1. **Mobile Tour & Discussion of Lindon City Public Works Facilities**

The Council and staff assembled at the Lindon City Center at 12:00 noon on July 28, 2021 for a mobile tour to view secondary water facilities operated by Lindon City and North Union Irrigation Company. The group drove to the Provo River water turn-out located near the mouth of Provo Canyon and viewed the irrigation turn-out that diverts water into the Provo Bench Canal, which then transitions into the North Union Canal. Mr. Tucker explained his role as Water Master for North Union Irrigation Company and that he is traveling along the canal and checking turn-outs and cleaning grates between 1 to 5 times per day during the watering season.

Public Works Director, Juan Garrido, reviewed maps of the secondary system and water share data with the Council and staff members. He took Council members to a few locations along the North Union Canal to view infrastructure along the canal and conditions showing aging system components and need for reinvestment into the infrastructure. He also discussed potential for other alternative water delivery system options that are being explored in conjunction with Central Utah Water Conservancy District and the Provo River Water Users Association.

The group continued the tour with a stop at the Zone 3 secondary water irrigation pond and associated pump house. Mr. Garrido explained details regarding the operation of the secondary system. Mr. Tucker stated that he drives along the canal access road behind homes located adjacent to the Zone 3 reservoir between 1 to 5 times per day to inspect the system, verify water levels, and clean the traveling screen/grate that is located at the inlet to the pond.

2 The tour then went to the Lindon City Public Works facility at 946 W Center Street where
3 Matt Winward, Water Superintendent, and Mr. Garrido shows the Council members various
4 aspects of the SCADA radio control system that enables remote operation and monitoring of
5 Lindon City infrastructure. Details of the secondary water system was reviewed on the system
6 and explained in detail. Discussion of long-term project needs for culinary and secondary
7 water were discussed in relation to the facilities that were viewed on the tour and budgeted as
8 part of the FY2021-22 budget.

9 Mr. Garrido indicated that additional information will be presented to the Council
10 regarding billing and fee collection on the secondary water system and potential methodology
11 for possible implementation of secondary water meters throughout the city.

12
13 2. **Adjourn** – The work session mobile tour was adjourned at approximately 2:10 p.m.
