

SOUTH JORDAN CITY
CITY COUNCIL LUNCH MEETING
STAPLES GOLF PUBLIC OUTREACH PRESENTATION
OAK CONFERENCE ROOM

July 11, 2016

Present: Mayor David Alvord, Council Member Patrick Harris, Council Member Brad Marlor, Council Member Don Shelton, Council Member Chris Rogers, , CM Gary Whatcott, Administrative Services Director Dustin Lewis, Strategic Services Director Don Tingey, CT Director Jon Day, City Recorder Anna West

Absent: Council Member Tamara Zander

Others: Julie Holbrook, Janalee Tobias, Deanna Kaufman (MC), Max Shoura (MC)

Special Lunch Meeting – 12 Noon

Council Member Marlor motioned to have Council Member Harris chair the meeting in Mayor Alvords absence. Council Member Rogers seconded the motion. Vote was unanimous. Council Member Zander was absent.

Mayor Pro Tem Patrick Harris welcomed everyone and started the meeting. He said we are meeting to go over some recommendations that have been prepared for us by the Mulligan's Commission. Mayor Alvord is on his way and should be here soon.

Mayor Pro Tem Harris asked Council Member Marlor to do the invocation.

Mayor Pro Tem Harris said the purpose of this meeting is to have the Mulligan's Commission come and inform us of where things are at. There will be a public meeting where we will present some ideas and get some public feedback and before we move forward with that meeting we wanted to have the Council understand all the facts and maybe make some recommendations as well. He asked Council Member Don Shelton to introduce everyone on the Mulligan's Commission.

Council Member Don Shelton introduced members of the Mulligan's Commission as it stands right now: Dustin Lewis, Deanna Kaufman, Max Shoura, himself and Doug Brown. He said I invited them to come. He said we have an outline to present the material. He said nobody has seen of this material in its entirety all at once. This was compiled by Don Tingey (Attachment A).

Council Member Shelton said there are a few inconsistencies in the report. This is a Draft document. There are different parts of it that were drafted at different times and there hasn't been any vetting to make sure it is consistent all the way from start to finish. He said I am hesitant for this to be blasted out into the public until it has been gone through.

Mayor Alvord arrived at this time 12:15 p.m.

Council Member Shelton said about a year ago we hired Staples Golf as a consultant to study our Mulligan's Golf Course and to give us some recommendations. He said we had a fairly specific contract with them and part of their contract is to conduct a public process and to show different options to the public and to receive public input. That public input will then be wrapped into the final report that will be presented to the Mulligan's Commission and to the City Council. That piece of the Mulligan's Study will

be complete. Along the way, we thought it might make sense to also look at what if Mulligan's became a public park instead of a golf course. That's one of the things the consultant (GSBS) was hired to look at that option as well. Staples is not particularly thrilled with that because they are golf folks.

Don Tingey said GSBS is working on our Parks Master Plan and one of the options that Staples did consider in their report was a park and we felt like it would be worthwhile to get a concept idea on this.

Council Member Shelton said the purpose of the public open house is to receive input from the public and also to allow Staples to complete their contract with us so they can finalize that report. He said I will walk you through the materials that will be presented at the open house. If you go to the third green divider in the binder (Attachment A) you will see some pages that fold out which show all of the options that we want to present at the public open house.

- Maintain Status Quo
- Property Sale
- Mid-Level Investment
- High-Level Investment
- The Park Plan

Council Member Shelton continued; **Maintain Status Quo**, would require 2.2 million to be invested just to maintain the Status Quo on Mulligan's. This is deferred maintenance that should have happen along the way but because the City was subsidizing the cash-flow on Mulligan's it was a political decision of whether to do this as a CIP project. The Councils at the time were weighing other CIP projects against CIP Projects for Mulligans and they made their choice on where to spend their Capital. We have a CIP project list and we could prioritize that list and probably knock it off from cash flow from Mulligan's over a period of a few years.

Council Member Shelton said the next one is **Property Sale**. Our Y2 survey said this was not an acceptable option for the community. The report would be incomplete if it didn't consider that in the options.

Council Member Shelton said the **Mid-Level Investment Plan (Plan A)**, would keep the current configuration but would make smaller scale improvements. Cost listed is \$4.6 million and we would have to figure a way to finance it. He said the other thing Plan A would do would add safety netting where the red hash marks show on the picture. According to our consultants, these are areas where we should have safety netting if we don't reconfigure the course.

Council Member Harris asked about the current entry replacement and if there is something wrong with the current entry. Council Member Shelton said none of the consultants like it. They said it has no sense of arrival and a lack of direction of where you are at and where you are going. Dustin Lewis said there are some inefficiencies in the traffic flow as well. CM Whatcott said the entry needs to match the other side of the street.

Council Member Harris asked about rebuilding the batting cages and what would be different there. It was discussed that there is much different equipment used today compared to what we have now. Most teams won't use our batting cages to practice because they are using private batting cages and getting lessons. Council Member Shelton said THK said if we change and update this we can charge more and get more people there. It would give a better quality of experience.

Council Member Rogers asked if Staples advised if it is better that the batting cages stay or that they are relocated. Don Tingey said they are looking at different options. From a family fun experience THK would say to leave it.

Council Member Harris asked if they are adding another 18 holes of mini golf. Don Tingey said there are 36 now and they would add another 18 on top of the 36.

Council Member Shelton said a lot of your questions can be answered on page 7 Summary of Recommendations.

Council Member Harris asked do you agree with those recommendations. Council Member Shelton said we have had to push back on a number of things.

Council Member Shelton said the **High-Level Investment** (Plan B) shows a whole new entry area and new clubhouse. He points out the various changes and additions to Plan B with a cost of \$10,103,500.

Council Member Rogers asked if this option contemplates not having the batting cages. Council Member Shelton said they are still on this.

Council Member Rogers asked if they would be reducing the course from two to one 12 hole golf course. Council Member Shelton said that is correct. He said the marketing people are having trouble with that because they have not analyzed a 12 hole course before. It was noted that this is an emerging trend.

Council Member Rogers said I see a lot of trees on this picture. They discussed that is part of Staples expertise being Landscape Architecture. They discussed soil sampling for better soil for the trees.

Deanna Kaufmann said we looked at what it would take to make the most of our resources and best for the community; a learning facility or a family fun facility would work best.

Council Member Shelton continued on to The Park Plan. There are two options here. There is a flat out park (picture in upper right) and it would still have some of the other facilities such as the mini-golf.

Deanna Kaufman said we looked at the feedback we got from the Y2 study which included letting our citizens be in the environment, to preserve that as open space, to have operational sustainability, recreation improvement and most importantly public use and access. I heard loud and clear that for the people to whom golf is not a passion the idea that this is not available to me because it is a golf facility, came through from our citizens.

Council Member Shelton said you will notice this is a passive park. There are no soccer or baseball fields here. He said the picture to the left is a hybrid plan. In this plan the driving range would stay with the park around it. There would be a driving range and putting area.

Mayor Alvord asked if they priced the hybrid park versus the park. Don Tingey said the hybrid is the only one that was priced.

Council Member Shelton showed a comment card that they will have at the open house for residents to comment on and choose the option that they like best. It shows the basic features and the cost. They can make comments on the back of the card. He said it is a bit tricky on the pricing of the park compared to the pricing of the golf changes because they are different consultants so it is not apples to apples. He

passed around a summary of costs and how they might be funded (Attachment B) Staples Golf Master Plan Option Summary.

Council Member Shelton said the Status Quo would cost 2.2 million and pay as you go. He said the trick with that is asking 'how do you really save Mulligan's.' He said in my mind the way you really save Mulligan's is get it off the radar so the politicians aren't having to make decisions about it on a regular basis. If you do option one it is not off the radar because there is going to be maintenance costs that you will not be able to fund from cash flow. We need to replace the greens already and every green you replace is \$150,000. So status quo is kicking the can down the road and then there is going to be another political fight about it. Do we use taxpayer dollars to subsidize golf? The way to really save Mulligan's is we make it really self-sustainable and get it off the radar so we don't have to think about it so that City Council's now and in the future don't have to consider it as they review their budget.

Council Member Shelton said property sale is not an option. It has been clearly established that it is not an option. The Regional Park is an option but it is expensive. The Mid-Level Plan A, I think is ok. I like the High-Level Investment Plan B but I don't like the dollar amount. The bottom three options have the potential to preserve Mulligan's.

Council Member Harris asked if the estimates they are putting out there might be high. Council Member Shelton said yes, we pushed back on a lot of that. Council Member Harris asked if we put this much money into it that there will be that much more revenue coming in to be worth it. Council Member Shelton said if we are going to be conservative about it I think that at some point 4.6 million is too high for us. Deanna Kaufman said we want it to be sustainable.

Council Member Rogers asked if we could use future ZAP money for this. Don Tingey said in 10 years we could.

Council Member Rogers asked if they had thought about doing a GO Bond. Council Member Shelton said I think if you pursue the GO Bond the golf comes off the table. Politically that would be hard to sell a GO Bond.

Mayor Alvord asked if you can have multiple GO bonds on a ballot. CM Whatcott said we have never done a GO bond. Each of the projects are stand alone. They continued discussing options for GO bonds.

They discussed the potential of using park impact fees. CM Whatcott said there are parts that would not qualify and there are parts that probably would. If you are taking a golf course and expanding it to be a park, that is probably a qualification. Don Tingey said we have obligated a lot of it to Welby and a couple of current projects. I would say at least 50% is eligible but we don't have 5 million in park impact fees. We have not evaluated what the future receipts will be.

Council Member Harris said if we switch it to a park we will still have expenses in maintenance the same as if it were a golf course. Council Member Shelton said you have a valid point but I think it is different in political sense.

Council Member Rogers asked if we should have another cost line on the comment card regarding perpetual maintenance. Deanna Kaufman said ongoing maintenance is also a function of ongoing revenue generation. Council Member Rogers said it costs more to maintain a golf course than it does to maintain a park. Deanna Kaufman said there should be two additional lines; what is the annual maintenance and what is the annual revenue. She said it should reflect that the course remediation would be over 3 million.

Council Member Harris said the residents need to know we don't have ZAP money so if they vote to convert this they will be paying for that; the conversion and the ongoing maintenance. Don Tingey said we figured that the operational cost for a regular park is about \$2500 per acre per year. That would be for a passive park. If you move up to active parks then you are closer to \$3500 per acre per year.

Council Member Shelton said let's talk about the next step. The open house will be this Friday, July 15th at Mulligan's. You have seen the materials that will be presented and you've seen the comment card. We have a little bit of time to adjust the comment cards. There will be a tent at Mulligan's on the East side where people can come to see everything and fill out the comment cards. Andy will take that information and will finalize his report with that information. The preliminary report will be reviewed by Mulligan's Commission on August 5th. We will make any adjustments we think are appropriate and then at our Study Session on Monday, August 15th Andy will present that report to the Council. On Tuesday, August 16th we will accept the report at Council. That will be a formal closing of Andy's contract. At that point the report can go public. On Tuesday, September the Mulligan's Commission will use the decision making matrix found in the back of the book to help us to make a final recommendation to the City Council. Look through it and let us know if there is something you think we ought to change or other considerations we ought to talk about. A month later, on Thursday, October 27th at our Visioning meeting, the Council should be able to make a decision about the way we ought to go.

Council Member Harris said as a resident I would want to know what is the up-front costs on each of the options, what is the annual maintenance costs for each of these options and what is that going to cost me individually.

Council Member Shelton said I caution you to remember that this is all Draft information and the report from Andy is going to change. I would not want to see the open house on Friday prejudiced by this information going out.

Council Member Harris said I understand this is draft and I have no intentions of releasing this information. Let's just make sure that the residents understand the options clearly and how it will impact them.

Council Member Harris asked if the only feedback will be from people that are able to go to the open house? Council Member Shelton said we haven't established a process for that but I think we could and we ought to.

Don Tingey said the open house will be from 4-8 p.m. and someone will be there to answer questions. They will do a new presentation every ½ hour. They didn't want it to be a sit down power point presentation. Andy felt like every ½ hour to 45 minutes he could say here is the big umbrella picture of what we are here for.

Council Member Shelton said the way it has been publicized right now is with the City's social media and we also have a flyer at Mulligan's. That is why I asked each of you to use your own social media to promote it.

Mayor Alvord asked if this is going to have value in the end and what percentage of our public would the sample represent. Council Member Shelton said it is what his contract asks for and it also gets to what we promised in our resolution what our process would be to reach out to include the public on this.

Council Member Shelton said if we are seriously looking at the high-end golf or seriously looking at the park where it is a lot of money, I wouldn't be opposed to another study to make sure we reach out to the public.

Council Member Harris made a motion to adjourn. Council Member Rogers seconded the motion. The vote was unanimous. Council Member Zander was not present.

ADJOURNMENT

The July 11, 2016 City Council Special Lunch meeting adjourned at 1:15 p.m.

This is a true and correct copy of the July 11, 2016 Council Meeting minutes, which were approved on August 2, 2016.

Andy Staples, ASGCA, and his company Staples Golf Design (Staples Golf), a golf course design firm based in Scottsdale, Arizona directed this study. Staples Golf specializes in timeless golf course design that is sustainable and environmentally conscious with an emphasis on cost responsibility. Staples Golf was retained by the City of South Jordan to provide a Master Plan for future improvements of the Mulligans Golf and Games facility, utilizing his experience combined with input from the City Officials and the Mulligans Commission. The analysis provided herein is the product of on-site evaluations, plus Mulligans Commission input during the summer and fall of 2015, and the spring of 2016.

Mulligans Master Planning Team:

- Andy Staples, Staples Golf Design – Team Leader
- Dan Conway, THK Associates – Business Planning Consultant
- Peter Elzi, THK Associates – Business Planning Consultant
- Dale Winchester, Dale Winchester & Associates – Irrigation Design
- Kevin Atkinson, Atkinson Design Group – Landscape Architecture

In accomplishing this work, Staples Golf and the Master Plan Team, worked directly with the Mulligans Commission. Those involved with this process are:

- Dustin Lewis- Director of Administrative Services
- Don Tingey- Director of Strategic Services
- Don Shelton- Councilman
- Deanna Kaufman- Resident, Commission Member
- Max Shora- Resident, Commission Member
- Doug Brown- Mulligans Head Professional
- Mark Seethaler- Former Councilman

The responsibilities of these Commission members include:

- ✓ Oversee Master Plan process
- ✓ Provide input
- ✓ Collect and disseminate information
- ✓ Define approval process
- ✓ Approve design concepts
- ✓ Direct presentation format
- ✓ Commit to implementing Master Plan

Executive Summary

It is the goal of this study to create a vision for the highest-and-best-use of the Mulligans property, and provide the residents of South Jordan a golf-oriented amenity that is used by 100% of the community. This vision is called *South Jordan Community Links*.

We are increasingly excited and encouraged by the possibilities Mulligans presents. As the following reporting will show, the City of South Jordan has some decisions to make as to how it would like to approach its "front door." As we've been led to believe, whether it remains the same, under goes varying levels of investment, the property will indeed remain an open space. With that, which of the potential options makes the most sense for the City of South Jordan and its residents, becomes the question. This however begs another question that must be answered first; *does the City of South Jordan want to be in the "golf business," or would the City prefer to promote a more passive property like a park?*

This report will help guide the City's decision as to the above, but a worthwhile sentiment that seems to be continually surfacing, and which has proven thus far to be accurate, is that the planning process setup by Staples Golf and the Mulligans Commission, continues to work as intended. It has allowed for productive charrettes that have seen no conflict and lots of agreement. It should encourage the Council that we foresee this promising and positive trend continuing at the community outreach meetings, during the rest of the Master Planning process, and through the Master Plan's inevitable implementation.

The options noted below weighed the pros and cons of understanding what made the most economical sense from a business perspective, versus the ability of the City to invest general fund dollars when focusing the improvements on 100% of the community. The following is a summary of the options examined throughout the planning process:

- *Option 1: Maintain Status Quo.* Due to the deteriorating nature of the facility, just to maintain it as is would require an invest of \$2,200,000 into infrastructure. While these needed improvements to the existing facilities must be addressed, simply conducting necessary repairs will not significantly enhance the experience at Mulligans nor provide needed additional facilities. Also, this will not improve the "front door" to the City of South Jordan. We consider this option as simply "throwing good money after bad."
- *Option 2: Also Known as Plan A.* This option makes smaller scale improvements that include relocating or removing the batting cages, adding 18 holes of miniature golf renovating/ expanding the clubhouse facility and adding a trailhead. This option's investment is around \$4,440,000 with a determined discounted cash flow analysis of \$2,099,992 (pg. 110 of the THK Report), and would slightly enhance the appearance along South Jordan Parkway and the entrance to Mulligans.
- *Option 3: Also Known as Plan B.* Create full scale renovations that include those improvements from Option 2, while re-building the golf course(s) and incorporating new features from the Jordan River Trail. This option represents the greatest potential for community impact of all the

options while also maintaining the City's dedication to the game of golf. Investment in this option would range from \$7,000,000 to \$9,000,000, with a determined discounted cash flow analysis of at least \$5,174,980 (pg. 110 of the THK Report).

- *Option 4: Park Space.* An option exists for the City to convert Mulligan's and its related enterprise fund to a city sponsored regional park for general public use. Park improvements could include a trailhead for river recreation, ballfields and other facilities. Under this option, Mulligans and its related amenities would be eliminated including the golf course, driving range, mini-golf and other recreational facilities. This option would cost \$3,000,000 - \$7,000,000+.
- *Option 5: Sell.* Another option we determined would be prudent to include, would be to sell the Mulligans property for re-development. We understand that this is not preferred by the majority of South Jordan residents as determined by the 2014 Y2 Analytics findings, but with these 65 acres, THK Associates, Inc. would estimate a market value of the property at approximately \$20,000,000. Re-development of the property should be consistent with the business park to the south. The proceeds could be used to enhance other recreational facilities in South Jordan.

Our recommendation is for the City to accept and proceed with *Option 3: Also Known as Plan B.*

We commend the City for recognizing something needed to be done, and the establishing of the Mulligans Commission has been enormously helpful to this process, particularly through their creation of the "*Mulligans Guiding Principles:*" Environmental Interface, Open Space Preservation, Recreational Improvement, Public Use & Access, and Operational Sustainability. The overall health of the entire facility is deteriorating quickly, and questions related to the long term status of Mulligans will continue to come up. This can be seen in the inefficient clubhouse, current turf conditions, the pond banks, the errant golf balls from the range onto adjacent golf holes, and the concrete hitting stall structure, just to name a few.

Throughout this Master Planning process, we've continually come back to these Guiding Principles. Both the Guiding Principles, and the vision of Community Links present opportunities for the South Jordan community to focalize the specific values important to them, which will create a stronger community. A *South Jordan Community Links* would allow for everyone in the community to come together to learn, grow, establish healthy habits, and cultivate positive attitudes.

The highest-and-best-use of this property related to Option 3 is in part based on the potential revenue opportunities that exist within Mulligans' determined "Primary Trade Area" (PTA) over the next 10 years, and assumes the property will continue to operate recreationally within the golf segment. The PTA is a function of population density, natural barriers, golfer residences and travel distances, golfer habits, accessibility of the site, and the location of surrounding competitive facilities. Mulligans' PTA is approximately a 15 minute drive to the site from all directions. The socio-economic profile of the Mulligans' PTA (a combination of Household Income, Household Growth, Population Growth taken from the latest census data), shows positive economic growth trends through 2025 (pg. 58 of the THK Report).

Option 3 has been determined to be the highest-and-best-use option for both improving the quality

of life for residents, and for greatly improving the City's "front door." Strategic and thorough marketing initiatives with likely re-branding would occur with Option 3. Investment into the golf course along with the creation of a golf learning center is integral to the future success of the project. An opportunity exists for the City to take a leadership role in bringing new players to the game of golf, and allow the Mulligans property set the example for other cities across America to follow.

Connection to the Jordan River trail is incredibly important for increasing the exposure to the entire community. Educational opportunities for local residents would incorporate sustainable and ecological initiatives being taken on property by staff and the Jordan River Commission. Revenue increases from an additional mini-golf course and an improved golf practice facility is projected.

Those who win in the end are the local families, the youth, the area golfers of all skill levels, the seniors, and the non-golfers looking to either try the game, or just get in some healthy, fun, outdoor activity. This plan emphasizes beginner golf programs which include partnerships with the PGA Section of Utah, and delivers a driving range and learning center that will attract golfers for miles around. Additionally, we're incorporating educational points of interest that lend themselves to school field trips, and will even allow for self-guided family learning. True connectivity from the Jordan River Trail to the property is absolutely essential to our vision, and of course, date-night for the young and old alike will provide memorable experiences to be cherished. These fundamental pieces, amongst other truly engaging improvements to Mulligans, are evolving as this process continues on its path.

The Vision

Our goal is to be comprehensive and strategic in order to improve the quality of Mulligans, maximize community utilization through diversified offerings, adhere to realistic and achievable financial expectations, while continuing to foster and promote the participation of families, kids, seniors, beginner golfers as well as non-golfers through the valuable principles of the game of golf.

The Master Plan Process

Follow a process based on facts, Commission guidance, and resident input to build and develop support and loyalty for the Mulligans' Master Plan project. This process has shown itself to be the most effective measure to ensure success and enjoyment of a facility for the long-term.

Summary of Recommendations

It is our recommendation to incorporate into the design, a series of facility upgrades that focus on specific business “buckets” where individual aspects of the plan can be phased in, understanding that investing into the entire plan at one time may be cost prohibitive. Our aim to increase user participation and enjoyment, improve overall quality and communal experiences, and instill cost saving measures where ever possible. An opportunity exists to improve and build upon a much embraced City asset *for the long-term* that will further endear City of South Jordan residents to their community, and to each other, in economically and sustainably responsible ways.

In doing so, this plan will also address issues continually affecting Mulligans on an annual basis; notably, facility layout, golf and mini-golf quality, maintenance operations, deteriorating structures, trail connectivity, general signage, and marketing vision. These items are discussed throughout the report, and are substantiated by Dan Conway and Peter Elzi of THK Associates, Kevin Atkinson of Atkinson Design Group, and Dale Winchester of Dale Winchester and Associates, who have greatly assisted throughout this process. All have contributed observations in the form of various reports, which can be found independently in the Appendixes section of this Master Plan report.

General Recommendations

- 1) Rebrand the facility to: South Jordan Community Links. Create individual business segments that can be identified by a particular user group. It is also recommended to carry on the Mulligans name via branding the clubhouse restaurant “Mulligans.”
- 2) Increase marketing- Consider aligning with the local PGA section and a notable personality to increase visibility of the facility.
- 3) Create an annual investment account to ensure the facility continues to be repaired and maintained appropriately to protect the City’s investment.
- 4) Hire managers responsible for the specific business segments such as a full time food & beverage manager, golf course superintendent, etc.

Bucket #1 – Clubhouse, Food & Beverage, Mini Golf Improvements

- 1) Expand Clubhouse, Increase the Food and Beverage offerings- Expand and re-orientate space inside the clubhouse, or build a new structure, in order to capitalize on small events, birthday parties or school educational activities.
- 2) Improving Sense of Arrival- The sense of arrival into the facility at Mulligans currently is bland and underwhelming. Relocate the batting cages offsite to allow increased space for an improved entry, and presents the potential for mimicking the “boulevard” style design of the business park located south of the property.
- 3) Increase Outdoor Space- There is very limited space outdoors for sitting and relaxing. A properly planned seating area with a shaded “pavilion” type area would allow facility users to not feel as if they must be “doing” something, but rather just enjoying the outdoors in a picnic like setting.
- 4) Add one (1) additional artificial turf mini golf course.
- 5) Add one (1) natural grass putting course for use by golf patrons and non-golfers.

Bucket #2 – Golf Learning Center, Range and Short Game Areas and overall golf course improvements

- 1) Improve the Golf Course- The courses and the practice range at Mulligans appear to have been poorly constructed, present safety challenges and are in need of repair. With modifications regarding the current construction techniques along with modifications to increase strategy and aesthetics, Mulligans could be a showcase for learning the game of golf and serve a market that has been lacking in the SLC area.
- 2) Reduce Number of Holes- Reduce the number of golf holes to 12 executive length holes ranging from 50 yards to 375 yards. Also, create a series of 3-6 hole loops for flexibility in play and practice.
- 3) Add Short Game “Learning” Center- Address the growing need for ways to bring new players to the game and allow current players to work on their game. This learning center would be focused on kids, families and seniors.
- 4) Address Safety along the Edge of the Course- Industry best practices for “set-back” spacing must be implemented. As is, safety is a concern in multiple areas of the facility including the right side of the range, the trailside of the course, and the residential area at the rear of the Mulligans property. The Integrity of the double decker range must also be improved.
- 5) Address Deteriorating Lakes- Erosion is causing the banks to collapse, silt to infiltrate the irrigation lines, the pump station to deteriorate, and an increase in safety concerns. Consider reduction of the size of existing ponds to increase available space for use on the golf course.
- 6) Irrigation Upgrades- The current system seems to be properly sized, however, the addition of a central computer, increased control around the greens as well as allocating additional resources to properly maintain the course is needed.

