The facility utilizes a gas-fired Combustion Turbine with a Heat Recovery Steam Generator and a steam turbine operating in a combined-cycle mode. Cooling water is obtained from the Payson City Wastewater Treatment Plant (Payson City). The treatment plant and Payson Power have an agreement to use the treatment plant's effluent for cooling water purposes. The flow enters the cooling tower and is discharged as a non-contact cooling water stream. The flow is 0.75MGD. Payson Power has monitored the levels for both free and total cyanide in the effluent and requested that the limits and reasonable potential (RP) for cyanide be evaluated again. The permit has been modified accordingly.
