

Planning Utah County's Regional Highway Grid

Engaging the Decision-Makers

- Transportation Summits were held to get the regional transportation plan's vision and goals
- Goal #1 of the 2019 Regional Transportation Plan: "Update the Regional Highway System to a Metropolitan Grid-based Network"

Ideal Grid

Collectors every half mile, moving local traffic in residential areas.

Arterials every mile, moving traffic from local roads to freeways or between urban centers.

Freeways every five miles, for high-speed uninterrupted travel.

Ideal Grid

- A closer look at where these corridors **could** go
- Something to model and see benefits
- Let's work together to get the true locations of these routes

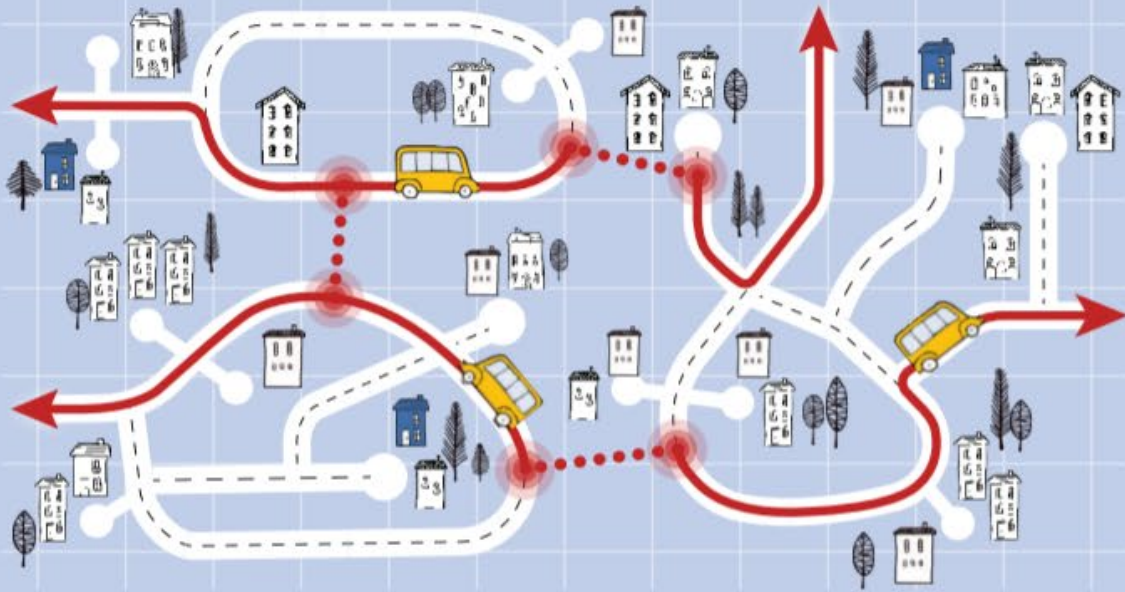

Improved Mobility

- Safer, more walkable environments
- Faster, more accessible and convenient transit
- Lower-impact, maintenance and construction
- Keeps local trips local
- Planning at a regional level for regional mobility