Bucket #3 – Jordan River Trail connections, trail amenities and Recreational Center corporate leasing segment

- 1) Create a Recreational Center- This focal point would partner with the trail activities adjacent to the Mulligans property, and allow additional exposure (and use) by those that currently utilize the Jordan River Trail. Additional expanded business uses that match the philosophy of health, wellness and outdoor activity should also be considered.
- 2) Gateway to South Jordan- As it currently exists, the Mulligans property is the “gateway” to South Jordan and is located in the prime spot to convey the attributes of what the city stands for. This “front door” access should be a celebrated focal point as residents and visitors enter the city.
- 3) Corporate Leasing- Allocate a two (2) acre parcel for corporate leasing to companies that will reinforce the recreational center philosophy, create visual marketing connections to these brands from 106th.
- 4) Address Trail Connectivity- The Jordan River Trail is a wonderfully underutilized asset that has the potential for bringing in new facility users, and provide opportunities to educate the youth on local ecological and conservational topics. A specific connection point is necessary along with specific viewing points from the trail to the Mulligans property.
- 5) Increase Visual Interaction with Golf- Currently there are little to no areas for taking in this great property. By adding strategic areas where facility or trail users can view the property, an increased sense of community and appreciation for this municipal asset can be achieved.

Recommendation Summary

General Recommendations:

- Rebrand the facility to: South Jordan Community Links
- Increase marketing
- Create an annual investment account
- Hire managers responsible for the specific business segments

<p>Bucket #1</p> <p><i>Clubhouse, Food & Beverage, Mini Golf Improvements</i></p>	<p>Bucket #2</p> <p><i>Golf Learning Center, Range and Short Game Areas and overall golf course improvements</i></p>	<p>Bucket #3</p> <p><i>Jordan River Trail connections, trail amenities and Recreational Center corporate leasing segment</i></p>
<ul style="list-style-type: none"> • Expand Clubhouse, Increase the Food and Beverage offerings • Improving Sense of Arrival • Increase Outdoor Space • Add one (1) additional artificial turf mini golf course • Add one (1) natural grass putting course 	<ul style="list-style-type: none"> • Improve the Golf Course • Reduce Number of Holes • Add Short Game “Learning” Center • Address Safety along the Edge of the Course • Address Deteriorating Lakes • Irrigation Upgrades 	<ul style="list-style-type: none"> • Create a Recreational Center • Gateway to South Jordan • Corporate Leasing • Address Trail Connectivity • Increase Visual Interaction with Golf

History of Mulligan's

Mulligans Golf and Games was opened in 1992, and was designed and built by Utah's own golf star, James "Jimmy" Blair, as a family-fun park which included a nine hole, executive course known today as "The Ridge," 36 miniature golf holes, batting cages, a lit driving range facility, and a practice putting and chipping area. In the late 1990's, the 9 hole, par 3 course know today as "The Meadow" was added to the list of Mulligans' offerings.

In 2004, the City of South Jordan purchased Mulligans through a lease revenue bond. The justification for the City was to preserve the open space from commercial development. The property was of course the gateway to South Jordan, and its current use was perceived as much better than if corporate buildings were to be built.

After the debt was paid on the revenue bond in 2013, the City of South Jordan began to explore additional opportunities for the property. The Land had previous been appraised for more than \$20,000,000 (2011), and considerations for the property's future by the City was considered prudent. This discussion spurred the "Save Mulligans" group, as well as the City commissioned Y2K Analytics study on residents' preference for the future of the property. The Save Mulligans group's mission was to obviously preserve the property as green open-space, and a beloved community amenity. The Y2K Analytics' study findings were similar to what Save Mulligans hypothesized; the overwhelming majority of South Jordan residents did not want to see the land commercially developed.

In early 2015, the Mulligan's Commission was formed to "Consider and evaluate best options, uses, and opportunities for Mulligans, the unique characteristics of the Mulligans property, the recommendations of qualified professionals, the principles of operational and environmental sustainability, the preservation of open space, the City's commitment to fiscal responsibility, and the enjoyment and best interests of the Community."

Staples Golf was engaged with the Mulligans Commission shortly after its formation, and in September 2015, after 2 site evaluations and a community outreach meeting, Staples Golf produced to the Mulligans Commission and the City of South Jordan the *Mulligan's Report*; a thorough analysis of the facility's strengths and weaknesses, and recommendations for improvement. The production of a Master Plan was

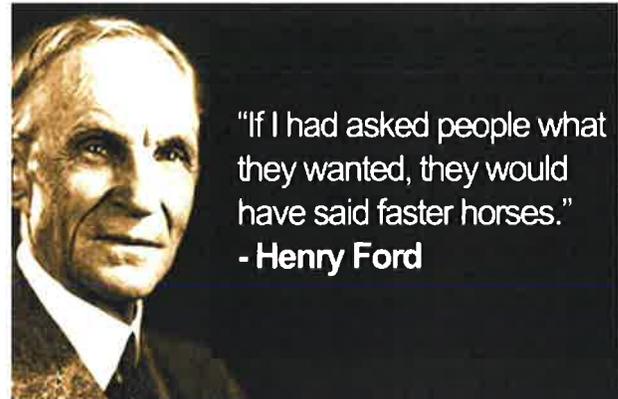

recommended by Staples Golf, and in October 2015, the City of South Jordan City Council voted unanimously to accept the Mulligans Commissions recommendation to award the Master Planning Contract to Staples Golf.

What is a Master Plan?

A Master Plan, developed with an outside, non-biased perspective, is a written and graphic document identifying issues, problems, and areas of opportunity at the golf course facility and serves as a roadmap for future improvements.

To more fully understand what a Master Plan is, it is often useful to explain what a Master Plan is not:

- It is not change for the sake of change
- It is not an excuse to spend money
- It is not a haphazard collection of certain individuals' ideas

One may ask, "Why do a Master Plan?" It is indeed because golf is a business! Real issues continue to affect the entire golf industry today, and will continue on into the future. Rising costs, new competition, deteriorating conditions, and even safety issues due to the longer distances a golf ball travels, all weigh heavily on the idea that golf is a business. These are verifiable reasons why a golf facility needs to be ready to address these issues and invest for the future.

Fact: Changes will be made to the golf course by golf course staff.

Most golf courses have some form of a governing body in charge of caring for the long term health of the facility. They are charged with allocating budgets, proposing improvements, and ensuring the overall quality of the course is maintained. It is prudent to have a plan in place that addresses these changes and directs staff when projects are implemented. Proper planning has proven to reduce costs and ensures projects are done right the first time.

An example of a tee built as an after-thought

Fact: A golf course naturally evolves and changes mostly for the worse.

As outlined in the Expected Life Cycle of Golf Course Items, it is shown that components of a golf course do have a life expectancy and will deteriorate over time. This life expectancy is also directly related to

GOLF COURSE ITEMS

EXPECTED LIFE CYCLE

HOW LONG SHOULD PARTS OF THE GOLF COURSE LAST?

No two golf courses are alike except for one thing: deferring replacement of key items can lead to greater expense in the future, as well as a drop in conditioning and player enjoyment. The following information represents a realistic timeline for each item's longevity.

Component life spans can vary depending upon location of the golf course, quality of materials, original installation and past maintenance practices. The American Society of Golf Course Architects (ASGCA) encourages golf course leaders to work with an ASGCA member, superintendents and others to assess their course's components.

ITEM	YEARS
Greens (1)	15 – 30 years
Bunker Sand	5 – 7 years
Irrigation System	10 – 30 years
Irrigation Control System	10 – 15 years
PVC Pipe (under pressure)	10 – 30 years
H.D.P.E. Pipe	40 – 60 years
Pump Station	15 – 20 years
Cart Paths – asphalt (2)	5 – 10 years (or longer)
Cart Paths – concrete	15 – 30 years (or longer)
Practice Range Tees	5 – 10 years
Tees	15 – 20 years
Corrugated Metal Pipes	15 – 30 years
Bunker Drainage Pipes (3)	5 – 10 years
Mulch	1 – 3 years
Grass (4)	Varies

NOTES: (1) Several factors can weigh into the decision to replace greens: accumulation of layers on the surface of the original construction, the desire to convert to new grasses and response to changes in the game from an architectural standpoint (like the interaction between green speed and hole locations). (2) Assumes on-going maintenance beginning 1 - 2 years after installation. (3) Typically replaced because the sand is being changed - while the machinery is there to change sand, it's often a good time to replace the drainage pipes as well. (4) As new grasses enter the marketplace - for example, those that are more drought and disease tolerant - replanting may be appropriate, depending upon the site.

ASGCA thanks those at the USGA Green Section, Golf Course Builders Association of America, Golf Course Superintendents Association of America and various suppliers for their assistance in compiling this information.

The materials presented on this chart have been reviewed by the following Allied Associations of Golf:

how well these items are maintained.

Fact: For a variety of factors, the golf ball is traveling further, and therefore has increased the total area needed to maintain a safe environment.

Generally speaking, an area of concern for clubs built prior to 1980, is in regards to the issue of safety related to the close proximity of adjoining golf holes. Due to increased club and ball technology, many courses are seeing golf balls hit into places not seen before. As the golf ball has continued to fly further (and will most likely continue), the entire facility should be analyzed and assessed for possible future adjustments.

Fact: Due to a nationwide trend of the reduction of played rounds, diversification of the golf course facility is a proven and viable option.

A typical golf facility is traditionally utilized by only 10% of the community. However, all courses will need to look toward the 90% of those who do not play the sport, but are looking for the added benefits a golf course provides. The health of residents, youth especially, is becoming more front and center, and seen by many local governments as an issue they should be addressing where possible. Updating the facility to bring in non-golfers, and to promote health oriented, outdoor recreational options is a wise move going forward.

HEALTH BENEFITS

NATURE IS THE BEST NURTURE
MANY STUDIES SHOW SIGNIFICANT HEALTH GAINS FOR THOSE IN CONTACT WITH NATURE

 REDUCED ANXIETY & DEPRESSION	 DECREASED STRESS	 INCREASED ENERGY	 INCREASED IMMUNITY
 50% LOWER RISK OF DIABETES	 INCREASED VITAMIN D PRODUCTION	 INCREASED WEIGHT LOSS & FITNESS	 REDUCED SYMPTOMS OF A D D.

★ 50% LOWER RISK OF HEART ATTACK ★ 30% LOWER RISK OF COLORECTAL CANCER ★

Fact: The costs to operate a golf facility and the likelihood of additional restrictions levied on these facilities are only increasing.

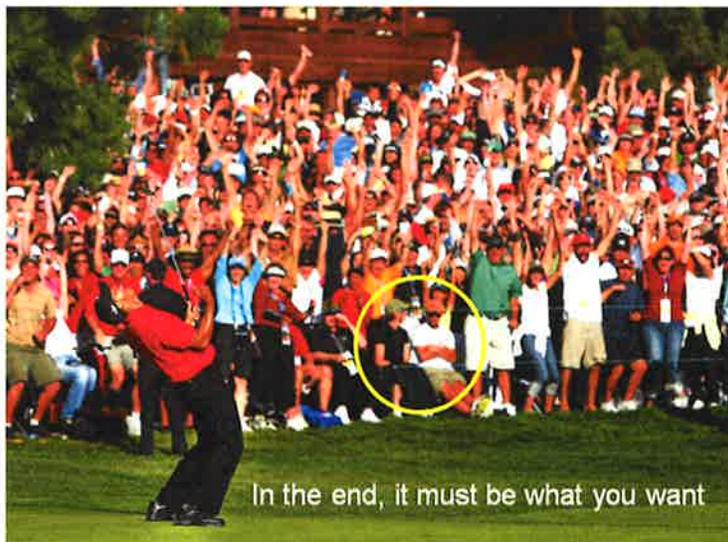

As the costs for resources such as water, energy, and fuel continue to rise and become less available, all golf facilities will need to become increasingly aware of how to address their future sustainability. Courses are already having to make unprecedented compromises in order to secure their future success. A Master Plan looks for opportunity to reduce water and chemical use, improve maintenance efficiency and do its part to secure long term sustainability.

How much will our resources cost in the future?

Fact: Without a firm direction or plan, a golf course will slowly lose its continuity over time, negatively affecting the long term health of the golf course.

So, as an answer to why a golf facility should have a Master Plan in place, it's very simple; a golf course needs a plan to account for the changes in the course that occur naturally, and to direct officials and staff when they plan to make changes, to positively affect and preserve the long term health of the Golf Course.

The Master Plan Process at Mulligans

Mulligans' Master Planning process has included:

1. Meetings with Mulligans Commission, the Save Mulligans Group, and the Jordan River Commission
2. Initial introduction meeting with the Community at large
3. Mulligans facility evaluation phase
4. Preliminary Design Phase including multiple design alternatives presented to the Mulligans Commission including cost estimates
5. Two (2) Webinar Presentations to the Mulligans Commission to update them on the status
6. A Community Outreach Meeting to interview, research and discuss life at Mulligans

The Process

1. **Assessment of existing conditions**
2. **Determine what the market says**
3. **Establish the "Vision"**
4. **Develop 'Plan A' and 'Plan B'**
5. **Get Community feedback**
6. **Finalize ONE Plan**

Summary of Meetings

Mulligans Commission

Staples Golf first met with the Mulligans Commission on August 6, 2015 to review the Commission's mission and goals, to date accomplishments, as well as expectations for next steps. It was a thorough meeting that covered quite a bit of ground. The major components of the meeting consisted of;

- Commission mission, goals, and guiding principals
- Commission progress to date
- Significant areas of emphasis, i.e. K2 study, open space preservation, current uses, marketing, etc.
- Staples Golf deliverables
- Expectations for next steps

The Five (5) categories that have been communicated as being important to the residents of South Jordan, and areas they have expressed as to what they would like to see regarding the facility's future are:

- Public Use and Access
- Open Space Preservation
- Operational Sustainability
- Environmental Interface
- Recreational Improvements

Save Mulligans Group

Staples Golf had the opportunity to meet with various members of the Save Mulligans group, including Julie Holbrook and Erin Peterson. This was an enlightening meeting that illustrated just how much South Jordan residents value Mulligans and its offerings. Pertinent items discussed were:

- Save Mulligans Group mission and goals
- Group concerns
- Staples Golf deliverables

Jordan River Commission

Staples Golf met with Executive Director of the Jordan River Commission, Laura Hanson, to discuss the mission of the JRC, and their expectations in working with the City of South Jordan and Staples Golf. This was necessary because Mulligans sits on the Jordan River, and increased connectivity to the Jordan River from Mulligans is desirable.

Community Outreach Meeting

One of the initial objectives of the process was to conduct a Community Outreach meeting at Mulligans

to identify what were the real issues facing the facility from the point of view of residents. This gave those who attended the opportunity to discuss how each user group used Mulligans, why they were patrons, and what needed to be changed or maintained.

Once the wants and desires were identified, our team was able to more fully understand what the mission of this Master Plan was going to be. After consideration of all important factors, the committee assisted in developing the final direction of the Mulligans' Master Plan. The areas that were communicated to our group over the series of meetings were:

Feedback

1. **Keep the open space**
2. **Focus on families, kids**
3. **Demand for small events**
4. **Desire for improvements**
5. **Must be marketed properly**

Upon completion of the evaluation of the golf course, clubhouse, double-decker range, batting cages, mini-golf, and the nearby Jordan River Trail, a number of important details about the club became apparent. To that end, the mission for Mulligans Master Plan is:

- Establish the "Vision"
- Develop 'Plan A' and 'Plan B' design alternatives
- Get Community feedback
- Finalize ONE Plan

Mulligans Facility Evaluation

A site review and assessment of the Mulligans Facility was completed by Andy Staples, as well as Dan and Peter of THK, Kevin of Atkinson Design Group, and Dale of Dale Winchester and Associates. This assessment was performed over multiple day trips; three (3) total.

1. Viewing residents engage with the facility
2. Interviews with maintenance staff about turf quality issues, irrigation and drainage, and agronomic considerations
3. Interviews with staff concerning the operations of the club regarding daily play, range usage, batting cage and mini-golf usage, course place of play, etc.
4. Three tours of the facility to understand how Mulligans fits into the local market along with how it is/can/will be viewed by the Salt Lake Valley market
5. Multiple conversations with local industry professionals to understand trends, maintenance standards, design styles and overall market competition

In summary of the evaluation, the following items are to be the focus:

1. Improve quality
2. Expand revenue offerings, expand F&B
3. Connect to the Jordan River trail
4. Improve the “front door”
5. Address safety on the course

General Observations

The location of the facility is set north, off 106th South, in a prime location. Considered as the “entry to the City,” Mulligans can be considered to be one the first things one would see as they enter into South Jordan. The natural beauty of the land is immediately observed as you enter the property. Added to the experience is the Jordan River, immediately adjacent to the property to the east. Mulligans sits on 65 acres of which approximately 58.5 acres are maintained as turf, 2.6 acres are open water and 4.25 acres of impermeable surface, i.e. pavement, buildings, etc.

The facility lacks a true “entry” as the user is met directly with the parking lot and a view to the batting cages once the turn from 106th is made onto the property. The facility provides little to no sense of arrival, and misses out on an excellent opportunity to communicate to the patron what they will be experiencing at Mulligans. The parking seems adequate, clean and well taken care of. The visual access to the clubhouse has been disrupted by a stark white barrier fence along the parking lot, and again towards the batting cages. At first glance, there is confusion as to how to access the facility, but as one wanders towards the small round-about adjacent to the clubhouse, the entrance appears.

Needs

- Improve the golf course
- Deteriorating lakes
- Irrigation upgrades
- Gateway to South Jordan
- Poor sense of arrival
- Safety along edge of course
- Safety around range
- Lack of outdoor space
- Lack of trail connection
- No visual interaction with golf

Current entry into Mulligans

The modest clubhouse is small in size, and seems to be designed properly for the type of the activities that are currently being offered. At the time of the visit, the kitchen appeared to be closed. It was confirmed that kitchen had been closed for some time, limiting the options to the customers to various packaged snacks and drinks.

Upon exiting the clubhouse and towards the range, it is immediately noticeable that the facility is blessed with an abundance of space for the driving range, however all of the views to these facilities, as well as the offsite views to the surrounding landscape, are blocked by the large concrete “double decker” driving range tee. Currently, the connection from the clubhouse to the range, through the cart storage area is sterile, cold and all concrete. It is normally within this space that specific attention is paid to attract users to sit, talk about the day’s activities, and spend some time (*hopefully while also buying something!*). Consideration should be given to the expanding this outdoor space, possibly relocating the concrete range tees to the west, and open the views to the course and surrounding landscape. And, with a good connection to the course, this space is ideally suited for outdoor event space and/or tournament activities.

View from the South West corner of the property looking East

Once outside, the true beauty of the property begins to unveil itself. Upon winding through a haphazard layout of cart paths and walking trails, the user finally finds himself at the golf course or driving range. Or, if the user returned through the door they entered, they haven't even noticed the golf course yet. After making the full circle around the clubhouse, the true picture of the facility is gained and appreciated.

Infrastructure

Golf Course

Overall, my impressions of the entire golf course is incredibly positive, and should be celebrated! This is exactly the type of entry level facility that was ignored during the late 80's and into the roaring 90's, as the "member for a day" offering seemed to dominate the landscape of golf development. The City should be applauded for having the foresight to allow this type of beginner facility to be built for their citizens, and then also for deciding to purchase it and invest in it for their future.

In regards to the overall net profits relative to all the offerings at Mulligans, the golf course is the only segment that loses money. From our perspective, there are a few key reasons for this; 1) The quality of the turf (specifically the putting greens) and; 2) the quality of the layout. These issues are complex and not straightforward. Some will take additional improvements, and perhaps some major adjustments to the overall facility. In the end our intention is to raise the standards of the entire facility, and at minimum, bring the golf course to a break even enterprise.

Two main areas of the maintenance plan for the golf course should be considered for additional investigation for improvement. Soil tests should be taken throughout the property, documenting the soil structure and physical property makeup of as many areas on the course as possible. Each test can cost around \$500, but if analyzed properly, an understanding of what level of quality of turf is attainable. My feelings are Mulligans is working with the deck stacked against them, in that the soils are very poor, not very well draining, and in need of significant amending. I would also test the water, and use these results to understand the impacts the water quality is having on the soil. It is very common to have the water/soil result be the cause of many turf problems due to high salinity, high pH or just to "hard." This testing can be well worth the investment, and the results can positively affect all areas of management. There is a reason your trees do not do very well on this property, and I'm sure it would be traced back to the water/soil result.

All of that said, there are many areas of the course that have been let go in terms of maintenance, some even ignored. Most of these issues are easily addressed. Others will take a little more deliberation in order to provide a responsible path to improvement. Overall, the course suits the current market well. However, in terms of "what it could be," I feel the facility is lacking.

Another area that merits additional study is the close proximity of many of the golf holes relative to the adjacent homes site (holes 5, 6 and 7 on the Ridge course) and the holes adjacent to the driving range (hole 2, 4, 6 and 8 on the Meadow course). There have been occasions where golf balls have ventured outside of the preferred lines of flight, causing potential conflicts in the future.

To better understand the safety issues related to current ball flight patterns, a ball flight study should be performed. This study will identify the areas of concern, and recommend netting requirements including netting length and height.

Image of range balls spread across the current 2nd green on the par 3 course

The Greens

It is the greens that most every golfer pays attention to when playing a certain course. It is what they talk about after their round, and what brings them back for repeat business. If Mulligans has the intentions to compete at any higher levels of quality related to their putting green surfaces, the current construction of the greens make this almost impossible. As the pictures provided below will show, the construction method that was used at the time of the original construction is called "native soil, push up" greens. Essentially the soil that is found on site was "pushed up" to create the complexes and were seeded with what appears to be bentgrass, a turf typical of putting greens in northern climates. This type of construction with the soils available at the site will limit any turf manager's ability to push the putting greens to the levels of smoothness and speed that today's golfer has come to expect as "normal." This is due to the root zone being prone to compaction, varying levels of moisture retention (staying too wet for too long, or easily drying out needing to be over watered), and high levels of the maintenance attention in the forms of sand top dressing and aeration. It's a testament to the current staff, and the resilience of turf grass, that the conditions of Mulligans are as good as they are!

Typical cross section of the greens at Mulligans. Note the heavy grey clay under the sandy, light colored material.

Another cross section of the greens at Mulligans. Note the dry nature of the soil.

The greens on the Meadow course appear to be the worst of the bunch. The turf quality appears to struggle the most, and has problems draining. The layout of these greens appear to be built as afterthoughts, and squeezed into a space that appeared to be “left over” from the original range design – a result of not having enough ground.

The overall design and strategy of the greens on the Ridge course appears to be of much better quality, and provides the opportunity for fun golf, targeted at beginners, and even the more accomplished golfer. The minimal bunkering (5 total bunkers) is also a positive and fits well for attracting the Mulligans’ target market.

The design of greens on The Ridge nine are well suited to the clientele at Mulligans.

The Tees

The size of each tee complex appear to be adequate for the amount of play, and provide an average amount of variety to ensure the 9 hole course remains fresh and full of variety. However, many tees are un-level and have inconsistent turf quality. I would like to see the tees enlarged a bit in order to spread out wear and tear for the current demand, and also in the event additional play does occur. I'd also investigate opportunities to locate additional tees for added variety and to give an entirely new look to the course, focusing on "beginner" tees at very short yardages with no forced carries to the greens.

Consideration should be given to expand the mowing extents of the tees to combine all the tees into one large "teeing ground." Harkening to the courses of the UK, the large grounds begin to insert variety into the game and allow for greater flexibility in laying out the course. It also allows for the new trend beginning take hold in the game – the golf version of basketball's game called "H-O-R-S-E." If large areas of turf are expanded from the previous green, a player can "call his shot" from anywhere on the course. Instead of being relegated to teeing from a specific tee marker or tee box, a player can use their creativity in finding the next area to play from. This facet of the game encourages creative shot making skills and loosens the traditional idea of the role of the teeing ground and where the golfer should play his first shot.

Bunkers

There are a total of five (5) bunkers on the Ridge and zero bunkers on the Meadow. This limited amount of bunkers fits perfectly into the idea that golf does not have to be difficult to be fun, and should not be changed. Consideration should be paid to upgrading the sand and drainage in each bunker to improve the playing condition of each bunker as the years of neglect appear to have gotten the best of them.

The bunkers are in need of upkeep including reconstruction of edges, new sub surface drainage and new sand.

Fairways and Roughs

The most notable observation of the fairways and roughs is the current turf grass selection throughout the courses (other than the greens). There appears to be a mix of blue grasses and buffalo grass, which is causing a significant color and textural contrast. In and of itself, I'm not against varying colors or textures, but it needs to be done in a manner that is consistent with a well thought out plan and within a customer's expectations. In this case, there appears to be no rhyme or reason behind the different turf selections. As a matter of fact, it appears as though the areas of buffalo grass were intentionally planted. In any case, an overall planting concept plan should be considered in order to focus on how the golf course plays, and should be maintained and matched to what a customer expects. This may result in a replanting or turf conversion sometime in the future.

A 9-deck gang mower manufactured by Kesmac in Canada.

There is one area of possible efficiency gain to be achieved regarding fairway mowing. In an effort to expand the short mown area for increased strategy, more player friendly options, and overall better visual appeal, an expansion of the fairway and chipping areas around the greens should be examined. Since the fairway areas constitute a smaller percentage of the overall mown area, an expansion shouldn't be too difficult to manage. Consideration should be given to adding a piece of mowing equipment similar to the one shown in the photo. This equipment has been proven to dramatically reduce the time it takes to mow fairways, and reduces the number of needed staff dedicated to mowing. The negative to this equipment may be in terms of less detail around features (which there are only 5 bunkers), less flexibility around severe slopes or mounds, and slightly less quality of cut. However, based on the target market, combined with the current staff levels, this appears to be a real viable option.

