcreek model of charging for access.	Holladay	04/24/2015
	Because of the current transportation bottlenecks, I would suppose that a limited number of people recreate in the mountains. If transportation was eased-how would the increased user traffic look? I'm not sure that the increase in users has been considered- both from an environmental standpoint- both wilderness use as well as private ski area use.	Holladay	02/04/2015
	Building a rail line up Big and Little Cottonwood Canyons with supporting shops and lodging will significantly increase the number of people in the canyons, especially those who would not otherwise make an effort to enjoy our mountains absent the new conveniences. While an increase in the number of people in our canyons is sure to increase the monetary economies surrounding those canyon rail stops, the environment and recreation will suffer drastically. A rail line in the canyon means that one cannot ride a bicycle in the canyon. A rail line will also increase canyon congestion rather than decrease it because mountain enthusiasts often carry supplies and equipment in their cars that are needed at the trailhead. Casual mountain visitors are unlikely to have mountain stewardship in mind when visiting and will increase the amount of garbage and erosion in the canyon and vastly increase non-monetary economic costs with regard to energy and valuable natural resources.	Holladay	04/30/2015
	Dog owners in Salt Lake City currently have very limited options for exercising with their dogs in the mountains. Presently, the only areas south of I-80 in Salt Lake County are the front range areas and Millcreek Canyon. It's too hot to hike with dogs much of the year on the western front of the mountains. Closing Millcreek Canyon to private vehicles will make A LOT of people very unhappy because these people now exercise themselves and their pets there. Go up to Dog Lake any summer evening and see how many people are there solely because their dogs are allowed. No shuttle system is going to allow dogs. If anything, more areas should be opened to dogs as the culture changes to more responsible ownership -- no chasing wildlife, picking up poop.	Holladay	02/06/2015
	Get going ASAP, especially with the transportation systems we're gridlocked now enough as it is with the "red snake" in LCC. Build that rail! Thanks	Holladay	02/04/2015
	I appreciate the way you are getting so many agencies involved, as well as the citizens of the community. I'm glad to see that this isn't a plan that only reflects the desires of one group - the environmentalists, for example. It seems to me you are asking all the right questions and taking into account the economic interests, the transportation needs, the desire for wholesome recreation, as well as protection of the environment. Thank you for your efforts. One concern I have is regarding the interests of private parties. It appears that the lands targeted to go from private to public are owned by ski resorts who are willing to make the exchange for better access to their remaining property. That's great. If additional land is needed, please be very careful with land owned by private citizens. I am a strong believer in the rights of land owners and would be disappointed to hear of any hostile take-over of privately held land. Please try to ensure that all concerned parties are willing participants. Thank you again for your efforts!	Holladay	04/30/2015
	I like that there is thought being taken to solving the problems. However, because so much of the Blueprint includes next steps as "evaluation", I think it's difficult to comment on what direction is the correct direction at this point. I would love to see what the "evaluation" yield. I don't like the idea of connecting BCC to LCC to PC off the bat, as proposed here. But I do like the idea of disincentives for cars in the canyons, paying for parking in the canyons, and increased options for better, more reliable, more efficient public transportation in the canyons. These are the things that I think everyone can take immediate action on with a positive impact to pollution and congestion. And, it'll make the user experience in the canyons more enjoyable (less car noise, less pollution, less fear of being hit while running, riding, etc. less parking congestion, fewer wrecks). The reason I'm not excited about the connection between LCC/BCC/PC is the general impact of creating additional roadways, which would seem counter-intuitive to the overall goal of preserving the recreation experience.	Holladay	04/29/2015
	I think the economic goals of the plan are not in keeping with the environmental goals of the plan and of many citizens who do NOT want the natural areas corrupted with economic developments.	Holladay	02/20/2015
	I think the major goal should be to connect Park City with a train system. No one wants to take rapid bus transit. The most enjoyable way to get up the canyon is on a train. Think of how Switzerland does this. Kimball Junction is the area where most tourism occurs and should have better access. Mountain Deli is also an area of interest. Eventually the train could connect through the mountains to the Big/Little canyon resorts. Let's keep people moving through the downtown Salt Lake area and up to the canyons... not have them take off from Sandy. There are fewer tourists or locals that head up the canyon from there. All the convention people and air passengers would love a way to visit Park City on a train from downtown. Have you considered new technology like "Air-Tube" that will be available soon. That would be a high tech draw and possible better cost alternative?	Holladay	02/04/2015
	It is difficult to know the economic and environmental sustainability of the proposed plan as speculation/projection is a major variable.	Holladay	04/16/2015
	It seems you are looking to make money for yourselves.	Holladay	04/04/2015
	It's unbelievable to think you would consider making any kind of tunnel system, how is that being a steward of these mountains.	Holladay	03/15/2015
	Linking Park City with the Wasatch mountains is ridiculous and would devalue the Wasatch ski experience. Transit issues in the cottonwoods is fair to address but please don't make Millcreek Canyon have a shuttle. Protection of the backcountry is key.	Holladay	04/28/2015

	<p>My first comment would be that the whole Blueprint seems to lead back in some way to "we need a train up the canyon" and is entirely too transportation focused. While the transportation issues are certainly huge, I am concerned that "every trail of bread crumbs" leads to there. Yes, big Federal money comes with transportation solutions but I was hoping this effort would be much more than that. While it does address other things, the over-arching transportation issues seem to overshadow those recommendations. For the sake of full disclosure, I was a member of the environment system group representing my then employer, Salt Lake County (no longer my employer). I was involved in the Mountain Accord from the start and previously-named iterations - the Wasatch-Summit Project and in many of the studies leading up to this current effort such as the Mountain Transportation Study. As a Planner for Salt Lake County, I also dealt extensively with the ski resorts from early 2007 until late 2014 and was working on new general plans for the Wasatch Mountains of unincorporated Salt Lake County and revisions to the FCOZ Ordinance when I left my position in November 2014 for another opportunity. Let's just say that I have considerably more background on this project than your average interested party having been an intimate part of the process on many levels. I think the process was very well-intentioned and that it represents a comprehensive approach to dealing with development issues in the Wasatch Mountains that is truly needed and long overdue. It is not an easy area to deal with politically by any means given the overlapping jurisdictional interests and sometimes conflicting regulations and goals. The balance is certainly difficult to achieve to keep the area from being "Loved to Death" - both an accurate term and the title of an article I published in the October/November 2012 issue of the Western Planner Journal that laid out a good overview of the diverse range of issues and logistical issues in the Wasatch Mountains. That article received many kudos from many of those involved in the Mountain Accord. My largest concern that I will express as a private citizen (but former insider) is related to the tenor of some of the meetings and how any negative comments or concerns expressed by those of us on the various committees were handled. Specifically, it often seemed like there was an end goal in mind for an outcome at many meetings and that any comments that diverted from that end goal were ignored or quashed. There appeared to be little appetite for dissent and those expressing any dissent were ignored at the meeting and left left out in future debates. I am saying that for myself, but other professional colleagues that served on the various committees also expressed similar concerns although they may be limited as to what they can say as they still represent interests on those groups. My point in all this is to simply express that I was somewhat disappointed that despite all the talk about this being a "fair and open process", the reality appeared to be quite different at times. While I completely support the idea of a comprehensive process, I think the way many things were handled in the process thus far left me (and others) with a bad taste as to how honest this process really was and feeling that it was quite contrived at times with a pre-determined conclusion in mind from the start. For the reasons I've expressed in these comments, I initially wasn't going to submit any comments as I felt they would be ignored and not well received or taken seriously. As a professional land use and environmental planner that loves the Wasatch Mtns and has a personal stake in this - I ski and I like the clean water those canyons provide (and the beer made from those waters) I decided to put those concerns aside and comment anyhow as this is simply too important to ignore. I'm not trying to be cynical, but I do want to express that I remain skeptical as to the ultimate motives and end goals given my experience in the process. I certainly would be willing to discuss these concerns in more depth, even with my skepticism remaining because I do think this is far too important effort and issue to ignore. Please accept my comments in the spirit they are intended which is to help in this process. As I said, if you care to follow-up with me, I am certainly willing and those involved know how to get a hold of me. Thank you.</p>	Holladay	05/01/2015
	<p>Properly defined business and use cases would help to better articulate stances and alternative scenarios. At this point, the items presented are still too high-level and require significant supporting data before I can personally stand behind any solution. In other words, supporting high-level due diligence is missing from this initial proposal.</p>	Holladay	05/01/2015
	<p>putting in a ski lift type system from the parley's canyon side of the area through guardsman pass over to the cottonwoods would ruin this area and there is no need for this</p>	Holladay	02/27/2015
	<p>Regardless of anything proposed, I think in the end, at least for what I'm concerned, I would cut as least as possible into nature. Anything that is proposed to restore, reforest and for the environment I agree with. We don't want to pollute our gorgeous mountain with a tourist overload and as for the Canyons/Vail \$50M project, I LOVE wintersports but am concerned that all these updates are going to raise season passes up. If we could keep season passes for locals at least under the \$600 range, as they are being sold now, I'm ok with any changes. I think quantity of People buying season passes with make up for the price difference. If the \$50M is pocket change to Vail, fine, go ahead but if us local skiers end up paying for it, keep things as they are. I know my comment is tailored towards the ski resort only but bottom line, we do care what we end up having to pay for it.</p>	Holladay	02/10/2015
	<p>some kind of alternative to tunnels through mountains must be found. This is an extreme disruption to the natural landscape that defines the Wasatch, which is why I responded as "poorly" to the question of responsible stewardship. I'm skeptical that the transportation options are environmentally-sustainable as well, but I'm not an engineer, and I simply don't know if the transportation options meet that criteria</p>	Holladay	04/14/2015
	<p>Thank you for considering transportation options that will actually work in the long run, like rail. The traffic will continue to get worse without this alternative. Also, with two disabled children, I ask that you remember that the beautiful backcountry is for everyone, not just those who want to be alone in the outdoors.</p>	Holladay	03/12/2015
	<p>The "blueprint" proposal had thousands of hours of work put into the system group meetings and sub meetings over the summer, yet, unfortunately their work is less apparent than the Exec board who were less engaged which resulted in a plan that represented their impressions/interests rather than what was determined by the System Groups. In its current form, I cannot support the "blueprint". But the Mountain accord ideals and the timing give me and many others hope that a more equitable balance can be achieved to accommodate many constituents'/stakeholders' desires, IF there is willingness to concede on some of their desires.</p>	Holladay	03/14/2015
	<p>The Blueprint is generally very good, but it appears to give too great a consideration to the economic needs and not enough consideration of the environmental impacts. For example, the transit alternatives for the Cottonwood Canyons are presented as though they are roughly equal in their cost, impact and effectiveness, without any attempt to address the economic and environmental pros and cons of each proposal. The Blueprint also appears to assume that we need to create a transit system that competes with and co-exists with private vehicles. The likely consequence of that assumption would be the construction of either a widened transportation corridor up Little Cottonwood Canyon, or the construction of a parallel transit corridor, either of which would have huge environmental impacts on the Canyon and the water, not to mention astronomical costs. There appears to be little consideration of using the existing roadway for a Zions Park type shuttle, that could be operated on the existing road, along with limited vehicle use, with little cost or adverse environmental impact. (I suppose this concept might be included within alternative D, but there is almost no discussion of that possibility, or the pros and cons of doing so). Also, the Blueprint is very difficult to understand and to navigate. I have spent literally hours trying to open and try to understand the various links, but there is no explanation or index to explain how one link relates to the others. The information ought to be organized into a single master index with various subparts (and connected links), because the structure of the current information is very confusing.</p>	Holladay	05/01/2015
	<p>The concept of putting a train up Little Cottonwood Canyon to solve the sometimes chronic car traffic issues should be considered separately from the concept of connecting Alta with Park City through a tunnel. The underground tunnel solution tying the three communities of Alta and Brighton to Park City must also be considered independently of the hill-climbing cog railway proposal. Transit solutions that do not require a central railway yard in Salt Lake Valley could function independently as a closed loop system, wholly underground, with daily maintenance performed at a service facility that is part of the terminus. The underground environment in a tunnel is at constant temperature, protected from the weather. This is nothing like outdoor highways and rail lines. A cog-rail train pulling a string of cars adequate for canyon travel is costly over-engineering in a tunnel. Furthermore, it can't provide prompt travel on demand that a queue of, say, driverless, programmed shuttles based on technological advances which might become reality within the next decade. An electric shuttle car system on a closed-loop track would be economically practical in a tunnel. Transportation choices must not be limited to legacy transportation hardware manufactured for other legacy projects.</p>	Holladay	02/24/2015
	<p>The idea of building transportation tunnels through the mountains is Not in the best interest of wild land conservation, water shed protection nor does it enhance the quality of the outdoor experience. Grizzly gulch, The Emma ridge line to Mt. Superior should be designated wilderness! White pine and Cardiff fork designated as notational forest. I am completely and utterly opposed to ski area expansion (increasing the ski area foot print) enough is enough!!! With the exception of Snowbirds expansion / acquisition of the Mary Ellen gulch parcel - expansion in this area would have far less impact on back country users , water shed ect. than other parcels on the table. The peripheral boundaries of the ski areas are already encroaching on the dispersed recreational opportunities throughout the Wasatch. In addition the cottonwood canyons should remain "dead end canyons" to connect the canyons in anyway would dramatically reduce the quality of the outdoor/ mountain experience and the individuality character and charm that is now present. Lets not turn the beautiful Wasatch into a paved Outdoorsy land, keep the mountains a wild and wonderful place for generations to come and enjoy and not "sell out" in the name of progress!</p>	Holladay	03/11/2015
	<p>The idea of combining the canyons to the Wasatch back is an absolute railroad job by those who stand to gain a profit the most. It disregards the locals who love the land and wish to keep it separated and secluded. The mountain accord disguises their true intent by throwing environmental nonsense (insignificant mumbo jumbo) right upfront, while backdropping the real impactful issues. Who said "less is more"? There is much truth to this.</p>	Holladay	02/17/2015
	<p>The open space that would be preserved generally seems to be land that could not be developed anyway (i.e. the side of Superior or land locked parcels). The Accord overlooks the potential for improved recreational access in the lower sections of the canyons and from the valley/Shoreline. From a cost effectiveness perspective, this seems like the most logical way to improve recreational opportunities and reduce summer traffic in the canyons.</p>	Holladay	02/12/2015
	<p>The priority must be sustainable natural resources for the future.</p>	Holladay	02/12/2015
	<p>The underground tunnel between Park City and Alta should be Priority One in the plan with Bus Rapid Transit solutions for the canyon passengers for the immediate future. The skiers are in Park City where the hotel and restaurant development is appropriate. If it only takes twenty minutes to travel the eight miles underground from Park City to Alta on a speed light rail train in any weather, you could eat dinner on Main Street and sleep slope-side that night at Snowbird. What a great marketing tool for Utah skiing, and for our wildflower hikes and tram rides in the summer. Barely 5% of Utah residents ski. Fewer are going to ride a slow cog railway once an hour when they can drive in half that time. Let's spend the Billion dollars where it counts and make a ski resort link to rival Grunewald, Switzerland.</p>	Holladay	02/10/2015
	<p>There's an assumption built into the working documents that the ski resorts are going to be scaled up. But at this point it's pretty clear that climate change is happening "now": in Utah (as in California) there are going to be diminished snowpacks, and also droughts (which will prevent making up for less snow with artificial snow). So there's going to be "much less" skiing, and it's reasonably likely that soon enough there won't be "any" skiing. We can be pretty sure the resort operators understand this. Their graceful exit is real estate development - selling upscale houses at the ridge of the Wasatch. That requires infrastructure development, in the first place transportation. So we should understand the agenda to be the urbanization of the upper Wasatch, over the next twenty or so years. So the question is whether that's a good idea. For the resort stakeholders, yes; for everyone else, pretty clearly no.</p>	Holladay	04/15/2015
	<p>This proposal seems very biased and not universal. The Forest Service motto is "Land of many uses." Yet, I see no access for motorcycles. I'm an avid hiker/biker/lyfther and motorcycle rider. It's disheartening to see no options for motorcycle trails.</p>	Holladay	02/11/2015
	<p>Why do we have to have "recreation" as one of the "GOALS"? Really it's a GOAL of Mountain Accord to DIG UP THE CANYONS ??? Who added that GOAL ?? NO CONNECT TO PARK CITY IS NEEDED. a connection to Park City is just another way for the wealthy to make MORE money, at taxpayer's expense.</p>	Holladay	03/26/2015
	<p>Deer Valley currently limits the number of skiers on any given day to prevent overcrowding. A much better Accord would be to define the current limits of the Cottonwood Canyons and approach future growth thru limitation of entry. During high visitation seasons mandatory use of buses or car pooling would be required. Visitation thru Mountain Accords blueprint would bring uncontrolled increases in population in the canyons degrading any and all quality of wilderness or recreational use.</p>	Holladay, UT	03/13/2015
	<p>Connecting the canyons (Wasatch Front to Wasatch Back, and Big to Little Cottonwood) is not responsible stewardship of natural resources. These connections are not necessary economically and have a big impact on the Wasatch Mountains - they essentially establish a new "road" through areas that are now "roadless." The blueprint should include alternatives without such connections.</p>	Holladay, Utah	03/03/2015
	<p>Bad idea Environmental destruction</p>		05/01/2015
	<p>I would like to see Express Buses for Canyons only from the TRAX station lots. Charge to drive up the canyon in a private vehicle. Our Canyons are over used as is. As a skier that lived a mile from Big Cottonwood Cyn for 36 years I saw how the dynamics changed for the skiers that lived in Utah. What I saw from all the charts and figures was money money money. Salt Lake &amp; surrounding counties seem to be doing better than the rest of the Country. We don't need companies and individuals that only want to make money coming here. How did any of that rambling explain how they were not going to hurt our watershed? How does light rail going up the mountain make a difference when there are avalanches. A train could not travel if there was a chance of being buried by snow. This is one big snow job. Please do not ruin the Canyons I love and grew up with.</p>	Ivins, UT	03/13/2015
	<p>Discuss the advantages and disadvantages of the various transportation options, particularly with respect to the inversion that is so important to health in the basin. For instance, which option would be best, when considering diesel bus from SLC to Park City, natural gas or biodiesel bus on the same route, or electric rail and aerial tram through or over the mountain? Spelling this out and quantifying its estimated impact on air quality (as measured by number of days above federal limits?) would be useful and powerful.</p>	Kamas	03/04/2015
	<p>Transit system should not try to connect Park City with Alta/Brighton. A fully functional multi-lane transit corridor exists in Parley's Canyon. Satellite parking and transit should be enabled in both the Wasatch front and back. The blue print should favor the environmental and watershed issues over economic issues. The US already has mega resorts (Vail, Park City/Canyons) that cannot be traversed in a single day. Connection of the resorts is of limited value. Rail up Little &amp; Big Cottonwood Canyons with covered track in avalanche prone areas could be a great solution to current traffic issues.</p>	Kamas, Utah	04/27/2015

	Some of the questions that are not answered by the Mountain Accord in regards to transportation and the proposed rail system, is how do people get on it? Where will people park? If it is not a good alternative, people simply will not use it. They are going to have to park somewhere and the current park and ride locations are not large enough to accommodate much more than they already do. I would like to see more buses before rails. Express buses that would leave even from 1-15 to the canyons with minimal stops (Perhaps on weekends and holidays – the highest user days of the resorts). I also think a tunnel is a bad idea—those cars would have to park somewhere and there already isn't enough, especially on weekends and holidays. I'd like to see more thought given to cheaper mass transit options that would not require parking, like buses. Buses have the added benefit of not increasing the size of the roads, whereas a rail system certain would. Also, ski resorts are a great resource to Utah's economy, but I am not in favor of additional expansion. Resort skiing is a cost-prohibitive sport for many and I don't want to see even more of our public lands used as exclusive country clubs. Currently Snowbird, Alta, and Solitude do not allow uphill travel access of any kind during the season. I would be in favor of Snowbird having additional parking, but perhaps increased number of buses and express buses can alleviate the need for additional parking and base facilities. Snowbird, Alta, Brighton and Solitude already have the best hills for skiing in the Wasatch, giving them more would be the detriment of current and future residents who wish to see and explore mountains unfettered with lifts, access roads for the lifts, ski resort bathrooms, etc. Consideration should be given to the fastest growing segment of ski/snowboard users, and that is backcountry users. The Central Wasatch is a small area and giving increased terrain to resorts would squeeze out even more human powered users who already don't have access to the national forest that is within the boundaries of the 4 ski resorts.	Kaysville	04/29/2015
	It would be better if rail was up Parley's Canyon as well as Big and Little Cottonwood. If they all link together that is great, if not, that is okay as well.	Keams	04/30/2015
	If the purpose of the mountain accord is in fact to preserve the water, animals and wilderness then the proposed blueprint is in my opinion totally flawed in the direction of development, increased tourism, and selling out those things that can't be bought with money.	Kihei Hawaii	02/12/2015
	I am very concerned with the potential negative economic impacts on Summit County and Park City, by enabling tourists to connect only to the ski resorts and not add to the bed base / restaurant tax, as these guests can just ski and then return to SLC for their other expenditures. I love the improved transit options, and just hope this has been taken into consideration. Possibly remove the connection from Cottonwood to Park City, and enhance I-80 only.	Kimball Junction	04/29/2015
	It is a Pork Barrel proposal by land developers to connect to better snow for a short and unreliable season and traffic that is only a problem on certain holidays and powder snow days. It is a waste of taxpayer money, a threat to National Forest lands and to the water supply for Salt Lake City. The biggest solution problem is Salt Lake City burning coal for power. The Auto traffic in the Cottonwood Canyon is not a major cause of pollution. You can see this from the mountain!	Kingsville	04/15/2015
	Prioritize the focus of the blueprint to be that of responsible stewardship of natural resources. While I understand the desire to expand upon existing infrastructure to make outdoor experiences more convenient to those who wish to easily access all that is great about the wasatch front, the central focus still needs to be maintaining the reason that people visit, the natural environment. There are many cases in southern Utah's national parks where access has been made easier to guests and locals who wish to enjoy quality recreational experiences and the exact opposite has happened. Increased visitation leads to increases in pressures on the same natural resources that need to be protected.	Lahaina, HI	03/16/2015
	In the past I was ambivalent about the Wasatch frontback connection plan. However, clearly growth of the area is inevitable and this plan gets in front of that development in a way that will allow it to be more efficiently achieved and better controllable. Congratulations to those folks who put this plan and presentation together, and thank you.	Las Vegas	04/30/2015
	Utah's landscape is very beautiful and diverse. I believe we should preserve as much of it as possible while yet allowing us to enjoy it. Many parks are having to go to public transportation systems to accommodate the sheer number of people trying to access them; it is only reasonable that public transportation will become necessary next to such a large urban center to allow access to our public lands without destroying them to allow for parking. Even if you build more parking, there will never be enough. Thanks so much for doing this.	Layton	03/02/2015
	Difficult to comment due to the lack of specifics; general goals are good	Layton	05/01/2015
	I am opposed to new roads. In fact, vehicular traffic should be further restricted. This area needs to be preserved and vehicles removed from it. If one of the existing roads is converted to rail only transit this will be an improvement. Cars can be eliminated thereby allowing increase numbers of people and goods to be moved through the area. I think it is great that people who want to put forth the effort to access the backcountry via foot and ski, but providing roads (non-rail) allows people access with no effort or consideration. Eliminate one of the vehicle roads and convert it to rail only. A rail only tunnel through the mountain would also be a low impact option between resorts. An aerial tram would be too high of an impact to be acceptable.	Layton	02/06/2015
	It looks to me like the proposal is mimicking what is already happening now. I didn't see anything that stood out as "new" or "improving" minus the interconnect thing...which is not a solution for "ALL PARTIES INVOLVED!" That thing is just a way for ski resorts to get business. The trails will be destroyed by construction, the views will be taken away by industrialism, and nature will leave to find other places to live. Nowhere did I see the Division of Natural Resources playing a role! Plus...if I can't take my dog hiking in the Cottonwoods, then why should there be a massive ski lift thingy all over the mountains? Doesn't make sense!	Layton	02/07/2015
	Light rail is a failure. No rail in our canyons, ever!	Layton	04/12/2015
	Rock climbing (all forms) has been vastly overlooked. And what about exploratory hiking? An imposed fee system in alarming, particularly since mass transit stops in LCC have been completely overlooked in lieu of stops only at ski resorts.	Layton, UT	03/30/2015
	The process must be shown to the public. The "Blueprint" is not a blueprint but a biased "vision" of a few. It seems to assume the interconnect (which is opposed by the people of Utah) as an underlying assumption for mountain growth. The "Blueprint" does not show how private ski area expansion is related to public investment in transportation. The relationship to proposed land protection to Forest Service approvals for vague ski area expansion plans is not explained, nor is public opinion's role in this undefined process defined.	Lebanon,N.H.	03/07/2015
	This is remarkable! It looks like a win for all stakeholders.	Lehi	02/04/2015
	I would like to weigh in. I think the overall blueprint is good, and brings up issues that need discussion and resolution. I am concerned about too much commercialization, and economic development. I am more for conservation and preservation of wilderness and back country. I would be more for restricting access to the mountains, than for improving transportation to limit the impact of more people. I would prefer improved biking lanes, and hiking access, but limit personal vehicle encroachment. I would be more willing to pay money to limit economic development, than improve my tax advantages by economic development that encroaches on our wilderness.	Lehi Utah	04/17/2015
	Feedback more on your survey: It is hard to answer these questions the way they are worded. I am hesitant to mark that a proposed Blueprint achieves an objective "very well" when I have serious concerns about those objectives. A better way to ask might be "How well does the proposal serve the needs of Utah's in the area of (transportation). These have been broken out for transportation below but not other areas. In summary one question asks both do I approve of the objectives and do we achieve those objectives, the answers to those might be very different.	London	02/04/2015
	The traffic between the Cottonwood canyons and Park City is problematic. I recently spent an inordinate amount of time in a van crawling up route 210 to visit Alta and snowbird. While I did NOT support ski-link I feel Mountain accord should take into consideration the 'One Wasatch' Plan. The Wasatch Backcountry alliance seems more about keeping private land for their own personal use rather than sensible development for all; residents and visitors.	Litchfield, Ct	03/04/2015
	NO LANES NO TRAINS UP LITTLE COTTONWOOD CANYON.	Logan	03/02/2015
	Please do not sacrifice any more public land for private enterprises. Keep the backcountry that is close to SLC open and free. There are plenty of resorts or terrain that can be further developed within resort boundaries.	Logan Utah	04/30/2015
	Well the purpose of Mountain Accord is to support the fat cat ski resort owners and the members of the legislature who stand to gain personally from big changes so I guess you are rocking it. However, as far as preserving the canyons for the general public's recreation and the future generations Mountain Accord could not be worse. No trains and no extra lanes up Little Cottonwood Canyon. The canyon cannot sustain it environmentally, and you are taking a precious gem and turning it into nothing more than a transportation corridor.	Logan Utah	03/10/2015
	Although short term infrastructure upgrades will cause significant disruption to watersheds, wildlife, and commuter traffic the long term benefits will outweigh these short term negatives. As a 30+ native people in this state are opposed to change, no plan will make everybody happy. Listen to your conscious not your wallet, decide with you heart not political affiliation. I have traveled the world and being from Utah has been an advantage. No matter where I go I run into others who have been to Utah and return yearly to experience the solitude of the Wasatch Mountains. Over the years I have watched non managed "progress" take away from my wilderness experience to the point I left the Wasatch front and moved to Cache Valley. According to the Lung Association SLC has the 7 worst air in the nation, Logan #8. These particulates are contaminating our watersheds. Healthy balanced ecosystems are critical when managing excessive pollution sources. All life forms of Utah have the right to clean water, clean air, and a quite place to experience nature. This comes before political agenda, profits, and personal gain. Make the right decision. Cooperate extensively, compromise, and manage the resource with the future in mind. If you are not up to this task then pass the torch to someone who is.	Logan, Utah	04/30/2015
	Having skied Alta for over 25 years, I am very interested in this process. I like the idea of a rail system connecting SLC, the Cottonwoods, and Park City. If I had a way to get to Park City without driving, I would make a point to go there at least once/twice while on ski trips. At the very least, avalanche flowovers on UT 210 are certainly needed. Even with the veoman's job UDOT does keeping the road open.	Marietta, GA	03/23/2015
	I feel that the Transit alternatives proposed that destroy the end/top of canyon environment in Little Cottonwood Canyon is raping the legacy and current environment of that part of the Wasatch range. I'm saddened that you are even considering ruining such a special environment that attracts and provides both man and nature a unique and irreplaceable escape from other regions.	Menlo Park, CA and St. Paul, MN	02/11/2015
	everything is okay except for the train up little cottonwood. It would wipe out the trail that many folks use along little cottonwood.	Midvale	02/05/2015
	Grizzly Gulch should not be 'under consideration' and needs to be left alone for all the recreation users (backcountry skiers, etc). Utah has some of the best backcountry terrain in the world and above anything else it should be preserved. Although there are many parts of the blueprint that are good (about 75% is pretty good); I feel MORE importance should be placed in environmental and recreation proposals first, then transportation second, and lastly should be economic. I feel this way because Utah has many smart citizens, we can collectively come up with great ways to fuel our economy. But the little remaining lands in the Wasatch should be preserved because if we gamble and it's gone, it's gone forever. Better to be conservative on the conservation side because the 'costs of error' are not near as severe than if we put more importance on economic at the cost of the environment and remaining wild lands left. Please PRESERVE the Wasatch, it's all our home.	Midvale	02/15/2015
	I am NOT a fan of this. Keep it how it is. No one needs access to all these resorts in a day. Keep the Wasatch wild. We have a great balance between tourism, resprtd and most importantly backcountry. You take this away and you are jeopardizing too much of our backcountry. I know someone on here is working hard to strike a balance but as an outdoor recreation professional who sees the need for both tourism and backcountry this is too much. Do NOT expand these lifts and resorts. People come for world class backcountry outdoors here in UT and you will be taking away more than is necessary.	Midvale	02/28/2015
	I am sick of reading how this will increase tourism and bring in more \$\$ when the idea is to deal with the existing situation.	Midvale Ut	04/09/2015
	I favor the mountain light rail connections over an aerial tram, but I have serious concerns about the impact from construction of something like that.	Midvale, UT	04/30/2015
	WHY IS THE BOOMING HEBER VALLEY BEING IGNORED IN THIS PLAN? THAT IS POOR, POOR FUTURE PLANNING FOR LOCALS. Very few people can afford to live in Park City (the average price of a small home in Old Town is now \$1.5 Million) anymore and the plan is ignoring the locals and worker bees, most of whom live in or are rapidly moving to the Heber Valley. Let's do a plan that takes locals into consideration first and tourists second. I'd like to see better transit options between the Valley and Park City.	Midway & Park City, UT	02/24/2015
	Creating transportation and recreation corridors with less maintenance required because I dont see the funding available to maintain a structure. As it is the pedestrian bridge across parleys and the surrounding trails see little to no maintenance and have become unsafe in places and full of graffiti. We need something we can keep maintain not just something that is good for a year.	millcreek	02/05/2015
	I am curious to see how the entire east bench, from Parley's Canyon to BCC and LCC will be incorporated into the transit system. Millcreek as a whole has seen bus lines get eliminated, yet there is the overarching need for better transit systems and reduction of vehicular traffic. I am wholesale in support of buses up BCC and LCC IF: the buses come regularly and on a schedule and IF getting to the buses is not a hassle. IN addition to the above, I am in support of carpooling up BCC and LCC: If a vehicle can pick up a full carload (4 or more people) they should be able to drive up the canyons. When you have whole families with little children, they will be less likely to switch to a bus. Also, the bus situation is not 'visitor' friendly. If an entire car-load of out-of-town-guests comes up a canyon, then they should be permitted to drive. If UPD Canyon Patrol would actually PATROL the canyon entrances, then this could be achieved.	Millcreek	04/10/2015

	I believe a tunnel from Park City to Either Alta or Brighton is a huge mistake. If real, demonstrated, consistent annual vehicle transportation needs from the Wasatch Back to the Wasatch Front merit a permanent connection, then spend the necessary money to upgrade the Guardsman Pass Road to an all year, all weather road, similar to Highway 12 between Grover and Boulder Utah, traversing the east flank of Boulder Mtn. in Wayne and Garfield Counties. Within the Cottonwood Canyons, Hybrid (natural gas - electric/battery) Bus Rapid transit should be investigated and promoted rather than a heavy/light rail system which would be greatly more impactful in a negative sense to the Canyon environment. With regard to a lift served ski interconnect system linking Park City and the Cottonwoods, I believe that to be an unnecessary and large chunk of infrastructure being pushed solely as a marketing benefit for the ski industry. I'm 65 years old, a 40 year resort and back country skier as well as a hiker of the Central Wasatch. I (downhill) ski Snowbird and Alta regularly and tour the backcountry a bit still, so I'm no opponent of the ski resorts. BUT, the interconnect concept is nothing more than a marketing gimmick to bring more ski tourists to Utah. No real serious skier from around here will elect to spend half his/her day riding lifts between the resorts when he/she could be on the snow making turns in the powder through the trees instead. Skiers want to be on the snow, not standing in lines preparing to ride in multiple stage lifts to get from resort to resort. Moreover, the lift cuts through the trees, the tram towers, cables, high speed quad towers and their required powering infrastructure would irreparably harm the scenic beauty and pristine serenity of the backcountry they would necessarily have to cross through, over, and above, forever negatively impacting those who would enter that same backcountry terrain to find peace and quiet. I believe the resorts should be allowed reasonable downhill ski expansion within their footprints similar to what Snowbird has done with Mineral Basin and Alta has done and wants to do in the Point Supreme area, all the while keeping Mt Superior, White Pine, Red Pine, and Maybird in their natural states. The mechanized lift connection from Summit County to the Cottonwood Canyons is unnecessary and unwise, and should not be pursued. With regard to Millcreek Canyon, the present toll system is doing some real good, and if vehicle pressure in that drainage increases, and the Canyon environment is threatened, or becomes degraded, then hybrid bus rapid transit ought to and should be pursued there as well.	Millcreek	05/01/2015
	I generally agree with the proposed Blueprint, with some specific exceptions and additional recommendations. I do not believe that rail transportation is appropriate for Little Cottonwood Canyon. Expanded bus service, whether via conventional bus or dedicated BRT lanes, could provide better access at significantly less cost and much lower environmental impact. Bus transit can provide much more flexibility, both in terms of quantity of service at peak times and ability to stop at multiple destinations. I am in favor of the proposed land exchange to provide additional protections to popular areas, but I believe that the exchange should be accompanied with restrictions on the amount of development that is allowed within the ski area bases. I do not oppose the expansion of the Brighton ski area footprint into Hidden Canyon to include additional skiing acreage, but I am opposed to any building within the expanded area except lifts to transport skiers back to the existing resort footprints. I am unsure of the proposal to expand Solitude within Silver Fork, because it is difficult to determine from the Blueprint exactly where the proposed expansion is, and whether or not it would include additional lifts. I would oppose any expansion in the main Silver Fork drainage, as that is a very popular area for backcountry skiing and snowshoeing in winter and hiking in summer. I feel that it is critical to provide convenient access to backcountry gateways (major and minor trailheads as well as infrequently used dispersed access points) to continue to provide diverse recreation opportunities. I support the proposed development of additional trail systems, especially the interconnections between canyons.	Millcreek	04/26/2015
	I support the effort to reduce car traffic in the Cottonwood canyons, but the solution should be better and more affordable than using one's own car. It has to be affordable, fast and convenient to overcome our dependence on cars. If you can do that, it has a chance.	Millcreek	02/24/2015
	The proposal seems to favor development in the central Wasatch despite issues of climate change (less snow pack) and highly inflated expectations of resort skiers. There should be more consideration given to wilderness preservation and conservation. There should be less focus on resort interests to expand, with my opinion favoring maintaining current boundaries.	Millcreek	02/05/2015
	I agree with the need to reduce traffic up Big and Little Cottonwood Canyons but feel the additional of light rail, tunnels, trams is counterproductive to maintaining landscape. As was done in Zions and other places with large amounts of traffic and easier solution is to limit the number of cars and increase bus transport. It would great if we could expand our trail system in the Wasatch Front but if that is linked to connecting Big Cottonwood, Little Cottonwood, and Park City the cost is too high. I am supportive a alternative to buses on the major established corridors like Foothill and I-80 but think cost advantages of Light Rail versus buses should be taken into account.	Millcreek Township	05/01/2015
	Most of the proposed solutions are excellent. However, an aerial transit system is incompatible with environmental protection. It will inevitably create pressure for commercial development along the route. Please eliminate all consideration of an aerial transit system between the Cottonwood Canyons and Park City.	Millcreek Township	05/01/2015
	Thanks to all for putting this together. I live near Millcreek Canyon and use it several times a week for trail running. I just noticed this morning (3-9-15) that 18 plus acres are up for sale on the north side not too far from the canyon entrance. There is no development there now and it is very steep to build on. I think it would be a blight on the beauty of this canyon to have development within it. We already live with some cabin stock up it's corridor now. How can this property be zoned out of developments reach and the owner compensated for its purchase?	Millcreek Township	04/09/2015
	While I appreciate the efforts of all involved and input from the public, I have several concerns which I will touch upon in the comments below. So, thank you! These questions are v. subjective. What do my answers mean? It's not even clear what Mountain Accord goals are because they tend to be contradictory between the different systems. The transportation studies quoted aren't clear either. For example, how can you predict increase cars in the canyon in the winter when parking is limited? Are thousands of cars going up the canyon in a snow storm so they can turn around and return? The economic benefits are not determined. The language used in the process is unintelligible to most of us. What does this "mountain accord speak" mean? I thought a blueprint gives fairly precise directions on how to do something. This "blueprint" varies from page to page as to what the primary mission is. Ordering of important goals changes so that I am never quite clear as to what the primary goals are. Yes, it is stated at the top of each system, but these systems are sometimes incongruous. I expect more and find the data presented to be of poor quality. It would appear that traffic and people in the CC is declining. And if there is a trend upward, who is fueling this? Ski resort marketing to the rich? The opening of high density parking for Snowbird along rt 210 that I have never seen before until the last year and in particular this year? It seems that the current goal is to favor what resorts want to satisfy their bottom line and how the state perceives to market the central Wasatch. Alps, really?? It ain't British Columbia either. I've skied both. It's not even the Dolomites. What the Central Wasatch is? Land for development purposes. The new "multi-use" for those who can afford it. See Vail's just released report on increased revenues due to high rollers and their business model of the Epic Pass.	Millcreek township	04/30/2015
	A train / mountain rail system in LCC seems like it would be very difficult to do. It would also require numerous snow sheds, etc. to be able to operate in any conditions. It also seems like it would be very difficult to do without a lot of wildlife habitat damage and environmental disruption. It might make more sense to route rail to Park City then tunnel to LCC? I do believe that a mass transit system is needed for both LCC and BCC. The least invasive might well be a tram/gondola up the canyons, but NOT over the ridgelines! or electric trolley buses running in their own lanes.	Millcreek, UT	04/30/2015
	Among the proposed next steps, "Evaluate the designation/protection options" for USFS land seems premature and federal designations/formal proposals might potentially lead to restricted options as Mountain Accord proceeds. Better to delay this evaluation for a later phase.	Millcreek, UT	03/14/2015
	Do not disrupt the natural ecosystem anymore than what we have already done to Wasatch front. These proposals are short sighted and really do nothing but promote economic gain. The excessive materials needed and additional pollution is uncalled for. If you want to protect the wasatch front than protect it. Don't use some crazy organic scheme to push a false agenda of envirental protection on the wasatch front and surrounding canyons. The proposal will disrupt pristine wildlife and habitat and will create excessive strain on the ecosystem. We already have enough man made items in the Wasatch please don't allow any more.	Millcreek, Ut	05/02/2015
	Some interesting ideas - some of which (tunnels) seem a bit pie-in-the-sky as far as funding goes. But a good way to look at the bigger picture. Scary to think of the Wasatch Back as urbanized as the front.	Millcreek, UT	02/11/2015
	This is another attempt to develop the Brighton area. The water shares are all allocated. The road is at capacity. A rail line is out of the question due to the sensitive nature of the canyon. The ski area is at capacity during ski season. Why would we want an area like Vail Colorado? They have basterized that area and ruined it. I am a land owner in Brighton and as you can tell I think the idea is stupid. We want to keep the canyon and Brighton just as it is, get k??	Murray	03/16/2015
	1. In looking at these documents, I see politics at its worst; general statements with NO actual metrics and NO concern for ACTUAL environment, only PEOPLE not LANDS or WILDLIFE. You don't even bother LISTING WILDLIFE in ANY OF THE DOCUMENTS. 2. I don't see ONE actual measurement here. We badly need to measure the actual conditions of the WILDLIFE so we KNOW what is there now and can PLAN to PROTECT it as we develop and Use the area. 3. By 2040, there will be NO WILDLIFE except garbage-eaters left in our near mountains; is that the goal, delay until the arguments are moot? 4. FIRST should be ACTUAL RESIDENTS of the area, the ECOLOGICAL CYCLES that are there depend on them, not us. We will end up with concrete and dirt otherwise.	Murray	04/25/2015
	Enough. Enough of carving up the last remnants of these irreplaceable mountains. Enough of these short sighted greedy little people starting with contemptible governor herbert & ted wison stealing the legacy we should be leaving our kids. Isn't the disgustingly overdeveloped base area of Solitude or the revolting hyper greed development all over the Park City side enough of a warning? Hyper traits-national developers keep out. God help us now that Vail Corp. is here. Hopefully the water board people have the balls to stand up to these soul dead rapacious bastards. Spasus the rationalizations, we've heard it all before, won't bother trying to shame these little leeches- it can't be done. This is our land, not yours. Keep out and stay out.	murray	04/30/2015
	I am completely against rail or aerial transportation from park city to BCW or LCW. Completely against any form of tunneling. While increasing tourism dollars to Park City and increase access to PC residents, the plan will absolutely decrease the quality or recreational experience for salt lake valley residents. I	murray	05/02/2015
	I am concerned about the impact trains would have on the canyons. To provide sufficient space for roadbeds for both a highway and trains would require a good deal of land and could destroy much of the scenic nature of the canyons and streams. The impact the freeway has had on Parley's Canyon is an example of how a canyon's nature can be dramatically changed.	Murray	03/16/2015
	I applaud the purpose of Mountain Accord to preserve the legacy of the central Wasatch through responsible stewardship of the natural resources, quality recreation experiences and a modern, environmentally-sustainable transportation system. If these three are properly addressed, a vibrant economy will certainly be the end result as the outdoor recreation experts would attest. As other locations and cultures have learned, we must protect the very exceptional beauty and experience of the Wasatch as this unspoiled scenery and unurbanized experience is what visitors seek. To do otherwise would ruin the very un-replaceable places so important to our connection with and stewardship of this planet.	Murray	05/02/2015
	I do not feel that building a tram to connect the Cottonwood Canyons to Park City is a good idea. I think that we need to protect our backcountry. I DO like the idea of building a train up the canyons, but I understand that it does not meet all of the transportation requirements that have been set. The bus systems seem like a great idea. I would like if the bus ran year round (even if it was only on odd or even days, or even once a week in the spring/summer/fall)	Murray	04/05/2015
	I don't believe current residents should suffer for the impact of tourism. If we increase recreation fees, we should increase it to out-of-state visitors, not current residents. Fees are pretty high as it is, for current residents, in my opinion. A suggestion might be to tax on some of this tourism revenue and apply such money to deal with environmental impacts. Whatever you decide to do, please do - protect our watershed - protect the beauty of the environment of the Wasatch - limit development in areas that should remain natural. Thank you! Paul Melgar	Murray	04/20/2015
	I don't want a train or light rail going up the canyon. A train would ruin the canyon, and make it so the canyon is inaccessible. you would have to put the train on either side of the canyon and that would make that side of the canyon closed off. because it wouldn't be unsafe to get across the tracks. People use both sides of the canyon. Please don't put a train or light rail up the canyon. Shuttles would be fine.	Murray	03/17/2015
	I had a question in looking at the maps with current wilderness, lands for possible extended environmental protection, and the possible new travel routes and transportation hubs. Many of these new routes and transportation venues were located in the "land for possible extended environmental protection." so how would the state be able to keep these lands protected- if they were to develop them into roads or railways for transportation? and would there be any kind of rule or limit to transportation upgrades in these areas? meaning= would there be a "stopping point" or would it be fair game to keep developing and extending either road or rail? I am worried, understanding the upcoming needs for additional transportation to accommodate tourists and/or residents in these areas, that any kind of development will have both a short term and then long term effect on the environment. is there any kind of checks and balances in these sorts of developments? how much is too much? and what will happen not only to the watershed but to the mountains in general after this kind of development? while I know we are also hoping to try an dboost Utah's tourism revenue- if we aren't careful, we could over develop and over work the mountains and then not have any part of this beautiful landscape for not only tourists, but ourselves and our children.	Murray	02/09/2015
	I've read a few items on this website and I like what I see. Some of the wording of the proposals are hard to know if they are for or against the way I view things. My wife and I are outdoor enthusiasts. We hike, fly paragliders, ski, windsurf, to mention a few. It's always a concern to me to see conflicts between the use of our natural resources and protections or restrictions. Both are important and both seemed to get misused. I saw the words a Perfect World in here somewhere. We live in a beautiful place but it's far from perfect or even fair. Hopefully this organizations and ones like it can help it become more so. I read the email I just sent and agree with it. Access to land is essential to the beautiful sport of paragliding. We have virtually zero impact on the land and it beautiful to watch and do. We only hike a small portion of the trails because we hike with our dog most of the time. Good luck in your efforts. I'm supportive of efforts to balance land use and access. Thanks	Murray	03/12/2015
	I don't like base expansion or increased visitation at the expense of the environment. The #1 priority has to be protecting the watershed. Expanding base operations to draw in more visitors is strictly about making more money. This is not a capitalism issue this is an environmental necessity. I do much prefer buses than a train or a tunnel. Again strictly trying to protect the watershed.	Murray	02/09/2015
	No lanes and no trains in Little Cottonwood Canyon. I can't believe you would even think about tearing up the beautiful temple quarry trail that goes through some beautiful places. Leave the canyon alone. If it's not broke, don't fix it. We don't want ALL those people at once in such a beautiful place. Serenity is why people use the canyons. Keeping a single lane is fine. It just makes people slow down and enjoy the scenery.	Murray	04/21/2015