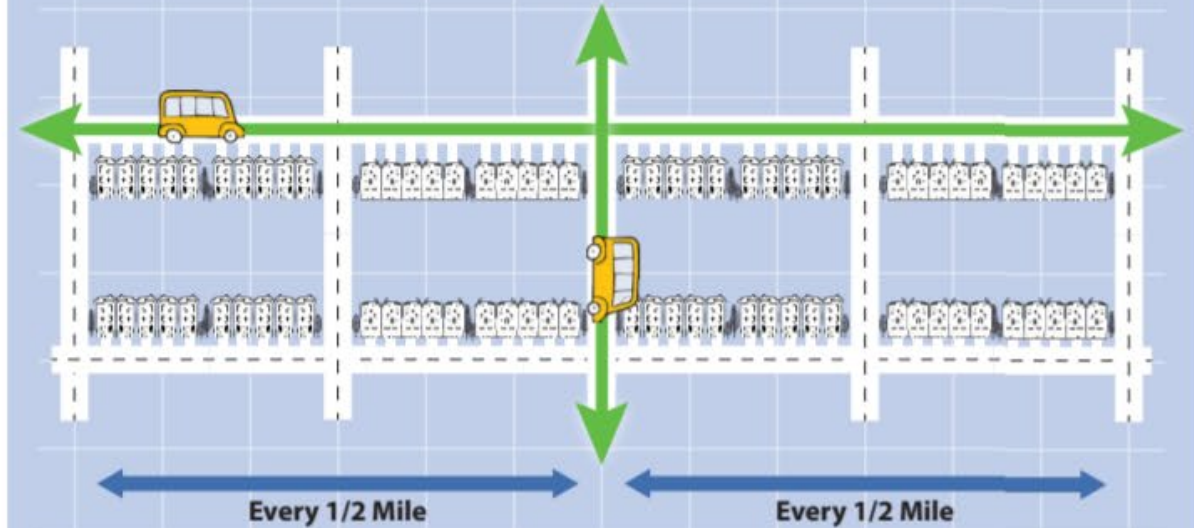

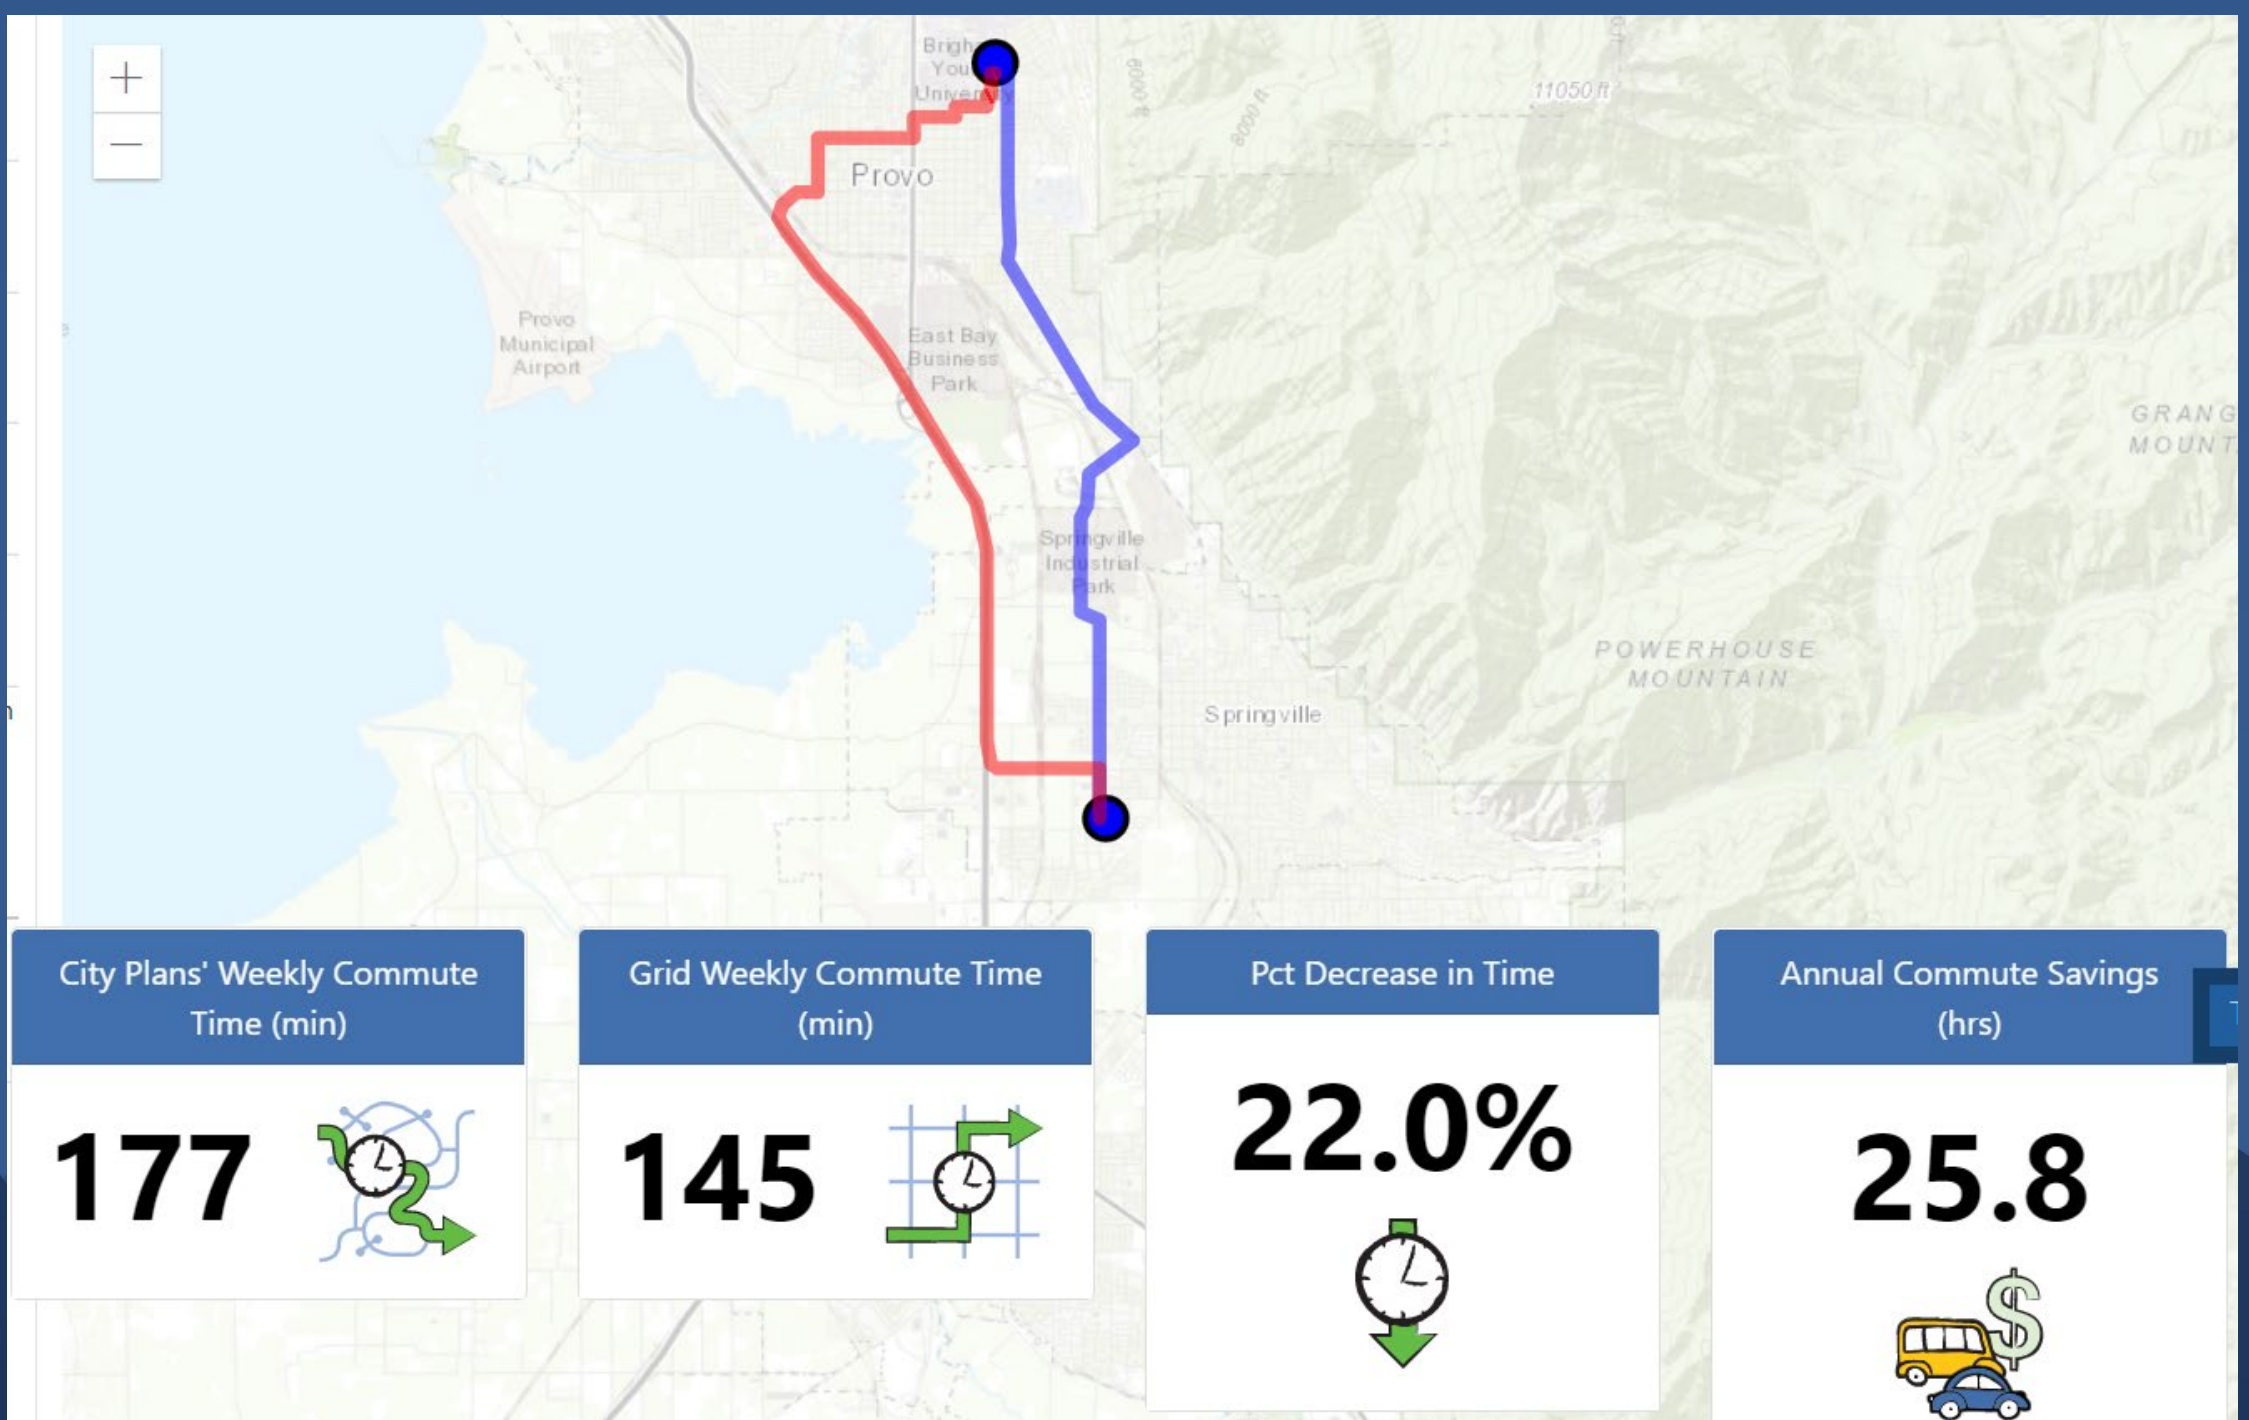

Improved Mobility