Practice greens, Chipping green, and Practice bunkers

These features are an incredible asset to Mulligans and should be viewed as a must save in any plan moving forward. There is, however, a bit of disconnection between all three of these features. It is important to allow for adequate space around these greens for the occasional failed shot or “skull.” This is actually very important as people learn the game and practice. Being located next to the parking lot, and adjacent to a building leaves a feeling of uneasiness as shots are being struck. Also, the eastern most putting green near the concrete range tee appears to have been built in way that is hard to use, and not consistent with the conditions found on the course. There is opportunity to comprehensively plan these features into one practice area, providing adequate space, variety, and make them incredibly fun to use.

Irrigation

The one true way to assess an irrigation system and pumping station is through an irrigation catch can audit and pump efficiency test – both of which would be recommended as part of the future planning process. However, much can be learned by visually inspecting the course and its irrigation infrastructure.

The first item we looked to acquire is the irrigation system asbuilt. This does exist, albeit, in poor condition. The asbuilt tells us the system was properly designed, but with possible inconsistencies in head spacing and control. I verified the spacing in the field as being pretty consistent with a few minor exceptions (however, I did not perform an exhaustive investigation). This process tells us the system should be in good condition.

The current irrigation as-built for Mulligans.

The next area of research was the pump station. There are two areas of possible concern surrounding the pumps. First, the irrigation pond appears to be eroding severely around the pump enclosure. This is most likely due to strong cavitation around the intake pipe at the base of the wet well at the bottom of the pump. *This situation should be addressed asap.* The second would be the overall hydraulics and main line sizing. These items would be identified during an audit, but there does not appear to be any areas of concern. A side note: it was noted the current pump station has a Premium Efficient motor, placing the efficiency of the motor in the top 2% of the best available options.

Example of the pond bank erosion, causing encroachment to the pump station enclosure.

A best management practice for all golf course irrigation systems is checking the working order of the sprinkler nozzles, ensuring sprinklers are set level to the ground and that all head are functioning properly in terms of rotation and timing. Many of these items can be accomplished by staff, however, a comprehensive irrigation system audit would be recommended.

The final area of interest regarding irrigation is the overall water use plan, how the water is utilized, stored and handled around the site. Currently, a series of interconnected channels and small holding ponds totaling approximately 2.6 acres. Also, currently there is no mechanism to monitor how much water is coming on to the property, and how much leaves. Each golf course handles this differently, but consideration should be given to establishing a method of measuring the amount of water used on the golf course.

An area of consideration concerning the ponds is the total amount of acreage that is dedicated to holding water. Consider investigating the option of reducing the overall size of the ponds to maximize space,

reduce mosquito pressure, reduce the maintenance of the collapsing edges and improve the overall strategy of the course. Also, since the ponds are only about 5-feet deep, continued erosion is likely to occur due to the constant fluctuation of the water level.

Erosion is occurring along all banks of the ponds.

Drainage issues are present throughout the course.

Signs of range balls landing on the adjacent golf holes are present on The Meadows nine.

Various varieties of competing turf grasses exist on The Ridge nine, causing color and textural differences.

Adjoining Buildings

Clubhouse

It appears as though the current clubhouse facility is functioning well for the current operation. However, the current design will be restrictive in terms of how to expand the operation to include a more robust F&B operation, connection to a quality gathering space, all the while continuing to offer good services in terms of goods sold and taking greens fees. Expansion and/or relocation of this building must be considered as part of the improvement plan moving forward.

Surrounding infrastructure

It's readily apparent various infrastructure has been deteriorating over the years, and is cause for concern. Of primary concern is the cracking of the concrete of the driving range stalls. An engineering study should be performed to understand the true extent of the potential issue. Moving forward, this structure should play a significant part in the overall plan as the upper deck of this structure is a very desirable asset. I have a vision of upgrading the upper deck of this area into private hitting areas, complete with upgraded seating, umbrellas and tables, able to be reserved for corporate meetings, or date nights. With added menu ordering and upgraded hitting mats and clubs, this space could be utilized as a higher-end service offering with great views and privacy.

The concrete "Double Decker" range tee structure appears to have significant structural issues.

A short note about the ball cleaning station located outside the clubhouse; this building appears to be functioning, but it certainly needs to be evaluated for its longevity and future safety.

Maintenance building

The current maintenance building also seems to be meeting the needs of the current operation, however, it could be considered too small due to the amount of equipment that is needing to be stored outside. When considering a connection to the Jordan River, the location of this building is perfectly suited to address added services related to the river. Rentals of mountain bikes or kayaks could be run out of this building with little to know modifications. And, with some slight adjustments to the fence line and parking lot, this entire space could be transformed into a river activity center that could include a trail connection, exercise station, kid's park, educational opportunities, shade structures, and even light food service. Consideration should be given to this location and its desire for trail access, along with building a new "Turf Management Center" that addresses the needs of additional space, offices and a conference room.

Miniature Golf

Generally, the design of the course is above average. And, having 36 holes allows for plenty of capacity and overall play. That said, the current state of the mini-golf amenity could use an overall face-lift. While doing our walkthrough, it was apparent that some portions of carpet were in need of replacement sooner than other portions. There will be a need to replace all of the carpet soon, but it's pretty obvious where the more immediate needs should be addressed. In addition, some of the water features were leaking, which points to the need of having all of the plumbing thoroughly inspected. The pond basins need to be thoroughly addressed as well, as previous patchwork and repairs are blatant in some areas. Ensuring no weak areas are present, and the potential for other weak areas are improved, will help prevent future long-term maintenance of the pond basins, and save water. Fresh coats of paint on many of the structural features is also recommended, as is basic repair maintenance to these structures throughout. An inventory of immediate and longer term needs, balanced with an improvements budget should be established through a dedicated Mini-Golf "master plan." Lastly, consideration for removing the segregating white fence around the mini-golf amenity should be given so a more "open" feel can be established.

Batting cages

The batting cages appear to be in decent working order, but could also use some attention. One thing we couldn't help but notice was that it is the first thing anyone entering Mulligans is going to see; as well as anyone driving down 106th. While moving the cages elsewhere off the main entrance would be ideal, there are ways to "spruce" it up from an aesthetics standpoint. Consideration should be given to replacing the current black netting with white netting, or even green netting. The cage poles could also be painted white for overall cohesion, if white or green netting was implemented. Ultimately however, our feelings are the location of the cages should be addressed in a manner consistent with an overall plan and should be seriously considered for relocation or placing underground, in the event this option is feasible.

Trail Connection

~~Currently, Mulligans is situated directly adjacent to the Jordan River.~~

The miniature golf carpet is worn in many places, and are showing signs of needing to be repaired in the near future.

The water features surrounding the mini golf are severely leaking and are in need of repair or possible replacement.

Trail Connection

Currently, Mulligans is situated directly adjacent to the Jordan River. However, there is little if any specific trail connection between the golf course and Jordan River Trail, which causes the feeling of being closed off from one another. ~~As a matter of~~ In fact, there exist a barbed wire fence that separates the two uses. An opportunity exists to create a visual connection from the trail to the golf course, open views from one to the other (in a safe manner), and allow for the ability to open the space up as a place that non-golfers are welcome.

A barbed wire fence closes off the connection between the golf course and Jordan River Trail.

Course Profile:

Course Name: Mulligans Golf and Game

Location: South Jordan, Utah

Golf course architect: Jimmy Blair

Superintendent: None

Assistant Superintendent: None

Golf Course Equipment Mechanic: Guy Gunning

Part-time Staff: Al Vrable, Rodney McKenna, Josh Stout, Jaxon Christensen,

Maintenance budget (annually): 35000 for grounds and maintenance and about \$50,000 for labor

Director of golf: Doug Brown

Par, Yardage/Rating/Slope: Par 33- 2200, 1818

Par 27- 1016, 833

Rounds (annual): About 25,000 per year in 9 hole starts

Percentage of play walking: About 48% in 2014

Pace of play average range: When busy: 2 hrs. Generally: 1 ½ hrs.

Soil type(s): Clay/ heavy clay, poor

Average annual precipitation: 16.1 inches

Monthly average temperature:

January	22°	41°
February	25°	47°
March	32°	56°
April	38°	65°
May	46°	75°
June	54°	87°
July	61°	95°
August	60°	94°
September	51°	83°
October	40°	69°
November	30°	53°
December	22°	41°

Prevailing wind: Directly north or directly south, no crosswind.

Total acreage of golf course site: 67 acres

Elevation: Clubhouse Base: 4,324 ft.

High point & elevation: 4,341 ft.

Low point & elevation: 4,317 ft.

Total Greens: 18

Greens size avg.: Exec- 4940.66 sq. ft. / Par 3- 2667 sq. ft.

Greens construction: Exec- Push up/ Par 3- Push up

Green turf type(s): Bentgrass with some Poa Annua

Overseed: None.

Greens cut: .145 inches

Stimpmeter reads: Par 3 greens; 5.5/ Executive greens: 7.

Tees turf type: Blue Grass with some Buffalo

Tee cut: .25 in.

Fairways: 8.72 Acres

Roughs: 32 Acres

Bunkers- total #, avg. size, and total size:

Greenside bunkers: 5, .09 acres, 4332 sq. ft. total (including practice bunkers)

Fairway bunkers: 0

Practice bunkers: 2, .01 acres

Water hazards: There is one large lake (flowing river) that cuts through the course. This comes into play on one executive hole and three par 3 holes. There are also temporary ponds that are filled that come into play on a few executive holes.

Other hazards: 0

Practice facility: 2 large practice greens, 1 chipping green. Both are close to the club house.

Irrigation: Pump capacity (GPM), # heads: 600-700 GPM. Approx. 500 sprinklers

Water window: 11pm to 6am, 7 hours

Water source: 90% secondary water and 10% culinary. Water is out of a pump near #4 tee box.

Water storage: Ponds

Annual water use average (2014): 158 ac.ft. According to *Site Pro*, Mulligans used 51,807,318 gallons from 9/17/2014 to 9/17/2015

Annual utility spend per year: \$60,000 power, gas and water

Trees – dominant species: Russian olive (exotic and invasive), Tamarisk (exotic and invasive),
Siberian elm (exotic and invasive)

Wildlife - dominant species:

Birds: Geese, Swans, Teal, Mergansers, Pheasants, Quail, Grebes, Pelicans, Cormorants, Herons, Bitterns, Egrets, Ibises, Eagles, Hawks, Harriers, Kestrels, Falcons, Coots, Cranes, Killdeer, Others

Mammals: Shrews, Evening Bats, Hares, Rabbits, Squirrels, Chipmunks, Gophers, Mice, Beaver, Coyotes, Foxes, Raccoon, Skunks, Others

Reptiles: Turtles, Horned Lizards, Lizards, Skinks, Snakes, Others

Recommendations

In summary, it is the intention of the Master Plan process to identify all factors related to the above observations and input during the evaluation phase that will directly affect the long term improvement plan for Mulligans. Thus, we have approached the preliminary design process from two angles known as Plan 'A' and Plan 'B'.

Plan 'A' – Considered to be the most minimal level of investment necessary to properly address the needs of the facility and position Mulligans for proper success in the future. Plan A looks to understand how to improve the facility by making the least amount of “change” to the current layout and orientation of the entire facility.

Plan 'A' –
Concept
Plan

Plan 'B' – This plan looks to maximize the overall “best use” of the property, understanding the high level of value of the property and the importance of Mulligans’ location as the “front door” to the City of South Jordan. Plan B examines the possibility for more involved adjustments of the overall layout of the facility in order to unlock its full potential as a comprehensive recreational center used by all residents.

Plan 'B' –
Concept
Plan

Plan B

1. New entry boulevard with expanded parking
2. New double-ended driving range with new “top golf” style clubhouse
3. Recreational center/focal point
4. Expanded Jordan River connection corridor
5. Renovated golf course with pond upgrades
6. Learning center (relocated maintenance yard)

Plan 'B' – Detailed design of golf course

South Jordan Community Links - Plan 'B'
South Jordan, Utah

Mulligans Investment Options for the City of South Jordan by THK

The Mulligans Golf and Games facility highest and best use feasibility analysis has been completed in order to determine which of the following options will result in the financially optimal scenario for the future of Mulligans subject site.

- **Scenario 1: *Maintain Status Quo***. Due to the deteriorating nature of the facility, just to maintain it as is would require an invest of \$2,200,000 into infrastructure. While these needed improvements to the existing facilities must be addressed, simply conducting necessary repairs will not significantly enhance the experience at Mulligans nor provide needed additional facilities. Also, this will not improve the “front door” to the City of South Jordan. We consider this option as simply “throwing good money after bad.”
- **Scenario 2/Plan A: *Minimal Investment***. Create smaller scale improvements that include relocating the batting cages, adding 18 holes of miniature golf, renovating and expanding the clubhouse facility. Also this scenario should enhance the appearance along South Jordan Road and the entrance to Mulligans.
- **Scenario 3/Plan B: *Maximize Best Use***. Create full scale renovations that include those improvements from Scenario 3, re-building of the golf courses and incorporating new features for the Jordan River Trailhead.
- **Scenario 4: *Regional Park***. An option exists for the City of South Jordan to convert Mulligan’s and its related enterprise fund to a city sponsored regional park for the general public. Park improvements could include a trailhead for river recreation, ball fields and other facilities. Under this option, Mulligans and all its related improvements would be eliminated including the golf course, driving range, miniature golf and other recreational facilities. This study does not include an in-depth evaluation of this option - depending on what improvements are included, this option could cost \$3.0 - \$7.0 million and possibly more.
- **Scenario 5: *Sale of Property***. Another option would be to sell the Mulligans Golf and Games property for re-development. With 65 acres THK Associates, Inc. would estimate a market value of the property at approximately \$20,000,000. Re-development of the property should be consistent with the business park to the south. The proceeds could be used to enhance other recreational facilities in South Jordan.

Discounted Cash Flow Analyses

Scenario 2/Plan A: The projected cash flow indicates that a renovated clubhouse and related facilities at Mulligans could support \$5,281,367 in present value revenues, after allowing for a 1.2 coverage ratio. After issuance costs and reserves, actual funds for the construction and improvements will be \$4,330,721. With an allocation of administrative expenses from South Jordan to Mulligans the actual funds for the construction and improvements will be \$2,099,992.

Scenario 3/Plan B: The projected cash flow indicates that a renovated clubhouse and new golf facilities at Mulligans subject site could support \$9,031,351 in present value. After allowing for a 1.2 coverage

ratio and issuance cost, the actual funds for construction/improvements will be \$7,405,708. With an allocation of administrative expenses from South Jordan to Mulligans the actual funds for the construction and improvements will be \$5,174,980.

Mulligans Program
3/7/2016

Existing Site:
Existing Course
Existing Mini Golf
Existing Club house area
Existing Parking
Existing Maintenance

Proposed Site Summary:	Proposed
Mulligans Clubhouse Area:	2.25 AC
Includes existing 188 parking lot	
Entrance and circulation roads:	
Entrance	0.25 AC
Service Road	0.50 AC
Mini Golf (Parking included above in clubhouse area):	
Existing 18 hole mini course	1.30 AC
Proposed new 18 hole mini course	0.75 AC
Estimated needs 72 parking stalls (assuming 2 courses)	
Driving Range Area:	
Includes turf tees (25 stations), double decker artificial tee lines (56 stations) and fairway including portion of safety buffers	
Needs 86 parking stalls	
Golf Course Area:	
Includes all greens, tees, water, fairways, rough, etc	
Needs 56 parking stalls	
Maintenance Area:	
Includes building, dry storage, chemical storage, parking, wash bay, etc.	1.00 AC
Needs 15 parking stalls	
PGA Office Area:	
Building (5,000 SF)	0.75 AC
Needs 17 parking stalls	
Recreation Retail Area:	
Building (12,000 SF)	2.00 AC
Needs 60 parking stalls	
Community link trail/park/food truck area:	
	0.75 AC
Batting Cage (Parking included above in clubhouse area):	
	0.50 AC
Program Notes:	10.05 AC

Estimate of Costs DRAFT

	PLAN B	NOTES
		Currently we have 188 parking stalls and that is not sufficient. In Plan B we have additional uses that requires additional parking per County Code. Assume we need an additional 150 parking spaces at \$6,000 per stall. And \$75,000 for new entry landscaping
	New Entry w/ parking	\$ 975,000.00
	New Drop-off Area	\$ 230,000.00
		Includes 7500 SF of pavers @\$20 SF, landscaping \$30,000 and signage/lighting \$50,000
Bucket #1	Remove Batting Cages	\$ 25,000.00
		Based on ABC Batting Cage estimate for 4 cage system. See attached document. If more stalls exist this may need to increase. Are we saving the existing equipment?
	New Clubhouse/Double Decker	\$ 2,500,000.00
	Expand/Retrofit Mini Golf	\$ 300,000.00
		Check with Castle Golf for additional cost estimates.
	New Trail Head Connections/Trail System	\$ 750,000.00
		Estimated 900 LF of path at \$20 SF including concrete path, sodding, planting, etc. To be handled under a Jordan River grant?
Bucket #2	2 New Viewing points on golf course	\$ 100,000.00
		Allowance - to be handled under a Jordan River grant?
	Irrigation/pond upgrades	\$ 850,000.00
		Line pond, fill in unnecessary ponds, pump station improvements
Bucket #3	Golf Course Improvements	\$ 1,500,000.00
		Rebuild greens, bunkers, new irrigation
	New Maintenance Area/PGA Bld	\$ 1,750,000.00
		Larger maintenance bld, seperate small office building
	Design & Engineering (10%)	\$ 898,000.00
	Contingency (10%)	\$ 987,800.00
	TOTAL	\$10,865,800.00

Implementation schedule

APPENDIX

January 21, 2016

Performed by: Kevin Atkinson, Atkinson Design Group

RE: Mulligans Landscape Architectural Assessment Report

The focus of my work as the Landscape Architect is to work in conjunction with Andy Staples, Golf Course Architect with all land planning, golf architecture, safety concerns and any opportunities we may see to benefit the overall project. Andy has developed an overall concept of "Community Links" that is our overall guiding strategy to better connect the golf course facility to other private, public and recreational spaces. Below is a summary of my observations based on our site visit in December 2015.

Jordan River Trail

- Utilizing the overall concept of the golf course being a community hub, incorporating the adjacent Jordan trail is an incredible opportunity to grow the game of golf.
- With only 9% of the overall public participating in golf our goal is to try to attract the other 91% to the game.
Incorporating new portions of the trail to be routed closer to the golf course/Mulligans we are optimistic that we can introduce the game of golf to new customers that would not otherwise visit a golf facility.
- Mulligans overall location as a mid-point along the Jordan River trail we believe a new retail opportunity for recreation rental business opportunity should be explored. This new location could act as a destination for trail users.
- Based on the past success of Food Truck Friday at Mulligans, we believe this concept should be introduced to Jordan Trail users as well. Our idea is to have multiple food trucks parked along the rerouted trail to act as a "farmers market" or destination for weekend users.
- Along the expanded trail we should create a couple of vantage points for trail users to stop and enjoy the view of the golf course.

Business Park

- The new business park just south of Mulligans is a very well done and successful development. With the amount of restaurants and businesses that utilize the business park, we feel Mulligans architectural style should relate better to the style of the business park.
- The landscape architectural style throughout the business park should be repeated as the entrance to Mulligans. This will give a better visual relationship that could aesthetically connect the business park to Mulligans.
- Based on the amount of businesses in the business park, we believe effort should be placed to attracting lunch gatherings with an expanded lunch menu serving hot food should be offered. This can be a combination of lunch with a bucket of balls. This could be offered in conjunction with expanded outdoor seating/event space.

Sense of Entry

- The sense of arrival to mulligans is not desirable. I believe the batting cage should either be relocated off property or be relocated away from the entrance to mulligans. In addition, creating a circular drive closer to the front door of the clubhouse would help lead people visually to the clubhouse location. This could be done quite beautifully with proper land planning and landscape architecture.
- The existing sign for mulligans should reflect the same architectural style that is across the street at the business park. In addition, the overall size of the sign should be enlarged to be more visible along the roadway.
- Additional parking should be planned for increased use and new business opportunities

Miniature Golf

- Based on the demand that the existing miniature golf courses have, we believe an additional miniature golf course should be considered.

Golf Course

- While this is Andy Staples area of expertise there are many significant safety issues that I know Andy is addressing.
- Relocate the existing maintenance facility to be located at the north end of the property to open up more valuable space for public spaces around the trail and the clubhouse area.
- Create more key vantage points for the public to stop and see the beauty of golf.
- We discussed alternate golf opportunities to help the beginning golfer learn the sport in a less stressful, less time consuming and more rewarding setting (SNAG golf?)
- The existing range shelter appears to have structural damage. If this is replaced a new location should be considered to create a more scenic setting from the clubhouse.

Club Area and outdoor seating

- There seems to be a lack of quality outdoor seating around the clubhouse area. Considering The beautiful and sunny weather that the Salt Lake City metropolitan area enjoys, additional outdoor living spaces with high quality views should be introduced.
- The views from inside the current clubhouse need to be improved to show off the beauty of the golf course and potential outdoor living spaces. Currently the primary views are the batting cage net and a cinderblock wall for the range shelter.

Andy Staples

30 March 2016

I would like to divide the irrigation into (2) two sections.

- (1) Delivery System
- (2) Application System

Delivery System

The Delivery system will constitute those items required to retrieve the water from the lake to the base of each sprinkler head. This system is in very good condition and very little maintenance has been required. A miscellaneous pipe break occurs every once in awhile. There has been no major pipe failure issues.

At the irrigation lake the water is collected thru a metal screen and delivered to the wet well where the pump station produces the required flow and pressure. The screen is correct in size but is installed at the bottom grade of the lake. There should be a minimum 16" from the lake bottom to the screen bottom. With the screen on the bottom there is a continual migration of the surrounding dirt, silt, leaves, fish, etc. This allows the delivery of items which will clog the sprinkler heads. Clogged sprinklers is a issue. A simple fix.

The pump station is a Watertronics Model VTV-60-5VC, Serial number 2002207. Watertronics is a major supplier of golf pumping equipment.

The station is a 60hp, VFD type with a maintenance pump. A pressure relief is also provided.

The pump production is set at this time at: 800 gpm @ 95psi.

Some digging has occurred since the fall. I have recommended that the area be expanded as much as possible from both sides and opposite side from the intake. A small mini could drag the soil back and the spread it over the surrounding area.

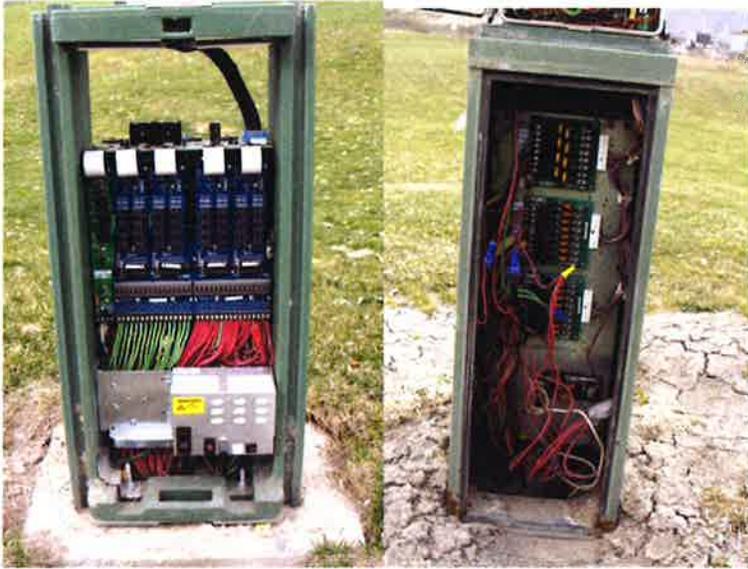

Application System

The application system will constitute the items from the base of the sprinkler and include the control system which operate the sprinkler.

The system was laid out correctly using a 64' triangular space of the heads. This spacing is the premium method for head location. There are a few irregular areas which is normal.

There is an as built showing, heads, isolation, station control, piping, tees, greens, ponds, streams and more. There is no indication of pipe size. We know the discharge is 8". It is visible.

- There is no indication of a specification.
- The control plan shows poor thought in the connecting of dual operating heads.
- It is not know at this time if there are part circle heads.
- There are no greens back up heads.
- Heads are a mix of Toro models. Many were used, purchased at construction from others who were remodeling.
- Many of the solenoids from the older models are beginning to fail.
- Wiring (splices) seem to have several faults and poorly made.
- There is evidence of gophers in the area.
- It appears the power wire is undersized for the new multi station operation in some controllers.
- The control system is Toro E-Osmac.
- There are(3) different controllers types from (1) new to (6)original upgraded.

Newest

Upgraded

Very Old Upgraded - Gopher Evidence

Typical Wiring

I have divided the system into 3 areas.

1. Executive
2. 3 Par
3. Practice (Driving Range)

At a design for the estimated worst week I use 1.75" for a week's average application. This would also mean a .25" application per day. At the 1.75" rate it will compute to 362,058 gallons per day. This figure will vary when weather data is introduced into the system each day and adjustments are made for daily ET.