	I want backcountry preserved, no linked ski areas and no tunnels. Better bus service sounds good. I want to be able to find solitude and untouched nature in the canyons. This is already being compromised by the sheer number of people in the canyons. I am for preservation, preservation, preservation of flora and fauna in the canyons.	Murray	03/05/2015
	Please include bicycles as an important part of the plan. They will play a huge part for all four parts of the Mountain Accord. Economy, Recreation, Transportation and Environment.	Murray, UT	05/01/2015
	The Blueprint seems to favor the interests of the ski resorts in the Cottonwoods, possibly at the expense of summer users, backcountry skiers and watershed interests. The Blueprint assumes a growth in the number of resort skiers, but I am not convinced this will happen. Backcountry skier numbers, I believe, will continue to increase.	Murray, UT	04/30/2015
	I have major concerns about connecting Park City to the Cottonwood Canyons in any way shape or form.	Murray, Utah	05/01/2015
	Maximum conservation. Why destroy a gem. We'd never get it back.	Murray, Utah	04/28/2015
	The ski industry will do anything to gain new terrain, pure and simple. The ski resorts in the upper cottonwoods - ALREADY operating on mainly public land - are in a land grab in the hope they can grow skier days and revenues. The upper cottonwoods is a unique environment. Once a lift is put in, it will never go away. How can increasing the Utah tax base by \$15m or whatever the cost of the transportation options are help anyone but the resorts. If you want a vibrant economy, spend it on teachers, or tax incentives for out of state businesses to relocate to Utah. I agree the accord is an attempt to reconcile parties with different objectives and it possibly does that. However, sometimes one has to put ones foot down to save the environment.	New York	03/03/2015
	I am curious about the future of hunting in the area, a traditional activity.	Newark, CA	04/30/2015
	Grizzly gulch needs to be set aside as wilderness no chair lifts. The trail from alta to grizzly gulch sometimes has 100 people in line waiting to get up it. If a chair goes in grizzly the backcountry between brighton and sulfide the backcountry there is ruined.	North Salt lake	04/29/2015
	The blueprint leaves out a trail up Parley's Canyon. This idea has been discussed and even planned at various degrees and for various sections of the canyon, i.e. west mouth to Mountain Dell or Mountain Dell to Parleys Summit. There is too much speculation as to how trails projects may be funded. Too often trails have to battle for funding and are often afterthoughts instead of priorities. The concept of a "Wasatch Trail Loop" should be considered when planning for improving and connecting the "regional Trails Network." How is that network defined?	North Salt Lake	04/30/2015
	My family appreciates the work that has been done on this Mountain Accord proposal.	North Salt Lake, Utah	04/29/2015
	What is the blue print for transportation? It is up in the air. Nobody wants to make a commitment. No one appears to want to make a sacrifice. The one thing is we don't need charlift strung across the canyons, and we need to stop cars with a transit system which runs every 15 minutes ALL day not morning and afternoon. Transit systems work they run constantly regardless of the cost. It is for the public, and we have to pay the cost. No one wants to feel any pain, and do not want to be inconvenienced. We need the federal government to step in and take control since the Utah Legislature will vote to destroy the area if they can get a deal for their cronies.	Oakley	04/07/2015
	As a former resident of Holladay I grew up in the Cottonwood and Millcreek canyons. I believe it is of primary importance to our way of life to preserve the pristine natural beauty we have. I want my children to have the opportunity to ski Alta powder without the urban sprawl that blights so much of our west coast neighbors. I wish you would include the Pineview/Snowbasin area in your study as we are experiencing too much building in our area. A vibrant economy is important but at what cost. Expanding the Mountain Accord to include more of the Wasatch would be fantastic.	Ogden	04/26/2015
	It's pretty confusing for a lay person who doesn't have a lot of time to study it. If it proposes a train into canyons and recreation areas, then it's not environmentally sustainable nor responsible stewardship of natural resources. Likewise with tunnels or interconnecting canyons with gondolas. It is unclear at this time if snow and participation in snow related activities will be as large as projected. It is important for changes to benefit all local visitors and not just the small segment of the population that can afford the luxury of ski resorts. The marketing of ski resorts is only concerned with these residents and consumers. The natural environment and ecosystems seems to be the last priority.	Ogden	04/16/2015
	"Light rail transit (LRT) exclusive guideway up Little Cottonwood Canyon to the Park City area, including tunnel connections between Alta, Big Cottonwood Canyon and Park City." The foregoing is an encouraging quote from the study. The most "exclusive guideway" would be a master tunnel with Draper as the portal into the "front" with respect to access to ski areas and Park City. There is Global precedent for such tunneling. Such precedent has been expressed in its very early conceptualization by Master Geologist Leon Hansen...deceased. There are many of us who believe that a "Super Tunnel" would remediate if not eliminate most environmental concerns and create a cornucopia of economic activity. The father of the Utah Tunnel concept is Leon Hansen. Leon was a Masters degree level geologist who had a lifelong working relationship with the Greater Park City Mining District of Utah. Leon has held senior positions with several large, international, mining enterprises. There exists a repository of proprietary data that confirms the existence of precious metals resources that equal or exceed what have already been recovered from the mining district prior to its closure. Mining was halted decades ago because the metals resources were impacted and impounded by water being in the mines. Leon believes that the water in the mines is a resource even more precious than the remaining gold and silver reserves. If the waters are recovered, the metals can also again be recovered. Synopsis: The Utah Tunnel will be a tunnel like many other long, long tunnels...New York-85; Sweden-51; Japan-33; Moscow-25; Madrid-25; Finland-74; LOETSCHBERG-21; Chunnel-31; Utah Tunnel-21 The Utah Tunnel would also be 21 miles long and most like the LOETSCHBERG tunnel. Loetschberg is the longest land tunnel (21Miles) in the world. The Loetschberg tunnel took eight years to build and cost \$3.5 billion. The Loetschberg tunnel transports skiers to Swiss resorts more quickly. The Utah Tunnel would be a multipurpose/multi use resource. It will convey...Water...Strategic minerals...Tourist transit to world class ski and recreational resorts...and other economic benefits to all of the citizens of Utah. The Utah Tunnel...it can be done...during economically difficult times. The famous symbols of recovery in the West during the Depression included: Hoover Dam, Grand Coulee Dam, The San Francisco Bay Bridge and the Golden Gate Bridge. The Utah Tunnel will develop the following resources: Water...Multi-Millions of gallons from aquifers under and around the Uinta and Wasatch mountains recovered. Strategic minerals...\$0,000,000,000 (at thousands of dollars an ounce) of water locked, precious metals (gold, silver etc.) resources freed!!! Travel to ski and recreational areas...rapid, uncongested, and safe transit from the airport and other points to resort areas developed. Hydro and Geothermal power...other economic benefits... The tunnel from Draper to Park City will pass under three of Utah's most famous ski resorts. The plan is to connect those resorts with the tunnel thereby ensuring safe and rapid transportation from the Salt Lake International Airport to the resorts. It is our understanding that there is an existing railroad right of way from Draper to the Airport.	Ogden and Salt Lake City	05/01/2015
	By being shot straight to hell; there is no need to make you corporate bastards more money than you already have. It's all about money rather than the preservation of our natural resources...stick a fork in your shit show idea and get the F*** out of UTAH.	orem	02/05/2015
	First, I appreciate that so many groups have come together to work on this, and also appreciate the willingness to compromise. However, I feel that the current plan emphasizes the economy and access over the environment, and that ultimately these decisions would be detrimental. In an attempt to keep my comments brief, I'm opposed, specifically, to the proposed connector tunnel and to the train up Little Cottonwood Canyon. I don't believe either are necessary and will have severe negative impacts to the environment. Why not improve and expand a bus line instead to transport individuals. Once expansions and development happen we can never go back. I urge the members to put more emphasis on maintaining as much of the pristine environment as possible - that is something we've been blessed with and have a stewardship to protect, and is also what brings so many visitors.	Orem	03/15/2015
	The Wasatch Front is becoming more and more enjoyed by locals, and tourists every year, and it seems that every year there are more people out recreating than there was the year before slowing down at all, but I do believe that the Mountain Accord blueprint is a start in preserving the mountains that we love. I am an avid archery hunter, and these mountains are very important to me and many other outdoorsmen who frequent these mountains. We need to keep these mountains the way they are, and prevent them from becoming just another tourist spot for wealthy people from around the world to come to just to ski, shop, and party. I support the proposed blueprint because it is better than the alternative.	Orem	03/04/2015
	Protect Grizzly Gulch it is a classic backcountry hiking and skiing area for true locals. Do NOT create a transit from Park City to Brighton and Alta. That's too much damage to wilderness, not fair to wild life, not fair to SLC locals. Keep Park City tourists and user wealthy residents IN Park City. A majority of locals already cannot afford to ski in the Cottonwoods. Encouraging elites Park City to come to LCC and BCC more often will encourage these already awesome enough resorts to ramp up their luxury services and costs.	Orem Ut	04/23/2015
	No extra bus lanes or trains up LCC. Provide more parking so we can take a bus. Provide incentives to ride the bus or ride share by charging a toll or parking fee for vehicles with fewer than 3 occupants. Don't spend so much money to support only one segment of the economy, especially a segment that pays so little to its employees.	Orlando	04/30/2015
	The proposed mass transit train system is a great long term solution however, the best near term solution is staring us in the face. With only four additional chairlifts we can link up the One Wasatch and turn this into a phenomenal world-class ski area with minimal environmental impact. This could be done right away and the greater community benefits. If you look to the Canyon Ski Resort half the impact as adding the 8 lifts South of Tombstone. Were we to permit misguided naysayers not allow this to go in we would still have a Wolf Mountain / Park west. Now with just 4 additional chairs we can make the dream of the vast and silent majority a wonderful reality. Please link up the ski resorts for a true one of a kind world class ski center in Utah's Wasatch.	Park City	04/06/2015
	I attended the meeting at Park City High School. I believe the majority of those who attended were concerned primarily about the transportation initiatives, and specifically, the tunnel. I am personally opposed to the tunnel for both economic and environmental reasons. I am opposed to spending funds to "study" the tunnel as I see this as an alternative that will be "dead on arrival" in Park City. I would like to see a light rail/integrated public transportation solution that better connects Park City with the Salt Lake Airport, Wasatch Front ski resorts, and the valley. More visitors would use public transit if there was a quick and reliable mode of transportation to/from the airport.	Park City	04/28/2015
	a major lynchpin is localized affordable housing, which seems to be the toughest to legislate and implement. without it, the other components are "arranging deck chairs on the Titanic". to move forward, the blueprint implementation needs real teeth and incentives that will mean something significant to the powers-that-be, not just "encouragement". if major employers in Summit County (ie Vail...) would commit to affordable LOCAL seasonal housing (dorm-like), then employment needs could be satisfied with minimal increased traffic (thereby environmental) congestion. has there been a weighted analysis (maybe I missed it?) of the subgroup populations that will grow, who is doing the lion's share of traveling, the times of year that have the biggest impact (ie 50,000 people for 5-10 days at Sundance vs. 4 months of Salt Lake residents coming up the canyons either daily for work or weekly for recreation, etc.) my "gut feeling" is that it's commuters during the winter, so the localized seasonal housing needs should be prioritized. in all of this, how much input and support is coming from legislators? does the state government support this 2040 effort? if so, can they be induced to help move this effort forward?	Park City	02/24/2015
	a tunnel between park city and big cottonwood is long overdue.	park city	03/16/2015
	All of the transportation alternatives that connect the Cottonwood Canyons to Park City are HORRIBLE and will ruin Park City.	Park City	02/08/2015
	As a member of the Park City community for over 40 years I have watched the good and bad of growth. I am diametrically opposed to any connection between either Big or Little Cottonwood Canyons and Park City or the Wasatch Back. A transportation system that runs concurrent with existing I-80 to Kimball Junction is a possibly acceptable option, but only if it does not enter Park City limits. There is absolutely no economic incentive for Park City and the Wasatch Back to provide recreational amenities for the Salt Lake valley. We don't need the traffic, impact and social costs while the valley enjoys the benefit. Indeed Greater Park City is already over planned for development. Mountain Accord is a project designed to enhance the economic viability of greater Salt Lake City and environs by destroying the mountain environment it claims to protect.	Park City	04/28/2015
	As ex-Mayor Dana Williams said, "you've drunk the Kool Aid." Your plan is appalling. It caters only to the ski industry and economic interests. It does not consider the devastating impacts to the environment in general and to wildlife in particular. Drilling tunnels is an insane idea. Your plan does absolutely nothing in regard to the major issue, which is traffic congestion in Parleys Canyon and into Park City. Shame on you for pushing this plan!	Park City	04/30/2015
	As we recall, the Mountain Accord was born because of the controversy regarding Skink. Opponents stated that 13 lift towers and a gondola would hurt the environment. And now...A TRAIN! While I can support a train, I do not see how pumping millions of people year-round into the Wasatch is more environmentally friendly than just connecting the existing ski areas by lift and letting people use their skins for transportation. A multi-billion dollar train seems like overkill.	Park City	02/24/2015
	Believe the "OneWasatch" proposal was the best for the purposes of "recreation". Connecting the Park City mountains with Big Cottonwood and Little Cottonwood canyons would be the best thing for the Utah economy....a singularly differentiated ski experience. Highly recommend using chairlifts, aerial trams, gondolas for the connections	Park City	04/30/2015
	Billion dollar tunnels or train systems are not environmentally compatible. The best thing about the plan is the trail network.	park city	03/27/2015
	Cordery It is a very poor choice to drill large tunnels inside of mountains. That displaces everything that we have come to Utah for. It would drastically change the landscape if you were to drill tunnels through the mountains. Just think about all of the people who will be here when we are gone. It is not fair to put anyone through this disaster of a plan!	Park City	02/23/2015
	Delete all connections between cottonwood canyons and park city. Specifically, delete trains and tunnels from the plan. Enhance bus connections between slc airport and park city.	Park city	04/30/2015
	Detail on the electrical re generation qualities of a rail transit system.	Park City	02/28/2015
	do a light rail line from SLC to Park City on to Heber on to Provo, running both directions this will help move employees to PC from Heber then rely on local buss systems to move away from light rail stations	Park City	02/05/2015
	Eliminate the transportation element as long as you continue to pursue trains up the Cottonwood Canyons. Zion National Park has proven buses work. Eliminate cars completely and no trains that cost too much and have too much of a negative impact. If you're serious about wanting to preserve and protect the Wasatch Mountains then do just that.	PARK CITY	02/25/2015

	Gillwald obviously funding for all this will play a role. transit connections to and from the cottonwood canyons to park city are important along with increasing resort base amenities in case one gets stuck at altitude with no real way to get back to park city.	Park City	02/06/2015
	How many more people do we really want to "attract" and why? I know that the resort industrial complex wants more more more - but to truly give visitors a unique and positive experience there is a tipping point. It's getting so crowded in Park City - we may be victims of our own success. Of course the climate changes that we will (and already are) experiencing may just make a lot of these plans seem ridiculous - even with the best snowmaking equipment - if the temperatures are too warm we will not have consistent snow throughout a ski season. I have friends from Chicago who typically come four times per year that just cancelled their spring break trip here. For a while you may be able to attract new people with outreach marketing - but if the snow isn't great and if too crowded to get into a restaurant then they won't return.	Park City	03/12/2015
	I agree with preserving watersheds, open space, and water resources as well as doubling the federal land and wilderness area. Adding a transit system with tunnels will not do this. It will be extremely disruptive to the environment, wildlife, etc. I believe this is driven by money and will benefit those that can develop and increase personal revenues. Who will fund this? Why should our government pay billions when this is mainly for personal gain. I think a well planned out enhanced bus system with disincentives to drivers would be the solution. I also think it is very interesting how this came to pass since Vail has invaded Park City and the wealth that came along with them is most definitely behind this!	Park City	04/27/2015
	I agree with the comment from the October 29, 2014 meeting, "Concern about transporting too many people into the Cottonwood Canyons; noted that the canyons were eliminated as Olympic Venues in 2002 because it was felt that 25,000+ visitors were too large to handle and also a public safety concern." In addition, I live in Park City in the winter, but am a season pass holder at Alta. I don't ski in Park City and haven't skied there in five years. I fear that the connection will change the culture and the recreational experience and lifestyle in the Cottonwood Canyons. Let's not strive to be Colorado; what we have works. I'm for saving the environment and keeping the Wasatch beautiful, however, will this be accomplished?	Park City	04/29/2015
	I am against the proposed tunnel from Sandy to PCMR. It is extremely expensive and will bring only day skiers up (larger crowds here in our community) with little contribution to our economy or community. How does the proposal improve Park City? Seems to me that it will make us another suburb of Salt Lake and that is not why we moved here. Also, seems to me that the options which will be implemented will be buses as the cost for light rail is too expensive for our state (I will never get the funding) I would prefer to see improvement on I80 and in transportation options from kimball to park city improved vs. a tunnel through cottonwood canyon.	Park City	02/23/2015
	I am concerned about the "why?" of the Mountain Accord movement. Nobody on the Wasatch Back cares about going to Sandy on a regular basis so I see no benefit and only IMPACTS to the citizens of the Wasatch Back. I am also concerned about the environmental consequences of building such an endeavor. The construction requires a large footprint that could be very destructive to the environment and wildlife. I don't see the need and feel like this would be better served with light rail along the existing highways. Economically, this all makes no sense to me and I never seeing this being monetized.	Park City	04/30/2015
	I am concerned that these plans are for the financial benefit of the few at the expense of the many and of the future.	Park City	04/26/2015
	I am not really in favor of putting in tunnels from the Cottonwood Canyons to the Wasatch Back. Our mountains are already riddled with old mining shafts etc. With I-80 being the main artery from the Wasatch Front to Park City, we will need in the future a more efficient bus system. Perhaps at some point in the future, cars may not be allowed in central business districts without paying a surcharge such as they do in London or Stockholm. Also feel that there needs to be a better system from Park City to Heber City and Kamas.	Park City	04/30/2015
	I applaud addressing transportation problems with environmentally friendly mass transit options. I do not support the building of tunnels or over the snow connections that potentially adversely impact the watershed and environment, fauna, flora and access and quality of life. At the very least a full EIS should be done before proceeding with any of these alternatives. I am a skier, but I do not support turning the Wasatch Front and Back into a giant amusement park for the ski industry. There are many non skiing recreational users and nearby residents who want their quality of life preserved. More development is not necessarily good.	Park City	04/30/2015
	I appreciate the hard work that people put into this, but this to me is mostly about economic growth and the economic considerations outweighs the other areas that this proposal is intended to support. I believe small projects that enhance key bottlenecks should be considered and not a holistic mega-plan. Decisions are being made now with 2015 technologies being considered. In 30-40 years we will have completely new tech that will give us other options. BUT pursuing these plans now will restrict the best plan possible for the Wasatch, that can only happen when we understand what the new technologies in the coming decades will deliver. Once we mess with it, we will never get it back to the way it was... please don't. Thank you.	Park City	03/27/2015
	I believe after viewing the webpage this is a wonderful attempt to preserve the Wasatch back. I am opposed to anything that would endanger my ability to ski, mountain bike or dirt back in the Wasatch. I believe alternative transportation options allowing transportation from Park City to Big and Little Cottonwood Canyons makes sense.	Park City	03/06/2015
	I believe this whole process is a marketing gimmick for private landowners and businesses. It would better meet the purpose of MA if it focused more on protecting the environment and water shed. I would like to see more benefit for Park City residents rather than Salt Lake. I do not believe more and more unchecked growth is desired by the people who live here, only the ones who will directly profit. The whole Wasatch back is an incredibly diverse, unique and beautiful area. It will be ruined by more and more growth. We do not need any more marketing.	Park City	05/02/2015
	I believe we are at a tipping point on the Wasatch front and back. This may be the last chance to preserve the unique environment and community instead of destroying the carrying capacity of this place. I believe more extreme measures for conservation and disincentives for automobile use and sprawl development should be utilized. Economic growth can continue to prosper through these efforts. Lets try something different - let's think of future generation not immediate profit for the development community. Make this accord have teeth. I also believe that a train back up Parley's canyon is the answer, environmental and economically. Blasting a tunnel makes no sense at this point.	PARK CITY	04/30/2015
	I believe you are too concerned about bringing in more people and how to make their vacations better and not enough on how to make the home owners and residents of our community have a sustainable future in a community we have invested in. Where will the water come from to support the vacationers? Don't they vacation here now because of how it looks and feels. If we turn Park City area into Salt Lake City who will want to come? If we build business parks that will house high end jobs then the residents won't have to depend on tourism to sustain. Lets work on making our community sustainable with less emphasis on tourism. There's too much at stake here. Water, Air, trails...quality of life, we bought this...we deserve to keep it. There's more to us than a destination resort. We are a community. We won't become a ghost town if we don't spend money on getting tourist around easier. We use what we have. Buses on an HOV lane works. UBER type transportation to bus stations and back. I picture each community having an electric small bus that is on call and transports people to and from their house to the city bus) The HOA of Jeremy Ranch pays for their drivers, Pinebrook for theirs, etc. The city doesn't need to pay for this but collaboration will make it work and will be part of the future plans of each community.	park city	04/30/2015
	I cannot answer the questions since I believe that the Blueprint uses words and phrases which are open to interpretation relative to a person's point of view. This makes the process political, encourages extreme positions and provides cover for any decision. Who decides what is sustainable? What is responsible stewardship? What is quality recreation? Who's vibrant economy? Economically sustainable transportation system? How about affordable? This blueprint is trying to address too many issues at once.	Park City	04/29/2015
	I can't imagine what need you are meeting by building a train and tunnel system through the Cottonwoods and over to Park City. The expense and environmental impact will be incredible. If you want to make it easy to get from SLC to Park City, do it up the I-80 corridor, not through our gorgeous mountains. This feels like something that Sandy requested to be able to provide quick access to all the mountains.	Park City	02/07/2015
	I do not want any tunnels or roads connecting Little and Big Cottonwood Canyons to the Park City area over Guardsman Pass. What I would like to see are very big multi level parking garages (free) at the bases of all the Canyons (Little, Big and Parley's) and people being REQUIRED to park there and then be bussed (free) up to the resorts. Only those owning residences being allowed to drive a vehicle up to their residence. Anyone renting or staying at hotels or condos would be required to park at the lots at the base and they would be taken up from airports or the parking garages at the bottom of the canyons by vans. There would be no personal vehicles driving on the canyons except for owners. All workers would have to use the parking garages	Park City	05/01/2015
	I feel the Blueprint is a sell out for those of us that really want to protect the Wasatch. A sell out for us and a BIG win for business expansion and development.	Park City	02/05/2015
	I feel this is a very well thought out plan that addresses all aspects of proper stewardship.	Park City	02/04/2015
	I grew up at the base of Little Cottonwood Canyon and I now live in Park City, Utah. The Wasatch Mountains are dear to me. The Mountain Accord doesn't improve upon any aspect that is being proposed. The project is driven with financial benefit and is manipulating a transport system resolve as a decoy. I want to deliver a speech such as Chief Seattle. In essence, there is nothing sustainable or preserving or vibrant about scaring beautiful mountains and connecting that which isn't connected. Only problems will come of such human destruction. Are we thinking generations ahead? No. What is sacred anymore? 'Give the people convenience' is not sustainable. This whole idea needs to get flipped on it's head. The Wasatch mountains and its ski resorts are attractive as little niches that can be discovered by tourists and locals alike.	Park City	03/17/2015
	I left the sections on environmental stewardship as an unknown because I do question the environmental impact of building a tunnel, vs developing a bus only infrastructure over Guardsman's Pass, thereby decreasing additional resources needed to develop a tunnel. While I personally would prefer to have a train and tram system throughout Utah, I understand that from a political perspective, the state might not be ready for that. For that reason, I would like to see further proposals for buses, simply because I think they would be easier to digest from a cost and impact solution, while perhaps not as much of a vast improvement. My vision is to develop a gated bus route over Guardsman's. The pick up/drop off point in Park City would be in town and there would be no stop at the top of Deer Valley, ensuring that riders did not leave their cars at the top, causing increased traffic on Marsac. As it is now, Guardsman could be gated, only accessible by buses and residents who own land.	Park City	04/30/2015
	I prefer more emphasis on restricting development	Park City	02/05/2015
	I really hope that you ignore the government of Park City and continue with the idea of connecting the cottonwoods to Park City. We desperately need a transit system in Park City and access to the cottonwoods without using the Parley's 500 would be so much safer, environmentally sound and economical. I think the government of Park City is run by the Large resorts in town who want Park City to be a destination resort. They come to Vail or Deer Valley and they go NOWHERE else. Easy access to Snowbird is not in their business model. It seems that a tunnel would be very expensive to create; however, I would imagine it is better for the wildlife corridors and the scenery. I would like to know more about your research on the tunnel. Why did you come to that possibility. I would like to know more so I can spread the word. I think it would be ridiculous to do buses they are part of the traffic and can be unreliable when there is an accident. The transit system has to be better than travelling by car or it will not be used. We need a train system that is efficient. One selling point would be that for the cottonwoods, you can always get up there as it is easy to create snow bridges etc so the train can run regardless of avalanche danger. I also think that you need to propose NO TRAFFIC in the cottonwoods. Then give people an efficient and easy alternative. Thanks for doing this	Park City	03/14/2015
	I strongly support both the Mountain Accord and the One Wasatch proposals. I am a visiting professor of marketing and I've taught ski resort management (formerly at the University of Utah and currently in Europe). Our ski resorts are in such close proximity to each other it seems natural to link them and create an even better European resorts experience. The marketing, economic, and ski and tourism experience benefits will be incredible!	Park City	04/29/2015
	I think that we need to focus on preserving as much of our open space and surrounding lands as possible. We live in a desert and droughts are starting to be more common every year. I think transportation is a big concern as well as the over development of the wasatch front and back. I believe that connecting the cottonwood canyons and Park City is not an option, each canyon and Park City offers its own unique experience and putting Aerial trams and tunnels to connect these places would take away from the special experience of each place. I think it is also fair to think of our next generations our children and their children I personally want them to be able to recreate in these mountains the way they are now. A lot of people go out there to escape the over crowded resorts and to appreciate the natural wild setting that is in our back yards. These mountains are our future without them we lose everything and we should make our decisions on what's best for them and not a select few that will profit from connections and expansions. Bus rapid transit and some light rails sound like great options for transportations, tolls for day use in the cottonwood canyons could be effective for traffic issues, renovation projects and land preservation for the future.	Park city	02/06/2015
	I think the focus has to be on transportation options that are affordable and efficient. I don't like any of the bus options. Buses move at the same pace as a car, are less comfortable and the overall travel time is a lot longer. The only type of mass transit that should be considered and invested in are trains. While more expensive initially, they are more efficient to run, have high reliability and can be designed so that they get you there quicker than in a car. Take it from a guy who commuted into NYC for 23 years by train. The train up Rt 80 through Kimball Junction to Park City makes sense. Not so sure about the one through the Cottonwoods. Don't waste time and money on buses except more frequent service up the Cottonwoods.	Park City	02/19/2015
	I think trains or monorail on existing interstates combined with large capacity aerial trams with dedicated parking structures/zones areas would enhance transportation argument and lessen impact of connections. You have to maintain the resort destinations or you'll lose the battle with the municipalities and the residents. Sense of place has to be maintained and enhanced without compromise.	Park City	05/02/2015
	I would love to be able to start skiing in park city and at the end of the day go to say gold miners daughter and get a pizza and then be able to catch a train back to park city THAT WOULD BE AWESOME.	PARK CITY	03/02/2015
	I'm 100% in favor of the One Wasatch concept, connecting the major mountain resorts with chairlifts, gondolas, and (or) trams. Improved bus service would be positive, but I'm not sure about the cost effectiveness of expanded light rail or train service. I'm 100% opposed to blasting tunnels through the Wasatch mountain range to create new roadways.	Park City	03/11/2015
	I'm concerned that the Brighton Estates area is not on the map. With a pending water system, 100s of lots, and other pre-existing proposals by Park City Mines and Deer Valley it seems that this area is being overlooked. This could quickly become a highly dense area including houses, cars, and a resort. Did I miss this being addressed if so please show me what I missed?	Park City	02/04/2015

	I'm not sure that building a tunnel or a tram into Park City is sustainable or necessary. Let's leave that whole area as it is...not sure people want to travel into the backside of PC from Solitude/Brighton	Park City	04/16/2015
	I'm really happy this process is taking place, but I have to say that I am very unimpressed with the transit plan as laid out. Why on earth would light rail from the airport, up cottonwood canyons and into Park City on this map when bus service from the airport to 80 is the only option? I am a very politically active resident in Park City and I'm going to tell you right now, that is just not going to work. While the residents of Park City are mixed on the idea of light rail, many favor it up 80 and around the highway areas, but not in town. We certainly don't want to be the last stop on a train that comes from other ski resorts but doesn't address our own from the 80 corridor. I would like to see a train that runs in a C starting at Kimball Junction ending in the cottonwood canyons with the airport in the middle, running in both directions. I have no issues with the cottonwood PC connection, I just think it should be made over the snow (gondolas etc).	Park City	02/08/2015
	In a nutshell, my feeling is that the "One Wasatch" ski resort interconnect project is woefully missing from that plan. It is, in fact, "the elephant in the room" in the way it was left out not to offend a highly vocal minority. As a matter of fact, "One Wasatch" embodies the four pillars of the Mountain Accord plan: Environment, recreation, transportation and economy. Further, interconnect resorts have been tested in the Alps for more than 40 years to the satisfaction of its visitors, its local population and its environment. Finally, it stands as a free test that would work with each one of the categories considered. Environment: Many people staying in Park City ski Big and Little Cottonwood Canyons everyday. The availability of a ski connection would render these car trip unnecessary and would also allow folks living the Valley to ride the UTA transit system to any Cottonwood Canyon resort and get to Park City without using their car. Most importantly though, skiers (alpine, touring) have very little or no impact on the pristine mountain environment. Contrast this to, say snowmobile traffic, for example... Recreation: The interconnect would add exponentially to the experience that both locals and visitors receive when they ski our seven resorts without having to rely on vehicular transportation. The best things in life are experiences and opening up a small part of our Wasatch Mountain to winter recreation would expose more people in a full and dramatic manner to the beauty of our mountain environment; it would also elicit even more love and respect from everyone towards our magnificent nature. Transportation: As said on the "Environment" section, vehicular traffic and need for extra parking could actually diminish with a working ski interconnect. With it, a very compelling argument could be made to visitors for not renting a car. The net result would be enhanced traffic everywhere. Economy: A ski interconnect would bring more destination visitors to Utah during during the mid-week period, maximizing the resorts capacity and providing an insurance that in spite of a receding snow cover, tourism business would continue to be good for Utah, making it a unique place in North America for its multi-resort experience.	Park City	03/22/2015
	In addition to my earlier comments, would like to add the following: 1) User Fees are a must. I have seen how much Millcreek Canyon improved once the user fee system was initiated a couple of decades ago. Absolutely should expand this where and when possible. Please consider an annual pass like the National Parks annual pass to avoid having to have passes for each individual canyon. \$100 is a good starting point for an annual pass and \$10 or so for day passes. 2) Park City to Brighton tunnel options are really clever but are they realistic? Would fully support this for the reasons mentioned but given the track record of Park City developers (now Van) seems like a stalling horse for their preferred option of aerial which is beyond worthless. It won't carry the load, allow people to move the equipment, they need, will destroy the very landscape we are trying to save. Please bring back the Guardsman Pass expansion option. The Swiss and Austrians would laugh if they saw how easy it would be to make Guardsman Pass an all season road. It is basically almost half done thanks to the ugly construction in upper Park City. Just finish the road and leave the rest of Big Cottonwood Canyon alone. 3) Where can I sign up to help donate towards public land acquisition fund? Putting as much of the Central Wasatch into public hands is the best protection.	Park City	03/28/2015
	In my opinion the proposed rail system is a great mid / long term idea. If one has been to Japan there is already in existence an excellent model in place "Shinkansen (Bullet train) from Tokyo to Gala Yuaza ski resort. This model could be used from SLC to all of the existing resorts. The beauty of the Japanese model is that you exit the train, buy your ticket (rent skis) and are zipped to the slopes on a Gondola. I also believe that we need to connect the existing ski resorts prior to 2040 by a system of gondolas and chairs. The environmental impact of a train system will be much greater than a few well placed gondolas.	Park City	02/25/2015
	Increased public transportation options are good. However, I'm unsure if this would tackle the effect of traffic. Most people will still use their cars when possible.	Park City	02/05/2015
	It is still too vague for me, with too many questions. I understand that this is step one, and that it is a massive task.	Park City	05/01/2015
	It looks like the players proposing this plan are more interested in money projects. I don't like the tunnel idea at all. That part makes the entire accord look like the ski areas are pushing for more access for skiers. Transportation is another big money project for bonuses for UTA. envision Utah has a better comment survey participation method. If this method for comment is the only way to influence the accord, the accord group is going to push this program right through. The future for skiing is not certain due to climate change. I would much rather have a toll booth at the entrance to the canyons. Bussing for non permitted travel up the canyon. Keep the canyons difficult to ruin. Protect our water. Don't start big projects that cost me money to make our state Disneyland. If traffic is terrible people will plan ahead to get a permit. Allow travel up Albion basin by a permit. Some people just drive around up the canyons, we can stop that with a fee. No need to expand the resorts, or buy up property. This program, the mountain accord needs better communication. It's very difficult to understand the goals of the group other than greed, and inside deals. I'm not sure if there are other goals than money, am I wrong?	Park City	05/01/2015
	It meets the purpose well with exception of - Casual use of the word "wilderness"; the 1968 Wilderness Act is outdated and cannot be updated in the current congress (touching it would hurt it). Bicycles or mechanized devices cannot be ridden in Wilderness. So I think casual use of the word Wilderness is a mistake. You are already aware of this as I've gathered.	Park City	02/25/2015
	It seems a rail system over Guardsman Pass versus tunnels would be the most inexpensive and environmentally sound way to connect Big Cottonwood Canyon and Summit and Wasatch County.	Park City	05/01/2015
	It seems like the blueprint has hit the recreation hubs well and all trans up Parleys Canyon. Swapping land with the ski areas to build out at their bases is a good plan. Any kind of transit connection up a canyon other than Parleys is asking for it, thought. Build it and the people will come. I see enhancing trans (buses only with adequate service) up B & L Cottonwood canyons with one of them as Bus Only. Parleys needs buses or light rail with service every 10-15 minute. Huge Park & Rides at the base in SLC and also in PC at the soon to be Transit Center. But PC tourists should not need a car to come here at all because bus service should be top notch. No trains or road enhancement over Guardsmen. Too risky with disruption of what's IN those rocks and also watershed.	Park City	05/01/2015
	It seems that unlike a number of my PC neighbors I am in favor of the light rail system connecting the Wasatch Back and Front. The idea of taking guests (tourists) from the airport to the resorts by rail eliminating cars and traffic is wonderful. Until such a system is developed I believe more "Park & Ride" lots should be established outside of PC to encourage more use of the current bus system in the hope of eliminating traffic and congestion. Keep up the effort and I hope the local governments (PC & Summit Co.) don't give up on this promising effort! Eric	Park City	03/16/2015
	It's imperative that we use tunnels for transportation. It's more money upfront but with out scaring of the mountains and safer than snowy roads. Driving from Alta to Park City is ridiculous with the current system.	Park City	03/06/2015
	Keep individual canyons separate	Park City	04/30/2015
	More discussion about electric cars/vans, solar-powered charging stations, carbon offset fees for inefficient modes of travel. Make sustainable transportation sheik--buses should be decked out so people WANT to ride them. Tourists are coming to ski--they'll take whatever modes of transportation we provide as long as they are comfortable and timely.	Park City	04/30/2015
	Mountain accord needs to address first benefits for The Wasatch front. Pollution is the major threat for all of us who live here. The 6 big polluters give us 50% of our pollution and only 8-9000 jobs. The minor amount of environmental impact caused by developing an improved transportation system, roads, and expanded terrain for the recreational industry is minuscule compared to the real polluters in UT. The recreational industry probably provides considerably more jobs and is the future of UT. Developing year around recreation and the subsequent business will provide far more jobs and local benefit that the existing old industries. In order to do that a mass transit plan is essential to provide efficient access. Guardsman's pass needs to be open year to both vehicle and light rail. Both resort traffic and commuter traffic need to be considered. There need to stops at the resorts and population centers. Commuter use will decrease the per passenger costs. Midway needs to be incorporated and the resorts need to have a single pass for UT residents that make skiing/biking etc affordable. Trails/ski runs and lifts should go from Midway, Park City, the Canyon resorts and Sandy. Tolls for non resident vehicles should be charged and subsidies for rail should be used to encourage use of mass transportation but not exclude UT residents. Electric vehicles need to be encouraged in the canyons and salt lake. Park City's traffic is a mess. A Mass transit loop route up Big Cottonwood over Guardsman's and down I 80 is essential. Mountain access should be available from houses in Midway, Sandy and Salt take not just Park City. The plan needs to include all of the Wasatch and not just protect Park City's housing base. This is essential for the economy of the whole Wasatch. The plan needs to work for visitors and be affordable for locals who will pay the taxes to make it happen. The environmental issue is real and the solution is simple, make the big polluters clean up their discharges or move on. Develop the recreational industry that is sustainable and will create more and better jobs. Develop a mass transit system that serves everyone and does not close out the locals.	Park City	03/28/2015
	need alignment with OneWasatch and per such would like to see more transit by ski lifts (chairs, gondolas, funiculars, etc.) and less pavement/cars -- more recreation not more recreational vehicles	Park City	04/09/2015
	Need more land protected on the Southeast--why is there the big area missing? Running busses through areas that now are just dirt roads or trails would result in huge degradation of the natural areas. Need better protection!	Park City	03/01/2015
	No tunnel to Park City	Park City	03/13/2015
	Not allowing any transportation over the the Wasatch Crest between resorts.	Park City	05/01/2015
	Overall the document still reads too much like a General Plan without much detail to really comment on. Transportation and Environment groups have done their jobs but the Recreation and Economic groups are lacking in detail.	Park City	02/09/2015
	Please amend the wording of Consensus decision to require that governmental members such as Summit County or Park City may reject a portion of the Mountain Accord agreement; and Mountain Accord will honor that rejection.	Park City	04/30/2015
	Please maximize the designation of federal lands as WILDERNESS.	Park City	05/01/2015
	preserving wild / un-mechanized areas in central wasatch for human-powered recreation is my number one goal. these areas are a unique resource because of their proximity to a large population base. environmental quality, wild life habitat, water shed also important. limit any lcc and bcc ski area expansion except in cases where land trades make sense. eliminate heli ski operations by buying out concession eliminate snow mobiles in lcc and bcc, especially cardiff fork no need to link park city with lcc/bcc roads or ski areas 3 park city ski areas will link "organically" with little negative impact on traffic and enviro quality	Park City	03/15/2015
	Put less emphasis on the ski resorts needs and more on the communities. Park City's and Summit Counties transportation problems exist and need to be resolved regardless of the impact from tourism and skiing.	Park City	03/15/2015
	Reducing traffic must be a bigger priority. Light rail has to be part of this. Ever been to ski areas in Switzerland or Austria? Buses won't solve the problem. Rail plus high parking charges are the way to go.	Park City	02/06/2015
	I live in the Pinebrook community of Park City and work in Midvale. I would love to be able to take transit. I do not work regular 9-5 hours, so would need the flexibility of a transit system that would be faster than my SOV and almost as flexible. I would also like to be able to take my dog with me on the transit system. A train system with a stop in Kimball Junction would be attractive to me as a commuter. Even better would be a stop at the Jeremy Ranch/Pinebrook exit.	Park City	04/26/2015
	Seems to be a shift for UTA moving large amounts of people to a small environmentally fragile environment. It will be an enormously costly effort to benefit very few developers and pushed onto the taxpayers. The water issue here never been addressed, we had a moratorium in the 70s and has been pushed under the carpet time and time again. There is something wrong with a process where large amounts of money are required to even have a voice at the table. We have had numerous projects shoved down our throats by the legislature turning PC into a sideshow.	Park City	05/02/2015
	Seems to me that the whole thing hinges on whether a train system into LCC is financially feasible and realistic within a reasonable period of time. I did not see a position being taken on the One Wasatch proposal, which I am strongly against.	Park City	02/18/2015
	I only saw one mention of protecting wild life corridors. Letting other animals live on this Earth is essential to our welfare. This plan looks unfinished because this concern is not addressed as thoroughly as it should be. There is no need for access from Park City to Big and Little Cottonwood Canyons. It will create more traffic in a pristine area and goes against the environmental aspect of this blueprint. Maybe an underground train or a gondola, but increasing car traffic is against all of our best interest. I think this project is amazing and I'm so impressed by the forward thinking. That you all for doing such an amazing job and keeping everyone so involved.	Park City	04/30/2015
	So far, I'm disappointed by what Mountain Accord has achieved. It seems like the group has spent a lot of time on just coming up with ideals rather than actual action plans that can achieve results. While good, these ideals seem self evident. It's time to get to work on coming up with actionable goals that achieve a balance of environment, recreation, transit, economy, livability and equality for all parties involved. I know a lot of people are focussing on the train like, so I'll just add my two cents too - don't build a train line from Park City to Sandy. That's just silly. Focus on the infrastructure we have, make it better, make it more efficient, convenient and more sustainable. Also, I really like trails. A lot. I like non-motorized activities the best.	Park City	05/01/2015
	Stewardship for the Wasatch does not include any significant development over and above all the development that has done by ski resorts and private property owners. No new development outside of private property and ski resorts is the ideal that I can agree with and support. A trade for appropriate lands to preserve public property and preserve tracts of the environment is acceptable.	Park City	04/30/2015
	Thank you for the vision to look into the future issues to protect an incredible place that is the foundation for the greater Salt Lake Area. Involving all the different interest groups is key to accomplishing the goals. I would like to see the Heber Valley involved, as you look at the 360 view around the central Wasatch they are a key component and will only increase over time.	Park City	02/25/2015

	The Accord seems to be focused on improving access to the Wasatch. It seems to be that the most preserved areas of the country are very difficult to access. Improving access is only going to encourage faster development and more destruction of our natural resources. I would like to see more protections and limited access built into the Accord.	Park City	04/26/2015
	The biggest proposal that Mr. Accord has come up with is a train, bored through the Wasatch. Is that environmentally friendly? I don't think so! I prefer the concept of One Wasatch, where all of the resorts are connected so we can ski between them.	Park City	04/08/2015
	The blueprint has a lot of information but not a lot of good sustainable solutions.	Park City	04/11/2015
	The blueprint is based entirely on promoting the ski industry, with no effort to address diversifying economies when the ski industry is no longer viable. The transit system does not go far enough to reduce automobile use in the Cottonwood Canyons. UNDER NO CIRCUMSTANCES SHOULD A TUNNEL BE CONSIDERED BETWEEN THE COTTONWOOD CANYONS AND PARK CITY!	Park City	05/01/2015
	The blueprint is in conflict with the purpose of the Mountain Accord. It will serve to further erode our environment	Park City	04/07/2015
	The blueprint places a lot of emphasis on development over preservation of the environment and natural landscape. We need to focus on keeping our open space open for dispersed recreation, wildlife, and preservation of natural resources.	Park City	05/02/2015
	The blueprint should be looking at the long term—for example, it states that the Big Cottonwood and I-80 road are ok for now, so we need to do nothing other than add buses (that few will use, just like now). But that won't be the case in 25 years, and Mountain Accord should plan for that now. And I suppose we have to compromise with the ski areas to get their land into the public domain, but isn't there already enough development in the Cottonwood Canyons? Wouldn't a better course be to buy the ski area lands and add them to the National Forest? And where is added water going to come from?	Park City	03/16/2015
	The current Blueprint appears to be a menu of potential high level actions associated with 4 distinct, not integrated, focus areas. Its impossible for an informed reader to make specific comments due to high level granularity of the document. However, the magnitude of resources that would be required for some potential actions (e.g., light rail tunnels) conveys the feeling of a plan that is overly weighted toward further development at the cost of a sustainable Wasatch. So at this point in development the Blueprint causes me grave concerns. Further, the process by which inherently competing interests (i.e., development vs environmental sustainment) will be satisfied or appeased is nebulous. Taken together (perceived current weighting toward development and an opaque decision making process) causes me to be very skeptical of the final outcome relative to enhancing environmental sustainability. Further, no legal means of enforcing trade-off deals that could provide future protection for environmental resources have been identified. Leaving the option for walking back on agreements resulting in further loss of protected sensitive environments.	Park City	03/26/2015
	The economic blueprint could do a better job of calling out the need to diversify the economic interests of the Wasatch Front and Back given impending climate changes and the resulting likelihood that the snowfall will be much reduced in the future. It appears that the idealized systems and blueprint framework is grounded in the belief that tourism will continue to be the main driver of the local/state economy.	Park City	03/11/2015
	The Mountain Accord seems to have turned into a way to justify a train for the Wasatch front to access the mountains at a cost that is unaffordable and unsustainable. It does not address the needs of the back of Wasatch community at all! This feels like a bunch of politician/developers getting together and figuring out how to get rich at the taxpayers expense.	Park City	02/08/2015
	The Mountains are already over crowded at many of the ski resorts. There is no information about how crowded the trail systems and ski hill are at this current time and how bad it will be if we can get more people up the mountain. I would also like to see some information on how many people use the public transit system already. There is a free bus system in Park City and I would be interested to know how many people use this system each day. I see people driving to work along side the bus every day.	Park City	02/05/2015
	The proposed approach appears forward thinking, even-handed and realistic about getting in front of and purposefully managing coming growth and pressure on our amazing natural resources.	Park City	02/05/2015
	The proposed train to Little Cottonwood Canyon and the tunnels to connect it to Big Cottonwood and Park City is environmentally unsound and economically unrealistic. The train would be underutilized most of the year. It would place a tremendous burden on taxpayers who would pay for an inflexible transportation system that would at best be serving a relatively small number of people and a few ski resorts. Far more flexible and more economical to beef up the bus system, perhaps making the canyons car-free as in Zion. If the canyon roads remain open, most people will continue to use cars to get to the resorts. The environmental damage to the canyon during the construction of a rail line and tunnels through the mountains would FAR outweigh their value. Don't rip up our mountains!	Park City	02/28/2015
	The proposed transit connection through the Big Cottonwood Canyon is an absolute travesty and is being driven by special interests in the Valley. No one in Park City wants this. It makes no sense and is an outrageous use of taxpayer dollars. Focus on the Parley's connection!!!! THAT makes sense. THAT people will use. The other is a marketing tool for Sandy and Salt Lake County. The general feeling is that this issue was decided long ago and this window dressing of a public process is just that. I do not believe that any consensus was developed.	Park City	02/04/2015
	The purchase of privately held land/easements is laudable. Removing entitlements from sensitive lands will ensure continued preservation and high quality recreation.	Park City	02/17/2015
	The transit system as proposed provides great benefit to the city of Sandy and possibly Draper, the Snowbird and Alta ski areas, and marginally also to the LCC and PC ski areas. This would necessarily be taxpayer subsidized. The LCC train and tunnel offer absolutely no common sense year-round benefit to the cities or citizens. It seems to work only as an effort for the LCC resorts to mitigate their occasional weather-induced access and egress issues (let's all hope heavy and regular snowfall becomes and remains an issue). The city of Sandy wants to be a mountain resort city. Laughable on its face, this idea would be boosted immensely if their hotel base was connected by the glamorous train to the mountains and a tunnel to the PC side is gravy on the deal. Meanwhile, the Accord's predictions show the incredible growth coming on the Wasatch back - yet fails to provide any realistic solution to the transit issues that are happening already. My input: a train, preferably a direct Trax connection with no necessary transfer, that links the Back to Salt Lake City is the vision for the future that is required. If a train connection is desired to the top of the LCC/PC area, it should come off the PC line. There is a reason that Parley's Canyon has been the connection all these years. It's the only one that makes sense. Please do not let the funding source of this scheme drive the result. It is a chance to do something good.	Park City	04/30/2015
	The transportation system is not well thought out. There is no need to connect all the ski resorts with a train type system or a auto type system. The ski resorts do not need to be connected. Types of skiers are different within the resort system. Skiers on the Cottonwood side and High end resort skiers on the PC side. The Gondola is not a good option because of the skier difference.	Park City	04/30/2015
	The tunneling between Little Cottonwood and Park City seems like a good idea when compared to the alternatives. It would be great if only trains and cyclists can use it. Powering the train with green energy would be a great addition as it would have less of an impact on our water supply. If the tunneling goes ahead I would look closely at the necessity of any aerial tram/gondola connecting Park City and Big Cottonwood Canyon. I feel this would be very unnecessary and would only encourage development of that beautiful area. The ski interconnect that currently serves as the 'go between' works very well and is always a trip people remember for the rest of their lives.	Park City	02/04/2015
	The weakness of the plan is that it depends on extensive financial support. A backup plan is needed. For example, opening Guardsman Pass to vehicular travel in the winter will address part of the connection problem to Brighton. But the Guardsman Pass road does not even appear on the map... it should at least be a footnote.	Park City	02/04/2015
	The work that the Mountain Accord has undertaken is impressive to date based on what I have read and heard. I agree that there are generally, no bad ideas. However, I personally believe that the Accord is attempting to address too many issues and should consider narrowing its focus. First and foremost in my mind is the fact that Utah does not need another consortium to guarantee economic growth. There are no mid to long term regional indicators on the horizon that even remotely suggest a slow down in the creation of jobs in the technology, services, energy, health care, tourism and even manufacturing sectors. Which leads me to the notion that the Accord should be solving for just two factors that truly threaten the quality of life for most of the citizens. First, the Accord should work to protect the fragile environment of the Central Wasatch so these pristine environments are not engulfed by the inevitable growth that is on our doorstep. As our economic growth increases demand for these prime recreational spaces we need to exercise thoughtful management of these limited spaces as to maintain the quality of life that is Utah. Second, The Accord should be focused on the planning and development of a world-class transportation system that shifts our paradigm from single user vehicles in those areas that need protection the most (the Canyons) while providing long term planning for the Wasatch Back. When you combine local vehicular traffic with thousands of rental car units it is simply an escalating recipe for disaster on many weekends and heavy periods. If we solve for transportation we have a better opportunity to maintain the quality recreational experience residents and visitors desire. The economy is best left to leaders who create competitive, market driven businesses with fair oversight from the state and county governments. Protect the Wasatch and solve our transportation woes. That's the focus to me. Thanks for listening.	Park City	04/27/2015
	There is so much to read on the Mountain Accord site that we went to the Park City meeting to get some clarification. But, the consistent theme there was that there are so many unknowns that your panel could not adequately give answers at this point. The Blueprint could contain more concrete proposals, and the cost of those. Perhaps going forward the Blueprint could include "Education", so the public can be aware of the impacts of unfettered growth, water use, and boundless consumption. I think it is important to acknowledge that without adequate snow pack (after this winter, we may need to plan for that) our watershed will suffer, as will any economic growth or expanded recreation.	Park City	03/17/2015
	These questions are tailored to serve your own purposes and not necessarily give you the feedback that you need to hear. IMO, I would say that there are better ways to address transportation issues, etc. with less impact to the environment than what you've proposed. The Accord, in the way it's presented, is misleading on many levels. The proposal puts humans (economy, recreation, etc.) first and foremost. I can't support that.	Park City	03/17/2015
	This is a clear push by the city of Sandy and Wasatch Front legislators to increase tourism at the expense of our canyons and the environment.	Park City	03/15/2015
	This is awful, billions is a lot of money to spend to urbanize what is left of Summit County	Park City	04/30/2015
	This plan doesn't address the problem of getting thousands of people from the condo to the restaurants at 6 pm nor from the ski hill to the condo at 4 pm. The easiest thing, to plan for, is how to move bodies from the airport to the destination, a 4th grader can see the answers... what will happen when 10's of thousands are zipped into the resorts with a sea of taxis in gridlock? maybe this has been included in this overview and it has escaped me... maybe not... My idea would be to work out the hard issues of ski hill to restaurant FIRST! that's where the rubber meets the road... The airport to resort sections will fall in place as we see how the demand loads work out, going into the future. The bottle necks are here now, we don't need to pile more bodies into the existing bottle necks. Work on the hard decisions, then your plans A, B, C, D will be easy choices... I doubt those who were in Park City this Christmas will be back next year... I surely wouldn't bother... did I miss the high level comprehensive set of actions?	Park City	02/24/2015
	Though we were told all along that this explorative and planning process was not about a train, I believe we were misled. If this wasn't the case, then someone needs to answer why over the snow connection now appears to be off the table. This is a patently dishonest political play by the leaders of the Accord to get what they want (a train). If not, then put the over the snow connectors back on the table as a viable option and let the people decide. Or stated another way, imagine if the Accord folks just unilaterally took the train concept off of the table altogether the way they have over the snow. Do you think the communities would be upset? If so, who would be upset? This is a decision that must be made via the public process, not unilateral political decision making. I ask how the Accord even has the authority to do this? Do you have the same authority to take other transportation options off the table unilaterally? Again, who's decision was it to eliminate over the snow? This is a serious question that must be answered.	Park City	03/11/2015
	Transit solutions to the Wasatch back should focus on routes up Parley's Canyon or possibly over Guardsman Pass because they could be utilized by visiting tourists and locals alike. Creating a tunnel from the Cottonwood Canyons to the Wasatch Back is wasteful and only supports tourists.	Park City	04/04/2015
	Tunnels are an expensive and stupid solution. Those pockets are being lined by that boondoggle?? I expect Utah to make better financial decisions. The combination of rail and/or bus and a high speed ski lift system would be a better and much more efficient solution. It would significantly reduce the numbers of vehicles on the roads thus reducing traffic and pollution from vehicles.	Park City	05/01/2015
	Unsure how any of this benefits Summit County. There are 6-7 major ski and recreational resorts, several of these are in very close proximity and quite easy to access. How connecting these additional areas will improve the environment or economics of this area relative to the enormous expenses which will be incurred, is a mystery.	Park City	03/16/2015
	We do NOT need a tunnel connecting Park City with the Wasatch front ski resorts. We DO, however, need a viable light rail system connecting Park City with Kimball Junction and then continuing down to SLC and the rail system there. We DO need the light rails system to operate to the airport on Sundays to be useful to tourists and local travelers in SLC and Park City. A light rail system up the Cottonwood Canyons, connecting to the I80 transit system, would be helpful to tourism and the environment. A tunnel is a waste of taxpayer money, and will not improve the quality of life for Utah residents or tourists.	Park City	04/22/2015
	We look forward to seeing the ski resorts joined together to create the largest ski resort in the world. We are confident that the various bodies and authorities will do this in a way that preserves the beautiful Wasatch mountains for future generations.	Park City	02/04/2015
	We should coordinate these efforts with the One Utah/Ski Link proposals. It is critical that we link the resorts: 1) they back up to one another already; 2) the positive economic impact will be enormous (we will have a 'European Ski Experience' of 20,000 skiable acres); and 3) linked ski areas will mitigate transportation costs and impacts on the environment. Lavnee and the Board are doing a great job managing this process!	Park City	02/25/2015
	We should focus on outcomes that are economically feasible and have a chance in the next 20 plus years of being completed. The train tunnel concept makes very little sense. While it is most important to protect water shed everywhere, more should be done in Big and Little Cottonwood Canyons. What about addressing the septic systems in the canyons and the effect on water quality. Certainly putting ski lifts to connect the ski areas will have less impact on water quality than the current septic situation. Also, the meeting in Park City was poorly run and could have been handled in a much more professional manner.	Park City	04/30/2015