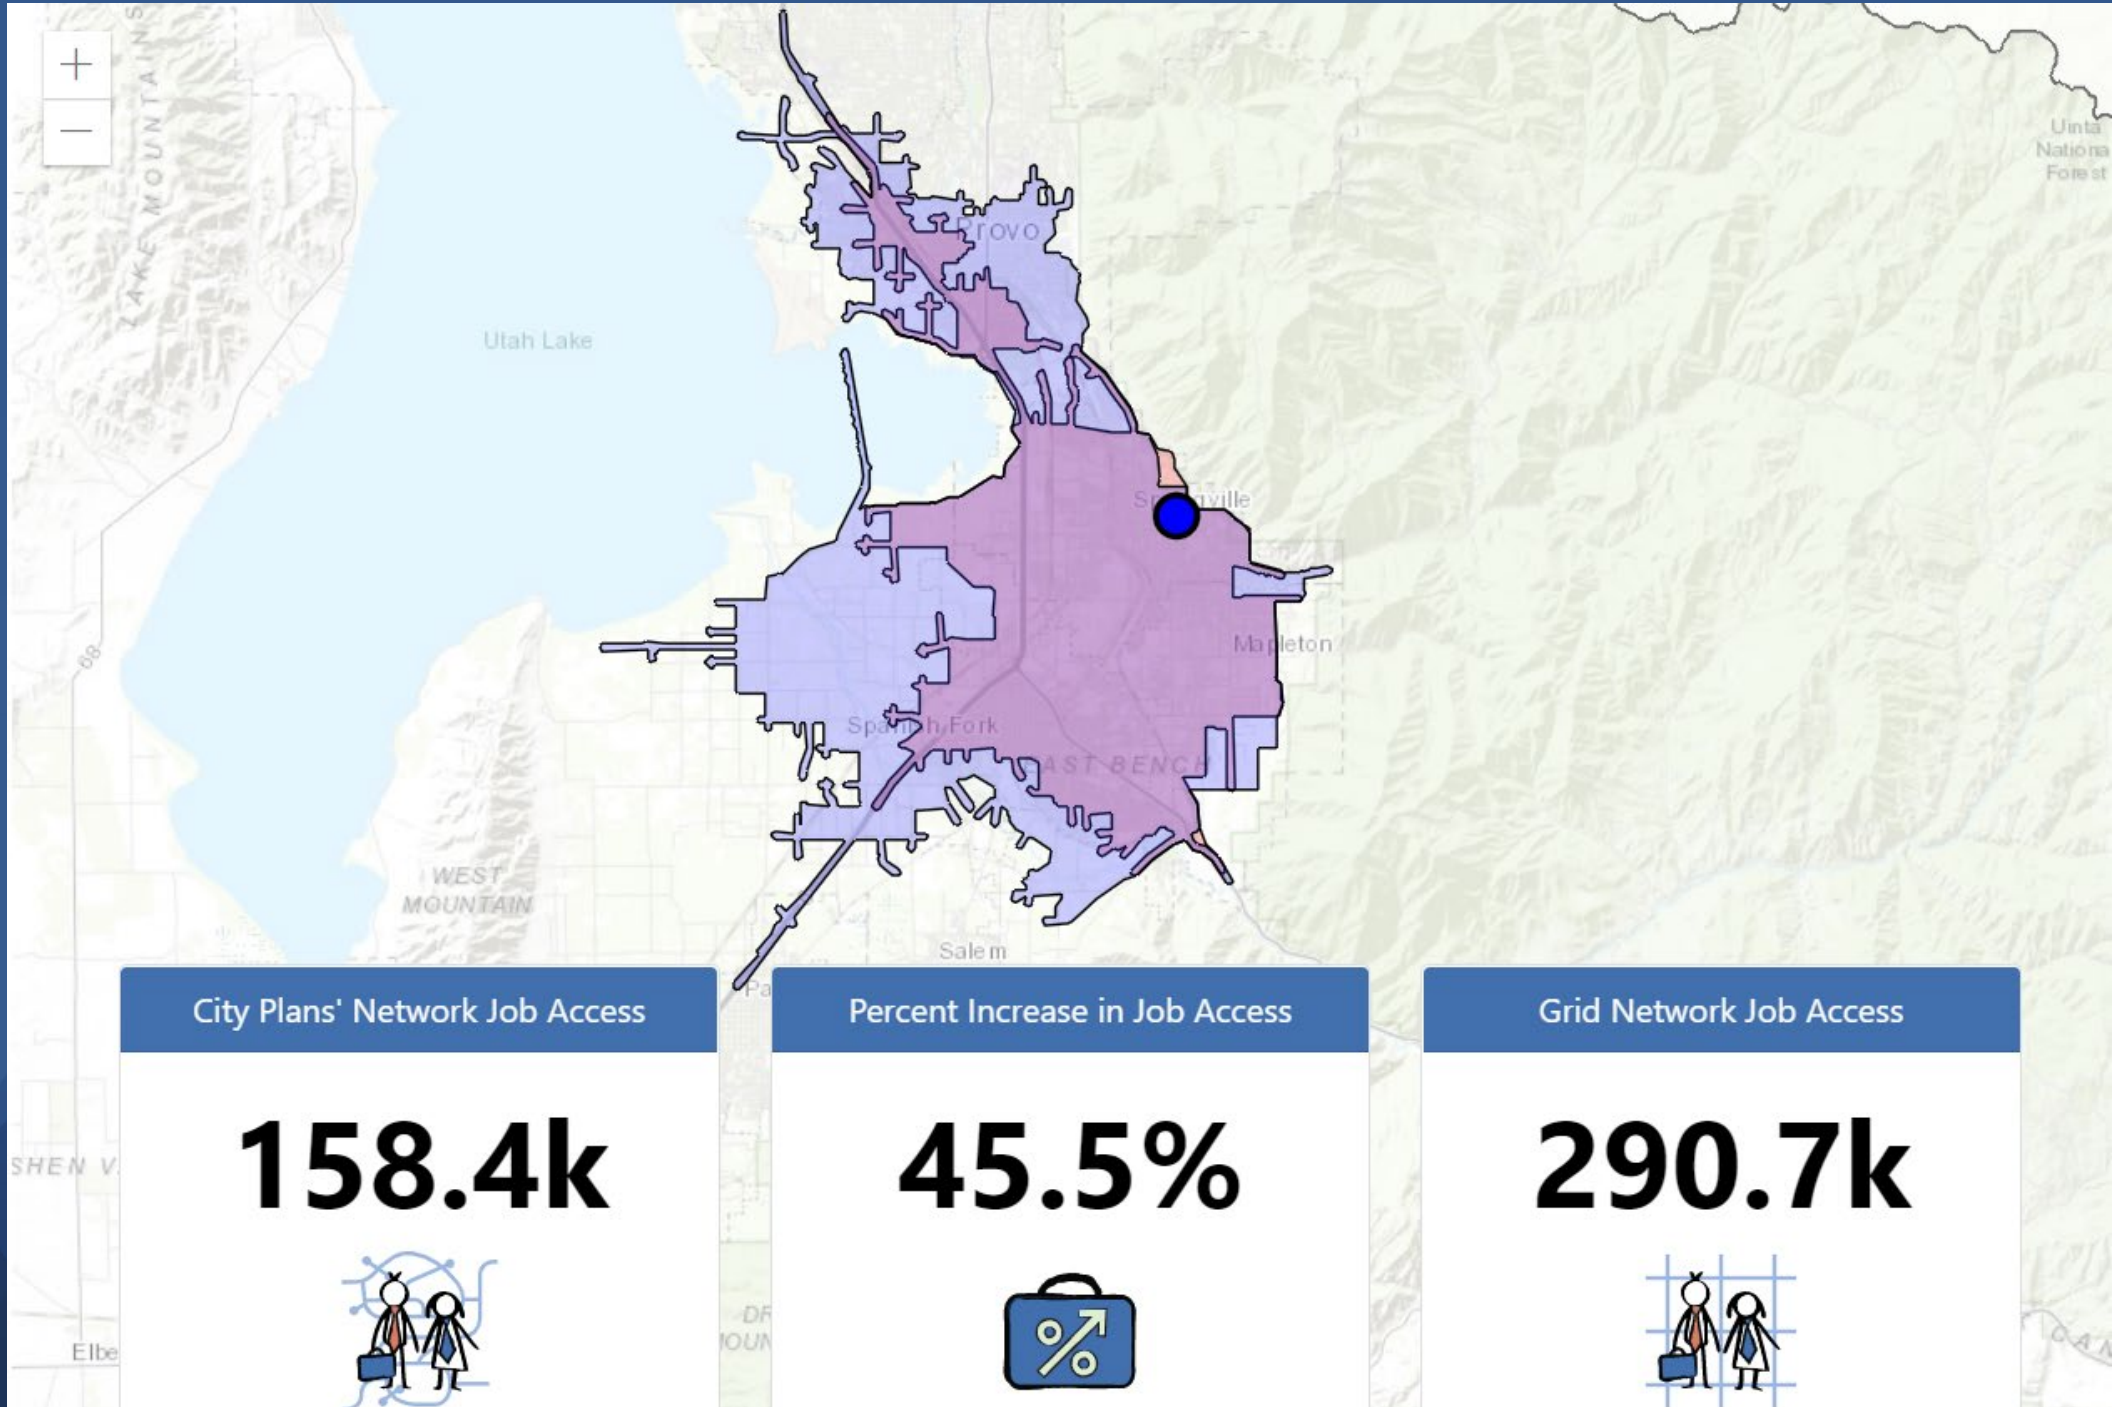

POOR Transit Connectivity **WITHOUT** Grid Network