At 1.75" application as the design point the general delivery to each area in hours is as follows:

	8 Hours	9 Hours	10 Hours	11 Hours	12 hours
Zone 1	530 gpm	470 gpm	420 gpm	380 gpm	350 gpm
Zone 2	160 gpm	140 gpm	130 gpm	120 gpm	110 gpm
Zone 3	<u>250 gpm</u>	<u>230 gpm</u>	<u>200 gpm</u>	<u>190 gpm</u>	<u>170 gpm</u>
Total 1-2-3	940 gpm	840 gpm	750 gpm	690 gpm	630 gpm

The existing pump station produces: 800 gpm @ 95psi

In Irrigation design and maintaining the recommended 5.0 FPS velocity, the flow max should not exceed 720 gpm.

The above calculations do not include the miniature course usage.

I understand that there is a City water connection which is connected to a separate line that feeds water to the executive course greens. I cannot find any additional information at this time. Doug and Rodney know where this connection is but not how it is piped from that point. The Issue will be, there is no backflow device known.

I would recommend a new control system along with a new 220 volt power to those controllers.

Most heads are operated as a (2) heads per station. if the control system is replaced we should add more stations and separate the wires into a single head operating system.

When the master plan is accepted and the direction is planned it will be a simple project to fit the existing piping to the new. Major main lines and most lateral piping will remain intact. Some movement will be required but no major replacements seem to be needed.

Mulligans Investment Options for the City of South Jordan

The Mulligans Golf and Games facility highest and best use feasibility analysis has been completed in order to determine which of the following options will result in the financially optimal scenario for the future of Mulligans subject site.

- **Scenario 1:** Do nothing. The City of South Jordan has the option of doing nothing at this time and letting the facilities fall into further disrepair which will potentially decrease market share. This scenario does nothing to improve the “front door” to the City of South Jordan.
- **Scenario 2:** Invest \$2,200,000 into the currently deteriorating infrastructure. While there are needed improvements to the existing facilities, simply conducting necessary repairs will not significantly enhance the experience at Mulligans or provide needed additional facilities. Also this will not improve the “front door” to the City of South Jordan.
- **Scenario 3/Plan A:** Create smaller scale improvements that include relocating the batting cages, adding 18 holes of miniature golf, renovating and expanding the clubhouse facility. Also this scenario should enhance the appearance along South Jordan Road and the entrance to Mulligans.
- **Scenario 4/Plan B:** Create full scale renovations that include those improvements from Scenario 3, re-building of the golf courses and incorporating new features for the Jordan River Trailhead.
- **Scenario 5:** An option exists for the City of South Jordan to convert Mulligan’s and its related enterprise fund to a city sponsored regional park for the general public. Park improvements could include a trailhead for river recreation, ball fields and other facilities. Under this option, Mulligans and all its related improvements would be eliminated including the golf course, driving range, miniature golf and other recreational facilities. Depending on what improvements are included, this option could cost \$3.0 - \$7.0 million and possibly more.
- **Scenario 6:** Another option would be to sell the Mulligans Golf and Games property for re-development. With 65 acres THK Associates, Inc. would estimate a market value of the property at approximately \$20,000,000. Re-development of the property should be consistent with the business park to the south. The proceeds could be used to enhance other recreational facilities in South Jordan.

Discounted Cash Flow Analyses

Scenario 3/Plan A: The projected cash flow indicates that a renovated clubhouse and related facilities at Mulligans could support \$5,281,367 in present value revenues, after allowing for a 1.2 coverage ratio. After issuance costs and reserves, actual funds for the construction and improvements will be \$4,330,721. With an allocation of administrative expenses from South Jordan to Mulligans the actual funds for the construction and improvements will be \$2,099,992.

Scenario 4/Plan B: The projected cash flow indicates that a renovated clubhouse and new golf facilities at Mulligans subject site could support \$9,031,351 in present value. After allowing for a 1.2 coverage ratio and issuance cost, the actual funds for construction/improvements will be \$7,405,708. With an allocation of administrative expenses from South Jordan to Mulligans the actual funds for the construction and improvements will be \$5,174,980.

Maintain Status Quo

SUMMARY

- > Invest \$2.2 million into the existing facility as-is without any changes to the facility..
- > By doing nothing, the facilities fall into further disrepair which will potentially decrease market share. with no to improve the "front door" to the City of South Jordan.
- > The necessary repairs will not significantly enhance the experience at Mulligans or provide needed additional facilities, these will not improve the "front door" to the City of South Jordan.

DESIGN NOTES:

Due to the deteriorating nature of the facility, just to maintain it as is would require an invest of \$2,200,000 into infrastructure. While these needed improvements to the existing facilities must be addressed, simply conducting necessary repairs will not significantly enhance the experience at Mulligans nor provide needed additional facilities. Also, this will not improve the "front door" to the City of South Jordan. We consider this option as simply "throwing good money after bad."

Current double-decker range tee

Driving range balls are hit onto the golf course

Existing water features are deteriorating

Needs

- Improve the golf course
- Deteriorating lakes
- Irrigation upgrades
- Gateway to South Jordan
- Poor sense of arrival
- Safety along edge of course
- Safety around range
- Lack of outdoor space
- Lack of trail connection
- No visual interaction with golf

GOLF COURSE ITEMS EXPECTED LIFE CYCLE

HOW LONG SHOULD PARTS OF THE GOLF COURSE LAST?

No two golf courses are alike except for one thing: deteriorating replacement of key items can lead to greater expenses in the future, as well as a drop in conditioning and player enjoyment. The following information represents a realistic estimate for each item's longevity.

Conditions like age can vary depending upon location of the golf course, quality of materials, original installation, and past maintenance practices. The American Society of Golf Course Architects (ASGCA) encourages golf course leaders to work with an ASGCA member, superintendent and others to assess their course's components.

ITEM	YEARS
Greens (1)	15 - 30 years
Bunker Sand	5 - 7 years
Irrigation System	10 - 30 years
Irrigation Control System	10 - 15 years
PVC Pipe (under pressure)	10 - 30 years
H.D.P.E. Pipe	40 - 60 years
Pump Station	15 - 20 years
Cart Paths - asphalt (2)	5 - 10 years (or longer)
Cart Paths - concrete	15 - 30 years (or longer)
Practice Range Tees	8 - 10 years
Tees	16 - 20 years
Corrugated Metal Pipes	15 - 30 years
Bunker Drainage Pipes (3)	5 - 10 years
Mulch	1 - 3 years
Grass (4)	Varies

NOTES: (1) Based on typical use; (2) depends on traffic; (3) depends on pipe material and installation; (4) depends on maintenance practices. The American Society of Golf Course Architects (ASGCA) encourages golf course leaders to work with an ASGCA member, superintendent and others to assess their course's components.

ASGCA thanks those at the USGA Green Section, Golf Course Builders Association of America, Golf Course Superintendents Association of America and various suppliers for their assistance in compiling this information.

The materials presented on this chart have been reviewed by the following Allied Associations of Golf:

GCSAA NGA NGE USGA

Existing putting green core (Typ.)

Property Sale

SUMMARY

- > Not an acceptable option for community according to recent Y2 Analytics survey.
- > Option would sell the Mulligans Golf and Games property for re-development. According to THK Associates, Inc, 65 acres would estimate a market value of the property at approximately \$20,000,000.
- > Re-development of the property should be consistent with the business park to the south.
- > The proceeds could be used to enhance other recreational facilities in South Jordan.

DESIGN NOTES:

Another option we determined would be prudent to include, would be to sell the Mulligans property for re-development. We understand that this is not preferred by the majority of South Jordan residents as determined by the 2014 Y2 Analytics findings, but with these 65 acres, THK Associates, Inc. would estimate a market value of the property at approximately \$20,000,000. Re-development of the property should be consistent with the business park to the south. The proceeds could be used to enhance other recreational facilities in South Jordan.

Mid-Level Investment

aka Plan 'A'

SUMMARY

- > Create smaller scale improvements that include relocating the batting cages, adding 18 holes of miniature golf, renovating and expanding the clubhouse facility.
- > Improve the golf course keeping the current layout and expand the driving range..
- > Address safety concerns around the course.
- > This scenario should enhance the appearance along South Jordan Road and the entrance to Mulligans.

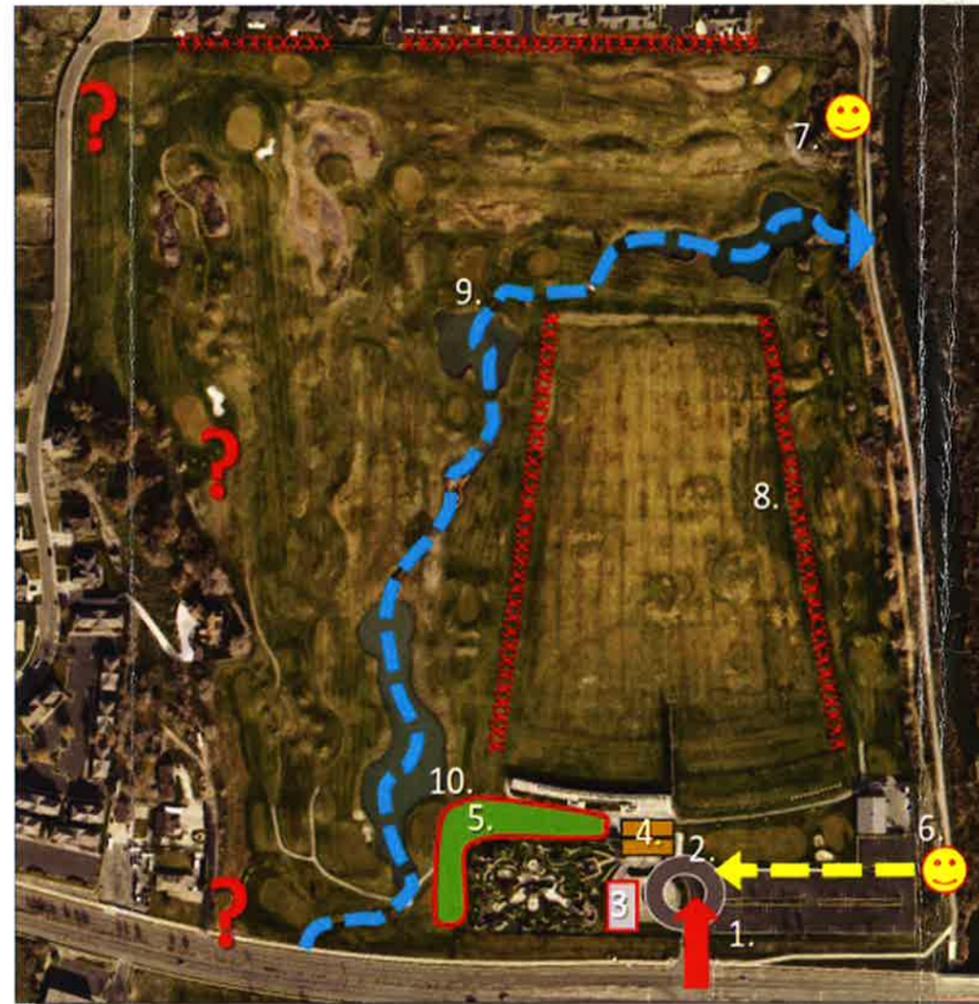

DESIGN NOTES:

This option makes smaller scale improvements that include improving the golf course keeping the current layout in place, relocating or removing the batting cages, adding 18 holes of miniature golf renovating/ expanding the clubhouse facility and adding a trailhead. A strong focus would be placed on enhancing the appearance along South Jordan Parkway and improving the entrance to the facility. The safety concerns around the course would be addressed by adding safety netting along with making minor modifications to the layout of the course.

Focus of our Work

1. Improve quality
2. Expand offerings, expand F&B
3. Connect to the Jordan River trail
4. Improve the "front door"
5. Address safety

COST ESTIMATE - PLAN A	
New Entry w/ parking	\$ 350,000.00
New Drop-off Area	\$ 150,000.00
Rebuild Batting Cages	\$ 100,000.00
Expand Clubhouse	\$ 500,000.00
Rebuild Double Decker Range tee	\$ 250,000.00
Expand/Retrofit Mini Golf	\$ 250,000.00
New Trail Head Connection	\$ 150,000.00
New Viewing point on golf course	\$ 50,000.00
Add safety netting	\$ 250,000.00
Irrigation/pond upgrades	\$ 750,000.00
Golf Course Improvements	\$1,000,000.00
Design & Engineering (10%)	\$ 380,000.00
Contingency (10%)	\$ 418,000.00
TOTAL	\$4,598,000.00

Plan A

1. New entry
2. New drop-off area
3. Rebuild batting cages
4. Expand C.H.
5. Expand mini golf
6. New trail head connection
7. Viewing point to golf course
8. Add safety netting
9. Irrigation/pond upgrades
10. Minor changes to golf course

High-Level Investment

aka Plan 'B'

SUMMARY

- > Create full scale renovations that include those improvements from mid-level improvements.
- > Re-building of the golf course to 12 holes, expand the driving range and add a world-class learning center with expanded short game areas and putting course.
- > Incorporate/expand a new trail connection for the Jordan River Trailhead.
- > Create a "Recreational Center" with corporate leasing space in conjunction renovations to facility.

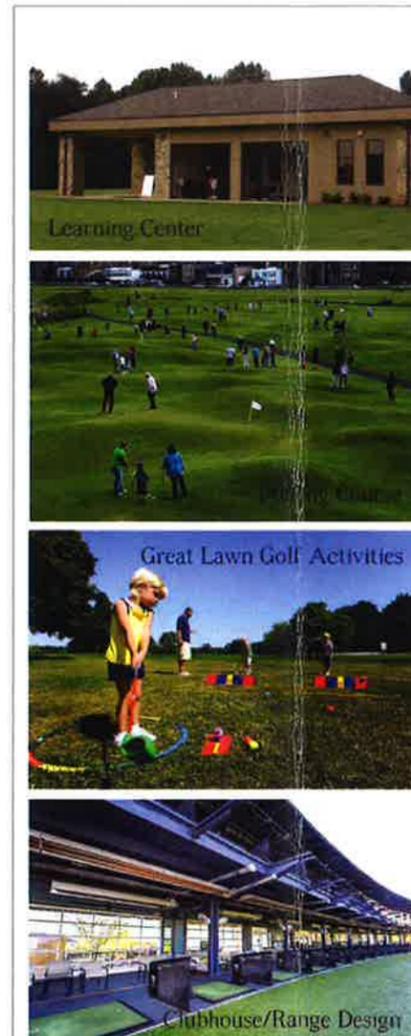

"SOUTH JORDAN COMMUNITY LINKS"

DESIGN NOTES:

Create full scale renovations that include those improvements from Plan A, while re-building the golf course(s) and incorporating new features from the Jordan River Trail. This option represents the greatest potential for community impact of all the options while also maintaining the City's dedication to the game of golf - a **Community Links**.

COST ESTIMATE - PLAN B	
New Entry w/ parking	\$ 600,000.00
New Drop-off Area	\$ 150,000.00
Rebuild Balting Cages	\$ 100,000.00
New Clubhouse/Double Decker	\$ 2,500,000.00
Expand/Retrofit Mini Golf	\$ 250,000.00
New Trail Head Connection	\$ 150,000.00
2 New Viewing points on golf cours	\$ 100,000.00
Irrigation/pond upgrades	\$ 750,000.00
Golf Course improvements	\$ 2,000,000.00
New Maintenance Area/PGA Bld	\$ 1,750,000.00
Design & Engineering (10%)	\$ 835,000.00
Contingency (10%)	\$ 918,500.00
TOTAL	\$ 10,103,500.00

South Jordan Community Links - Plan 'B'
South Jordan, Utah

The Park Plan

SUMMARY

- > An option exists for the City of South Jordan to convert Mulligan's and its related enterprise fund to a regional park.
- > Park improvements may include a trails, trailheads pavilions, playgrounds great lawn space and other facilities.
- > Under this option, Mulligans specific facility amenities such as clubhouse, trail system, mini-golf, etc. would be improved.
- > The golf course would be eliminated. The driving range and learning center could be maintained.

DESIGN NOTES:

An option exists for the City to convert Mulligan's and its related enterprise fund to a city sponsored regional park for general public use. Park improvements could include a trailhead for river recreation, ballfields and other facilities. Under this option, Mulligans and its related amenities would be eliminated including the golf course, driving range, mini-golf and other recreational facilities.

COST ESTIMATE

Entry Pavilion and Plaza
\$3,000,000

New Parking
\$637,000

Mini-Golf Concessions and Pavilion Shelter
\$1,115,000

Two New 18-hole Mini-Golf Courses
\$1,227,000

Golf Course Driving Range and Structure
\$2,357,000

Pavilions, Play Areas, Restrooms
\$1,178,000

Park Open Space Improvements
\$1,807,000

TOTAL
\$11,579,000

KEY ELEMENTS

- Enclosed Pavilion
- Expanded Parking (and water ice sheet)
- Enhance Jordan River Trail Connections
- 2 New Mini-Golf Courses
- 18-Hole Disc Golf Course
- Double Ended Driving Range
- Bike Rental and Repair Station
- Recreation Rentals
- Bike Trail
- Park Trails
- Playgrounds
- Picnic Pavilions
- Public Park Spaces

Pavilions, Play Areas, Restrooms
\$1,178,000

Park Open Space Improvements
\$1,807,000

Golf Course Driving Range and Structure
\$2,357,000

Two New 18-hole Mini-Golf Courses
\$1,227,000

Mini-Golf Concessions and Pavilion Shelter
\$1,115,000

Entry Pavilion and Plaza
\$3,000,000

New Parking
\$637,000

EXECUTIVE SUMMARY

EXECUTIVE SUMMARY

Mulligans Golf and Games Surrounding Environs

The purpose of this golf and entertainment highest-and-best-use market feasibility analysis has been to determine the demand potentials for various golf and entertainment features at the Mulligans golf and entertainment facility, which is located in South Jordan, Utah. The demand potentials and competition have been studied to determine whether currently existing features should be upgraded or non-existing features should be added. An assessment of demand potentials and the competition for public golf rounds, miniature golf rounds, batting cage usage and driving range usage has been undertaken for currently existing facilities. Furthermore, THK Associates has also determined the related potential of the adjacent Jordan River and Jordan River Trailhead to support an on-site/Mulligan's retailer which could provide additional services like bicycle sale rentals and service, kayak and canoe rentals.

The Mulligans subject site is approximately 65.3-acres and is located within Salt Lake County, which is a part of the greater Davis, Salt Lake, Summit, Utah, Wasatch, and Weber Six-County Salt Lake City regional market area (pg. 11 & 12). The Mulligans subject site is located approximately 14.5 miles directly south of downtown Salt Lake City in the Salt Lake Valley. The Salt Lake Valley is at an elevation of 4,300 feet, encompasses approximately 500 square miles, and has nearly 360 degree views of the surrounding Mountains. The Mulligans subject site is approximately 6.5 miles west of the O'Sullivan's Peak foothills, which reach an elevation of 11,300 feet. These foothills are a part of the greater Wasatch Mountain Range that stretches 160 miles to Idaho and reaches an elevation of 11,900 feet. Several Ski resorts in the Wasatch Mountain Range like Brighton, Solitude, Alta, and Snowbird are all located within 17.5 miles of the Mulligans subject site. Mulligans subject site is located 21.0 miles southeast of the Great Salt Lake which covers an area of 1,700 square miles, and 14.0 miles north of Utah Lake which covers an area of 150 square miles.

Mulligans subject site is located on the eastern edge of the City of South Jordan, in Utah where there is substantial support for entertainment facilities like Mulligans Golf and Games (pg. 13) Immediately south of Mulligans across South Jordan Parkway is 1.7 million square feet of office space and approximately 8,500 office workers at the River Park Corporate Center (pg. 104). Less than a mile east, across I-15 is the South Town Center Mall which has 1.3 million square feet of retail space and 150 stores, including REI which leases over 20,000 square feet and promotes an active outdoor lifestyle. Approximately 15,600 people live within two miles north and south of the Mulligans subject site between 1300 W and I-25. The South Jordan River Trailhead and River flank the eastern edge of the Mulligans subject site and connects Utah Lake to the Great Salt Lake at a distance of over 50 miles. Near the Mulligans subject site, the trailhead has approximately 225 daily weekday users, 350 daily weekend users and greater numbers realized during holidays. The Jordan River Trailhead is helping to bring office workers, retail shoppers, households, and outdoor enthusiasts right past Mulligans, enthusiasts that are already interested in the active lifestyle that Mulligans is promoting (pg. 104). Furthermore, Mulligans subject site is located 2,500 feet west of the intersection of Interstate 15 and South Jordan Parkway in the northwest quadrant. The Mulligans subject site is in a unique position to capture a substantial number of customers from the 170,285 vehicles passing along I-15 and the 39,950 vehicles passing along South Jordan Parkway at the point of intersection each day.

Six-County Demand

- The Mulligans subject site is located in the larger Six-County Salt Lake City regional market area that is currently experiencing strong growth (pg. 11).
- The Six-County market area has a population base of 2,319,471 people living in 728,829 households, of which approximately 1,484,539 people are employed (pg. 52).
- The Six-County market area has been growing historically since 1980 by 26,732 jobs and this has fueled annual population growth of 33,500 people in 10,550 households. In the last five years annual employment growth has accelerated to an average of over 39,335 new jobs per year (pg. 19 & 36).
- The Six-County market areas largest private sector job growth is projected to occur within the professional and technical services, health care and social assistance, and finance and insurance industries over the next decade (pg. 28).
- This Six-County region is projected to grow by 30,866 new jobs, 39,840 people, and 11,813 households annually on average over the next decade (pg. 52).
- Since 1980, the Six-County market area has averaged annually the construction of 11,621 residential units, including 8,682 single-family and 2,938 multi-family units (pg. 42-45).
- The Six-County market areas five to 14 year old age group is projected to increase by 0.4%, while the 14 to 18 year old age group is projected to increase by 1.5% annually on average over the 2016 to 2025 time period (pg. 56).

Salt Lake County Demand

- The Salt Lake County submarket makes up the immediate environs of the Mulligans subject site and has also experienced tremendous growth (pg. 12).
- Salt Lake County currently has a population base of 1,100,370 people, living in 365,396 households, and 827,494 employed people (pg. 53).
- Salt Lake County has been growing historically since 1980 by 13,984 jobs and this has fueled annual population growth of 13,750 people in 4,583 households. In the last five years, Salt Lake County region's employment growth has accelerated to 20,641 average annual new jobs per year (pg. 20 & 36).
- Salt Lake County's largest private sector job growth is projected to occur within the professional and technical services, finance and insurance, and administrative and waste services industries over the next decade (pg. 29).
- Salt Lake County is projected grow by 17,647 new jobs, 16,630 people, and 5,094 households annually on average over the next decade (pg. 53).
- Since 1980, Salt Lake County has averaged annually the construction of 5,123 residential units, including 3,481 single-family and 1,642 multi-family units (pg. 42-45).
- Salt Lake County's five to 14 year old age group is projected to increase by 1.7%, while the 14 to 18 year old age group is projected to increase by 1.6% annually on average over the 2016 to 2025 time period (pg. 56).

Golf Demand

The Primary Trade Area (PTA) for golf participation for Mulligans subject site encompasses the greater part of Salt Lake City, South Salt Lake City, West Valley City, Taylorsville, Murray, Holladay, West Jordan, Midvale, Cottonwood Heights, Sandy, Riverton, Draper and South Jordan (pg. 55). A majority of these areas have been very active in recent years with significant increases in population and households, resulting in substantial residential housing construction activity which in turn is the driving factor for entertainment facility participation (pg. 38).

- The Mulligans Primary Trade Area (PTA) for golf currently has a permanent population of 1,076,190 people living in 356,228 households (pg. 59 & 60).
- Since 1990 the Mulligans PTA has added an average of 14,804 people and 4,896 households annually, and over the last five years, the Mulligans PTA has added an average of 14,008 people and 4,503 households annually (pg. 60).
- The Mulligans PTA is projected to grow annually by 16,570 people and 5,060 households over the 2016 to 2025 time period (pg. 60).
- The Mulligans PTA has 39,223 serious golfers who golf eight or more times annually and 78,315 occasional golfers who golf less than eight times annually, for a total that is projected to grow from 117,538 golfers in 2016 to 131,473 in 2025 (pg. 66).
- The Mulligans golfers play an average of 15.9 18-hole equivalent rounds annually on average, and this figure is projected to grow to 16.0 by 2025.

The Mulligans Golf PTA is currently experiencing a demand for 1,386,212 total 18-hole equivalent golf rounds. There is a demand for 66,746 18-hole equivalent golf rounds for public par 3 and executive golf courses (pg. 70). Of the 29 golf courses in the Mulligans PTA, five are public 9-hole executive or par 3 golf courses and two of those five public 9-hole executive and par 3 courses are located at the Mulligans subject site (pg. 72). Mulligans subject site is projected to therefore capture 25% of the annual market demand for public executive and par 3 golf rounds, or approximately 16,687 rounds. Currently Mulligans is achieving 12,500 18-hole equivalent rounds, for a demand shortfall of 4,187 rounds. If Mulligans Golf and Games were improved and upgraded, it is projected that the site could capture 35% of the executive and par 3 market demands, or 23,361 18-hole equivalent rounds annually (pg. 80). Based on a capacity of 30,000 18-hole equivalent rounds at Mulligans Golf and Games, this demand to capacity ratio under the "As-Improved" scenario establishes a course utilization of 77.9% (pg. 82). This utilization rate is projected to grow to 95.8% in 2025 based on PTA population growth. The course utilization is a determination of Mulligans two golf courses ability to utilize or reach their full capacity of rounds.