	What exactly does "increased environmental protection" look like on an enforcement level? Anytime you build a road or chairlift/other ski transportation, you are not only cutting through habitat and wildlife corridors, but you also open up hundreds of acres that will be more susceptible to human traffic, litter, noise disturbance and the possibility of future development. I have a hard time believing that bringing hundreds of thousands more people into the heart of the Central Wasatch will actually translate into a healthier ecosystem and good land stewardship, even if the effort is there from a small group of people. I also don't think ski resorts like Deer Valley, Park City and Canyons are beacons of environmental responsibility, even though they'd claim differently. The consumerism and water use alone should be a red flag. Turning the whole central Wasatch into a mega-resort and economic hub (more than it already is) simply cannot be considered environmentally sustainable. What does "vibrant economy" mean? It sounds nice. Don't we already have a booming economy? Why can't we focus on making the "resort experience" more intimate, more defined by individual character, rather than lumping them all together into the Walmart of ski resorts. It feels like we are just accepting the "bigger is better" mantra without considering the fact that many people go to a resort like Solitude, just for that: solitude.	Park City	04/30/2015
	While I support some of the transit opportunities servicing Park City, I object to a plan that combines the Wasatch front ski resorts and the Park City ski resorts. I feel that Park City maintains its character by being physically separated from the Wasatch Front.	Park City	03/12/2015
	Why doesn't this Mtn Accord include the back side of the Wasatch Mtns through Soldier Hollow recreation area? There is skiing, tubing, golfing and biking, including mountain biking and road biking? There are national competitions held in this area, including Nordic Combined skiing (winter) and Tour of Utah biking (summer). Additionally the plan shows NONE of the areas for nordic skiing, such as Mountain Dell, Park City including RoundValley area, Olympic Park area (near Kimball Junction) and Soldier Hollow. If the plan is going to show alpine ski areas, mountain biking trails, and hiking trails where are the defined nordic ski trail areas? They require access and parking and get more crowded each year. And the safety and access improvements to these venues? Perhaps a better definition of "Central Wasatch"? Seems to include only the middle mountain area, yet the report includes SLC area and Quinn's Jct area. Midway/Heber are experiencing high growth. Wouldn't now be the time to include these areas in the recreation/economic/transportation Wasatch Mtn Accord? Many supporters are listed on the front page - where is the TUNA (The Utah Nordic Alliance) decal? Has anyone contacted them? Additional land purchase for preservation is great idea.	Park City	04/29/2015
	Would like the Blueprint to address the locations of the entrance to the Park City area exactly. Where would the transportation enter from over the mountains in Park City? I am speaking of the exact street location. No where does it specifically state this. This will impact the people living around this location drastically and I notice this issue is being conveniently ignored. Please respond on the blueprint where this location is to be and what kind of transportation. Thank you.	Park City	03/26/2015
	Wright Mountain Accord Comments (Glenn Wright, Park City Resident) The Recreation and Environment pieces of this project are well done and mostly of concern to Salt Lake County. The Transportation element is more controversial. My comments are based on the document called Mountain Accord Transportation Corridor Purposes and Alternatives 2/3/2015. I favor a combination of alternatives B, C and D. -BRT or bus up both Cottonwood Canyons, with other traffic restricted to commercial vehicles and residents only. -Aerial connection from Park City to Brighton. -Express Bus from SLC airport connecting to a BRT line from Kimball Junction to the resorts and Quinns Junction. -Aerial Connection - similar to the Peak to Peak Gondola at Whistler ( <a href="http://en.wikipedia.org/wiki/Peak_2_Peak_Gondola">http://en.wikipedia.org/wiki/Peak_2_Peak_Gondola</a> ). The Aerial connection to replace the Town Lift and start on the west side of the ski bridge, with stops near the uphill terminus of the Crescent Lift, proceeding to a point near Scott's Bowl or Puke Hill, terminating at Brighton base area. This lift is about twice as long as the Peak to Peak gondola at Whistler which cost \$51M CDN. I suggest that it be built in a public/private partnership between the resorts and the UTA or UDOT, to be operated by the ski areas during the ski season and by resort personal, but paid for by the public partner during non-resort operational hours and days. Express Bus - This service must be easy for the visitor to use and include a system to seamlessly deliver luggage to the final destination (perhaps in different vehicles) as well as merging into a robust BRT spine on SR 224. The Chamber of Commerce and travel agents should be promoting mass transit before the visitor arrives and attempt to intercept visitors before they hit the rental car counters	Park City	03/08/2015
	You cannot reconcile a 'vibrant economy' with 'responsible stewardship of the environment' when tunneling through the mountains and building rail systems is on the table.	Park City	04/26/2015
	A new high traffic corridor between Little Cottonwood and Park City would greatly increase urban sprawl instead of relieving the traffic congestion we face. It seems that the underlying and unspoken purpose of adding the train and southern entrance to Park City would be to increase development. At some point, we need to determine how much is enough and learn how to give a more quality product rather than just opening the area up to more and more. Adding the new development corridors would take away from the character of what has made the Wasatch Front an idyllic place to live, work, and play, and turn us into an LA of the Mountains.	Park City	05/01/2015
	The information in the Accord is not specific enough to answer any of the questions truthfully. Maybe I need to read the whole thing again but I doubt it will get much clearer. My question is, "when is enough, enough?" How many more biker, skier, hiker, tourist etc do we need to provide transportation for ""? At some point it will become self regulating like Yogi Berra once said about a local diner, "No one goes there any more, it is crowded". I think everyone needs to take a deep breath and slow down a little. Who is pushing this whole thing? Look at the small amount of input time was given to Park City compared to that of the Wasatch Front. The impact on Park City will be huge where Sandy will hardly know or care what happens in the mountains above them. Please slow down and really think this thing through, there won't be any do overs. Randy Spagnolelli RandySpag@gmail.com	Park City	02/25/2015
	Tunnel idea is very interesting if it could re-utilize some of the existing mines in Park City and the Cottonwood canyons. Would be reasonable grades (rather than up and down) and avoid the snow removal issue. Would like to see this idea developed. Aerial gondolas make no sense. Footprint of giant towers across the wilderness area. Will get minimal use nine months of the year and even in high season will not likely be economic. Just look at how much Snowbird had to build to try to economically justify the giant gondola it built 40 years ago in the failed attempt to get the Olympics. Not to mention destroying the mountain top on which the gondola was built. Can always tell with Snowbird is when hiking the Wasatch peaks now. Widening and plowing Guardsman Pass as an all-season road is not the greatest thing but may be cheaper than the tunnels and would not damage the wilderness area like aerial gondolas that will be economic/environmental failure. Could add bike/ski lane/trails on the side of the road. Switzerland and Austria have a number of interesting engineering solutions for these high elevation roads. Would be interested in learning more about how the Brighton Bowl will be protected now that Deer Valley owns Solitude. One of my favorite hiking areas that I do not want to see end up like Empire Pass/Montage with development throughout the open space.	Park City	02/24/2015
	The saying "If we build it, they will come" is already coming to fruition with the presence of VAIL...and is very concerning to me. As a 13 year resident in Park City (primary residence) I am very very concerned over the influx of visitors to park city mountain resort, and I am beginning to feel like I am the outsider on the mountain. Gone are the days when riding the lifts I would have the opportunity to chat with other locals...this year 9 times out of 10 I am riding the chair with out of state folks...while I realize how important visitors are to our economy - sadly we are definitely losing the feel of a small mountain town. I see this problem as increasingly worsening with Vail touting the expansion of PCM with Canyons as it is being touted as the largest ski resort in US...they will come !!! My biggest concern is out of control building, and no. 1 overall - the traffic congestion and parking issues. While there are many proposed transit options, some much better than others in attempting to sustain our "independence and small town culture" I don't feel either of the councils have the long time PC residents interest at best here, and definitely the consideration of a pathway from Sandy to Park City should be removed -no matter what!! The only sane option that I would consider is placing a "cap" on the number of individuals that are allowed access in any given day on the Mountain for skiing, and consideration of a significant Toll Fee to be placed on private vehicles entering PC from either SR 224 or via HWY 40. Full time Residents of Park City could purchase a Toll pass, but all visitors would be subject to paying a toll if transport into PC is via vehicle. Colorado has electronic Toll cameras that seem to work well. This may encourage use of other transit systems, which there are a few that seem to make the most sense both environmentally and recessionally. I would be in support of a light rail Transit (LRT) both on SR 224 & SR 248 into Park City as being the most unobtrusive option and if there is adequate parking for people coming up I-80 I believe it would be receptive. Adding BRT Bus rapid transit vs bus in mixed traffic seems to make more sense as well as long as it does not diminish the bike paths. This winter has seen many days (sadly) permitting road riding...and I am a frequent rider on SR 224, and would hate to lose any bike access from Kimball into Park City. And then of course there is the dilemma of Deer Valley, and only one exit path --- we have experienced way too many nights of 45 minute time frames just to get out to Sr 224 !!! I believe the gondola may be a good option, but again that with these parking issues as well for those that choose to ride the gondola. Once again, a FEE for private vehicle access may be one way to deter folks from driving. In closing as much as I hate our beautiful PC to become such a "Dictator" community, by limiting the number of vehicles/people to preserve the "land that I love live in it" is more important than anything. If the increases in building (both residential and commercial) continues at the rate we are now seeing, and traffic and congestion on the Mountain - it may be time for us to consider moving elsewhere...sadly, as we had hope to retire here in these beautiful mountains...it may not even remain affordable as BIG corporation and growth seems to be taking precedence. Also, I do agree with all of the current proposals for the Transportation options to be DROPPED...none are acceptable.	Park City UT 84098	03/11/2015
	don't spend billions of dollars building roads and trains into our mountains and mountain towns!!! you will only make the mountains more crowded and developed then they already are!!!	Park City Utah	03/16/2015
	1.Create incentives/disincentives to reduce the use of private cars to move skiers, other recreational traffic, and resort employees between Kimball Junction, Quinn Jct, lodging facilities, and residences, and the ski resorts. 2.Improve and expand the free bus transportation from residential areas (including Heber valley, SLC valley, etc.) for employees of the resorts and of the general hospitality infrastructure to the various work places. 3.Separate as much as possible the ski resorts/visitor traffic in the Wasatch back from the daily routine traffic of residents, with the goal to improve everybody's experience.	Park City, UT	04/08/2015
	As a Park City resident, I won't support an over the mountain rail system to Park City from the Cottonwoods and Sandy. An over the mountain to Park City tram, or train seems like it'll be both extremely expensive to build/maintain, and very slow. Increased bus service and park-and-rides for the Cottonwoods seems more achievable and useful than a light rail.	Park City, UT	03/16/2015
	Full Disclosure, I work in the Real Estate industry, specifically in the finance world. So I benefit from this type of growth. That said, this growth is the evolution/death of the Wasatch Front as we know it. It is the path of enabling more and more to use the area. It is hard to argue that we should prevent people from using the area however there is no argument that this type of growth is motivated by a profiteer at some level enriching the very few yet affecting the many. Again, I work in this industry and understand the process of land acquisition to final end user consumer taking title downstream. I am against it as I am here in Park City because of the small town feel/ quality life for my children vs the Rat Race of the valley and other metro areas. Bringing the Rat Race to Park City is something I will fight as long as I am here. There is a place for this type of ambition and it is not in my backyard.	Park City, UT	02/24/2015
	I am highly opposed to the plan for a tunnel into Park City. It would do harm to the character of our town. It would only add to the congestion here. It would help developers, hotels and restaurants in the valley but not those in Park City. Inanition the proposed cost is out of control!! I am also opposed to your bringing a train into Park City.	Park City, UT	04/30/2015
	I feel that a tunnel from Little Cottonwood Canyon to Park City is a terrible idea. It is environmentally unsound due to the damage done by tunneling through pristine areas. It creates far too much traffic coming into Park City on steep windy roads. It will only increase Park City's traffic problems. If it is desired to connect the different areas, the solution proposed by One Wasatch is a more sound idea. It would only require 2 more aerial lifts in addition to the new one being built between Canyons and Park City. That way skiers could ski all the areas in one day IF desired. It would not increase automobile traffic. Mass transit options between the Salt Lake Valley and Park City are a much better idea using the I-80 corridor.	PARK CITY, UT	04/26/2015
	I have spent considerable time underground in the Park City Ontario Mine. The cost of building tunnels and then maintaining them is unrealistic. The proposed connections do not solve any transportation problems but only move traffic from one congested narrow canyon to another.	Park City, UT	04/30/2015
	There should be no road or tunnel connections from Cottonwood Canyons to Park City.	Park City, UT	04/30/2015
	The blue print is poor because it costs too much.	Park City, Utah	05/02/2015
	The phrasing here incorrectly assumes the responder agrees with the real (ie. economic) purpose of the Mountain Accord. Please respond and honestly explain how more access to the Park City area from the Salt Lake Valley protects and improves the natural beauty and recreational experience for people(residents and visitors) on the Park City side. You are tripling access options from an area populated by millions to an area populated by a few thousand. The protection that you claim to be promoting should be limiting access from the Wasatch Front to the Wasatch Back. The Wasatch Back will have enough stress from the growing population on the Wasatch Back. Congestion in the Millcreek and the Cottonwood canyons is only a problem for Park City residents when you physically connect them. A more accurate title for your plan would be "One Salt Lake Valley". This plan should be limited to improving conditions on the Wasatch Front.	Park City, Utah	02/11/2015
	need more information regarding the details /specifics of the Blueprint. Understand that it is still early and the ideals set out are very good but the how-will-you-get-there nuts and bolts is not conveyed. Maybe it is still early and details are being worked out, but there is a lot of this is great we should do this, but the path forward is not clear (maybe it is still being worked out)	Philadelphia	02/06/2015
	No trains, lanes ping up little cottonwood canyon. Preserve nature. There is already a riad to access the canyon. Nothing more is needed or necessary.	Piano tx	03/05/2015
	I think connecting resorts between SLC & Park City is a very cool idea, but may be somewhat impractical. You start out in one resort in one canyon, and you end up in another in another canyon and city, without your car, or questionable transpo on the other side. Too many unknowns- people won't take the risk. It's cool, but unless resorts respect other resorts tags, I'm not interested in paying alot of extra \$ to visit a resort for 1 run, and scramble back to fetch my car. If it's a clean transfer, it would be alot better. But the issue of transpo on the other side is a bit dicey. I would be scared I'd get stuck on the other side. If I were a visitor, I think I'd just pick another day and ski that resort. Although, it sure does seem enticing. Not sure if I would use it at all if these issues weren't addressed. Seems like any common-sense tourist would have the same fears.	Pleasant Grove	05/01/2015

	By not putting highway/road connections through the mountains, which will only increase traffic, pollution, and eventual degradation of natural resources.	Provo	04/15/2015
	The nature will be disrupted with all these modifications mentioned in the blue print. These mountains are appreciated and make Utah residents proud of living here. Their pristine beauty should be kept untouched by man's development that only seeks financial gain with no consideration of other life like the impact on the wildlife or natural ecosystem in that area.	Provo	03/15/2015
	When it says transit does it mean bus or rail?	provo	02/06/2015
	Canyon resources should be extended for more than just commercial ski industry. The proposal to construct rail access seems difficult to justify for any other interests. Future plans need to address more than commercial exploitation. I see the Mineral Basin "cleanup" as a good example. It was "cleaned up" primarily to provide support for extending Snowbird resort, and excluding all others. This violates the Forest Service "multi-use" mission, among others. I favor developing a balanced comprehensive plan for the future, but I don't have much confidence that this is it.	Provo, UT	02/09/2015
	Seems like the ski areas are having their way with this process. They are probably the only interest group who would benefit from increased infrastructure, especially transit. They've somehow convinced everyone that this is necessary for economic growth, when it really hurts our backcountry experience and therefore our reputation as a great "mountain city."	Provo, UT	02/06/2015
	Why try to squeeze more people into the Cottonwood Canyons? All for more money for the corporations. Leave them alone! Do not sell out! Develop in Parley! Stay out of the Cottonwoods! Any more development will have the die hard skier's and rider's leaving, and spending their money in Montana and other less developed Rocky Mountain states! I'm sure this is an agenda, and the powers that be are trying there best. Leave the Cottonwoods's alone!	quincy	04/30/2015
	good luck buddy!	ranchosanta margarita	04/30/2015
	I don't believe Mountain accord has in mind the best most majestic future for the wasatch. I would like to see the least possible impact on the beauty and naturalness of the mountains. We can't continue to trade all of our great natural resources that all of those places and our state is great for in exchange for dollar signs. Your ruining natural beauty, wildlife habitat, and further incorporating what should be left an untouched peace of gold. We don't need trains or expansion of ski resorts. I would be more open to the trains if vehicle travel was no longer permitted up the canyons. Don't ruin wildlife habitat or corridors, or put in danger Utahs thriving hunting and fishing community that provides billions to the economy by trading these places to forever be lost because of irreversible economic growth. Destroying our natural resources isn't moving in the right direction.	Richfield	03/10/2015
	There should be greater protection on our natural resources and there is no need for a train system up the canyons. Shuttle bus would be an effective way that would not damage or marginalize the scenery, water, or wildlife habitat. We need to keep the Wasatch a beautiful and natural place, rather than develop and ruin it forever. The more protection from development the better for all of us.	Richfield	04/08/2015
	I don't like this idea at all. It will take away from the natural beauty of the area. One reason I love SLC is the solitude of the mountains. This proposal will end that. This plan only benefits someone's greed.	Riverton	03/14/2015
	This is a good plan, long overdue and needs to be done.	Riverton	04/30/2015
	The Blueprint stated that the federal lands would be doubled to help preservation. Does the land really have to fall into federal hands to be preserved? Could the state preserve these lands just as well? I understand that the Wasatch is top priority not only for the extent of the natural resources but also for the watershed. However, I would love to see the Mountain Accord extend to the Ogjinh mountains also. It would be wonderful if we could preserve Rose and Butterfield Canyons, the Herriman Hills, and space for the Bonneville Shoreline Trail before the west side Canyons also get "loved to death." Also, many developers are eyeing the lands on the mountains of the west side of Salt Lake Valley, behind the backs of the people looking to the east.	Rose Canyon	02/05/2015
	A tunnel from the Cottonwood Canyons to Park City would RUIN the Cottonwood Canyons. We would see an influx of people who would otherwise be recreating in Park City. The only way that a tunnel would be feasible environmentally is if cars were banned from the canyons completely. There should be improved bus service from PC to SLC if those residents want to recreate in the Cottonwoods. UTA needs to be improved to allow better access from PC and the Salt Lake Valley as well. A 2 hr commute time from the Salt Lake Valley is unacceptable if we are truly concerned about cars in the canyon. Ski areas should not be allowed to expand any further. They are already huge polluters of our watershed. Snowcats burn hundreds of gallons of diesel fuel per night in our watershed and along with snowmobiles, leak motor oil and petro chemicals into our watershed, as well as disrupting nocturnal wildlife.	Salt Lake	05/01/2015
	As far as providing "quality recreational activities" it addresses how to better get people to areas such as the ski resorts or park city, but does not speak much to how or what is going to be improved on the "trail networks". I am an avid biker. Both Road and mountain bike. I don't see much in these plans as far as details about improving bike lanes and if transportation up the canyons is getting an upgrade, then so should the bike lanes and shoulders up the canyons for road bikers! On the mountain bike side I feel like Salt Lake (more the avenues/shoreline area) badly needs a similar trail system that has been created in the Draper-Corner Canyon area. Some uphill and downhill specific trails. But if something similar could be set up in Parleys, or Millicreek or the Cottonwoods, that would be great too! I would love to see a trail system come from Parleys summit down to Lams canyon. It would seem to have a similar feel as what has been created on Jackson Pass, WY. Just a few thoughts, and if someone has direction on where I can get more information, or get involved in trail system discussions I would love it. Thanks, Tyler 801-209-7116	Salt Lake	05/01/2015
	As the goal of the Accord is to "preserve the central Wasatch" and to mitigate the effects of future growth, the current blueprint falls desperately short in its efforts to protect this precious resource. If the goal is to strike a balance between preservation, public usage, and economic benefits, that balance was attained at least two or three ski resorts ago. Any model that attempts to accommodate increased usage expansion of developed areas through trail building, expansion of infrastructure, or increased tourism is counter productive to the goal of protection, and in conflict with the concept of conservation. The Wasatch range is a treasure that needs to be protected for future generations, not exploited for short sighted economic gain or recreational convenience.	Salt Lake	04/30/2015
	Drop any ideas of hugely expensive mountain railways and fully interconnected mountain areas. Include, and does seem to be there, creative shuttle and bus ideas and ideas for programs to promote such use and make it easier. I find much of the blueprint and accord laudable - save the environment, clean air/water, great recreation. The specifics are much harder to interpret (and foresee) the pros and cons, but some are concerning (Below)	Salt Lake	04/19/2015
	Hi, I am most concerned about the environment. I want to see an Environmental Impact Study by an independent entity that will not benefit from any economic development under the jurisdiction of NEPA before I am convinced that what you propose will actually protect and preserve our "unique" mountains. I am concerned about the impact to our watershed, flora, fauna, and quality outdoor experience. Train - against. Tunnel - against. Land swap so resorts can increase density in bottom of canyon - for Grizzly Gulch - keep as backcountry skiing access. Snowbird in Utah County - fine - this way they can make more money, right? Protect White Pine and Days Fork - awesome. Expand and maintain trail systems - good use of public money that benefits "the people of Utah and tourists" Guardsman Way - protect from further development. More parking lots - avoid if possible	Salt Lake	04/15/2015
	I am a backcountry skier, hiker, fisherman and general muscle-powered user of the Wasatch. I encourage all planning that comes from this process, with particular attention to the following issues- 1) Water quality preservation is of utmost importance. 2) Transportation by car should be limited, bus service improved, LCC particularly should be examined for possible shuttling, train service, or similar alternatives. 3) No tunnels through the mountains, no gondola, ski lift or mechanized transport should be considered. 4) No further ski resort expansion should be allowed, particularly in Grizzly Gulch, Flagstaff, White Pine, American Fork side of the divide. 5) Overall enviro concerns must take precedence over developers' and resorts' needs.	Salt Lake	04/17/2015
	I am like a lot of people who live in Utah for the recreational opportunities. Any resort expansion invades heavily used backcountry space. The resorts are not hurting. Look at the money they are currently willing to throw around in lawsuits and acquisitions. They don't need an interconnect and more lifts, with a few exceptions, removes an irreplaceable resource. Interconnect has been a dream for the ski companies for ever. NO! If Park City and Deer Valley want to drop their ropes I say go for it. Sol-Bright and the lift between Alta and Snowbirds Mineral Basin are fine. Hardly anyone uses them. New lifts or gondolas going over ridge lines to connect the canyons is a terrible idea. HATE HATE HATE this idea in any form. OneWasatch, Ski Link, Interconnect or whatever you want to call it, it's a terrible idea.	Salt Lake	04/30/2015
	I do not believe that the transportation systems proposed (tunnel) can be accomplished by meeting the environmental preservation/conservation goals of the accord.	Salt Lake	03/25/2015
	I think you are being deceptive on the website. Under "key proposals" or "actions" you don't come out and say you're proposing to put 2 tunnels through the mountains PLUS an aerial tram! Viewers might miss that like I did the first time through. How on earth do tunnels protect the environment. This is ridiculous. And to propose an aerial tram over that gorgeous ancient aspen forest across from solitude. I am very upset about this!! You should require multiple occupancy cars and put in some kind of bus like what they did at Zions. Please do not trash the mountains with tunnels!	Salt Lake	04/15/2015
	In my review of the Mountain Accord, I feel the purpose of protection of our natural resources is undermined by creating easier access. Though I support less cars and more transit, I feel increase bike access should be assessed as well. More people accessing the mountains is great but I fear a loss of the wild nature of many Wasatch areas as well as increased litter and waste that comes with the addition of people to previously less access areas.	Salt Lake	05/01/2015
	In order meet environmentally sustainable goals that protect the environment, there should not be any cross mountain transportation plans that will newly disturb the Wasatch Mountains.	Salt Lake	05/01/2015
	Is there a need to consider capacity - capacity of cars in the parking lot, bikers/hikers on trails, etc.? What will limit human use and what are the implications on wildlife of those different levels? I recall a study done at Delicate Arch that essentially determined how many people could have a quality experience. They were able to identify a carrying-capacity if you will. When visitors exceeded that number, the experience began to decline. Is there an equivalent to be considered with the Mountain Accord?	Salt Lake	04/30/2015
	More development between the Ski areas only damages more of the ecosystem in the high mountains. It might be good economically-but we have already impacted our shrinking wild areas-those are the priority.	Salt Lake	03/22/2015
	Must preserve all existing hiking and biking trails.	Salt Lake	04/26/2015
	Restrict traffic, halt all development expansion, including ski areas, no tunnels.	Salt Lake	02/11/2015
	There is no need for increased connectivity or increased transportation, beyond the needs of the special interests who stand to profit.	Salt Lake	04/05/2015
	very broad brush at this point makes it difficult to come to any conclusions or judgments about how effective the accord might be. Details are needed OR parameters set to create minimum standards	Salt Lake	04/30/2015
	Was hoping this might be something other than about development and building a train. Transportation should of been about efficient affordable year round options for all. The mountains should be star of the show not "a train like Zermatt". The world does not need a direct connection between State St in Sandy and Park City.	Salt Lake	05/01/2015
	I do not want any ski resort connections with Cottonwood Canyons/Park City built. I do not want ski resort expansion. (I am a skier) I do not want to open more land up for commercial development in the canyons. With Global Warming we will have more years ahead with less snow, perhaps drastically altering our ski industry. Do not build massive condos, trams, etc, which are based on our past records of snow fall. I DO want a non polluting (ideally) way of mass transit up and down canyons to provide for hikers and other recreation. Solar battery powered or something - get Tesla to build it! I want the watershed protected, hiking trails improved, x-country ski trails built, but generally leave things alone and preserve what we have now for further generations. Thank you	Salt Lake City	04/30/2015
	no extra lanes and no trains up Little Cottonwood Canyon.	Salt lake city	03/10/2015
	Only transportation options that improve the following aspects of the Central Wasatch environment over the current state of affairs should be considered: 1) watershed quality, 2) environment for native flora and fauna, and 3) quietude. Access to trails for human-powered exploration should not take a back seat to transportation to large resorts. The emphasis should be on getting people to their destination and back to their point of origin. Any design that facilitates single vehicle traffic through one canyon into another such as connections between the Cottonwood canyons and either Park City or the Heber valley will greatly increase traffic density with a concomitant increase in noise and air pollution. Just because areas above 7,000 ft generally have better air quality than the valleys is no reason to pollute the mountain environment until it does become a problem. In other words, DO NOT recapitulate the mistakes of urban development where webs of through-roads permeate the land in the interests of housing and financial development. And then, any transportation plan should have majority public support followed by an Environmental Impact Study under the NEPA process.	Salt Lake City	04/27/2015
	The Accord places economic growth above preservation. I have heard the Ski Utah rep promote connecting the canyons as a unique "marketing" benefit - not as a move with inherent good for our community. I also object to placing a train in Little Cottonwood. The expense is not justifiable and the need to control traffic could be met by limiting parking (by cost and spaces) and implementing a van system like the one used in Zion National Park. Please, please reconsider the existing proposal. It requires enormous public spending while benefiting very few citizens and compromises the wilderness quality of our beautiful canyons. Kate Lambert	Salt Lake City	03/09/2015

	I do like the new trails and designated protected areas, but I am not sure what it means to have "increased environmental protection". I think I speak for a lot of people when I say, we thought a rail system into the canyons meant closing the roads to most, if not all car traffic (big and little cottonwood canyons). Also, connecting the rail system between the canyons only adds to the degradation of the tri-canyons and ruins the experience for those people trying to get away from cars, trains, ski resorts, helicopters, etc. I am sure the ski resorts are very happy with what you are proposing. This proposal is very slanted toward economic interests and overall I am very disappointed with what is in the proposal. I really thought this was going to be a process to save the canyons. One good note, I consider myself to be someone that is willing to compromise to get to a mutual agreement, but there have already been so many compromises in the Wasatch for business it would have been nice to see a proposal that really wanted to save the Wasatch from more development. I have lived here all my life and watched the Wasatch get loved to death, this proposal, if implemented, is the end of what used to be a unique and special place.	Salt Lake City	03/04/2015
	The Mountain Accord purpose, as I understand it, is looking towards the future of our mountains, the increasing people using the areas and the traffic involved, the impact on the land, water and air. It seems to me the "proposed blueprint" ideas are thoughtful, but seem to fall short of actual trends of the current users of the Wasatch Mountains. The water data presented is old. Our water shed areas increasing limits places individuals can go with their animals. The UTA continues to raise prices, take routes away, what makes the Mountain Accord think the public will use transportation infrastructure that may be difficult to use. The canyons lack adequate current parking and many trails are in disrepair which can be a factor in environmental erosion. I agree the future of our beloved mountains and all their great resources should have a plan, I just don't feel the general public's interest is being considered. It feels to me that the Ski industry and their moneys are driving this blueprint.	Salt Lake City	03/11/2015
	The scenarios stated don't do enough to protect the wasatch and it's resources. Preservation is more important than economic stimulus. Connecting the resorts together isn't a good idea for anyone except the ski resorts and their interests. Find a way to get less cars on existing roads -don't make new ones!	Salt Lake City	05/01/2015
	* I think light rail is ridiculous, in terms of cost and purpose. In nearly every place and study, systems like Bus Rapid Transit are a WAY better use of public dollars. * I oppose any growth or development or expansion of existing ski resorts. Development should be pushed in our urban valleys, not our canyons. * The words in the blueprint all sound good, but I fear many of the words are just a cover for more houses. Bigger houses. More malls. More shopping. More condos. * I'd like more camping, more hiking, more buses, more safe roads for cycling.	Salt Lake City	04/30/2015
	1. Please consider a walking/biking path along the road in Upper Mill Creek. 2. Air Quality along the Wasatch Front impacts the economy, our health and our recreation. How does the Mountain Accord proposal address this?	Salt Lake City	02/25/2015
	1. Unfortunately to see the Aerial Solution for both canyons but specifically LCC off the table. Having used high-speed gondolas in Switzerland I believe it preserves the scenic and natural resources and it is such a great traveler experience. The trail down could serve as an alternate way to get down the new, wide canyon trail on mountain bikes or walking. Leaving the road for road-bikes. I could see traffic allowed before 7am, after 7pm, or destination traffic with permits. 2. Great to extend the trails as proposed, but there is still much more to do with existing trails that are lacking basic maintenance. 3. I could get behind a one-wasatch idea if it meant just the connector lifts, and if trail skiing would then be forbidden in the Wasatch as well as snowmobiles in guaman pass and other areas where they regularly poach. 4. The sad thing is that our snowpack will continue to diminish and the resorts are going to need all the water they can get their hands on for snowmaking. We think running free buses up the canyons will do the trick, and on paper it might sound good, but experience in other cities shows people just don't like to get out of their car for the bus part if they don't have to. Zermatt has done this figured out decades ago, Avoriaz too. Kick the cars out and watch the value of the experience, as well as property skyrocket. People get used to it super fast. Zermatt allows electric cars only, the downtown area is a walk only zone and businesses are doing better then ever before. By the way, good luck, you guys are brave trying to tackle this. Thanks for the opportunity to chime in.)	Salt Lake City	02/05/2015
	A few comments: 1. A shuttle system is a GREAT idea! Right now the canyon is at capacity (car capacity). If more users are going to use it, a shuttle is necessary. I do feel that the speed limit should be reduced, and there needs to be limitations on how wide the road becomes. As I own property in the Firs development in Millcreek, this is important to me. 2. The only way rail makes sense in the Cottonwoods is if driving private cars is limited to land owners in the canyon or there is a hefty \$5 fee (ala Millcreek). 3. The land swaps seem fair to me, but there needs to be zoning restrictions so that a Brighton Hotel (for instance) cannot be 20 floors tall. This way we retain as much of the traditional character of the place as we can. But I do feel that if Grizzly Gulch isn't part of the agreement, then there should be no land swaps at all. 4. I very much oppose any type of transportation linking the ski resorts that would put any kind of tram/ski towers over the ridges between big and little cottonwood canyons. The only place it makes sense to link the canyons is Brighton/PC through hidden canyon. UNLESS we are talking about tunnels. 5. I think it important to establish legitimate trailheads for some tenuous situations, such as Heughs canyon, for instance. 6. Mountain Accord should seriously look at stopping motorized access in Mineral Fork. There is motorized access for almost the entire northern and southern Wasatch. While the number of hikers increases, the amount of land set aside for hiking is not getting any bigger. Mineral Fork seems like the best place to do that. 7. Make sure the new parking lot at Wasatch Mountain State Park is not so close to the cabins up there. Cabin owners don't want it, and recreationists also don't want to see cabins either. There are alternative locations for that (abnormally large) parking lot further down-canyon that make more sense.	Salt lake City	04/30/2015
	A rail system tearing through Little Cottonwood Canyon will destroy the environment, cost far too much money, and cater to the wealthy. It will be a blight on the exquisite landscape year round simply to solve a problem that exists during a short period of the ski season. I realize most of the big stakeholders have huge profits to be made, but I still fail to see the point of ruining two gorgeous canyons in order to access Park City, when I-80 provides easy transportation. Why carve up our mountains in order to serve high-end tourists and locals? Canyons are for more than skiing, and since many in our valley cannot even afford to ski, Big and Little Cottonwood Canyons should remain as pristine as possible for those who seek the simpler pleasures of nature.	Salt Lake City	05/01/2015
	A train tunnel up/under LCC/BCC would seem to create a lot of opportunity: no worry about weather; tunnel access to all areas; alternate/safe exit route in case of road accidents; water/fallings clean up; no surface impacts or property loss; mass transit. That is how they do it in Europe. Don't be so constrained, this is a vision.	Salt Lake City	04/30/2015
	About transportation: It is unnecessary to provide a transportation link between the Cottonwood Canyons and Park City. The need is for a viable mass transit system that serves access to the Cottonwood Canyons from the Salt Lake Valley. Please do not build tunnels thru the mountain. Instead, we need restricted car traffic and a vibrant/frequent bus transportation system such as has been implemented in some of National Parks (e.g., Zion). About development: Please do not expand the base facilities at the Cottonwood Canyon resorts. The goal should be to keep the development simple, with basic services and lodging. The magic of the Cottonwoods is that they are not overly developed like Park City, Jackson, Lake Tahoe, Colorado, etc.	Salt Lake City	02/09/2015
	Accolades that such a variety of interests have come together at the table.	salt lake city	04/26/2015
	Address the proposals that would link all ski resorts. You may not support it, so counter it. If you do support it, address it. And if you don't have a stance, you can't ignore the proposal!	salt lake city	04/29/2015
	After reviewing the Blueprint of the Mountain Accord, I truly believe it's VITAL to make wilderness/environmental protection the priority. We are at a point in human history where we need to start thinking of environmental stewardship above all economic, recreation, industrial, etc. purposes. I know it may seem irrational and extreme now, but if Mountain Accord sets environmental protection as #1 on their "To Do" List, their project could potentially become a role model for other projects like these around the country. Mountain Accord has the unique opportunity to combine transportation, recreation, environment, etc. by working with specialists from ALL these areas, rather than polarizing the groups. Groupthink is the ONLY way we will come to a resolution to this problem, but I truly believe that environmental awareness should ALWAYS be in the back of our minds, no matter what. I urge you to prioritize wilderness protection.	Salt Lake City	05/01/2015
	An environmentally-sustainable transit system would involve mass construction in, and around, all of the canyons. Such large scale construction would have an impact on the natural environment and would certainly have an impact on our fragile watershed. The "blueprint" must realize that the environment comes before economic and recreational expansion. If our mountain environment is compromised for our selfish want to expand, and industrialize, then surely it will fall and we will be left with a deteriorated shell of our glorious mountains. It is imperative we take care of our mountain environments in a world affected by climate change; especially in our dry, hot climate.	salt lake city	04/05/2015
	An Unpardonable Sin The quality and quantity of the snow, steep beautiful terrain, and easy access make the skiing/hiding experience in the Wasatch Mountains (backcountry and resort) world class. This is a special place. But the quality of the skiing experience in the central Wasatch is in jeopardy. I see the proposals for expansion by the resorts and Ski Utah's "One Wasatch" simply as marketing tools to attract more tourists to our world-class resorts. As a native Utahn, Snowbird season pass holder, and frequent backcountry skier, I don't believe these proposals for expansion are in our community's best interest. The Alta and Snowbird ski resorts cannot accommodate more skiers/snowboarders without further compromising the already crowded skiing experience that exists there. Who wants to stand in longer and longer lines while waiting to ride the greatest snow on earth? Not only are the lines insufferably long, with larger and larger crowds the snow gets "skied out" faster and faster. Is this the kind of experience Ski Utah and the ski resorts want for their customers? At the same time, the backcountry cannot afford to be annexed any more by the resorts without compromising the riding experience there. The ski industry in Utah has an insatiable appetite for expansion and development at the expense of the environment and wilderness experience. Both the resorts and the backcountry/wilderness can co-exist harmoniously but it's time for permanent hard lines to be drawn. Tunnels and aerial trans connecting the Cottonwood Canyons and Park City would desecrate what little is left of a wilderness/backcountry experience that exists in the glorious but fragile central Wasatch range. Why connect the resorts? If I want to ski at Alta, I go to Alta. If I want to ski at Deer Valley, I go to Deer Valley. The concept of an interconnect is just a sightseeing gimmick for tourists. No local would dream of wasting quality ski time riding lifts between resorts. Don't ruin what makes this place special and unique just for more money. It's true, transportation challenges in BCC and LCC do need to be addressed. More efficient mass transit makes sense, but let's not reinvent the wheel with complicated expensive projects that permanently deface and deform more of this glorious little mountain range in which we are so fortunate to live.	Salt Lake City	04/16/2015
	Any additional access to little cottonwood with damage the canyon. Remove the road and switch to rail only access.	Salt Lake City	04/30/2015
	Any major construction project in our/my National Forest I am definitely opposed to. The impact will be irreversible...Period. We have made it thus far with the way it is...Its about money. Real Estate. Etc. There is NO NEED FOR THIS So called Transit system with a ulterior motive. I AM HUGELY OPPOSED TO ANY KIND OF PROJECT IN THE SERENE MOUNTAINS THAT SURROUND US. I can't speak for others, but I would think the majority of REAL born and newly born Utahns with a love of the Mountains would oppose any such project. Dont try and create son e kind of illusion on the public that there is some economic need...It will do more harm than good...PERIOD...	Salt Lake City	02/04/2015
	Any mention or illustration of transportation "connections" from LCC and BCC through to Park City negate the stated purpose of balancing stewardship of natural resources and quality recreational experiences and show that the personal economic vibrancy of some of the Mountain Accord participants is clearly getting more attention.	Salt Lake City	04/08/2015
	As a fairly new resident of Salt Lake City and Utah, I would like to see as much wilderness preserved as possible. I am happy I moved here before developers and the ultra rich have gotten their hands on every piece of the Wasatch. I fear one day you won't be able to enjoy the serenity and peace which the mountains provide because there will be endless chair lifts and gondolas and rich people's second homes scattered throughout our wonderful mountain range. I understand this is a "give and take" process but I hope you place members on your board who realize once the mountains are developed, it's lost forever (or at least for a lifetime).	Salt Lake City	04/30/2015
	As a long-time user of the Wasatch backcountry (all seasons - 40 yrs) I am concerned with two items in particular. The first is the transportation issue. We sorely need some kind of public transit that works for all and reduces, if not completely does away with, private automobiles in the canyons. I approve of the "whistle-stop" idea so that there are many places that hikes/climbs/ski tours can start and end conveniently. And as a backcountry skier for 40 years, I have seen many areas that used to be backcountry gobbled up by the ski areas. Honeycomb Fork at Solitude, Clayton Peak and Snake Creek Pass at Brighton and Pt. Supreme/Katherine's Pass at Alta. Heaven forbid Snowbird ever getting into White Pine Canyon. With climate change, more backcountry has been ruined by less snow at low and mid elevations, while at the same time, the number of backcountry enthusiasts has greatly increased. I would hate to lose any more area. I don't at all understand the need to be able to go from Park City to Brighton and Alta, but would prefer tunnels to ski lifts. I assume that there are old mining tunnels that could partially be used to develop this system. And one more thought...if the state of Utah were to take over our public lands, how would this affect the Mountain Accord blueprint?	Salt Lake City	03/05/2015
	As a person who is primarily interested in human powered recreation (ski, climb, bike), I see more of an appeasement of my group rather than a wholehearted attempt to develop and grow the infrastructure for making the wasatch and SLC a leader in urban areas embracing human powered recreation. This is a huge opportunity to be a true pioneer and we'll likely blow by chasing the money.	Salt Lake City	03/16/2015
	As an avid Wasatch user, more economic development within the Wasatch seems like a direct threat to the preserving the pristine natural experience. This is mainly directed at the ski industry which is looking to expand. Secondly, a tunnel connecting Little Cottonwood Canyon to Big Cottonwood Canyon is a monstrosity.	Salt Lake City	03/11/2015
	As an environmental engineering researcher, I highly approve of any sustainable infrastructural changes. I attended a seminar on the proposed Blueprint at the University of Utah on March 9th and was interested to hear all points of the proposal. I agreed for the need and the plan of Mountain Accord, but I did not approve of the connection between Park City and Little Cottonwood. It is a well known fact that the resorts of Big and Little Cottonwood are the main reason for bridging a direct connection between Park City and the Cottonwoods would cause much more congestion at the Cottonwood resorts which would make additional issues - right now the driving distance between PC and the Cottonwoods is preventing huge crowds at these resorts. Establishing a connection between PC and the Cottonwoods would hurt business at Park City Resorts, guaranteed.	Salt Lake City	03/10/2015
	As for recreation vs. environmental protection - I support stronger protection but would want to make sure that existing and potentially new trails in current non-wilderness areas will be open to bicycles.	Salt Lake City	04/22/2015
	Assigning at least order of magnitude costs to different alternatives. Benefits are outlined in detail but are impossible to assess absent any indications of costs.	Salt Lake City	04/08/2015