IDEAL Transit Connectivity **WITH** Grid Network

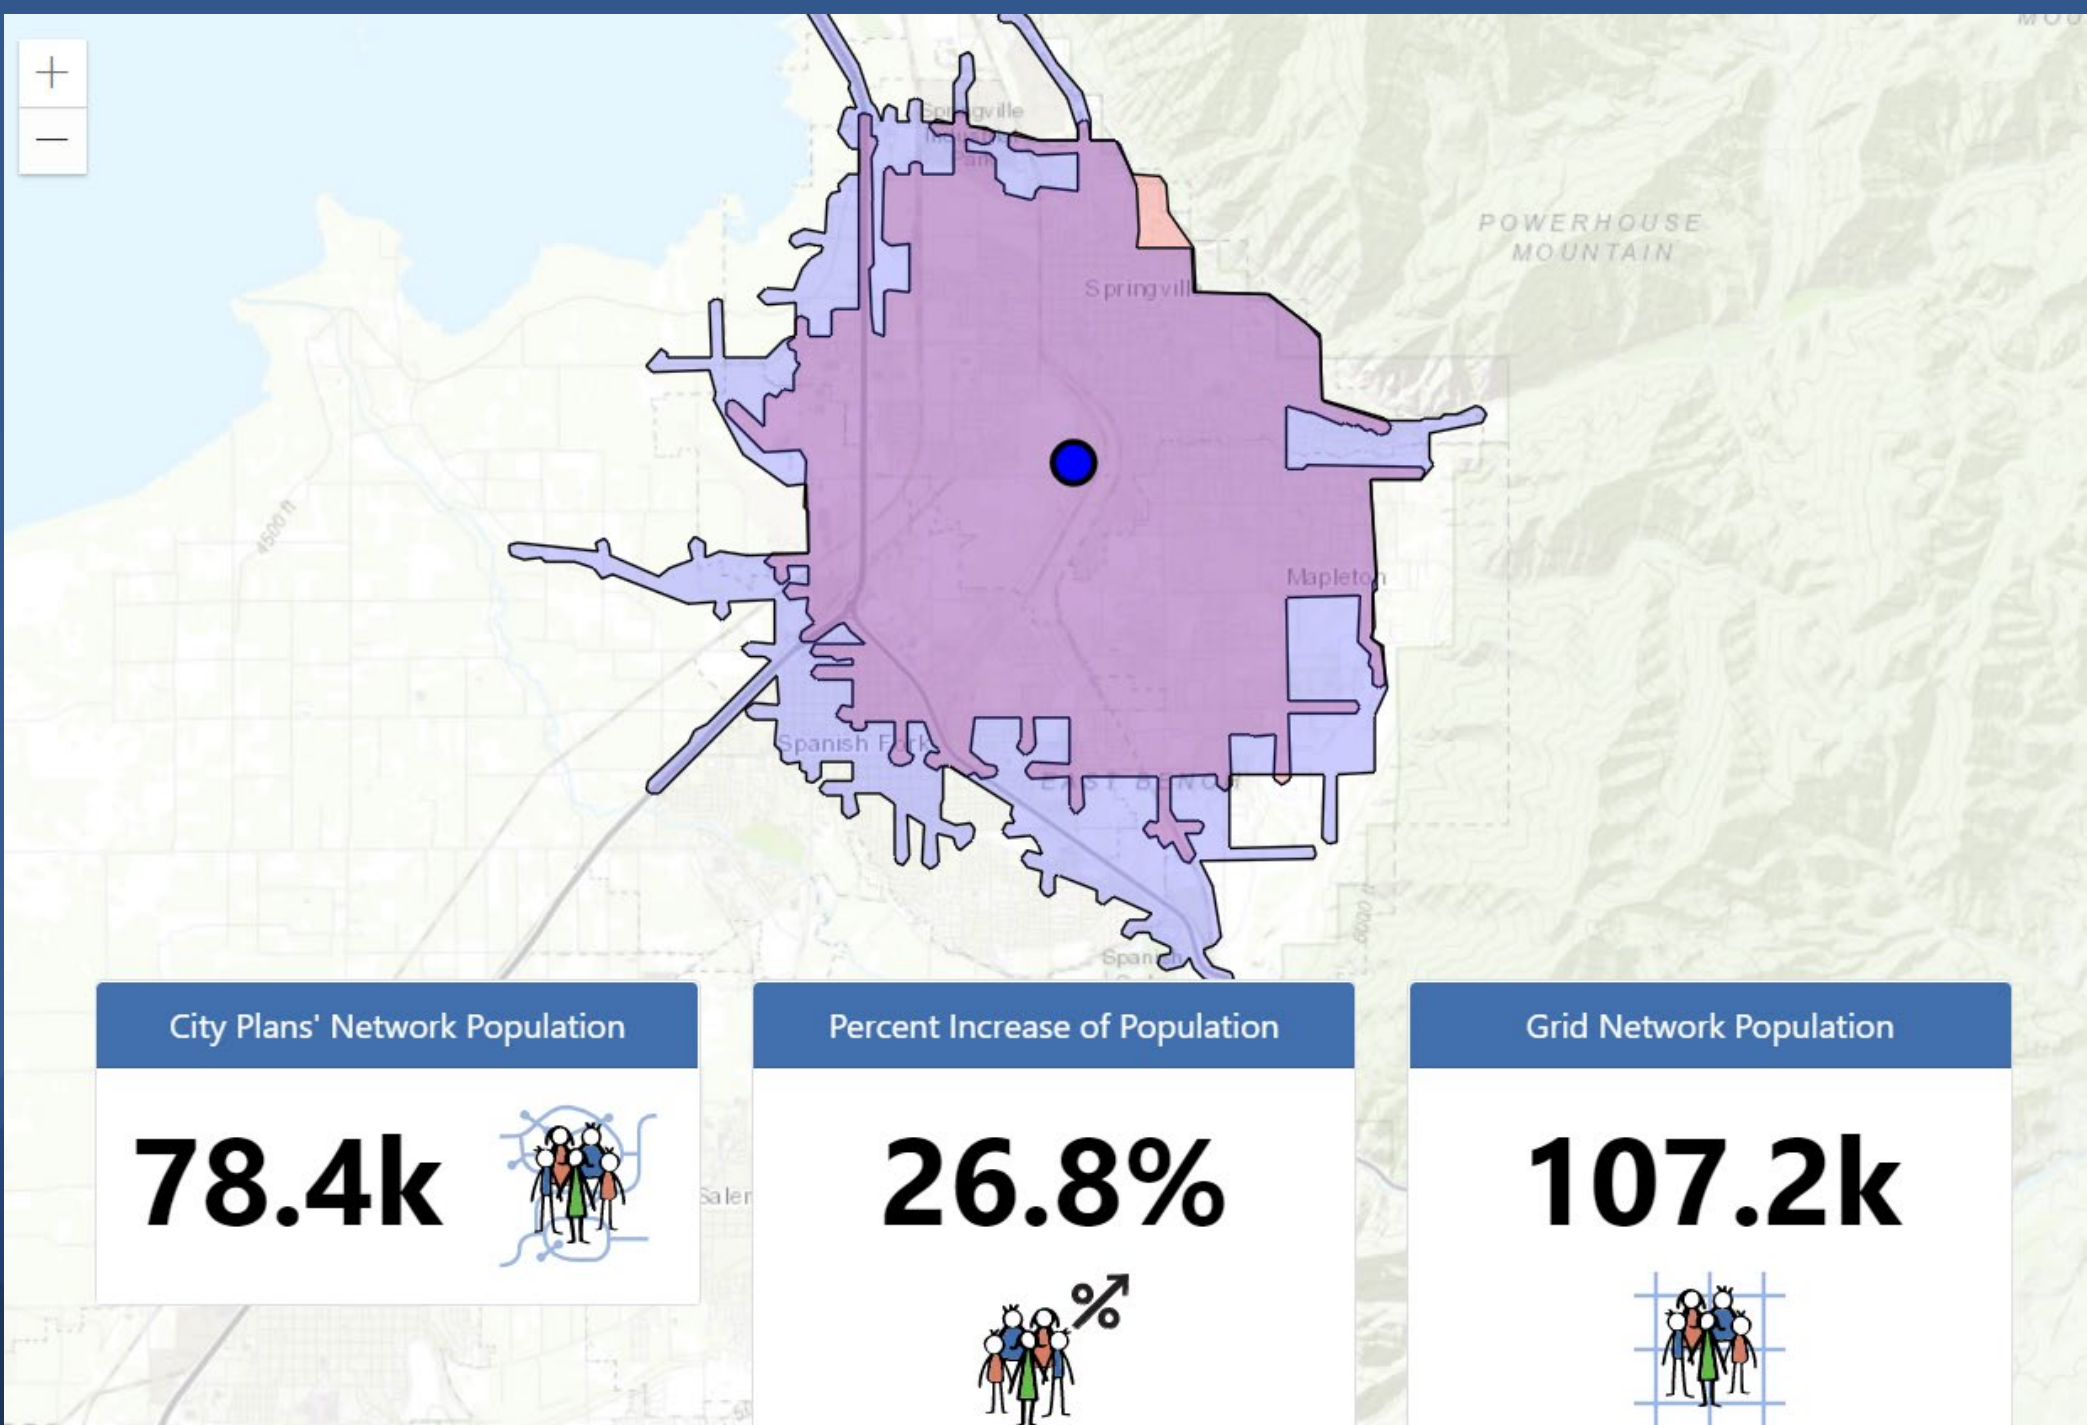

Fostered Long-Term Economic Benefit

- Increased connections = increased business access
- Opens more areas for development
- Demonstrating the need and benefit for a connected highway grid strengthens your argument for funding