Alternative Recreation and Entertainment Demand

The PTA for miniature golf, batting cage, driving range, bicycle and kayak entertainment features at Mulligans subject site is slightly smaller than the golf course PTA because participants to the former do not travel as far (pg. 87). In the entertainment demand analysis section the potentials for driving range bucket sales, miniature golf rounds, and batting cage usage among existing facilities was projected. Furthermore, the potential for bicycle and kayak demand from incorporating the adjacent Jordan River and Jordan River Trailhead into Mulligans Golf and Games was also considered.

- Based on maintaining current driving range operations and a 5.5% capture rate, the number of driving range practice plays at Mulligans subject site is projected to increase from 57,987 in 2016 to 64,862 in 2025. (pg. 84).
- Based on expanding from 36 to 54 hole and a 25% capture rate, the 18-hole equivalent miniature golf round demand at Mulligans subject site is projected to increase from 95,880 in 2016 to 112,676 in 2025. This will create a miniature golf utilization rate that increases from 79.9% to 93.9% over this same time period (pg. 91).
- Based on maintaining current batting cage operations and a 25% capture rate, the batting cage plays at Mulligans subject site are projected to increase from 61,745 in 2016 to 70,176 in 2025. This will create a batting cage play utilization rate that increases from 68.6% to 78.0% over this same time period (pg. 100).
- Based on integrating the Jordan River Trailhead with the Mulligans subject site and a 7.47% participation rate, the volume of potential bicycle users that move past the site are projected to increase from 198,983 in 2016 to 233,842 in 2025 (pg. 105).
- Based on integrating the Jordan River Trailhead with the Mulligans subject site and a 1.67% participation rate, the volume of potential kayak users that float past the site are projected to increase from 3,707 in 2016 to 4,357 in 2025 (pg. 105).

Mulligans Investment Options for the City of South Jordan

The Mulligans Golf and Games facility highest and best use feasibility analysis has been completed in order to determine which of the following options will result in the financially optimal scenario for the future of Mulligans subject site.

- **Scenario 1:** Do nothing. The City of South Jordan has the option of doing nothing at this time and letting the facilities fall into further disrepair which will potentially decrease market share. This scenario does nothing to improve the “front door” to the City of South Jordan.
- **Scenario 2:** Invest \$2,200,000 into the currently deteriorating infrastructure. While there are needed improvements to the existing facilities, simply conducting necessary repairs will not significantly enhance the experience at Mulligans or provide needed additional facilities. Also this will not improve the “front door” to the City of South Jordan.
- **Scenario 3/Plan A:** Create smaller scale improvements that include relocating the batting cages, adding 18 holes of miniature golf, renovating and expanding the

EXECUTIVE SUMMARY

clubhouse facility. Also this scenario should enhance the appearance along South Jordan Road and the entrance to Mulligans.

- **Scenario 4/Plan B:** Create full scale renovations that include those improvements from Scenario 3, re-building of the golf courses and incorporating new features for the Jordan River Trailhead.
- **Scenario 5:** An option exists for the City of South Jordan to convert Mulligan's and its related enterprise fund to a city sponsored regional park for the general public. Park improvements could include a trailhead for river recreation, ball fields and other facilities. Under this option, Mulligans and all its related improvements would be eliminated including the golf course, driving range, miniature golf and other recreational facilities. Depending on what improvements are included, this option could cost \$3.0 - \$7.0 million and possibly more.
- **Scenario 6:** Another option would be to sell the Mulligans Golf and Games property for re-development. With 65 acres THK Associates, Inc. would estimate a market value of the property at approximately \$20,000,000. Re-development of the property should be consistent with the business park to the south. The proceeds could be used to enhance other recreational facilities in South Jordan.

Discounted Cash Flow Analyses

Scenario 3/Plan A: The projected cash flow indicates that a renovated clubhouse and related facilities at Mulligans could support \$5,281,367 in present value revenues, after allowing for a 1.2 coverage ratio. After issuance costs and reserves, actual funds for the construction and improvements will be \$4,330,721. With an allocation of administrative expenses from South Jordan to Mulligans the actual funds for the construction and improvements will be \$2,099,992.

Scenario 4/Plan B: The projected cash flow indicates that a renovated clubhouse and new golf facilities at Mulligans subject site could support \$9,031,351 in present value. After allowing for a 1.2 coverage ratio and issuance cost, the actual funds for construction/improvements will be \$7,405,708. With an allocation of administrative expenses from South Jordan to Mulligans the actual funds for the construction and improvements will be \$5,174,980.

Private Third Party Management or Other Public Ownership Options for Mulligans

THK has observed a variety of options utilized by communities to involve private third party management companies in the operation of community owned golf courses and related recreational facilities. Management options available to a community may include:

1. A community can hire a private management company to operate their golf course and recreational facilities including the food and beverage operations. The community has a high level of control and a stable financial return. The community also has quality assurance and shorter term contracts, specialists can be hired. Under this approach, the management company is paid a fixed fee or percent of revenue. The community benefits from potential lower or no negative operating expenses and it reduces employees and related costs. The management company is responsible for

EXECUTIVE SUMMARY

maintenance, but the community is responsible for capital improvements. It requires more community involvement and it minimizes private investment and entails greatest level of community financial risk.

2. Often times, communities enter into a lease for the food and beverage operations with a concessionaire that is responsible for all food and beverage related activities. The short term lease rate to the community can be a fixed annual rate or a percent of the annual gross revenue or net income. Sometimes the lease can be expanded to handle other operations including the golf course, driving range and miniature golf facilities. Maintenance standards can be established by the community and often times maintenance employees are on the community payroll with community benefits. Leases can minimize political influence in setting fees, policies and procedures. Under some scenarios, the community is responsible for capital improvements and under other scenarios the concessionaire or lessor is responsible for capital improvements, which brings private capital into the project. The benefit of leasing to a private third party is it eliminates the negative cash flow and guarantees a fixed income to the community. It may minimize operational and quality control and financial upside. It also eliminates some community employees, their salaries and benefits. The negative is that lessors or concessionaires may not reinvest net operating income in maintenance and capital improvements and the improvements may not be maintained to City standards.
3. Sometimes communities enter into a long term lease with a private company for a period of 20 years or longer. The annual lease rate may be tied to gross revenue or net income and the employees, operations maintenance and capital improvements become the responsibility of the lessor. Under this scenario, the community eliminates all negative cash flows, reduces employees and has a guaranteed income. It is unlikely that any company is going to be willing to undertake a long term lease at Mulligans because of the \$2.2 million of deferred maintenance and the possibility that an investment of \$4.2 million to \$7.5 million may be needed to insure the competitive status of Mulligans.
4. Finally, the opportunity may present itself for the operation of Mulligan's to be taken over by another public agency such as the county, a regional recreation district or some other entity through a purchase or land swap. Mulligan's occurs at the front door to the City of South Jordan and the 65 acre site is an extremely strategic and valuable piece of real estate. It is unlikely that another public or private entity would understand the importance and value of Mulligans. This site and its improvements should set the whole tone for the quality of life available in South Jordan and it should project a sense of arrival that you are entering a special place, the City of South Jordan. For this reason, the City of South Jordan should control what improvements occur and are maintained at Mulligans.

I. INTRODUCTION

I. INTRODUCTION

The purpose of this golf and entertainment highest-and-best-use market feasibility analysis has been to determine the demand potentials for various entertainment features at the approximately 65.3-acre Mulligans subject site, which is located in South Jordan, Utah. These entertainment features include a 9-hole executive and a 9-hole par 3 golf course, 36-holes of miniature golf, batting cages, a driving range, as well as potential bicycle and kayak rentals. In order to determine the entertainment highest-and-best-use market feasibility of the approximately 65.3-acre Mulligans subject site, THK Associates has undertaken the following research:

- Prepared an aggregated economic base analysis of the Six-County Salt Lake City regional market that includes Davis, Salt Lake, Summit, Utah, Wasatch, and Weber counties.
- Prepared an economic base analysis of Salt Lake County, where the Mulligans subject site is located.
- Profiled the Six-County market and Salt Lake County submarket by historical and projected population, household and employment growth
- Compiled data on major employers, per capita personal income, age demographics, housing characteristics, single-family and multi-family housing permit data and other relevant statistics.
- Interviewed key persons and researched recent publications related to the economic growth, outlook and entertainment features of the Mulligans subject site and surrounding environs.
- Determined a primary trade area (PTA) from which a majority of golf course demand is projected to derive from.
- Examined employment, population and household growth, along with other key demographic data and growth potentials within the Mulligans PTA.
- Profiled participation rates and number of residents by gender, age and golf persuasion in order to determine the number of potential golf participants in the Mulligans PTA.
- Determined the number of golf rounds by gender, age and golf persuasion in order to determine the total 18-hole equivalent golf rounds demanded in the PTA from 2016 to 2025.
- Established the 18-hole equivalent golf round demand for public facilities using secondary support and capture rates for par 3 and executive courses in the PTA.
- Profiled all public, private, semi-private and daily fee golf courses in the PTA by facility, amenities, driving range characteristics, membership pricing and monthly dues, average annual rounds played, date of construction, green fees, number of holes, etc.
- Utilized the 18-hole equivalent average annual rounds by course type in order to determine course equivalency and total holes for all municipal courses.

INTRODUCTION

- Determined "As-Is" and "As-Improved" golf capture rate for Mulligans subject site based on competitors and current play at Mulligans in order to determine annual demand surplus/shortfall at Mulligans subject site.
- Projected "As-Is" and "As-Improved" course utilization at Mulligans subject site from 2016 to 2025 based on Mulligans subject site demand and capacity.
- Utilized participation rates, play frequency and captures rates in the Mulligans PTA for driving range usage in order to determine the projected number of practice plays at Mulligans subject site from 2016 to 2025.
- Created an inventory of entertainment facilities in the Mulligans PTA that have miniature golf, batting cages, skating rinks and go karting, along with their dollar usage rates, hours of operation, year built, building size, amenities and other relevant factors. (Driving range facilities are included in the golf course inventory).
- Determined miniature golf round demand for the Mulligans PTA, and determined the miniature golf round demand and utilization rate for the Mulligans subject site from 2016 to 2025.
- Determined batting cage play demand for the Mulligans PTA, and determined the batting cage play demand and utilization rate for the Mulligans subject site from 2016 to 2025.
- Established additional demand and made recommendations for incorporating the Jordan River Trailhead and accompanying alternative uses like bicycle and kayak rentals into the Mulligans subject site.
- Summarized several basic and alternative marketing recommendations in order to increase the number of general patrons to the Mulligans subject site.
- Created a Discounted Cash Flow Analysis of the Mulligans subject site in order to determine "As-Is" and "As-Improved" annual facility revenue sources, expenses, annual net operating income and the present value of operations.

II. SITE DESCRIPTION

II. SITE DESCRIPTION

A. SITE DESCRIPTION

The Mulligans subject site is approximately 65.3-acres and is located within Salt Lake County, which is a part of the greater Davis, Salt Lake, Summit, Utah, Wasatch, and Weber Six-County Salt Lake City regional market area. The location of the Mulligans subject site with respect to the surrounding environs is shown below in Figure-1 through Figure-4. The Mulligans subject site is located approximately 14.5 miles directly south of downtown Salt Lake City in an area referred to as the Salt Lake Valley. The Salt Lake Valley is at an elevation of 4,300 feet, encompasses approximately 500 square miles, and has nearly 360 degree views of surrounding Mountains. The Mulligans subject site is approximately 6.5 miles west of the O'Sullivan's Peak foothills, which reach an elevation of 11,300 feet. These foothills are a part of the greater Wasatch Mountain Range that stretches 160 miles to Idaho and has an elevation reaching altitudes of 11,900 feet. Several Ski resorts in the Wasatch Mountain Range like Brighton, Solitude, Alta, and Snowbird are all located within 17.5 miles of the Mulligans subject site. Mulligans subject site is located 21.0 miles southeast of the Great Salt Lake which covers an area of 1,700 square miles, and 14.0 miles due north of Utah Lake which covers an area of 150 square miles.

Mulligans subject site is located on the eastern edge of the City of South Jordan, as shown in Figure-3. Mulligans subject site is located 2,600 feet west of the intersection of Interstate 15 and South Jordan Parkway in the northwest quadrant. The Mulligans subject site is in a unique position to capture a substantial number of customers from the 170,285 vehicles passing along I-15 and the 39,950 vehicles passing along South Jordan Parkway at the point of intersection each day. The South Jordan River Trailhead and River are adjacent at the eastern edge of the Mulligans subject site and connects Utah Lake to the Great Salt Lake at a distance of over 50 miles. The trailhead has approximately 225 users on the weekdays and 350 users on the weekends with much greater numbers realized during holidays according to the counter 1.6 miles north of the Mulligans subject site at West 9400 South.

In 1991 the first application for a driving range, miniature golf and batting cage facility was submitted by Mulligans Golf and Games. In 1992 the par 3 Meadow Golf Course at Mulligans was built. In 1995 an application for additional acreage eventually lead to the Executive Ridge Golf Course at Mulligans being built in 1997. Acquisition of the Mulligans property by the City of South Jordan was about having control of an important piece of property to perpetuate open space. The Mulligans subject site was purchased in 2004 by the City of South Jordan with a \$12,500,000 bond.

SITE DESCRIPTION

Mulligans Golf and Games is ripe with a varietal of amenities to attract a large number of public users. Mulligans is home to a driving range with 36 ground level open tee boxes and 38 elevated open tee boxes, with the latter having heated stalls beneath. Of the 20 golf courses in the larger Mulligans environs, only Mulligans and one other golf course have heated driving range bays. Furthermore, Mulligans has 8 batting cages, 36 miniature golf holes, golf lessons, golf leagues, company and private outings. Mulligans Golf and Games has added foot golf in recent years, which has grown in popularity from 1,710 rounds in 2014 to 4,323 rounds in 2015. The amenities are located on the southern side of the Mulligans subject site off of South Jordan Parkway near the parking lot and entrance, while the golf course extends to the north.

III. ECONOMIC BASE ANALYSIS

III. ECONOMIC BASE ANALYSIS

A. HISTORICAL EMPLOYMENT GROWTH

Employment trends are prime indicators of the economic growth of an area. Increases in employment spur population and household expansion and generate growth for most sectors of the local economy, largely dictating the rate at which it will expand. This section looks at the area's various historical employment figures by industry and projects their course over the next decade. Table III-1 on the next page shows historical employment growth since 1980 in the Six-County market area, defined as Davis, Salt Lake, Summit, Utah, Wasatch and Weber counties. Total employment has grown from 548,935 in 1980 to 1,484,539 in 2015 – an annual increase of 26,732 jobs. Since 2011, the Six-County market has added 39,335 new jobs annually on average, and 39,949 annually on average since 2013.

Table III-2 shows historical employment growth for Salt Lake County. Since 1980, Salt Lake County has added an annual average of 13,984 jobs. More recently, since 2011, Salt Lake County has added an annual average of 20,641 jobs, for a 2.7% average annual growth rate. Ever since 2012, employment levels have continued to exceed the former high mark in 2007 and appear poised to continue this trend for the next several years. In 2007, Salt Lake County had a total employment base of 761,839 workers. In 2008, 2009 and 2010 Salt Lake County lost 36,868 employees in total. This trend was short lived, and in 2011 employment grew by 19,960 employees, and since 2013 Salt Lake County has added 19,479 new jobs annually. Employment Graphs for the Six-County and Salt Lake County market areas follow Table III-2. Over the last 35 years Salt Lake County has decreased from 61.4% to 55.7% of the total Six-County market areas total employment.

The Standard Industrial Classification (SIC) index for reporting employment by industry was replaced in 2001 by the North American Industry Classification System (NAICS). The new system allows the government an improved method of tracking economic statistics. Employment by industry is tracked for the Six-County and Salt Lake County market areas in Table III-3 and III-4, respectively. Over the past decade, the Six-County Market area has experienced growth in almost every employment sector, as shown in Table III-3; only the Utilities and the Construction industries have seen declines. The greatest number of private sector jobs in the Six-County market area are found in the Retail Trade industry (155,015 jobs), Health Care and Social Assistance (125,779 jobs), and Professional and Technical Services (119,199 jobs). Together, these three sectors account for 399,993 jobs in the Six-County area, or 26.9% of total farm and non-farm employment. Table III-3 shows that in the past three years, these industries have added an annual average of 12,448 jobs – 31.2% of the Six-County growth over this aforementioned period of time. In Salt Lake County, the greatest number of private sector jobs are found in the Retail industry (80,758 jobs), Finance and Insurance (69,835 jobs), and Professional and Technical Services (68,113 jobs). Together, these three sectors account for 218,706 jobs in Salt Lake County, or 26.4% of total farm and non-farm employment. Table III-4 shows that in the past three years, these industries have added an annual average of 6,234 jobs, or approximately 32.0% of total job growth over this aforementioned period of time. Employment data by industry and year is graphed following Table III-4.

Six-County Salt Lake City and Salt Lake County Total Employment by Industry, 2015

ECONOMIC BASE ANALYSIS

B. PROJECTED EMPLOYMENT GROWTH

As shown in Table III-5A, the Six-County market area is projected to add, on average, approximately 30,866 jobs per year over the 2016 to 2025 time period. The sectors with the highest projected growth by number of jobs are the Professional and Technical Services industry (5,688 jobs per year), Health Care and Social Assistance (3,085 jobs per year), and Finance and Insurance (2,489 jobs per year), accounting for 11,262 jobs annually on average or 36.5% of the total projected annual average Six-County employment growth.

In Table III-5B, THK Associates has projected job growth for Salt Lake County, which is expected to add approximately 17,647 jobs annually on average from 2016 to 2025. Industry sectors that are projected to experience the greatest growth by number of jobs over the next ten years are the Professional and Technical Services industry (3,383 jobs per year), Finance and Insurance (1,988 jobs per year), and Administrative and Waste Services (1,859 jobs per year), accounting for 7,230 jobs annually on average or 41.0% of the total projected Salt Lake County employment growth. This illustrates that Salt Lake County is more reliant on the Administrative and Waste Services industry and less reliant on the Health Care and Social Services industry than the Six-County market area is. The Professional and Technical Services and Finance and Insurance industries are projected to realize strong growth for both market areas. Historical and projected Six-County and Salt Lake County employment are graphed following Table III-6.

Table III-5C shows the largest employers in Salt Lake City. The three largest employers by number of employees include Intermountain Health Care, The University of Utah, and The Church of Jesus Christ of Latter-Day Saints, which in total account for approximately 50,000 employees according to Shawn Beus, the Economic Development Manager of Community and Economic Development at Salt Lake City Corporation. In total the eight largest employers in Salt Lake City account for a total of 76,500 jobs, or 9.2% of the total current 827,494 employees in Salt Lake County in 2015.

Within the surrounding environs of the Mulligans subject site and the Salt Lake Valley area, there are numerous economic stimulators and industries. These economic stimulators include educational facilities like the University of Utah, Westminster College, Western Governors University, Salt Lake Community College, as well as Utah Valley University and Brigham Young University further south. Health care facilities include the Jordan Valley Medical Center, Riverton Hospital, Lone Peak Hospital, and Alta View Hospital. Major shopping centers include Gardner Village, Valley Fair Mall, Brickyard Plaza, Fashion Place Mall, Trolley Square Shopping Center, South Towne Shopping Center, The Gateway, and City Creek Center.

C. INCOME LEVELS BY COUNTY

The Six-County market area continues to see rising per capita incomes as shown in Table III-6. Since 2004, 2009 and 2010 were the only years in which any of the six counties had decreases in per capita income which followed the national trend after the Great Recession.

In 2009 all six counties had negative growth in per capita personal income which ranged from -4.3 in Weber County to -11.6% in Summit County. Wasatch County and Weber County were the only counties that experienced a decrease in per capital income in both 2009 and 2010. Since 2010 all counties had positive growth in per capita personal income which ranged from 2.7% in Weber County to 8.3% in Summit County. Salt lake County per capita personal income has increased by \$1,354, or 3.5% over the last five years annually on average, while over the 2000 to 2014 time period this figure has been closer to \$986, or 2.8% annually on average.

Over the long term, since 1980, Salt Lake County has had per capita personal income growth of \$982 or a growth rate of 4.6% annually on average. Salt Lake County per capita income has grown faster in dollars than each county in the Six-County market area since 1980, with the exception of Summit County. Furthermore, Salt Lake County per capita income has grown faster than each county in the Six-County area since 2000, with the exception of Summit County and Wasatch County. Table III-6 illustrates a recovery in wealth for Salt Lake County as well the Six-County market area since the Great Recession which will positively impact both residential and commercial real estate within these counties over the next several years. An increase in the per capita personal income growth of households in Salt Lake County will further strengthen demand for goods and services found at retail centers and entertainment facilities like Mulligans Golf and Games.

D. HISTORICAL POPULATION AND HOUSEHOLD GROWTH TRENDS

Population and household growth stem from employment and ultimately drive the demand for residential real estate development. Furthermore, households occupying residential units drive the demand for commercial real estate development, including entertainment venues like Mulligans Golf and Games. As shown in Table III-7, all six counties in the study area have increased in population and households since 1980. Since 1980, the annual average population growth for the Six-County market area has been approximately 33,500 people and approximately 10,550 households, for a population household ratio of around 3.18. As previously shown, Mulligans subject site is located in Salt Lake County. Since 1980, the annual average population growth for Salt Lake County has been approximately 13,750 people and 4,583 households for a population household ratio of around 3.0, slightly lower than for the Six-County area. This indicates that families in the five counties surrounding Salt Lake County have larger household sizes on average than those located within Salt Lake County. The population growth that has occurred in Salt Lake County since 1980 has accounted for approximately 41.0% of the total Six-County population growth and 43.4% of the total Six-County household growth over the same time period. From 2010 to 2015, the annual average population growth for Salt Lake County has been approximately 14,143 people and 4,555 households. Salt Lake County has accounted for an ever so slightly smaller percentage of the Six-County market area population and household growth over the last five years as compared to the 1980 to 2015 time period.

Following Table-7 is a map of the major cities that surround the Mulligans subject site, as shown in Figure-7. As detailed in Figure-7 and later shown in Table III-8, population and household growth since 1990 is shown for Salt Lake City, South Salt Lake City, West Valley City, Taylorsville, Murray, Holladay, West Jordan, Midvale, Cottonwood Heights, Sandy, Riverton, Draper and South Jordan, the latter of which is the city in which Mulligans subject site is located. Over the 1990 to 2015 time period, South Jordan has grown by 2,200 people and 652 households. Over the last five years, the population of South Jordan has grown by 3,431 people and 967 households annually on average. The Mulligans subject site is located in South Jordan, which has had stronger population and household growth than any of the aforementioned 12 cities over the last five years. South Jordan has accounted for 24.5% and 21.5% of the Mulligans Primary Trade Area's (PTA's) population and household growth, respectively, over the last five years. The Mulligans PTA is defined as a drive time of approximately 15 minutes from the Mulligans subject site and is clarified and shown later in Figure-8.

Over the 1990 to 2015 time period, the Mulligans PTA has grown by 14,800 people and 4,896 households annually on average, with the population and households growing at 1.7% annually on average. Over the 2010 to 2015 time period, the Mulligans PTA's population and households have grown by 14,008 people and 4,503 households, for 1.4% and 1.3% respectively. The Mulligans PTA's population growth over the last five years has been stronger than over the last fifteen years, while the Mulligans PTA's household growth has been weaker over the last five years than over the last fifteen years. This has led to an average population per household growth rate of 3.11 people over the last five years and 2.87 people over the last fifteen years, representing smaller households being added to the Mulligans Primary Trade Area.

E. HOUSING TRENDS BY UNIT TYPE

Below, Table III-9 compares data among the 2000 and 2010 U.S. Census regarding total housing units in the Six-County and Salt Lake County market areas. The table also includes an estimate for the housing stock by unit type in 2015 based on trending data over the 2010 to 2014 time period. The total housing units are separated into total housing units along with those housing units which are occupied by renters and those occupied by owners. There is also a breakdown of the percentage of each housing unit type or dwelling type.

Salt Lake County is the more important of the two market areas to analyze because the Mulligans subject site is located in Salt Lake County most specifically. Total housing units in the Six-County area increased slightly more at 32.0% from 583,954 in 2000 to 770,658 in 2015. Total housing units in Salt Lake County increased 22.0% from 310,988 in 2000 to 379,374 in 2015. The demand growth for housing has been greater for the Six-County area than for Salt Lake County on average over the last 15 years.

Currently it is projected that around 93.1% of total housing units in the Six-County market area are occupied, with approximately 63.5% of total housing units being owner-occupied. Contrarily it is projected that around 95.4% of housing units in Salt Lake County are occupied, with approximately 62.3% of total housing units being owner-occupied.

In Salt Lake County, single-family detached housing units have increased from 69.7% to 70.3% of total housing unit inventory, while multi-family units have increased from 27.7% to 28.1% of total housing units since 2000, both at the expense of miscellaneous housing. Owner-occupied units in Salt Lake County have declined from 65.5% to 62.3% of total occupied units over the last 15 years. This decreasing owner-occupied trend is projected to slow or even reverse slightly as the economy as a whole experiences a strong recovery, credit ratings improve, savings increase, per capita salaries remain strong, and an undersupplied stock of multi-family housing units continues to drive rental rates up. The trend in occupancy rates should continue to stabilize as occupancy rates reach highs, permits and construction increase, and recently explosive job and salary growth steadies to better reflect long term averages. High occupancy rates coupled with strong unit demand in Salt Lake County and the surrounding Six-County area provide strong household growth that will continue to support entertainment uses at the Mulligans subject site.