	I am absolutely opposed to construction of tunnels, rail lines, and ski lifts in the Central Wasatch.	Salt Lake City	02/12/2015
	I am all for improved express bus transit. The tunnels are a silly idea to be-it's rather redundant and overdeveloping to add both a light rail and tunnels. Let's proliferate what we already have going for us (public transit) via bus/shuttle and allow a bounty of people to become intimate with the canyons with driving out of mind! People don't benefit from fleeing from one canyon's end to another through the mountain, they benefit from time to be where they are. Canyons end only to allow a soft return to the valley, and the thrill of making it up and down another. In consideration of "Proposed Cottonwood Canyons Scenario for Public Consideration", I see that in exchange for more protected lands, ski resorts want additional water for snowmaking. No. We need water in the table, to hydrate the growing population through the fall. Normally we could rely on melting snow as nature's water meter, allowing us to have water throughout the year. But with less snow melting sooner, people need to meter the water. Snow making does not create The Greatest Snow On Earth, it is a climate change catalyst. Keep in mind that Park City's #1 source of CO2 emissions comes from energy needed to make and cover the mountain side with snow.	Salt Lake City	02/23/2015
	I am extremely opposed to running mass transit directly through the summer recreation areas of Little Cottonwood Canyon. I understand that the recreation and economic focus for this project have been wholly centered around the ski industry; however, the plan neglects the recreation for the other 3 seasons. You will be cutting through vital climbing/bouldering and hiking areas in order to shuttle people up to the ski resorts, which attract far fewer people during the 'off season'. In addition, the environmental impacts of disturbing the land, watershed and creeks running through these areas is a poor compromise. While I'm not happy about the proposed changes, I do understand the need to reduce congestion, provide more environmentally-friendly modes of transport and reduce the amount of land in these wilderness areas used for parking. Perhaps a better alternative would be to widen the road slightly and run the rail up the center of the road that is already in place. I appreciate you taking into consideration the opinions of the local community.	Salt Lake City	02/11/2015
	I am generally in favor of the approach being taken to develop the Mountain Accord but believe protecting the environment for water, wildlife, and low impact recreation should be the highest priority. In general, the emphasis on discouraging automobile traffic and encouraging public transit is favorable, but I think the proposals in Little Cottonwood Canyon would have negative environmental impacts. Instead, I think utilizing the existing road, and adding avalanche protection if necessary for the use of public transit like buses would be better, and include means to discourage automobile traffic such as a toll booth and paying for parking permits in the canyons.	Salt Lake City	04/27/2015
	I am hesitant about blasting through the pristine Wasatch wilderness to create transit tunnels and destroying wildlife habitat to build aerial lifts as means of transport from Little Cottonwood Canyon to Park City and other areas. That is where the Mountain Accord goes away from keeping the transportation system completely "environmentally sustainable". Sure, less cars means less pollution and traffic...but trains, buses, and lifts would increase canyon usage which in turn might have a negative impact on the environment. Blasting open the back end up the canyons would take away the charm, solitude, and uniqueness of the Wasatch. Not all tourism needs to be streamlined and efficient. The best adventures are often rugged and full of little mishaps here and there. I hope that the Mountain Accord Blueprint is able to preserve this incredible aspect of the Wasatch Mountains.	Salt Lake City	04/29/2015
	I am HIGHLY opposed to an light rail, aerial transit, or tunnels to connect the canyons and/or Park city. These would be quite destructive to maintaining the quality of the canyons. A BRT would be acceptable to me, but none of the other options.	Salt Lake City	02/04/2015
	I am impressed with and excited by the thoughtfulness and comprehensiveness of the Blueprint. Thank you so much for the hard work that has gone into this project!	Salt Lake City	05/01/2015
	I am in favor of a light rail system going directly to the ski resorts. There should not be any stops around popular hiking trails. You claim that this blueprint encompasses the environment, recreation, transportation and the economy. As far as I can tell there would only be economical benefits if tunnels were to be created in our mountains. There is absolutely no reason that a person should find it necessary to visit multiple resorts in a single day. That's pompous behavior.	Salt Lake City	02/04/2015
	I am in favor of the ski link and feel to be competitive with the rest of the world, more emphasis should be placed on its development.	Salt Lake City	02/04/2015
	I am in support of the Mountain Accord. The plan is the right and responsible course of action for preserving the qualities, which make Utah a great place to live and visit. Change and population growth are inevitable in our amazing state. The future perseverance of our resources and quality of life depend on our ability to take an active role in developing the Wasatch Front's infrastructure, transportation and recreational use sustainably. Have you ever been to Corner Canyon to bike on a Saturday morning or tried to ski the first powder day of the season? If you have answered yes to these questions, you must understand. If not, you should come explore the wonders the Wasatch offers to anyone wishing to explore it's bounty. Inaction is not an option and will only lead to the degradation and misuse of Utah's incredible Wasatch Front.	Salt Lake City	05/01/2015
	I am like a lot of people who left Utah for advanced education and came back for the recreational opportunities. Lots of people in my profession make more money than I do because they chose not to return. The loss of money is more than compensated when I make dawn patrol laps before work, 7/10 times those laps are done in Grizzly Gulch. I am never the only one in the parking lot. Any resort expansion invades heavily used backcountry space. And if you think the backcountry is limited to a few weeds trying parking at Mill D or Spruces or Bear Trap or White Pine or Grizzly Gulch after 9 am on any Saturday once the snow flies. Weiridos, I'll grant you but there are lots of them. I've been backcountry skiing since the early 90's and have watched the explosion. There is no place like the Central Wasatch in the world. Montana, Wyoming and Idaho have more wilderness but lack the public access. The resorts are not hurting. Look at the money they are currently willing to throw around in lawsuits and acquisitions. They don't need an interconnect and more lifts, with a few exceptions, removes an irreplaceable resource. I will add that in looking at prices to take my family of 6 skiing I'm thinking of buying everyone an avalanche beacon. I would support land swaps with resorts in order to permanently protect places like Grizzly Gulch which is the last easily human powered accessible north facing area above 9000 feet left in the Central Wasatch. If Alta wants to expand there, let them give up public Forest Service land on which they currently operate. How about Albion Basin? I would support a lift expansion in Honeycomb Canyon for Solitude providing it does not actually extend the range that inbound skiers are able to go. No opening up Silver Fork to Solitude skiers. In other words the lift will not begin lower than the Honeycomb Return lift thus effectively opening up the East Bowl of Silver Fork and west side of lower Silver Fork to side country access. Look at where the avalanche deaths are increasing and you'll see it's mostly coming from people leaving resorts and getting in trouble.	Salt Lake City	04/30/2015
	I am opposed to any expansion of the ski resorts and opposed to any connection between LCC, BCC, and PC, including tunnels and ski lifts. I'm opposed to a train. First traffic solutions should be parking pricing structure at the resorts.	Salt lake city	05/01/2015
	I am opposed to the proposed transfers of forest service land to private ownership. At least some of the areas are the only public parking areas that allow public access to forest service land. If these are turned over to private ownership they will eventually be used for development and what parking remains will likely be limited to guests at the resorts or become very expensive parking, as is occurring in Park City now that Vail has taken over the ski area. I am also very concerned about the impact on Salt Lake's water supply. Water used for snow making comes back to us as run off in the summer. Water used to support development becomes sewage. Given the current drought and the likelihood of climate change from global warming I don't think we can afford any additional development in Big Cottonwood Canyon or Little Cottonwood Canyon.	Salt Lake City	03/12/2015
	I am strongly opposed to resort interconnect over the back of the Wasatch via lift connection. The interconnect will create a major detriment to both backcountry skiing, hiking, and bike trail system, our watershed, environment, and user experience. The Mountain Bike community rides all Spring, Summer and Fall and are a major source of tourism and revenue for all our communities on the Wasatch. To encroach upon pristine wilderness in the form of land development for more hotel/restaurant/condo space and resort to resort lifts for the profit of Vail/Epic Resort Corporation is unacceptable. I encourage a bus/shuttle/carpool rider incentive in the form of earning \$ towards the next year's season pass for each bus ride or carpool taken, and Resort discounts would also be helpful. A strong disincentive to single car ridership up all canyon roads in the form of a toll of \$2 per single rider car. As for the small trav/train link up the canyons? I am undecided. Finally, a large transit/train up I-80 and perhaps a link eventually for I-70 is already WAY overdue! It should already be through the planning and funding stages by now. Thanks for listening, Amy	Salt Lake City	04/30/2015
	I applaud the efforts to permanently set aside and protect additional land in the Wasatch from development. Protection of Mt. Superior and the White pine drainage are especially important. Although no additional development in the canyons would be ideal, I understand its necessity. The proposal for a tunnel system to preserve mountain side and ridge line lands seems like an acceptable compromise. I hope the specific of these new transportation corridors will focus on keeping these modalities as non-intrusive as possible. I hope biking lanes are being considered in these proposals. Also the efforts to dissuade private vehicles from driving in the canyons (e.g. fees, tolls, parking limitations) are important. For the rail and other public transportation systems, it will be important to have stops along the way up and down the canyons, and not solely at the resorts. This will allow other users of the canyons, not solely resort patrons, to take advantage of new transportation systems. Keeping these systems affordable to the riders is important as well.	Salt Lake City	02/12/2015
	I appreciate the emphasis on preserving the legacy of this special place as much as possible. I feel like too much emphasis and leeway is being given to the ski resorts. The transportation options seem quite intensive and may have a significant impact on the canyons.	Salt Lake City	05/01/2015
	I believe a train system only serves the ski industry and not the other users of the canyon. More natural gas buses with several stops along the way would make much more sense. It would also allow for climbing areas to not be destroyed, along with forest and animal life.	Salt Lake City	04/30/2015
	I believe if we transport the number of folks into those canyons that will be possible with the present proposed transit options the canyons will be ruined. The numbers are wilderness experience in these canyons. We have to limit numbers. That should not be economically driven. If economics is in and of itself is what we want then I think initially it would work but Salt Lake is loved because of its exquisite wilderness proximity. They don't have a Salt Lake or a New York outside of the Tetons, or the Grand Canyon. We have an important resource that needs to be protected. Transporting folks into it just because we can and to benefit economics is not a responsible stewardship.	Salt Lake City	04/30/2015
	I believe more emphasis should be put on maintaining natural resources, environmental quality and recreation and less on a "vibrant economy." I see no reason other than "development" and pleasing developers for linking LC and BC resorts with PC resorts. It's been shown that this is all marketing hype generated by Ski Utah which will not increase skier visits, will not be utilized by skiers and only opens the door for more development and secondary homes which will be occupied 2 weeks out of the year. I'd rather see the land remain undeveloped and enjoyed by all rather than developed and set aside for the few.	Salt Lake City	04/14/2015
	I believe that linking the canyons through tunnels won't improve traffic situation or skiing experience. Air pollution is not being considered effectively in any of plans so far. Skiers would have to pay a highly increased prices for combined tickets, yet won't be able to enjoy all the terrain that these areas offer. It's better to ski at one area at a time. Snowboarders will be pushing for Alta to allow snowboarding and yet, Alta Ski Area is one of ONLY three "skiers only" resorts in the country and skiers want to keep it that way.	Salt Lake City	02/06/2015
	I believe that the quality of the Wasatch mountains is enhanced by less development than more. I am not in favor of the ski resorts (Alta, Snowbird, Brighton, and Solitude) expanding any further. The land around these resorts is essential to our water and the wildlife. There is no need to have a "ski connect". This includes the gondola between Park City and The Canyons. Just because they are owned by the same company does not mean that they have to be connected. I ski in the winter and hike and trail run in the summer and the beauty of our canyons, so close to a large city is unparalleled. That is what visitors exclaim over. Not how we can further develop but how great to have what we have so accessible. I believe that Save Our Canyons is on the right track although I do not agree with letting Snowbird expand to the south. And shouldn't there be some kind of moratorium on placing buildings on ridgelines? When one looks out across the mountains, seeing a boxy, building on top, does not keep with keeping the view pristine. The convention center on Hidden Peak should have been located elsewhere.	Salt Lake City	04/08/2015
	I believe that we could all benefit from better transit within the mountains and to them, however I think that linking park city to either of the cottonwood canyons is a mistake. I don't think this would be environmentally informed and it would be non reversible.	Salt Lake City	03/09/2015
	I believe the best thing to do is to create a train system to take people along the EXISTING highways to interconnect all resorts, and otherwise improve the current transit system. We do not need any expansion of the resorts from the way they are. There is no need to connect canyons and ski resorts that are easily accessed by driving an hour to get to the other destination, or hiking for a couple of hours to get there.	Salt Lake City	02/10/2015
	I believe the Mountain Accord's blueprint should lean towards wilderness and preservation more than business and additional infrastructure. Granted, some infrastructure (like efficient transit options) is very necessary, but priority should be given to maintaining open/green space. We need to encourage people to reconnect with the earth and nature, this is not done by turning our wild-spaces into theme parks. Although it might sound selfish, I honestly would like to see less tourism in the Wasatch. The mountains have never needed our human economy to inspire awe, offer a place of refuge, or provide recreation opportunities.	Salt Lake City	03/05/2015
	I believe the rubrics used to assess the goals in the above charter miss important characteristics of our mountain environment. I do NOT believe that access to mountain canyons should alter the natural flow of the mountain environment. If there are rugged cliffs at the end of a canyon, this should not be altered by a tunnel to allow higher use and impact on the canyons. We need to respect the natural boundaries that have been created by the dramatic uplift of the Wasatch Mountains.	Salt Lake City	05/01/2015
	I couldn't gather the key ingredients of the blueprint from a quick read. It was all vague, general purpose-style language, much too much information on a map, and lots of stiff language. I read an opinion piece in the SL Tribune today that bemoans the lack of input, so I went to the site. I don't have an hour to commit. I have 10 minutes. Give me a survey that says things like: do you want year-round bus access to Brighton. Itemize the key proposals. I support your mission, would love to help. In the next round, I recommend you do a survey of your survey before you release it. Test out the ease of the questions. Go to Impact Hub or one of the other fresh-idea labs to figure out how to gather input in a social-media age.	Salt Lake City	04/12/2015

	I do not like the idea that we would be able to go from Alta to Brighton and PC in a car through a tunnel. I am concerned that will really get people into the canyons. People who just want to drive through. The costs must be horrendous! I would like to have a tougher approach on the driving ability up and down the canyons. Only car-owners who have cabins should be able to drive up there, the rest should have to use the trail-rail (I am not a cabin-owner). It is awful to drive up to the ski-resorts to ski. I am certainly glad we are trying to change that. The cars might as well stay in the valley and we go up on a light-rail. Currently it is awful to drive up the canyons in the spring until the drivers are sharing the road with cyclists going up and down, with cars passing cyclists in both directions. I do not see how they can share the road. I am not sure where the Gondolas come in the picture... Another thing, let's remember that this is USA, not Europe, where everyone is used to a transit system (that works), therefore people use them. I do not think people will use a transit system, if a road is available to drive a car, no matter the cost. Possibly I/UTA can prove they can compete with cars in speed. I know UTA likes to pat themselves on their shoulders. I think they can do that IF they can prove their system is faster than the cars, so far that has not happened anywhere in this city.	Salt Lake City	05/01/2015
	I do support preservation of these lands. I do not feel that building transit would preserve the land. This would be harmful for the wildlife and ecosystems. I also have concerns about how it would affect our water supply. I would support more buses being added on the current roads. I would also support a toll fee to increase use of public transportation.	Salt Lake City	04/30/2015
	I do think that increased public transit in the canyon is a big plus, but I'm concerned that the construction of a train system could be overall detrimental to the area. It could potentially be a net loss in the beauty of the area.	Salt Lake City	03/01/2015
	I don't see how tearing our mountains apart to build a train between PC and LCC and BCC is responsible stewardship of the lands. It seems more like a gimmick than a plan that will cut pollution and keep our wilderness intact. Restricting vehicular traffic up the Cottonwoods to employees only and expanding parking lots at the base as well as running clean energy buses and shuttles up the canyons seems like a far better option and one that will actually keep people off the roads and from lining up and idling for HOURS just to get up the canyon (LCC). If the buses were more convenient and ran in a more timely manner people would utilize them, and they will definitely utilize them if they are required! Let's get serious about actually doing something about the air quality in this area and stop that outrageous line up and down the canyon.	Salt Lake City	05/01/2015
	I favor optimizing bus service to all the ski resorts. I am opposed to a light rail system going up Little Cottonwood Canyon and I am strongly opposed to a tunnel system between Little and Big Cottonwood Canyons. I would favor a long gondola up Little Cottonwood Canyon. This would be a terrific tourist experience and would decrease auto traffic in the Canyon. A Gondola might work in Big Cottonwood Canyon also, although I recognize that it would have to be even longer. The easiest way to connect the Park City areas with Big Cottonwood Canyon would be to improve Guardsman Pass and keep it open in the winter.	Salt Lake City	03/11/2015
	I found the survey questions and options and data presented in a confusing manner. My fear is that when we see a blue print in the next phase it will be rigid and fixed without good discussion. The tradeoffs are great, we have no crystal ball, we should go very slowly on development, be careful to preserve the beauty and nature that is so necessary for so many of us who find the mountains part of our religious experience. Protect what we have. Pollution and climate change are already affecting the area not to mention overpopulation of the planet.	Salt Lake City	04/30/2015
	I fully disagree on any kind of development or expansion to new areas. People come to Utah because of the snow, if they want more terrain they would go to big sky, Jackson, whistler. A lot of the resorts already look like a six flags park with zip lines, toboggans and what not. Development will not bring more people, national and global population growth will. I truly believe that corporations should capitalize on having pristine lands as their neighbors, not expanding into them and making said lands lose their appeal. The energy and focus should go towards on how to make our environment better for future generations by keeping our lands pristine and unique.	Salt Lake City	04/30/2015
	I fully support efforts to transfer Grizzly Gulch into public ownership in order to eliminate the threat of future development and to secure public access to recreation in the area. In fact, this task should be of very high priority. I would also support appropriate user fees on public lands in the Cottonwood Canyons.	Salt Lake City	05/01/2015
	I haven't answered any of the above check-box style questions as I don't believe they can adequately convey the whole of my thoughts. Not that this little box will do complete justice, but at least it can't be misconstrued. I am against any resort expansion, use of taxpayer dollars to fund transportation to the resorts in the Cottonwood canyons or permitting any more lifts to be built on our land. They already have enough of the prime high elevation terrain. If they can't figure out how to make a profit on that, then that is their problem. Their claims to be building a more European ski experience are pure bullshit. The Wasatch is a small percentage of the size of the Alps and they already have enough control of the land up there. If they wanted to create a truly European ski experience, they would tear out 75% of their lifts and make the terrain more of a lift accessed backcountry experience. I put the emphasis on backcountry experience as you would still have to put in quite a bit of effort to reach terrain outside of what the lift affords you. I would prefer that through this process, we further protect the remaining land we have from any more encroachment of the ski resorts.	Salt Lake City	05/01/2015
	I honestly do not feel any public land should be sold to Alta until they open up to snowboarding. Snowboarding is not banned by the Forest Service and Alta needs to stop hijacking public land that 40% of the Salt Lake public can not use. I thought the Mountain Accord was about making the mountains a viable place for our community. Alta's policies go against that.	Salt Lake City	02/04/2015
	I just don't understand how you can say you want to protect the environment when you're proposing to destroy it. And I am so sick and tired of hearing the whining about "you have to wait in traffic and then you might have a good day skiing but then you have to wait in traffic again and it just ruins the day". Oh boo hoo. That just tells me where your priorities really are. It's not about the environment. It's not about the economy. It's not about community or about anything you supposedly say you want to protect. It's about the selfish bastards willing to destroy the canyons, to take people's homes and properties and ruin residents lives, to spend billions of tax payer money and for what? So that they don't have their day ruined by having to sit in traffic? I call that bullshit! If you are so bent out of shape about traffic why aren't you taking the public transportation?	Salt Lake City	02/12/2015
	I just spent over an hour writing comments only to not be able to submit them. This, as well as trying to understand this unnecessarily complicated report makes it extremely frustrating. Many folks I have talked with have not given input because of the unwieldy nature of the report. Now I can understand why!	Salt Lake City	02/16/2015
	I like the idea of incorporating public transit and discouraging or restricting use of automobiles to access the canyons and ski resorts, but I don't like the idea of a train going from Little Cottonwood to Big Cottonwood or Park City because of the impacts to the environment and the experience of hiking and, backcountry skiing in the mountains between the resorts. I think we should first try more bus service, add parking lots at the bottom of the canyons and charge for parking in the canyons to encourage use of public transit.	Salt Lake City	05/01/2015
	I like the proposal but don't think we need tunnels connecting LCC/BCC/PC. Trams, etc would be a better solution and keep the character of the cottonwood canyons intact. Tunnels would really open up the cottonwoods and create an influx of people and traffic that would negatively affect the feel of those special places.	Salt Lake City	02/09/2015
	I object to building transit systems to the mountain areas. Improving and creating more transit opportunities into these areas, will facilitate their destruction. On the contrary, we need to protect these areas from the masses.	Salt Lake City	05/02/2015
	I oppose the tunnel connection between Little Cottonwood Canyon and Park City, as well as a lift interconnect between the cottonwood canyons and Park City. I also oppose the expansion of both Alta, Snowbird, and Solitude, and as result, would like to see more land protected for both recreational and environmental reasons. As it stands, I feel that the blueprint does more to promote the interests of private groups for economic reasons more than it serves both the public, and more importantly, the environment.	Salt Lake City	05/01/2015
	I read the SLCA's response to these questions and I overall feel the same way they do on these issues. I'm am a "dispersed user" in the cottonwoods, so my main concern is to protect and to preserve both back country skiing and climbing. I am very concerned about transportation methods interfering with the world class climbing we have. If we were to loose some of this climbing, I honestly would consider leaving Salt Lake City.	Salt Lake City	03/12/2015
	I recognize the necessity of compromise, but this proposal is full of invalid assumptions. Are there any guarantees that OneWasatch or SkiLink proposals will stop if Mountain accord is adopted? Is an increase in trails, transportation, or ski boundaries really an advantage to what the canyons represent to this community? Will increasing skier visits to already vibrant ski areas really be a significant (and necessary) impact to the Utah economy? My guess is the answer to these questions is "no", which is why I cannot support this proposal. I cannot support a mountain rail system primarily designed as a marketing tool for ski resorts. If anything, traffic congestion in the canyons acts as a natural limit to daily visitors in the canyons. How will hiking, biking, picnicking, and camping be controlled during peak summer months if the train allows ever-increasing quantities of visitors to get up the canyon? I am not an expert, but I find it hard to envision a train in the canyon without disrupting view shed, water shed, noise, and wildlife. I can, however, envision a road permanently dedicated to bus-only transportation, not unlike some of the national parks. Much of the private land proposed for a "swap" in this proposal appears to be unsuitable for commercial development already. Else it would probably already be developed. Thus, I see little gained by the "trade" for these private lands. Expanding ski area boundaries into American Fork Canyon while presenting the need for increased transportation are in direct conflict. Ski area expansion, by definition, suggests the quest for more visitors/traffic. Utah ski resorts are already world-renowned. My guess is they are profitable as-is. It is not a "given" that for these legitimate businesses to continue to be successful they must be on an ever-increasing path to expansion. Expansion means more traffic, more congestion, more pollution, more stress on the environment. Those canyons do have a maximum capacity. Stop the quest for expansion and focus on maintaining the existing business. Furthermore, the canyons represent a much greater value to the Salt Lake Valley beyond skier visits. Protecting the watershed at the expense of increased ski resort expansion and greater transportation access for skiers is not worth the compromise.	Salt Lake City	04/13/2015
	I suggest that Little Cottonwood Canyon adopt a different transportation approach under which it would not yet be joined with a route to Big Cottonwood Canyon and Park City. That option could always be added later. In the first phase, I suggest we keep Little Cottonwood Canyon "wild" by limiting the maximum number of cars that may access the canyon each day (year round), increase parking fees, and, if necessary, providing park and ride lots and rapid transit bus service from the base to the top of the canyon. This would open Big Cottonwood Canyon to the full effects of the proposed transportation link (and there is already a summertime road connection to Park City) but would allow Little Cottonwood Canyon to try an alternative approach to the growing population that may limit the number of visitors and provide a unique wilderness experience as compared to the other canyons. If, after a few years, it doesn't work out, a transportation route to Brighton and Park City can always be added. I think the Mountain Accord is headed in the right direction in many ways but the unique and precious beauty of both Little Cottonwood Canyon and Big Cottonwood Canyon are due largely to the fact that they are effectively dead end canyons and skiers, hikers and others cannot access them from another canyon and count on a transit ride back out. If that has to change, let's start with the sacrifice of Big Cottonwood Canyon but hold off on sacrificing Little Cottonwood Canyon until we can see what the results have been and whether the objective have been achieved. Let's keep Little Cottonwood Canyon wild. Thank you.	Salt Lake City	05/01/2015
	I support aggressive land preservation and protection. Please preserve land, protect watersheds and water resources. Secure additional protections on federal lands!	Salt Lake City	05/02/2015
	I survey ski guests each year, 8 years, total of 3,000 surveys a year by our team. 99% say keep the mountains the way they are, as that is why guests come to Utah. Not to buy stock in Vail Resorts, not to believe the cool aid, knee jerk Ski Utah hype. The views, the ease of use. Yes they drive, you WON'T get guests out of their comfortable cars til you make the UTA bus as comfortable as their car. Simple solution to change behaviors is ala Mill Creek, charge a fee. These people spend thousands per week, they could care less about a buck or two. Have ya ridden a UTA bus lately? Rude drivers, big gaps in schedules in the Canyons, high pricing, and stupid schedules. Ridership is way down. Its great to see the last gasp of resorts promoting everything EXCEPT going green. Parking lots are not green, roller coasters either. Time's are a changin', costs are way up, snow is way down. No way a foolish train makes sense when 5% of Utah locals ski. Right now you have 12 weeks of drunken Oktoberfest with sheriffs at the Tram top at 3pm to stop the fighting, real nice. With social media now there are thousands of quiet people working in the backwoods of Utah used to be the land of the foolish, no more. The Skyline High event made more Utah's ticketed off and we saw the lobotomy job foisted on the public with zero comment, no input, a bunch of idiotic poster boards. Resorts need to fend for themselves, not get a hand out and act like trains, tunnels are so badly needed. They need vision, not more money. Oh those 3,000 surveys? More resort transportation, better food and half day skiing, not expansion. Markets decide the future and this Accord is a joke that even very young students are totally opposed to...	Salt Lake City	03/26/2015
	I think it's good that people are involved and discussing the protection of the Wasatch mountains especially with the high use and growing population; however, I find that this proposal is driven by some ulterior motives that are not in the best interest of the people. The transportation section, especially, smells of these motives. I cannot see the cost-benefit, let alone the possible, unalterable destruction that could happen if the proposed transportation ideas come to fruition. I will talk more about that below in that specific section.	Salt Lake City	03/06/2015
	I think land preservation needs to be the #1 priority here. Ski resorts are great, but do not need to further expand at all.	Salt Lake City	03/05/2015
	I think Lone Peak Wilderness should expand to White Pine. Twin Peaks Wilderness should expand to Silver Fork. Olympos Wilderness should expand to Alexander Basis. The tops of the Little and Big Cottonwood Canyons should be National Parks - seriously. Snowbird should not be expanding into Mary Ellen Gulch.	Salt Lake City	04/28/2015
	I think resorts need to prosper, but, the traditional backcountry areas needs to be protected along with the experience of serenity the canyons currently provide. Pursue the land swaps before resorts can do any expansion.	Salt Lake City	04/28/2015

	I think shuttle buses up and down all canyons would be fine. Widen and improve the road up big cottonwood through guardsmen pass into park city and heber. I am against building a mountain rail up little cottonwood because it will ruin land already there for both preservation and recreation uses. Tunnels are extremely invasive and would completely disrupt little cottonwood creek as well as beautiful backcountry terrain above Alta and eastward towards heber. The inherent beauty and intense experience of the enjoyment of the wasatch range is keeping it somewhat remote and keeping man made structures out. I am completely against usage fees as well. Keep the wasatch pure and serene. I support environmental studies for water management but shuttle buses are the only transportation I support. People choosing to live in heber and midway should understand the implications of where they live with regards to accessing Salt Lake City. Traffic is only bad on certain occasions and certain times usually during good skiing days and holidays during ski season, maybe Oktoberfest. Summer traffic is usually always manageable and most people probably wouldn't even ride the rail they would prefer vehicles.	Salt lake city	05/02/2015
	I think that relying heavily on private funds flaws this system and would like to see them eliminated/limited/ or made completely transparent. I do value the proposed plans for the Cottonwood canyons and on the shuttle service up Millcreek canyon (I would like plenty of bike access on buses/trains), but I worry what role private funding is having for all of this-especially the Cottonwood/Park City connection. Therefore, I do not want the Cottonwood/Park City connection. I also don't know the difference between a shuttle and a local bus.	Salt Lake City	02/10/2015
	I think the blueprint does not adequately address the threat to existing wilderness areas from population and commercial pressure. I think the rail access to Little Cottonwood Canyon is a good thing, but it should not connect to Brighton and Park City. I think that connecting Alta, Brighton, and Park City will diminish the uniqueness of each.	Salt Lake City	04/27/2015
	I think the Blueprint should put more emphasis on the environmental impacts that could occur from construction of transportation options such as a light rail or an aerial system that would connect ski areas. How much pristine and untouched land would have to be sacrificed for these things to happen?	Salt Lake City	04/15/2015
	I think the concepts of conservation, transportation, recreation, economy, etc. are essentially covered, but much remains to be seen regarding the feasibility of the some of the proposed actions such as rails, tunnels, avalanche sheds, road improvements.	Salt Lake City	03/09/2015
	I think the transit options, like trains and trams, to connect Big & Little Cottonwood Canyons and BCC and Park City cannot be built with negatively impacting the natural ecosystem to a high degree. Use of these trains or trams to connect these canyons will continue to harm the ecosystem over time and diminish any gains in any other parts of the blueprint. Other than these intrusive, unnecessary trains, the plan looks solid.	salt lake city	05/01/2015
	I think this plan allows the ski resorts too many options to expand. I especially don't think Alta should be able to expand into Grizzly Gulch. The ski resorts are big enough. We need to leave some of the Central Wasatch as it is, without lifts running everywhere.	Salt Lake City	03/13/2015
	I think transportation is the biggest issue in our canyons. I like the idea of light rail. I've often thought that reducing car capacity and increasing public transit and at the same time increasing safety for cyclists and hikers is the way to go.	Salt Lake City	04/29/2015
	I think you should have a better "options oriented" survey than this subjective well-poor option survey. That is, put out a "final survey" that lists specifics under the four categories for people to select options that they are willing to "pay for". Example: Transportation: vote for the transit options you would like to see in place- no change, improved winter bus Park City and /or Cottonwood Canyons, year round bus, bus with dedicated bus lanes, rail to Alta, rail to Alta w tunnel to Brighton, rail to Alta, Brighton and PC tunnel. That way you can get a feel from "the people" as to which specific options are supported or not. Just a thought... this survey is pretty bland in my view.	Salt Lake City	04/29/2015
	I understand that increased development of the central Wasatch range is inevitable, however I believe that a stronger stance towards preservation is much more beneficial to the area, and the public, and an even greater resistance towards development should be shown. To do, the Mountain Accord does seem to be the most responsible plan for our land usage, however I think that a full cessation of development of the upper canyons should be imposed, and we should focus on the methods of transportation, and traffic to the area.	Salt Lake City	05/01/2015
	I understand the concepts behind Mountain Accord, and I'm glad that public meetings have been held over it. It's not that much of a hot button issue unless you're in the canyons more that a certain amount every year - or an environmental/recreational professional. Then again, I'm not sure what the public at large really thinks about Mountain Accord. It's sort of just gone on in the darkness - what do other people think (Other countries, who are our highest tourist countries that utilize the Wasatch). I think getting out a LARGE amount of PR would be a better way to meet the purpose of Mountain Accord. That is what is meant by the word "Accord" in this case, correct? So if that's the name, live up to it - do more to get more involved, don't just post random meetings for certain individuals to treasure hunt and find. Don't be afraid of change, and don't be afraid of losing out on your wallet. Mountain Accord, not Mountain of High Ranking Individuals Who Make Decisions in the Dark.	Salt Lake City	03/09/2015
	I vehemently oppose building a road through Grizzly Gulch from Alta to Brighton. It does not reflect responsible "stewardship" of our land and does not protect environmental concerns, rather is driven by economic concerns alone. I also oppose year round access over Guardsman pass from Brighton to Park City. To make the road safe for winter travel would have too heavy of an impact on environment and cost too much in the winter months to maintain. This plan seems to address car access and travel only. Please look at alternate resources: train.	Salt Lake City	02/06/2015
	I was led to believe that this was supposed to be a PROPOSAL, rather than a blueprint. Much of the work that was done is not represented in the "blueprint" and it is clear that executive members of the mountain accord simply made decisions for their own benefit.	Salt Lake City	03/10/2015
	I wish it could be more clear on transportation. Currently the unique feature which has both positive and negative effects are the variety in different parking options in the canyon. In other recreation areas like the mountains surrounding the Tahoe areas, backcountry users have only a few places to park which concentrates users, and limits areas available for hiking/skiing--this is bad. Also, I wish it were more clear on how to solve the urban transportation issues which have a great impact on the canyon transportation problems. The Urban areas need more attention to solve the canyon problems.	Salt Lake City	04/30/2015
	I would like more information on how land reclassification will proceed. As an avid rock climber I appreciate the installation and replacement of fixed anchors which might be prohibited if climbing areas are re-designated as Wilderness.	Salt Lake City	02/12/2015
	I would like more information on how land reclassification will proceed. As an avid rock climber I appreciate the installation and replacement of fixed anchors which might be prohibited if climbing areas are re-designated as Wilderness.	Salt Lake City	02/12/2015
	If Ski Area connectivity happened, where boundaries already met - like Deer Valley -> Park City - then I think the retention of the limited resources is met.	Salt Lake City	04/29/2015
	If the ecology is what you want to protect, how about controlling the dogs that are allowed to trash the creek in Millcreek canyon? It feels like this is all designed to protect the bikers and dog walkers.	Salt Lake City	05/01/2015
	If the mountain accord is focused on this "sustainability" mindset it needs to take into account the environmental degradation that is going to occur with mass amounts of people. The idea of "wilderness" conservation is being put by the wayside in order to bring upon economic prosperity. By putting economic prosperity at the forefront it is only going to open a door for a complete elimination of wilderness within the Wasatch.	Salt Lake City	05/01/2015
	If the Mountain Accord truly wanted to stay in line with its goals of "... preserve the legacy of the central Wasatch through responsible stewardship of the natural resources, quality recreation experiences..." it would not entertain the idea of expanding resort boundaries. Preserving the legacy of the Wasatch means no more development, especially unnecessary ski area expansion. The resorts are HUGE and already take up a vast majority of quality, skiable terrain in the central Wasatch especially in low snow years such as this. You could probably argue that bigger resorts mean bigger business, but is that really what we, as locals, want? At what point do we draw the line and ask, are we done developing yet? It's hard enough to go for a long hike, summer or winter, without seeing ski lifts, lodges, and restaurants. Transportation is certainly an issue that needs to be addressed, but MA has yet to release any plans that seem feasible or detailed enough to persuade me.	Salt Lake City	03/30/2015
	If this is in fact a blueprint, which to me invokes an action plan, I have to acknowledge low marks for this plan. I would tend toward labeling this a vision that provides decision makers guidance from which to act on. In general I am adverse to the blueprint referring to "disappearing" qualities, values and resources. It threatens use of disappearing values evokes extinction of these values. Does not a plan or vision carry a premise of identifying existing values, potential mitigations and collaborative wins? The implied threat of disappearing values tells me this action plan is one sided and meant to be exclusionary. Additionally the "protection" of environmental and recreational components is important in preservation for quality and use aspects. That is stated, but am also seeking language that would promote increased access and use. Public land for public use. Do not use Accord as a vehicle to further restrict any use resources and access. Economic development and infrastructure improvements (transportation included) should be encouraged in and surrounding the canyons. A vibrant use and access can still be achieved without calling for exclusion. I ask the Accord to recognize the vision accommodate all concerns and not impart limitations. The proposed economic actions and transportation alternatives are a very acceptable initiation for the Accord. Please be open to further positive expansion of resource preservation and use as well as area access by all. Simply, if area population is expected to double by 2050, then I would expect area policy to support a doubling of infrastructure and access.	Salt Lake City	04/30/2015
	I'm a big proponent of keeping as much land as possible protected and preserved as wild. I was pleased to see the proposed enlargement of the ski areas were not as big as I'd imagined.	Salt Lake City	04/13/2015
	I'm all for the bussing (hopefully as electric or at the very least natural gas driven). However, my biggest concern is the costs of building the transit systems (i.e. rail pattern and tunnels)-and how they would be paid for. While I think the bussing systems could and should be taken care of with public tax money as well as via patron fares, I need to say the ski resorts themselves should be financially responsible for the rail or tunnel construction (especially the tunnels since they and their patrons are the ones who will benefit most from those tunnels-as in people wanting to "jump" between the resorts). And how much surface disturbance will occur in order to build the rail system up Little Cottonwood Canyon?-No doubt a considerable amount. Additionally, I definitely don't want to see any more "aerial" structures built-especially between resorts-as they always require access roads for construction of the support towers and later their maintenance--thus further diminishing the quality of the backcountry between the resorts--a between Alta and Brighton. So at the very least, the bussing system should be implemented long before the rails, and the tunnels ought to be the very last to be constructed.	Salt Lake City	02/15/2015
	I'm neutral about the whole plan. It calls for more development, more people, more ski area takeover of the Wasatch Mountains. I wish the Wilderness boundaries had been drawn properly years ago - I wish there had been more of an effort to buy out public inholdings years ago. Reading the Wasatch Accord plan feels like all of this planning is happening way to late to get an optimal outcome. So what I see in Wasatch Accord is that we who live in Salt Lake City are going to lose some things we have enjoyed and valued - we'll get more crowded canyons, more development in the backcountry, bigger more expensive ski resorts that will be more unfordable to families like mine, more threats to water quality. And what are we getting in return? Nothing at all. Frankly, I want the ski industry to give something back, and I don't mean "jobs" or "economic development". The Wasatch Mountains are a huge part of the quality of life in Salt Lake City, and the ski industry continually wants to take just a little bit more of that quality of life away from every single Salt Lake City citizen in order to pursue their own profits. How about instead of gobbling up the backcountry, conning congressmen into selling public lands asking me to pay for their fancy "mountain rail" they offer something back to the community? The blueprint could be better by showing me what the ski industry is actually contributing to this effort instead of merely representing what they are demanding.	Salt Lake City	04/30/2015
	I'm not convinced that anything in the Blueprint is more than a tax payer supported transfer of wealth to the ski resorts ("recreation hubs"), with minor concessions to the environment and recreation. Ultimately, I disagree that recreation, transportation, environment, and economy should all be equally prioritized. The environmental aspects must remain paramount, and in the process they provide for recreation. Transportation and economic growth for those who already have so much wealth are not to be valued at the same level as the environment.	Salt Lake City	04/14/2015
	I'm not sure what the terms really mean (an environmentally sustainable transit system is a great goal, but is that best met with a train or effective bus rapid transit or other? Quality recreational experiences mean very different user groups, ie, snowmobilers vs. backcountry skiers vs. snowshoers vs. resort skiers). I realize this is an attempt to balance all of those things, but these questions don't allow for that distinction because the terms are far too squishy and vague.	Salt Lake City	02/18/2015
	In a lot of ways, the whole package presented is attractive. It is better to make a thoughtful plan than to allow uncontrolled growth. However, it looks possible that some parts of the plan will be achieved and others not. For example, the plan to gain wilderness protection for a large area is wonderful, but difficult to achieve. Without wilderness protection, the increased access allowed by the transit improvements would cause a lot of damage to the back-country. I would hate to sign off on the whole package and only get the increased traffic.	Salt lake City	05/01/2015
	In addition to transportation for people I believe it would be very important for a means of transportation for people with pets as well. This comes in to play a great deal in the summer months when traveling to recreation areas.	Salt Lake City	02/05/2015
	In general, I agree with many of the goals of the Mountain Accord, although having read the document thoroughly, I find it too vague in key areas, specifically the extent of ski resort expansion, and the fate of Grizzly Gulch.	Salt Lake City	05/01/2015
	In my opinion, I think the proposed transportation concept D would be the best plan to build for the future of the canyons. An additional leg up and down Big Cottonwood Canyon should also be considered. The volume of personal automobiles now allowed to access Big and Little Cottonwood Canyons has strained the system to its limit. A european access model of electric trains connecting to existing transit systems in the Salt Lake Valley would serve the future of the area far better than another bus system, susceptible to delays from ever increasing automobile traffic, and also possibly contribute additional pollution in the canyons from exhaust fumes.	salt lake city	05/01/2015

	Increased Wilderness areas and other actions are needed to guarantee and provide for public access but limit and protect lands and improve the quality of visits and purposely reduce visits in currently undeveloped lands (already too crowded and impacted particularly in summer months), reduce development in most spaces. Consider actions and agreements to increase some summer time uses on/in ski areas that are not major watersheds to concentrate use for ease of management in those areas for such things and mountain biking, camping, fishing, casual visits, visit opportunities for those with access issues and those less willing to make the efforts to enter Wilderness and understand and abide by Wilderness rules. More forward thinking and practical transportation solutions including forgetting the senseless tram idea and instead increasing a fast rail option in I-80 corridor, and mountain rail in BCC and LCC without the use of expensive tunnels. Do not construct new roads over to Park City side out of any canyons and do not improve guardsman pass for cars! Instead find a rail solution along I-80 and up and over LCC and out and back in rail service in BCC and prevent private vehicles from using guardsman pass all together. Limit this road to a shuttle system, no cars but connected by rail! Improve bike access and safety on all existing roads including guardsman.	Salt Lake City	04/19/2015
	It could go beyond environmental protection and find specific site area improvements. I think it would be very valuable to clean up some of the old mine tailing in places like Grizzle Gulch and Silver Fork. Also, this may be 'down in the weeds,' but I think we could look at utility service improvements. If a train or something major is built, it is possible to bury power lines, improve sewer systems. For example, could power be brought up the canyon with a train system, allowing the removal of power lines that cross ridge lines. Overall, I think the blueprint is a good plan.	Salt Lake City	02/09/2015
	It is a complete give away to the industrial powers and resort industries. Leave the mountains alone. Stop building. It should not be focused on a "vibrant economy" or recreation, but instead on conserving what we have left.	Salt Lake City	05/01/2015
	It is assumed that the purpose of the mountain accord is to reach the best solution, but we all know that it is a compromise. Protection of the fragile environmental integrity of canyons should trump all other considerations. Strengthening "the Brand" is code for making a quick buck at the expense of the long-term health of the environment.	Salt Lake City	05/02/2015
	It is great there are so many organizations working together to create a Blueprint that will address the four areas of concern-recreation, environment, economy and transportation. The Blueprint is outlining some very general concepts and "big ideas" which will allow people to have a sense of the Mountain Accord's Purpose. As an out of state resident, it would be helpful if the blueprint had a better visual of present versus future scenarios. It's difficult to determine if these big ideas can be translated into real success and meet all of the organizations, government and environmental thresholds. It appears to be an overwhelming challenge and may have a better chance at success if done in phases.	Salt Lake City	03/04/2015
	It is imperative that any attempts to expand private recreational development (ex. Ski Link) be denied. We don't need permanent facilities to enjoy the outdoors. Nor do we need more accommodations. The canyons should be visited, not lived in. The enjoyment simply comes from the interaction between people and the natural environment. Those lacking the mindset to enjoy the canyons in their natural state should pursue other entertainment options along the Wasatch Front. That said, the canyons are being loved to death. There will be an ever increasing level of visitation by people traveling up the canyons in cars. Allowing buses only as is found in Zion National Park seems to be the only reasonable alternative. I fear that any plan, regardless of how well thought out, will never protect our air and water if we don't make Utah families aware of the impact of unlimited population growth. Large families grow exponentially. A fact lost on the majority of people. The result is exponential increases in air pollution and water consumption that cannot be met by an environment with static or even decreasing carrying capacity.	Salt Lake City	04/27/2015
	It is important that people from diverse backgrounds get to give their input on the proposed Blueprint. It does seem that there are a disproportionate amount of stakeholders who have a say in the Blueprint. It says there are nearly 200 of them. I think environmental protection groups should have an equal representation of input.	Salt Lake City	04/01/2015
	It is my belief, that though well intended, the accord as a whole is not only using extremes in their thinking, but also still seeing a very tunnel vision of what the Wasatch will be and can become. Putting a trail-system as a way for us to "environmentally" reach the canyons is not taking into account what this access can do for our canyons. Right now, one of the issues the forest service is dealing with, is how to dispose of human waste that is being currently deposited in the already heavy used forest. Now you propose to add even more access to these canyons which will surely increase this issue the forest service already has. This will then create demand for more infrastructure to be built in order to accommodate a demand that was created in the first place by placing these mountains to a greater access. If a rail system were to be put in place, where would those rails be put? What recreational areas would have to be destroyed in order to allow the passage of this rail system? LCC is already a small canyon, without taking into account a rail system coming through the it's passage way. Would this really be the best thing for this canyon? To me the answer is no. Though I know first hand the issues that we deal with these canyons, right now the only way the amount of people that are reaching them is really only being regulated by the amount of parking slots you have up the canyon, take that away and you will have an influx of people that will have a great impact on these natural resources. I am not opposed to having better access to them, I for one will love for more people to enjoy the natural wonders that are in our backyard, but we need to approach this in a more reasonable manner. I've always been a big promoter of a better bus system, one that will make several stops along the road and allow people to access several trails in both LCC and BCC. The only time a bus goes up these canyons is in the winter, why not have it go year round? Another option, is to put a pay booth at the beginning of these canyons. Why not charge, and with that money ensure that these well visited resources have the money they need to be maintained. I would invest in more parking at the mouth of each canyon, this will decrease the parking slots needed along the main canyon roads. I believe that a better parking situation at the mouths of each canyon, better bus systems, and perhaps a toll payment will help ensure that the beauty of these canyons remains what we love. I am sure many oppose the toll, but really those that love coming will be willing to pay it. I don't see why a \$4/car fee will be such a bad thing to implement. Protecting our watershed, and the mountains that are a passage way for so much animal traffic should be this accord's priority. Not being involved in land trades to better the ski resorts interests (though I know they are the ones with big pockets). We have come so far in protecting these mountains, this is not and will not be the first or last time resorts seek to expand their already heavy impact of these mountains. Say you do give in into the land trade, and that you give Brighton the land it wants, Soltitude and Snowbird the go ahead to connect, what happens when all of this infrastructure is set in place and in 20 years from now there is now snow? Then we are left with ski abandoned lifts and we become no better than the Rockies with their endless amounts of failed ski resorts. Do I wish we had more snow, of course, do I love to ski and recreate in these wonderful mountains during the winter and climb/hike them during the summer, yes. I also wish everyone can experience them, but the worst things you could do is to put a ski lift to where no matter what trail you took, or where you went, there would be a ski lift greeting you on the side of the mountain. Ski lifts that will need roads to be maintained, more buildings to sustain them, etc. This project was very exciting to me at first, but now, it is taking a dangerous road that I am not sure I agree with anymore.	Salt Lake City	03/12/2015
	It is obvious that the central Wasatch is/will become overwhelmed with use in the very near future. If not already. To preserve the environmental quality is not really possible. Unless you wish to limit the use to current levels. To allow for increased use and maintain a somewhat quality experience the accord is correct in identifying a key issue as transportation. However it fails when the transportation solution must be "marketable". The transportation solution must be efficient, do able and sustainable. Not marketable. Also more regulation of activities will be needed. For example trails are enhanced when made "one way". Regulation and or separation of non compatible activities (ie down hill mt. biking and hiking or backcountry foot powered use and hell-skiing). This is a tiny area with intense use. Management of all activities is the only way to keep them sustainable.	salt lake city	03/17/2015
	It seems as though the Blueprint focuses most of its attention on this proposed transit line through the Wasatch. I wonder how environmentally sustainable this option really is considering that no limitations on vehicular use will be implemented as well. I agree that something ought to be done about the large amounts of cars that drive up and down the canyons daily but I do not think that a transit system will be any less invasive when you consider the extended line that would cut through the upper Wasatch to Park City. Have you thought about the already struggling wildlife habitat that would then be even more fragmented? Even though there is a growing number of visitors to the region, we should try to better encourage proper use by visitors first (there could be multiple areas of improvement of this) before we develop and destroy this area even further.	Salt Lake City	03/16/2015
	It seems like one of the critical components of the environmental sustainable transit will be seen when we know what the actual alignment of the rail and how construction is managed and finally how well the master plan deals with the interface of human populations, transportation and hydrology. It seems critically important the water quality is at the forefront of all these decisions and execution.	Salt Lake City	05/01/2015
	It seems like the only goal is to make sure that Park City's investors make money. Opening the Cottonwoods to more tourism from Park City will destroy everything that makes these canyons special. The Cottonwood resorts are small and the current infrastructure is a natural limiting factor to what the canyons can handle. In other words, when the canyon is full, it is full. We understand that Sandy wants the tourism dollars, but it would be at the expense of the taxpayers of Salt Lake County. All of these proposals seem to be about making more money for developers and very little about improving anything for Salt Lake City's citizens or tourists. So, why are the citizens being asked our opinion when this is clearly about tourist dollars?	Salt Lake City	05/02/2015
	It seems like you've got all the right people involved in making these decisions. But it's not clear to me whether your ultimate conclusions will have the force and effect of law or whether those will only be "advisory" conclusions for the Legislature to consider. If it's the latter, I would be concerned that the Legislature will only consider what is politically expedient and not what best serves the interests of the people of Utah.	Salt Lake City	03/13/2015
	It seems to me that the blueprint takes into account the many issues and potential problem areas the central Wasatch faces. It is thorough, and well researched.	Salt Lake City	02/05/2015
	It would be wonderful if these four aims could all be achieved simultaneously, but I fear that the focus will be more on economic growth at the expense of soils, watersheds, and wildlife. For instance, the transit corridor between PC and LC does not seem a very environmentally friendly idea. It won't be good for the wild character of the mountains and their animal inhabitants, that's for sure. The language to protect, restore, and adaptively manage our natural resource base is in the Blueprint, but will these concerns actually receive attention and, more importantly, funding? I hope so, but am skeptical...	Salt Lake City	03/17/2015
	It would seem that the proposed charter is really "Transit Driven" rather than "public development options" driven. The Blueprint meets the needs of the charter, but is the charter the correct one? It sounds good, but from what perspective? I think it should include in the charter the view of the family and the individual, not just the so-called stake holders of business and government and environmentalists.	Salt Lake City	02/05/2015
	It's hard to rate how environmentally sustainable the proposed transit will be without additional details regarding which of the proposed options are actually chosen and then how they are actually implemented in practice. However, I do like the stated goals/objectives that were specified to guide the transit options proposed. I think they balance the competing goal and interests of the various stakeholders well.	Salt Lake City	04/29/2015
	There may be an opportunity for a small hub of activity at Olympus Cove where considerable underutilized and vacant land exists. A towncenter that provides for 4 season access to the adjacent Wasatch could add to needed rooms for visitors. another location could be the gravel pit area at the mouth of Big Cottonwood. Establishing more centers in the Valley would mean less need up on the mountain. How does a town like Alta get real input? It seems they want to create a commercial core.	Salt Lake City	03/31/2015
	In winter make transportation from the mouth of the canyons part of the ski ticket price and then limit the number of cars that can drive up the canyon. In summer the number of motor vehicles can be increased but still there are limits and public transportation is necessary.	Salt Lake City	02/10/2015
	Keep busses and mass transit out of Millcreek Canyon!!!!	Salt Lake City	03/26/2015
	Keep the existing backcountry and open spaces available to the public in their current form, and not ruin the forest by expanding the number of resorts, roads, and other damage to the natural environment.	Salt Lake City	04/26/2015
	Keep UTA from making canyon access expensive or less accessible. Their plans are both environmentally and economically disastrous. Extra lanes for buses - BAD. Their buses are expensive, poor hours, poor frequency and run by folks who claim a lot and deliver little. They waste funds, pay themselves grandly (at the top) and destroy traffic flow. You can't even do a bike lane well in the canyons, don't think these guys are saints. No one could afford these buses/rail anyway. Family hikes in the Cottonwoods would be history.	Salt Lake City	03/17/2015
	Leave out the light rail in the canyons. No more proposed development by the ski industry. Once it's developed, that's it. There is no turning back. What really needs to happen is that our leaders stop giving out corporate incentives to continue the population expansion of this valley. It is already high density enough.	Salt Lake City	05/01/2015
	Leave the Wasatch front alone...	Salt Lake City	04/30/2015
	Less cars and more public transportation options sounds great! I question the need to link up the back of the Wasatch with any of the major canyons.	Salt Lake City	04/30/2015
	Less traffic, even people in watersheds, like City Creek Close off to cars 1/2 the days a week	Salt Lake City	04/23/2015
	Mainly seems aimed to increase profits for ski resort areas. What is nice about the Cottonwoods side is that the majority of the out-of-town knuckleheads stay in Park City and Canyons. Brighton and Soltitude are nice because they're more of a locals area.	Salt Lake City	03/03/2015
	The health of the ecosystem must be considered above simply marketing the Wasatch Mountains that will lead to increased use. Low impact to the environment must be continuously emphasized in allowing various uses.	Salt Lake City	04/28/2015

