

Scott and Town Council,

Here is an update for the Main Street Project.

CIVCO Engineering, Inc. has started gather the field data (survey) for the project. The preliminary data was collected approximately two months ago.

The surface models (electronic drawings) of this data have been developed.

The surface models have been reviewed for accuracy and completeness.

The centerline alignment for the roadway has been developed.

The initial roadway vertical alignment has also been developed.

The title page for the plans is being developed along with the project detail sheets.

The typical sections for the roadway drawings are being developed.

The Summary sheets for all the quantities are being developed (and quantities being calculated).

The hydraulic (piping and catch basins) design is proceeding.

I am sorry; I did not schedule the Town Council meeting for tonight into my planner. I am unable to attend this evening.

I will plan on attending the February (2-7-19) Town Council meeting to show all the preliminary plans and have a discussion with you and the Town Council.

I will bring the second reimbursement request for UDOT to that Town Council meeting.

If you have any questions, please feel free to give me a call.