F. RESIDENTIAL CONSTRUCTION TRENDS

As shown in Table III-10, single-family permits, multi-family permits and total permits are shown since 1980 for each county that comprises the Six-County market area. Mulligans subject site is located within Salt Lake County, which has accounted for 40.1% of the total Six-County single-family permits issued annually on average over the last 35 years, and 36.9% of the total Six-County single-family permits issued annually on average over the last three years. In total in the Six-County area, 8,682 single-family permits have been issued annually on average since 1980, while 8,176 (5.8% less) single-family permits have been issued annually on average over the last three years. The recent trend in single-family permits issued has been a steady return to historical levels after climbing from a recent low of between 4,246 and 4,500 between 2008 and 2011.

Salt Lake County has accounted for 55.9% of the total Six-County multi-family permitted units annually on average over the last 35 years, and 50.6% of the total Six-County multi-family permitted units annually on average over the last three years. In total in the Six-County area, there have been 2,938 multi-family permitted units annually on average since 1980, while 4,734 (61.1% more) multi-family permitted units have occurred annually on average over the last three years. The recent trend in multi-family permitted units has been a strong increase in permitted units since a temporary recent low of 1,653 permits in 2010. In 2014 and 2015, 5,419 and 5,591 (annualized after September 2015) multi-family permitted units were issued, respectively, in the Six-County market area. Since 1980, there have been 11,621 total single-family permits and multi-family units permitted annually on average in the Six-County area. Over the last three years in the Six-County market area, there have been 12,910 total single-family permits and multi-family units permitted, annually on average.

As shown in Table III-11, the total single-family permits and multi-family permits issued annually on average for Salt Lake County are shown and further detailed as a percentage of the total County. Table III-11 acts as a summary table for the multiple permit details in Table III-10, and compares the growth occurring within Salt Lake County to the Six-County market area. Since 1980 the Salt Lake County area has accounted for approximately 44.1% of the total permits issued in the Six-County market area, while this figure has been approximately 41.9% over the last three years, respectively. Single-family permits have accounted for 67.9% of total permits issued in Salt Lake County area over the last 35 years. More recently single-family permits issued in Salt Lake County area have accounted for 55.7% of total permits issued over the last three years, with the remainder being for multi-family permits; indicating a trend for multi-family housing in recent years. Graphs for the Six-County and Salt Lake County permits issued follow Table III-11. Table III-12 details single-family and multi-family permits pulled annually for Salt Lake City, South Salt Lake City, West Valley City, Taylorsville, Murray, Holladay, West Jordan, Midvale, Cottonwood Heights, South Jordan, Sandy, Riverton and Draper since 1980. These are major cities surrounding the Mulligans subject site as shown previously in Figure-7. Single-family permits issued in South Jordan have increased from 441 over the last 35 years to 703 over the last three years, annually on average. Multi-family permits issued in South Jordan have increased from 70 over the last 35 years to 227 over the last three years, annually on average as shown below in Table III-12. The increase in permits pulled recently will lead to further housing construction and households around Mulligans Golf and Games, thus driving up demand for entertainment uses at the Mulligans subject site.

G. POPULATION AND HOUSEHOLD PROJECTIONS

Population, household, and employment data for the Six-County market area is compared in Table III-13 over the 1980 to 2015 time period and then projected for the 2016 to 2025 time period. In 1980, the total population of the Six-County area was 1,147,049 and resident employment was 548,935 for an employment participation ratio of .4785, meaning that 47.85% of the Six-County population was employed. By 1990, the MSA's population had increased to 1,360,625, and resident employment had increased to 764,105 for an employment participation ratio of .5615. Employment and population have since continued to increase since 1990 and with that the ratio has also increased with the exception of the dip that occurred in 2010. By 2015 the employment participation ratio had risen to approximately .6400, which is projected to continue increasing steadily over the next ten years. Furthermore, Table III-13 projects population growth for the Six-County market area based on the anticipated employment growth. With a projected 2025 resident employment of 1,789,869 the estimated 2025 population for the counties is projected to be 2,714,000 based on an anticipated participation rate growing to .6595. Based on the estimated population growth and a household population ratio growing from 3.1408 in 2016 to 3.138 in 2025, the Six-County area should have approximately 845,993 households in 2025. The Six-County area's permanent population is projected to grow by 39,840 persons, 30,866 employees, and 11,813 households annually on average from 2016 to 2025.

Table III-14 shows the projected growth in employment, population and households in Salt Lake County. By way of comparison, this Salt Lake County submarket currently has a higher employment participation rate of .7520 than the employment participation ratio in 1980 of .5460. Proportionally, average annual employment growth from 2000 to 2010 was less than population growth, effectively causing the employment participation ratio to decrease, akin to the Six-County market area. The drop may be attributed in large part to the Great Recession which occurred over the late to middle part of the 2000 to 2010 decade. Even though employment slowed during the 2000 to 2010 time span, household growth and population growth still remained strong. Employment, population and households in Salt Lake County are projected to grow by 16,630 people, 17,647 jobs and 5,094 households, respectively, on average annually from 2016 to 2025. Jobs are projected to grow faster than people due to the large number of people commuting to Salt Lake County for work. Employment, population and household information is graphed following Table III-14 for the Six-County market and Salt Lake County. The Six-County market and Salt Lake County population, employment and household growth tables details that the projected growth rates over the next decade for each area are slower than their respective 1990 to 2000 growth rates; however, stronger than the 2000 to 2010, as well as 1980 to 1990 growth rates.

Table III-15 details population growth by age group for the Six-County Market and the Salt Lake County area from 2016 to 2025. The table details that for Salt Lake County, the 30 to 40 year old age group will decrease between -0.9% and -1.8% annually on average, while the 70 to 80 year old age group will increase between 8.0% and 8.4% annually average. The five to 22 year old age group is projected to be a strong target demographic age for the Mulligans subject site and is projected to grow between 1.6% and 1.8% over the 2016 to 2025 time period.

IV. GOLF COURSE MARKET ANALYSIS

IV. GOLF COURSE MARKET ANALYSIS

A. SOCIO-ECONOMIC PROFILE OF MULLIGANS PRIMARY TRADE AREA

In the analysis to determine demand for golf rounds and golf facilities, it is necessary to identify the primary trade area (PTA) from which a majority of the primary demand for Mulligans Golf and Games two golf courses are anticipated to derive from within.

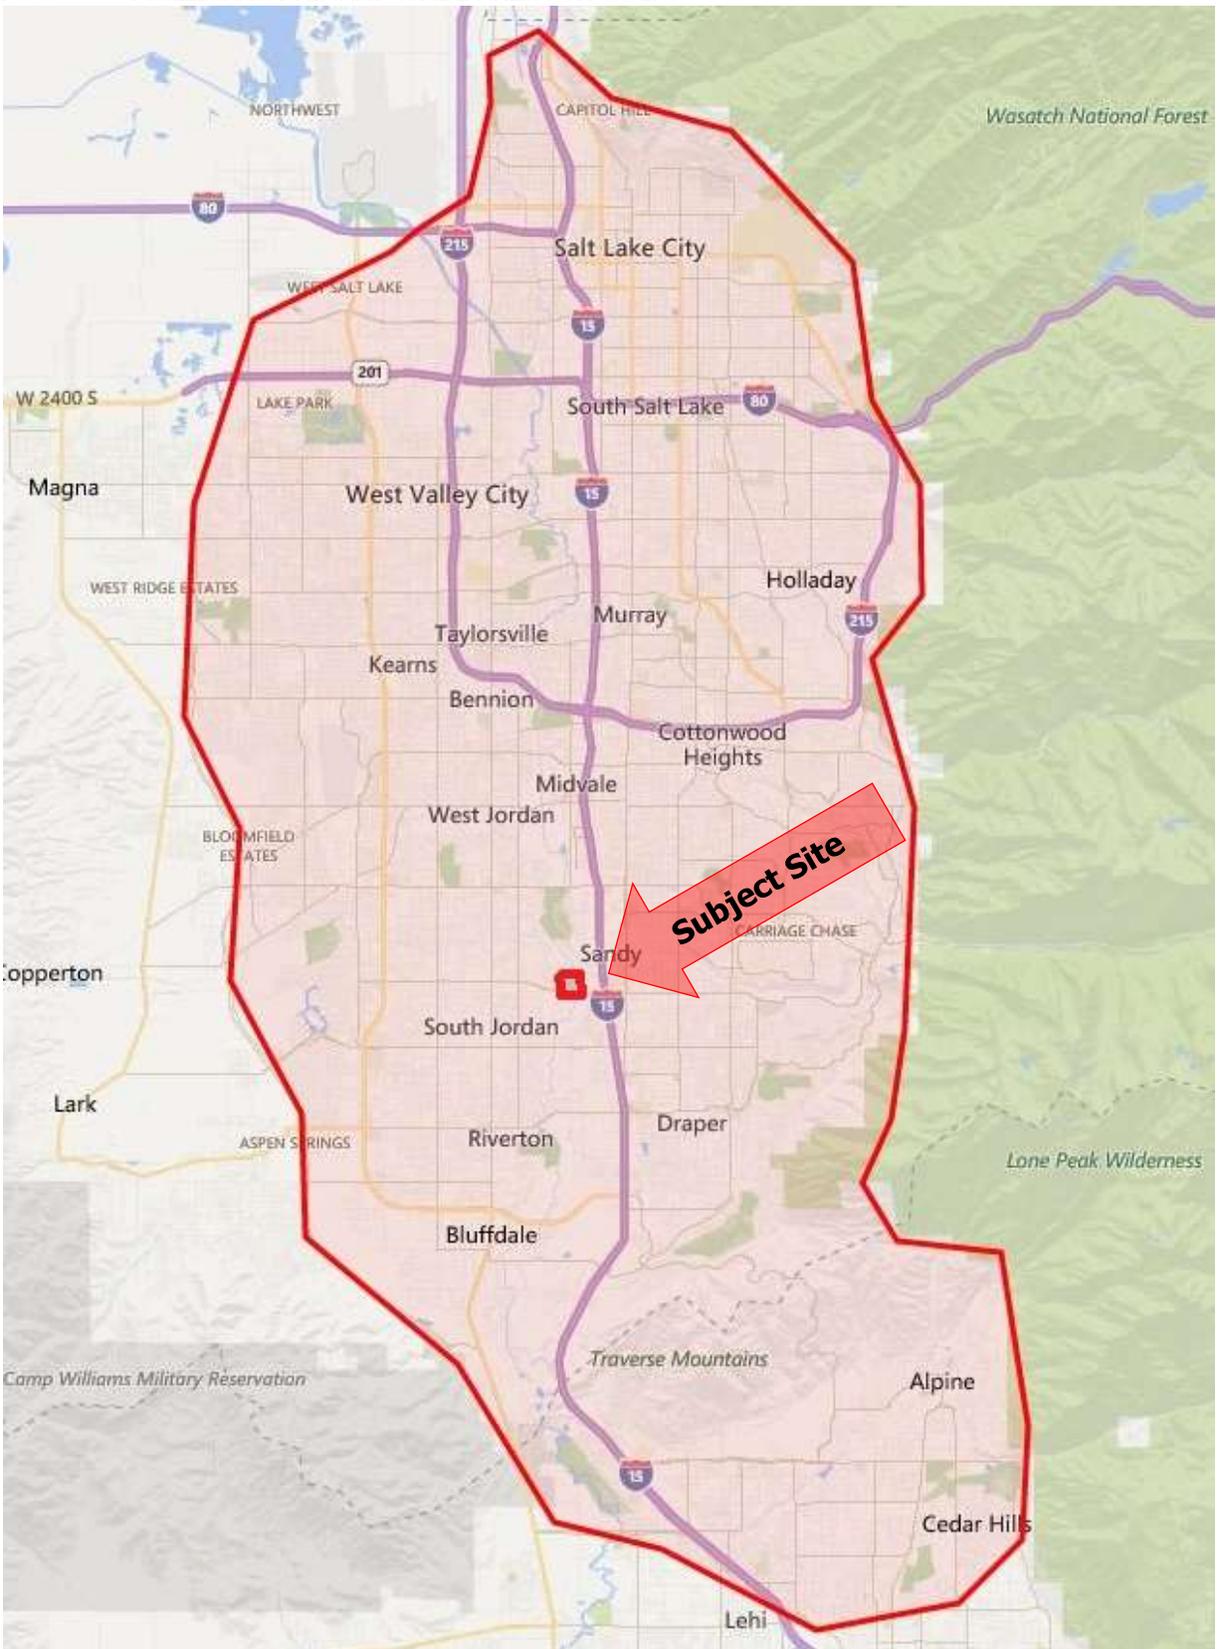

The primary trade area is a function of population density, natural barriers, golfer residences and travel distances, golfer habits, accessibility of the site, and the location of surrounding competitive facilities. After driving this area and reviewing where competitive facilities are located and how physical characteristics and conditions impact travel time, the primary trade area boundaries were refined. The Mulligans PTA is approximately a 15 minute drive time from the Mulligans subject site in all directions, as shown following in Figure-8.

Having determined the appropriate primary trade area, THK then researched population, households and income using STI data which tracks census data by geographical boundary. The median income for the PTA is currently \$60,492. As shown in Table IV-1, there are currently 1,076,190 (2015) people residing in 356,228 (2015) households within the PTA. In 1990, there were 706,087 people living in 233,828 households in the PTA, which has since experienced an average annual growth rate of 1.7% for households and population. Since 1990, the Mulligans PTA has grown by 4,896 households and 14,804 people annually on average. Over the last five years, the Mulligans PTA has grown by 14,008 people and 4,503 households, at rates of approximately 1.4% and 1.3%, respectively. The Mulligans PTAs household growth has accounted for 98.9% of Salt Lake Counties' household growth since 2010, and it has accounted for 99.0% of Salt Lake Counties' population growth since 2010.

The Mulligans PTAs household and population growth is projected to account for a similar percentage of Salt Lake Counties' growth moving forward from 2016 to 2025. Table IV-2 projects population and household growth for the Six-County, Salt Lake County and Mulligans PTA over the 2016 to 2025 time period. Based on the historical development activity in the area and the economic forecast for the area, it is possible to project future population levels in the primary trade area. Over the next decade Mulligans PTA population and household growth is projected to account for 99.4% of Salt Lake Counties' household growth and 99.6% of Salt Lake Counties' population growth. The Mulligans PTA is projected to growth by 5,060 households and 16,570 people annually on average over the 2016 to 2025 time period. Below Figure-8 details the boundaries of the Mulligans Primary Trade Area with respect to the Mulligans subject site.

B. NATIONAL GOLF MARKET CHARACTERISTICS

Overall Golf Market Characteristics

Research conducted by the National Golf Foundation indicates that from the mid 1980's to the turn of the century, the number of golfers grew by about 50% - from 20 million to 30 million golfers for a compound annual growth rate of approximately 3%. But since the year 2000, the number of golfers plateaued and has been slowly declining; raising concerns about the future of golf courses. This decline has been largely attributed to decreasing participation rates and the effects of the Great Recession that occurred in the mid to late 2000's. In addition, the over building of golf courses within the industry has caused many golf courses to struggle in gaining traction, while financing has remained increasingly difficult to obtain. This creates a critical need for golf course facilities and operators to remain competitive and understand how the market is shaped by the specific characteristics of the people whom use their facility.

Standard Golf Term Definitions

The ownership and operational structure of golf courses are critical in determining which type of golf courses are in demand. Courses are classified into four categories and defined as follows:

Daily-Fee Golf Courses: Are privately owned but open for public play.

Municipal Golf Courses: Are owned or operated by a government entity and are open to the general public.

Private Golf Courses: Are owned privately either by individuals or corporations and not open for public play. Memberships in this type of club are limited and include typically large initiation fees or property purchases requirements.

Semi-private Golf Courses: Are similar to private country clubs in that memberships are offered; however, limited public play is allowed on the golf course.

Two further distinctions of golf course facilities include the playability and character of the course. The definitions for par and the common designations for golf courses are shown below:

Par: The par for a hole is defined by the number of strokes needed to complete a hole. Once the green is reached, it is assumed that it will take two strokes to finish the hole. Thus, a par-3 course will consist completely of greens that can be reached with one stroke from the tee.

Regulation: Any nine-hole or 18-hole golf course that includes a variety of par three, par four and par five holes, and is of traditional length and par. A regulation 9-hole facility must be at least 2,600 yards in length and at least a par 33, while a regulation 18-hole facility must be at least 5,200 yards in length and at least a par 66.

Executive: Have a variety of par three, par four and/or par five holes. 18-hole executive courses are 5,200 yards in length or less, with a par of 65 or less.

Par 3: as the name suggests, par 3 courses consist of all holes being par 3's; thus, an 18-hole course has a total par of 54.

C. GOLF PARTICIPATION RATES AND AGE DISTRIBUTION

THK Associates has determined the golf demand at the Mulligans subject site over the next decade. In order to understand this demand, it is important to first determine the participation rates for golf by age and gender, and population by age and gender in the Mulligans PTA. By multiplying the participation rates for golf and population by age and gender, THK can then project the total number of golfers by age and gender over the 2016 to 2025 time period.

As shown at the bottom of Table IV-3, golf participations rates are shown for Utah, the United States and Mountain Communities over the 2016, 2020 and 2025 time period. Furthermore, participation rates for serious golfers (those who play eight or more times annually) and occasional golfers (those who play less than eight times annually) are shown. The table shows that Utah has a higher percentage of occasional golfers and a lower percentage of series golfers than for either the United States or mountain communities. As shown in Table IV-3 the overall average golf participation rate for both genders aged 5 and above in the United States is 11.1%; 18.5% for males and 4.1% for females. The mountain states have an overall average golf participation rate of 11.4%, 17.2% for males and 5.8% for females. Utah has overall average golf participation rates are 12.8%; 19.3% for males and 6.4% for females. Males and females are more active in Utah than across the United States or in typical mountain communities.

Table IV-4 details both the total number of females and males by age group in the Mulligans PTA for 2016, 2020 and 2025. Later on the participation rates by golfer type from Table IV-3 will be multiplied with the population in Table IV-4 for each age group within each gender category. This will help determined the appropriate number of golfers by gender, age and golf participation level in the Mulligans PTA over the next decade.

D. NUMBER OF TRADE AREA GOLFERS

The next step in the golf market analysis is to apply the participation rates from Table IV-3 to the PTA population from Table IV-4 by the age and gender breakdowns. For example, in Table IV-3 in Utah, the participation rate for serious male golfers and occasional male golfers aged 30 to 39 is approximately 8.9% and 16.6%, respectively. In Table IV-4 in 2016 there are 86,408 male residents between the ages of 30 and 39 in the PTA. Table IV-5 simply multiplies the two aforementioned figures to determine the number of serious and the number of occasional male golfers between the ages of 30 and 39. Based on these figures, there are approximately 7,700 ($86,408 \times 8.9\%$) serious golfers and approximately 14,300 ($86,408 \times 16.6\%$) occasional golfers who are male and aged 30 to 39 in the PTA, as shown in Table IV-5. Thus, the total number of male golfers between the ages of 30-39 is approximately 22,000. By repeating this process for each age and gender group, as well as for occasional and serious golfers, the number of golfers can be determined for each grouping.

Table IV-5 below shows the number by age, gender and golf participation for the Mulligans PTA for 2016, 2020 and 2025. There are 117,538 total male and female golfers projected for 2016 within the Mulligans Primary Trade Area boundaries. Based on Mulligans PTA population growth projections it is anticipated that the number of golfers will growth from to 122,962 in 2020 (1,356 new golfers annually on average from 2016 to 2020) and to 131,473 golfers in 2025 (1,702 new golfers annually on average from 2020 to 2025). The faster growth in the golfing population over the 2020 to 2025 as compared to the 2016 to 2020 time period is largely a result of older age groups with higher golf participation rates growing faster than the lower participation rate age groups. This exercise is important because the primary indicators for golf participation are age and gender, as they are for most all recreational activities. Any variations in the demographic profile of the local Mulligans PTA have important impacts on the demand for golf, because of the differences in golf participation rates among different age groups and genders.

E. TRADE AREA GOLF ROUNDS DEMANDED

Table IV-6 shows the frequency of play or the number of 18-hole equivalent rounds that the average golfer plays by age level. The national golfer averages 18.1 (18-hole equivalent) rounds per year, while golfers over 65 average 41.7 (18-hole equivalent) rounds of golf per year. Young golfers average only 6.8 (18-hole equivalent) rounds per year nationally. In the State of Utah, it is estimated that the average golfer is currently playing 15.9 (18-hole equivalent) rounds, and the average golfer aged 65+ is averaging 36.6 (18-hole equivalent) rounds of golf per year. The number of rounds in the State of Utah is expected to increase steadily to 16.0 (18-hole equivalent) rounds for the average golfer in 2025. Although Utah has a higher participation rate of golfers (occasional and serious combined) than the United States, Golfers in Utah have a lower frequency of play.

In Table IV-7 the 18-hole equivalent rounds per golfer are determined after multiplying the number of golfers by the number of 18-hole equivalent rounds played them. These figures are determined for all female and male golfers by each age, seriousness of play and year. In 2016, all residents of the PTA will demand 1,386,212 (18-hole equivalent) rounds of golf across both genders who are either serious or occasional golfers. An impressive 22.3% of those rounds will be demanded from golfers aged 65+. Within the Mulligans Primary Trade Area, the number of total 18-hole equivalent golf rounds demanded will increase to 1,542,491 rounds in 2020 and to 1,706,139 rounds in 2025. Although 66.6% of golfers in 2016 are categorized as only occasional golfers, an overwhelming majority, or 86.4% of the 18-hole equivalent golf rounds demanded will come from serious golfers.

It is next important to determine the total demand for golf rounds by course type as shown in Table IV-8. This will determine the number of golf rounds demanded for executive and par 3 courses that Mulligans Golf and Games is competing for in the Mulligans PTA. In 2016, golfers residing in the PTA will demand 1,386,212 total (18-hole equivalent) rounds of golf, of which 1,039,659, or 75.0% (18-hole equivalent) rounds will be played on public courses; 342 out of the 359 holes in the PTA are located at municipal courses. Table IV-8 further shows that the Mulligans PTA is projected to capture 85% of public golf course play within the PTA and 10% secondary support from outside the PTA for a total demand of 857,719 public golf rounds.

Lastly, because the Mulligans subject site has one par 3 and one executive course it is important to isolate demand for par 3 and executive golf course play from the Mulligans PTA. 54 out of the 459 holes (11.8%) in Mulligans PTA are at public executive (27) and public par 3 (18) courses. THK has conservatively determined that 10% of the total public and private golf round demand within the PTA moving forward will therefore be for executive and par 3 courses. THK projects that out of the 111,244 rounds demanded in 2016 at par 3 and executive golf courses in the Mulligans PTA, 60% or 66,746 will be for public golf. The number of executive and par 3 golf rounds demanded annually in the PTA is projected to grow to 74,271 (18-hole equivalent) rounds in 2020 and 82,151 (18-hole equivalent) rounds in 2025. Next, after moving through the supporting detail breakdown of all public and private golf courses in the Mulligans PTA, THK Associates will estimate the number of golf rounds projected to be captured annually at the Mulligans subject site.

F. PROFILE OF EXISTING GOLF COURSE FACILITIES

Table IV-9 details all public and private golf courses within the Mulligans PTA and details the courses by name, address, course designer, year built, number of holes, type, length, par, driving range amenities, club house size and pro-shop availability. Furthermore, Table IV-9 highlights each course's annual membership costs by membership group type and finally the five-year annual average number of rounds played. In total there are 29 private and public golf courses that currently exist within the Mulligans Primary Trade Area, including Mulligans Golf and Games two golf courses. Later on the data from Table IV-9 is synthesized and summarized so as to get a more holistically image of what type and quality of courses actually exist in the Mulligans PTA. Table IV-10 profiles the golf courses by year constructed, showing that among the 29 golf courses within the Mulligans PTA, although they are not all very old, there are very few which are new. 86.2% of the golf courses were built after 1950 and 62.1% were built after 1970; however only 6.9% were built after 1999. Table IV-11 details the public and private golf course green fees when applicable, and highlights and averages the fees for all courses as well as for just the executive and par 3 courses, the latter of which are much lower in price.

Table IV-12 provides a detailed analysis of the type, size and number of holes for each of the 29 total private and public golf courses shown earlier in Table IV-9. Out of these 29 courses, two are semi-private, 22 (75.9%) are municipal and five are private; zero are semi-private. Out of the 459 total golf holes, 405 (88.2%) are at regulation courses of par 66 and higher, 27 holes are at executive courses of par 65 and lower, and 27 holes are at par 3 courses of par 33. Furthermore, out of the 459 total golf holes, 72 are within 9-holes, 360 (78.4%) are within 18-holes and 27 are within 27-hole courses.

Table IV-13 displays the 29 total golf courses by the number of holes and rounds in order to determine a course equivalency or the number of equivalent 18-hole courses for the various ownership types of golf courses. These include private, semi-private and daily fee golf courses. For the five private golf courses, there are a total of 81 holes, or 4.5 18-hole course equivalents, as well as 131,500 18-hole equivalent rounds played, or an average of 26,300 18-hole rounds played per course. For the 22 municipal golf courses, there are a total of 342 holes, or 19.0 18-hole course equivalents, as well as 526,500 18-hole equivalent rounds played, or an average of 23,932 18-holes rounds played per course. For the two semi-private golf courses, there are a total of 36 holes, or 2.0 18-hole course equivalents, as well as 63,500 18-hole equivalent rounds played, or an average of 31,750 18-holes rounds played per course.