	Maybe Mountain Accord staffers need another European gondola ride from the study money to extend the study. 28th study! UTA's infusion of \$20 million dollars to get SLC to go along with a study to determine if they needed a bus or a train. Then the train ride is 80% subsidized, with a capacity of 2500 people/hour now lauded by the same mountain accord execs who have quashed all improvement and development via SLC Corp and the newest friends of Alta's burgeoning build out. All this after decades of SLOC, SOC and SLCORP denying private property owners to develop their property right Or develop. Now it's a billion dollar train ride, through the mountain. And save our canyons tries to have people believe digging (MINING) 20+ MILE TRACK AND TUNNEL somehow preserves and protects the watershed. Private meetings held using public funds! Closed door meetings. Property owners denied representation as stakeholders with private property rights trumping the feel good propaganda spewed as an invitation of "public comment" as a slap in the face of democratic process. This group of undemocratic saps took public money to convince us why our own property rights have been negated... in order to build a brave new town center in Alta replete with a billion dollar train. At the head of this circus, Ralph Becker has green lighted his public works department to initiate law suit after lawsuit beating owners up so the could monopolize the 47 square miles of their own acquisitions--purchased outside the SLC Corporations physical boundaries and charter. Mountain Accord is a farcical bar none. Becker and Save our Canyons set themselves up to be the new friends of Alta--Alta development that is--white stripping others of property rights, litigation, threats of litigation and the type of bald faced lies Expectorid by more seasoned politicians, in places like Chicago. Mountains Accord has been a bombastic accorrdion of concessions to itself. Not only are your opinions not wanted, the process was used to have Ralph Becker orchestrate the phased of neutrality while having Karl Fisher of SOC be the front man on their own sale out of every previously held tenent used to deny property rights.	salt lake city	05/01/2015
	More detail on type of bus rapid transit is needed. Diesel exhaust spewing buses won't be any better for our snowpack or watershed.	Salt Lake City	02/07/2015
	Mountain Accord is a collaborative effort to make the best decisions for the future. It seems environmental organizations are underrepresented, with Save Our Canyons being the only non-profit environmental group listed. With the proposals for environmental stewardship including monitoring and restoration, it seems like more environmental organizations should be involved. The environment should be the foremost priority, as it is the basis for the remaining objectives of transportation, recreation, and economy. Without strict environmental protection, extreme degradation of the Central Wasatch will certainly ensue.	Salt Lake City	03/16/2015
	Mountain rail system? You are kidding, right? The cost (both environmental impact and fiscal) to build a rail system into the canyons far exceeds that of the much lesser cost of concrete to simply increase parking in "existing" ski resort parking lots with stacked structures. Those existing sprawling lots can be land that can be better utilized to manage traffic control and solve the problem long term at fraction of the cost of developing a rail system based on "usage guesswork" studies. How hard is that? Mountain accord seems to want to re-invent the wheel and impose rail system where one is not necessary at tax payer expense and uses obscure verbiage to "sell" it leading public to believe this is the best viable solution to handle "projected" increased canyon vehicular traffic in the canyon recreation areas. Oh, please... The reasonable solution is simple, and has clearly been over-sighted by those looking to validate their blurred vision of Utah's recreational areas. Please DO NOT push to destroy Utah's recreational canyons at the mercy of an idiotic proposal such as rails systems throughout the local canyons for resort access. This will have far greater negative impact on the natural surrounds than simply increasing parking within the areas where parking exists.	salt lake city	05/01/2015
	My basic position on the Mountain Accord proposed Blueprint essentially mirrors that of Wasatch Backcountry Alliance (WBA), Winter Wildlands Alliance (WWA) and Save Our Canyons (SOC). The proposed Blueprint is simply too favorable to touted, yet unproven economic development at the expense of the environment and dispersed recreation. As currently proposed in the Blueprint, the benefits simply do not outweigh the costs. I do not support an interconnection between Big Cottonwood Canyon, Little Cottonwood Canyon and Park City, or any combination thereof. This includes tunnels. The resulting direct, cumulative and indirect impacts to dispersed recreational experiences and the environment are potentially significant, while economic costs and benefits to the public are not known. As a next step, I strongly support development of a purpose and need statement that balances the "Systems Mountain Accord" is addressing, without giving undue bias to any one element or proposal. Only then can an environmental analysis that considers an appropriate range of alternatives be conducted. We believe this range includes measures designed to provide reliable, lowcost, low-impact transportation to both dispersed and developed recreational nodes in the Canyons. As drafted, the Blueprint needs much improvement - it simply places too much emphasis on development over preservation of the environment and dispersed recreation.	Salt Lake City	04/30/2015
	My comment will be somewhat unhelpful but "environmentally-sustainable transit system" for increasing traffic/VMT is really a misnomer or not possible. Having said that ... if we build a system with as small a footprint as possible that meets the objective of reliable free flowing transportation of people then we, the users, will learn to use and be satisfied with the new system much like the Zion Park shuttle or other systems in Europe.	Salt Lake City	04/30/2015
	No additional feedback.	Salt Lake City	03/12/2015
	No e of it is necessary. It will ruin our collective wilderness experience for ever.	salt lake city	05/02/2015
	No further resort expansion should be permitted. Open spaces are already extremely limited in the wasatch and the resorts have been given the lions share of the quality ski terrain. Further development permanently scars public land while enriching a very few. However, the proposals to improve public transit in the canyons is extremely welcome.	Salt Lake City	02/04/2015
	No more development in the Wasatch please. No ski resort expansion. Protect all undeveloped areas with wilderness designations. Transportation should proposals should seek to reduce automobile traffic and emissions in the canyons. More buses, avalanche sheds, tolls, incentives for car pooling and low emission vehicles should be considered. Trains and tunnels would be extremely damaging to the environment and so expensive as to not likely be feasible.	SALT LAKE CITY	02/12/2015
	No more development. Closure of the canyons to private traffic on weekends and high volume days. Only commercial permitted vehicles on those days and public transit. No ski area expansion. NO TUNNELS OR TRAMS CONNECTING PARK CITY TO COTTONWOODS.	Salt Lake City	02/24/2015
	no no no! on tunnels and overhead trams.... I have lived and worked in Salt Lake for 40 years, and in the ski industry, in BCC, for almost that many.. I do know first hand how things have changed.... Overhead anything is intrusive and will NOT maintain our pristine recreation areas ( have any of you been to Whistler? ) . And despite what people fantasize, traveling from the PC "back" to the Cottonwoods and back again is not a realistic scenario. People may currently buy Snowbird/Alta or Solitude/Brighton passes, but they don't go back and forth much. At the aforementioned Whistler, the gondola is handy if the snow is terrible on one mountain and one wants to try the other, but you can't go back and forth and get much skiing in. DONT DO IT. Nothing but a gimmick and it is NOT a "transportation solution" . And tunnels ARGGH. Yeah, the tunnel from Denver to A-Basin saves a lot of problems in bad weather, but do you want a freeway from Park City to Brighton? What will tunnels do to our water? What will that do to all the residences there now? A tunnel would totally alter, and destroy, the ambience in either BCC or LCC. If you are hell-bent on one or the other, at least a tunnel would not be visible from the back country, but would bring more traffic , not less, to the tops of our two canyons. NO!!!	Salt Lake City	04/26/2015
	No ski area expansion! No trains. Make a toll road. The mountain according stake holders should excuse them from this process. We can not have a fair process of the mountain accord is made up by the people who will profit from it.	Salt Lake City	05/01/2015
	No ski resort expansion. The vast majority of the SL Valley citizens do not want any ski resort expansion now or every	Salt Lake City	04/30/2015
	No train up the canyon. Also, UTA should not be a part of the transit solution. They can't schedule to save their lives and we keep throwing money at them. They can't get me to work in a reasonable amount of time (or at all). Now they are throwing resources at vacation spots for rich people, instead of servicing the general population of SLC. UTA needs to be dropped from the proposal all together.	Salt Lake City	04/28/2015
	No trains / no tunneling / no new lifts / no interconnect	Salt Lake City	02/05/2015
	No trains are necessary for transportation in the Wasatch Front.	salt lake city	02/28/2015
	Not all aspects should carry the same weight. The Maslow hierarchy of needs comes to mind. Watershed preservation needs to come first and foremost. Economic development should be second, if there is any more room for it in the Wasatch. Unfortunately, recreation, the reason why we love our Mountains so much, should come last. This would mean that we favor the utilization of our mountains by paying visitors and use that money to pay for valley infrastructures and education. There is plenty of space still for the local populations to recreate in, a bit further. The Wasatch can only accommodate so many people and uses. Being a significant drinking water reservoir is its most critical role.	Salt Lake City	05/01/2015
	Obviously less vehicles driving up the canyons is better for the environment. Achieving that goal via more buses, rapid transit buses, and/or rail, should help. These can also hurt the recreation and could go against the charter's statement of being a steward of these resources. Everything depends on what "actually" is done. This is just a blueprint, that is vague and had no certainty in what will actually be changed/created. For the vibrant economy, is there a problem with it now? If it's a problem of getting people to come to Salt Lake, the problem has absolutely NOTHING to do with transportation to the resorts (any of them) from the airport. Far more people fly into Denver and drive 2+ hours to get to a ski resort. Why don't more people come to Salt Lake City, where we have 7 world class resorts within a 30 minute drive from downtown? Airfares. Airfares. Flights into Salt Lake cost a good amount more than flying to Denver, and that's why people will choose Denver over Salt Lake City. And let's not forget the fact that most people outside of Utah laugh at us over our ridiculous liquor laws.	Salt Lake City	02/05/2015
	once it is gone, it is gone! I would favor every plan that limits further development, other than those types of things that improve the quality of the experience, light, noise, smoke structures, litter, fire, water degradation all reduce the quality. I understand that some development will take place, but I think the focus should be on continuing to keep the canyons a primarily day use resource, mitigating the need to house, feed, protect the increased number of people that will use the canyon in the future. transportation issues should include the most environmentally sound ideas, with cost being an issue. the transportation should be frequent, quick and reasonably priced. zion has done this with buses, milcreek has limited it with a fee. bike lanes should be expanded.	salt lake city	04/27/2015
	Once land is developed, it is lost. The central wasatch has limited resources that should be more important for financial gain for few.	Salt lake city	04/15/2015
	One thing I did not see proposed or discussed was the use of a permit system for access to the canyons during high volume periods. This could promote car pooling, provide additional funds for infrastructure support, and reduce the volume of "Sunday Drivers" on busy days who simply drive up and down the canyon without ever even leaving their vehicles.	Salt Lake City	03/15/2015
	OPPORTUNITIES & POTENTIAL BENEFITS Through Mountain Accord, we have the opportunity to be forward thinking regarding the predicted population doubling in the Wasatch and plan accordingly. Climbers have a seat at the table as a stakeholder in Mountain Accord and a voice in the planning process now and into the future. The SLCA aims to protect and enhance climbing areas and the surrounding environments. The Mountain Accord interest in federal land designations surrounding ski resorts will stop ski resort expansion and protect the Wasatch, permanently ending the battle over ski area expansion. The SLCA sees opportunity with a National Recreation Area or National Conservation Area federal land designation to protect climbing resources into the future. The SLCA recognizes that a mass transit system and trail network systems will cost a great deal of money and supports Mountain Accord seeking federal funding to implement these systems through federal legislation. Currently, the SLCA works with land managers and private landowners to protect access to climbing areas, and we support the Mountain Accord process to examine and carry out land swaps to better ensure access to climbing that is on private land. The Gate Buttress owned by the LDS Church in Little Cottonwood Canyon is one property the SLCA recommends for the Mountain Accord Cottonwood Canyon Taskforce to explore as a highly valuable recreation site. The SLCA promotes better climbers' access trails, therefore we are excited about the inclusion of a trail connectivity component in Mountain Accord. We recommend the inclusion of a climbing ranger and climbing management plan as part of a greater trails plan for the Wasatch. Mountain Accord is interested in projects that are shovel-ready and the SLCA is encouraged by the support for the Grit Mill & Climbing Master Plan Project. This climber access trail network will set the precedent for better climbing access trails throughout the Wasatch. The SLCA recognizes the need for funding to maintain and develop recreation areas in the Wasatch and is open to fees that directly support and improve recreational sites within the canyons. The SLCA is interested in getting more cars off the canyon roads and is interested in mass transportation ideas that serve dispersed recreation users as well as the resorts. The SLCA sees opportunity for better trailhead parking throughout the canyons because of Mountain Accord. The SLCA recognizes a need for an environmental monitoring system in the canyons and is in support of Mountain Accord's efforts to create this promptly to advise future National Environmental Protection Act (NEPA) work. As a member of the Wasatch Legacy Project (WLP), the SLCA recognizes the need for a steering body for the Wasatch Front and Wasatch Back and recommends that Mountain Accord consider the WLP to fill this role. THE UNKNOWNNS Impacts to the watershed from new infrastructure for mass transit Ski area interests in 416 acres in American Forkland how this will impact American Fork Canyon Mass transit with different possible routes in Little Cottonwood Canyon impacting climbing sites. A wilderness federal land designation could prohibit the use of power drills for re-bolting work on routes and make working on trails prohibitive	Salt Lake City	04/30/2015
	Outlines fewer and most specific viable solutions for transit. Currently it puts all opportunities on the table and many of them are irresponsible for the watershed or will hugely alter the landscape	Salt Lake City	03/16/2015
	Overall I understand the desire to make a more efficient system for accessing the natural wonders that make Utah what it is. However, I do not believe that connecting roads and/or lifts is the appropriate approach. Many locals and tourists enjoy the backcountry and secluded nature that Utah provides with its many recreational outlets. All seasons of the year here provide people with numerous activities that can be enjoyed, but would essentially be hampered or ruined by massive changes to landscape. New roads, especially a connective tunnel, would more than likely increase traffic flow and become a major thoroughfare. Pollution is a major issue for the Salt Lake valley, especially during winter months. The most important change to improve air quality and reduce traffic is to invest in and expand public transportation options. Cities around the globe are taking steps towards combating climate change and reducing traffic by offering discounted or free public transit on poor air quality days. I think the Blueprint could better meet the purpose of the Mountain Accord mission statement by supporting public transit options.	Salt Lake City	05/01/2015
	Overall it is a good start with one major exception - Alta still has Grizzly Gulch down as "under consideration." Alta is essentially saying they want to do major development on what is now public land at their base area, plus have more water for making snow, plus have a train, AND, they want to keep the option of developing Grizzly Gulch open in the future.	Salt Lake City	02/21/2015

	<p>Overall Mountain Accord Blueprint: I applaud and support the collaboration of stakeholders in developing a comprehensive land use plan for the Canyons and Wasatch Mountains. Please continue this work. I do NOT support the proposed alternatives as they stand today in this draft blueprint. The proposed draft blueprint does not sustain and support a vibrant economy, diverse recreational opportunities, nor does it protect the beautiful character, natural systems, wildlife and water of the Wasatch. The draft blueprint should be substantially revised by implementing the proposed land transfers, by not expanding the ski area boundaries, by not connecting the canyons, and by removing and restoring Guardsman Pass Road. More details are listed below. Cottonwood Canyon Scenario: I support the transfer of 2,150 acres of private ski area owned land to public ownership in exchange for 258 acres of public lands to private lands along the base of the canyon for base area management and future development. I think this is more than enough fair exchange due to the undevelopable nature of the 2,150 acres of private lands for the developable land gained. I do NOT support the transfer of 416 acres of public lands in the American Fork Canyon. These lands are not mapped and I do not understand the rationale for transfer of these public lands into private ownership. I support an increase in the amount water used for snowmaking as long as it supports the overall best use and management of our drinking water and other water needs in the canyons and in the valleys. I do NOT support an expansion of the ski area boundaries by 210 acres. I think the ski areas should stay within their current boundaries. I do not want to see an over all increase in ski area boundaries except for a moderate amount of growth at the base of the ski area along the roads and existing development. The amount of skiable land with ski area infrastructure is already a high proportion and disrupts the natural character of the Wasatch. Any increase in this footprint would change the character of the Wasatch and limit other uses (wildlife habitat, natural area protection, bird watching, hiking, snowshoeing, cross country and backcountry skiing). Transportation I do NOT support any transportation connection between Little and Big Cottonwood Canyons to Park City. I do NOT support expansion or improvement of the current summer season Guardsman Pass Road. In fact, I support closing this road permanently and year round to any traffic. I propose ripping up the concrete, restoring the roadbed into the natural mountain landscape, and maintaining the restored natural and public land for hiking, snowshoeing, cross country, and backcountry skiing. I do NOT support building a tunnel to connect the Canyons to Park City for a light rail, for a rapid bus service, or for car traffic. I do NOT support building a tram, gondola or any other aerial transportation option to connect the Canyons to Park City. I support improving public transit transportation incentives and options for movement up and down Big and Little Cottonwood Canyon along current paved road footprints. I support removal and restoration of the I do NOT support transportation goal #4 providing new evacuation routes out of both canyons. This transportation goal should be removed from the list. One way up and down traffic is a normal and natural condition and limit on growth the Wasatch. If development cannot increase in the canyons due to safety concerns, development should be limited. Unnatural creation of alternative evacuation routes is unnecessary and does not consider appropriate development within the landscape.</p>	Salt Lake City	03/01/2015
	<p>Overall, I am disappointed with the initial position/posture of the MA Blueprint. A decade ago, the Envision Utah process revealed that the vast majority of Salt Lake residents favored limiting the expansion of the central Wasatch ski resorts and preserving this small but incredibly beautiful (and heavily used) for future generations. The MA Blueprint appears to move in the opposite direction, by creating a favorable climate for continued ski resort expansion, at considerable taxpayer expense, and equating the creation of a "vibrant economy" with this kind of expansion. The mountains, the water, and the population of the city are poorly served by the blueprint. Responsible stewardship. Considering the projected growth of Salt Lake City's population, the blueprint seems rather irresponsible in its determination to allow continued development in the mountains. It's a classic western battle for "what's left over," and the ski resorts are leading the charge. Planners need to step back and assess the larger issues, which in truth center on the fact that additions thousands of people are going to want access to the canyons, and these won't all be skiers. The proposed summer trail system will help, but the best option seems to be one of restraint, wherever possible. Hard boundaries should be created that truly preserve this resource for the future. Quality recreation. Again, quality for which group. Right now lift-served ski industry is anything but vital, and from what I read much of the profit for these companies (like Vail) comes from residential development. The blueprint needs to be democratic in the sense that it considers all user groups equally, and this means hikers, back country skiers, wild flower enthusiasts, and fisher people, as well as lift-served riders and side country users. It seems that the latter group is fading, while the others are growing. Something to think about. Vibrant Economy. As I said above, assuming that the only way to create a vibrant economy for the city and the area is by allowing the resorts to expand is wrong minded (as well as short sighted). There are other ways the Wasatch benefits the city's and the state's economy, and one in particular--and that should be considered carefully in this process--is the role the mountains and the recreation they offer play in attracting (and in continuing to attract) new industries. Right now, many industries (and this includes but is not limited to such outdoor companies like Petzl, Black Diamond, Specialized) sell Utah as a place for investment because of its incredible backcountry/outdoor/natural environment. The canyons are right here, and available to people more so than in any other city (except maybe Los Angeles). In the long run, preserving the natural experience, which means hiking without ski lift cables running overhead, will benefit the city/state's economy much more than helping a few ski resorts make some quick money (at taxpayer expense). Transportation. The train is a bad idea. It is too expensive, has limited carrying capacity, and limited flexibility in terms of dispersing users/riders. A bus system (natural gas or electric powered vehicles) with a dedicated lane, multiple stops (at various trail heads), is the best solution. Placing a fee on auto use (and parking) is also important, so that riding the bus is more attractive. Snow sheds work well in Europe, and it seems like a no-brainer that they should be installed here in LCC and BCCs. As a number of people have pointed out, you can get a lot of snow shed for the 2 billion it would take to run the train up these canyons.</p>	Salt Lake City	04/07/2015
	<p>Overall, I commend the efforts and results of the Mountain Accord Initiative to date. However, in some respects the Blueprint doesn't go far enough in providing a truly Bold End Vision for the Central Wasatch. For example, it talks about getting people out of their cars but in most cases provides only buses as the alternative. Several critical Trunk Rail lines are needed sooner than later to really get people out of their cars and enable people to start from any of the Economic Hubs, go Nordic or Alpine skiing, snowshoeing, hiking, climbing, mountain biking, road biking, or even to work, and be able to return home or to their accommodations rapidly and comfortably from where ever they end up. The Mountain Accord Blueprint needs to lay out a complete end vision, and then come up with a plan to make it happen. Although we may not be able to afford everything in the vision at once, the critical pieces like rail trunk lines to Park City and along the eastern SLC Valley need to be in the plans for the next decade, not in 25 years. To me, a "World Class Transit System" means getting off a plane at SLC Airport, walking through the terminal to a train, and arriving at the top of LCC or Park City in 45 minutes. There are plenty of examples of this in Europe (Interlaken and Zermatt areas in Switzerland, Chamonix in France to name a few) where you can go from an international airport (Zurich, Geneva) to a mountain destination quickly and efficiently without the need of automobiles or buses. First, clearly paint a bold long-term vision; then we'll figure out how to make it happen.</p>	Salt Lake City	03/15/2015
	<p>Overall, the proposed Blueprint is too much skewed towards further development versus conservation. The focus must be on the least environmentally damaging interventions; the protection of watersheds, wilderness, and scenic ridgelines should be paramount. The developments pushed by the ski industry, in addition to benefitting only the ski industry and not the residents of Utah, are nearsighted. The ski business is not a growing business, the opposite. The changes in the climate (after this past winter I would dare anybody to deny them) are not conducive of investments in expansion / interconnection of ski resorts. They are just bad investments, period. In the longer run, conservation and preservation will prove the best investment of all, for all the residents of Utah.</p>	Salt Lake City	04/03/2015
	<p>Please address how the disputed areas will be handled instead of leaving them open for discussion - i.e. Grizzly Gulch. Please provide more content on where you want to put lifts and how many access roads will be needed to maintain the lifts. Also provide details as to where those roads would be placed. This report is vague at best, barely mentioning aerial transport. While progress has been made with this accord, it lacks depth and detail that is needed to garner support. Additionally - would a train be added while keeping the existing road open or would the road be shut down? That needs to be addressed. A train isn't a bad idea if the road itself is shut down, or access to the canyons is limited by shuttle. But to have both the road packed with cars and a train cruising up and down the canyon--that seems to be a very poorly planned idea. Additionally, please convince us that all of this is necessary for an industry that is steadily declining and more people are exiting the sport of skiing than entering into it. Also, is all of this necessary with the snow we have been receiving in recent years? We haven't exactly been having stellar winters. I do not see any of this addressed in the study. I do not support this plan in its current state.</p>	Salt Lake City	02/16/2015
	<p>Please do something about the traffic jams in LCC...more buses a train something.</p>	Salt Lake City	04/30/2015
	<p>Please have the transit system managed by someone other than UTA. Based on the current state of public transportation in Utah, it is clear that we need a managing body that understands the needs of all users. public transportation only works if it is available on a regular basis. People use public transportation if it is convenient, which means that it needs to be available even at times that don't maximize profit for the governing body.</p>	salt lake city	03/04/2015
	<p>Please keep the trails out of the canyon. Buses can be made as reliable as trains because it is the same organization running them. Just make the buses more dependable and reliable. Use additional funds to make the buses meet the need. Diesel or natural gas would be good bus choices. I have no problem with a small aerial tram from Alta to Brighton.</p>	Salt Lake City	04/30/2015
	<p>Please make the land parcels in Grizzly Gulch and White Pine high priority for transfer to public ownership.</p>	Salt Lake City	05/02/2015
	<p>Please protect the backcountry areas of the Cottonwood Canyons. They are a very special place. Sounds like you're trying to do just that!</p>	Salt Lake City	03/12/2015
	<p>Please see the detailed comments provided by the Wasatch Backcountry Alliance, which represents my feedback for purposes of this comment box.</p>	Salt Lake City	05/01/2015
	<p>Preserve the backcountry.</p>	Salt Lake City	04/30/2015
	<p>Preserve the precious backcountry and the peace and serenity it offers! Do not continue to propose development!</p>	Salt Lake City	02/19/2015
	<p>Pretty well, pending on the results of feasibility studies about impact, cost, wildlife corridors, etc</p>	Salt Lake City	04/30/2015
	<p>public transit up the canyons needs to be not only provided but an incentive should be give when used so that emissions and carbon footprints can be reduced</p>	salt lake city	05/01/2015
	<p>Really unhappy with some of the proposals. Couched in high sounding narrative - the actual actions are rather poor. High capacity transit in LCC - really poor idea. "and the resorts would get more water for snow making" - in a water constrained part of our country. A TUNNEL linking Alta and Brighton is also a very poor idea. This effort seems bought and paid for by the ski industry. Look at the long term climate change, decrease in snow etc. Tax payers will be holding the back for these initiatives.</p>	SALT LAKE CITY	02/04/2015
	<p>Recreation I am in full support of creating a trails network in the upper reaches of the two canyons. The trails should be a mix of hiking exclusive, mountain biking exclusive, and and shared (and/or with management techniques conducive to habits, ie Snowbird's new trail being uphill till the tram runs and then it becomes downhill). Any new road/transit construction must have improved road cycling facilities (wider shoulders, exclusive bike lanes, disconnected paved bike paths) LCC/BCC parking areas need to be enlarged and enhanced for the major dispersed user trailheads, with optional stops for the Bus Rapid Transit at White Pine, Argenta, Butler Fork, Mineral Fork, etc. I support the permanent protection of the Emma Ridges to Superior ridgeline from development. I do NOT support a chairlift in Grizzly Gulch. I recognize that it is private property, but I also appreciate that much of Alta's operations are on public land and that they stand to benefit greatly from enhanced base development on a lot of lucrative land, additional water use, increased snowmaking, and improved LCC transit. Grizzly Gulch and the surrounding area should be put into some sort of permanent protection. I could be supportive of chairlifts and development into the American Fork Canyon depending on alignment and scope. I could be supportive of a re-aligned chairlift in Honeycomb Canyon, depending on the alignment, provided there are no effects on Silver Fork backcountry I am supportive of Brighton's formal adoption of Hidden Canyon, provided any chairlift reaches back towards the Great Western chairlift. I am supportive of increased connectivity between Brighton and Solitude in the SolBright area. I am supportive of enhanced facilities at identified high-use nodes to both concentrate use in appropriate close-in areas and disperse use in more-remote areas I am in support of modifying wilderness boundaries to accommodate new and existing sections of the Bonneville Shoreline Trail. I fail to understand how the Mountain Accord can consider all forms of recreation in the Central Wasatch except for one of the most significant and controversial forms: Wasatch Powderbirds. To me this "oversight" of neglecting helicopter skiing in our tiny range - that was based on a Forest Service administrative timeline that was arbitrarily changed from 5 year renewals to 10 years - is an egregious omission. Economics I support enabling the ski resorts to utilize more water for snowmaking I support adding potential land and altering zoning for additional development at the various resorts' bases. I support enabling the ski resorts to expand their summertime activities within their existing footprints. I support enhanced modern avalanche mitigation techniques (ie Gas-X) above Alta. I do NOT support a chairlift on Flagstaff peak. I do not support extraordinarily-expensive, taxpayer-funded "solutions" to "problems" that enable profit maximization for ski resorts whose lift tickets are pricing their customers out of an already-flat-to-declining market. Environment I know that the EPA has determined that ski resort development has a more profound effect on watershed integrity than ANY other development. But I am cautiously optimistic that SLC Water and various other governing bodies will ensure water quality despite the threats associated with increased use, transit, and development. I am in favor of a re-forestation effort on (particularly) the Emma ridgeline area I am becoming increasingly convinced that simple people-pressure on the canyons is having a degrading effect on the watershed, and dramatically increasing opportunities to transport people up the canyons will have a commensurate effect on the watershed quality. I am concerned that the ski resorts are getting many of their desired "gets", and their "gives" are more along the lines of "we are not taking as much as we could take", at the expense of potential environmental and backcountry terrain preservation.</p>	Salt Lake City	03/09/2015

	The proposal is far to heavily weighted in favor of development and not enough weight for preservation. Possible Solutions to capture data and further discussion include: * What about optimizing rapid transit and private shuttle systems up BCC/LCC. * Possibly reconfigure road to minimize avalanche hazards and improve bus transit/shuttles from valley transportation hubs. Use disincentives for driving by limiting parking, charge for parking and charge for a variety of permits to drive on canyon roads. * There needs to be much more data to determine what the best ROI is for taxpayers. It is very hard to believe that trains and tunnels up LCC to BCC to PC benefit more total users, improves the economy and reduces more air pollution than using the money to improve the Provo to SLC to Ogden corridors so people can commute more efficiently, be more productive and reduce air/road related pollution. Prove it. * There needs to be more data to compare various transportation options as well. Using a corridor up Parleys to the Wasatch Back seem much more logical from a cost, environment, changed canyon character, water damage, than trains/tunnels in LCC. * Compare the ROI on the above options to a re-configuring of the LCC road to support an optimized rapid transit system. * While we want the ski resorts to grow and prosper they need to do so within current footprints. They can't expand forever...so let them figure out how to grow within limits vs once they have expanded and hurt the Wasatch Mountain experience.	Salt Lake City	03/02/2015
	Remove the commercial aspect. It ruins our mountains. There is currently enough development. Yes, transportation needs to be addressed.	Salt Lake City	04/27/2015
	Resorts are deeply subsidized by the public in the current system with USFS leases that are 80-90% below market rates. In no way, shape, or form do the resorts have leverage adequate to simply allow vertical development and horizontal encroachment into open areas. The private land in the Cottonwoods sucks compared to the public land utilized by resorts. Why the milquetoast approach on the part of the community leadership in allowing so many obvious revenue handouts to private companies at the expense of the majority of user groups. Do not let the resorts expand yet again. They already have world class operations that strain the transit and natural systems.	SALT LAKE CITY	02/15/2015
	Running rail up LCC is crazy and would destroy the canyon. If there is going to be a rail connection to Snowbird it should be from PC via Brighton. Ski area expansion needs to be squashed. NO MORE EXPANSION - its been going on far too long! Growth in Ski industry is in skiing backcountry/side country. NO MORE terrain that needs to be BOMBED daily to be made 'safe'. Resorts should sell land cheap to keep the sweetheart deals they already have on public lands. The resorts are big enough already. I have been skiing here since 1986, its why I moved here. With climate change, skiing has become limited to the upper canyons. What untrammeled/undeveloped land that remains must be preserved for future generations. They have made my life so much better. Development does not belong in the canyon!!! Please don't allow the mountains to be turned into a theme park.	Salt Lake City	05/01/2015
	See below.	Salt Lake City	03/02/2015
	Since many things haven't been decided yet, these issues are hard to comment on. These are the things that I worry about: 1. Developers- if money is involved, there seems to be no limits to the destruction to the environment that they are willing to cause. Several examples: the conference center at the top of Hidden Peak. Short of an earthquake, this tragic eyesore will be a scar on our mountains into the unforeseeable future. While (unfortunately!) Emigration Canyon is not included in this plan, we can see by the hedge-podge of high rise condominiums at its entrance, how developers free for all might look in our other canyons 2. The power of large resorts such as Vail. Again, it seems that if you have the money, you will be able to destroy our mountains with relative ease. 3. Transportation- I would strongly support mass transit. Ideally, a trax line, but nicer and more frequent buses would be a great start. I do not like the aerial tram idea; too much destruction on the hill side. I do not support connection of ski resorts. I think this is totally unnecessary. 4. I would strongly support more bike paths, both road and trail. Road bikers should be able to get up and down our canyons with out the fear of being killed by someone talking on their cell phone. 5. While this may just be a pipe dream and is not presently included in your plan, we really should consider the elephant in the room: uncontrolled population growth! We can't continue to ignore this; whether it's this continuing encroachment and destruction of our natural world, water shortages, air pollution, traffic congestion, food availability, over crowding in schools, poverty, lack of health care, etc, etc. Most of our problems are directly or indirectly caused by over population.	salt lake city	04/30/2015
	So far so good, but I'd lean more towards preservation and reduction of personal vehicles	Salt Lake City	02/05/2015
	Some how we need to think out of the box. I know our ski resorts are "world class but I would like economic develop to come more from the cited than into the mountain, of which you only have one. If you destroy nature, it won't come back.	Salt Lake City	05/01/2015
	Some transit proposals are well thought out (limiting access to upper portions of Millcreek). Cottonwoods plans however are not sustainable if not borderline ridiculous.	Salt Lake City	03/26/2015
	I wish to vote for a transportation model that uses a natural gas-powered shuttle bus system in the Cottonwood canyons(similar to the system in Zion National park) with automobile passes for canyon residents. Also a light rail train to Park City in Parley's canyon on the I80 corridor. Light rail on Foothill Blvd/wasatch blvd connecting East bench residents living South of I 80 is a must.	Salt Lake City	04/15/2015
	Specifically call out that One Wasatch will not be allowed. The current plan allows for reasonable resort expansion, no additional expansion should be permitted. This is especially true for the grizzly gulch area. I feel that the millcreek shuttle is a great idea and should be followed through on.	Salt Lake City	02/11/2015
	Stewardship of natural resources: I fully support the proposal for a land swap, bringing into public ownership the 2,000+ acres. I also believe that the land deserves nothing less than wilderness designation, anything less would not put in place rigorous enough standards to assure lasting protection. Recreation experience: I wonder whose recreation experience these changes are being tailored to, it certainly feels to me, a life-long resident, that the experience is being tailored to out-of-town visitors who are eager for quick access to the mountains from both the front and back side of the Wasatch, and less to those of us who live on one side or the other. Additional attention to a comprehensive trail system is welcome. But with few details I can't really comment on whether those plans are adequate or address the real problems of multiple use, especially hiker/biker conflicts. Economy: I think above all this plan addresses economy and the desire for the state of Utah and the ski industry to capitalize on the mountains as much as possible - ringing every last bit of use out of a limited amount of space with little thought to climate change and the potential disappearance of the ski industry as winters bring less snow. I certainly feel that economy is driving this plan and is the biggest winner. Transportation: Where is the discussion of the environmental impact on the canyons of constructing a rail system and connecting tunnels and roads? Will the transit system be efficient and useful? Better timed and operated than the deplorable trax and bus transit system now available in the valley? (I still never take bus or train because its faster and more convenient to get places on my bike and I've never taken the train to the airport since the drive is 15 minutes from my house and the train, with transfer downtown, would take over an hour.) Would it be for locals, or once again a gimmick for tourists? Would it require increased parking at the canyon entrances?	Salt Lake City	03/18/2015
	The transportation proposals assume a link in the "Little Cottonwood/Park City corridor." Alta should not be connected to Park City directly. Mass transit can be responsibly used in Parley's, but tunnels and trains do not belong in Little or Big Cottonwood. Very little is said about how people will be encouraged to ride mass transit. Physical facilities (such as lockers) need to be built and significant price differences (either steep discounts on lift passes or large parking fees) will also help. But at some point the possibility of mandatory use of public transit for certain areas needs to be thought of.	salt lake city	04/28/2015
	Stop trying to connect everything in the Wasatch! Every lift, every road, every train, every tunnel that connects point A to point B destroys wildness and degrades watershed. Why are we looking to interconnected resorts in Europe as a model for our precious Wasatch? Remove the dollar signs from your eyes and take a critical look at those European interconnects, and all you'll see are lifts and ski cuts. Nothing wild is left there. Let's not repeat that mistake! All this talk of "compromise" -- the compromises were already made, long ago! Any more development in the canyons isn't compromise, it's outright theft of the precious little wildness that remains. The only real problem that needs to be addressed is transportation, and that can be solved with a bus system that actually works -- no need to spend billions on trains and tunnels that will only serve the 1%!	Salt Lake City	04/04/2015
	Thank you for the opportunity to comment on the proposed blueprint developed under the unique Mountain Accord process. I appreciate your efforts to protect our treasured resources in the Wasatch Mountains. Although I see the need to begin to start a conversation within the community on alternatives for our future in the Canyons, I am stunned by the lack of basic background technical information justifying the Accords "idealized alternatives." Although the Accord has spent resources to produce glossy handouts, the tools to understand the proposals such as the interactive maps are clumsy and lack specifics. The public meetings have been carefully orchestrated to control messaging without opportunities for the community to share ideas or ask difficult questions. Before the Accord could with a straight face call their proposal a "blueprint", much more analysis and input needs to be gathered. Moving forward with an Environmental Impact Statement process from here is premature, and I urge the Mountain Accord to study the issues more in depth, make the information available to the stakeholders and allow more public input.	Salt Lake City	04/28/2015
	Thank you to all stakeholders, reviewers, and authors who have contributed to this project. I am deeply committed to the future of the Central Wasatch and I believe that recreation, economy, transportation, and environment factors are each important. Having reviewed the blueprint, I am concerned that transportation alternatives might include heavy handed and irreversible alternatives. I believe that connecting Park City to the canyons via highway, train, or tunnel will increase use and decrease environmental integrity in the Central Wasatch. If we accept the assumptions of the Accord--specifically projections of growth--then we must also accept that environmental integrity is the most critical factor in economic strength. For the Central Wasatch to remain an economic vehicle for decades to come, infrastructure in adjacent counties must be developed to provide alternatives for visitation. Human visitation and tourism in Utah is a system, and considering a vision for the Central Wasatch in isolation from surrounding systems is short sighted. For me to be enthusiastic and supportive about the Blueprint, I need to see that transportation will be limited rather than enhanced. This is the only way to preserve economic vibrancy and environmental integrity in the long term. Nate Furman Salt Lake City Citizen	Salt Lake City	04/26/2015
	Thank you very much for all of your efforts to see that these proposals get put through to keep access to back country while allowing ski areas continue with what that have and NOT expand all over the Wasatch mountains. We need a good balance. I am an active volunteer member of the Wasatch Mountain Club and have been for the past 25 years. Enjoying not just the back country for hiking and snowshoeing, but also for the wonderful vistas that the mountain provide. Too much additional ski lifts or other development will damage this valuable resource. Thank you again, Knick	Salt Lake City	04/17/2015
	The amount of car traffic up the canyons is a big problem; it contributes to poor air quality and congestion, taking away from the canyons. More easily and affordable public transportation is ideal. In addition, we need Grizzly Gulch to be undeveloped - it is such a big trailhead for backcountry skiing, and we need this land and area to be for the people.	Salt Lake City	05/01/2015
	The backcountry touring options that exist now should be preserved; it would be tragic if resort ski area boundaries were unnecessarily expanded as part of all of this.	Salt Lake City	02/05/2015
	The best and most responsible way to benefit local skiers, the local economy, and tourists is to connect the resorts via ski lift. Turning the Wasatch into a single ski area would make the Wasatch the most exciting ski area in North America if not the world. I've skied in France, Switzerland, and most of the US, and a connected ski area would be a truly transformative attraction. The idea that as a Snowbird passholder, I could explore the entire Wasatch with a small daily upgrade fee or go have lunch in Park City from Snowbird would be incredible. Even narrow advanced connections that minimized the "takeaway" from backcountry skiers would suffice, but connections should be an essential component of any long term plan.	Salt Lake City	02/10/2015
	The blue print and its stakeholders/representatives need to take a step back and examine the big picture. Robert Manning has created land management techniques that have been utilized and tested for over 30 years and have been adopted by many Forest Service Agencies across the country. Choosing an overarching management strategy can help to align all four of the areas that the Mountain Accord is proposing to be supporting. All of the goals that are listed under each of these four areas are independently wonderful, BUT they are unfortunately too lofty, unachievable, and conflicting. An example of this is under the environment goals and is to, "protect and restore the environment." If I read this goal on its own I would consider it to be an excellent goal, but when I look at it in the context of the Wasatch Front it is a statement that cannot be backed up or achieved with all other areas of the proposal moving forward. This to me means that each area is trying to say what people want to hear but they don't have a path to get there, nor have they done any research into understanding what it would mean to restore the environment. Impacted areas, especially those as popular as Little and Big Cottonwood Canyons, experience the majority of impact within the first season of use. After this initial impact, the impacts increase but at a much slower rate. Regeneration may occur slightly in seasons when use is limited, but this is an even shorter season in these canyons because of the ski resort and backcountry use that occurs. So, without a significant reduction of visitors to the canyon or a multiple year shut down of these canyons, regeneration is not possible. I would urge the Mountain Accord to do some research, enlist unattached experts, or allow some students to assist them in the understanding of management strategies that exist and the potential benefits and continuity that this could create in the process. While Robert Manning from the University of Vermont has outlined his management techniques in multiple peer reviewed publications and books there may be a framework that is a better fit. But the ignorance that is occurring by jumping straight to the actions or the practices of the proposal create an obvious lack of cohesion and the potential for MORE conflict on an already hot topic is eminent.	Salt Lake City	03/13/2015
	The blue print appears to be well thought out, but we are dealing with the water supply for SLC, public access for seniors. I grew up skiing at ALTA. I worked for six years at Snowbird after graduating from the UofU in 1971 in a management position. The ski resorts are a business. They want more people in the canyon to support ridiculous projects like the building on Hidden Peak. Develop natural gas transportation system with wheels to accommodate traffic. Dont build a rapid transit system. Development has ruined Park City. Save both Little and Big Cottonwood from ending up like Park City Resorts. Regards	Salt Lake City	04/29/2015
	The Blue print could better meet the Mountain Accord by valuing nature, wilderness, and the environment over economic development. The Wasatch does not need to be turned into a Disneyland of the national forest. Meaning, trying to attract more visitor and expand resorts.	Salt Lake City	03/13/2015
	The Blueprint - fails to consider watershed impacts of proposed transportation and interconnect construction - should put watershed protection and preservation of the environment above economic considerations -fails to discuss what limits or constraints will be required to preserve the natural or ecological values of the Wasatch	Salt Lake City	03/16/2015

	The blueprint DOES NOT preserve the legacy of the Central Wasatch whatsoever. An interconnected Central Wasatch will forever change their character and attributes that has made them world-famous. This blueprint clearly demonstrates the strong desire of city officials, county officials, and private entities to leverage such a precious resource for their own monetary gain. A responsible plan would be focused on changing use patterns and minimizing impacts of growth. It would also propose a plan based in fact. The transportation solution appears to be complete over-kill for the current and near-future. A responsible plan would identify the trends and propose strategies to address crowds as the needs arise. Instead, this plan will exacerbate and accelerate user impacts. The proposed major transportation solution will accelerate visitation and degradation of the resource. It will increase over-crowding of the Central Wasatch, degrading user experience, watershed, and viewshed. The proposed tax-payer funded interconnection is clearly being proposed to bring in federal dollars for its construction and profits of municipalities and private interests... All at the expense of preservation.	Salt Lake City	03/02/2015
	The blueprint fails the purpose of the Mountain Accord from the leading tenet of "responsible stewardship of the natural resources." Expanding development throughout the Central Wasatch has limited upside to the environment and a large downside. The upside of improved transportation options, could easily be negated by carving holes through the Wasatch mountains and adversely affecting their watershed and ecosystem. Purchasing private lands for conservation without trading for currently public lands is a better option for protecting the existing ecosystem of the Wasatch and our watershed.	Salt Lake City	03/02/2015
	The Blueprint favors profit over preservation. There needs to be more aggressive interventions to protect the fragile mountain areas from development. The current recommendations do not go far enough to implement a "limits to growth" approach. The current recommendations also seem to minimize the factors of change that seem to be unfolding with global climate change. Therefore, many of the assumptions for managing a fragile environment seem grounded in hopes that things will not get worse rather than the incorporating the protections that are needed if predications for climate changes are within a reasonable possibility. Of particular concern is the limited commitment in the recommendations to require sustainable changes in the methods of transportation to access the canyons. There needs to be much more aggressive approaches to decreasing transportation pressures to all areas of the canyons.	Salt Lake City	04/13/2015
	The blueprint is an excellent starting point as more and more interests compete for the Central Wasatch, I only hope that the conversation stays in the hands of citizens and out of Vail Resorts, Doppelmayr, etc. NO to ONE WASATCH!!	Salt Lake City	03/02/2015
	The blueprint is based on the notion that we can simultaneously "grow" the economy, "enhance" the recreational experience, yet preserve the wilds and our water supply. IT IS NOT GOING TO HAPPEN. The first law of Disney does NOT trump the first law of thermodynamics.	Salt Lake City	04/28/2015
	The Blueprint is far too skewed towards the continued development of our ecosystems and habitats for the purposes of an unsustainable tourism and real estate industry. Though a reasonable attempt has been made to address the concerns of many difficult-to-balance ideas and interests, the Blueprint tends to favor the viewpoint that profit is the best possible use of our home landscape. Tunnels, trains, and interconnects are a very small-minded way to address our transportation issues, which just happens to make our mountains more "marketable" to visitors from other places. We should be addressing the health of our communities--human and nonhuman--here first, not the interests of tourists or out-of-state corporations that depend upon tourists. Why does everything have to be predicated on encouraging growth? The report is predicated on an assumed massive growth of our population. This is, in fact, the main problem that this process is seeking to address--more people--yet there is no mention of what we could do to discourage this growth. Perhaps the route to sustainability involves less of us, not continuing to alter this place to accommodate our "inevitable" growth.	Salt Lake City	05/02/2015
	The blueprint is impressive in many ways. It's difficult to predict how well it achieves a vibrant economy, because that is dependent on many factors in addition to the Blueprint. I worry about the light rail and bus options connecting Big and Little Cottonwood canyons and Park City. Each is a wonderful, and, to me, independent recreation area that doesn't need to be connected to another recreation area. Tunneling sounds both expensive and potentially harmful to the watershed. Bus provides more flexibility over time than light rail and allows for flexibility as the area expands and experiences economic cycles. It's difficult to anticipate the actual growth rate, as other economic factors and birthrate factors intrude.	Salt Lake City	04/23/2015
	The Blueprint is not very clear to the casual reader about what it is advocating exactly. I support above all environmental protection. Second, environmentally sound trails access for body-powered activities. Any aspect of this plan that will degrade the environment I strongly oppose. The economic idea of linking ski resorts is very likely one of these. We only have one environment. We have lots of people who have made (or who want to make) a lot of money in real estate, development, and recreation products and services, many of whom will put their own profits above the preservation of the mountains and canyons.	SALT LAKE CITY	05/01/2015
	The blueprint is well written and congratulations to everyone who worked on the blueprint. My fear, and the fear I think of a lot of us who love the back country is that ultimately too much will be given away to additional residential or commercial development and we'll lose access to more and more lands crowding the backcountry even further. So congratulations on a strong blueprint, but how do we work to ensure there is limited ski resort development and that we can keep more towers and train tunnels out of the Wasatch?	Salt Lake City	04/27/2015
	The Blueprint lays out what has been discussed at the board level. It is well designed and put together in an easy to use manner. One of the major points missing from the Blueprint is discussion of where the funding will come from. There is also information missing on the amount of backcountry skiers and hikers who use the resource away from the ski area boundaries.	Salt Lake City	03/20/2015
	The Blueprint outlines a plan which does a good job of balancing protection of natural resources while concentrating development within the resort boundaries. There is a lack of specifics about new wilderness proposals, which the Blueprint seems to accommodate by including land trades and excluding new development and ski boundary expansion into sensitive areas which are being proposed for wilderness expansion.	salt lake city	02/23/2015
	The Blueprint really just lists alternatives - many of them are poor.	Salt Lake City	04/27/2015
	The Blueprint recommends further studies. As this is the third study on the proposal, I would recommend not creating any more studies. It is time to act on the proposals at hand.	Salt Lake City	02/04/2015
	The Blueprint seems overly weighted towards the economic benefits at the expense (sacrifice) of the environmental/responsible stewardship objectives. The Blueprint seems directed to getting MORE people into the canyons for the promotion of business. There is NO need or reason to link the Cottonwood Canyons to each other or to Park City resorts. The blueprint should promote resort development at Park City Resorts and leave back country recreation and use (which has lower impact on the natural resources) in the Cottonwood Canyons (and Mill Creek and Alpine Canyons).	Salt Lake City	05/01/2015
	The bottom line is that development, once implemented is impossible to remove and restore. This is too slanted towards development rather than preservation.	Salt Lake City	05/01/2015
	The chance of having a tram from BCC to LCC is what takes away the natural surroundings, environment, and recreation. So this possibility is the biggest fault of the proposed blueprint in regards to the purpose of The Mountain Accord, especially since it's probably the worst solution for transportation.	Salt Lake City	02/24/2015
	the connection of all canyons will only increase traffic on trails and lead to further degradation of our preserved wilderness; i also enjoy cycling up the cottonwood canyons and placing mass transit on the roads will make this ride more limiting and interfere with the enjoyment of the ride; i do NOT support mountain accord!	Salt Lake City	05/01/2015
	The economic viability of our recreational opportunities in Big and Little CW Canyon is tied to the ability to move people to and from the resort/recreation areas. Much thought needs to be given to the fact that traffic and parking are a problem because the transit system is not adequate and is a miserable experience. For instance, if I want to take the bus to Alta, which costs less and is more environmentally friendly, it not only takes 2-3 times the amount of time to get there, it is a physically miserable experience (tight spaces, poor ventilation, uncomfortable ride, etc.). I would rather pay more and arrive at my destination feeling ready to recreate. Advice: Make the experience pleasant and the problem solves itself!	Salt Lake City	03/10/2015
	The general format of the mountain accord is setup well. Considering the ideals of Recreation, Economy, Transportation and Environment covers the major areas of interest pretty well. However, the overall blueprint is still heavily weighted toward the economy. It's as if this proposal was submitted by wealthy people in Park City who want an easier way to get to the cottonwood canyons. In fact, that's exactly what this proposal is all about. In this day and age we should be putting more emphasis on the environment and over-indexing in our efforts to preserve our natural spaces. Without it, the economy, recreation and transportation fail. I am all in favor of better public transportation for the cottonwood canyons and for parley's canyon. I believe we should have a train that runs up all three canyons. I don't think people should be allowed to drive up the cottonwood canyons. I am all in favor of preserving more land and not selling public land to private corporations. I do not think we need to expand our recreation opportunities by building more chairlifts, tunnels or roads. The access in Utah is unheard of. The economy is continuing to grow in Utah, and it's not because of recreation.	SALT LAKE CITY	02/10/2015
	The health of the mountain ecosystem and the importance of watershed should always be the most important area of discussion. Commerce and profit, for once, needs to be put aside. This is an issue of great importance to future residence of this area.	Salt Lake City	04/26/2015
	The highest interest served in this whole process is and should be PRESERVATION of as much property and land in the Tri Canyon area as possible. Economic, travel, resort and private interests pale in comparison to the preservation standard. Proposals for a rail line up Little Cottonwood Canyon, and Lift expansion connecting the resorts and Park City, should be scrapped. No need for further study or expense of these issues. Parties that push such proposals - if they are on the board or executive committee - should stand down and no longer serve. The money involved in this process, payments to Layne, are shocking. The proposed costs for a rail line up the canyons, shocking also, and certainly not in the public interest. Who is going to stand up for nature in this process. Everything else takes a back door. More wilderness needed, and a greater reverence for preservation amongst all of the parties. Vail, Snowbird, Alta don't own the canyons and they own the politicians or UTA or Hatch or Lee, that would push for Federal Appropriations. What is owned is the collective canyon ecosystem by the citizenry of both sides of the Wasatch. It's a crown jewel and all the scenarios to further carve it up, cut the walls of the canyons and launch lift towers over ridgelines, are an abomination. They not necessary, there is no overriding public demand, and they are not in the overall public interest. Salt Lake County, Salt Lake City, should put an immediate stop to the gargantuan plans re rail and lifts and scale back proposals, seeking first to preserve as much land as possible. I'm disappointed in the charlatan leaders that speak of their love of recreation and then in the next breath laud the ideal of more lifts and rail lines in the canyons. A false connection to nature and to what's sacred. Please, scale back the proposals, and push for preservation, more than anything. Else. Thank you SLeewis, SLC UT	Salt Lake City	04/30/2015
	The idea of connecting the canyons with a mountain pass from the Park City area to the Big Big Cottonwood canyon area is not a good idea. If this is allowed, development of these now not quite unspoiled areas will be developed and destroy the natural essence of this beautiful area which is a terrible idea. As for a train up Big or Little Cottonwood canyons I think this is a terrible idea, too. More express bus service is a great idea, however, to reduce automobiles in the canyons. And yes, I personally would use the express bus service.	Salt Lake City	04/30/2015
	The importance of protecting the watershed which provides drinking water must be of utmost importance not slighted for "economic" gains. Really crowded days at ski resorts aren't that numerous and shouldn't be the driver of overblown "cool" transit plans damaging to the canyons and the environment. Transportation is a problem but not as HUGE as it is being made out to be and rarely rather than all the time.	Salt Lake City	05/02/2015
	The main purpose should be preservation of the Wasatch Mountain's greatest asset: pristine vistas and the enjoyment of those in as much a natural way as possible (in my opinion, therefore, less roads, tunnels, buses, trains, and more trails for bikes and hikes, snowshoes and skis). Less development is a laudable goal. I want my kids and grandkids to enjoy these mountains as I have, without witnessing destruction of the wilderness by the building of homes, parking lots, hotels, and other developments. Our mountain landscape, and unique quality of proximity of our wilderness in Salt Lake City needs to be preserved in order to continue to market it as a wilderness!	Salt Lake City	04/26/2015
	The major failure of the Blueprint with respect to the Mountain Accord Charter is a failure to designate priorities. Protection and conservation of the environment should have been designated the number one purpose, with all other purposes designated secondary. By describing all the purposes as equivalent, the Blueprint creates a framework for possible environmental degradation, as long as other purposes are met. In addition, the Blueprint should include an explicit statement that all participants and stakeholders are relying on the fact that public lands in the Wasatch will remain public lands, never to be transferred to state control. I would suggest a "savings" provision that provides that if an when NFS lands in Utah are transferred out of state control, that the NFS lands in the Central Wasatch would not be included, and if included, would be transferred to control of a "trustee" of some kind obligated to carry out the Mountain Accord plan	Salt Lake City	04/02/2015
	The most important part of this project is improving transit, as this affects the other categories so strongly as well. I appreciate the stance of the mountain accord in being proactive in smart development, and I think the transit thing has to be done right. I think the light rail is a great idea, but why only LCC and not BCC? I've been a local for 2 seasons in the Wasatch now, and feel very strongly about fixing the traffic jams up the canyons. I don't understand the jaded local view point of "leave our canyons alone, there's so little left!"	Salt Lake City	02/05/2015
	The mountain accord blueprint frames the interrelated, and sometimes competing goals, well. The identified next steps for environmental stewardship and recreation are solid. But much of the economy and transportation blueprint seems shortsighted or unrealistic with respect to cost and overall benefit. The central Wasatch is a community sustaining gem in many ways. Ski and other outdoor tourism is important but that value pales in comparison to the importance of water resources and recreation to residents and broader business climate and quality of life.	Salt Lake City	05/01/2015

