SAFETY MESSAGE

PET SAFETY

When a dog is left alone in a car on a hot day, panting becomes much more important for cooling down as the temperature increases and the dog approaches core body temperature. However, when the ambient humidity is also increased, which is always the case when your dog is locked in a car, the panting becomes far less efficient and it becomes increasingly more difficult for your dog to effectively regulate their body temperature.

CAR TEMPERATURE PET SAFETY CHART

How long does it take for a car to get HOT?

Outside Temp (F)	Inside Temp (F)	
	10mins	30mins
70°	89°	104°
75°	94°	109°
80°	99°	114°
85°	104°	119°
90°	109°	124°
95°	114°	129°

Dogs Die EVERY SUMMER
In minutes your car temps are deadly!

VeterinaryClinic.com

The normal temperature for a dog ranges from around 100.5-102.5°F. Heatstroke is defined as a state of extreme temperature, with body temperatures ranging from 106-109°F, which results in thermal damage to the body tissue. The initial stages of heat stress see the heart rate increasing blood flow in an attempt to dissipate heat on the body's surface. However, your dog's core blood pressure drops when these superficial blood vessels begin to dilate. Decreased circulating blood volume due to lower blood pressure and loss of fluids from panting results in the failure of heat loss mechanisms and further elevations in body temperature.