There are a total of 459 total private, municipal and semi-private golf course holes in the Mulligans PTA, or 25.5 18-hole course equivalents. There are also 721,500 18-hole equivalent rounds played, or an average of 24,879 18-holes played per course. A map of the Mulligans PTA golf courses by number of holes is shown in Figure-9, indicating that Mulligans Golf and Games is the only golf course facility with any 9-hole courses south of the Interstate 215 Beltway. A map of the Mulligans PTA golf courses by course ownership type is shown in Figure-10, indicating that nearly all of the private and semi-private golf courses flank the foothills of the Wasatch Mountain Range.

GOLF COURSE MARKET ANALYSIS

Figure 9- COMPETITIVE GOLF COURSE MAP BY COURSE HOLES

GOLF COURSE MARKET ANALYSIS

Figure 10- COMPETITIVE GOLF COURSE MAP BY COURSE OWNERSHIP

G. SUPPLY AND DEMAND IN THE MULLIGANS PRIMARY TRADE AREA

Table IV-14 compares the projected annual demand for golf rounds in the "As-Is" and "As-Improved" condition as compared to the current annual play at the Mulligans subject site area. There are a total of 3.0 18-hole equivalent executive and par 3 golf courses in the Mulligans PTA, not including Mulligans subject site. The Mulligans subject site therefore accounts for approximately 25% of the total public executive and par 3 golf course round demand in the Mulligans PTA. As shown earlier in Table IV-8, there are 66,746 total public executive and par 3 18-hole equivalent rounds demanded in the PTA in 2016. The Mulligans subject site is projected to capture 25% or 16,687 annual 18-hole equivalent rounds in 2016 assuming Mulligans Golf and Games remains "As-Is" without redevelopment or repositioning. Currently there are 25,000 annual 9-hole equivalent rounds played at the Mulligans subject site course across one par 3 and one executive course. This number of 9-hole equivalent rounds equates to 12,500 18-hole equivalent rounds. Based on the "As-Is" condition and 16,687 projected annual 18-hole equivalent rounds demanded at Mulligans, there is currently an annual demand shortfall of nearly 4,200 18-hole equivalent rounds being played at the Mulligans subject site. This indicates that if Mulligans remains in the "As-Is" condition, it would have an annual demand shortfall of 4,187 18-hole equivalent rounds.

Table IV-14 details that if Mulligans Golf and Games is improved upon with respect to marketing, positioning and redevelopment, then they could capture an additional 10% of the market or a total of 35% market share. Assuming that Mulligans could capture 35% of the 18-hole equivalent golf round demand in the PTA with an "As-Improved" status, then 23,361 18-hole equivalent rounds could potentially be demanded at the Mulligans Golf and Games subject site. This indicates that if Mulligans were improved upon, into an "As-Improved" condition, the Mulligans subject site would have an annual demand shortfall of 10,861 18-hole equivalent rounds.

Table IV-15 looks at the demand for public executive and par 3 golf courses over the next decade and assumes that Mulligans subject site could capture 25% of the currently 66,746 18-hole equivalent round market demand based on an "As-Is" condition. The table further assumes that Mulligans Golf and Games has a 30,000 18-hole equivalent round capacity. Based on the "As-Is" demand and capacity for each year, course utilization is projected to grow from 55.6% in 2016 to 68.5% in 2025. The Mulligans subject site is currently underperforming with respect to capturing their share of the executive and par 3 golf round demand market. Table IV-16 looks at the demand for public executive and par 3 golf courses over the next decade and assumes that Mulligans subject site could capture 35% of the currently 66,746 18-hole equivalent round market demand based on an "As-Improved" condition. The table further assumes that Mulligans Golf and Games has a 30,000 18-hole equivalent round capacity. Based on the "As-Improved" demand and capacity for each year, course utilization is projected to grow from 77.9% in 2016 to 95.8% in 2025. If the Mulligans subject site makes marketing, redevelopment and repositioning changes, they can potentially reach 95.8% full course utilization by 2025. Table IV-17 details the golf rounds played annually at the Mulligans subject site over the 2011 to 2015 time period, indicating a step decline in demand in 2014, and a five year average annual demand for approximately 25,000 18-hole equivalent rounds.

H. DRIVING RANGE DEMAND

GOLF COURSE MARKET ANALYSIS

Table IV-18 below details the market potentials for the Mulligans Golf and Games driving range and projects demand from 2016 to 2025. Based on a the number of golfers and golf course competitors from the previous section, as well as participation and frequency rates, the number of practice plays is projected to increase from 57,987 to 64,862 from 2016 to 2025. Table IV-19 details that Mulligans subject site has realized an annual average of 50,588 buckets sold over the last five years, and had experienced a slight dip in 2014. Based on 2016 figures, Mulligans subject site is projected to realize a demand shortfall of approximately 7,400 buckets (57,987 – 50,588) this year.

Table IV-18: Market Potentials for the Mulligans Driving Range, 2016-2025

Item	2016	2020	2025
Golfers (PTA)	117,538	122,962	131,473

V. MINIATURE GOLF MARKET ANALYSIS

MINIATURE GOLF MARKET ANALYSIS

V. MINIATURE GOLF MARKET ANALYSIS

A. MINIATURE GOLF ROUND DEMAND

The following exercise is important because the primary indicator for miniature golf demand is population growth, the participation rate, and the number of plays per year per participant, as shown below in Table V-1. Any variations in the population size of the Mulligans PTA over the next decade will have important impacts on the demand for miniature golf because of the high correlation between the population and the annual demanding for miniature golf. The Mulligans miniature golf PTA is shown in Figure-11 and it is slightly smaller than the golf course primary trade area as shown earlier in Figure-8. This is because the miniature golf and batting cage participants are not willing to travel as far as golfers are to participate in their respective activities. Table V-1 displays that the PTA population is projected to grow from 887,774 to 1,043,299 people from 2016 to 2025. Based on a national average of 16.0% of residents participating in miniature golf coupled with an average of 2.7 plays per year per participant, the annual demand for miniature golf rounds can be projected. Over the next decade, demand for miniature golf rounds within the Mulligans PTA is projected to grow from 383,518 rounds to 450,705 rounds, or approximately 7,465 additional rounds annually on average.

Table V-1: Miniature Golf Demand in the Mulligans Primary Trade Area, 2016-2025

	2016	2020	2025
Population (PTA)	887,774	962,495	1,043,299
Participation Rate*	16.0%	16.0%	16.0%
Participants (PTA)	142,044	153,999	166,928
Plays Per Year*	2.7	2.7	2.7

MINIATURE GOLF MARKET ANALYSIS

Figure 11- MULLIGANS PRIMARY TRADE AREA - MINIATURE GOLF AND BATTING CAGE

MINIATURE GOLF MARKET ANALYSIS

B. MINIATURE SUPPLY AND UTILIZATION AT MULLIGANS SUBJECT SITE

The Mulligans subject site has achieved 58,820 miniature golf rounds annually on average over the last five years, with a high of 66,893 rounds in 2015, as shown below in Table V-2. The projected capture rate for miniature golf at the Mulligans subject site is based on the number of competitive facilities and is shown below in Table V-3. The capture rate shows the share for miniature golf that the Mulligans facility should be able to capture from the PTA. The capture rate is determined by the number of existing and anticipated facilities. Figure-12 details the location of the three entertainment facilities within the Mulligans PTA that have a miniature golf facility. There are zero proposed or under construction. The 17 entertainment total facilities shown in Figure-12 are later detailed in the Appendix. Because the Mulligans subject site is strategically located in-between the other three miniature golf courses and centrally located alone on the west side of Interstate 15, it will likely draw upon a large share of the Taylorsville, Kearns, West Jordan, South Jordan, Sandy and Cottonwood Heights market. Table V-3 calculates a generic capture rate of 25.0% based on Mulligans Golf and Games being one of four total facilities. As shown in the Appendix later, the three competitors have a total of 63 holes while Mulligans has 36, or approximately 36.4% of the total miniature golf holes market. The interior strategic location along Interstate 15 coupled with its substantially competitive number of holes supports Mulligans Golf and Games highly competitive position in the Mulligans PTA.

As shown in Table V-4, Mulligans Golf and Games is projected to 95,880 (25%) of the total 383,518 rounds demand in the PTA in 2016. Table V-4 is an "As-Improved" model and assumes the Mulligans increases to a capacity of 54-holes or 120,000 18-hole equivalent rounds. Based on a 120,000 18-hole equivalent round capacity and the demand for rounds at Mulligans subject site, the course utilization is derived. Higher course utilization indicates that miniature golf demand exists is closer to the capacity that a miniature golf course can support. The course utilization is projected to grow from 79.9% in 2016 to 93.9% in 2025 assuming no new miniature golf facilities are added to the market. THK believes the demand for miniature golf rounds are strong at Mulligans Golf and Games; however, marketing and positioning need to be revamped in order to reach the potential. Based on the market we recommend adding 18-holes to the Mulligans Golf and Games subject site for a total of 54 holes.

Table V-2: Miniature Golf Rounds at Mulligans Subject Site, 2010 - 2014

	2015	2014	2013	2012	2011

VI. BATTING CAGE MARKET ANALYSIS

BATTING CAGE MARKET ANALYSIS

VI. BATTING CAGE MARKET ANALYSIS

A. BATTING CAGE PITCHES AND PLAYS CAPACITY

The following section details the demand for batting cage capacity and potentials in Mulligans PTA over the next decade. This information is arrived at by detailing national standards on pitches and plays at batting cages coupled with seasonal machine usage, competitors and the number of batting machines at Mulligans subject site. As shown below in Table VI-1 below, the national average batting cage has 15 pitches per play (token), and has a capacity for 30 plays per hour for a total capacity of 450 pitches per hour. Mulligans Golf and Games offers a competitive advantage of 25 pitches per play. Based on 25 pitches per play and a capacity of 450 pitches per hour, Mulligans potential plays per hour per machine is 18, which approximately 40.0% less than the national average according due in part to the larger number of pitches offered per play at Mulligans Golf and Games.

Table VI-1: Batting Cage Potential Plays per Hour per Machine at Mulligans, 2015

National Batting Cage Standards

pitches per play	15
plays per hour	30
potential pitches per hour per machine	450

Mulligans Batting Cage Potentials

Mulligans pitches per play*	25
Mulligans potential plays per hour per machine	18

*Considering 6 seconds in-between pitches and normal customer enter/exit time

*One token equals 25 pitches at Mulligans

Source: Master Pitching Machines and THK Associates, Inc.

BATTING CAGE MARKET ANALYSIS

B. BATTING CAGE PLAY CAPACITY AT MULLIGANS SUBJECT SITE

Table VI-2 utilizes the 18 play per hour per machine capacity from Table VI-1 to determine Mulligans annual potential plays per year, or capacity. National average batting cages are open six hours a day during March, April, May, September and October, and are open 10 hours a day during June, July and August. Batting machines are typically closed for the remaining months of the year. Based on an 18 play per hour capacity, Mulligans could potentially provide 108 daily plays per machine during the colder months and 180 daily plays per machine during the warmer months. With eight total machines at Mulligans subject site, these figures equate to 864 total daily plays during the colder months and 1,440 total daily plays during the warmer months.

Extrapolating these daily plays for each season over the five months of availability in the colder months and the three months of availability during the warmer months equates to 129,600 potential total plays per season or a total of 259,200 total annual plays across all eight machines. According to Master Pitching Machines, the typical course usage rate as a percentage of course capacity is between 25.0% and 50%, or approximately 35.0% for Mulligans subject site. Mulligans subject site is projected to capture a demand for 90,720 total plays each year, or 35.0% of the Mulligans 259,200 total plays capacity. The play capacity is later used in conjunction with actual demand in Table V1-4 to determine batting cage utilization at Mulligans Golf and Games subject site.

BATTING CAGE MARKET ANALYSIS

Table VI-2: Batting Cage Potential Plays at Mulligans, 2015

Mulligans Potential Daily Plays	March, April, May, Sept, Oct	June, July, August
Mulligans potential plays per hour per machine	18	18
hours of machine availability	6	10
Mulligans potential daily plays per machine	108	180
number of batting machines	8	8
Mulligans potential daily plays	864	1,440
Machine Availability		
months	5	3
days	150	90
Mulligans Annual Play Capacity		
Mulligans seasonal play capacity	129,600	129,600
Mulligans Total Play Capacity		259,200
25% typical usage		64,800
30% typical usage		77,760
35% typical usage		90,720
40% typical usage		103,680
45% typical usage		116,640
50% typical usage		129,600

note: Industry utilization rates average 25% to 50% of machines potential capacity

note: Assumes two play per participant

Source: Master Pitching Machines and THK Associates, Inc.

BATTING CAGE MARKET ANALYSIS

C. BATTING CAGE SUPPLY AND PARTICIPATION AT MULLIGANS SUBJECT SITE

Table VI-3 below shows that there have been 54,991 average annual batting machine plays at Mulligans Golf and Games subject site over the last five years, with a recent high of 63,445 in 2015. With three of the 17 total entertainment facilities in the Mulligans PTA offering batting cage facilities as shown in Figure-13, Mulligans Golf and Games could potentially capture 25.0% of the PTA demand for batting cage plays. As shown later in the Appendix, Mulligans subject site is at a competitive advantage because even though competitor number one has four batting cages, it is far removed from the I-15. Furthermore, competitor number two is not open to the public, and even though competitor three has five machines and direct access on I-15, it is located much further south in Draper where the PTA population dwindles. Lastly, competitor number four only has one batting machine and is also far removed from I-15. Mulligans Golf and Games has eight batting machines and is the first facility heading south from Salt Lake City along I-15, likely capable of continuing to capture a strong majority of resident's northeast in Sandy, and Cottonwood Heights.

The competing batting cage facilities are shown in Figure-13 on the following page. Mulligans Golf and Games is centrally located among the other facilities; however only one of the other three facilities has direct access to the Interstate-15. Furthermore, The National Sporting Goods Dealer Association details that approximately 7.5% of the national population is involved with baseball or softball activity after accounting for cross participation. Based on a current 2015 Mulligans PTA population of 1,076,190 residents and a 7.5% participation rate, there is a current demand for approximately 81,118 batting cage plays in the Mulligans PTA. 25.0% of this subset of the Mulligans PTA population is further assumed to have an annual play frequency of 12 times for an annual batting cage participation in the PTA of approximately 243,353 people in 2015.

Table VI-3: Batting Cage Plays at Mulligans Subject Site, 2010 - 2014

	2015	2014	2013	2012	2011
Annual Plays	63,445	58,471	53,786	55,302	43,951

BATTING CAGE MARKET ANALYSIS

D. BATTING CAGE UTILIZATION AT MULLIGANS SUBJECT SITE

As shown below in Table VI-5, the population for the Mulligans PTA is projected over the 2016 to 2025 time period. Based on a combined baseball and softball participation rate of 7.5% from Table VI-3 as well as batting cage participation of 25.0% and an annual play frequency of 12 times from Table VI-4, batting cage play demand can be projected. The total number of batting cage plays in the Mulligans PTA is projected to grow from 246,980 in 2016 to 280,706 in 2025, of which Mulligans will capture approximately 25.0% of. User demand for batting cage plays at Mulligans subject site is projected to grow from 61,745 plays in 2016 to approximately 70,176 plays 2025.

As shown earlier in Table VI-2, the capacity for a batting cage facility with eight machines was 259,200; however, after accounting for a typical usage of approximately 35%, the actual capacity is projected to be around 90,000 plays at Mulligans Golf and Games. Based on the demand for plays and capacity for plays at the Mulligans subject site, the utilization rate may be determined. The course utilization indicates the demand for batting cages at Mulligans Golf and Games as compared to Mulligans batting cage capacity. The facility utilization is projected to grow from 68.6% in 2016 to 78.0% in 2025. Higher course utilization indicates that batting cage demand exists; however, the ultimate capture for it at Mulligans subject site will increase with effective marketing, facility amenities and operations, etc.

BATTING CAGE MARKET ANALYSIS

VII. JORDAN RIVER TRAILHEAD SUPPORTING USES

VII. JORDAN RIVER TRAILHEAD SUPPORTING USES

A. INCORPORATION OF THE JORDAN RIVER TRAILHEAD INTO MULLIGANS

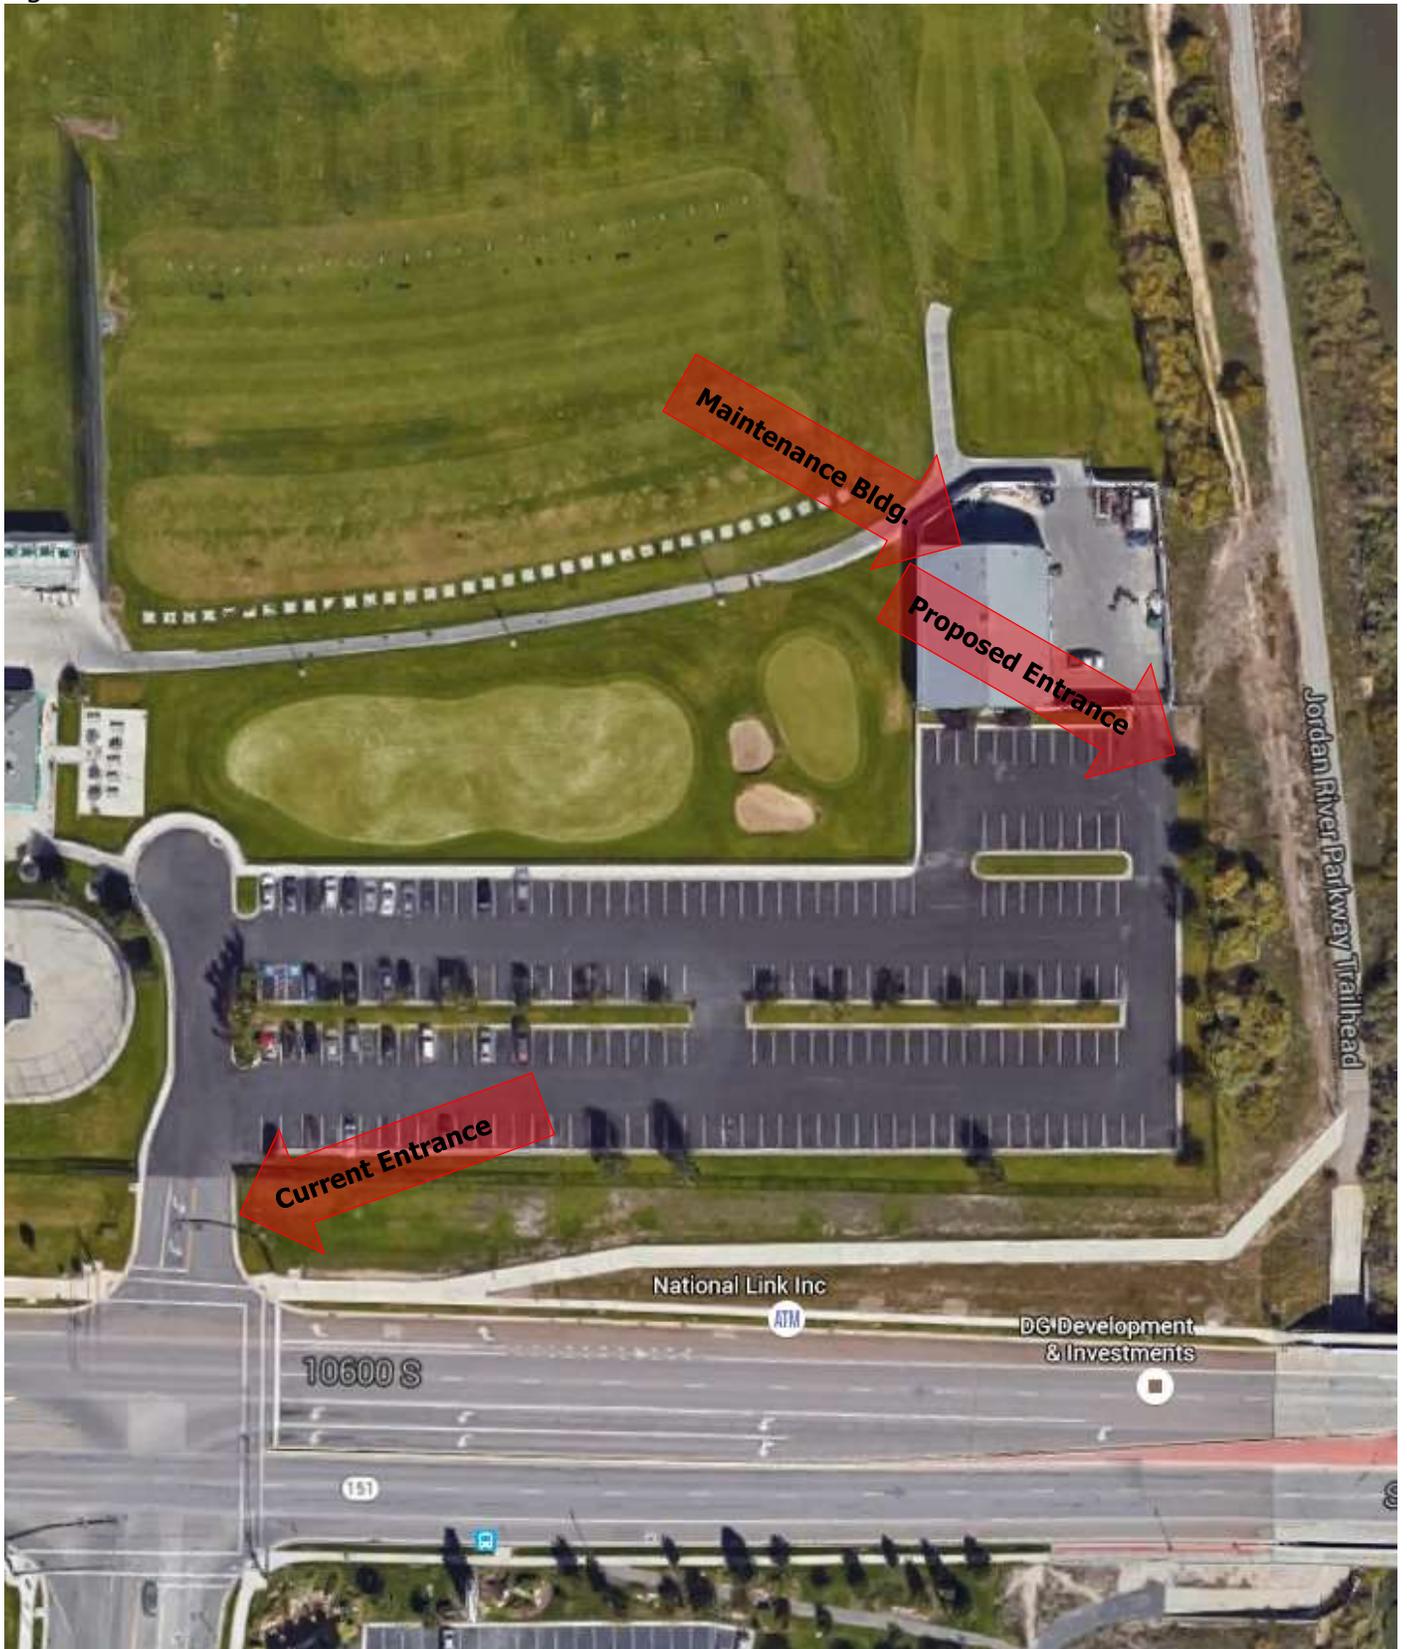

Mulligans Golf and Games is ideally situated along the Jordan River and the Jordan River Parkway Trailhead in South Jordan. The Jordan River runs north and south along the eastern edge of the Mulligans subject site as shown in Figure-14. The Jordan River flows through three counties, while the trailhead connects Utah Lake to the Great Salt Lake at a distance of over 50 miles. The Jordan River is home to rare species of animals like the Bullocks' Oriole bird, Bufflehead Duck, Great Basin and the Spadefoot Toad. THK Associates has completed a number of greenway, trailhead, river and surrounding environs connectivity, restoration, integration, and redevelopment projects. THK Associates views the Jordan River as a currently underutilized asset that could increase the volume of visitor traffic to Mulligans Golf and Games. This will be accomplished by expanding Mulligans offerings to draw upon the benefits of the Jordan River and trailhead and by making it easier for trailhead users to enter Mulligans. Currently the Mulligans subject site is separated by a fence from the Jordan River Parkway Trailhead at distances as short as 60 feet, like by the maintenance building. The non-existence of an entrance in the fence along the trailhead forces would-be visitors to walk 800 additional feet along the South Jordan Parkway sidewalk and to enter Mulligans Golf and Games from the street, a deterrent to non-driving visitors. The Jordan River is helping to bring outdoor enthusiasts right past Mulligans, enthusiasts that are already interested in the active lifestyle that Mulligans is promoting. The removal of barriers between the Mulligans subject site and the Jordan River Parkway Trailhead is paramount to unlocking the full potential of Mulligans Golf and Games.