	The Mountain Accord outcome I would like to see would focus on conservation of the land, Protecting our watershed and changes that would amount to a net reduction of development in the Central Wasatch. Land swaps that would concentrate development at the base of resorts in trade for minimizing private land in the backcountry seem to make sense both economically and environmentally. A Shuttle system involving buses or vans would be able to meet the varied recreational needs in the canyons. Trains are not conducive to multiple trailhead stops and are not as flexible as buses or vans for changing needs both over time and season. Plus the environmental cost of building rail in the canyon seems overwhelming for such small area. I don't support further connectivity for the resorts. There is no good way for this to be accomplished and the benefit would have nothing to do with those of us who live here. It is all for marketing a declining industry. I would also favor fees such as we have in Millcreek Canyon. It makes sense that those that use the canyons for recreation should help in the maintenance of those facilities that we enjoy. Money collected should be earmarked for improvement and maintenance of those canyons.	Salt Lake City	04/27/2015
	The Mountain Accord Process is important because Our Mountains have an amazing value to the community and need to be preserved. If other plans are brought forth, our only chance at keeping one of the most beautiful recreational areas safe will be put at risk, and NO ONE should want that.	Salt Lake City	04/30/2015
	the mountain are for all people to used, we all need to take care but not have big brother look over it for us.	Salt Lake City	05/01/2015
	The mountain transit proposal seems reckless. I don't want a light rail, trains, or tunnels in nature. It will forever scar the canyons. The point of nature is that there is a little bit of sacrifice in experiencing it - I like the peace and solitude in the mountains. It should be more remote than a city. That's why it is designated as wilderness. Please try circulator buses that stop more often (at trailheads, resorts, campgrounds, etc) and see if they are utilized before investing millions in a train that will be devastating to the environment.	Salt Lake City	05/01/2015
	The Mt Accord is trying to provide openness and transparency by having the community meetings. I attended one of the meeting and it was a total farce. It was a very controlled meeting and they only read the screened questions which they liked or were easy to answer. The one controversial questions was responded with "I don't know". We have the big executive committee made up of Cities, UDOT, UTA, ski resorts, politicians, etc. With the exception of Save our Canyons everybody will benefit financially with this proposal. There is also the saying of following the money. So it looks like these ideas will be jammed down the throats of the taxpaying citizens. I suggest any idea you want to implement it should be voted on, because the taxpayer will be subsidizing these private entities.	Salt lake city	03/11/2015
	The notion that any sort of transportation system from Park City to Brighton will IMPROVE transportation challenges or environmental impact in the canyons is a pipe dream. I am 100% in agreement that current traffic patterns and environmental impacts of transportation need to be addressed, and that it will be difficult. But the "pool" of users from the Wasatch back is almost irrelevant in this. A) they are minimal. B) for the sake of argument, they already drive around via I-80, which has an environmental impact. But it will only be increased if SL County folks drive UP I-80 to access the new transportation system, and C) it doesn't deal with the actual problem, which has nothing to do with users on the wasatch back, and that it that the canyons cannot support the EXISTING pool of users coming from the valley. Building a new "in road" into the canyons will only increase the number of users in the canyon on a given day, thereby increasing waste, etc. PLEASE DO NOT ADD A TUNNEL OR ARIEL INTO THE CANYONS FROM THE WASATCH BACK.	Salt Lake City	04/30/2015
	The online "Mountain Accord" was illegible because it could not be expanded for reading. The web site was also unavailable. If this was an attempt at communication, it failed. I am also concerned by ski area land grabs, particularly below Great Western. Brighton Ski Resort has historically done a poor job of land management, allowing erosion to gut the runs and trash to accumulate year by year. Why should they be allowed to expand further until they clean up their act? I hope planners bent on maximizing development in the Wasatch will, at some point, remember that WATER is the most valuable resource that the mountains can offer. If you screw that up, nothing else really matters.	Salt Lake City	02/07/2015
	The only thing I see from the blueprint is even more people in our canyons. Then in 20 years we will want more access to the resorts again. Then what? Do the resorts go to the Forest Service and request more land to stick their lifts on? It has to stop. Making more parking and ways of getting up the resorts is just feeding a pig. Has anyone thought about just limiting access to the resorts? I know people want access to the canyons and backcountry in general, but why not limit access to the resorts? I guess you just follow the money and not the interests of the locals who spend more than just a few winter months up in the canyons.	Salt Lake City	03/12/2015
	The part I am most unsure of is the idea of a rail line up Little Cottonwood Canyon and through a tunnel to Park City. How much impact will that have on the canyon? I was very opposed to Snowbird's plans for some sort of roller coaster over the road. Our canyons should not be turned into amusement parks. They should not be turned into train systems either. However, I trust the recommendations of Save Our Canyons, so perhaps this is the best compromise for all parties. I guess I'm having a hard time envisioning rail transit up the Little Cottonwood Canyon. I am very interested in a central governmental organization for administering the central Wasatch, something that will prevent the canyons from being torn up by private interests. The Mountain Accord seems to be a good start towards that. Thanks for all this work and for thinking ahead. In general, I am in favor of this plan.	Salt Lake City	04/20/2015
	The plan should look more seriously at Zion style buses in LLC in the winter before looking at the more expensive, "pie in the sky" engineering projects. It will be important to preserve backcountry access for this though.	Salt Lake City	05/02/2015
	The policy going forward should be NO NEW DEVELOPMENT OF PUBLIC LAND. The strain/strain on our small natural resources is already reaching a breaking point with four large resorts in two small canyons. With the impending growth in along the Wasatch Front we should be working to preserve more and more land and resources instead of bargaining it away to the ski resorts. Their skier numbers are down and I think the logical next step is to discuss ski resort reduction rather than expansion to match their demand. With the fastest growing segment of skiing being in the backcountry, shouldn't we work harder to protect it?	salt lake city	05/01/2015
	The primary focus should be preserving what is left of the Wasatch rather than developing it for the ski industry's grandiose One Wasatch dream. To that end, moving people up the canyons is important and can be solved by much improved bus service but not by installing a frightfully expensive and destructive train system. Alta is NOT Zermatt and nor will it ever be. Likewise, there is no need to create the artificial requirement of linking resorts via a tunnel system. In my 20+ years of resort skiing I either went up one canyon or the other (or, on very rare occasions, up Parleys to the Wasatch Back resorts). Never did I have a desire to ski Alta and then pop over to Solitude for a few runs. That is a marketing dream (and a local's nightmare).	Salt Lake City	04/16/2015
	The priorities seem to be geared toward skiing and tourism, not wilderness preservation. More frequent buses, perhaps shuttle buses, seem a better option than construction of a train line.	Salt Lake City	05/01/2015
	The proposal could be acceptable without the transit option of connecting Big Cottonwood, or Little Cottonwood, etc (although I didn't see other canyons in the plan - I may have missed them) with Park City or the Park City area. I think that this is a horrid idea and would destroy so much. I think that the only ones who would benefit from this would be the ski resorts. I don't blame the resorts for wanting to improve their business prospects but that should not happen at the expense of the canyons. The expense for this should not be carried by any tax or government help, if it does happen. I think improved public transportation in the canyons would be great. Express buses from downtown hotels and various gathering places to ski resorts should help as would better public transportation in general. Additionally, we should consider the unpredictable weather/snow that we have and will continue to have. Will those resorts be able to stay in business without decent snow? Perhaps they want to increase their business options, but once again, they should do that at their own expense.	Salt Lake City	03/25/2015
	The proposal does achieve a transportation link between Big and Little Cottonwood Canyon. Then the big question of what transportation means to get up Big and Little Cottonwood. And ultimately would this connect over to Park City. I would propose Gondolas and or Trams and Bus systems as the costs would be more reasonable and provide spectacular scenery which you wouldn't get in train ride. A train to Park City seems to be the most logical connection from the SLC Airport	Salt Lake City	03/01/2015
	The proposal to move forward with either a tunnel connecting the Cottonwood Canyons to Park City or a gondola both seem a little absurd and undermine the notion of environmental protection. It seems like a purely economical move in terms of consolidating resorts and limiting backcountry access (Val Resorts expanding from two resorts in Park City into a third in BCC). A much easier way to increase tourism revenue in Utah would be to change the liquor laws as opposed to drilling a hole through a mountain or building a gondola.	salt lake city	04/30/2015
	The proposed blueprint is a runaway proposal for developers. It spells out BILLIONS in public spending that only benefits a few of the developers. This blueprint fails completely to protect the watershed, nature health of the Wasatch Front. The board is "stacked" with developers, and represents very few who actually care about the Wasatch. Since when has Big Cottonwood Canyon been closed for more than a few hours? The argument that we need "Escape" routes to evacuate the canyon is a specious argument at best. The argument about "fair quality" is flatly false. I look to the 8,000 new drivers every year on the roads in Salt Lake County, and nothing you do to limit the traffic in the canyons will alter the pollution in Salt Lake Valley. A "TRAIN" you have got to be kidding... right now the public has to subsidize TRAX at the tune of \$72/per person/per ride...!!! UTA is a bloated bureaucracy (the director makes over \$500,000 per year and hundreds of UTA employees make well above \$250,000/year... we need less TRAX, and much smaller UTA salaries before I could ever support a train... Land swap... come on. This is only about making an industry that is less than 1% of the Utah economy rich. Dump the Billions into better schools (the US now ranks last in the industrialized world in MATH and SCIENCE)... maybe dumb voters are the reason this blueprint is even being considered.... I am now convinced that the Mountain Accord is a thinly veiled guise for a publicly funded amusement park called the Wasatch Front.....	Salt Lake City	02/24/2015
	The proposed Blueprint is extremely vague and I did not find it helpful. It sounds nice to have all the stakeholders involved, but the devil is in the details. I fear that the survey results will be mis-used because of the vague questions. I prefer human powered recreation and thus would push for as much land as possible to be in the public domain, and would oppose expansion of ski areas. Likewise I am a proponent of public transit as long as the system is designed well. Anything we can do to minimize carbon emissions is a good thing and will benefit everyone, including the ski areas. While some of the warmth from this season is due to natural variability, some of it is also due to climate change and it points to large future impacts on ski areas. How will the ski areas propose to stay in business in 50 years when the ski season is dramatically shorter or non-existent? (CCSM model projections of springtime snow depth in North America under RCP8.5: <a href="https://www.youtube.com/watch?v=8L00AYHqY">https://www.youtube.com/watch?v=8L00AYHqY</a> )	Salt Lake City	03/17/2015
	The proposed transit system looks like a quilt of political influence. Trains here, buses there, ski lifts over yonder. The Mountain Accord is on the correct track they need to take the concept further and make a few people mad as opposed to the current hodgepodge proposal trying to keep everyone somewhat satisfied.	Salt Lake City	02/05/2015
	The purpose of the mountain accord is to provide a framework for achieving "responsible stewardship of the natural resources" and "quality recreation experiences." In order to better achieve both of these goals, the Mountain Accord should provide a framework for responsibly and fairly ending the very heavy mineral extraction activities currently taking place in Parley's Canyon and the mouth of Big Cottonwood Canyon. Both of these gravel mines extract an extremely heavy toll on the environment, creating visual and air pollution, permanently altering the landscapes of our canyons, increase traffic on our mountain highways, and take up invaluable space that could be used from scenic, recreational, and transportation purposes. The Blueprint for the Mountain Accord should provide a means whereby both of these gravel pits can be acquired as public property and rehabilitated in a way that can be enjoyed and used by all members of the public. Clearly, these gravel pits are parcels of private lands operated by private owners, and they must be fairly compensated if their land was acquired. But gravel mining is wholly inappropriate in the beautiful, vital, and environmentally sensitive area of the central Wasatch. The Mountain Accord should provide alternatives where the public could acquire these lands, either through sale of the lands on the open market, or through eminent domain.	Salt Lake City	02/04/2015
	The purpose of this email is to give you my general comments re the proposed plan: 1. I am not in favor of any public-private land swaps unless the parcels received by the public entities are placed in wilderness designation so that they are totally protected from development. 2. I think the idea of a tunnel is a bad idea and under no circumstances should any tunnels be paid, in whole or in part, with public funds. 3. The idea of improved public transport (whether bus or rail) is worth exploring further so long as any resulting transportation is frequent and free or has only a nominal charge to stimulate use and there are mandatory limits on auto traffic up Big and Little Cottonwood Canyons and the private development does not increase auto travel or auto parking in the canyons.	Salt Lake City	03/18/2015
	The purposes are inconsistent so to ask how the blue print achieves the purposes is to ask what purposes you value most. I prefer preservation to economic development or to recreational experience opportunities with the belief that a higher quality experience should be preserved at the cost of convenience and development.	salt lake city	04/30/2015
	The stated purpose of the Mountain Accord is to "preserve the legacy of the Central Wasatch Mountains." This is a highly laudable goal, because this mountain range is priceless. To preserve the legacy of the Central Wasatch Mountains, you preserve what is left of the Central Wasatch Mountains. I rate the Accord very poorly because its actual purpose is to "preserve the legacy of the Central Wasatch Mountain Ski Industry." Only the promotion of the ski industry makes any sense for boring holes through mountains, building railroads up canyon floors, and expanding resort development. Resorts and developers may be the loudest and most influential voice at the Mountain Accord table, but they represent a trivial fraction of people who value and treasure these mountains. So please...remember what legacy you say you are preserving, and represent the real constituency of the Central Wasatch Mountains. Please don't trade the Mountains for anything. It's a bad deal.	Salt Lake City	02/10/2015
	The train and tunnels concept for transportation is ridiculous and is the worst possible approach to canyon transportation; it is the most expensive, most environmentally damaging, least flexible, would take the longest to put into service, and will do the least to reduce the number of cars driving up the canyons.	Salt Lake City	05/01/2015
	The Transportation Alternatives should favor cost effective solutions (e.g. bus rapid transit) over high capital outlay solutions (e.g. light rail).	Salt Lake City	02/25/2015

	The transportation plan involving the cottonwood canyons and possibly the park city area is the critical decision. Right now there are too many possibilities included and that makes your blueprint very hard to judge. I hope the environmental impact statements of each proposal are conducted in a fair and judicious manner and that the public will be able to see all impacts and have the ability to weigh in on the plan to be selected. Also we are going to continue to see poor winters like this one due to global warming. Has that been factored into the planning? If anybody on this Accord is in denial about global warming that should be grounds to remove them from the process. It simply isn't up for debate anymore regardless of what a lot of folks think. I applaud the Accord's goals of meeting these 4 criteria but I believe it will be hard to balance and deference should be made to protecting natural resources and the natural environment. I would only be in favor of a proposed improvement for economic, transportation, and recreation interests only if it also at the same time improves the natural environment within a reasonable timeframe. The birds, the bees, and the trees are more important than some new condos or making it a little easier for an out of towners to have the "perfect" ski vacation.	Salt Lake City	03/26/2015
	The Wasatch mountains are an incredible source of beauty, nature, and recreation right at the backdoor of everyone living in the surrounding area. Whether you hike, ski, bike, or just look up at the mountain from the valley, everything possible should be done to preserve and keep these mountains pristine.	Salt Lake City	05/01/2015
	There are positives and negatives so it is hard to give an overall rating, but the expansion of ski areas and installation of aerial trams over the Wasatch is a big negative that affects my evaluation of Environmentally sustainable Transit, Quality Recreation Experience, and Responsible Stewardship of Natural Resources.	Salt Lake City	02/04/2015
	There is a lot of pressure to build a Little Cott. - Park City corridor which I am not in favor of. Also, no more expansion of Solitude into Silver Fork or Alta into Grizzly Gulch. User fees seem practical and we need more efficient express buses	Salt Lake City	02/06/2015
	There is a need to understand ridership numbers for public transportation up the canyon. Besides a persons moral/environmental conscience, what incentives will there be to take transit over personal vehicles?	Salt Lake City	04/30/2015
	There is not enough details to decide what changes would be appropriate. Most citizens are not going to have the time to review details, but depend on other organizations to look out for the public interest. My biggest concern is that what I'll call the "money interest" views the resources in Utah as nothing more than something to make a profit from. They must be put in check by governments and environmental organizations. I do like that there is an attempt to bring all stakeholders together to come up with an agreement rather than lawsuits. Thanks.	Salt Lake City	03/15/2015
	There is something special about the action required to get yourself up to the mountains. The people who arrive at the top of one of the canyons have come for a purpose and have taken time to plan and figure out how they are going to make it work. No matter how simple that planning might be they had to think about it. Your transportation system changes that. I am very much for reducing the amount of cars up and down the canyons. However, connecting all the mountains through tunnels and contrived interventions goes completely against the intent of your goals. Use what you have, don't create more; More is not responsible stewardship, environmentally thoughtful, or providing a better recreational experience. It seems more like a bid at "look at the cool thing we created here in Utah." It will take away the little bit of sacred that is left in the Wasatch!!!	salt lake city	02/06/2015
	There needs to be further development to connect the Canyons/Park City Mountain Resort ski areas or the Deer Valley/Solitude ski area. No development or opening of roads or trails should be built across land where it does not exist today. No public lands should become private.	Salt Lake City	05/01/2015
	There should be no more expansion of any of the ski resorts and base facilities. Shuttle buses would be fine if people are allowed to drive early in the morning for long hikes. Skiing has a poor future due to climate change and expense. This proposal seems more like corporate welfare to the ski industry. The Wasatch is for everyone, not just the wealthy. Please no more development in the Cottonwood canyons. I could care less what happens to Park City. It is already ruined.	Salt Lake City	02/08/2015
	This appears to be understudied and rushed. We need good facts before doing something expensive and permanent. Little Cottonwood Canyon is unlike any place on earth. Lets not rush this!	Salt Lake City	04/29/2015
	This is a disaster for our environment. The whole valleys culinary water is being risked for the sake of commercial profit. The taxpayer dollars going towards funding this may or may not pay out in the future, but our backcountry will be lost forever. We don't need more corporate land grabs. Keep our backcountry open to the community who actually lives here. I can't believe this is even a proposal. Insanity. Corporate greed raping our landscapes at its worst.	Salt Lake City	03/25/2015
	This is a terrible idea. This blueprint is written to try and not step on anyone's toes and say all the right things. You can clearly see this is not what will actually happen. This is a money making scheme for the resorts as well as for the state to boost tourism and commerce. It is being done for the wrong reasons and will ruin the reason I moved to Utah which is the incredible mountains. There is a reason skink has already failed!	Salt lake city	02/05/2015
	This is an effort by a limited number of well placed corrupt individuals in government and industry to exploit the wasatch for PERSONAL gain and enrichment. It has nothing to do with all the fluff they are trying to sell. It all comes down to Money for these greedy individuals who if they had their way would sell their mothers for a dollar.	Salt lake city	03/15/2015
	This is my second comment on the Mountain Accord and these comments are specifically directed at the proposed Alta land swap. "The Mountain Accord as written includes a mountain lands owned by the Alta Ski Lift Company, mostly in the Emery area, will be exchanged for Forest Service lands in the Alta base area. There are several significant problems with this. "The swap may include all the public parking in Alta. If the deal goes through all users of the surrounding National Forest Land would be required to park on land and in lots owned by a private owner. It is not a stretch to imagine that before long this parking could either be restricted (in winter to those purchasing Alta lift tickets for example) and/or require a parking payment, summer and winter, to park and access the surrounding public lands. It is a really bad idea to limit public access to public lands which could be a consequence of the land swap as currently drafted. "The swap sets the stage for the possibility that a private owner could charge a "backcountry fee" for visitors who wish to use the town of Alta as a starting point for their ski tour, hike or climb. For that matter the private owner would be in a position to charge a "viewing fee" for those who just want to be up in Alta to soak up the scenery. "The exchange would open up significant parts of the Alta base for further development. The various consultants involved in the project believe that land is not useful unless it holds a town square, retail areas, food and other concessions, and even office space. They do not understand that visitors to Alta are not there to shop or for robust night life. They are there specifically because Alta is not cluttered with those things. This is evident most every weekend in the summer. The parking lots are full but the one restaurant that is open in the summers almost always has seats available. But the trails are busy. In the summer visitors to Alta are there to enjoy the wonderful outdoor environment with their friends and family. They are not there to shop and eat. "The consultants and the moneyed interests pushing the vision of development in the Alta base area have no idea what we value in Alta. They presume that we as users wish there were more shopping, dining and man-made recreation opportunities (one design envisioned by the consultants includes an indoor ice rink). We need to speak out loudly and often to ensure that the committees drafting this plan, and our local, state and national legislators, know that we actually like Alta the way it is: relatively undeveloped with public lands and public access for all. "The Alta Lift Company, at public hearings, has insisted that they have no intention of limiting user access - that the land and access is open to all. Yet this has not been their record - ask the homeowners in Albion Basin who used to be able to access their cabins via a dedicated snow cat road at any time of day or night and now have had that access limited by the lift company to early morning and evening hours. "The land swap would make Alta a private town. Owned by a private owner. With orphan businesses stuck within and dependent on the private owner for access and survival. Do we really want to have the town of Alta? "The Grizzly area (Twin Lakes Pass around to Emery) where Alta runs their cat skiing operation is land owned by the ski lift company. They have made no secret of their desire to eventually develop lifts in the area. While this would be a loss to the thousands of hikers, runners and backcountry ski and snowshoers who use the area it would also have the effect of turning Silver Fork into difficult to access backcountry at best and Alta Ski Lift sidecountry at worst. The plan does not address this issue; it says the Grizzly area is still under negotiation. "The land swap would increase the value of Alta Ski Lift Company dramatically and make them far more attractive to an acquirer like Vail Resorts substantially increasing the probability such a change of ownership would happen. An acquirer like Vail would not hesitate to develop the property as fully as possible as that is their business model. While I certainly cannot fault the Alta Lift Company for working to make the land swap a reality I do not think it is appropriate for the Forest Service to trade away a low value steep pitched mountain slope asset for the developable land at the Alta Base. Nor do I think it appropriate for the Forest Service to, with a penstroke, irrevocably alter the Alta that the Alta Town Office, Friends of Alta, and thousands of friends and admirers of Alta have fought for decades to protect. "Note that the plan for the area includes building avalanche snow fences in all of the significant slide paths above town. This would likely eliminate the building restrictions currently in place due to the danger of these slide paths and open up the entire Alta base area to commercial development. "There is a middle ground. Currently all of Alta's buildings are on Forest Service land. It would make sense to trade the land under their buildings for the undevelopable parcels up on the mountainside. Perhaps a land buffer around	Salt Lake City	03/11/2015
	This is no accord at all. The proposed developments would spell the death of backcountry skiing in the Wasatch and would usher in a new era of big-money development and environmental degradation. The current transportation system in the Cottonwood Canyons limits traffic to the resorts - a desirable outcome so as to limit the human impact on the environment and to ensure the canyons are not transformed into a theme-park-style zoo of people and commercial interests. As a long-time backcountry skier and hiker in the Wasatch, I'm saddened and worried about these plans, and I hope the interests of a few wealthy developers will no be able to squander taxpayer dollars on their profit-driven projects.	Salt Lake City	02/28/2015
	This is worse than anything else that has been thought of to date. Leave well enough alone. Keep the backcountry pristine.	SALT LAKE CITY	02/05/2015
	This money is a complete waste and there are numerous other projects that could use these funds that benefit Utah's citizens. This would absolutely affect the environment in a negative way while only somewhat helping a small group of people that ski at these resorts.	Salt Lake City	02/12/2015
	This plan describes far too much development. I enjoy using the existing services in the canyons and Park City but I see a plan here that allows for unprecedented development in the Wasatch with little-to-no protection of our resources. The services described take too much out of the hands of the public and put it under control of the government and private owners.	Salt Lake City	05/02/2015
	To preserve the legacy of the central Wasatch means to preserve the Wasatch as it is. Development, more transit, degrading the waterways, and packing more people into the Wasatch cannot "preserve the legacy of the central Wasatch." The blueprint is hard to interpret as a specific plan, especially because it is necessary to refer to all of the supporting documents. Are the "Private Lands to Secure for Protection" in the blueprint getting the same recommendation or support for Wilderness status as the "Private Lands Under Consideration to become Public" in the Cottonwood Canyons Scenario? Is that, environmentally, the correct understanding? That these lands will be recommended for Wilderness designation?	Salt Lake City	02/24/2015
	Trails are an important part of life on both sides of the Wasatch. We need more trail funding, more robust planning, and a commitment to getting people to trailheads where they can have a quality trail experience outside the sensitive trio-canyons area of the Central Wasatch.	Salt Lake City	04/30/2015
	Transit up the canyons at the moment is completely fine. Buses work and so do cars. Instead of promoting a different form of transportation promote car pooling and safe driving.	Salt Lake City	05/01/2015
	transportation- The blueprint proposes Exorbitantly expensive proposals for solutions, in the case of tunnels connecting LCC and BCC to PC, unnecessarily. I worked at Snowbird for over 20 years, and didn't see any use or need to be connected to PC, all this interconnect is marketing schemes. Not something skiers/tourists really need. ANY polis showing it favorable is STILL just marketing HYPE, which is all fine to talk about, has been talked about for nearly 40 years. But when you talk about spending a BILLION \$ to dig tunnels, NO as a long time skier in LCC, skiers have always talked about a rail system up LCC, but it has always been a dream because of \$\$\$\$\$\$\$\$\$\$ and all the talk of Buses, rails, tunnels, as in all public transportation, they are underutilized because Americans don't want to get out their cars.	Salt Lake City	04/30/2015
	Tunnels and trains in the canyons is not a reasonable transportation option. Use fees would likely control traffic as effectively without the environmental disruption. Electronic readers like in HOV lanes or tollbooths all over the East Coast would keep traffic flowing while limiting use.	Salt Lake City	05/01/2015
	We certainly need a long range plan for the Wasatch. We are so lucky to be able to recreate in such a special place so close to Salt Lake City. I like that the plan tries to balance so many needs and desires: water quality, air quality, a trail system, public transportation, etc. What is not addressed is a complete end to ski area expansion once a resolution is reached. Ski areas are insatiable in their quest for never ending expansion. What worries me is that there is quite a bit of private land available in the Big and Little...these holdings are wild cards and it makes me reluctant to trade off public land without an idea of the possibility of development on those private holdings.	Salt Lake City	03/16/2015
	We DO NOT NEED a tunnel (or ANY access) from Little to Big Cottonwood - it would be environmentally irresponsible and benefit only a few	SALT LAKE CITY	02/05/2015
	We don't need this, the mountains are already crowded and can't handle more development. Start a new development in another area with private land and more space. Why ruin what you have?	Salt Lake City	02/05/2015
	We love the "wild" Grizzly Gulch and are concerned that it and other areas will not be so wild as recreation-for-profit attempts to capture these spaces. I do not see how ski expansion serves the purposes of the people. The NATURAL wonders of Utah will foster tourist dollars, not more development. I am all for mass transit, but any rail system in our narrow, water cut canyons would be outrageous... Any thinking person could see that if they walked or biked the canyon. The only rail would work would be if auto traffic was discontinued. We have a HUGE responsibility to preserve wild places. That won't be done through compromise, but through appropriate sacrifices of personal preferences and possible financial gain.	Salt Lake City	04/23/2015
	We must do all that is possible to preserve and protect what is left of our fragile wildlife and their environments, and for generations to come. This means quickly securing our delicate lands, and the non-human inhabitants who make their home there, from the damage of human intrusion, before it's too late! We lose our wild lands, we lose our humanity along with it.	Salt Lake City	02/05/2015
	We need to ensure that the transit system that is proposed has little or no impact on the canyons. That will be tough to sell to a lot of people.	Salt Lake City	05/01/2015
	We need to see cost versus benefit analysis.	Salt Lake City	02/21/2015
	Well..... I disagree with the focus on transport systems and economic growth. Please manage for wilderness and preserving the existing use and property owners like me.	Salt lake city	04/29/2015

	<p>When the Mountain Accord process was initially proposed I was enthusiastic and optimistic. I fell in love with the Cottonwood Canyons in the early eighties and the affair remains strong. Yet over the last three decades I have seen the impact of a dramatic increase in users despite the efforts of the Forest Service, Town of Alta, Friends of Alta and many others to mitigate said impact. Clearly something needs to be done. My comments address the following: Overview - the unique nature of the three primary core Wasatch areas of Park City, Big Cottonwood Canyon, Little Cottonwood Canyon. Transportation in the Canyons - Transfer of Private Lands to Public Entities - Transfer of Public Lands to Private Entities - Water Issues - Cost. Overview - The three main areas (PC, BCC, LCC) of the core Wasatch each have unique characteristics that offer both locals and visitors distinct and special experiences. We are not Europe nor should we try to be. We are Utah; let's celebrate and preserve the special characteristics of each of the three areas. The mountain accord as proposed would destroy the individual character of each of the three areas; the combination of ready access via rail line and increased developable space in the base areas would create a much more homogenous experience across the zones. Additionally it appears to me that what began as a transportation plan has been hijacked by development interests as a real estate development plan. I am in favor of a sensible transportation plan. I am opposed to a plan that opens the door for significant additional development in the Cottonwood Canyons and has the additional unfortunate consequence of diluting the unique experience offered by each zone. Transportation in the Canyon - A rail interconnect is a bad idea. As described above it will result in a much more homogenous experience across the three areas. It also would take a long time to come to fruition and would be extremely expensive. Fortunately there are better solutions. Note again that a rail interconnect is extremely expensive. The cost is measured in billions of dollars and it will likely take decades to plan, approve and build. The problem exists now and needs to be resolved. Adding a dedicated bus lane in LCC would cost millions not billions and could be completed in years, not decades. (Note: A billion is one thousand times greater than a million. This dramatically lower price tag should appeal to our congressional delegation that claims to be fiscally conservative). Transfer of Private Lands to Public Entities - The idea of preserving lands from future development is appealing. It would be a relief to be assured that the Grizzly Gulch Area and the Emma through Flagstaff Ridge in LCC would be safe from development pressures in perpetuity. Unfortunately transferring private lands to public entities would not create this assurance. Large parts of the existing ski terrain in the Cottonwood Canyons is on permitted public land. The political pressure to develop these areas would not cease as a result of the mountain accord and future Utah congressional delegations will likely find themselves pressured by the existing resorts and other developers to open up these public lands to additional development. The only way to assure these lands remain safe from development pressures is to have title in the properties pass to a not for profit entity like the Utah Land Trust. Otherwise the transfer will be a development delaying tactic and nothing more. Transfer of Public Lands to Private Entities - Alta has retained its unique character over the past several decades through the dedicated efforts of the Alta town office, Friends of Alta, and the broad community of people who have come to love Alta for its relatively wild and undeveloped nature. Yet much is changing. We have seen Vail resorts take control of the Canyons ski area and take ownership of Park City Ski Area. We have seen Deer Valley acquire Solitude, Vail, along with other ski area operators, has figured out the formula to dramatically enhance shareholder returns by creating comprehensive base areas with a full range of services including lodging, dining, shopping and entertainment. The land swap as envisioned which would pass title of much of the land in the Alta base area to the Alta Ski Lift company would be an economic bonanza for the shareholders of the Alta Ski Lift company. It would also make the Alta lift company far more valuable to an acquirer like Vail Resorts who need developable land in the base area to build it out according to their model. This would come at the expense of the broad public who owns the area, through governmental entities, right now. I have no idea what the Alta Ski Lift company plans to do and count many of the individuals managing the resort as friends. However I do not think it is appropriate to provide an economic bonanza to a private entity at taxpayers expense. Additionally such a transfer would allow development space at the Alta base for development and acceleration of the homogenization of the three core Wasatch areas which I oppose. Water Issues - I am not sure what the political process was that resulted in</p>	Salt Lake City	03/07/2015
	<p>Where you mention transit systems...is that including interconnect and ski lifts? This section is vague and doesn't identify what those alternatives are. I am strongly opposed to interconnect and additional ski lifts and/or gondolas. However, I think a train, rail system or increased bus usage to and from the canyon areas is warranted to decrease traffic, allow for growth and to prevent the environment from being destroyed. Interconnect is TOO much. Our mountain range is far too small to house such massive expansion of ski lift chains. Ski lifts require access roads and maintenance roads, all traversing through our watershed. Let's limit the "crazy" ideas and focus on something sustainable that won't result in our mountains being destroyed. Interconnect is bad. Other transportation options are warranted. We are experiencing record warm winter temperatures and very little snow. What sense does it make to build a series of ski lifts when the snow is not falling as hard and fast as we would hope it to? Let's focus on conservation of our limited resources, not exploitation of them. Major expansion and development should be limited. We only have one Wasatch. Let's not cover it in buildings and lifts for tourists. We live here. They only visit.</p>	Salt Lake City	02/06/2015
	<p>While I indicated "very well" for each of the criteria, this rating would be dependent on degree to which each portion of the Accord is executed. For example, "increased environmental protection" on public lands could be interpreted in many varying degrees of conservation designation. It would serve the goals of the Accord and the people of Utah if this was intended to include the maximum environmental protection, or in other words, wilderness designation. Similarly, "an environmentally-sustainable transit system" would be better served with tunnels than any aerial route and with rail or bus rapid transit over normal buses.</p>	Salt Lake City	02/05/2015
	<p>While I support more private lands becoming public for conservation purposes, tunneling through the mountains seems like a pointless and incredibly invasive approach to transportation in our beautiful mountain range.</p>	Salt Lake City	03/18/2015
	<p>Will additional transit be eco-aware? More research and quantifiable data is necessary to move forward with any focus.</p>	Salt Lake City	03/06/2015
	<p>Vibrant economy should not take precedent over quality of recreation activities in the canyons. The states growing population will ensure addition impact on resources without canyons and Park City. New businesses, traffic, outlets, buses, schedules, etc.</p>	Salt Lake City	04/30/2015
	<p>Building tunnels through pristine and protected wild land areas is no way to protect the environment. Connecting these resorts doesn't even make sense. Brighton, a resort that's mostly snowboarders, being connecting to Alta, a skier only mountain isn't going to benefit from this situation. Valuable backcountry terrain will be damaged as well.</p>	Salt Lake City	05/01/2015
	<p>Economically, the Mountain Accord will likely be successful. However, it will be at the sacrifice of the environment. Opening the canyons to an increased flow of construction, and late, traffic, will cut into the landscape and disrupt the ecosystems of the Wasatch.</p>	Salt Lake City	05/01/2015
	<p>I agree with Lin Alder in this article here: <a href="http://www.sltrib.com/opinion/2446902-155/top-ed-before-expanding-ski-resorts-w/">http://www.sltrib.com/opinion/2446902-155/top-ed-before-expanding-ski-resorts-w/</a> He said, "The smartest long-term economic development scenario is one that capitalizes on where mountain culture is going – backcountry terrain – instead of where it has been. The Wasatch backcountry will continue getting more crowded. The smart economic bet is on keeping backcountry available for the next generation." Doing this would also help protect the environment and the water shed as the pressure to it grows. And it will make it available to all not just those who can afford to pay to be there. Please push to preserve every square foot of our wilderness. Stop any more future growth of private land ownership in these mountains. And if any private land is being sold in our canyons please buy it up to make it public land. Roll back the private and corporate interests. PLEASE PLEASE make it possible for all of our children children be able to enjoy those mountains for many generations to come.</p>	Salt Lake City	05/01/2015
	<p>I am like a lot of people who left Utah for advanced education and came back for the recreational opportunities. Lots of people in my profession make more money than I do because they chose not to return. The loss of money is more than compensated when I make dawn patrol laps before work. 7/10 times those laps are done in Grizzly Gulch. I am never the only one in the parking lot. Any resort expansion invades heavily used backcountry space. And if you think the backcountry is limited to a few weirdos try parking at Mill D or Spruces or Bear Trap or White Pine or Grizzly Gulch after 9 am on any Saturday once the snow flies. Weirdos, I'll grant you but there are lots of them. I've been backcountry skiing since the early 90's and have watched the explosion. There is no place like the Central Wasatch in the world. Montana, Wyoming and Idaho have more wilderness but lack the public access. The resorts are not hurting. Look at the money they are currently willing to throw around in lawsuits and acquisitions. They don't need an interconnect and more lifts, with a few exceptions, removes an irreplaceable resource. I will add that in looking at prices to take my family of 5 skiing I'm thinking of buying everyone an avalanche beacon. I would support land swaps with resorts in order to permanently protect places like Grizzly Gulch which is the last easily human powered accessible north facing area above 9000 feet left in the Central Wasatch. I know some of it is private land and some of it public. I support property owners rights but if Alta wants to expand there let them give up public Forest Service land on which they currently operate. How about Alton Basin? I would support a lift expansion in Honeycomb Canyon for Solitude providing it does not actually extend the range that inbound skiers are able to go. No opening up Silver Fork to Solitude skiers. In other words the lift will not begin lower than the Honeycomb Return lift thus effectively opening up the East Bowl of Silver Fork and west side of lower Silver Fork to side country access. Look at where the avalanche deaths are increasing and you'll see it's mostly coming from people leaving resorts and getting in trouble. The rail proposal, especially the idea of tunnel, I find dangerously amusing. A proposal to build a really expensive transport system to benefit a couple corporations? I would laugh if I didn't worry it would actually happen. Expand the bus service! Currently to get a bus to Alta without 2 exchanges or driving to the canyons and leaving my car at the park and rides I have to get my family to the stop at 7:30. No buses currently stop at trailheads. We already have most the infrastructure, let's use it. Interconnect has been a dream for the ski companies for ever. NO! If Park City and Deer Valley want to drop their rates I go for it. Sol-Bright and the lift between Alta and Snowbird Mineral Basin are fine. Hardly anyone uses them. New lifts or gondolas going over ridge lines to connect the canyons is a terrible idea. HATE HATE HATE this idea in any form. OneWasatch, Ski Link, Interconnect or whatever you want to call it, it's a terrible idea.</p>	Salt Lake City	04/30/2015
	<p>I read every word of the accord. It was one big transit system and "economy booster" proposal wrapped up in jargon about protecting the wasatch and maintaining the wasatch wilderness. How is plugging a hole in the mountain and everything that comes along with road widening and more people in the canyons at all a way to preserve what we've got? I spend a great deal of time backcountry skiing and mountain biking right up where this park city train is planned to go. Let's say I want to take my kids back there in ten years. How do we tell them that the train was to help that place get better?</p>	Salt Lake City	03/12/2015
	<p>I think the Blueprint does a good job of explaining its purpose with pictures and descriptions but it could also suggest a few ideas that are not completely taking away what is already there.</p>	Salt Lake City	02/11/2015
	<p>Preserve Grizzly Gulch. Use Bus Rapid Transit in Little Cottonwood Canyon. No trains. No tunnels. More designated wilderness areas.</p>	Salt Lake City	03/15/2015
	<p>The blueprint said that it would use buses...buses do not meet the vision, we need light rail.</p>	Salt Lake City	05/01/2015
	<p>This is no more than a Band Aid to grow the resorts using tax payer dollars. No many real issues are being addressed.</p>	Salt Lake City	04/30/2015
	<p>I would hate to see new roads/tunnels connecting LCC and BCC to Park City. I don't feel that is the direction we want to be headed. Not sure if it's less impact, but I would prefer to see a gondola that could not be used to ski - transportation only - connect the resorts. Better yet, leave it how it is. It should be a priority to protect the back country character of the upper cottonwood canyons.</p>	Salt Lake City - Salt Lake	03/31/2015
	<p>The proposed blueprint is a thinly veiled outline for additional development of the central Wasatch Mountains: it proposes ski area expansion and methods for increasing human visitation and impact in the canyons. To better meet it's purpose, the blueprint should permanently prohibit expansion of ski areas and limit daily human entrance to the canyons, by any mode of transport. In addition, due to the air pollution caused by vehicles with internal combustion engines, these vehicles should be completely restricted from operation in the canyons for at least two to three days a week.</p>	Salt Lake City (East Millcreek Township)	05/01/2015
	<p>The Proposal for a train in Little Cottonwood Canyon needs far more details. How would the already narrow road accommodate the train? What about the environmental impacts of the train? Wouldn't a high speed - natural gas powered - bus system in a dedicated lane be as effective as a train and not as environmentally impactful? The preservation of the Mt. Superior Ridge line should be preserved from Twin Peaks and Stairs Gulch up to The Wolverine ridge including Grizzly Gulch without allowing any further ski lifts or private development. There needs to be more emphasis on preservation and not as much as development and ski resort linking ideas. These Mountains have many hundreds of Ridgelines and they should have sensible protections that are permanent and preserve the wild nature of the Wasatch Mountains and back country. These Mountains are our watershed and close place for escape to serenity and silence. There should be strict limits on off road motorized travel that are maintained. Please preserve the wilderness and the refuge of these canyons, ridge lines and valleys as our escape from the man made world of machines and city and engine noises. We all need and can benefit from keeping the Wasatch as close to preserved as they are. There are plenty of accommodations in hotels and dining and homes to serve and grow the current and future demand. None of resorts and mountain towns ever completely sell out. There is plenty of recreation and tourist infrastructure to accommodate present and future demand.</p>	Salt Lake City (native)	05/02/2015
	<p>Expanding public (rail) transit within City limits specifically to sugarcane and liberty wells area, as well as beyond the airport would provide huge opportunity for more efficient transit for those of us who live within the valley and desire to clean the air we live in daily.</p>	Salt Lake City (Sugarhouse)	02/04/2015
	<p>Any concept to connect Park City to the Cottonwoods should be put away. If you want to destroy what is there - continue but you will never be able to bring it back to how it is today which is not even close to how it was 20 years ago. Stop this proposal to connect everything, now before it gets out of control. Any idea to charge a fee to enter or use the canyons makes no sense. People have money to spend it will not detour visits at all. As stated in you plan - increase visitation ?? You are trying to limit congestion yet you want to increase visitation. You cannot have both. I do not know if this is feasible and if it is should have been done years ago. Very large multi level parking facilities at the mouth of each canyon. From there you can have bus service up and down. Which needs to be reactive to those who wish to get off and on at most any point of interest at any time, that is how people like to travel the canyon. Stop Look whenever ever, come and go as and when they please. Some sort of rail service up little cottonwood - and do not allow cars at all thus saving on avalanche control and no traffic congestion. A tram from Sandy to Park City who's money making losing idea was that. What would it cost to build, to ride, to operate? Lets be realistic! Just some possible ideas off the top from some one who visits the canyons often. Iks Kennyg.</p>	Salt Lake City, Utah 84047	02/25/2015
	<p>I am not in favor of a train that cuts through the ridge between Big and Little Cottonwood Canyon. It is too expensive, and too detrimental to the natural environment that exists there. I am in favor of better public transportation in the canyons, but think that an enhanced bus system would be a much more effective use of funds and be better overall. There just aren't enough people who would use a train on a daily basis to justify the cost and the environmental damage that would occur.</p>	Salt Lake City / Alta	03/12/2015

