Fwd: North Valley Landfill

To Karla Ferguson <newtontown@comcast.net>

Hello Karla,

Will you please make this available for my section of the meeting tonight?

Thanks,

Subject: North Valley Landfill

Date: 2021-09-02 16:41

From: Issa Hamud <issa.hamud@loganutah.org>

To: Kevin Rhodes <krhodes@newtonutah.org>, Holly Daines <holly.daines@loganutah.org>

Mayor Rhodes,

Thank you for taking the time to meet with us today. Per your request, below is a summary of what we are proposing.

Logan City landfill is close to its capacity and has begun the final closing of the landfill. In 2020 we have closed most of the north slopes and west slopes and this year our goal is to close the south slopes and part of the east slopes. In 2020 Logan Landfill received approximately 30,112 tons of construction and demolition (C&D) waste and a total of 55,809 tons of municipal solid waste from Cache County residents. If we continue to use this landfill at this rate of use this landfill will be at its full capacity in 2 years. Our goal is to preserve some capacity in this landfill for emergency use when hauling to the North Valley Landfill is not practical due to bad weather conditions.

We are asking the support of the communities on the north for a plan that will send construction and demolition waste directly to North Valley Landfill. Most of the C&D waste we receive is delivered to us by private haulers. Over 80 percent of these haulers are small self-haulers, and the remaining are large haulers. Small hauler means trucks with less than 54,000 lbs Maximum Total Weight (GVWR) and large (big) haulers means trucks with GVWR greater than 54,000 lb.

Generally, the large trucks are from a big demolition project and they occur only on a project-by-project basis in a short duration usually less than a month. Logan City wants to request permission to send the large trucks to NVL with some restrictions. We will establish a permitting process and provide educational material before we allow these private trucks to haul waste directly to NVL. The educational

material will include information such as approved routes, speed restrictions, and time of operation.

To minimize traffic to NVL Logan City will bulk the C&D waste from small generators and use its transfer trucks to transfer this waste to NVL.

Other helpful information. Logan City does not accept out of Cache County contracts for waste disposal, and we don't transfer Cache County waste out of the County for disposal.

--
