## Murdock Greenhouse

Aaron Walker <aaron.walker@loganutah.org>

Wed, Sep 4, 2019 at 3:06 PM

To: Diane Campbell <dcampbell@providence.utah.gov>

Given that the structure is a greenhouse (AG use?) and not a residential, and the fact that existing access gets to within 150 feet, and such structures generally don't increase traffic, I have no current concerns with the greenhouse.

Thanks.

RE: 384 North Sarah Street, Providence UT

The above-named site plans have been submitted to the Logan Fire Department for a fire and life safety review. This review was made in the interest of the fire safety provisions and regulations as adopted by the State of Utah and in accordance with the International Fire Code. This review is not considered comprehensive nor regarded as sanctioning any code deficiencies not identified. The ultimate responsibility for compliance with the applicable codes, standards and ordinances rests with the owner.

This project was reviewed using 2018 IFC, 2006 Utah Wildland-Urban Interface Code and Providence City Code, Title 10 Chapter 5 for Hazard Wildfire Area.

**This project is being recommended to Providence City for approval.**

**The following comments document the review process:**

**Access**

*(IFC 503.1.1) Fire Apparatus Access shall extend to within 150 feet of all portions of the exterior walls of the first story of the building as measured by an approved route around the exterior of the building.*

- **Access approved at subdivision review.**

**Fire Hydrant Locations and number of Hydrants**

*(IFC 507.5.1) Fire Hydrants shall be located within 400 feet of the building as measured by an approved route around the exterior of the building. Exception allows for the distance to be increased to 600 feet for R-3 occupancies.*

- **Fire hydrant location approved at subdivision review.**

### Fire Water Flow

*(IFC 507.1) An approved water supply capable of supplying the required fire flow for fire protection shall be provided to premises upon which facilities, building or portions of buildings are hereafter constructed or moved into or within the jurisdiction. (IFC 507.3) Fire flow requirements for buildings or portions of building and facilities shall be determine by an approved method.*

- **The building appears to be approximately 5,404 square feet in size. According to Table B105.1 the fire flow for a combined fire area 5,404 sq. ft. of type V-B is 2,000 GPM. Fire Flow requirements are subject to change due to separation of fire areas, type of construction, and the installation of fire suppression system.**
- **There are two hydrants within 600 feet of the structure**
- **Hydrant #507 has approximately 2,242 GPM at 20 PSI and is adequate for this size of construction.**

### 2006 Utah Wildland-Urban Interface Code

#### *SECTION 506 Class 3 - Ignition-resistant Construction:*

*506.1 General. Class 3 ignition-resistant construction shall be in accordance with Sections 506.*

(No wood shakes or combustible roofing used) **Homeowner/Builder is planning on a Class A roof covering. Approved***
