Ongoing Support to Collect Visitor Use Data for Integration into the Central Wasatch Environmental Dashboard (FY23)

Purpose and Objectives

In late 2021, Utah State University began collecting visitor use data through a variety of methods throughout the Central Wasatch for the purposes of providing a comprehensive understanding of outdoor recreation use as well as key ecological and physical resource conditions of outdoor recreation settings. Visitor use counts (i.e., monthly estimates of trail use), are currently being collected via trail counters and mobile device use throughout the region. This request supports the continued collection of visitor use counts for trails within the tri-canyon region consisting of Little Cottonwood Canyon, Big Cottonwood Canyon, and Millcreek Canyon for the purposes of displaying these data on the Central Wasatch Environmental Dashboard.

Utah State University will continue to monitor and collect data on trail use through both trail counters and mobile device use within the canyons. These data will be collected, curated, and transferred to the University of Utah for integration into the Central Wasatch Environmental Dashboard. Data will be aggregated to the individual trail segment, trail shed, trail complex, or canyon as determined most appropriate by both the Utah State University research team, the University of Utah team developing and maintaining the dashboard, and staff from the Central Wasatch Commission. Data will be provided by the Utah State University team on a quarterly basis from December 2022 through August 2023.