	<p>Utah has a vibrant economy without ruining that that a relatively few enjoy with the dreams of a few to tame the 11 thousand foot peaks at our doorstep. Please do not Disneylandize the wilderness and near experiences in the Wasatch Mountains that are already easily available to over 1.5 million people along the Wasatch Front. Like Democracy, most people don't give a damn. In fact roughly 95% of the people, who live near, do not use the Wasatch mountains and they are ignored other than appreciation as the beautiful backdrop the mountains give to city and suburban dwellers. It is so wonderful that this wilderness is available to us who love it and live here because it is so relatively accessible. Please do not ruin what the Wasatch offers to us without destruction on the whim of developers.</p>	Salt Lake City use mostly Little Cottonwood Canyon	05/01/2015
	<p>At this point it is difficult to make a good assessment, it seems to be early in the process, the proposed changes don't have concrete direction or even very much supporting information as to costs, environmental impact, but the goals and the evaluation steps to meeting those goals are clearly published and will hopefully help the community better understand this along the process. Visually/aesthetically, the blue print doesn't "look" much different than the way we view salt lake right now, it's difficult to see the impact of proposed changes.</p>	Salt Lake City, 84105	02/12/2015
	<p>Obviously a lot of hard work and imagination went into the proposed blueprint. The residents of salt lake valley are fortunate to have such a collaborative effort in place. As the plan moves forward I would like to ask that the recreational opportunities of the free flying community be protected. I am a member of local organizations representing paragliders and hanggliders, soeeflyers and speed riders, and basejumpers. As board members maybe aware Utah is a world class destination for these sports and participants travel from sound the world to fly here. National distance records have been set from sites in big cottonwood canyon. Many of our sites are within the borders of areas that have been noted as under consideration for enhanced Protection. Flying sports in the wasatch can easily be documented to be a usual and customary use. Our users are extremely low impact, lower than hikers runners skiers and bikers by far. The majority of our use occurs in the air, however rarely on access to multiple hillsides and Mt tops to launch or jump and various areas in the canyon bottoms for intended or unplanned landings. We use no fossil fuels in our enjoyment of our public lands, make no noise, and leave no trace. However we feel a potential threat from the mountain accord project. This is a shame because most of the projects goals and values are shared by members of our organizations. Many of us are also avid climbers backcountry skiers ultra runners and hikers. Some like myself are also property owners in the wasatch. Unfortunately almost all of the federal land managers controlling wilderness, national monument, and national park land have severely restricted or more often prohibited paragliders hang gliders and basejumps. Generally we are lumped in with powered aircraft. Very often our pilots are aggressively harassed and commonly criminally prosecuted for both intentional and unintentional use of our public lands. This does not occur with land managers who administer national forest and BLM land. The wasatch is unique as our use of these lands will predate any change in designation and we expect to have continued access to our land. Our organizations would like a part of the discussion about land designation changes and to secure the right to continue our recreational use of our lands. I would appreciate the chance to discuss this facet of future proposals in greater detail with members of the executive committee.</p>	Salt lake city, Mt Haven	03/12/2015
	<p>Connecting Sandy to Park City via LCC and BCC is a bad idea, as is connection for connection's sake. Bus is cheaper and more flexible than rail and aerial, and increasing traffic at the top of LCC and BCC is the opposite of "an environmentally-sustainable transit system".</p>	Salt Lake City, UT	02/24/2015
	<p>Hello and thank you for the opportunity to provide comments about the proposed blueprint for the Mountain Accord. Cottonwood Canyons scenario - I generally support the proposed development swaps which would allow ski areas to expand near their bases while preserving and protecting Superior, Emma ridge, Flagstaff, and White Pine. It is essential that Grizzly Gulch also be preserved and protected. It's important to recognize that the status quo already advantages the ski resorts with much of the high elevation, north facing terrain that provides the best skiing. In a year like this, when snow below 8,000 feet is sparse, I've become frustratingly aware that most of the prime terrain is already occupied by ski resorts, forcing backcountry users to crowd into a few small areas. I have no issue with ski areas developing their bases, within reason, provided appropriate environmental considerations are taken, and protecting additional land for backcountry ski terrain is important to preserve the recreational value of the Wasatch. I say Grizzly Gulch must be included because this trailhead is an important access point by which backcountry skiers can safely access much of the rest of the terrain in upper Little Cottonwood. Grizzly also offers access to the most diverse terrain of any backcountry area in the Wasatch, from steep chutes in Wolverine bowl to mellow slopes perfect for beginner backcountry skiers to a safe summer road that is often used by snowshoosers. Every time I went to Grizzly Gulch this winter I noticed that it was crowded with backcountry skiers, cross country skiers, kids, families, snowshoosers, etc. I think the unique nature of the terrain here (safe, approachable, beautiful, fun) is why it would be such a loss to the recreation community were it to be developed. Transportation - I support more transportation options along the Wasatch Front, coupled with incentives to use them. A few of the proposed options stick out to me they would have a big impact at a reasonable cost - shuttle service up Millcreek - year round - and a bus service up Little Cottonwood - fast transit from the airport to Park City - high capacity transit in eastern SL Valley. A few options seem unreasonably expensive and designed mostly to serve the needs of the ski resorts. While I agree that we need to find solutions to the traffic in the canyons, I think there are much smarter ways to use our resources than building a tunnel. I think we should increase the capacity of the existing transit routes we have before spending money to build new ones - by running more frequent buses up existing routes, optimizing service to encourage people to use them, and potentially keeping Guardsman pass open in the winter to provide access from Park City to Big Cottonwood.</p>	Salt Lake City, UT	04/26/2015
	<p>I answered "Undecided/I don't know" to all of these questions because I feel that the Blueprint does not provide enough information to evaluate the statements. It does not address the specific environmental impacts of expanding ski areas (putting in lifts, generating additional snow, etc.) or widening the road to provide a bus lane or a train. I feel that the specifics of each of the proposed changes could make a large difference in the viability of various options. For instance, if there is a train built up Little Cottonwood Canyons, how much would it cost to ride, and would there be easy access to parking at the mouth of the canyon (or easy connection to other public transit)? If the train was faster than driving, and free, and if there was a toll to access the canyon, I might be inclined to ride the train. But if the train carries a cost that is greater than the cost of gas for driving up the canyon, I don't think that I would use it. I'm not sure that expanding a bus lane would provide much benefit. I haven't observed a large problem with the buses sharing a lane with cars. Running buses more frequently might make me more inclined to use them, or having expanded parking at the mouths of the canyons for people using the buses. Again, a financial incentive would be needed for me to utilize a bus system. One question I have regarding a potential train up the canyon is whether it would stop at backcountry trailheads, because I primarily use the backcountry trailheads rather than the resorts. With regards to the proposed expansion of ski area boundaries, I'm uncertain as to why the resorts need to expand - some days are quite busy, to be sure, but I'm not sure that additional terrain would provide an additional draw to skiers/boarders, and thus I'm not sure that it would generate significant revenue. With the climate changing and climate models predicting reduced snowpacks, is resort expansion really a good idea, even purely on economic grounds? Similarly, I'm not sure that adding a bus lane would provide a big enough benefit to offset the costs. People would use the bus lane, but would it actually cause significantly increased use of the resorts? One of my main concerns in viewing this proposal is that the integrity of the backcountry be maintained. There are proposed "trades" of backcountry terrain for resort expansion, but I believe that a significant portion of what was once all backcountry has already been allotted to resorts. Resort skiing fills a key niche in the recreational community, but I think it is important to preserve the wilderness setting that makes the Wasatch so unique. Along with this, I believe that preserving the natural ecosystem - for water security, if nothing else - is important, and that expanding/connecting the resorts may jeopardize this.</p>	Salt Lake City, UT	03/17/2015
	<p>I don't like the idea of either light rail or another lane dedicated to bus only in Little Cottonwood Canyon. Would it be possible to increase bus service available, provide more parking at the base of the canyon, and use the road as it is. I also do not like the idea of a tunnel or air transport between canyons. Why should this be desired at all? If you want to hike or ski in one of the canyons there is plenty of terrain in each canyon for local activity. If you want to stay in one canyon and recreate in another canyon you would spend more time transporting than recreating.</p>	Salt Lake City, Ut	02/25/2015
	<p>The one aspect that I have not seen discussed is aesthetics. The road cut that goes up little cottonwood canyon is very significant and significantly detracts from the scenic character of the area - I would love to see a transit solution that is geared to fit in with the aesthetics of the resort.</p>	Salt Lake City, UT	02/23/2015
	<p>While I heartily applaud the MA as a valuable FIRST step, it is a disappointing baby step. The heart of this blueprint SHOULD be a viable 21st century transportation plan for the Wasatch Front and back that directs government and private entities to address transportation PRIORITIES. Currently, the MA pretty much has it backward, in identifying transit needs in Little Cottonwood Canyon as the highest priority. In my view, the biggest priority, which will have the most noticeable effect on all of the MA analysis areas, is a comprehensive mass transit system that will serve the Wasatch Front and Back and dramatically reduce the number of vehicles and vehicle miles in the area. While the MA gets a part of the solution right (the proposed mass transit system up Parley's Canyon), it misses the most important priority--the Salt Lake Valley--and instead, inexplicably, focuses small-bore on Little Cottonwood Canyon. The transportation system we need has to start with the CORE--a "backbone" of commuter rail (light and medium) that encircles the Salt Lake Valley (i.e., along the I-2-15 alignments), with a REAL mass transit system that operates where people live, and when they work. People should not have to walk more than 0.25 miles to get to a bus stop, and the system should operate 20-24 hours, 7 days/week. MA should set aggressive/aspirational goals for reductions of vehicle miles traveled, PM2.5 emitted, and CO2 generated/released. If we do not get a handle on this, environmental quality, quality of life, economy, and recreation will all be beside the point: too many people idling in traffic creating even more emissions that will continue to undermine our health and quality of life. And too much CO2 to contemplate even having a viable ski industry, much less water to drink. That die is already cast, actually, but failure to deal with this only condemns our children to an even MORE hellish (temperature wise) future. Getting back to MA's transit priorities, the development of a viable mass transit system will solve the car and parking problems in both Big and Little Cottonwood Canyons, Kimball Junction, and everywhere else. Get people out of cars and cars off the road, provide them with mass transit to get where they want to go when they want to go there, and viola! no more parking problems or red snakes in the canyons! This is likely "out of scope" for the MA, however, if MA's conclusions are altered to identify regional mass transportation planning and implementation as the highest priority to solve the problems identified in the blueprint, and if the MA then becomes the impetus for real political and social will to solve this problem, it will be a valuable document. If not, and if it is finalized with "cherries on top" (cog railroads up Little Cottonwood Canyon) as the highest priority, it will be a travesty of planning, a waste of public servants' time, and just another foot of dirt on the grave of the things it purports to want to conserve. Thank you for the work you have done, because you have gathered a lot of data, and made a start of identified options, but if I needed to condense this whole thing down to one statement, it would be "Get your Priorities straight. It's all about the Transportation." Thank you for the opportunity to comment.</p>	Salt Lake City, UT	04/24/2015
	<p>Work with ski areas and USFS to build recreation opportunities around the transit systems. Hiking and biking trails that traverse from canyon to canyon with a ride on transit connecting them. Transit stops at the ski lifts, with parking lots further away, etc.</p>	Salt Lake City, UT	02/04/2015
	<p>Do not expand existing borders of ski resorts. There is a growing interest in back country skiing for the younger generation for two reasons. It is less expensive and exercise intensive. We need to preserve the undeveloped space that is left in the small Wasatch areas.</p>	Salt Lake City, UT 84121	04/30/2015
	<p>I think there is still a lot undecided. The transportation alternatives are all worth studying, but I don't think there is a compelling case yet for rail transit as superior to bus rapid transit in the canyons given costs and the effect of a limited access rail bed on recreating and wildlife. Creation of new trails is very welcome, but some difficult to evaluate without more specific plans. It is disappointing that the blueprint does not specifically mention the types of users of public transit and there needs. This makes me wonder if only foot traffic and skiers are being considered. Other uses of the canyons that should be considered are mountain biking and in millcreek canyon, dogs. There may be other users I am not aware of as well.</p>	Salt Lake City, UT 84109	04/03/2015
	<p>Focus should be on quality not quantity and on protecting the environment and water shed. As the ever expanding ski industry continues it should be kept in mind that the cottonwood canyons are a very fragile and finite area which already have developed a great deal of commercial ski terrain. We can't possibly keep expanding resorts as demand and popularity of skiing continue to grow and still protect the fragile environment and water shed.</p>	Salt Lake City, Utah	02/25/2015
	<p>Stop making - marketing Park city as the Bedroom for all of the wasatch canyons. We who live here and have done so for since birth should have the most say as to how and by whom the canyons are used. Too much is slanted toward outside money interest groups. Listen to the true locals. More ski lifts will not cure anything it will just add to the issue / problems - tks kennya</p>	Salt Lake City, Utah	03/16/2015
	<p>Sorry, I want to support but as a pro-business registered Republican, there are too many un-answered questions.</p>	Salt Lake City	04/08/2015
	<p>Even though expensive, the train option up Little Cottonwood, with connecting tunnels to Big Cottonwood and Park City is my preferred option. Any option which reduces the number of cars in the canyons is positive and the train option would offer and a unique and exciting way to access all these canyons have to offer in a non polluting and sustainable way. If the Europeans have found a way to do this why can't we?</p>	Salt Lake County (Canyon Rim Area)	04/28/2015
	<p>MA purports to be "balanced," but the proposed Blueprint is anything but balanced. It expresses no intent whatsoever to respect private property rights. Moreover, it shows no trust in private enterprise to achieve its purposes. It is a blueprint for more government control by public employees who have nothing personally at risk and who likely have no real world experience. MA's final Blueprint needs to be improved by expressly stating its intent to respect private property rights and to have government employees do so. In addition, it should seek ways to enlist the support of private enterprise rather than merely seeking to control it.</p>	SALT LAKE CTY	04/30/2015
	<p>It would be a travesty to put a train up Little Cottonwood Canyon. Building a train would do irreparable damage to the environment and beauty of the canyon. The canyon does not belong to the ski resorts, the ski tourists or the local skiers. It belongs to the everyday Utahn. If something must be done to upgrade the ski experience and deal with existing issues, a gondola system connecting the resorts should be carefully studied as a preferable alternative. It would do far less damage to the environment and not block access to Little Cottonwood or other canyons for any Utahn. As a state, we simply cannot afford to spend billions to build a train up the canyon. Some people say that this money will come from the federal government. If the federal government gives money for this project, they will consider that their obligation to help Utah is met. If we can get billions, that money should be used to upgrade, repair or expand the transportation and road system throughout the Salt Lake valley, particularly on the west side. If we had any "extra" money, it should certainly go towards education or other top priorities that would benefit many more of our citizens. Putting a train up Little Cottonwood Canyon is a terrible idea, designed to benefit just a few of the wealthiest among us at the expense of other pressing needs. Ravaging this spectacular canyon to benefit this small segment of our population is not only indefensible but inexcusable.</p>	Sandy	05/01/2015

	Early on in Mtn Accord meetings there was talk of not killing the goose that lays the golden egg in the Central Wasatch. Big changes to this environment cannot be undone. Connecting the Cottonwood Canyons to Park City via tunnels and/or rail would alter the unique environment of those canyons in irreversible ways. Connecting Big and Little Cottonwood Canyons via tunnels is fine because these 2 canyons have a similar population density and recreational uses. Putting a train up the Cottonwoods would also damage the environment of those canyons. Better bus systems and fewer cars are needed in both Cottonwoods along with incentives (yearly fee pass) for people to leave their cars behind and use the buses. A train up Parley's Canyon makes a lot of sense. There are many more people traveling up and down that canyon on a daily basis. Yes, it's a little slower than cars, but most commuters will make that small sacrifice to avoid bad weather and/or negotiating traffic.	Sandy	03/10/2015
	**** I believe the best overall plan to access the Park City area from SLC is with buses a rail system would have a devastating effect on the wildlife and natural resources. **** A Tram or gondola system would work well in the little and big cotton wood canyons as long as there would be loading stations on/off at recreation sites throughout the canyons, hiking / biking / back country access, as well as express routes direct to the ski resorts. **** The rail system could be expanded to access central terminals for each of the transit systems - Train and buses.	Sandy	04/30/2015
	1) Definitely bring Grizzly Gulch to protected status via public ownership 2) Move bicycling lane improvements in all canyons to the top of the list. Millcreek, Parleys, LCC and BCC. Incentify bicyclists while de-incentifying autos. Set aside discounted camping options for cyclists who cycle in. 3) Toe the line to the utmost on NOT allowing ski resort expansion / connections. Increase independent study of supposed greater marketability being touted by the ski industry. The growth being reported may be localized but skier visits and numbers across the board remain stagnant and in decline. Those in the industry site growth but the growth is only taking visitors from one area to another not creating overall industry growth. 4) Survey user groups on their mode of transportation and why they do not use public transportation. Gain public buy-in in conjunction with resort management buy-in to public transportation that is mutually beneficial to both user groups.	Sandy	05/02/2015
	1. Until the United States government has a balanced federal budget, and is operating with surplus funds, it should be considered an act of high treason punishable by death or exile to entertain the notion of blowing money we don't have as a nation. Our elected officials, have the sacred stewardship of protecting the rights of ALL the people. Not save our canyons special interest groups, resort owners, and all vested parties who will profit and make fortunes off of this disgraceful project. 2. Save our canyons?????what hypocrites. They obviously have under the table deals with the power brokers who would willingly sacrifice this canyon and allow its total desecration for some sort of underhanded trade off or concession on another area they are more interested in. 3. The de-watering of Little Cottonwood stream by Murray City is irrefutable evidence of the irresponsible management of resources by a government entity. They harvest the water to reduce the cost of electricity to their citizens. They own the rights. They have the power. Yet, they refuse to leave a small portion of water running in the native stream bed to preserve the natural habitat. The trees, fauna, and animals have been dying for years, and the destruction advances every year due to lack of water. If they cannot exercise the self restraint to leave a tiny amount of water to sustain the habitat of the canyon, how are other self vested government entities and special interest groups to be trusted to do any better with the entire canyon impacted severely not mildly, or partially but total. 4. Transportation: Require the resort owners to purchase private property in the valley and use their own privately owned property for employee parking, and require them to operate natural gas or electric/hybrid buses to shuttle their employees. This will reduce traffic substantially and reduce exhaust emissions. (Run on natural gas on the ascent, and electric power on the descent. 5. Require resort owners to provide open areas of federal or state lands controlled and operated by them for public access to hiking, horseback riding, OHV, camping, etc. The national forests are designated as "lands of many uses" The control given to private parties of public lands always involves somebody getting rich. Wise leaders long ago understood the need to protect our resources for all generations of American's. This does not do that. Imagine Bryce Canyon with a train running through it, The Grand Canyon, Yellowstone, Glacier etc. etc. etc. being developed to ultimately make wealthy people more wealthy. How long before we have car lots, Mega-plex theaters, McDonalds etc. in our national parks and forests? Summary:As a lifelong resident of Utah, a little Cottonwood Canyon resident for almost 30 years, and as one who respects and wants to protect the great outdoors for all to enjoy for generations, words cannot convey my extreme opposition, disgust, anger, fear, and sorrow at the monumental travesty you are all planning on shoving down our throats. Shame on you all. This is the dumbest thing you politicians and special interest groups have ever come up with. work on your budgets, crime, and services. Leave our natural resources alone.	Sandy	05/01/2015
	A "vibrant economy" should not be at the sacrifice of environmental issues. Development is not always better. Bigger is not better.	sandy	04/07/2015
	A key factor in regard to this is whether or not Alta agrees to the proposed land swap in Grizzly Gulch. With this swap, Mountain Accord has done an admirable job in meeting its goals, with this swap, it gives dispersed recreation and the environment little protection.	Sandy	02/26/2015
	A number of questions: It appears that the vast majority of "preservation" energy is devoted to LCC. How does increased access and restricted growth of available resources benefit the skier experience? I have skied at Vail and in the East and it is not enjoyable. Public funds should not be used to improve the profitability of the ski areas! What specific projects are planned for the 108 units of water at Alta? Has adequate parking been secured for the planned shuttles, buses and train passengers up BCC and LCC? Current parking is inadequate on high demand days without the addition of more options. A tunnel from the East to LCC would only serve to increase demand on inadequate facilities at Snowbird and Alta which you are restricting from further expansion. How does this serve the skier experience? In the future, please construct the document in a linear fashion -pg 1,2,3 etc rather than requiring links. Also, please restrict a web document to one screen width. Having to scroll back and forth is not a benefit for the reader. Thanks	Sandy	02/09/2015
	A rail system will trash the canyons. Use a shuttle bus system during the busiest times of the year. Lots of stops, no private vehicles unless you have a permit (own property, etc.) like in Zion NP or in Aspen, etc. Rail is overkill for this pristine, fragile, smallish area.	Sandy	05/01/2015
	About time we connect the Cottonwoods with Park City. Excellent plan that takes the environment into account!	Sandy	05/01/2015
	Adding trains and lanes up Little Cottonwood Canyon is not the right idea. The negative impact it would have on the canyon far out weighs any benefits this plan provides. How about more affordable busing options with more convenient schedules?	Sandy	03/07/2015
	After attending several meetings my concerns are deepened that the proposed blueprint and proposed transportation plan would simply destroy the Wasatch mountains and specifically Little Cottonwood canyon. The canyons are at their limits now in being able to handle the large volume of people currently accessing them. Adding capacity to increase the number of visitors will tip the scale beyond what the canyons can realistically handle. I have seen no studies as to the carrying capacity and environmental impact.	Sandy	05/01/2015
	As a hiker and hunter, I would like to see as little change to the mountains as possible. One of the problems is roads, traffic, and parking. We need to keep cars out of the mountains as much as possible. Replacing them with behemoth buses will mean widening and straightening roads, which I am against also. We need a system that allows environmentally friendly transportation, perhaps smaller natural gas or electric buses. There also seems to be a tendency to put profit and development as a top priority instead of preservation.	Sandy	02/13/2015
	As a local, I am opposed to adding more opportunities for "vibrant economy" (ie. more shops, restaurants, lodging etc.). I want to keep the canyons more pristine and unblemished to enjoy for hiking, skiing, biking etc. We live here and have to deal with the growth...tourists shouldn't take precedence over citizens who love the canyons and have a vested interest in keeping them unspoiled. You can't UNDO overdevelopment!!!!	Sandy	03/15/2015
	As a long time resident (1980s) and backcountry user and father of three. I generally think the facilities at the resorts are more than adequate and would not like to see further resort expansion. I drove for Canyon Transport up and down LCC and BCC for almost a decade. I applied the concept of an avalanche shed light rail up LCC, Accessing Solitude and Brighton and on to PC. Such a line would have to have rider triggered stops at climbing areas, backcountry trailheads and backcountry exit points. The amount of traffic and lack of parking is getting pronounced. Even before I was a professional and still driving for canyon, it was difficult and risky to estimate the amount of time needed to exit LCC to catch an afternoon flight. Traffic caused by storms and powder chasing skiers or late in the day spring avy risk foiled many families attempts to ski in the day and catch an evening flight home. This is a big deal for a 4 to 5 day family ski trip. The visitors that I drove for I think about 8 seasons had little interest in an on skis interconnection between resorts, but they greatly valued getting a few hours of skiing in on arrival and departure days. I think ease of movement between resorts and from resorts to the valley could be a more successful marketing pitch for the resorts than more lifts and more terrain. In lieu of a train I would approve of a bus-commercial vehicle only approach like Zion NP to be tied in BCC and LCC. But you would have to be able to stop and be picked up at multiple spots. Such a system should also connect at the same point so that trips that started in LCC or BCC could use the transit to be picked up in BCC or Millcreek respectively and returned to the same starting point.	Sandy	02/10/2015
	As a Person who works and recreates in both Cottonwood Canyons I agree with the need to appropriately solidify a long term plan. While much of what is being discussed so far seems reasonable the one item that stands out as objectionable is the rationale for a rail system serving Little Cottonwood. The affect of constructing and maintaining a rail system versus benefit seems to go against other stated goals. I certainly agree that the current method of inadequate bus service for both canyons does not serve well however a better use of continued improvement of (then) current buses and scheduling would serve long term goals far more efficiently. Environment-friendly people moving technologies will continue to improve and schedules that include bottom to top and multi-stop offerings can be properly scheduled to accommodate seasonal needs. Y	Sandy	04/26/2015
	As an everyday skier, I would love to have better transportation up the canyon. Traffic and parking is becoming an ever worse problem. The bus system is not the answer. They are slow, pollute, and don't afford me the convenience that would make me stop driving everyday. I think that a Gondola system up LCC would be the answer. No road closures for avalanche work or closure due to accidents. I have heard that a rail system is what is being proposed. If it is in a tunnel or sheltered would make it more viable.	Sandy	03/14/2015
	I was impressed with the environmental proposal, satisfied with the recreational proposal, scared of the other two; but that is because my main concerns are these first two. I am satisfied that care is being taken to preserve "my" mountains.	Sandy	02/17/2015
	By not doing it.	Sandy	02/05/2015
	Continue to consider items that may need to alter. Stay as flexible as we can for the future. We are not sure what the dispersed recreational hubs may need to support. They will most likely be different for each season.	sandy	02/23/2015
	Destroying our mountains for economic gain is not the way to make Utah a better place to live.	Sandy	02/26/2015
	Do not add trains or trams to our canyons to connect ski resorts!!	Sandy	03/05/2015
	Feels like Pandora's box. I would suggest keeping park city resorts and those in the cottonwood canyons separate. It is the link between the wasatch front and back that I object to.	sandy	03/01/2015
	First off, I can tell that a tremendous amount of thinking and time has gone into this document, thank you. What I don't get is that this didn't seem like a blueprint at all. It read as a pre-cursor to a blueprint until I got to the Proposed Next Steps section at the end. There were ideas and thoughts, but nothing seemed to be committal or concrete. I don't get a sense of a plan that will be implemented, but rather, ideas of a plan. When I read phrases such as: "The Blueprint could deliver new mobility options" or "The Blueprint would offer a care- fully designed approach to permanently protect treasured landscapes and provide opportunities for active, healthy lifestyles and connection to the outdoors." I am not left feeling like there is a blueprint in front of me, but rather, just ideas of what could be in the blueprint. So, I am not seeing a "blueprint" at all in its literal sense. Again, the Proposed Next Steps helped clear up what items will be actionable and not just talked about.	Sandy	02/12/2015
	Grizzly Gulch should be expressly excluded from any further development by Alta Ski area or any other resorts. For public land preservation, watershed concerns, visual pollution, and preservation of a uniquely accessible wild area, Grizzly Gulch should be protected and preserved. Grizzly Gulch is one of the most accessible wild areas left at the top of Little Cottonwood Canyon. A short hike, ski or snowshoe take one away from the sight of ski resorts and into a forested haven. It is a place many of us had our first backcountry ski tours or snowshoeing adventures. Ski lift expansion in Grizzly Gulch would be a tragedy for not only that area but also for the area near Twin Lakes, Lake Catherine, Silver Fork, Days Fork, Cardiff Fork and other adjacent areas.	Sandy	03/11/2015
	Grizzly Gulch/Catherine's Pass areas must be kept undeveloped. The small resort expansions are acceptable if future expansion by any resort is permanently banned by law. The proposed rail system for transportation is not acceptable. A bus system, similar to that used in Zion, would be easily instituted, cost effective and very efficient. The further destruction to the canyons to install a rail system and the massive cost of a project like this is unacceptable. This idea seems to be a poorly conceived marketing scheme from the ski industry. We have enough lift served skiing in the Wasatch. Please preserve the remaining wilderness for future generations!	Sandy	02/16/2015
	Here is my idea: use the Snowbird Tennis club area or the plaza on Highland and 94th South as a nice "landing pad and shuttle launch" for clean air shuttles that go up the canyons. These can be nice coffee shop and hang out areas for people to park and take quiet, roomy shuttles that go directly to the lifts of the resorts or trailheads up both canyons. Gondola type transport seems more viable between the resorts over the passes, but please...NO extra lanes or trains going up our canyons. They would destroy our trails--some of the few natural trails. As it is already there is no where to park when hiking. Wouldn't it be great to ride a bike or drive to a cute and quaint little village, and be able to easily board a shuttle to take you anywhere up the canyon without the hassle of parking then schlepping all your gear? I say put the expense in a nice town square center, shuttles and bike lanes and over the pass gondola AND save our trails, wildlife, sanity, neighborhood feel of our precious canyons.	sandy	03/03/2015
	Houmand I'm a member of the Granite Community Council. I live right on Little Cottonwood road and therefore in the direct path of any transit proposals. Honestly, I don't want a train coming up the road, I don't see how it could run without it having a direct impact on where I live and likely forcing me to vacate a house I love. Having said all that, I know there are interests greater than mine and I'm prepared to support a sustainable long-term use of the canyons that many people can enjoy. I'm very fortunate to be able to access the canyon without the use of my car because I live so close. Not everyone can do that, and they really should have access. I also realize there are too many cars coming up the canyon. On avalanche control days they are lined up in front of my house for hours. Bottom line: I'm keeping an open mind.	Sandy	03/05/2015

	How could a train up Little Cottonwood canyon be environmentally friendly? The destruction of the natural terrain will harm wildlife as well as disrupt there natural resources and patterns of living. Little Cottonwood canyon is a large water shed area how many chemicals will be spilled or seeped into our water over many years to come? In addition, a train will not add to the beauty that we all love. The traffic up the canyon is only at it peak 10-12 days a year (fresh snow days). To spend billions of dollars to destroy our canyon, disrupt wildlife, harm our water shed, and take away from the beauty of this land makes little sense. I love skiing at Snowbird and have been a season ticket holder for 10 years. I would not consider saving 10 minutes to get to the resort 10-12 days out of the year and ride a train. Other options to consider would be to widen the road by one lane going up the canyon. Increase electric bus options on heavy snow days. Please consider other options....and save our canyon!	Sandy	05/01/2015
	I agree with the purpose/goals of the Mountain Accord.	Sandy	05/01/2015
	I am completely against any plan considering building a train up little cottonwood canyon. It would destroy the peace, beauty and fragile environment of this narrow canyon. An improved and increased bus system could very easily handle increased ridership. At the same time it would save a billion of our tax dollars and preserve the natural beauty and eco systems of the canyon.	Sandy	05/01/2015
	I am not convinced that a rail system between the ski resorts is necessarily a good idea for the environment. However, it may be preferable to the proposed ski-link plan. That being said, I am happy to see plans to improve transportation between SLC and Park City. There should certainly be both a light rail and improved bus system in place to facilitate both growth and reduce traffic issues. I would especially like to lend my support to the piece of the plan which recognizes that we must develop already urban areas, rather than create new developments in rural/wilderness areas.	Sandy	04/30/2015
	I am not happy with the blueprint due to the transportation proposal in LCC, the proposal to link the canyons, and the possible loss of my favorite back country ski terrain. Please see my letter in the next section below.	Sandy	04/30/2015
	I am strongly opposed to making Little Cottonwood Canyon a major transit to Park City. The bottom of Little Cottonwood Canyon is very narrow and installing additional lanes and/or a rail line up the canyon would dramatically change the nature and current available uses of the canyon. The proposed blueprint is far to heavily favored on resort development, tourism and economic growth and does not do enough to preserve the pristine nature of our canyons, particularly the Cottonwood Canyons. Tourism may be important to the State, but I am more than willing to pay double the share of my family and myself in increased taxes to cover the incremental revenue tourism brings to the State. The Cottonwood Canyons are not a Vail or Lake Tahoe or Park City, they can not accommodate the crowds and influx of tourists, regardless of attempts to mitigate impact. The resorts can cap the number of skiers per day like Deer Valley.	Sandy	03/14/2015
	I am very concerned about development in the Wasatch and am worried that there is an over-emphasis on business and transportation. From my perspective, the emphasis should be on preserving, not developing. However, I do agree that concessions need to be made to allow for growth. I'm just nervous that money is playing too big a roll. Any new development will mean unalterable changes to the mountains. We need to tread very carefully to preserve this irreplaceable resource.	Sandy	05/01/2015
	I believe in attempting to get people out of their cars and on to rapid transit. The downside to skiing Little Cottonwood is definitely the road. We need to make it more accessible to public transportation...more rides, more buses, a light rail. And I believe we will need to restrict access to the canyon by car.	Sandy	04/06/2015
	I believe more mass transit that can be provided in the Canyons will have significant benefits. Limiting the use of POV in the canyons will necessitate the development of staging areas for persons intending to use the resorts.	Sandy	03/12/2015
	I believe that if you are planning to use a train for transportation, the only logical choice would be to have a train up Parley's rather than Little Cottonwood Canyon. There is no way to put a train up that canyon and still maintain the pristine canyon that we now enjoy.	Sandy	03/12/2015
	I believe the current proposal doesn't provide enough protection for the wilderness. Once you take the wild out of wilderness then all you have iserness; which isn't a word. We need to preserve what's left of the wild so we can't keep wilderness alive. However, I do think the approach to offer more mass transit options up the canyons is a good one. The long term benefits will outweigh the costs. No lifts connecting PC to the Cottonwoods please. I think there should be an opportunity for hotels in the cottonwood canyon area to thrive instead of allowing them to struggle when Vail visitors take over the PC market. We need to preserve the diversity of the resorts.	SANDY	02/23/2015
	I can add none. Likely, future advances in technology, like teleportation, battery capacity, hydrogen, etc. will provide even better solutions to the challenges faced here.	Sandy	02/14/2015
	I consider the process to be a farce. It is apparent that there is no true open excess to the process and that the intent do the MA is to cram a train system up little cottonwood canyon. I cannot believe that you truly think such a project would be beneficial to the canyon. It would be destructive and intrusive and would benefit a very few business interests. The UTA want a big project but spending billions on this is simply wrong.	Sandy	05/01/2015
	I don't think we need a train and tunnels in the mountains. When I ski, I don't need to spend time transiting to another ski resort. Buses are doing well.	Sandy	04/24/2015
	I feel that both train and extra lanes up the canyon would harm the environment that exists in our canyons. We have larger canyons and larger roads (Parley's and Provo) to provide access to Park City and Deer Valley. Our local canyons would be spoiled by these two solutions. We can maintain the quality of our canyons with an increase in the bus schedule. As a residence of Granite community at the base of Little Cottonwood Canyon I will strongly oppose bringing Trax lines into our community. I know that all of my neighborhood and the surrounding neighborhoods would fight having a line in our area. It is not worth the lose in our property values and the increase transient traffic. We are a residential area. Trax has no place by the mouth of Little Cottonwood Canyon. We are not a commercial area. We have no business or retail areas. Bringing Trax through just to feed the canyon would inconvenience and hurt many residents of this area that chose to live here because it is a quiet, laid-back environment. Many of these residences that would be close to Trax lines are worth millions of dollars. Trax would drastically impact these properties.	Sandy	03/16/2015
	I found a lot of what is in the "blueprint" to be highly confusing. First off, I suggest that the term "blueprint" itself is inaccurate and misleading because the proposed "blueprint" is actually many alternate proposals, and I don't think that any one of them actually qualifies as a "blueprint". In my view a "blueprint" is, as defined in the Merriam Webster Dictionary (2nd definition), "a detailed plan of how to do something"; in my opinion the MA Blueprint has very little in the way of detailed plans. I'd say a lot of it is "blue sky" rather than "blueprint". I also felt overwhelmed by all the choices presented. I found it difficult in many cases to even understand the difference between what was proposed, proposed but dropped, merely a pipe dream, or not even open for consideration. Of course, producing detailed plans for all the alternatives proposed is probably impossible at this point in time. But, the MA Blueprint is missing even the grossest of cost estimates, time lines for development, and probabilities for approval by regulatory and funding agencies. Given all that lack of detail, I found it very difficult to form judgements on many of the alternatives proposed. So, I think ways "how the proposed Blueprint could better meet the purpose of Mountain Accord" include - more details on (gross) cost estimates, time lines, and probabilities for approval by regulatory and funding agencies. I have a general concern regarding what I consider inadequate attention by MA to the effects of climate change on snow sports. It seems to me that many of the MA proposals assume snow sports participation, particularly at ski resorts, will continue to be the same as today or even increase. Even as nationwide on-snow ski resort usage declines and most large ski resorts have been shifting their revenue production towards more non-snow-related activities (real estate, golf courses, other summer activities), MA seems to assume the demand will continue or even grow. I think you've missed the curve. As climate change reduces snowfall, especially at resorts below 8,000' such as the Park City resort bases, I think snow sport user participation at ski resorts will probably significantly decline in the next decade. It seems to me that MA has not even considered that as a possible scenario. Do you really think building railroad lines and stations or constructing BRT lanes or a tunnel in the canyons is even worth considering in light of likely climate change?	Sandy	05/02/2015
	I know this is in there, but I'd like to stress the idea of building new trails on the bench. Trails are cheap, and they'll minimize traffic in the mountains from people who just want a quick dose of nature.	Sandy	04/16/2015
	I love the Transportation option D with rail connecting SLC to PC through Parley's and LCC!!!	Sandy	02/13/2015
	I strongly oppose any ski resort expansion beyond those shown in the map from solitude and Brighton. I'd prefer that those expansions not occur, but can swallow them if a rail system is really going to happen. The ability to easily move from PC to the cottonwood resorts at night and in bad storms or times of hazardous avalanche conditions would create the most positive impact for locals and visitors alike. Getting caught in or stuck out of LCC is more than a minor concern for many visitors. I drove LCC and BCC for Canyon Transportation for 7 winters. Resorts should be connected by transportation routes, not ski lifts. The era of hiking is over in the wasatch, there are simply way too many backcountry skiers now to favor the short client list of WPG.	Sandy	04/20/2015
	I think a tunnel and train system is excessive. Why is it necessary to have significant additional connections connecting park city/heber/midway to provo, slc and ogden? We have several existing points connecting these city's, efficiently. I think the biggest opportunities is to limit automotive traffic, by increasing eco friendly shuttles, clean buses, car pooling, etc... The canyons create a natural division between to areas, why disrupt that, when it is home to a sensitive eco system that provides our water and a home to many species. We do not need to connect everything to ensure a healthy economy. We can make enhancements and still find business opportunities through smart and modest development. Locals and tourists can meet all of their recreational needs by visiting the places they enjoy the most, without excessive development like a tunnel and a train.	sandy	04/01/2015
	I think solving the transit problems in our canyons is the most crucial aspect of sustaining the unequalled resource we have here. The Blueprint appears to recognize that the four areas of focus (economy, transportation, environment, natural resources) must be in harmony. I guess the most expensive part of everything proposed is transportation. Currently the UTA bus system is a near total failure due to its lack of dependable, timely, and comfortable bus service. The current bus schedule is a joke - a bad joke - that does more to encourage personal transportation than encourage shared public transportation. The bus schedule needs 1. to be more consistent (i.e., 2 trips per hour), 2. have a longer season (i.e., stopping ski service in early April is idiotic), 3. have more flexibility (i.e., extra buses on "powder days") so people can actually count on the bus being at the park & rides close to on-time and having a seat available. A long range plan that includes not allowing personal vehicles up Big & Little Cottonwood should be considered. This is not realistic until a continuous, timely, and safe light rail system can be provided. I focus on transportation because without solving this issue, the other focus on the Blueprint cannot be achieved.	Sandy	03/14/2015
	If you connect Park City to the Cottonwood Canyons with a much easier to use system, people in Park City (tourists and residents) will flock to the better skiing conditions in the Cottonwood Canyons to the detriment (to many people) of regular Cottonwood Canyon users. Am I being selfish-yes. Realistic-yes. And who pays for this- probably me.	Sandy	04/30/2015
	I'm still not clear on the real purpose of MA. Seems like MA wants to add more traffic to Little Cottonwood and Big Cottonwood Canyons in hopes of bringing in more \$ to the ski resorts while paying little to no attention to the environment. Did I get that right?	Sandy	04/14/2015
	It appears that decisions have already been made. We need a more flexible system that can evolve over time as technology evolves (improves). A bus system that used natural gas vehicles or battery powered vehicles is much cheaper and more flexible. Flexible for both expansion and for different needs for summer versus winter recreation. Also, on a dollar spent, spending this kind of money would reduce emissions 1 a per unit basis if spent in the valley.	Sandy	02/23/2015
	It does not provide increased access to and protection from further construction efforts in the Little Cottonwood Canyon area.	Sandy	03/09/2015
	It is difficult to comment on the proposed blueprint because it isn't clear what the blueprint is actually proposing. The only part of the blueprint with discernible substance is the transportation plan which shows several alignments for proposed transit through the Wasatch Mountains. This portion of the plan shows a transit line from Little Cottonwood Canyon to Park City. It doesn't appear that there is any scientific basis for the addition of this proposed line that is backed up by transportation modeling. Currently it is very easy to get from the Wasatch Front to Park City via I-80 with very little delay. If the community desires to install a transit facility from the Wasatch Front to Park City it would make more sense to put transit in Parley's Canyon where an existing corridor is already in place and where environmental impacts would be more limited than the potential impacts of a new line in Little Cottonwood Canyon. It seems that a transit line between Little Cottonwood Canyon and Park City would have very limited benefit to citizens of the Wasatch Front (who already have easy access to Park City via I-80) and would only benefit Ski Resort Owners who want to promote more traffic to their resorts in the winter. This would produce very limited economic benefit to average citizens in Utah and would primarily benefit large ski corporations, many of whom are located outside our state. In addition, most climate change models predict that the Wasatch Mountains will see limited snow precipitation in the future which would make an investment in ski area expansion very risky. It is also very risky to alter groundwater patterns in the Wasatch Front because Park City already has contaminated water due to historic mining practices. If this groundwater were to be altered to enter the Cottonwood Canyons, it could potentially contaminate one of the primary sources for drinking water on the Wasatch Front. I am opposed to a transit connection between either of the Cottonwood Canyons and Park City and believe that if transit is used it should utilize Parley's Canyon for a route. In addition, I see any expansion of transit or roadway capacity in the Cottonwood Canyons to only benefit ski resort owners and not average Utah citizens. This plan is very similar to One Wasatch in that it is a thinly disguised plan to link ski areas in Utah in order to support the ski industry, but not benefit other recreational users of the Wasatch.	Sandy	03/17/2015
	It makes more sense to use electric buses to shuttle people up the canyon. Like at Zion National Park for example.	Sandy	05/01/2015
	It will be very important that any transportation expansion be the most minimal in terms of disruption to the environment and habitat of animals in the middle Wasatch. The construction of Light Rail seems that it would be extremely disruptive. I would advocate more of a shuttle bus system in the canyons like what is done in Zion's National Park.	Sandy	05/01/2015
	I've lived in Sandy for 42 years. This is a bad idea. What's wrong with the way the canyons currently operate? If we want to ski we drive up the canyon. There's such an emphasis on protecting the watershed but you want to put a railroad up the canyon. Makes no sense and reeks of special interests that trump public interest.	Sandy	02/15/2015
	Last night's meeting was a joke, none of the questions we asked were answered, no open discussion was accomplished. This seem to be a technique to ram thru a bunch of mountain development plans with no input by neighbors.	Sandy	02/12/2015