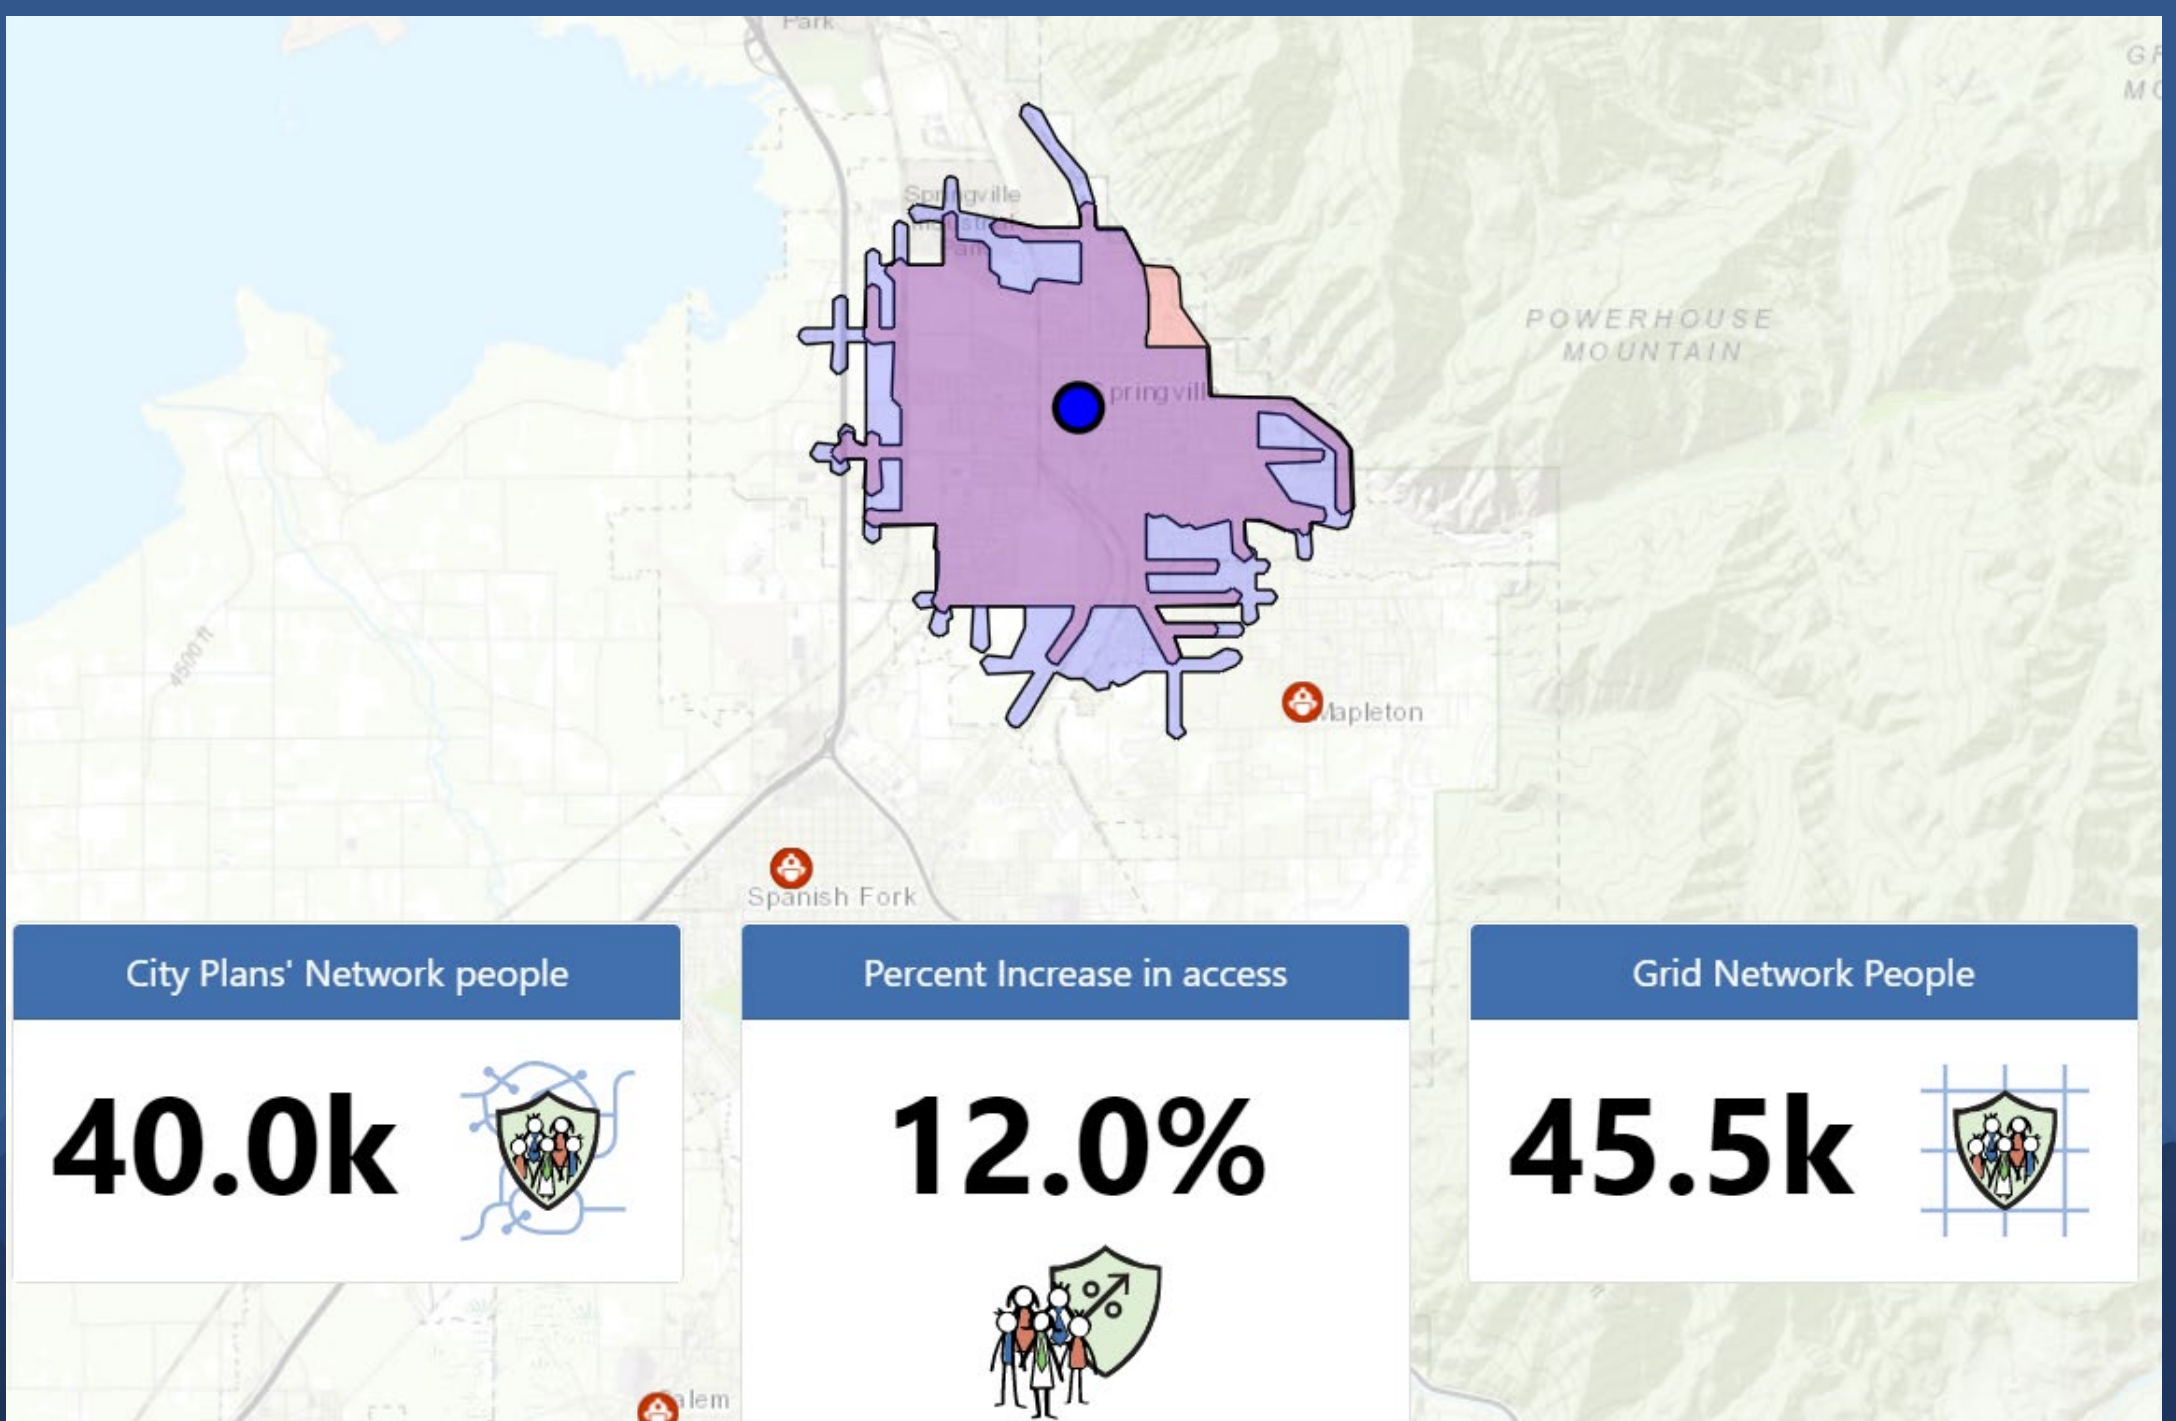

Improved Health and Safety

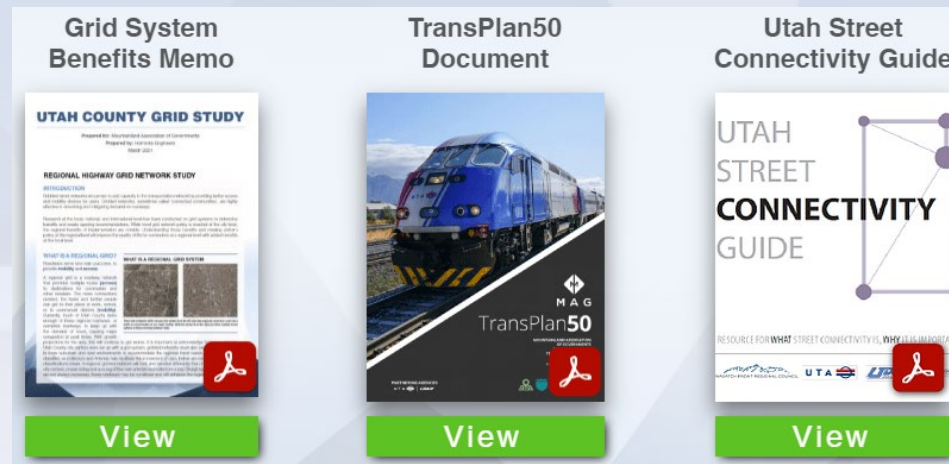

- Pedestrian-friendly design
- Reduced emissions
- Demand is spread out, reducing potential crashes
- Additional EMS routes and reduced response time

Other Items on the Webpage

- Videos on the benefits of a grid system
- Definitions and Examples
- Links to useful and educational documents

What now?

- Use our webpage and resources to learn more about the Grid and what it can do for your city and region!
- Review your city's transportation plan, consider using the grid's recommendation of spacing of regional roads **in** and **through** your city.

We can help your staff when needed!