The creation of a new point of entrance from the Trailhead into Mulligans will assist in transitioning Mulligans from an activity-only venue, into an interconnected activity, recreational and outdoor destination. Interconnectivity, natural systems design, safety, proper lighting, and detailed information about Mulligans at this alternative entrance will minimize separation and encourage visitors from the trailhead, allowing each to piggy-back off the other. River activities not currently supported at the Mulligans subject site include bike, canoe, or kayak rentals; wildlife and ornithology viewing features (a migratory bird refuge is across the river); seating and resting areas; wildlife and habitat informational markers; and fishing lessons and equipment rental.

Approximately 15,600 people live within approximately two miles north and south of the Mulligans subject site between 1300 W and I-25 as shown in Figure-15. This is a large number of households and people that are likely to utilize the trailhead and possibly Mulligans; however, are currently dissuaded from a lack of entrance and transitioning activities. With a more convenient entrance into the Mulligans subject site, trailhead users can whimsically break for a game of putt-putt on their family walk or purchase a quick beverage during a short jog. During lunch or after work, employees at the 1.7 million square feet of office space directly south in the River Park Corporate Center can walk along the trailhead and play a fast bucket of driving range balls. A majority of the River Park office space is located within one half mile directly south of the Mulligans subject site. Based on a national average of 200 square feet of office space per office employee, this office space translates into approximately 8,500 office employees that could have additional incentives to visit Mulligans.

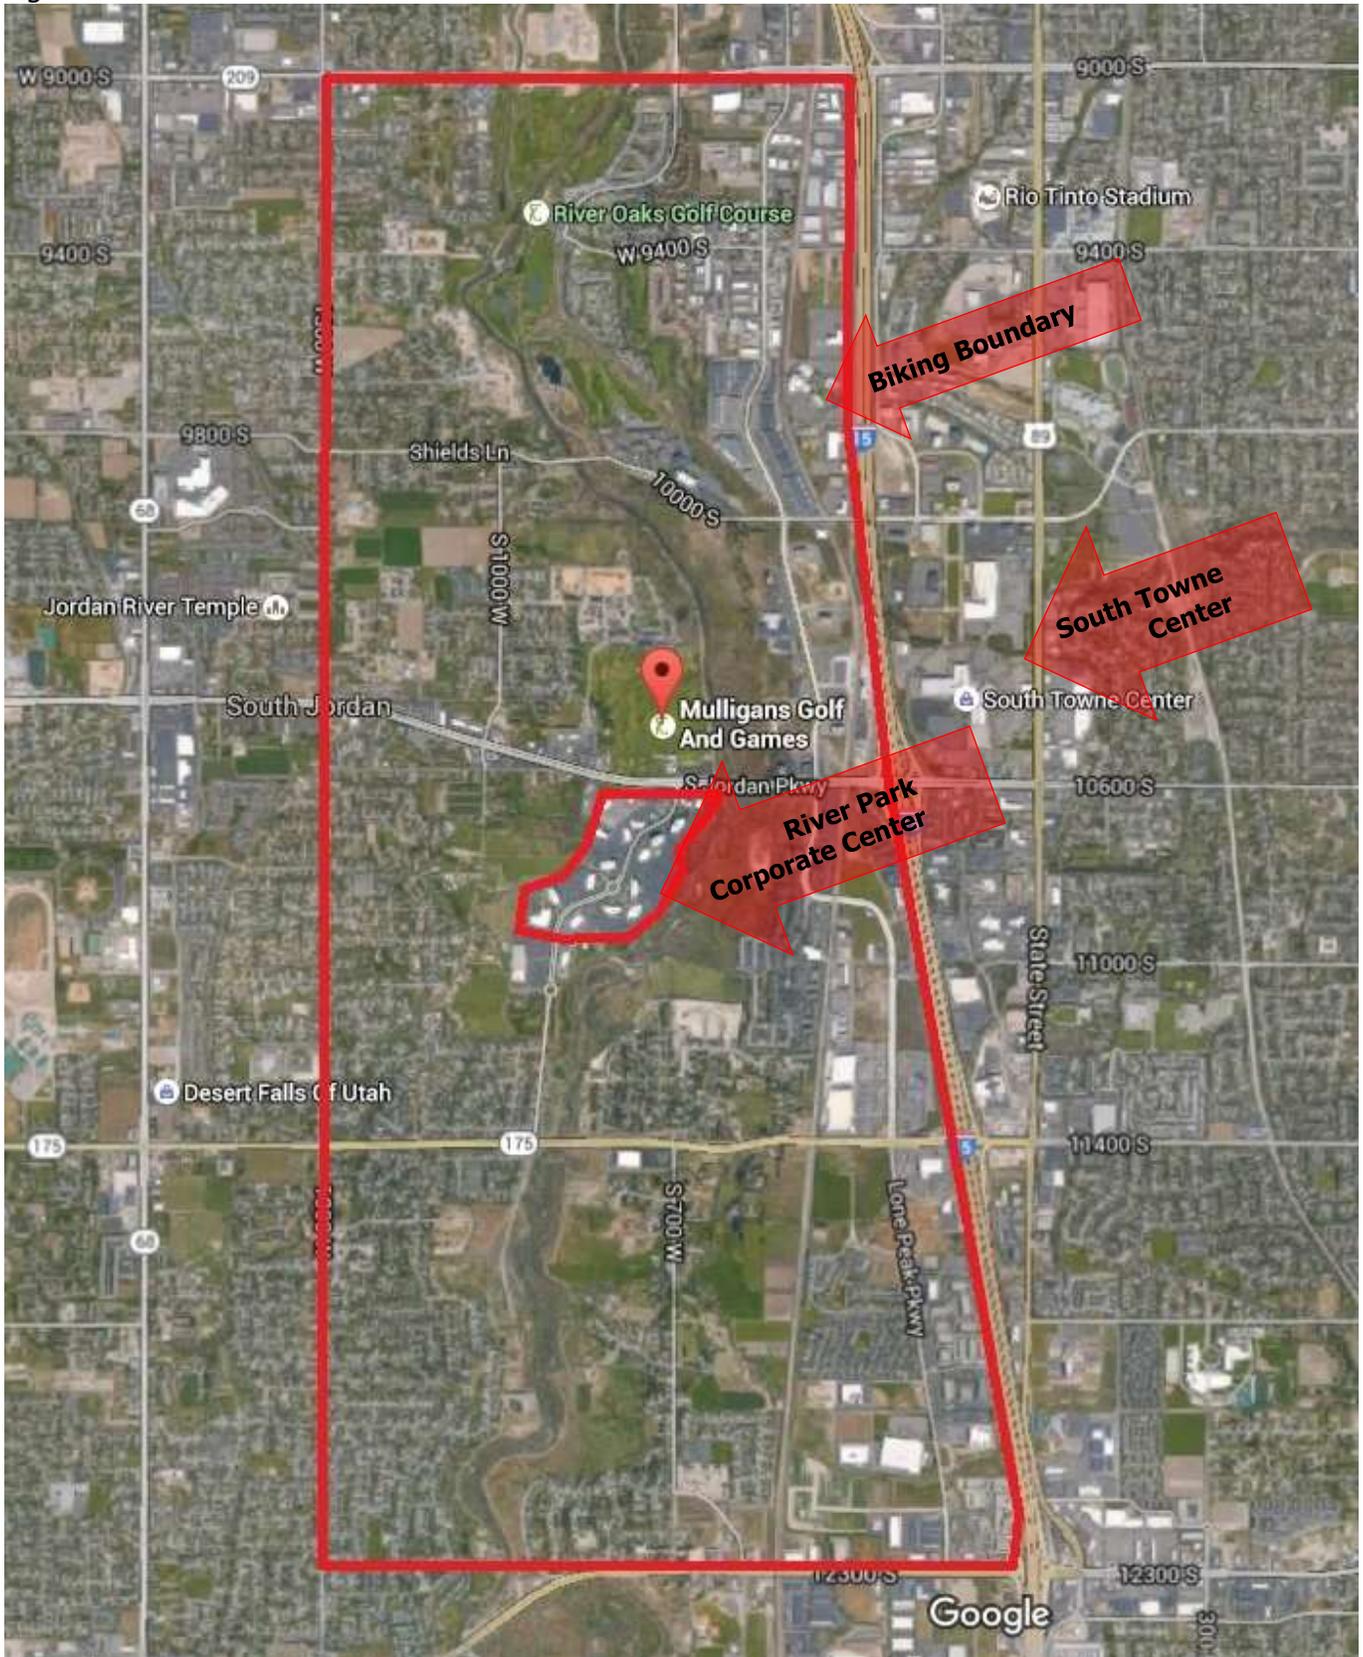

JORDAN RIVER TRAILHEAD

Figure 14- MULLIGANS CURRENT AND PROPOSED ENTRANCES

JORDAN RIVER TRAILHEAD

Figure 15- BIKING BOUNDARY AND RIVER PARK BUSINESS PARK

JORDAN RIVER TRAILHEAD

B. BICYCLE AND KAYAKING USAGE ALONG THE JORDAN RIVER TRAILHEAD

As mentioned earlier, there are currently not any features at the Mulligans Golf and Games subject site that support bicycle and kayaking needs. Based on participation rates, participation days and the Mulligans PTA growth over the next decade demand for these activities at the Mulligans subject site have been projected below in Table VII-1 and Table VII-2. Potential bicycle users are projected to grow from 198,983 in 2016 to 233,842 in 2025, while the potential kayaking users are projected to grow from 3,707 in 2016 to 4,357 in 2025.

C. ICE RINK POTENTIALS

One activity considered for the Mulligans Golf and Games facility was ice skating and related activities such as hockey. In order to accommodate ice rink activities it is likely that a portion of the driving range would need to be utilized for this activity, assuming golf in the form of 9-holes of executive and 9-holes of par 3 are retained in the master plan. We see numerous conflicts with practice range users and ice activities during the winter months. Furthermore, if the ice is accommodating to hockey there would need to be boards and other equipment that would detract from the driving range. The City of South Jordan currently has a small ice rink near City Hall. In addition there are seven facilities in the Mulligans Primary Trade Area that currently offer ice skating and hockey facilities. Immediately west of the City of South Jordan, Herriman City is also planning two full service ice rinks. The market for ice rinks appears that it will be competitive in the near future. For the reasons of competition and site utilization, THK Associates, Inc. is not recommending ice be an included activity for Mulligans.

D. CLUB HOUSE RECOMMENDATIONS

The current clubhouse offers a minimal food and beverage service making it difficult to compete for outings, birthday parties, business lunch activity from the adjoining employment center, etc. Virtually all major entertainment centers offer food and beverage service to attract the above mentioned activities. Team outings and birthday parties are the two biggest opportunities that should be addressed. In the recommendations THK has programmed an expanded clubhouse that can seat up to an additional 40 to 50 persons in approximately 1,200 square feet. The existing kitchen area will need a minor expansion to allow for a walk-in cooler, grill and fryer. Typical sales per square foot for this type of food and beverage service will average \$225 per square foot. This has been translated into a per round expenditure of \$15.00. THK believes that this is one of the most critical improvements to Mulligans that needs to be made.

E. ACTIVITY MARKETING RECOMMENDATIONS

The Mulligans Golf and Games subject site has an inherent marketing advantage in its frontage along South Jordan Parkway and Interstate 15 near Salt Lake City that the other batting cage and miniature golf facilities do not. To take advantage of this strategic location, Mulligans Golf and Games should erect whatever signage the city will allow it to along these two frontages. This includes the multiple billboards or vacant land along I-15 for several thousand feet on either side of South Jordan Parkway. Advertisements should also be added along the South Jordan River Trailhead, the latter of which was previously examined for alternative marketing and activity opportunities. With the large amount of advertising dollars being redirected over the last decade to online strategies like pay-per-click google campaigns, banner advertisements on affiliate websites, and YouTube commercials, billboard advertising has plummeted in demand and price in recent years. Traffic; however, continues to increase along vital roads like I-15. According to the 2014 Utah Department of Transportation traffic report, the traffic on South Jordan Parkway in front of Mulligans is approximately 39,950 vehicles per day, while the traffic on I-15 near South Jordan Parkway is 170,285 vehicles per day. Although billboard advertising is often more effective in capturing the surrounding market that already passes by Mulligans routinely, this medium does not have the capability of measuring specific market data or return on advertising dollars spent like digital marketing.

JORDAN RIVER TRAILHEAD

The Mulligans subject site has adequate surrounding household activity to draw from to keep interest maintained at a high level. Furthermore, there is 1.7 million square feet of office space directly south in the River Park Corporate Center across South Jordan Parkway. Based on a national average of 200 square feet of office space per office employee, this office space translates into approximately 8,500 office employees that could participate at Mulligans for work events or outings. THK recommends routinely marketing or providing teaser rates or coupons to local high schools, restaurants, and household patron locations while more expensive business calls and promotions are reserved for bigger business like the South Town Center Mall across I-15, at offices.

In recent years, miniature golf and organizations like the United States Pro-Mini-Golf Association (USPMGA) have proliferated with local and national championships. This year the 2016 USPMGA Master's National championship is being held in North Myrtle Beach, SC in mid-October. The USPMGA actively has registration information available to courses interested in holding local tournaments. Furthermore, consider submitting to or starting up a recreational league or tournament held at Mulligans that is similar to recreational sports leagues that dominate most major cities. If a tournament were held in the Mulligans PTA, Mulligans will be at a competitive advantage because it is one of only two courses with 36 holes in the Mulligans PTA. Furthermore, if Mulligans Golf and Games increases its number of miniature golf holes to 54, this advantage will be even greater, offering more in depth training and challenges that the other nine and 18-hole courses do not.

VIII. DISCOUNTED CASH FLOW ANALYSIS

DISCOUNTED CASH FLOW ANALYSIS

VIII. DISCOUNTED CASH FLOW ANALYSIS

A. CASH FLOW ANALYSIS

Based on the preceding analysis, THK Associates, Inc. has prepared a cash flow analysis assuming two scenarios:

- Scenario 3/Plan A. There will be an addition of 18-holes of miniature golf; re-location of the batting cages and clubhouse expansion to allow for food service and parties/outings and landscaping improvements to better mirror the business park south of Mulligans.
- Scenario 4/Plan B. The second scenario assumes that the executive and par three courses will be re-developed, be an addition of 18-holes of miniature golf, re-location of the batting cages an clubhouse expansion to allow for food service and parties/outings, creation of a pad/parcel for lease to an outdoor activity entity to service users of the trail and river as well as landscaping improvements to better mirror the business park south of Mulligans.

B. MAJOR ASSUMPTIONS

The following major assumptions have been made in preparing the following cash flow:

- Overall fees for greens fees, cart fees and miscellaneous revenues will remain constant with and without a renovation.
- In the scenario of re-building the golf holes, there will be a one year period for construction and grow-in.
- Pro shop revenues, lessons and food and beverage are based on golf rounds as the common dominator.
- The mini golf will be based on 36-holes in year one and 54-holes years thereafter.
- The batting cages can be re-located with minimal disruption in use during the off-season.
- Food and beverage revenues are based on \$2.29 per round for six months and \$15.00 per round for six months during the first year while expansion of the clubhouse takes place, then \$15.00 per round years thereafter. With an expanded clubhouse of an additional 1,200 square feet to seat up to 50 persons, sale per square foot for food and beverage are estimated at \$225 per square foot which equates to the approximate \$16.00 per round.
- Advertising of the facility will be re-stored to previous levels and increased to approximately \$125,000 per year.
- Staffing for maintenance will be restored to improve the quality of the facility and allow the golf professional/facility manager to better concentrate on marketing and revenue generation.
- A retail pad/parcel can be leased for approximately \$12.00 per square foot market value and an 8.0% annual lease rate.
- Access to the river and path will be allowable by City, County and other governing authorities.
- Debt can be obtained at 5.0% interest with a 1.2 coverage ratio and 3% issuance costs.
- Reserves will be three years of interest.

DISCOUNTED CASH FLOW ANALYSIS

Scenario Three/Plan A - 18-holes of additional mini-golf, relocated batting cages, expanded clubhouse identified differed maintenance items and landscaping improvements to the main road and entry:

The projected cash flow indicates that a renovated clubhouse and related facilities at Mulligans could support \$5,281,367 in present value revenues, after allowing for a 1.2 coverage ratio. After issuance costs and reserves, actual funds for the construction and improvements will be \$4,330,721. If an expense allocation of approximately \$213,000 for administrative and other expenses from South Jordan to Mulligans is assessed the funds for the construction and improvements will be \$2,099,992.

Scenario Four/Plan B – Re-development of golf facilities, 18-holes of additional mini-golf, relocated batting cages, expanded clubhouse, identified differed maintenance items, creation of a retail pad for river/trail access and landscaping improvements to the main road and entry:

The projected cash flow indicates that a renovated clubhouse and golf facilities at Mulligans subject site could support \$9,031,351 in present value revenues. After allowing for a 1.2 coverage ratio and issuance cost, the actual funds for construction/improvements will be \$7,405,708. If an expense allocation of approximately \$213,000 for administrative and other expenses from South Jordan to Mulligans is assessed the funds for the construction and improvements will be \$5,174,980.

The following table is a summary of the historical performance at Mulligan’s for golf, mini-golf, driving range and batting cage performance versus the projections moving forward for a renovation of 18-holes of additional mini-golf, relocated batting cages and expanded clubhouse as well as the scenario with re-developed golf and a river/trail commercial operation.

APPENDIX**Sensitivity Analysis**

The preceding cash flows are based on the projected performance of the Mulligan's facility with various improvements. The following tables illustrate the performance and supportable debt if there are only 5%, 10%, 15%, and 20% increases in golf rounds over 2015 versus the higher increases indicated by the market demand. After the initial increase rounds have been increased at the rate of growth in the trade area or by 1.023% annually.

This was calculated only for Scenario Three/Plan A to illustrate the magnitude of lesser growth in rounds.

**Table VIII-1: SCENARIO THREE/PLAN A, Projected Mulligans Pro Forma With Expansion of Clubhouse, Additional Mini Golf and Re-location of Batting Cages

Examples of Golf Course Renovations Impacts

In order to estimate the likelihood of renovations to Mulligans having positive impacts on rounds and revenues, THK Associates, Inc. and Staples Golf provide the following examples of impacts from renovations.

The City of Hobbs New Mexico in 2013 and 2014 renovated their 18-hole golf course, added a 9-hole par three course and added a boule ended range. Rounds prior to the renovations were 17,000 annually. For the second half of 2015, after the renovations, rounds were 17,000. Rounds for 2016 are projected at 32,000.

Sidney, Nebraska renovated their golf course in 2013 and 2014 with retro fitting the irrigation system and re-turfing of the fairways. The course was operating at a \$200,000 annual deficit and in 2015 was at break-even.

In Denver, Colorado a municipal golf course, Willis Case, built a new clubhouse in 2009. Clubhouse revenues went from \$267,900 in 2008 to \$456,600 in 2010.

Equally important to these examples is an independent analysis conducted by Jeffrey Brauer in April of 2015 regarding public golf course renovations. The research and examples provided by Mr. Brauer illustrate very positive impacts on the performance of public golf courses after renovations. The following article is a summary of his findings.

Do public course renovations pay off? - GCI - Golf Course Industry

Columns - Design concepts

April 15, 2015

Jeffrey D. Brauer

Jeffrey D. Brauer

First, let me say that I hope everyone who attended the recent GIS show in San Antonio had a good show and enjoyed my home state, despite some inhospitable weather. Texas can't get its weather in shape for either GIS or the Super Bowl! I had a nice show, meeting and seeing everyone I wanted to, and I appreciated touching base with several who take the time to read this column.

I also made an ASGCA presentation on the potential financial returns for public course renovations. It's the \$1 million question that potential clients always ask, and I presented independent data gathered in 2014. I was part of a National Golf Foundation business report team for a course in the Dallas-Fort Worth area. Recommended options ranged from closure to total renovations, with a few stops in between. When their City Council asked for backup data for the renovation options, NFG retained Sirius Golf Advisors, a Texas-based golf course business consultant to survey recent public course renovations and their financial results.

Since 2000, DFW has seen 19 public course renovations, and Sirius was able to obtain financial data for many courses that had undergone renovations. For the presentation, I added one of my new renovations that didn't make their list, to make it an even dozen, and adjusted their average numbers accordingly, as shown below in chart form:

As seen, according to the Sirius Golf Advisors data, the nine major renovations increased revenues by an average of 63.7 percent and \$546,709, with increases ranging from only \$73,000 to nearly \$730,000.

There were four minor renovations, which focused on turf improvement for greens or greens and tees, with little new design. These increased revenues by an average of \$210,000. The least successful renovation actually lost revenues, owing to losing turf on their new greens in year two, negating any improvements. The most successful minor renovation is actually a sister course in a 36-hole facility, and the other course had been totally rebuilt, with improved clubhouse, and upgraded service the year before its greens were re-grassed with the "no till" method discussed last month. It clearly gets some residual benefit from the other course.

The minor renovations increased revenues by an average of 23.3 percent and \$210,250. Even without the "outlier" top and bottom performers among minor renovations, the middle two renovations averaged

revenue increases of 12.2 percent and \$120,000, about half the average when considering the other two.

The consistency of increased positive rounds, revenues and ROI results is very encouraging for anyone considering a major renovation. However, DFW has good public golf demographics, which may generally mirror other large and vibrant urban areas, but may not reflect depressed and/or rural areas or resort-based golf courses. And, on both the private or public sides of golf, there are many sub-markets, and you have to know where that biggest opportunities lie, and what it takes to hit that sweet spot or niche in that particular market place.

In short, your proposed renovation needs its own specific economic analysis. Post-2006, most golf course master plans I have seen are preceded by a golf course business plan.

NGF/Sirius Golf Advisors did provide some thoughts based on their survey. They believe that you need to reposition and rebrand the facility in the marketplace, to maximize revenue gains. Name changes may occur but aren't always necessary. And, accomplishing that requires that you do everything right – including improving the golf course in design, maintenance, service and image (logo, amenities, etc.) to see the best financial return.

Minor renovations can be financially successful. While they returned much less in total revenues, usually by providing improved greens, which golfers always value, their ROI calculated as increased annual revenue (assuming year two results continue) divided by construction cost. It may pay to fix just what needs fixing on an otherwise solid course.

The statistics also show that first year returns are often highest, probably due to pre-re-opening marketing, buzz and curiosity, and then dip into a more sustainable pattern the second year. While the survey only covered the first two years of post-renovations operations, for which they had data, for consistency, NGF notes that most courses have maintained their new revenue levels, even for those that are 10 years old now.

Raising prices after renovation makes sense. Golfers expect to pay more for a better product, and increasing revenues by \$500,000 via 20,000 more \$25 rounds is a lot harder than 5,000-10,000 new rounds, with all rounds grossing \$40-50 per player on a "new and improved" product!

Course	YEAR ONE			YEAR 2			
	Cost (\$)	Rev Before (\$)	Rev Year 1 (\$)	Rev Year 2 (\$)	Change from Base (\$)	% Increase	ROI

Average	445,000	1,168,000	1,517,500	1,378,250	210,250	23.30%	73.50%

Overspending rarely pays. Most projects require value engineering to infrastructure, design and image improvements. If at all possible, minimize clubhouse improvements – projects with less than \$200,000 for clubhouse improvements provided the highest return. While it sometimes is a necessity, clubhouses rarely pay off. In all cases, a review of the “want to haves” vs. the “market-based must haves” is essential.

The financing mechanism for these courses wasn’t available, but their – and your – biggest task will be to determine whether anticipated new revenues will support new debt. With currently low interest rates, \$500,000 in revenues might support \$7 million for a break even, debt-free facility. It’s rarely that clean cut, and that figure must also cover interest carry, lost revenues, etc. Many courses wait for their original construction debt to be paid off, and then issue new debt that they can comfortably cover in anticipated revenues.

Those of you who have been through the renovation process will probably agree that it is usually necessary, often profitable, but never all rainbows and butterflies.

Jeffrey D. Brauer is a veteran golf course architect responsible for more than 50 new courses and more than 100 renovations. A member and past president of the American Society of Golf Course Architects, he is president of Jeffrey D. Brauer/GolfScapes in Arlington, Texas. Reach him at jeff@jeffreydbrauer.com.

NOTE: Level of Service (LOS)

Staples Golf Master Plan

Option Summary:

Maintain Status Quo

- Cost: \$2.2 million (estimate) – deferred maintenance
- Pay as you go (page 43 of Staples report)

Property Sale (not an acceptable option for community)

- Property valued at \$20 million (page 43 or Staples report - THK estimate)

Regional Park

- Cost: \$11.2 million (GSBS estimate)
- THK estimate – not completed as part of this study

Mid-Level Investment (aka, Plan A)

- Cost: \$4.6 million (Staples estimate, see boards)
- THK estimate - \$4.3 million available (page 43 of Staples report; page 110 THK report)

High-Level Investment (aka, Plan B)

- \$10.1 million (Staples estimate, see boards and page 46 of Staples report)
- THK estimate - \$7.4 million available (page 43 of Staples report; page 110 THK report)

Time frame moving forward - next steps

- Friday, 7/15 Open House conducted by Staples Golf at Mulligans
- Friday, 8/5 Preliminary Report to be reviewed by mulligan's commission
- Monday, 8/15 Council Presentation @12:00pm (Andy's report to City Council)
- Tuesday, 8/16 Council action "accept report" - no need to attend (10-15 minutes)
- Tuesday, 9/20 CC Council - Mulligans Commission recommendation
- Thursday, 10/27 Council Strategy Session