	The environment is fragile. LCC doesn't have enough water as it is, without adding what will be a huge demand. Why does MA get to make the decisions that impact all of us? This feels illegal. It needs more time and public awareness, including being put to the vote by all of UT or at least the Wasatch Front. Who will pay the costs and how much are the costs? Millions? More than that? We don't spend enough money on schools - why should we spend huge money for a small percentage of people to ski? The biggest problem I see is that a group of 28 people or whomever was assigned to be on the committee by someone of (undetermined name(s) get to make a decision for all. Last time I checked, this is a democracy. The huge cost to the environment, the neighborhoods and the actual cost to carry this out is too much for a small group to get to make that decision.	Sandy	04/15/2015
	Leave the canyons alone!! Developments do nothing but DESTROY nature!	Sandy	03/15/2015
	Leave the canyons the way they are!	sandy	03/09/2015
	Leave the mountains alone! No more development! Leave the private areas private! We're killing the sense of serenity in the mountains that are so easily accessible from the Salt Lake Valley. Less is more. PLEASE do not connect the resorts, do NOT build a coaster. Leave the mountains natural (as they are now). NO MORE.	Sandy	02/20/2015
	Light rail to resort areas	sandy	03/11/2015
	Light rail up LCC will ruin our most precious resource with destruction of environmentally sensitive areas, not to mention the noise pollution, that benefits too few people and the ski resorts at a ridiculous cost. BRT makes so much more practical and environmentally sound sense that could connect to nodes in more centrally located commercial areas of Sandy and Cottonwood Heights. It is also a more adaptive option that can evolve with the changing needs and seasons of the canyon with relatively very little up front investment. MA needs to stand up to UTA and the ski resorts interests and protect LCC for the majority of Salt Lake residents who value the canyon for all of its other uses.	Sandy	03/17/2015
	Linking the canyons' transit lines together is too drastic and destructive a solution. Keeping their access separate makes them unique and preserves some sense of a pristine and rugged backcountry experience. Connecting Alta to Brighton would be a HUGE mistake. Brighton to Deer Valley is already linked in summer months. Park City Resorts also have a sense of exclusivity that won't be helped by increased traffic via Big Cottonwood. I love the idea of having car traffic limited in the canyons. I have often thought that installing something like we have in Zion's National Park featuring stops in areas of heavy recreation, while allowing those that live and work up the canyons permits to drive. Further vehicle access would be allowed by paying an exorbitant fee. Better biking and pedestrian lanes along the roadside would be helpful.	Sandy	03/16/2015
	Looks like an ideal blueprint for the PRIVATE ski resort owners with no consideration for other tax paying citizens or homeowners living near the impacted areas i.e. have the public foot the bill for expansion of private enterprise! Find a way to justify increase in use in an already over used area .	Sandy	04/04/2015
	MA purports to solve a problem where there is none.	Sandy	05/01/2015
	Make it a priority to purchase all private property in Big and Little Cottonwood Canyons. The alignment of the mast transit should be along the road. The canyons should be closed to private vehicles during ski season.	Sandy	04/26/2015
	Mountain Accord has jumped many steps without a thorough environmental evaluation. Without knowing more than any of the executive committee truly knows now, there can be no responsible manner to permit a development plan to proceed to the next phase! How can MA responsibly approve a "go ahead" when we still do not know who will be the "applicant" or who will be the lead or co-lead agency in the EIS? There are so many things about MA that remain unanswered, even mysterious and since tax monies have been used to fund MA there should be a published accounting of where every penny of these monies have been expended! When the MA transportation committee was polled with a show-of-hands vote, the 94% preference was for express, low emission buses rather than trains. The MA executives summarily dismissed and eliminated that idea in favor of what strongly appears to be a predetermined conclusion of a train in LCC rather than what their own advisory committee preferred. This smacks of certain individuals trying to create a legacy rather than a workable solution and responsible environmental stewardship of one of Utah's many treasures! The integrity of MA has suffered significantly as a result of their attempt to haphazardly rush through what should be a meticulous, pains taking process, that leaves no doubt in any mind that any conclusion reached is truly in the best interest of the environment and the people of Utah rather than commercial interests that put tourist dollars ahead of protecting Utah for Utahans! As a Utah native, this smacks of a battle to deprive Utahans their rights first rather than for the tourists' one or two week vacation! In other words, we are all expected to help subsidize the ski resorts by sacrificing our canyon! Utah should not be for sale to the highest bidder!!! When we see the manner in which the MA executive committee has handled the rollout of UTA's plan for a train up to the ski resorts and since many of the MA executive committee are elected officials, one has to wonder if they are similar stewards of their elected offices?	Sandy	04/16/2015
	Mountain Accord needs a different purpose. Mountain Accord seems to serve its funders; UTA & ski resort owners. Taxpayers pay for the upkeep of the canyons, and should not have to pay more to have them destroyed or to have limited access to recreation. Stewardship over the land is not helped by destroying it, carving into it sending a train by the watershed, or leaving any huge footprint in it. We need a system like Zion's National Park with more buses for Little Cottonwood Canyon. That should be the solution with more parking outside the canyon possibly in Salt Lake or lower Sandy. Extra lanes or a train would be a huge footprint in a little canyon, not to mention it would cut out recreational needs of Utah residents. Since cars will not be limited it is just more of packing the canyon full. The new transportation will be too expensive to ride, and will not help the residents. The maintenance would be a burden on taxpayers as well. It seems that the major transit system only benefits UTA and the owners of the ski resorts. I do not want to pay for that as a tax payer, and I do not want the money taken from education as an educator.	Sandy	04/30/2015
	Mountain Accord. The "Key Actions" seem to be to "encourage development", "generate economic growth" and "ensure Utah's tourism". This entire project seems to be generated as a money maker for all of the KEY PARTICIPANTS. This is a money maker for many people that have decided to promote a sham of an environmental coverup to shove more people up the canyon. If there really was a concern for the environment, water protection and all animal life and resources, you would not try to find a transportation system that crams as many people up the canyon as possible. This is being pushed forward without the adequate study of the long term effects on the canyon ecosystem. No one has studied how many people should or ought to be allowed up the canyon. This idea shouldn't be to force as many people up the canyon as possible, but how many people the canyon can accommodate while still preserving one of the great natural resources of our state for FUTURE generations. The all mighty dollar should not be the determining factor, yet it sure seems to be at this point. The ski resorts and the Sandy City hub are sure on board to make money off of Little Cottonwood Canyon without adequate study or consideration for this soon to be exploited natural resources and current canyon residents. As part of the public, one of the things I love about going up the canyon is to get away from people. Enjoying the quiet views and beauty of nature. Entering the mountains is an escape from city life. I do not agree with the idea of shoving more people up the canyon along with destroying the canyon to widen roads and make way for a train. The canyon should be kept. Has anyone considered the effects on property value and sense of community from a relatively quiet canyon community to a major thoroughfare all to get a few more skiers up a canyon on a few days a year? It takes longer for most home owners to get their homes approved in the foothills region of the canyon because of concerns of damage to the environment and wildlife than you are allowing for public debate for this entire Mountain Accord project. There are incredibly strict building requirements for putting a home in the canyon, yet these same concerns don't seem to comply to a major transportation project that will have huge and irreversible effects of destruction to the canyon. This is a premature vote on an improperly studied proposal. Approving a plan without adequate study and appropriate explanation of plan details seems not just inappropriate but borderline corrupt.	Sandy	04/19/2015
	My concern with the transit system up the canyons is why would we propose to spend millions on a trax system when we don't have nearly enough busses running up and down the canyons. On a weekday, trying to get a bus is super challenging and they are not nearly frequently enough. It is also very difficult for the Mountain Accord to succeed and noble is its cause. I am concerned about a trax system going up the canyons and the environmental impacts caused just for construction. I also understand how damaging environmentally a stack of idling cars can be from the mouth to the top resorts on a powder day.	Sandy	05/01/2015
	My impression of Mountain Accord differs from how you present this. What I see is a complicated plan which at the heart changes ownership of some properties in the areas around the commercial ski resorts in exchange for taxpayer funded rail transportation to the ski resorts. The principle economic beneficiaries appear to be the Ski Resorts, primarily Alta and Snowbird at the expense of taxpayers and to the detriment of residents in and around Little Cottonwood Canyon. This troubles me.	Sandy	03/06/2015
	NO additional lanes, trains, tunnels, etc.	Sandy	03/09/2015
	No extra lanes or trains up Little Cottonwood canyon. Only more busses, and a more flexible bus schedule.	Sandy	05/01/2015
	No extra lanes! No trains up Littlewood Canyon! Please protect our community!	Sandy	03/14/2015
	NO LANES NO TRAINS! THEY WONT SOLVE ANY OF THE ISSUES! THIS BLUEPRINT IS ONE SIDED. IMPLEMENT SOMETHING LIKE ZIONS HAS.	Sandy	04/29/2015
	No lanes, no trains in little cottonwood canyon.	Sandy	03/03/2015
	No more trax! It is terrible and a waste of money.	Sandy	02/20/2015
	No train or rail up the canyon, don't disturb more terrain More buses and flexible schedules will impact the canyon less Why try a major overhaul when you haven't tried to keep it simple? If the simple fails other methods could be considered.	Sandy	05/01/2015
	NO TRAINS OR LANES UP LITTLE COTTONWOOD CANYON	Sandy	04/29/2015
	NO TRAINS-NO TUNNELS!!! That just helps the ski industry to the detriment of everyone else. Zion has more visitors and gets along fine with a shuttle bus system. My grown kids need cheap recreation choices such as hiking up and down LCC. Four lanes and a train will destroy the simple beauty and enjoyment of the canyon. I don't want the wildlife such as the goats will like it either. What about Little Cottonwood Creek? I don't want to lose looking at a wild mountain stream because the ski resorts wants to bring in a bunch of out of state skiers. I don't think a single dime of public money should go towards a private ski industry. The ski industry is in decline, and the public shouldn't be expected to prop it up. I shouldn't have to worry about getting run over by a train while trying to enjoy the canyon. What about the bikers? Are you trying to destroy their use of the canyon? Skiing is such a small part of the year. We shouldn't be gearing our transportation plans to their needs. They should pay for their own shuttle system to get skier and employees up the canyon. Locals should continue to be able to drive their private vehicles up the canyon to sightsee, picnic, see wildlife, pull out for a rock climb or hike without some train or four lane busy road. The only transportation plan I support is private vehicles plus year round additional BUS Shuttles. The Mountain Accord people have been trying to slip this by the public without a full explanation of the practical effects it will have on those who use LCC and the people who live at the mouth of LCC.	Sandy	03/12/2015
	Not favor business interests over the sensitive environmental nature of the canyons.	sandy	05/01/2015
	Not one dime of public money should go towards rail or tunnels. More buses, yes. Keep the freedom to use personal transportation. It is not up to the public to help the ski industry. The ski industry doesn't share any profits with the public. Stop pretending to want public input. Start answering questions about eminent domain.	Sandy	02/14/2015
	No trains, tunnels in the canyons or foothills!	Sandy	03/12/2015
	Putting up light rail in Little Cottonwood will destroy the view of the canyons and destroy existing trails.	Sandy	04/24/2015
	Road Expansion and moving mass transit will destroy the canyons, hurt the water shed and be a disservice to all Utahn's. It will make the owners of the resorts wealthier but will degrade the quality of the skiing due to the heightened level of availability.	Sandy	05/01/2015
	Running a train up little cottonwood canyon would greatly increase the commercialization, which it turn would decrease property value, and affect the trails, and landscape negatively. It would be a terrible sight, to see a train running up through little cottonwood. Defeats the purpose if the mountains.	sandy	05/01/2015
	Save trails, develop no more land...Protect wild Utah! No connection from Alta to Park City...it benefits no one!	Sandy	03/16/2015
	Secure Grizzly Gulch from Alta. This area is a Key to public recreation at the top of Little Cottonwood Canyon.	Sandy	02/12/2015
	Ski resorts and other businesses have had a negative impact on the canyons over the last 40 years. Lets stop this trend. There are better ways to get people up the canyons on existing systems.	Sandy	04/30/2015
	Sounds like the heading of this Feedback question states the priority! which is mountain accord... and its mission to "Cram as many people into the canyons as possible with disregard for the majority of people who prefer natural beauty of the canyon, and who aren't in a rush to Shave 10 minutes off their commute to the resort at the cost of adding another car lane and the destruction of scenery to do it, same goes for the train, what a joke. Mountain accord can butter up their website all they want with all this conservation bull crap, but at the end of the day if either of these proposals go through there is nothing conservative about that. The mountains and canyons are perfect how they are and locals can appreciate the natural quiet beauty they offer. Many of us don't want a little Lake Tahoe rush here.	sandy	03/16/2015
	Stupid idea! Waste of money.	Sandy	03/28/2015
	The Accord answers one and only one concern and that is moving skiers into the resorts. The stated purpose of this accord is much broader but your answers are narrow. The environmental questions about Little Cottonwood Canyon are not met by massive transit projects. I have observed and participated in the traffic of this area constantly since 1985 and from my observations the traffic problems are confined to 12 - 20 days a year. And the result of the traffic is a wait time for those going to 'play' of an hour or two. How is this a multi-multi million dollar concern for our state when others around our area can not get to and from jobs and services without 5 day a week 52 week a year delays of equal time.	Sandy	02/13/2015
	The benefits will go to a relatively few people. What they don't put in their pockets will trickle down to the rest of us. A train will destroy the canyon environment. An additional bus lane could be added in certain spots to reduce transit times. Consider one way traffic at peak times.	sandy	04/20/2015
	The blueprint should include a broadside scope for sustainable economic development to go alongside the purpose of preservation of the watershed and natural environment. Look what has been done in the mountains of Switzerland for a good example.	Sandy	04/30/2015

	The Blueprint was full of pretty pictures and color points, but incredibly vague and very difficult to translate into a real image of the future. Perhaps this is all that is possible at this stage of the process, but perhaps this is also why there have been so few comments on it. Overall it feels as if there is the hope for much needed protections for some parts of the canyon but at an enormous expense of additional development in other parts. Frankly, it seems like a plan to provide the resorts with many opportunities for growth while providing pretty scenery.	SANDY	04/29/2015
	The financial and economic gain is largely in favor of the stakeholders of the resorts and development companies that would benefit from an increased flow of traffic and tourism from the Blueprint. The upside from the proposed Blueprint would all go to the stakeholders of the resorts and development companies. The Blueprint as it is currently written is a plan to increase the amount of revenue generated from increases in population and paid use of the Wasatch Mountains. The Blueprint could better meet the purpose of the Mountain Accord by limiting the use of the Wasatch Mountains to preserve the water and wilderness that would be ruined by increased traffic.	Sandy	05/02/2015
	The full environmental costs including increased transit footprint and greenhouse gas emissions (including materials and construction) should be estimated at this point in the study.	Sandy	02/18/2015
	The legacy of the Wasatch comes from its nature. Conservation and preservation of the Wasatch environment (flora and fauna) have to be explicitly named the King and Queen drivers of all that MA does.	Sandy	04/14/2015
	The Mountain Accord personnel care not about public suggestions or alternatives these questionnaires request input on so I will not proceed to fill out further forms. It became apparent through the first 4 Mountain Accord public meetings I attended that although the printed purpose of the Mountain Accord sounds very intelligent and appealing it's life truthfully is economic gain and power.	Sandy	05/01/2015
	The problem with this whole proposal is that the land swaps and other fairly reasonable suggestions are intrinsically tied to a flawed transportation plan. There is no way the large footprint of a train going up the Canyon will not have a significantly damaging impact on the environment of the entire lower Canyon. Making Little Cottonwood Canyon a transportation corridor is a flawed plan. There are many other more reasonable plans using increased bus service, car pool incentives and so forth that will allow flexibility depending on the season and significantly less impact on the environment. The cost will be profoundly less expensive. The congestion issues are literally 10-20 days total per year. I have no problems with the suggestions for the upper Canyon in regards to watershed, land swaps etc. But to have these plans dependent upon a train coming up the Canyon can only suggest this is being brokered and manipulated by big ski business and grandiose thinking by UTA and not the great partnership that is being portrayed!	Sandy	03/13/2015
	The project is at huge risk of failure due to the approach. Far too much is being focused on putting in a billion dollar plus system. This is going to be overly expensive. There are far less expensive solutions like bus or dedicated shuttles. The cost to put a Cog or train that will not be able to provide the service (one track suggestion) is really a bad idea. Secondly the canyon and roads are narrow, people live, work and play in these mountains to force this train or rail up the canyon is going to take more land and will have greater environmental impact that just using electric or natural gas vehicles that can carry people and make many more trips. Lets think logically about this. It is nice to dream about being something else, but let get real all we really need is a bus system that is effective in the movement of people from the valley to the mouth of the canyon, and then we need an effective simple system to move people up the canyon in an orderly way. No one disagree with the fact that we love our canyons, we do however do not want to see them destroyed creating something that is not needed.	Sandy	03/08/2015
	The proposal has been created with the interest of the ski industry and those with a financial interest in that industry. It does not represent the best interest of the general population of the Salt Lake City and surrounding areas. The proposal to build a train up LCC is absurd. I believe you should provide an incentive to share rides or ride the bus with tolls and parking fees for vehicles with fewer than 3 occupants. You should increase the frequency of buses using the existing road and build parking facilities at 6200 South and 9400 S and 20th E.	Sandy	04/20/2015
	The proposed deal will sacrifice Little Cottonwood Canyon by transforming it into a transportation corridor and will destroy much of its natural environment, appeal, and beauty. It would be one thing to build a rail line if there were no existing road, as such infrastructure might be necessary to allow Utahns to access and enjoy the canyons. However, doubling up on infrastructure in the canyon unnecessarily destroys the natural environment and beauty of the Canyon. Doubling up on infrastructure will likely stress the natural environment and may threaten existing species, wildlife corridors, watersheds, and other natural conditions. The proposed deal represents an elitist plan for the Canyons that will benefit only a small number of Utahns at potentially tremendous cost both to average recreational users and taxpayers. One of the primary focuses of the deal is to preserve backcountry areas for dispersed recreation, a goal which benefits a vanishingly small percentage of Utah residents. Only about 7% of Utahns ski and the number that have the time, training, and resources to backcountry ski is much smaller. Yet, in order to benefit the admittedly small ("dispersed") number of people who can take advantage of backcountry skiing, the proposal sacrifices the beauty enjoyment of the lower part of the canyon - the part that Utahns likely access most frequently, including trails like the Quarry Trail along Little Cottonwood Canyon. For most Utahns, the Canyons are a journey and an experience, and destination resorts like the ski-resorts are largely beside the point. Utahns love their canyons for the ability to hike with their families on trails that can be accessed from the valley quickly and for other similar recreational opportunities. Scarring the beloved Canyon landscape with additional, irreversible infrastructure development is contrary to the interests of these many Utahns who enjoy using the lower Canyons and benefits only a select, powerful, and wealthy few with the resources to take advantage of expensive skiing opportunities. Moreover, all taxpayers will be saddled with the enormous cost of this additional and unnecessary infrastructure. Additionally, this destruction of the Canyon is being suggested to address traffic congestion that is really only problematic on a few particularly busy ski days each year. The proposal flies in the face of good science and policy about confronting climate change risk. In the face of the risks and uncertainty associated with climate change, Utah should be investing its resources in robust, resilient strategies that allow us to respond flexibly to changing conditions, rather than committing massive amounts of money to an irreversible infrastructure project that may well be inconsistent with future needs and may saddle Utah's citizens with a project with no return on investment. Whatever one believes about the anthropogenic causes of climate change, there is little doubt that the climate is changing. What that means for Utah remains to be seen, but there is substantial risk that we will have many more winters like this one, in which limited snowfall and warmer winter and spring temperatures mean that ski resorts struggle to remain economically viable. There are also far more important risks associated with this potential climate change, including water shortages, increased wildfire risk, and inadequate capacity to store and collect water in existing reservoirs (which were designed to handle late snowpack melt rather than spring rains and early spring runoff). No one knows exactly how climate change will affect Utah, and in the face of such uncertainty, wise public policy requires choosing strategies that are resilient and "robust" - that offer benefits across a wide range of possible future scenarios, including those that we all hope will not come to pass (and this is true even if one doubts that climate change will materialize at all). Wise policy-making in the face of uncertainty also favors incremental solutions, rather than long-term, irreversible infrastructure investments. Incremental solutions allow adaptation to evolving conditions, rather than locking communities and taxpayers into expensive investments that no longer serve current needs and will not provide any reasonable return on investment. Of course, sometimes—even in the face of uncertainty—we have no choice but to make long-term, public infrastructure investments. In this case, however, there is no such urgency. Any need for increased transportation in the Canyons can be handled by incremental solutions like increased busing, shuttles, or perhaps "transportation system management alternatives," which meet short-term needs but allow us to remain flexible and nimble in responding to changed conditions. We should not saddle ourselves to an unnecessary and massively expensive long-term infrastructure when uncertainty and risk counsels incremental, adaptable solutions that can be altered to adjust to changing conditions. Building additional permanent and expensive infrastructure up our canyons will almost certainly increase pressure for future growth. The public will demand a return on its infrastructure investment, and that return is most	Sandy	04/29/2015
	The Wasatch Mountain Range is a relatively small range. It is already difficult to enjoy the mountains without encountering some sort of development (ski resorts, cabins, roads, etc) Further development will ruin the beauty of the range even further. I agree that traffic is becoming a serious problem in the Cottonwood Canyons. I strongly feel that further transit development is not the solution. Energy efficient/electric powered buses, similar to those in Zions would solve this problem with the least amount of environmental impact.	Sandy	03/17/2015
	There are many less intrusive solutions that have not even been discussed, let alone tried. No where has Mountain Accord considered how the proposed blueprint will impact the lives of Wasatch Front citizens. This should have been the number one criteria. We suggested early on that a fifth study group be added to do that. We received no response save "that's a good idea". Mountain Accord has done a masterful job at manipulating the process to get to the answer the executive committee wanted, rather than listening to the citizens of the Wasatch Front. As such, the blue print is useless. It is a manipulation. Even those on the 4 committees agree. They were never allowed to meet together to see how to merge their different areas. Divide and conquer. Always works. You should all be ashamed to be part of such a faulty process.	Sandy	02/25/2015
	There is no need to connect all the canyons for the convenience of the tourists at the expense of those of us who have grown up hiking and skiing in these mountains. The easier it is to get to the canyons, the more people will flock to these areas. If we are trying to limit the environmental impact to our wonderful natural resources, more people in the canyons is counter to what we should be trying to achieve. It is obvious that this proposal has been made for economic/tourist reasons, not for those of us who live and work here.	Sandy	03/16/2015
	They need to think there may not be water to support this and the move of the prison	sandy	05/01/2015
	This blueprint represents a lot of really good, collaborative work. Well done! I would be interested in participating in this effort.	Sandy	04/18/2015
	This is not a blueprint. It's a ramrod approach. If you don't like it we'll ram it down your throat. The recreation and water issues are primary to me. There is only limited water. You can't create more water. For example: you say you'll create more water for homesites at Alta. How will you create that additional water??? NO ASPECT OF THIS PLAN ADDRESSES CONSERVATION. This entire blueprint is geared at FORCING GROWTH -- not just dealing with growth -- but encouraging growth. Bringing more people to the mountains by transit does not solve the water issue. More people (no matter how they get there -- by transit or if they're dropped off from a space ship) will use more water -- not just in the restaurants but to simply flush the toilets. That increased use of the limited water has NOT BEEN HANDLED in the blueprint. You've avoided it all together. Shame on you! Let's talk about transit. Before we build the mountain, you should run a test with existing buses. I do not take the bus because the waits are too long. Run buses every 15 minutes. Experiment. See what happens. You might say it's too expensive to run buses every 15 minutes. But it's a test that you can run. Do it!!! See what happens -- then you can work from a reality check. It's stupid to bore through the mountain or develop transit and then discover that nobody uses it because waits are still too long! This Blueprint is terrible because it fails to start with the most basic issues -- such as limited water. And it fails short because it fails to experiment with existing systems (transit). Right now it's a land developer's wish list and to heck with reality and conservation of resources. BAD, BAD, BAD. Shame on you.	Sandy	04/30/2015
	this proposal is deficient in that it lacks adequate trails and paths for road and mountain bikers!	sandy	05/01/2015
	This proposed Blue Print is so high level, it just seems like vague eye candy. There is not real meat or substance to the blue print. I am more concerned that cycling has been mostly ignored in the blue print. Cycling is only mentioned once. You have thousands of road and mountain cyclists that need to be thought about too. All of the canyons are classic road climbs for road cyclists and we need to be able to keep cycling these roads.	Sandy	04/30/2015
	This will be a disaster for our canyons and our scarce water resources. Please leave trains out of our canyons! As a Sandy resident I can't stress how bad this will look. Why not just build a better bus/shuttle system like they use in Glacier NP or Zions NP? These can be run with electric or CNG buses without changing the look of the canyon permanently.	Sandy	04/30/2015
	To achieve "an environmentally-sustainable transit system" could never include ripping up our beautiful canyons for a train or making the roads any wider than they are currently. We need to look at utilizing our bus systems more effectively and get better control of the vehicular traffic situation. For example, all resort employees should mandatorily have to use the buses to get to work. And, how about shooting for avalanches in the middle of the night?	Sandy	02/26/2015
	Too many bicyclists want to ride the canyons, but many die each year doing so (including my neighbor). This is senseless... we need dedicated, separated bike paths in the canyons. Winding narrow roads with bad shoulders, increasing car and bus traffic and distractions of scenery and revelry are just too dangerous. This has to change. Please put dedicated bike paths up the canyons... please! Seriously, please. If you don't believe the canyons are heavily travelled by bicyclists, check out the Strava "Heat Map" of the Wasatch Front: <a href="http://abs.strava.com/heatmap/#12/-111.78467/40.62664/blu/bike">http://abs.strava.com/heatmap/#12/-111.78467/40.62664/blu/bike</a>	Sandy	05/01/2015
	Transportation is a huge issue for me and my family. The idea of trax going up the canyons and tunneling through the mountain all the way to park city is too invasive on our natural resources and threatens the very reason why the wasatch is so amazing. I'd have to say Trax as a whole is not a success. First it is too expensive for a family to regularly ride, and second every time we do we are surrounded by homeless and kinda scary people. The bus system going up the canyon is what needs to be approved. On a Saturday there are only 3 buses that go up LCC from 9400 so. in the morning. We have been turned away multiple times because they were too full. Let's try and improve what we already have in place, before we take such drastic measures.	Sandy	03/11/2015
	Tunnels cost too much money and will never happen. Light rail up little cottonwood to much money once again. If money grew on trees these are great ideas!	Sandy	03/12/2015
	Lowest impact lowest cost greatest return is to get skiers in Park City over the mountain by lift not all the way around by car, bus, tunnel. No cost to taxpayers increased access with only a few towers.	Sandy	04/30/2015
	We do not need anymore mass transit in little cottonwood canyon area. No more people will use the area anymore just because you install a train going up little cottonwood canyon.	Sandy	04/30/2015
	We do not need anymore mass transit in little cottonwood canyon area. No more people will use the area anymore just because you install a train going up little cottonwood canyon.	Sandy	04/30/2015
	We need to limit "Tourist" marketing We need to save Little Cottonwood Canyon, no train, no road widening The Tunnel from Brighton to Alta with Little Cottonwood Canyon closed in Winter is a good idea Using Utah tax \$\$\$\$ to attract tourist to cloq our canyons is a bad, bad idea	Sandy	04/13/2015

	<p>We strongly object to both the process and substantive conclusions of the Mountain Accord deal. These comments represent only a few of the many important issues that this proposal raises, in part because of the difficulty of getting good information about what is actually being proposed (and the true cost to taxpayers of that proposal) and because of the shortness of the timeline for public comment. The report fails to adequately consider alternatives or adequately explain why some alternatives are being excluded from further consideration. The report fails to adequately consider alternatives or adequately explain why some alternatives are being excluded from further consideration. For example, one of the most obvious solutions for managing traffic in Little Cottonwood Canyon is increasing bus service in mixed traffic up Little Cottonwood Canyon. This alternative, however, like many others has gotten short shrift in Mountain Accord's analysis. Specifically, the Transportation Purposes and Alternatives Report available on the Mountain Accord website proposes to drop this alternative from further consideration based wholly on a conclusory assertion, with no accompanying analysis or facts, that this alternative succeeds only in "reducing avalanche-related risk and delay" and would "fail to meet the other 13 purposes." No explanation is given as to why this option would not "reduce auto use and congestion in Little Cottonwood Canyon," "reduce vehicle emissions in the Cottonwood Canyons to improve air quality," "reduce parking impacts on environment, safety, and economy," "support land use goals for reduced sprawl and concentrated development," "improve access and connections for pedestrians and bicyclists," "protect or enhance the natural and scenic resources of the Cottonwood Canyons," "protect and enhance community character" or any of the other articulated goals for the plan. It defies logic to assume that more frequent and better timed bus service, coordinated with bus service schedules throughout the valley, would not decrease auto use, vehicle emissions, and parking demands in Little Cottonwood Canyon. This failure to grapple fairly with the issues at hand suggests a rigged, agenda-driven analysis rather than a careful, fair consideration of potential alternatives. Moreover, one wonders how the proposed approach "protects watershed health, water supply, and water quality" better than increased busing, given that the regulated proposal requires providing increased water for culinary purposes to Alta and increased water (in unquantified amounts) for snowmaking at the resorts. Additionally, while Alternative D, transportation system management alternatives—which "are combinations of incentives for transit use and disincentives to auto use, without adding new transit guideways or expanding roadways—is mentioned as an alternative that will continue to be considered, the Report evinces very little actual consideration of this alternative. It seems that a deal has already been struck between the existing players (who do not represent all relevant stakeholders) and that other alternatives are falling by the wayside without careful study. There seems to be little actual data in the report, so it seems unlikely that any alternative has received enough consideration to be eliminated from consideration at this stage. The report also fails to prioritize the many listed goals in any meaningful way and assumes that increased tourism in the Canyons is an unmitigated good. No sense of relative priority is given and the report fails to explain, for example, why creating a unique "traveler" experience in the Canyons should be given equal weight with reducing congestion and parking demands. Relatedly, the report also assumes that increasing tourism in the Canyons is an unqualified good without any explanation for why that is so. The proposed deal will sacrifice Little Cottonwood Canyon by transforming it into a transportation corridor and will destroy much of its natural environment, appeal, and beauty. It would be one thing to build a rail line if there were no existing road, as such infrastructure might be necessary to allow Utahns to access and enjoy the canyons. However, doubling up on infrastructure in the canyon unnecessarily destroys the natural environment and beauty of the Canyon. Doubling up on infrastructure will likely stress the natural environment and may threaten existing species, wildlife corridors, watersheds, and other natural conditions. The proposed deal represents an elitist plan for the Canyons that will benefit only a small number of Utahns at potentially tremendous cost both to average recreational users and taxpayers. One of the primary focuses of the deal is to preserve "backcountry areas for dispersed recreation," a goal which benefits a vanishingly small percentage of Utah residents. Only about 7% of Utahns ski and the number that have the time, training, and resources to backcountry ski is much smaller. Yet, in order to benefit the admittedly small ("dispersed") number of people who can take advantage of backcountry skiing, the proposal sacrifices the beauty enjoyment of the lower</p>	Sandy	04/29/2015
	<p>While good for increasing business \$, we dont need more crowds in Little Cottonwood Canyon resorts as a result of connecting with Ski lifts. We dont need the Park City crowd over here. However improved transport like a shuttle train is a good idea. it would be good to merge Snowbird and Alta to one large resort.</p>	Sandy SANDY	02/04/2015 03/12/2015
	<p>Why Little Cottonwood Canyon? There are so many other options available to reduce the traffic in Little Cottonwood Canyon and still expand the utilization of our mountains. We could divert the access to the ski resorts in Little and Big Cottonwood Canyons by developing access from Wasatch and Utah Counties including the addition of what looks to me like, fabulous ski terrain on the other side of the slopes. I do understand that what I propose would not support the focus on economic growth to only Salt Lake County. If that is the intention, as many people expect, of Mountain Accord, then Mountain Accord is a farce and all the pious rhetoric is only window dressing to mask the real intent of Mountain Accord which is to bolster the balance sheets of Salt Lake County and UTA at the expense of one of our greatest natural resources, Little Cottonwood Canyon. Please show us that I am wrong in my accusations, and not focus the Mountain Accord efforts on Little Cottonwood Canyon, but spread your proposed solutions to include other avenues.</p>	Sandy	02/24/2015
	<p>Why spent so much money to manipulate the economy especially in a segment that pays some of the lowest wages. The proposals for transportation are way too expensive and families with children will not want to use a train or take the bus. They would prefer to drive with all their gear snacks and lunches</p>	Sandy	04/30/2015
	<p>Widening of the little cottonwood canyon road and adding light rail will ruin the beauty and feel of the canyon and destroy some existing trails and recreation areas. Please do not make this mistake!</p>	Sandy	03/27/2015
	<p>Allow more lenient rental/short term and nightly rentals to accommodate the increase in tourism. Provide more public transportation. Allow for more commercial development such as tea houses and hostels in the mountain regions.</p>	Sandy	05/02/2015
	<p>you aren't preserving anything by ripping up the mountain and peoples homes, you will take away from the natural beauty of little cottonwood canyon by taking the natural away and adding man made items.</p>	sandy	03/05/2015
	<p>Your objectives are wrong. Trying to stiff more out of State tourists up the big and little Cottonwood canyons is wrong. The correct objective is to save these fragile canyons for the use of present and future residents of Utah. Plans to ensure</p>	sandy	02/28/2015
	<p>I am frustrated to see that there is no other way to access Little Cottonwood Canyon than through Alta. That means that if there is even one member of any family who snowboards the whole family is stuck. If I'm a tourist and someone who wants to spend their money wisely I'm not going to bother buying a pass that my whole family can't fully enjoy the benefits of. Please rethink the proposals to cater to ALL outdoor enthusiasts. Thank you for your time.</p>	Sandy	05/01/2015
	<p>I believe that a key part of the mountain accord should be to preserve the "wild" experience one gets while in the mountains. As such, I don't think a train or aerial tram belong in the mountains. A bus service that is fast, efficient, and cheap would be able to use the already existing roads in the mountains, hereby limiting construction and resultant noise and physical pollution. In addition, it would be able to be implemented very quickly. Even limiting the daily amount of cars allowed up the canyons or implementing a mandatory amount of people required per car would make a huge difference.</p>	Sandy	05/01/2015
	<p>If by "transit system" you mean clear sustainable bus system up Little Cottonwood Canyon for instance it makes a lot of sense. If you mean a rail system instead it makes no sense what-so-ever. If by vibrant economy your mean Sandy's "Ultimate Basecamp" development with promised access to the Wasatch as if it's a commodity to be offered and bought, it becomes outrageous.</p>	Sandy (Salt Lake County)	04/16/2015
	<p>Very difficult to conclude due to generalities and unsubstantiated claims. I anxiously await more detail. When assessing the goals of the Accord, my belief is that the watershed comes first, the broader environment comes next, recreation possibilities after that, then transportation and the economic benefits. From what is written, it seems like these interests are considered to have equal weight. I don't agree.</p>	Sandy (Wasatch Resort, LCC)	03/17/2015
	<p>I think it is vital that our communities look at future Mass Transit alternatives, something other than driving cars up and down the canyon. I applaud the efforts being made by all involved parties and look forward to seeing this become a reality.</p>	Sandy City	02/16/2015
	<p>very worried about Little Cottonwood Canyon and proposed transportation especially a train not enough info on route and it's impact on the canyon</p>	sandy ut	04/30/2015
	<p>I do not want to lose access to the most beautiful mountain areas in the world for picnics, and recreation such as hiking. I am not in favor of a train being placed up either canyon, and feel that a few changes on the current roads are more favorable for families to enjoy these areas. I am not in favor of a double lane highway way either, but believe that certain areas could be made more adequate for passing lanes etc. I do not want a train nor double lane highways up either Big or Little Cottonwood Canyon.</p>	Sandy, Sandy	03/10/2015
	<p>1. The blueprint only includes a plan that is not only environmentally detrimental to Little Cottonwood Canyon but is also extremely expensive for Utahns (most of whom do not use the ski resorts). Less expensive and less environmentally damaging alternatives need to be included. 2. There are far better uses to which these funds could be used that would benefit all Utahns. A better bus service would serve the same purpose and be a lot less expensive. 3. The blueprint does not protect watershed health, water supply or water quality. 4. The plan will only benefit a small amount of Utahns. 5. The last two winters have had below average snowfalls. This may be the case in years to come making mass transportation a non-issue. 6. There are more Utahns that use the biking and hiking trails than use the ski resorts. Having a train running through the canyon would greatly diminish the experience as well as pose a safety hazard. 7. It is not wise to build a new rail line on a mountain that is sitting on a major fault line as well as prone to rockslides, mudslides, wildfires etc. The present road is already at enough risk of these hazards.</p>	Sandy, UT	04/17/2015
	<p>all of the possibilities are covered the public needs to respond and the best cost effective solution needs to be discussed.</p>	Sandy, UT	03/26/2015
	<p>Alternate, flexible transportation plans need to be developed and tested before numerating the options for the EIS.</p>	Sandy, UT	02/23/2015
	<p>Do not implement the initiatives within the Mountain Accord. Do not implement mass transit, the building of tunnels, and development of green space. Our streams/rivers will be covered over. We will not have the pristine conditions that we have now. Houses, condos, hotels, stores, and other facilities will be planted within these mountains. We need wide open spaces. We need an escape from the pollution of the Wasatch front, where we have one of the highest particulate levels within the country. We will lose access to the canyons. We will be cut off to hiking trails. Where are our representatives? Why aren't they looking out for their people? I am one of them. I would like someone to look out for my family, my neighbors, my environment, for everything that is good in these mountain ranges.</p>	Sandy, UT	02/28/2015
	<p>Eliminate plans for building light rail in Little Cottonwood Canyon and anywhere else it is being considered. No connecting gondolas between resorts.</p>	Sandy, UT	04/30/2015
	<p>I think a "bus system" to/in the canyons will never work very well because people generally view bus service as inconvenient and complicated. Instead, I recommend a shuttle service, in which a vehicle (it can be a bus) continuously drives from the bottom of the canyons to the top (and back). This may require more parking lots at the bottom of the canyons, but would be worth it. The shuttle system may even need to be free, in order for it to be viewed as a painless way to access the upper canyons.</p>	Sandy, UT	03/14/2015
	<p>It seems as if there are still a lot of unanswered questions. Such why would we gain private lands &amp; then lose public lands? Also why resorts would be receiving more access to water for snow making? It doesn't seem to outline how we are going to conserve this precious resource. There is a lot of information to process here &amp; I might have overlooked something too.</p>	Sandy, Ut	04/26/2015
	<p>Placing a rail system in the Cottonwood canyons as well as tunnels is going to ruin the canyons. All that needs to be done is to provide more frequent bus service in the summer. Connecting the ski resorts via a lift system will ruin the canyon environment. t vacationers on a 2 to 3 ski day ski vacation don't even ski the entire ski area they are visiting. What makes you think if you give the option to go to seven different resorts they're going to do that. It's a novelty that will wear off with the result of the environment having to pay for it. With regards to the "vibrant economy" the ski resorts provide why is it that the ski resorts are paying their workers the same wages they were over 20 years ago and lift ticket prices have quadrupled. Very little of the ski resort sales benefit the community</p>	Sandy, ut	03/15/2015
	<p>The conceptual framework of Mountain Accord is flawed as it pits human created constructs of economy against the natural environment. This is illogical as the Wasatch Mountains are a limited resource that can very quickly be destroyed and never return to its former state, and the economy is a human construct that has no limits or bounds and can be strengthened in a variety of ways. Mountain Accord in many instances is sacrificing the non-renewable resource of the remaining wildness of the Wasatch mountains for "economic development" that will benefit very few at the cost to the environment, which benefits all. Any economic development promoted or paid for by public entities must be egalitarian and try to benefit the many, while reducing environmental and social costs. The Wasatch Mountains have undergone a continued siege of development and infrastructure expansion over the past 50-100 years, and it is time to stop expansion into the remaining wild and undeveloped areas that are left. Compromise after compromise has eaten away at wilderness quality lands, and it is time to stop the compromising. The Wasatch Mountains have been compromised enough. Finally, there has been little inclusion of environmental and social justice in the discussions of Mountain Accord. The participants have primarily been affluent citizens who have a limited perspective on how Mountain Accord can benefit all citizens of Utah. The Mountain Accord should include triple bottom line thinking, which does include the environment and the economy, but also includes social justice and welfare. The Wasatch Mountains cannot be just an elite recreation area for those that can pay the &gt;\$100 ski tickets. These lands are a public good that needs to be available to all and protected by all.</p>	Sandy, UT	05/01/2015
	<p>I don't think anything should change. I've been in Salt Lake Metro area since March, 1978 and things have just gotten more developed and worse for an enjoyable life!!! We need to go back to better use of our natural resources!!!</p>	Sandy, Utah	04/26/2015
	<p>I fully support the Wasatch Backcountry Alliance recommendations on the Mountain Accord proposal. No interconnect tunnel or train. Increased interconnect only serves to increase commercial development. Commercial development is something that should NOT be a priority in such a special environmental area. Keep the ski areas within their current boundaries. Increased ski development is contrary to the economic and environmental protection for these unique areas. Perform land swaps immediately in Mt. Superior, grizzly gulch areas to maintain the ridge line as a park effects in LCC. Keep the Soltitude Honeycomb lift to it's existing foot print. Improve the bus access, dramatically increase number of buses and instal a reversible bus only lane on the existing road with environmentally esthetic avalanche sheds in high risk areas. A train and tunnels is a totally non stater economically and time frame wise DO NOT ALLOW THE MOUNTAIN ACCORD PROCESS TO BE MOSTLY AN INCREASE COMMERCIALIZATION PLAN. The lands you have are unique and must be preserved.</p>	Sandy, Utah	04/27/2015

	One of the greatest draws for employers and employees to the Wasatch front is the close availability or wilderness experience and recreation. As one who has enjoyed hiking in our Wasatch for many years I realize that means must be developed to reduce the impact of increased visitation on the environment. I greatly support the idea of frequent bus or shuttle service (every twenty or thirty minutes) and either disincentives such as fees or outright precluding of private vehicles up the canyons. Mill Creek parking and parking at many of the popular trailheads is already in short supply. I am very concerned about the potential environmental impacts of any inter-canyon construction. Certainly there are some economic benefits, but I question how construction, tailings etc. would be handled. If this can be accomplished without destroying or degrading critical habitat and wilderness quality, then I support it. Also, for improvement of trails and wilderness monitoring, perhaps a vote could be had to provide additional funds could be assessed for the needed construction, trail construction, maintenance, and monitoring.	Sandy, Utah	03/03/2015
	Where is equestrian access even considered? Horse trails are getting wiped out by development in the valley and we need to look at the canyons to preserve equestrian access for riders in the most populated areas in the State.	Sandy, Utah	03/16/2015
	I've lived in Little Cottonwood Canyon for 15 years - the proposed Blueprint drives significant traffic, disruption and environmental degradation to an area that is by virtue of its toplogy very narrow and fragile. The Blueprint drives toward more construction, facilities and traffic through a canyon under the auspices of economic growth and environmental and water preservation yet isn't clear on the preservation aspect of the plan. For example, Alta currently has challenges with visitors staying on the path. The plan doesn't include additional resources to monitor the fragile ecology of Alta.	Sandy/Little Cottonwood Canyon	03/14/2015
	No rail near or in the canyons. Never a connect to Park City area. No tunnels in mountains	sandy/unincorporated SL county	05/01/2015
	To whom it may concern I think the canyons are too fragile for the large scale integrated transportation plan you outline here. I am against linking the resorts. I am in favor of light rail in Little and Big Cottonwood Canyons. I am in favor of buses in the canyons. I am in favor of a fee for vehicles to enter the canyons. That model worked well in Millcreek. Call if you have questions. Jeff Whiteley, 801 943 3648 Sent from my iPad	Sandy	03/16/2015
	I don't like the idea of any "fees" or "parking/pricing strategies" for the Wasatch. You should not have to pay a dime to access public land in the Wasatch. The good thing about having access to the Wasatch Mountains is that it is FREE recreation. I never use Mill Creek just because they charge you at the entrance. I think the tunnel idea is crazy, too expensive and too much engineering (plus were in an earthquake prone area). I think the tunnel concept in the plan distracts from an otherwise mostly good plan, the tunnels are ridiculous and should be completely taken out. I don't want my taxes to pay for tunnels and I don't want to see that much construction in the Wasatch. I do like the idea of a light rail system/train route up the canyons and to Park City though. I would prefer light rail over bus or any transit/connections of the canyons. I would support a light rail system to Park City and up the canyons. I think that should be the focus for the transportation portion.	Saratoga Springs	04/30/2015
	I would like to see much more on transit. To truly reduce our car reliance, we'll need to be bold and aggressive to tackle this challenge.	Saratoga Springs	04/25/2015
	I don't see how the supposed need to connect Alta with Brighton and/or Park City outweighs the impact to the landscape, watershed, and backcountry recreation, unless it's via a very deep tunnel.	Seattle, WA (formerly SLC, UT)	02/05/2015
	A railroad would be obtrusive and unnecessary. The road could be widened, at least in places, and bus service would more meet the needs of users by being more frequent in times that are needed. We live here, because we have skied, hiked, and camped in the Wasatch Mountains, right in our backyard, while living in a vibrant city. Don't mess up things with a railroad!	SLC	04/29/2015
	As our longtime (approaching 90 years!) non-profit wildlife-oriented group has previously stressed this effort has continued to fail to add wildlife value (and human-related safety) to its lists... As we feared, we still see NO evidence of ANY legitimate partner to represent our ongoing fears for both wildlife, nor the potential conflicts humans that have been ongoing, and are apparently NOT going to be resolved through the Accord's efforts - mostly it is ALL about making money! It is note worthy that in a public announcement by a representative of the Utah Division of Wildlife Resources at a recent Utah Wildlife Board Central Region Advisory Committee meeting that their Division had basically "written off" any optimism for any progress relative to this Accord, and had not really participated in the effort to deal with wildlife/human interactions! We find the Accord's lack of at least trying to find ANYONE who would attempt to represent the ongoing issues that often result in the death of both wildlife and humans alike. We take that to mean that the Accord does not REALLY care about wildlife/human interactions. So far, we see all of the Accord's statements relative to wildlife to be "classic" smoke-and-mirrors, flowery, general statements that will NOT result in any real solutions to obvious problems - embarrassing at best! We offer once again, and for the final time, an opportunity to engage us, and our decades of experience in dealing with Wasatch Canyons/wildlife issues... Salt Lake County Fish and Game Association, 801-596-1536	SLC	03/12/2015
	By finding ways to shuttle more people to the backcountry, how are you protecting it?	SLC	02/04/2015
	Decreasing traffic and congestion is critical to quality of recreation and environmental preservation. I am in favor of mass transit up the canyons and would add traffic restrictions or fees at certain times.	slc	04/12/2015
	Do not support expanding ski resorts or creating tunnels. These proposals hurt the environment and take away from the fastest-growing ski demographic which is backcountry skiing. In addition this blueprint will obviously be of significant cost with questionable and likely marginal economic benefit.	SLC	04/27/2015
	HERE IS OUR 'STATE' CHERISH ITS NATURAL WONDERS, CHERISH THE NATURAL RESOURCES, CHERISH THE HISTORY AND ROMANCE AS A SACRED HERITAGE FOR YOUR CHILDREN AND YOUR CHILDREN'S CHILDREN, DO NOT LET SELFISH MEN OR GREEDY INTERESTS SKIN YOUR 'STATE OF ITS BEAUTY, ITS RICHES OR ITS ROMANCE. -THEODORE ROOSEVELT	SLC	05/02/2015
	I am opposed to the the connection of transit by road, rail, or tramway between the Cottonwood Canyon and the Park City ski areas. Construction and traffic will diminish the quality of the watershed, fragment contiguous terrestrial habitat, and diminish back country qualities. I am in favor of mass transit plans on existing roadbeds including rail between Park City and SLC.	SLC	04/26/2015
	I believe your plan is great! Well-reasoned & balanced with great vision for future needs. I have a hard time believing that it will ever come to fruition though, once it comes time to actually pay for building light rail up LCC. There are always too many other needs, & this will be seen as another argument for eastside vs westside, rich vs poor, recreation vs resident priorities. I hope you have plans in place on how to fight those battles, because I would love to see it happen!	SLC	03/11/2015
	I do not support the Mountain Accord Blueprint. Here are a few of my thoughts on the blueprint. 1) Ski resort visits nationwide are flat. A billion+ dollar investment is not a wise use of dollars, especially considering the last few years of below average snowfall. Backcountry usage has skyrocketed. If Utah is so desperate for ski tourism, this seems to be an obvious way to expand ski tourism to Utah, appeal to those that DON'T want to use the resort. 2) I cannot conceive of a way that this proposal will be paid for by anyone other than the Utah taxpayer. Why on Earth should I care about making travel to the ski resort easier for tourists? If the transit system is paid for by private investors, how do we prevent the cost from being overly expensive to local citizens? Ski tourists already bring a billion dollars to Utah every season. WITHOUT a train, mass transit system, or resort interconnect, why change a model that is already working? 3) The Cottonwood Canyons are the watershed for Salt Lake City, any additional development will negatively affect the water quality for hundreds of thousands of people. 4) Cars cannot be replaced with transit unless it is reliable and fast. Car usage should remain unrestricted for those not interested in resort usage. 5) The opinions of people who DO NOT live in Utah should be disregarded. If those people want to ruin the outdoor spaces in their home states with gondolas, trains, and ski lifts, that's their business. Utahans need to take a long view on development and realize that natural attractions are a huge part of tourism. 6) A pay for use system is unacceptable. Taxpayers already fund the Forest Service through federal taxes, in my mind, I have already paid for access.	SLC	04/09/2015
	I don't like the idea of connecting Park City to Big and Little cottonwood canyons. Though I do think that there should be transportation up and down the canyons, just not connect them all together.	SLC	03/08/2015
	I feel the only benefits will be to the developers, big business, and political leaders of the state of Utah. Once again the losers are the general public, tax payers, environment and the animals within that environment. Have the factors of acid mine drainage, the disposal of the tailings from the tunnels, the heavy metal that will be exposed, the mass-wasting and the sewer water contaminates, to include the deposition of great amount of TDS, changing of the waters pH, the disruption of the water shed, the disruption of the ground water flow. Have the construction damage to the environment been evaluated, we are suffering the consequences of the Kennecott mining. And will for century's to come. Will the results become a new super fund site as now Kennecott is, as Vitro is as the actions of people just like the ones proposing the Mountain Accord have become, leaving the toxic waste and remnants to be once again cleaned up by tax payers. I would ask you to explain to whom and to the amounts of the finical gains would be benefit. Nothing is done in this world with out great finical gain to some group. As we all know heavy metals cause cancers, acid-mine drainage in to our ground water (as that is Park City) is a major cause of cancers, mutations in our children. Digging such tunnels will expose great amounts of leads, arsenic, and other toxic metals. I feel that if this project the Mountain Accord if allowed to go through, it will be yet another stupid mistake, by the people the public has entrusted to do the right thing for the environment and the people of the state of Utah. But as in the past it is the future generations that will have to clean up the mess and suffer the consequences, but as the saying goes "STUPID IS AS STUPID DOES"	SLC	04/23/2015
	I genuinely feel like the water shed protection is a major concern for MA. However I feel like the MA fails to come up with a viable transportation solution. The amount of money, hours and natural resources it would take to run a train from PC to LCC does not seem like an environmentally conscious plan at all. There seems like there is a mad rush to do something big... to go from zero to hero as far as transportation. In my opinion it's just not necessary. There are things the resorts could implement tomorrow if they wanted to, to improve the situation. Let's make steps toward the goal... steps that aren't as permanent as tunnels and trains.	SLC	03/16/2015
	I notice an aerial tram between Solitude and Park City. This does nothing to relieve traffic congestion in the canyons! It is a gimmick proposed by the ski resorts and it will detract from the beauty of the canyons and IS NOT an environmentally sound transit system nor does it promote environmental stewardship. I am unalterably opposed to this ridiculous idea which will cost tons of money and serve no beneficial purpose to the wildlife, plants, air, or animals.	SLC	03/02/2015
	I support the idea of transfer of parcels of prime backcountry ski terrain to the public in exchange for land near the resorts' base areas that can be used for development. Significant thought should be given to limiting traffic by limiting &/or charging for parking. I am very opposed to the tunnel idea. This would divert significant taxpayer funds to enable development. The current roads could be modified with avalanche tunnels, and all season bus service could be enhanced much more cheaply and without the substantial impacts of the proposed tunnels. I am very opposed to mountain rail system. Electric buses, with overhead catenary would reduce emissions.	SLC	04/14/2015
	I think that the train/ ski lift connect from the Wasatch Back to the Wasatch Front is a mistake. Existing roads should be improved and mass transit enhanced.	SLC	03/18/2015
	I want better transit up LCC, will the new rail system build be to great a danger for the health of the canyon or is it crucial we change the way we have been doing things.	slc	04/30/2015
	if the goal is to keep the natural beauty and legacy of the Wasatch mountains then I believe the solutions need to be less invasive, at least to begin with, pouring any new lanes our a train up little Cottonwood canyon would completely destroy it and it's legacy. There is a reason why during the Olympics in SLC it was decided that boo events would be held at Snowbird or Alta. That reason was because a good solution for changing that road couldn't be found. The is not room to widen the road or to build a train and still have a road because if the mountain on the north and the creek and homes on the south. I believe a bus system that runs consistently and frequently during heavy tourist months should be looked at and sampled before we talk about changing everything Little Cottonwood Canyon. Climbers, bikers and hikers are not going to want to continue using the area for recreation if they have to do it with a high speed train going by ten ft. away or within a few ft. of a 4 lane highway.	SLC	04/03/2015
	It is clear that the Mountain Accord Blueprint is catering to the faulty logic of the ski resorts. The resorts have a "build it and they will come" point of view. In fact, there is no data to support that expanding resorts will increase skier-days or revenue. If you query resort skiers, especially tourists who the resorts want to cater to, there is almost no interest in being able to ski at multiple resorts in a day. There is no additional lure for skiers to come to Utah for this reason. None. There are resort skiers and there are BackCountry skiers, and the vast majority of the time there is no mix between the two groups. Expanding into the backcountry by making it more accessible to resort skiers will not bring in more resort skiers. But it will drive away many local and visiting back country skiers who will find many of their prime areas destroyed. I believe the fastest growing segment of the ski industry are backcountry enthusiasts. In addition, while backcountry skiers are supporting mainly local ski shop businesses, most of the tourists coming for resorts are coming with their own equipment bought in another state. For all these reasons, it is certain that vastly expanding the canyon infrastructure for ski resort profit will be a failure and will destroy pristine terrain enjoyed by locals. This will ultimately hurt Utah's reputation as a great ski destination and will hurt the economy with wasteful taxpayer spending, as well as hurting local small businesses which cater to the backcountry community. 	It's unknown now, but what trails will be affected? I like the idea of the Millcreek shuttle but I hope it won't be a "required" shuttle as in the National Parks.	SLC	05/01/2015
	Less development of the canyons and Wasatch is what will bring the best and most sustainable long term results. We must plan to keep these great natural resources for generations to come and stop destroying them for unnecessary greed now. I would like to see greater land protections, less development, and no trains running up any canyons.	Slc	04/18/2015
	Looks like a pig with lipstick to me. Just another expansion bid by big money disguised as valuable to the community. This is going to vastly impact the natural beauty of the canyons. I don't mind the tunnel or the land swap ideas. I think it's great to protect the watershed but I don't see how putting light rail in both Cottonwood canyons is going toward that goal. To facilitate light rail is going to require a railroad bed be cut the entire length of the canyon. Not only will this look hideous, it will interrupt and contaminate water flow. Like I said before you can put lipstick on it, but it's still a pig.	slc	02/05/2015
